A Cyclopædia of Biblical Literature

VOLUME I.

E. Goodall

Sir D. Wilkie, R.A.

Convent of the Holy Trinity, Bethlehem

A
CYCLOPÆDIA
OF
BIBLICAL LITERATURE

BY JOHN KITTO, D.D., F.S.A.

THIRD EDITION

EDITED BY

WILLIAM LINDSAY ALEXANDER, D.D., F.S.A.S., ETC.

ASSISTED BY NUMEROUS CONTRIBUTORS

IN THREE VOLUMES

WITH BIOGRAPHICAL NOTICES AND GENERAL INDEX

VOLUME I.

EDINBURGH: ADAM AND CHARLES BLACK

MDCCCLXXVI

ADVERTISEMENT.

THIS edition of Kitto's Cyclopædia, first published in 1862, is to a great extent a new and improved work. It contains all the original matter of previous editions carefully revised, with the addition of much valuable information. The articles on Egyptian and Assyrian Antiquities have been almost wholly rewritten, as have also, for the most part, those on the Geography of the Holy Land. Those which treat of Jewish antiquities and embody Rabbinical and Masoretic lore are entirely new, as are also the notices of the lives and works of Biblical Scholars.

The articles by the late Professor Baden Powell on CREATION and DELUGE (now supplanted by those of Dr. M'Causland and Professor Geikie) are given as a Supplement to this volume, for the sake of those who may wish to refer to them; while a General Index of the various subjects treated throughout the different articles has been appended to Vol. III., with the view of increasing the utility of the work.

With the exception of the correction of typographical errors, there has been no alteration in the present issue of the Cyclopædia.

EDINBURGH, *October* 1876.

PREFACE TO THE FIRST EDITION.

THE present work was undertaken with the design of providing the public with a more complete view of the existing state of Biblical literature, both at home and abroad, than it previously possessed. It was felt that former works of the kind, numerous as they are, and useful as some of them may be considered, were built too exclusively upon the 'old learning' of Calmet and others; and that some recent attempts to give a more modern character to such undertakings had been made too entirely from home materials, and had too exclusive reference to such external facts and circumstances as travellers and antiquarians offer, to meet the demands of the present time. The work, therefore, owes its origin to the Editor's conviction of the existence of a great body of untouched materials, applicable to such a purpose, which the activity of modern research and the labours of modern criticism had accumulated, and which lay invitingly ready for the use of those who might know how to avail themselves of such resources.

It was no task for one man to gather in this great harvest. And as the ground seemed, for the most part, common to all Christian men, it appeared desirable that assistance should be sought from a sufficient number of competent Biblical scholars and others, without distinction of country or religious party, that the field might be the more thoroughly swept, and the greater wealth of illustration obtained, from men of different lines of reading and various habits of thought. The prompt manner in which the call of the Editor for co-operation has been met by the numerous eminent Biblical scholars and naturalists, whose names appear in the List of Contributors, has been among the highest gratifications arising to him out of this undertaking; while the ability, the laborious research, the care and the punctuality, with which they have discharged the various tasks confided to them, demand his warmest acknowledgments.

The only drawback likely to arise from co-operation so various and extensive, lay in the probability that considerably different views might be manifested in the several articles; and that, too, on subjects on which every reader is likely to have formed some opinion of his own, and will be disposed to regard as erroneous or suspicious every opinion which may not entirely coincide with that which he has been accustomed to entertain. In this lay the sole danger and the greatest difficulty of such an undertaking. Here was to be a book which no one man, and not even a very few men, could produce; and which the public would yet probably expect to exhibit as much unity, not only of plan and execution, but of opinion and sentiment, as if it were the produce of a single mind. The Editor, however, felt that he could not undertake to find forty independent thinkers among whom there could be no visible diversities of sentiment. But he thought that much might be done in producing so near an approach

to uniformity on matters of real importance as would satisfy every reasonable reader ; especially when he should come to consider that the choice lay between taking the work with such diversities as necessarily arose from the extent of the co-operation employed in its production, or of altogether dispensing with the immense amount of Biblical information which it embodies. Entire uniformity, if attainable at all, could only have been attained at the cost of providing a very different and greatly inferior work ; and a work thus different and inferior could not have established a distinction sufficiently marked from all previous undertakings of the kind to justify its production.

It has not consisted with the Editor's idea of the functions he had undertaken, to dictate to the Contributors the views they were to take of the subjects intrusted to them, or to set up his own views as the standard of correct opinion. This he must have done, had he made it his rule to insert only such statements as exactly coincided with his own sentiments, or to exclude altogether whatever views of particular subjects might differ from those with which his own mind is satisfied. The Contributors were expected to abstain from introducing the opinions peculiar to their nation or to their religious communion ; but they have been under slight restraint with respect to the conclusions which they might form as independent thinkers and reasoners, competent by their attainments and studies to form a judgment worthy of attention on the various matters coming under their consideration. In conformity with no other principle could this work have been produced ; and such being the nature of its execution, it became necessary that the initials of the several writers should be affixed to their contributions, that the reader might know to whom to ascribe the responsibility of the particular articles, and that no one contributor might be deemed responsible for any other articles than those to which his signature is annexed. The Editor also, who has provided all those articles which bear no signature* (except those adverted to at the end of the List of Contributors), does not hold himself responsible for any statements or opinions advanced in any other articles than these. Some of them exhibit opinions in which he is not able to concur, but which have nevertheless been furnished by persons whom he could not regard as less competent than himself to arrive at just conclusions.

Yet although some explanation is due to those who may possibly find in this work, in a few articles, opinions in which they cannot agree, and views from which their own differ, it is right that the persons engaged in producing it should claim for it a judgment founded not upon particular articles, but upon its general character, which was intended to be, and is, in accordance with the known standards of orthodox opinion in this country, as may be ascertained by reference to those leading articles which may be regarded as stamping the character of any work in which they are found. In fact, a Cyclopædia of *Biblical Literature*, as distinct from *Theology* properly so called, offers less occasion than might at first sight appear for the obtrusion of those matters of doctrine and discipline which Christian men regard with differences of opinion which the Editor would fain believe to be less wide and less important than is too generally supposed. In the dispensations of Divine Providence, he has been by

* This applies only to the preceding editions ; in this third edition Dr. Kitto's initials have been affixed to his articles.

physical privations shut out from many of those external influences and associations which tend to magnify such differences, and to deepen into impassable gulfs the space which lies between them. He has not found this condition a disadvantage in conducting the work which he has now the happiness of having brought to a conclusion; nor will he venture to regard that condition as an unmitigated evil, if, through the complete isolation in which he has thereby been placed, he has been enabled, without any compromise of the views he conscientiously entertains and which *his own* writings will sufficiently indicate, to realize more extensive co-operation in this undertaking than under pastoral or official connection with any religious denomination he could expect to have attained. It is believed that the English language has no other book which eminent foreign scholars have co-operated with our own in producing; and it is certain that it possesses no other work which embodies the combined labours of writers who, indeed, are of different communions here, and are known by different names among men, but who have the same hope in this world, and but one name in heaven.

The nature of the present work, and the place which its conductors desire it should occupy in the Biblical Literature of this country, will be best understood by a sketch of the whole field in which that place is marked out. This will show not only what is here attempted, but how much of this wide and fruitful field remains open to the same process of cultivation. Such a sketch will be found in the *Preliminary Dissertation* expressly prepared by Dr. Credner for this work, which is besides enriched by several valuable contributions from his pen.

To particularise the works of the kind previously produced in our own country might appear invidious. It may suffice to say that they have all in their day served purposes of more or less usefulness, for which they are no longer available. All that has been done till now has been in various degrees based upon Calmet's great work; and the present is the only production which can be regarded as even professing to draw its materials from original sources of information.

The Editor cannot but regard with peculiar satisfaction the ample references to books which occur in almost every article, and which indicate to the reader the means of more extensive inquiry into the various subjects which have been noticed with indispensable brevity in this work. The numerous references to Scripture will greatly assist its chief use and design—the illustration of the sacred volume. It is believed that the articles in the departments of BIBLICAL INTRODUCTION and CRITICISM embrace a body of information respecting the books of Scripture, and sacred criticism, such as no work of the kind in any language has hitherto contained. The NATURAL HISTORY of Scripture has now for the first time been examined, and as far as possible settled, not by mere scholars ignorant of natural history, but by naturalists of acknowledged eminence. The SCRIPTURE GEOGRAPHY has, by the help of Dr. Robinson's invaluable *Biblical Researches in Palestine*, and of other publications less known in this country, assumed in the present work a greatly altered and much more distinct aspect. The ARCHÆOLOGICAL articles exhibit an extent of illustration and research which will tend greatly to elucidate the obscurities which the subjects necessarily involve. The HISTORY has been discussed under the influence of those broad principles which con-

stitute its philosophy; and in this, as well as in the BIOGRAPHY, it has not been forgotten that while actions are always to be judged by the immutable standard of right and wrong which the word of God has established, the judgments which we pass upon men must be qualified by considerations of age, country, situation, and other incidental circumstances.

It is hoped that, with such claims to attention, and embodying, as it does, the results of great labour and much anxious thought, the work now offered to the public will receive indulgent consideration for the minute errors, defects, and perhaps discrepancies, from which the Editor dares not hope that it is wholly exempt, and which are perhaps inevitable in a work executed by so many different hands, and involving so large a body of references, titles, and proper names.

JOHN KITTO.

WOKING, *Oct. 15th*, 1845.

PREFACE TO THE THIRD EDITION.

THE late Dr. Kitto was engaged at the time of his death on a revision of this work for a new edition. He had not proceeded far, however, in this revision, when he was laid aside from all literary labour by the illness which ultimately cut him off. When the work could no longer have the benefit of his superintendence, the proprietors did me the honour of requesting me to undertake the task which death had prevented him from completing; but other duties at the time obliged me to decline this undertaking, and it was ultimately placed in the hands of the Rev. Dr. Burgess. By him many needful corrections were made, and certain important improvements introduced; but, as it had been resolved to retain the original stereotype plates, his alterations were necessarily confined within very narrow limits, and no material addition could be made to the contents of the work. A third edition being required, the proprietors again asked me to undertake the labour of revisal; but a careful examination of the work with this in view, strengthened a conviction I had before entertained, that nothing satisfactory could be done if the previous restrictions were continued, and I earnestly counselled the cancelling of the existing stereotype plates and the re-setting of the whole work, with such alterations as might be necessary to bring it up to the present state of Biblical knowledge. To this the proprietors consented, and committed to me the duty of preparing the work for publication according to this design.

In carrying out this purpose I have sought to keep in view the nature of this work as being not so much a Dictionary of the Bible, as a Cyclopædia of Biblical Literature. Whilst, therefore, seeking to give as much space as possible to the treatment of all questions of importance to the student of Biblical literature, I have not thought it necessary to occupy space with minutiae, which, however proper in a work of the former class, are somewhat out of place in one belonging to the latter. A Cyclopædia of Biblical Literature is not a Biblical Lexicon or a mere Onomasticon Sacrum; and therefore it is not to be expected that its pages are to be occupied with mere catalogues of names, of which no more can be said than that this is the name of a man or that of a place—a piece of information the reader usually possesses before he turns up the word. Care, however, has been taken to omit no name under which *real* information of any kind can be given.

A considerable portion of the original work has been retained in this edition. Into some of the articles thus retained a few alterations have been introduced; but where these have been more than mere verbal corrections they are indicated by being placed within

brackets, that no injustice may be done to the original writers of the articles, by having what had not been written by them imputed to them. Some alterations have also been made in the placing of the articles, especially those belonging to the department of natural history. The learned naturalist to whom the botanical department in the first edition was entrusted, adopted the plan of following the nomenclature of the objects he discussed as given in the original rather than that given in the authorised version: thereby avoiding the anomaly of prefixing to his article a title which it was frequently the design of the article to show to be erroneous. This plan has been extended in the present edition to the other branches of natural history, except in a few instances where no doubt exists as to the correctness of the rendering in the authorised version. To facilitate reference, however, the names as given in this version will be found in their proper place, with reference to the articles in which the object so designated is described.

Much attention has been paid, in this edition, to a department which was very defectively treated in the original work, and which, indeed, has seldom had justice done to it in this country,—the department of the *religious and literary archæology of the Hebrews*. In most of the articles in this department, the subject will be found discussed anew and from original sources. Special care has also been bestowed on *Biblical Geography* and *Topography*, as well as on the *Literary History* of the different books of Holy Scripture.

A new feature in this edition is the introduction of notices of the life and works of Biblical scholars. To the student such notices are always interesting, and may prove of much use by informing him of what has been done by those who have gone before him in the department to which his studies are directed. The notices of Jewish writers and works especially will supply to the reader information not easily accessible by him elsewhere.

The Editor has received valuable aid in this undertaking from the distinguished scholars whose names appear in the list of contributors. He has also to acknowledge the important services of the Rev. W. Veitch in the necessary work of revising the sheets, so as to secure accuracy. It can hardly be hoped, in a work of such magnitude, of such variety of subjects, and where so many minute details are given, that no mistakes or omissions will be detected; but as no labour has been spared to ensure exemption from such, it is confidently expected that none will be found but such as the ingenuous reader will readily account for and excuse.

W. L. A.

PRELIMINARY DISSERTATION

By K. A. CREDNER, D.D.

PROFESSOR OF THEOLOGY IN THE UNIVERSITY OF GIESSEN.

A comprehensive arrangement of all that belongs to the region of human knowledge has—not quite properly—been indicated by the term *Encyclopædia*, i. e., ἐν κἀκῶν παιδεία or ἐγκύκλιος παιδεία. Another term, *Wissenschafts-Kunde* (knowledge of science), has also been applied to that arrangement in Germany, when it includes likewise an internal and scientific development of the systems and subjects under discussion. In the title, *Cyclopædia of Biblical Literature*, borne by this work, it is obvious that the word ‘Cyclopædia’ is not to be taken in the more extended acceptation of the term, but merely so far as the Bible and Theology are concerned. As the peculiar province of *Biblical Encyclopædia* can only be clearly understood and defined in its connection with *Theological Encyclopædia*, it may be requisite to describe at length the meaning of the latter and more comprehensive term.

But even the notion of Theological Encyclopædia in general, is yet of too extended range for our purpose, as it might be supposed to comprehend a systematic development of *all* that refers to the knowledge of God generally; while here cognizance can be only taken of some particular branch of that knowledge, namely, of that belonging to Christianity alone. Our notice must therefore be limited to the Encyclopædia of *Christian* theology. But Christian theology forms only a special and limited part of general theology. The former, in endeavouring to comprehend scientifically the Christian religion, deals altogether with a subject of experience. For the Christian religion, or the Christian knowledge of God, is not innate and constitutional in man, or something existing in his mind *à priori*, but is a religion connected with Jesus Christ as its revealer. Christian theology is thus a positive or historical science, which can be traced from its origin at a known point of time.

Now, nothing more intimately concerns the spirit of Christian theology than the solution of the question, By what standard are we to determine the tenets of the Christian religion, or from what source must they be deduced? It is in the solution of this important question that the adherents of the Christian religion divide themselves into two large bodies; the one considers the Scriptures, emanating from the Holy Ghost, as the first and last source of knowledge for Christian truth,—a source, however, not bounded by time and space, but continuing to flow, and pour forth new religious truths within the range of the Church formed under the guidance of the Holy Spirit. This doctrine is usually expressed in the following terms: the Catholic Church assumes a double outward source of the knowledge of religious truth, namely, the *Apostolic*, both *Scriptural* and *traditional*. The other great religious party makes a very marked distinction between the revealed doctrines laid down in the Scriptures and the later views and development of the same by the Church; in other words, they distinguish between Scriptural and traditional revelation. Their leading principle is that the Christian religion can be derived pure and unalloyed from the Bible alone; and

they therefore reject, as unnecessary and unauthorised, all professed sources of religious knowledge which are foreign to the Holy Scriptures. As Christians of the latter class, we here take the Scriptures as the *only* external source of revelation for religious truth ; and from this point of view we also trace the outlines of theological science.

Thus considered, a little examination of the subject leads us to discover in it a threefold principle :—1. An eternal, ever-prevailing, and therefore immutable, Christian principle ; 2. Another, *established* upon this positive foundation ; and 3. One that is *developing* itself out of this. Our business is, therefore, not with a revealed doctrine which has long since been completed, which had lived, lost its spirit, and died ; but with one which, like the human mind itself, is continually expanding in youthful vigour—one which, when correctly comprehended, exhibits a mutual relationship and equal degree of development with whatever stage of culture and civilization its adherents, the Christians, may have reached. Thus it has happened that in process of time many truths which must ever be most essential to the Christian, have been variously and differently understood and interpreted. Every thinking Christian must strive to bring his religious opinions and actions into a possible, perfect, and continued harmony with a correct view of the doctrines contained in the Bible. *Christian Protestantism* is the spiritual advancement of humanity at the side of the Bible ; and the task of Christian theology must thus be to show, not only how far that end has been aimed at in past times and until now, but also in what manner man is to strive after it in time to come, and to indicate the means by which the teachings of the Scriptures are to be exhibited in their true union with every advancement which mankind can make in knowledge and civilization.

It is thus evident that Christian theology stands in the closest relation to all the departments of human knowledge, and more especially to philosophy, to which, when duly applied, Christianity has ever been much indebted,—while it has caused her great damage and injury whenever its natural and necessary boundaries have been overpassed ; and it is not less clear that the efforts of the theologian must, above all, be directed towards a due comprehension and a progressively seasonable development and advancement of the always living Christian spirit contained in the Scriptural doctrines. This task pre-supposes a proper understanding of the Scriptures. Christian theology must, therefore, in the first instance, try to solve scientifically the questions—What is meant by Holy Writ ? How have its doctrines been understood until now ? And by what laws are we to proceed so as to arrive at a right understanding of their scope and spirit ? The results of these inquiries, systematically obtained, form a complete science in themselves. As Christianity, however, is not limited to abstract speculations, but has for its chief aim the enkindling and diffusion of true piety, in thought and in practice, Christian theology has further to display the means by which this Christian conviction may be on the one hand called forth in the soul of man and diffused abroad, and on the other quickened and defended. Christian theology is, finally, required to set forth the course which Christianity has pursued in former ages, and to describe its past vicissitudes and present condition.

The foundation of Christian theology must thus be sought in the Scriptures : and, divesting ourselves of all prepossessions and hypotheses, it will, in the first instance, be necessary for us to obtain a clear insight as to the circumstances and the times in which the series of books which constitute the Scriptures came into existence. This leads us to the first branch of theological science, namely, to BIBLICAL ARCHÆOLOGY, or BIBLICAL ANTIQUITIES. Biblical Archæology, usually confined within too narrow limits, is that part of theological science which tries to unravel the various circumstances and conditions which have exercised more or less influence upon the composition of the Scriptural books. Its object is, therefore, to treat of :—

1. The nature of the country in which those books have originated ; to this branch of inquiry belong *Physical Geography* and *Natural History*. By the latter we understand not only (a common mistake) a systematic survey of the natural productions, but also and chiefly an enumeration of the peculiar features of their origin, growth, continuance, cultivation, use, etc. It is, for instance, quite immaterial what place the date-palms or balsam-shrubs occupy in the system—such investigations being of no importance for the understanding of the Bible, the writers of which have disregarded those points ; while, on the other hand, the peculiarities of the locality where the palm-tree stands, its external appearance at the different seasons of the year, its growth, fertility, use, etc.—in short, all that particularly strikes the sense of the beholder, have frequently exercised considerable influence on the inspired writers ; and these sources of external impressions on the senses and mind of man, are to be particularly considered and noticed by Biblical Archæology.
2. The inhabitants of those countries ; their peculiar character, manners, customs, way of living, and their intercourse with other nations.
3. The vicissitudes of their people—consequently, the history of the Hebrews and Jews, down to that time when the last books of the Scriptures were written.
4. The politico-religious institutions, the civil and geographical order and division of the land and the people ; and
5. The mental development of the Hebrews and Jews, the regulations founded on it, and the degree of progress which the arts and sciences had attained among them.

Biblical Archæology may be further divided into two classes—that of the Old Testament and that of the New Testament : the former may again be sub-divided into the *Hebrew* and the *Jewish* archæology.

As soon as the foundation for Biblical researches is laid by the help of Biblical Archæology, the theologian then turns to the solution of the second main question in theology :—What is meant by the Scriptures ? How and when have they arisen ? In what form do they lie before us ? The answer to all these questions is the object of BIBLICAL INTRODUCTION, or, more correctly, of the *History of Holy Writ*. It is divided into Introduction to the Old Testament and Introduction to the New Testament. It must render an account—

1. Of the origin of the individual books received into the sacred canon ; not omitting to notice at the same time the various views that have been entertained on that point by critics of all ages, as well as those particular opinions which are seemingly the more correct.
2. Of the origin of the collection of the books of Scripture as the repository of Christian knowledge, or of religion ; constituting the *History of the Canon*.
3. Of the spread of the Scriptures by transcriptions, translations, and printing.
4. Of the vicissitudes and fate of the original text ; forming the *History of the Text* ; and—
5. Of the various motives which have led to various modes of understanding the Bible ; being the *History of Interpretation*.

We next come to that important part of Theological Encyclopædia connected with the question—What have been regarded as Christian doctrines from the introduction of Christianity to the present day ?

The answer to this important question is given by DOCTRINE-HISTORY,* which, in a less limited sense than that in which the term is usually taken, points out the peculiar doctrines which have from time to time been received as articles of Christian belief. But as a variety of opinions with regard to the essentials of the Christian religion has arisen, not only among the various and different sects as separate bodies, but likewise at sundry times among the members of even one and the same sect or party, Doctrine-History must necessarily include all the peculiar features of schismatic views, their origin and history, the causes of their rise and gradual development, as well as their connection with the Scriptures, from which they all claim to be derived, and by which they must be tried.

A principle that is given out by a Christian sect as an essentially Christian doctrine, becomes an article of creed, a *dogma* (*δόγμα* = *ἡ δέδοικται*).

A *Dogma* is understood to be the doctrine of a particular party or sect, although that party may agree with the other sects in respect of other doctrines of Christianity, and must necessarily agree with them in regard to the spirit and central point of the Christian religion. Such dogmas, or articles of creed, are the fruit of a certain way of thinking peculiar to the age in which they arise, and obtain clerical importance when received either into the system of *Symbols* or into the public liturgy. All symbols must therefore only be considered as belonging to both a certain party and a certain time, and are thus not to be ranked among the eternal and universal articles of faith. The exhibition of a finished system of doctrines lies beyond the range of *Symbolic*; it sets forth merely the most essential truths, the fundamental elements, leaving the farther scientific or systematic details to the sphere of *Dogmatic*. Dogmatic is therefore immediately linked to the doctrines established by a certain party of Christians. An universal Christian Dogmatic is not to be hoped for, so long as there are different parties among Christians. We should therefore have to range Symbol, Dogma, and Dogmatic together, under the comprehensive head of Doctrine-History. Such history ought, however, not to be limited to actual dogmas alone, but ought likewise to embrace many of the more loose and unembodied doctrinal views and speculations; partly on account of the influence which they may have had upon the rise and reception of some embodied dogmas, and partly because history shows that some doctrinal views advanced but rejected in earlier times, have, perhaps after the lapse of some centuries, been reproduced, received, and sanctioned. A comparative survey of the various dogmas of the different sects or church parties is the object of *Comparative Dogmatic*; though it has hitherto limited its views chiefly to the dogmas of the principal sects alone.

It is greatly to be desired that the scope of Comparative Dogmatic should be so extended as to embrace the collection of those dogmas which have, from time to time, prevailed within the church of one and the same party—as, *e. g.*, of the Roman Catholics, with special regard to the variety of opinions entertained by this church on some doctrinal points, from her foundation in the second century, in comparison with those held in the fourth, fifth, and sixth centuries. This function of Doctrine-History has been too much confined to the established doctrines within *one* church-party alone; and this limitation is almost unavoidable with those sects which, like the Roman Catholics, look at all other sects as infidels,—a judgment surely as erroneous as it is partial and uncourteous.

CHRISTIAN MORALS is, properly speaking, only the practical part of Dogmatic, and was, indeed, formerly always exhibited only in its connection therewith. Its province is to show the influence which the Christian dogmas exercise upon the dispositions of

* *Dogmen-geschichte*, 'history of doctrines.' We have no corresponding term in the English language, and therefore propose that of Doctrine-History.

the heart, or in what degree those dogmas may be brought into action upon the will of man. What, in our recent times, has often been called—especially on the part of some German Protestant theologians—*dogmatics* or *doctrines of faith*, without attaching to them any particular meaning of a sect or church-party, partakes mostly of a middle view between church dogmatic, Biblical theology, and religious philosophy, wavering between all, and belonging to none.

PATRISTICS* and PATROLOGY† seem to lie beyond the circle by which we have defined the limits of theological science. For the notion attached to the term ‘Fathers of the Church’ is not universally acknowledged by all Christian sects, and least so among Protestants, who consider it a contradiction to the principle by which the Scriptures are recognised as the *only* source of the knowledge of religious truth.

The immense mass of manifold and various tenets which have prevailed as Christian doctrines at different times and in different countries, ever since the introduction of Christianity, makes it evidently impossible to ascertain what is real Christian doctrine, and what is not, if we do not take the SCRIPTURES as the only guide in this labyrinth. The science, therefore, which discloses to us the tenets of Holy Writ we call BIBLICAL EXEGESIS, or INTERPRETATION. It involves the difficult task of discovering the true meaning attached to the words by the writer. To be able to do this, a thorough knowledge of the language in which the author has written down his thoughts is indispensable; consequently, a profound knowledge of Hebrew for the Old Testament, and of Greek for the New Testament, is of the utmost necessity, and is one of the first requisites, in an expounder of the Bible. But as the Sacred Writings have greatly suffered from, and have been disfigured by the liberties of transcribers and emendators, it is needful to try to discover or restore the real words of the original text; and the science employed in this task is known by the name of BIBLICAL CRITICISM. By means of criticism and philological research the sense of the Biblical writings may be ascertained, *grammatically* or *philologically*. To this mode of exegesis or interpretation is given the name of *Grammatical Exposition*. But although it is most essential to correct interpretation of the Scriptures that the text should be grammatically considered, yet it is equally undeniable that philological exegesis is by itself insufficient to develop completely the meaning of the sacred writers in the words which they employ. To be able to do this completely and satisfactorily, it is necessary that the interpreter should possess the means of transporting himself into the times and into the spirit of the ages in which those writers lived; or, in other words, that he should be well acquainted with the historical conditions of those ages, and with the modes of thought which then prevailed; as well as with the circumstances affecting the particular position of the individual writer of every sacred book, and of the people whom he addressed. Biblical Archæology and Biblical Introduction are the proper instruments for the accomplishment of that object, which we call the Historical Interpretation of the Scriptures; the *true* and perfect Biblical Interpretation is thus comprised in the category of GRAMMATICO-HISTORICAL EXEGESIS,—a term implying conditions which are hardly ever found in an equal degree of profundity in one and the same interpreter.

A more easy, partial, and objectionable species of interpretation is that called DOGMATICAL EXEGESIS, which does not limit itself to an independent inquiry into the meaning of the sacred writings, but attempts rather to determine the sense of the text by arbitrary dogmas. Equally objectionable, and still more arbitrary, is the process of the ALLEGORICAL mode of exposition, which tortures the Biblical sense into figurative

* PATRISTICS, the literary character and history of the Fathers.

† PATROLOGY, the doctrinal and ethical systems founded on their writings.

meanings ; and which rarely fails to evince the essential difference that exists between the mode of thinking in the author and the interpreter, or between the ancient and modern times.

HERMENEUTICS establishes the laws by which the interpreter is to proceed in his labours. Its relation to Interpretation is that of theory to practice. The suggestions which have led to the formation of Biblical Hermeneutics were given chiefly by Dogmatical Exegesis.

The requisites of theology are, however, not confined to the mere endeavour to discover by means of correct exegesis the true meaning of Holy Writ, or of particular passages in the New Testament ; but the object of theology as a science is also and chiefly to collect the various religious views and doctrines dispersed in the Scriptures, and to compare and unite them into an entire system ; and this science, aided by exegesis, is called BIBLICAL THEOLOGY, which is the true corner-stone of Biblical Exegesis. The inquiries involved in it are rendered difficult and intricate by the fact that the Scriptures were composed by various authors, and at different, and often at very long intervals. Biblical Theology must in the first instance be divided into two parts, that of the Old Testament and that of the New Testament. But at the time of the rise of Christianity and the writing of the New Testament, the Jews had already formed a theology of their own, founded upon what may be called exegetical explanations of the religious views set forth in the Old Testament, and which, although not essentially wrong in its principles, was considerably at variance with historical truth. This system of Jewish theology represents the religious opinions which prevailed in the time of Christ, in consequence of the peculiar views which the Jews entertained of the Old Testament writings and of the revelations contained in them ; and it therefore supplies an intermediate link, which is often of more direct use to us for understanding the theology of the New Testament, than the theology of the Old Testament viewed in its purer and more simple results. Neither the Biblical theology of the Old Testament, nor the Jewish theology in general, can be of binding force upon Christians, except in so far as either may be borne out by the Biblical theology of the New Testament. The former bear about the same relation to the latter as Biblical archæology does to the exegesis of the New Testament.

If the essence of Christianity be made a foundation for farther philosophical speculations, we arrive then at CHRISTIAN RELIGIOUS-PHILOSOPHY, which embodies into its system some, but by no means all, the doctrines of Scripture.

There have always been individuals, ever since Christianity has existed, who have particularly employed themselves in diffusing, enlivening, animating, and defending the Christian faith ; and in most instances the Church, as an independent community, has made the conservation of the Christian interests the particular obligation of some of her members. Thus has arisen a science for itself, directed towards the care and preservation of Christianity, and usually called PRACTICAL THEOLOGY. The province of this science is of a threefold character :—

1. A guidance to the right method of calling forth Christian conviction either in those who had hitherto been attached to another religion,—PROSELYTISM ; MISSIONARY-STUDIES ; or in those who, although Christians, are still in want of Christian instruction,—CATECHETICS.
2. The preservation and religious animation of the Church community by means either of public worship itself,—LITURGICS ; or of edifying discourses during the same,—HOMILETICS ; or of that peculiar agency which has its sphere in domestic and private life,—PASTORAL THEOLOGY.

3. Defence of the Christian Church, by diverting the attacks made either against her rights,—CHURCH RIGHTS; or against her sublime truths,—APOLOGETICS.

Finally, Christianity having already existed for very many centuries as a religious institution, it must be for every man, as a *man*, and more particularly for the thinking Christian, of the highest importance to learn the origin of Christianity, its propagation and vicissitudes until our present times, and the extent and nature of the influence which it has exercised upon its votaries. The science which gives information on all these points is called CHURCH HISTORY, describing all the known facts belonging to the total process of development of Christianity. This science is of such an enormous extent as to compel its division into several departments, which have also been variously treated. Such are the *History of the Spread of Christianity*; *History of Church Doctrine*; *History of the Moral Influence of Christianity*; *History of Religious Confusions and Fanaticisms arising out of Christianity*, *History of Christian Civil Constitutions*; *History of the Relations of the Church to the State*; *Ecclesiastical Antiquities or Archæology*; *History of some Christian Sects*, such as, *History of the Jewish Christians*; *History of the Catholics*; *History of the Protestant Church, of the Presbyterians, Methodists, etc.*; *Church History of some Countries and Nations*; *History of Christian Literature*. In that part of Church History which describes the vicissitudes of the Church in times long gone by, the question at last suggests itself, What is the present state of Christianity in the world? The science which—far from being as yet sufficiently cultivated—solves this important question, goes by the name of CHURCH STATISTICS, and with it we may regard the sphere of THEOLOGICAL ENCYCLOPÆDIA as completed.

It cannot lie within the province of the present work as a *Cyclopædia of Biblical Literature* to embrace in the form of a dictionary all the subjects thus described as appertaining to Christian theology. Passing by systematic theology (which is the object of dogmatic history), practical theology, and church-history, the work comprises those branches of positive knowledge which are indispensable for the understanding of the Bible, and its historical interpretation, including, therefore, *Biblical Archæology* and *Biblical Introduction*, but leaving the application itself, together with grammatical criticism, to the department of *Biblical Interpretation*. The treatment of these matters in the form here adopted has certainly the disadvantage of somewhat obscuring the survey and impeding the systematic development of the whole; but this disadvantage is greatly counterbalanced by the benefits arising from the easy and convenient use which in this form can be made of the abundant and various materials belonging to the subjects discussed: a dictionary of such a character has, moreover, this important advantage, that the subjects embraced in its plan can be handled with such fulness of criticism as the present age requires.

Attempts were early made to exhibit information pertaining to the Bible under the alphabetical arrangement of a dictionary. Of the many works of that kind deserving notice, are: *Hierolexicon reale collectum, moderante Ad. Rechenbergio*, Lipsiæ et Francf. 1714, 2 vols.; Aug. Calmet, *Dictionnaire Historique, Critique, Chronologique, Géographique, et Littérale de la Bible*, Paris, 1722, 2 vols., and (most complete) 1730, 4 vols. fol.; *Dictionnaire Universelle, Dogmatique, Canonique, Historique, et Chronologique des Sciences Ecclésiastiques, et avec des Sermons abrégés des plus célèbres Orateurs Chrétiens*, par le P. R. Richard et autres Religieux Dominicains, etc., Paris, 1760-64, 5 vols.; W. F. Hezel, *Biblisches Real-Lexicon, über Biblische, und die Bibel erläuternde alte Geschichte, Erdbeschreibung, Zeitrechnung, etc.*, Leipz. 1783-85, 3 vols. 4to.; F. G. Leun, *Bibl. Encyclopædie, oder exegetisches Real-wörterbuch über die Sämmtlichen Hülfswissenschaften des Auslegers, nach den Bedürfnissen jetziger Zeit. Durch eine Gesellschaft von Gelehrten*. Gotha, 1793-98, 4 vols. 4to.

Although the work of Calmet was the most learned and practically useful of all, the partial stand-point of the author rendered it unsuited to the enlarged demands of the present age ; which, with the superficiality and want of plan in later works, had brought performances of this kind into some disrepute ; and it was reserved for George Benedict Winer, a theologian of Leipsic, to restore them to their former credit by his *Biblisches Real-wörterbuch*, Leip. 1820, 2 vols. 8vo., of which a second and improved edition was published in 1833-38. The sphere of that work is, however, too narrowly drawn, the critical treatment in it is of a very unequal character, and many of the subjects examined in its pages, especially in the department of natural history, have in reality no relation whatever to the Bible. Similar publications by various other writers have been produced on the Continent, but they cannot be regarded as exhibiting any claims to scientific criticism, or well-considered arrangement. [Since the above was written the great work edited by Herzog, the *Real-Encyclopædie für Protestantische Theologie und Kirche*, has made its appearance.]

CYCLOPÆDIA

OF

BIBLICAL LITERATURE.

AALAR

A and Ω, the first and last letters of the Greek alphabet, used as a designation of Himself by the speaker in Rev. i. 8; xxi. 6; xxii. 13. In the last of these passages the speaker is undoubtedly our Lord; in the second the speaker is described as *ὁ καθήμενος ἐπὶ τοῦ θρόνου*, which may be the designation either of the Father or of the Son (Rev. xxii. 1), but according to the usage of the book, is more properly that of the Father (see especially ch. vii. 10); in the first, the speaker, if we adopt the received text (*λέγει ὁ κύριος*), is our Lord; if we follow that of the critical editions (*ὁ κύριος ὁ θεός*), he is God the Father. As respects the *meaning* of the appellation, it is made sufficiently certain by the exposition in ch. xxii. 13, compared with Is. xli. 4; xliii. 10; xlv. 6, that it is equivalent to "the Eternal One." Most commentators adduce the Rabbinical formula 'from א to ת' as analogous to that used in the Apocalypse. But so far as the instances cited go (see Schöttgen, *Hor. Hebr.* l. 1086; L. Capellus, *Spicilegium*, p. 132), the one usage does not appear to be the same as the other; for in all the passages cited the formula used by the Rabbins is used simply to denote *entireness* or *completeness* (e. g., 'Adam transgressed the law from א to ת,' *Jalkut Rubini*, p. 174), not *eternal* and *immortal being*. The idea of the Divine causality appears to be also included in the apocryphical formula as well as in the parallel passages in Isaiah (Piper in Herzog's *Real-Enc.*) In the symbolism of the early Church, the letters A and Ω were combined with the cross, or with the monogram of Christ (Mamachi, *Origin. et Antiq. Christ.* iii. 75, *Maitland Church in the Catacombs*, p. 167). The ascription of this to Jesus Christ has ever been held to imply the ascription to him of divine honours. (Smith, *Script. Test.* ii. 274. 4th edit.)—W. L. A.

AALAR (Ἀλάαρ I Esdr. v. 36), supposed by some to be the same as Addon [ADDON], by others to be the name of a man.

AARON (אֲרֹנִן, etymology and signification uncertain; Sept. Ἀαρών), the eldest son of Amram and Jochebad, of the tribe of Levi, and brother of Moses. He was born B. C. 1574 (Hales, B. C. 1730), three years before Moses, and one year before Pharaoh's edict to destroy the male children of the Israelites (Exod. i. 22; ii. 1, 2). His name first occurs in the mysterious interview which Moses had with the Lord, who appeared to him in the

AARON

burning bush, while he kept Jethro's flock in Horeb. When Moses sought to evade the great commission of delivering Israel, by pleading that he lacked that persuasive readiness of speech which appeared to him essential to such an undertaking, he was reminded that his brother Aaron possessed this in a high degree, and could therefore speak in his name and on his behalf. During the forty years' absence of Moses in the land of Midian, Aaron had married a woman of the tribe of Judah, named Elisheba (or Elisabeth), who had borne to him four sons, Nadab, Abihu, Eleazar, and Ithamar; and Eleazar had, before the return of Moses, become the father of Phinehas (Exod. vi. 23-25).

Pursuant to an intimation from God, Aaron went into the wilderness to meet his long exiled brother, and conduct him back to Egypt. After forty years of separation, they met and embraced each other at the mount of Horeb. When they arrived in Goshen, Aaron introduced his brother to the chiefs of Israel, and assisted him in opening and enforcing the great commission which had been confided to him. In the subsequent transactions, from the first interview with Pharaoh till after the delivered nation had passed the Red Sea, Aaron appears to have been almost always present with his more illustrious brother, assisting and supporting him; and no separate act of his own is recorded. This co-operation was ever afterwards maintained. Aaron and Hur were present on the hill from which Moses surveyed the battle which Joshua fought with the Amalekites; and these two long sustained the weary hands upon whose uplifting the fate of the battle was found to depend (Exod. xvii. 10-12). Afterwards, when Moses ascended Mount Sinai to receive the tables of the law, Aaron, with his sons and seventy of the elders, accompanied him part of the way up, and, as a token of the Divine favour, were permitted to behold afar off the outskirts of that radiant symbol of the Sacred Presence, which Moses was allowed to view more nearly (Exod. xxiv. 1, 2, 9-11).

The absence of Moses in the mountain was prolonged for forty days, during which the people seem to have looked upon Aaron as their head, and an occasion arose which first brings the respective characters of the brothers into real comparison, and the result fully vindicates the Divine preference of Moses by showing that, notwithstanding the seniority and greater eloquence of Aaron, he wanted the high qualities which were

essential in the leader of the Israelites, and which were possessed by Moses in a very eminent degree. The people grew impatient at the protracted stay of their great leader in the mountain, and at length concluded that he had perished in the devouring fire that gleamed upon its top. The result of this hasty conclusion gives us the first intimation of the extent to which their minds were tainted with the rank idolatries of Egypt. Recognising the authority of their lost chief's brother, they gathered around him, and clamorously demanded that he should provide them with a visible symbolical image of their God, that they might worship him as other gods were worshipped. Either afraid to risk the consequences of a refusal, or imperfectly impressed with the full meaning of the recent and authoritative prohibition of all such attempts to represent or symbolize the Divine Being, Aaron complied with their demand; and with the ornaments of gold which they freely offered, cast the figure of a calf [CALF]. He sought, however, to fix the meaning of this image as a symbol of the true God, by proclaiming a feast to Jehovah for the ensuing day. On that day the people met to celebrate the feast, with dancing, with shouting, and with sports.

Meanwhile Moses had been dismissed from the mountain, provided with the decalogue, written 'by the finger of God,' on two tablets of stone. His re-appearance confounded the multitude, who quailed under his stern rebuke, and quietly submitted to see their new-made idol destroyed. For this sin the population was decimated by sword and plague. Aaron, when taxed by his brother for his conduct in this matter, attempted to excuse himself by casting the whole blame upon the people, and pleading the necessity of circumstances (Exod. xxxii.)

During his long absence in the mountain, Moses had received instructions regarding the ecclesiastical establishment, the tabernacle [TABERNACLE], and the priesthood [PRIESTS], which he soon afterwards proceeded to execute. Under the new institution Aaron was to be high-priest, and his sons and descendants priests; and the whole tribe to which he belonged, that of Levi, was set apart as the sacerdotal or learned caste [LEVITES]. Accordingly, after the tabernacle had been completed, and every preparation made for the commencement of actual service, Aaron and his sons were consecrated by Moses, who anointed them with the holy oil, and invested them with the sacred garments. Aaron's elevation was soon followed by a most afflictive event. His two eldest sons, Nadab and Abihu, were struck dead for daring, seemingly when in a state of partial inebriety, to conduct the service of God in an irregular manner, by offering incense with unlawful fire. On this occasion it was enjoined that the priests should manifest none of the ordinary signs of mourning for the loss of those who were so dear to them. To this heavy stroke Aaron bowed in silence (Lev. x. 1-11).

Aaron would seem to have been liable to some fits of jealousy at the superior influence and authority of his brother; for he joined in, or at least sanctioned the invidious conduct of his sister Miriam [MIRIAM], who, after the wife of Moses had been brought to the camp by Jethro, became apprehensive for her own position, and cast reflections upon Moses, much calculated to damage his influence, on account of his marriage with a foreigner—al-

ways an odious thing among the Hebrews. For this, Miriam was struck with temporary leprosy, which brought the high-priest to a sense of his sinful conduct, and he sought and obtained forgiveness (Num. xii.)

Some twenty years after (B.C. 1471), when the camp was in the wilderness of Paran, a formidable conspiracy was organized against the sacerdotal authority exercised by Aaron and his sons, and the civil authority exercised by Moses. This conspiracy was headed by chiefs of influence and station—Korah, of the tribe of Levi, and Dathan and Abiram, of the tribe of Reuben [KORAH]. But the Divine appointment was attested and confirmed by the signal destruction of the conspirators, and by a fierce pestilence which broke out among them, and by which they fell by thousands on the spot. When this was seen, Aaron, at the command of Moses, filled a censer with fire from the altar, and, rushing forward to the point where life had ended and death had not begun, he stood there, and the plague was stayed where he stood. This was in fact another attestation of the Divine appointment; and, for its further confirmation, as regarded Aaron and his family, the chiefs of the several tribes were required to deposit their staves, and with them was placed that of Aaron for the tribe of Levi. They were all laid up together over night in the tabernacle, and in the morning it was found that, while the other rods remained as they were, that of Aaron had budded, blossomed, and yielded the fruit of almonds. The rod was preserved in the tabernacle, as an authentic evidence of the Divine appointment of the Aaronic family to the priesthood—which, indeed, does not appear to have been ever afterwards disputed. (Num. xvii. 1).

Aaron was not allowed to enter the Promised Land, on account of the distrust which he, as well as his brother, manifested when the rock was stricken at Meribah (Num. xx. 8-13). His death, indeed, occurred very soon after that event. For when the host arrived at Mount Hor, in going down the Wady Arabah [ARABAH], in order to *double* the mountainous territory of Edom, the Divine mandate came that Aaron, accompanied by his brother Moses and by his son Eleazar, should ascend to the top of that mountain in the view of all the people; and that he should there transfer his pontifical robes to Eleazar, and then die. He was 123 years old when his career thus terminated; and his son and his brother buried him in a cavern of Mount Hor. The Israelites mourned for him thirty days; and on the first day of the month Ab, the Jews still hold a fast in commemoration of his death.—J. K.

AARONITES. This term occurs in the E. V. in 1 Chron. xii. 27; xxvii. 17; but there is nothing exactly corresponding in the Hebrew. In both passages the word is אַהֲרֹןִים for Aaron.—W. L. A.

AB (אב, *father*) is found as the first member of several compound Hebrew proper names, the etymology and meaning of which may be explained by a few remarks on the laws of their construction. This is the more necessary, as many indifferently take the former or latter member of such compounds to be in the relation of genitive to the other, *i. e.*, consider it equally legitimate to say, *Abner* means *father of light*, or *light of the father*.

Nevertheless, it may be laid down as an incontestable canon—being founded not merely on an accessory law, but on one of the *characteristic* peculiarities of the Syro-Arabian languages (that is, on the *state construct*)—that, in all cases in which a compound name consists of two nouns, *one of which is to be considered in the relation of genitive to the other*, that one must invariably be the *latter*. Abner, therefore, can only mean *father of light*, or *father of Ner*.

This error appears to have arisen (besides the want of sure principles of construction) from the inability to appreciate the metaphorical sense in which the Hebrews use the terms *father*, *son*, etc. The name *Abigail*, *father of joy*, appeared inexplicable as the name of a *woman*; and therefore those scholars thought it allowable to sacrifice the construction to the necessities of the sense. And yet it is not difficult to conceive the process by which the idea of a natural father became modified into that of *author*, *cause*, *source* (as when it is said, 'hath the rain a father?' Job xxxviii. 28); nor that, when once the language had sanctioned the use of father as equivalent to source, the word might be sometimes treated as an abstract, in idea, and be applied without gross incongruity to a woman.

As the Ethiopic, and especially the Arabic languages very frequently use *father* in the sense of *possessor* (as *father of white*, a name for milk), some have been disposed to vindicate the same privilege to Hebrew also. Thus Gesenius seems to have entertained this view, when he rendered *Abigail* by 'pater exultationis, i.e. hilaris,' in his *Thesaurus*.

Very much light yet remains to be thrown on compound Hebrew proper names, by a study of those of the same class in Arabic. The innumerable compound *prænomina* and *cognomina* which the Arabs bestow not only on men, but on beasts and inanimate objects, furnish parallels to almost every peculiarity observable in Hebrew; and although no example may be found in which a woman is called *father of joy*, yet the principle of the metaphorical use of terms of relationship, as the first element in a name, will receive ample illustration, and be brought within the reach of our occidental conceptions. (See an instructive paper on the *Prenomina* of the Arabs, by Kosegarten, in Ewald's *Zeitschrift für die Kunde des Morgenlandes*, i. 297-317).—J. N.

AB (אָב; Ἀββᾶ, Joseph. *Antiq.* iv. 4; the Macedonian Ἀβος) is the Chaldee name of that month which is the fifth of the ecclesiastical and eleventh of the civil year of the Jews. The name was first introduced after the Babylonian captivity, and does not occur in the Old Testament, in which this month is only mentioned by its numeral designation as the *fifth*. It commenced with the new moon of our *August* (the reasons for this statement will be given in the article MONTHS), and always had thirty days. This month is pre-eminent in the Jewish calendar as the period of the most signal national calamities. The 1st is memorable for the death of Aaron (Num. xxxiii. 38). The 9th is the date assigned by Moses Cotzensis (cited in Wagenseil's *Sota*, p. 736) to the following events: the declaration that no one then adult, except Joshua and Caleb, should enter into the Promised Land (Num. xiv. 30); the destruction of the first Temple by Nebuchadnezzar (to these first two 'the fast of

the fifth month,' in Zech. vii. 5; viii. 19, is supposed to refer; yet the tract *Pesachim*, cited in Reland's *Antiq. Sacr.* iv. 10, asserts that the *latter* was the only fast observed during the Captivity); the destruction of the second Temple by Titus; the devastation of the city Bettar (בֵּיתָר); the slaughter of Ben Cozibah (Bar Cocab), and of several thousand Jews there; and the ploughing up of the foundations of the Temple by Turnus Rufus—the last two of which happened in the time of Hadrian.

With regard to the destruction of the first Temple, although there is no doubt that the Jews commemorate that event by a fast on the 9th of Ab, yet the *seventh* is the date given for it in 2 Kings xxv. 8 (where, however, the Syriac and Arabic versions read the *ninth*), and the *tenth* that assigned in Jer. lii. 12. Josephus, however, in mentioning that the Herodian Temple was burnt on the *tenth* of Lous, expressly asserts that it was on the *same* day of the month on which the first Temple was destroyed (*Bell. Jud.* vi. 4, 5). Buxtorf, in his *Synag. Jud.* ch. xxx., reconciles the discrepancy between the 9th as the day of commemoration and the 10th as the date of the event, by saying that the conflagration *began* on the former day. Compare also Wagenseil's *Sota*, p. 942.

In a calendar ascribed to the celebrated astronomer Rab Ada, who lived in the third century, which Bodenschatz has given in his *Kirchliche Verfassung der Juden*, ii. 106, the 15th is the day appointed for the festival of the ξυλοφορῖα in which the wood for the burnt-offering was stored up in the court of the Temple, to which Nehemiah alludes in x. 34, and xiii. 31. Some place this festival on another day, or even month; or assume, on the authority of the treatise *Taanith*, that nine particular families brought wood on nine separate days, four of which, however, occur in Ab (Otho, *Lexicon Rabbin.*, p. 380). The election of particular families accords with the statement in Nehemiah. Nevertheless, Josephus, speaking of this festival, says, ἐν ἡ πᾶσαν ἑβδος ἕλην προσφέρειν (*Bell. Jud.* ii. 17); and the date of the day succeeding it, which he mentions in the next section, fixes its celebration, in his time, on the 14th of the month. It is, however, extremely difficult to distinguish the original from the latter forms in any rite of a people so prone to multiply its ceremonial observances as the Jews were.

Lastly, the *Megillat Taanith* states that the 18th is a fast in memory of the western lamp going out in the Temple in the time of Ahaz. It may be conjectured that this refers to the extinction of 'the lamps' which is mentioned in 2 Chron. xxix. 7, as a part of Ahaz's attempts to suppress the Temple service. For an inquiry into what is meant by the *western* or *evening* lamp, see the article CANDLESTICK.—J. N.

ABADDON (Ἀβaddὼν from Heb. אֲבַדוֹן *destruction*, the *place of the dead*, Job xxvi. 6; Prov. xv. 11), the name given in Rev. ix. 11 to 'the angel of the abyss,' and explained by the writer as equivalent to the Greek ἀπολλύων, *destroyer*. The term may be understood either as a personification of the idea of destruction, or as denoting the being supposed to preside over the regions of the dead, the angel of death. The Rabbins frequently use this term to denote the lowest regions of Sheol or

Hades (*Erubin*, fol. xix. 1; *Sohar Num.*, fol. 74; *Sohar Chadash*, fol. 22, Cf. Eisenmenger, *Entdecktes Jud.* ii. 324 ff.); and the addition, 'angel of the abyss,' seems to favour the supposition that the president or king of this place is alluded to here. But it may be doubted whether the angelology of the Rabbins finds any sanction from the N. T., and it accords better with the general character of the passage to suppose a personification here of the idea of destruction, so that the symbol may find many realizations in the history of the Church: as there are many Antichrists, so doubtless are there many Apollyons. The identification of Abaddon with the Asmodæus of the Apocrypha and the Talmud rests upon no solid basis.—W. L. A.

ABAGTHA (אַבַּגְתָּה), one of the seven chamberlains or eunuchs that served in the presence of King Ahasuerus (*Esth.* i. 10). The name has been derived by Von Bohlen, whom Gesenius follows, from a Sanscrit root *baga* fortune, whence *bagadāta* a fortuna datus. Others trace it to a Semitic root, the Chaldee כְּבִיאִ husbandman; comp. Syr.

بَغ which passed over into the Pers. باغ *bagh*, garden. Fürst identifies it with Bigtha, Bighthan, and Bigthona (*Esth.* i. 10; ii. 21; vi. 2), and derives it from Pers. *beh*, good, beautiful, and *tan*, apoc. *ta*, body—the handsome or fair one. This last seems preferable. The LXX. give a different set of names in *Esth.* i. 10.—W. L. A.

ABANA, or AMANA (אַבְנָה or אֲמָנָה); the former being the *kethib* or Hebrew text, and the latter the *keri* or marginal reading; Sept. Ἀβανά), the name of one of the rivers which are mentioned by Naaman (2 Kings v. 12), 'Abana and Pharpar,' as 'rivers of Damascus.' Amana signifies 'perennial,' and is probably the true name, the permutation of *b* and *m* being very common in the Oriental dialects. It is easy to find 'rivers of Damascus,' but there is a difficulty in appropriating the distinctive names which are here applied to them. The main stream by which Damascus is now irrigated is called *Barvuda*. This river, the Chysorrhoeas, or 'golden stream,' of the ancient geographers, as soon as it issues from a cleft of the Anti-Lebanon mountains, is immediately divided into three smaller courses. The central or principal stream runs straight towards the city, and there supplies the different public cisterns, baths, and fountains; the other branches diverge to the right and left along the rising ground on either hand, and having furnished the means of extensive irrigation, fall again into the main channel, after diffusing their fertilizing influences, without which the whole would be an arid desert, like the vast surrounding plains. In those plains the soil is in some parts even finer than here, but barren from the want of water. The main stream and its subsidiaries unite in greatly weakened force beyond the town on the south-east; and the collected waters, after flowing for two or three hours through the eastern hills, are at length lost in a marsh or lake, which is known as the *Bahr el Merdj*, or Lake of the Meadow. Dr. Richardson (*Travels*, ii. 499) states that the 'water of the Barrada, like the water of the Jordan, is of a white sulphureous hue, and an unpleasant taste.' At the present day it seems scarcely possible to appropriate with certainty the Scriptural names to these streams.

There is indeed a resemblance of name which would suggest the Barrada to be the Pharpar, and then the question would be, which of the other streams is the Abana. But some contend that the Barrada is the Abana, and are only at a loss for the Pharpar. Others find both in the two subsidiary streams, and neglect the Barrada. The most recent conjecture seeks the Abana in the small river *Fidgi* or *Fijih*, which Dr. Richardson describes as rising near a village of the same name, in a pleasant valley fifteen or twenty miles to the north-west of Damascus. It issues from the limestone rock, in a deep, rapid stream, about thirty feet wide. It is pure and cold as iced water; and, after coursing down a stony and rugged channel for above a hundred yards, falls into the Barrada, which comes from another valley, and at the point of junction is only half as wide as the *Fijih*. Dr. Mansford (*Script. Gaz.* in ABANA), who adopts the notion that the Abana was one of the subsidiary streams, well remarks that 'Naaman may be excused his national prejudice in favour of his own rivers, which, by their constant and beautiful supply, render the vicinity of Damascus, although on the edge of a desert, one of the most beautiful spots in the world.' See Wilson's *Lands of the Bible*, ii. 19; Stanley's *Sinai and Palestine*, p. 489, and papers by the Rev. J. L. Porter, M.A., in the *Journal of Sacred Literature*, 2d series, vol. iv. p. 245, and vol. v. p. 45.

ABARBANEL [ABRAVANEL].

ABARIM (הַעֲבָרִים) [from עֶבֶר, the region beyond; always with the article הַרְרֵה־עֲבָרִים or הַרְרֵ=the mount or mountains of the regions beyond]; Sept. Ἀβαρῖν), a mountain, or rather chain of mountains, which form or belong to the mountainous district east of the Dead Sea and the lower Jordan. It presents many distinct masses and elevations, commanding extensive views of the country west of the river (Irby and Mangles, p. 459). From one of the highest of these, called Mount Nebo, Moses surveyed the Promised Land before he died. From the manner in which the names Abarim, Nebo, and Pisgah are connected (*Deut.* xxxii. 49, 'Get thee up into this mountain Abarim, unto Mount Nebo;' and xxxiv. 1, 'Unto the mountain of Nebo, to the top of Pisgah'), it would seem that Nebo was a mountain of the Abarim chain, and that Pisgah was the highest and most commanding peak of that mountain. The loftiest mountain of the neighbourhood is Mount Attarous, about ten miles north of the Arnon; and travellers have been disposed to identify it with Mount Nebo. It is represented as barren, its summit being marked by a wild pistachio-tree overshadowing a heap of stones. The precise appropriation of the three names, however, remains to be determined, the locality has not yet been sufficiently explored; the researches of the most recent traveller, M. de Saulcy, have led to no satisfactory result.

ABATTICHIM (אַבְטִיחִים; Sept. ἄβτιχος). This word occurs only in Numbers xi. 5, where the murmuring Israelites say, 'We remember the fish which we did eat freely in Egypt, the cucumbers and the *abattichim*,' etc. The last word has always been rendered 'MELONS.' The probable correctness of this translation may be inferred from melons having been known to the nations of antiquity; and

it may be proved to be so, by comparing the original term with the name of the melon in a cognate language such as the Arabic.

The Cucurbitaceæ, or gourd tribe, are remarkable for their power of adapting themselves to the different situations where they can be grown. Thus Mr. Elphinstone describes some of them as yielding large and juicy fruit in the midst of the Indian desert, where water is 300 feet from the surface. Extreme of moisture, however, is far from injurious to them, as the great majority are successfully cultivated in the rainy season in India. Mr. Moorcroft describes an extensive cultivation of melons and cucumbers on the beds of weeds which float on the lakes of Cashmere. They are similarly cultivated in Persia and in China. In India 'some of the species may be seen in the most arid places, others in the densest jungles. Planted at the foot of a tree, they emulate the vine in ascending its branches; and near a hut, they soon cover its thatch with a coating of green. They form a principal portion of the culture of Indian gardens: the farmer even rears them in the neighbourhood of his wells' (Royle, *Himalayan Botany*, p. 218).

These plants, though known to the Greeks, are not natives of Europe, but of Eastern countries, whence they must have been introduced into Greece. They probably may be traced to Syria or Egypt, whence other cultivated plants, as well as civilization, have travelled westwards. In Egypt they formed a portion of the food of the people at the very early period when the Israelites were led by Moses from its rich cultivation into the midst of

1. *Cucurbita citrullus*.

the desert. The melon, the water-melon, and several others of the Cucurbitaceæ, are mentioned by Wilkinson (*Thebes*, p. 212; *Ancient Egyptians*, iv. 62) as still cultivated there, and are described as being sown in the middle of December, and cut, the melons in ninety and the cucumbers in sixty days.

If we consider that the occurrences so graphically detailed in the Bible took place in the East, we should expect, among the natural products noticed, that those which appear from the earliest times to have been esteemed in these countries would be those mentioned. But as all are apt to undervalue the good which they possess, and think of it only when beyond their reach, so the Israelites in the desert longed for the delicious coolness of the melons of Egypt. Among these we may suppose both the melon and water-melon to have been included, and therefore both will be treated of in this article.

By the term *Abattichim* there is little doubt that melons are intended, as, when we remove the plural form *im*, we have a word very similar to the Arabic بطيخ *Butikh*, which is the name of the

melon in that language. This appears, however, to be a generic term, inasmuch as they employ it simply to indicate the common or musk melon, while the water-melon is called *Butikh-hindee*, or Indian melon. The former is called in Persian *khuy-poozeh*, and in Hindee *khurbooja*. It is probably a native of the Persian region, whence it has been carried south into India, and north into Europe, the Indian being a slight corruption of the Persian name. As the Arabian authors append *fufash* as the Greek name of *butikh*, which is considered to be the melon, it is evident that *fufash* must, in their estimation, be the same. From there being no *ph* in Arabic, and as the diacritical point *noon* might, by transcribers, have easily been mistaken for that of *sheer*, it is more than probable that this is intended for *πέπων*, especially if we compare the description in Avicenna with that in Dioscorides. By Galen it was called *Melopepo*, from *melo* and *pepo*, the former from being roundish in form like the apple. The melon is supposed to have been the *αίκνος* of Theophrastus, and the *αίκνος πέπων* of Hippocrates. It was known to the Romans, and cultivated by Columella, with the assistance of some precaution at cold times of the year. It is said to have been introduced into this country about the year 1520, and was called musk-melon to distinguish it from the pumpkin, which was usually called melon.

The melon, being thus a native of warm climates, is necessarily tender in those of Europe, but being an annual, it is successfully cultivated by gardeners with the aid of glass and artificial heat of about 75° to 80°. The fruit of the melon may be seen in great variety, whether with respect to the colour of its rind or of its flesh, its taste or its odour, and also its external form and size. The flesh is soft and succulent, of a white, yellowish, or reddish hue, of a sweet and pleasant taste, of an agreeable, sometimes musk-like odour, and forms one of the most delicious of fruits, which, when taken in moderation, is wholesome, but, like all other fruits of a similar kind, is liable to cause indigestion and diarrhoea when eaten in excess, especially by those unaccustomed to its use.

All travellers in Eastern countries have borne testimony to the refreshment and delight they have experienced from the fruit of the melon. But we shall content ourselves with referring to Alpinus, who, having paid particular attention to such subjects, says of the Egyptians, 'Fructibus, &c. se replent, ut ex iis solis sæpe cœnam, vel prandium perficiant, cujusmodi sunt precocia, cucurbitæ, pepones, melopepones; quorum quidem nomen genericum est Batech' (*Rerum Egypt. Hist.* i. 17). He also describes in the same chapter the kind of melon called Abdellavi, which, according to De Sacy, receives its name from having been introduced by Abdullah, a governor of Egypt under the Khalif Al Mamoon. It may be a distinct species, as the fruit is oblong, tapering at both ends, but thick in the middle; a figure (tab. xli.) is given in his work *De Plantis Egypti*; but Forskål applies this name also to the Chate, which is separately described by Alpinus, and a figure given by him at tab. xl.

The *Cucumis Chate* is a villous plant with trailing stems, leaves roundish, bluntly angled, and toothed; the fruit pilose, elliptic, and tapering to both ends. 'Horum usum corporibus in cibo ipsis tum crudis, tum coctis vescentibus, salubrem esse apud omnes eorum locorum incolae creditur' (Alpin. *l. c.* p. 54). Hasselquist calls this the 'Egyptian melon' and 'queen of cucumbers,' and says that it grows only in the fertile soil round Cairo; that the fruit is a little watery, and the flesh almost of the same substance as that of the melon, sweet and cool. 'This the grandes and Europeans in Egypt eat as the most pleasant fruit they find, and that from which they have the least to apprehend. It is the most excellent fruit of this tribe of any yet known' (Hasselquist, *Travels*, p. 258). Forskal, uniting the Abdellavi and Chate into one species, says it is the commonest of all fruits in Egypt, and is cultivated in all their fields, and that many prepare from it a very grateful drink (*Flora Aegyptiaco-Arabica*, p. 168).

With the melon it is necessary to notice the Water-Melon, which is generally supposed to be specially indicated by the term Battich. But this it would be difficult to determine in the affirmative in a family like the Cucurbitaceæ, where there are so many plants like each other, both in their herbage and fruit. In the first place, the term Battich is rather generic than specific, and therefore, if *Abattichim* were similarly employed, it might include the water-melon, but not to the exclusion of the others. In the second place, it is doubtful whether the water-melon was introduced into Egypt at a very early period, as we find no distinct mention of it in Greek writers. It is now common in all parts of Asia. It seems to have been first distinctly mentioned by Serapion under the name of Dullaha, which in the Latin translation is interpreted, 'id est melo magnus viridis;' and Sethio is quoted as the earliest author who applies the term Ἀγγούριον to the water-melon, as has subsequently been frequently the case, though it is often distinguished as an Anguria indica. Serapion, however, quotes Rhases, Meseha, and Ishmahelita. In the Persian books referred to in a Note, the author finds *Battich hindæ* given as the Arabic of *turbooz*, which is the name assigned in India to the water-melon. So Alpinus, speaking of the anguria in Egypt, says, 'vulgo *Bateh el Maovi* (water), et in Scriptoribus Medicis *Bateh-Indi vel Anguria indica* dicitur.' One of the Persian names is stated to be *hinduaneh*. It may be indigenous to India, but it is difficult, in the case of this as of other long-cultivated plants, to ascertain its native country with certainty. For, even when we find such a plant apparently wild, we are not sure that the seed has not escaped from cultivation; and at present we know that the water-melon is cultivated in all parts of Asia, in the north of Africa, and in the south of Europe.

The water-melon is clearly distinguished by Alpinus as cultivated in Egypt, and called by the above names, 'quæ intus semina tantum, et aquam dulcissimum continent.' It is mentioned by Forskal, and its properties described by Hasselquist. Though resembling the other kinds very considerably in its properties, it is very different from them in its deeply-cut leaves, from which it is compared to a very different plant of this tribe—that is, the colocynth. 'Citrus folio colocynthidis secto semine nigro.' A few others have cut leaves, but

the water-melon is so distinguished among the edible species. The plant is hairy, with trailing cirriferous stems. The pulp abounds so much in watery juice that it will run out by a hole made through the rind; and it is from this peculiarity that it has obtained the names of water-melon, melon d'eau, wasser-melon. Hasselquist says that it is cultivated on the banks of the Nile, in the rich clayey earth which subsides during the inundation, and serves 'the Egyptians for meat, drink, and physic. It is eaten in abundance, during the season, even by the richer sort of people; but the common people, on whom Providence hath bestowed nothing but poverty and patience, scarcely eat anything but these, and account this the best time of the year, as they are obliged to put up with worse at other seasons of the year' (*Travels*, p. 256).—J. F. R.

[In concluding the first article in this work on the botany of the Bible, the author thinks it desirable to state the mode in which he has studied the subject, and the grounds upon which he has formed his opinions, whether they agree with or differ from those of previous writers. He has already related, in his 'Essay on the Antiquity of Hindoo Medicine,' that his attention was first directed to the identification of the natural products mentioned in ancient authors, in consequence of being requested by the Medical Board of Bengal to investigate the medicinal plants and drugs of India, for the purpose of ascertaining how far the public service might be supplied with medicines grown in India, instead of importing them nearly all from foreign countries. In effecting this important object, his first endeavour was to make himself acquainted with the different drugs which the natives of India are themselves in the habit of employing as medicines. For this purpose he had to examine the things themselves, as well as to ascertain the names by which they were known. He therefore directed specimens of every article in the bazars to be brought to him, whether found wild in the country or the produce of culture—whether the result of home manufacture or of foreign commerce—whether of the animal, vegetable, or mineral kingdom—whether useful as food or as medicine, or employed in any of the numerous arts which minister to the wants or comforts of man. In order to acquire a knowledge of their names, he caused the native works on Materia Medica to be collated by competent hakeems and moonshees, and the several articles arranged under the three heads of the animal, vegetable, and mineral kingdoms. The works collated were chiefly the 'Mukhzan-al-Udwieh,' 'Tohfat-al-Moomeneen,' 'Ihtiarut Buddie,' and 'Taleef Sheereef,' all of them in Persian, but consisting principally of translations from Arabic authors. These were themselves indebted for much of their information respecting drugs to Dioscorides; but to his descriptions the Persians have fortunately appended the Asiatic synonymes, and references to some Indian products not mentioned in the works of the Arabs. The author himself made a catalogue of the whole, in which, after the most usually received, that is, the Arabic name, the several synonymes in Persian, Hindee, &c., as well as in metamorphosed Greek, were inserted. He traced the articles as much as possible to the plants, animals, and countries whence they were derived; and attached to them their natural history names, whenever he was successful in ascertaining them.

Being without any suitable library for such investigations, and being only able to obtain a small copy of Dioscorides, he was in most cases obliged to depend upon himself for the identification of the several substances. The results of several of these investigations are briefly recorded in his observations on the history and uses of the different natural families of plants, in his 'Illustrations of the Botany of the Himalayan Mountains.' The author also made use of these materials in his 'Essay on the Antiquity of Hindoo medicine,' in tracing different Indian products from the works of the Arabs into those of the Greeks, even up to the time of Hippocrates. He inferred that tropical products could only travel from south to north, and that the Hindoos must have ascertained their properties, and used them as medicines, before they became sufficiently famous to be observed and recorded by the Greeks. Having thus traced many of these Eastern products to the works of almost contemporary authors, he was led to conclude that many of them must be the same as those mentioned in the Bible, especially as there is often considerable resemblance between their Arabic and Hebrew names (*Essay*, p. 138).

Although, like Hasselquist, Alpinus, Forskal, and others, the author studied these subjects in Eastern countries, yet he differs from them all in the circumstances under which he pursued his inquiries. His investigations were carried on while he was resident in the remotest of the Eastern nations known in early times, who were probably among the first civilized, and who are still not only acquainted with the various drugs and their names, but possess an ancient literature, in which many of these very substances are named and arranged. Having obtained the drugs, heard their names applied by the natives, read their descriptions, and traced them to their plants, he formed many of his opinions from independent sources. It may, therefore, be considered a strong confirmation of the correctness of his results when they agree with those of previous inquirers; when they differ, it must be ascribed to the peculiar process by which they have been obtained.—J. F. R.]

2. Cucumis melo.

ABAUZIT, FIRMIN, was born at Usez, in Lower Languedoc, in the year 1679. Having finished his studies, he devoted some time to travelling, in the course of which he became per-

sonally acquainted with Bayle, Basnage, and Jurieu in Holland, and Sir I. Newton in this country. William III. sought to detain him in England, but he preferred to return to Geneva, where he spent the rest of his life as honorary librarian to the public library. He died in 1767. His contributions to biblical science, besides the share he had, which was considerable, in the French translation of the New Testament, which appeared in 1726, consist in some exegetical essays of no great moment, and an *Essai sur l'Apocalypse*, in which he throws doubts on the claim of that book to be the work of the Apostle John, suggests that it was written during the reign of Nero, and advances the hypothesis, that it is to be viewed as an expansion of our Lord's prediction concerning the destruction of the Jewish state. This essay is considered as forming a sort of epoch in the history of Apocalyptic interpretation (Stuart on the *Apoc.*, p. 371: Edin. 1847). It was translated into English, and was published in 1730 under the title of *A Discourse, Historical and Critical, on the Revelation*. [TWELLS.] A volume of treatises, part polemical and part exegetical, from his pen appeared also in English, translated by Dr. E. Harwood, under the title, *Reflections on the Eucharist, on Idolatry, etc.*, 8vo, 1770. 'Its critical information is not very profound, and the opinions it expresses on some theological subjects abundantly free' (Orme). This was followed in 1774 by another volume, also translated by Dr. Harwood, entitled *Miscellanies on Historical, Theological, and Critical Subjects*. Two volumes of his *Oeuvres Posthumes* were published in London in 1773. Herzog (*Real. Ency. s. v.*) calls him a 'geistreicher dilettant' in theology.—W. L. A.

ABBA ('Αββâ אבא) is the Hebrew word אב, father, under a form peculiar to the Chaldee idiom. The Aramaic dialects do not possess the definite article in the form in which it is found in Hebrew. They compensate for it by adding a syllable to the end of the simple noun, and thereby produce a distinct form, called by grammarians the *emphatic*, or *definitive*, which is equivalent (but with much less strictness in its use, especially in Syriac) to a noun with the article in Hebrew. This emphatic form is also commonly used to express the vocative case of our language—the context alone determining when it is to be taken in that sense (just as the noun with the article is sometimes similarly used in Hebrew). Hence this form is appropriately employed in all the passages in which it occurs in the New Testament (Mark xiv. 36; Rom. viii. 15; Gal. iv. 6): in all of which it is an invocation. Why *Abba* is, in all these passages, immediately rendered by δ πατήρ, instead of πατήρ, may perhaps be in part accounted for on the supposition that, although the Hellenic (as well as the classical) Greek allows the use of the nominative with the article for the vocative (Winer, *Gram. des Neutest. Sprach.* § 29), the writers of the New Testament preferred the former, because the article more adequately represented the force of the emphatic form.

It is also to be observed that, in the usage of the Targums, אבא, even when it is the subject of an ordinary proposition, may mean *my father*; and that it is for this reason the word is not used with the suffix of the *first* person singular. Lightfoot has endeavoured (*Horæ Hebr. ad Marc.* xiv. 36) to

shew that there is an important difference between the Hebrew אב and the Chaldee אבנא: that whereas the former is used for all senses of *father*, both strict and metaphorical, the latter is confined to the sense of a *natural* or *adoptive* father. This statement, which is perhaps not entirely free from a doctrinal bias, is not strictly correct. At least, the Targums have rendered the Hebrew *father* by אבנא, in Gen. xiv. 8, and Job xxxviii. 28, where the use of the term is clearly metaphorical; and, in later times, the Talmudical writers (according to Buxtorf, *Lex. Talm.*) certainly employ אבנא to express *rabbi, master*—a usage to which he thinks reference is made in Matt. xxiii. 9.—J. N.

ABBOT, GEORGE, Archbishop of Canterbury, was born at Guildford, 29th October 1562. He received his education at Guildford, whence he passed to Balliol College, Oxford. His rise in the church was rapid. He became Dean of Winchester in 1599, Bishop of Lichfield in 1608, of London in 1609, and in 1611 he was elevated to the see of Canterbury. He held this dignified post amidst varying fortunes till 1633, when he died at Croydon on the 4th of August. 'He was a person,' says Wood, 'pious and grave, and exemplary in his life and conversation. He was also a learned man, and had his erudition all of the old stamp' (*Athen. Oxon.*) He was one of those to whom the translation of the New Testament, from Matthew to Acts, was entrusted by King James. His works are chiefly polemical; but he has left a commentary on the Prophet Jonah, in the form of sermons, which is much prized for its rich spiritual thinking and doctrinal weight rather than for its exegetical merits. The first edition appeared in 1600, in 4to. An edition, in two vols. 8vo, was published at Edinburgh in 1845.—W. L. A.

ABBREVIATIONS. As there are satisfactory grounds for believing that the word *Selah*, in the Psalms, is not an anagram, the earliest positive evidence of the use of abbreviations by the Jews occurs in some of the inscriptions on the coins of Simon the Maccabee. Some of these, namely, have שרואל, and חרות; and some of those of the first and second years have נ and ש; the former of which is considered to be a numeral letter, and the latter an abbreviation for שנת, *anno II.* (Bayer, *De Numis Hebræo-Samaritanis*, p. 171). It is to be observed, however, that both these latter abbreviations alternate on other equally genuine coins, with the full legends שנת אחת and שנת שתי; and that the coins of the third and fourth years invariably express both the year and the numeral in *words* at length.

The earliest incontestable evidence of the use of abbreviations in the copies of the Old Testament is found in some few extant MSS., in which common words, not liable to be mistaken, are curtailed of one or more letters at the end. Thus כִּי לְעוֹלָם is written for יִשְׂרָאֵל; and the phrase חֲסִדוֹ, so frequently recurring in Ps. cxxxvi., is in some MSS. written כִּי לְעוֹלָם. Yet even this licence, which is rarely used, is always denoted by the sign of abbreviation, an oblique stroke on the last letter, and is generally confined to the end of a line; and as all the MSS. extant (with hardly two exceptions) are later than the tenth century, when

the Rabbinical mode of abbreviation had been so long established and was carried to such an extent, the infrequency and limitation of the licence, under such circumstances, might be considered to favour the belief that it was not more freely employed in earlier times.

Nevertheless, some learned men have endeavoured to prove that abbreviations must have been used in the MSS. of the sacred text which were written before the Alexandrian version was made; and they find the grounds of this opinion in the existence of several Masoretic various lections in the Hebrew text itself, as well as in the several discrepancies between it and the ancient versions, which may be plausibly accounted for on that assumption. This theory supposes that both the copyists who resolved the abbreviations (which it is assumed existed in the ancient Hebrew MSS. prior to the LXX.) into the entire full text which we now possess, and the early translators who used such abbreviated copies, were severally liable to error in their solutions. To illustrate the application of this theory to the Masoretic readings, Eichhorn (*Einleit. ins A. T.* i. 323) cites, among other passages, Jos. viii. 16, in which the Kethib is עֵיר, and the Keri יָעִ; and 2 Sam. xxiii. 20, in which יָוִי is the Kethib, and חֵילִי the Keri. With regard to the versions, *Drusius* suggests that the reason why the LXX. rendered the words (Jon. i. 9) אֲנֹכִי עֹבֵר, by εὐδὸς κυπλοῦ εἰπὺ, was because they mistook the *Resh* for *Daleth*, and believed the *Yod* to be an abbreviation of *Jehovah*, as if it had been originally written עֲבָדִי (*Quest. Ebraic.* iii. 6). An example of the converse is cited from Jer. vi. 11, where our text has הִמַּת יְהוָה, which the LXX. has rendered θεοῦ μου, as if the original form had been הִמַּתִּי, and they had considered the *Yod* to be a suffix, whereas the later Hebrew copyists took it for an abbreviation of the sacred name. Kennicott's three *Dissertations* contain many similar conjectures; and Stark's *Davidis aliorumque Carminum Libri V.* has a collection of examples out of the ancient versions, in which he thinks he traces false solutions of abbreviations.

In like manner some have endeavoured to account for the discrepancies in statements of *numbers* in parallel passages and in the ancient versions, by assuming that numbers were not expressed in the early MSS. by entire words (as they invariably are in our present text), but by some kind of abbreviation. Ludolf, in his *Commentar. ad Hist. Ethiop.* p. 85, has suggested that numeral *letters* may have been mistaken for the initial letter, and, consequently, for the abbreviation of a numeral *word*, giving as a pertinent example the case of the Roman V being mistaken for *Viginti*. He also thinks the converse to have been possible. Most later scholars, however, are divided between the alternative of *letters* or of *arithmetical cyphers* analogous to our figures. The last was the idea Cappelent entertained (*Critica Sacra*, i. 10), although De Vignoles appears to have first worked out the theory in detail in his *Chronologie de l'Histoire Sainte*: whereas Scaliger (cited in Walton's *Prolegomena*, vii. 14) and almost all modern critics are in favour of *letters*. Kennicott has treated the subject at some length; but the best work on it is that of J. M. Faber, entitled *Literas olim pro vocibus in numerando à scriptoribus V. T. esse adhibitas*, Onoldi, 1775, 4to.

It is undeniable that it is much easier to explain the discordant statements which are found, for instance, in the parallel numbers of the 2d chapter of Ezra and the 7th of Nehemiah, by having recourse to either of these suppositions, than it is to conceive how such very dissimilar signs and sounds, as the entire names of the Hebrew numerals are, could be so repeatedly confounded as they appear to have been. This adequacy of the theory to account for the phenomena constitutes the internal argument for its admission. Gesenius has also, in his *Geschichte der Hebräischen Sprache*, p. 173, adduced the following external grounds for its adoption: the fact that *both* letters and numeral notes are found in other languages of the Syro-Arabian family, so that neither is altogether alien to their genius; letters, namely, in Syriac, Arabic, and later Hebrew; numeral figures on the Phœnician coins and Palmyrene inscriptions (those employed by the Arabs and transmitted through them to us are, it is well known, of Indian origin). And although particular instances are more easily explained on the one supposition than on the other, yet he considers that analogy, as well as the majority of examples, favours the belief that the numerals were expressed, in the ancient copies, by *letters*; that they were then liable to frequent confusion; and that they were finally written out at length in words, as in our present text.

There is an easy transition from these abbreviations to those of the later Hebrew, or Rabbinical writers, which are nothing more than a very extended use and development of the same principles of stenography. Rabbinical abbreviations, as defined by Danz, in his valuable *Rabbinismus Enucleatus*, § 65, are either *perfect*, when the initial letters only of several words are written together, and a double mark is placed between such a group of letters, as in יִשְׂרָאֵל , the common abbreviation of the Hebrew names of the books of Job, Proverbs, and Psalms (the *last* letters only of words are also written in *Cabbalistical* abbreviations); or *imperfect*, where more than one letter of a single word is written, and a single mark is placed, at the end to denote the mutilation, as יִשְׂרָאֵל . The perfect abbreviations are called by the Rabbinical writers ראשי תיבות , i. e., *capitals of words*. When proper names, as frequently happens, are abbreviated in this manner, it is usual to form the mass of consonants into proper syllables by means of the vowel *Patach*, and to consider *Fod* and *Vau* as representatives of *I* and *U*. Thus רמב"ם , *Rambam*, the abbreviation of 'Rabbi Mosheh ben Maimon,' and רש"י , *Rashi*, that of 'Rabbi Shelomoh Jarchi,' are apposite illustrations of this method of contraction. Some acquaintance with the Rabbinical abbreviations is necessary to understand the Masoretic notes in the margin of the ordinary editions of the Hebrew text; and a considerable familiarity with them is essential to those who wish, with ease and profit, to consult the Talmud and Jewish commentators. The elder Buxtorf wrote a valuable treatise on these abbreviations, under the title *De Abbreviaturis Hebraicis*, which has often been reprinted; but, from the inexhaustible nature of the subject, O. G. Tychsen added two valuable supplements, in 1768, and Selig incorporated them with his own researches in his *Compendia vocum Hebraico-Rabbinicarum*, Lips. 1780, which is the completest work of the kind extant.

With regard to the abbreviations in the MSS.

of the New Testament, it may be observed that they have furnished little matter for critical inquiry. Those that exist are almost exclusively confined to common and easily supplied words, e. g., *God, Lord, father, son, &c.*; or to the terminations of formation and inflexion, in which case they fall more properly under the province of general Greek Palæography. They very rarely furnish any hint of the mode in which a various reading has arisen, as has been suggested, for instance, in the case of $\text{καὶ} \omega$ and κυρίω in Romans xii. 11. The use of *letters* for numerals, however, according to Eichhorn's *Einleit. ins N. T.* iv. 199, is not only found in some MSS. now extant, but, in the instance of the number 666, in Rev. xiii. 18, can be traced up to the time of the apostles; partly on the testimony of Irenæus, and partly because those MSS. which wrote the number out in words differ in the gender of the first word, some writing ἑξακόσιοι , some ἑξακόσια , some ἑξακόσια . The early fathers have also unhesitatingly availed themselves of the theory that numbers were originally denoted by letters, whenever they wished to explain a difficulty in numbers. Thus Severus of Antioch (cited by Theophylact) accounts for the difference of the hour of our Lord's crucifixion, as stated in Mark xv. 25, and John xix. 14, by the mistake of γ (3) for ς (6). Eichhorn has given a lithographed table of the most usual abbreviations in the MSS. of the New Testament.

Lastly, the abbreviations by which Origen, in his 'Hexapla,' cites the Septuagint and other Greek versions, deserves some notice. The nature of this work rendered a compendious mode of reference necessary; and, accordingly, numeral letters and initials are the chief expedients employed. A large list of them may be seen in Montfaucou's edition of the 'Hexapla,' and Eichhorn (*Einleit. ins A. T.* i. 548-50) has given those which are most important.—J. N.

ABDON (עֲבֵדוֹן , *servile*; Sept. Ἀβδών), the son of Hillel, of the tribe of Ephraim, and tenth judge of Israel. He succeeded Elon and judged Israel eight years. His administration appears to have been peaceful; for nothing is recorded of him but that he had forty sons and thirty nephews, who rode on young asses—a mark of their consequence (Judg. xii. 13-15). Abdon died B.C. 1112. [BEDAN.]

There were three other persons of this name, which appears to have been rather common (1 Chron. viii. 23; ix. 36; 2 Chron. xxxiv. 20).—J. K.

ABDON, a city of the tribe of Asher, given to the Levites of Gershom's family (Josh. xxi. 30; 1 Chron. vi. 74). [20 Codd. read this for Hebron. עֲבֵרֹן , Josh. xix. 28.]

ABEDNEXO (עֲבֵד־נֶגוֹ , *servant of Nego*, i. e., Nebo; Sept. Ἀβδνεγώ), the Chaldee name imposed by the king of Babylon's officer upon Azariah, one of the three companions of Daniel. With his two friends, Shadrach and Meshach, he was miraculously delivered from the burning furnace, into which they were cast for refusing to worship the golden statue which Nebuchadnezzar had caused to be set up in the plain of Dura (Dan. iii.)—J. K.

ABEL (הֶבֶל , *breath, vanity*; Sept. *Ἀβελ), properly HEBEL, the second son of Adam, slain by

Cain, his elder brother (Gen. iv. 1-16). [CAIN.] To the name *Abel* a twofold interpretation has been given. Its primary signification is *weakness* or *vanity*, as the word **הבל**, from which it is derived, indicates. By another rendering it signifies *grief* or *lamentation*, both meanings being justified by the Scripture narrative. CAIN (*a possession*) was so named to indicate both the joy of his mother and his right to the inheritance of the first-born: Abel received a name indicative of his weakness and poverty when compared with the supposed glory of his brother's destiny, and *prophetically* of the pain and sorrow which were to be inflicted on him and his parents.

Ancient writers abound in observations on the mystical character of Abel; and he is spoken of as the representative of the pastoral tribes, while Cain is regarded as the author of the nomadic life and character. St. Chrysostom calls him the *Lamb of Christ*, since he suffered the most grievous injuries solely on account of his innocency (*Ad Stagir.* ii. 5); and he directs particular attention to the mode in which Scripture speaks of his offerings, consisting of the best of his flock, 'and of the fat thereof,' while it seems to intimate that Cain presented the fruit which might be most easily procured (*Hom. in Gen.* xviii. 5). St. Augustine, speaking of regeneration, alludes to Abel as representing the new or spiritual man in contradistinction to the natural or corrupt man, and says, 'Cain founded a city on earth, but Abel as a stranger and pilgrim looked forward to the city of the saints which is in heaven.' (*De Civitate Dei*, xv. i.) Abel, he says in another place, was the first-fruits of the Church, and was sacrificed in testimony of the future Mediator. And on Ps. cxviii. (*Serm.* xxx. sec. 9) he says: 'this city' (that is, 'the city of God') 'has its beginning from Abel, as the wicked city from Cain.' Irenæus says that God, in the case of Abel, subjected the just to the unjust, that the righteousness of the former might be manifested by what he suffered (*Contra Hæres.* iii. 23).

Heretics existed in ancient times who represented Cain and Abel as embodying two spiritual powers, of which the mightier was that of Cain, and to which they accordingly rendered divine homage.

In the early Church Abel was considered the first of the martyrs, and many persons were accustomed to pronounce his name with a particular reverence. An obscure sect arose, under the title of *Abelites*, the professed object of which was to inculcate certain fanatical notions respecting marriage; but it was speedily lost amid a host of more popular parties.—H. S.

ABEL (**אַבֶּל**; Sept. Ἀβελ), a name of several places in Israel, with additions in the case of the more important, to distinguish them from one another. [The opinion that this word means *meadow* or *grassy plain* (Gesen. *Thes. in voc.*) rests on no solid grounds. Hengstenberg contends that it means always *mourning* (*Auth. des Pent.* ii. 319). In 1 Sam. vi. 18, the reading is doubtful, but probably **אַבֶּל** stands there for **אַבְנֵי**. Even, however, if the reading **אַבֶּל** be retained there, it will not follow that it does not signify *mourning*; for the place may have received this name from being the scene of some calamity; perhaps, as Lengerke suggests (*Kenaan*, 358), that mentioned in the next verse on account of which it is expressly stated

that the people **יָהֲנוּ** 'lamented' or mourned. Where such uncertainty prevails, it is better to leave the word untranslated.]

ABEL, ABEL-BETH-MAACHAH, or ABEL-MAIM, a city in the north of Palestine, which seems to have been of considerable strength from its history, and of importance from its being called 'a mother in Israel' (2 Sam. xx. 19). The identity of the city under these different names will be seen by a comparison of 2 Sam. xx. 14, 15, 18; 1 Kings xv. 20; 2 Chron. xvi. 4. The addition of 'Maacah' marks it as belonging to, or being near to, the region Maacah, which lay eastward of the Jordan under Mount Lebanon. This is the town in which Sheba posted himself when he rebelled against David. Eighty years afterwards it was taken and sacked by Benhadad, king of Syria; and 200 years subsequently by Tiglath-pileser, who sent away the inhabitants captives into Assyria (2 Kings xv. 29). It is probably represented by the existing village of Abil el-Kamch, beautifully situated between the Merj 'Ayûn and Lake Huleh.

ABEL-KERAMIM (**אַבֶּל כְּרָמִים**, *Abel of vineyards*; Sept. Ἐβελκαραμῖμ), a village of the Ammonites, about six miles from Philadelphia, or Rabbath Ammon, according to Eusebius, in whose time the place was still rich in vineyards (*Judg.* xi. 33).

ABEL-MAIM. The same as ABEL.

ABEL-MEHOLAH, or ABEL-MEA (**אַבֶּל מְחֹלָה**, *Abel of dancing*; Sept. Ἀβελμουλά), a town supposed to have stood near the Jordan, and some miles (Eusebius says ten) to the south of Bethshan or Scythopolis (1 Kings iv. 12). It is remarkable in connection with Gideon's victory over the Midianites (*Judg.* vii. 22), and as the birth-place of Elisha (1 Kings xix. 16).

ABEL-MIZRAIM (**אַבֶּל מִצְרַיִם**, [here **אַבֶּל** undoubtedly means mourning, and if translated this name would denote *mourning of the Egyptians*]; Sept. Ἰβέθος Αλυππρου), a threshing floor, so called from the mourning made there for Jacob (Gen. 1. 11). Jerome places it at Bethagla [but this is improbable. Mr. Thomson, whose opinion is entitled to deference, places it at El-Haram, near Hebron (*The Land and the Book*, ii. 385.)]

ABEL-SHITTIM (**אַבֶּל הַשִּׁטִּים**, *Abel of the acacias*; Sept. Βελσῶ), a town in the plains of Moab, on the east of the Jordan, between which and Beth-Jesimoth was the last encampment of the Israelites on that side the river (Num. xxxiii. 49). It is more frequently called Shittim merely (Num. xxv. 1; Josh. ii. 1; Mic. vi. 5). Eusebius says it was in the neighbourhood of Mount Peor; and in the time of Josephus it was known as Abila, and stood sixty stadia from the Jordan (*Antiq.* iv. 8, 1; v. 1, 1). The place is noted for the punishment there inflicted on the Israelites when seduced into the worship of Baal-Peor, through intercourse with the Moabites and Midianites.—J. K.

ABELA. [ABILA.]

ABELE, ABRAHAM, a Jewish Rabbi at Gumbinnen, in Kalisch, who flourished in the seventeenth century. He wrote a homiletical commentary on part of the Pentateuch entitled **שֵׁן שֵׁן** (*oil of*

joy), which was printed at the end of a larger work, a commentary on the Jalkut Shimeoni, Dessau 1704 fol., Ven. 1743 fol.—W. L. A.

ABENDANA (אַבְנְדָנָא=*son of Dana*) JACOB, was born in Spain, circa 1630; thence he emigrated to Amsterdam, where he became Rabbi. He translated into Spanish the book of *Cusari* [JEHUDAH-LEVI], which was published in 1663, as well as the Mishna with the commentaries of Maimonides and Bartenora, which Surenhusius largely used and honourably acknowledged in his elaborate Latin translation of the same work. His more direct services to biblical exegesis consist in the valuable philological and critical notes which he added, under the title of 'Spicilegium rerum præteritarum et intermissarum,' to the celebrated *Michlal Jofphi*, published in Amsterdam in 1685. Abendana shortly after came to London, where he was made the head of the Jewish community, and died in 1696. After his death, a translation of treatises selected from his works appeared under the title, 'Discourses of the Ecclesiastical and Civil Polity of the Jews,' 12mo. Lond. 1706, 2d ed. 1709. 'This work treats of the Jewish courts of judicature, of their laws concerning tithes, of the institution of the priesthood, of their liturgy, schools, feasts, fests, coins, weights and measures. The discourses are on the whole sensible, and many of the remarks on scripture are more judicious than are usually to be found in Rabbinical writings' (Orme).—C. D. G.

ABENESRA. [IBN ESRA.]

ABEN JACHJA. [IBN JACHJA.]

ABEN TIBBON. [IBN TIBBON.]

ABI, the mother of King Hezekiah (2 Kings xviii. 2), called also Abijah (2 Chron. xxix. 1). Her father's name was Zachariah, perhaps the same who was taken by Isaiah (viii. 2) for a witness.

ABIA. [ABIJAH, 3.]

ABIAH. [ABIJAH, 1.]

ABI-ALBON. [ABIEL, 2.]

ABIASAPH (אַבִּי־אַסָּף, *father of gathering*), a Levite, one of the sons of Korah and head of one of the families of the Korhites (Exod. vi. 24). There can be no doubt that he is the same person who is called Ebiasaph (אַבִּי־אַסָּף, *Ebyasaph*) 1 Chron. vi. 37; ix. 19; but we must suppose it is another Ebiasaph who appears in 1 Chron. vi. 23, and who is there ranked as the great grandson of Korah, unless we understand the Chronicler as stating that Assir, Elkanah and Ebiasaph were collateral and not successive descendants from Korah. This supposition seems to demand adoption, not only because it brings the Chronicler into harmony with the passage in Exodus, but because it harmonizes so far the two parts of his own account; comp. ver. 22, 25, with ver. 36, 37. The whole passage, however, is full of difficulty. Comp. Bertheau, *Kurzgef. Exeget. Handbuch* in loc., and Lord Arthur Hervey on *The Genealogies of our Lord and Saviour Jesus Christ*, p. 210 and 214.—W. L. A.

ABIATHAR (אַבִּי־אֶתָר, *father of abundance*; Sept. Ἀβιάθαρ), the tenth high-priest of the Jews, and fourth in descent from Eli. When his father, the high-priest Ahimelech was slain with the priests at Nob, for suspected partiality to the fugitive David, Abiathar escaped the massacre; and bearing with him the most essential part of

the priestly raiment [PRIEST], repaired to the son of Jesse, who was then in the cave of Adullam (1 Sam. xxii. 20-23; xxiii. 6). He was well received by David, and became the priest of the party during its exile and wanderings. As such he sought and received for David responses from God. When David became king of Judah he appointed Abiathar high-priest. Meanwhile Zadok had been appointed high-priest by Saul, and continued to act as such while Abiathar was high-priest in Judah. The appointment of Zadok was not only unexceptionable in itself, but was in accordance with the divine sentence of deposition which had been passed, through Samuel, upon the house of Eli (1 Sam. ii. 30-36). When, therefore, David acquired the kingdom of Israel, he had no just ground on which Zadok could be removed, and Abiathar set in his place; and the attempt to do so would probably have been offensive to his new subjects, who had been accustomed to the ministrations of Zadok, and whose good feeling he was anxious to cultivate. The king got over this difficulty by allowing both appointments to stand; and until the end of David's reign Zadok and Abiathar were joint high-priests. How the details of duty were settled, under this somewhat anomalous arrangement, we are not informed. As a high-priest Abiathar must have been perfectly aware of the divine intention that Solomon should be the successor of David; he was therefore the least excusable, in some respects, of all those who were parties in the attempt to frustrate that intention by raising Adonijah to the throne. So his conduct seems to have been viewed by Solomon, who, in deposing him from the high-priesthood, and directing him to withdraw into private life, plainly told him that only his sacerdotal character, and his former services to David, preserved him from capital punishment. This deposition of Abiathar completed the doom long before denounced upon the house of Eli, who was of the line of Ithamar, the youngest son of Aaron. Zadok, who remained the high-priest, was of the elder line of Eleazer. Solomon was probably not sorry to have occasion to remove the anomaly of two high-priests of different lines, and to see the undivided pontificate in the senior house of Eleazar (1 Kings i. 7, 19; ii. 26, 27).—J. K.

There are two difficulties connected with the notices of this individual in Scripture, to which it may be proper briefly to advert.

1. Whilst usually it is 'Abiathar the son of Ahimelech' who is mentioned along with Zadok as high-priest, in three passages (2 Sam. viii. 17; 1 Chron. xviii. 16; xxiv. 6), it is Ahimelech the son of Abiathar, and in two (1 Chron. xxiv. 3, 31) it is simply Ahimelech who is so named. To relieve the difficulty thus occasioned, it has been suggested that both father and son had *both* names, and that sometimes the one and sometimes the other is used. But this is a supposition which rests on no authority, and which is not supported by Jewish usage in respect of naming, it being very unusual among them for father and son to bear the same name. Modern interpreters have recourse for the most part to the supposition of an inadvertent transposition of the two names by some transcriber, which was afterwards perpetuated (Thenius on 2 Sam. viii. 17). But though this might be allowed in the case of *one* passage, it is to a high degree improbable that it should occur in *four*,

and that in a fifth the name Ahimelech by itself should occur when we should have expected Abiathar (1 Chron. xxiv. 3). In this latter case *transposition* is wholly excluded. As the existing text stands, we seem shut up to the conclusion that in the time of Ithamar the succession of high-priests was Ahimelech, Abiathar, Ahimelech; the grandson bearing the name of his grandfather, which was usual. We must also suppose that the second Ahimelech was priest along with Zadok during his father's lifetime. How this came to pass, or what became of this second Ahimelech we are not told. There is a great difficulty here, but it is better to endure this than resort to the supposition of a series of blunders without parallel in the annals of copying.

2. In Mark ii. 26, our Lord says that 'it was in the days of Abiathar the high-priest,' that David partook of the shew-bread, whilst in 1 Sam. xxi. 3, it is intimated that this occurred during the pontificate of his father Ahimelech. Here, again, it has been supposed that there is a transposition of the two names; but is this likely? Is it likely that our Lord would confound the two men? or if He discriminated them, and said 'Ahimelech,' is it likely that Mark would confound them, and report Him as saying 'Abiathar'? Recourse has been had here also to the supposition of both father and son having had both names; and also to the supposition that the son was at the time the *vicarius* of the father. All this is gratuitous and improbable. Not more felicitous is the attempt to evade the difficulty by translating *ἐπι*, 'in the presence of,' or 'concerning' (*i.e.*, in the part of Scripture concerning), for even admitting these translations, neither of them in the least alleviates the discrepancy, since Abiathar's name is not once mentioned in the narrative in Samuel. Middleton (*Gr. Art.* p. 188, 190) translates 'in the days of Abiathar, who was afterwards high-priest;' but though Abiathar might be called high-priest by prolepsis, what writer, meaning to give a chronological determination, would express himself thus? (See Alford's note on the passage.) What is to forbid our supposing that our Lord here *supplies* a fact which the historian has not recorded, but which Jewish tradition had preserved, *viz.*, that it was to Abiathar David came as his friend, through whose influence he hoped to succeed in his request to Ahimelech; just as David, Ps. cv. 18, Stephen, Acts vii. 2, 16, 23-36, and Paul, 2 Tim. iii. 8, supply parts omitted by the historian? (Lange, *Bibel-werk*, on Mark ii. 26.) The subsequent intimacy of David and Abiathar may have derived some of its strength from earlier relations between them.—W. L. A.

ABI B. [NISAN.]

ABICHT, IN. GE. Doctor and Professor of Theology, and General Superintendent at Wittenberg, and formerly Professor of Hebrew at Leipzig, was born at Königsee, March 10, 1672, and died at Wittenberg, 5th January 1740. He wrote, besides several dissertations on passages of Scripture, 'Accentus Hebræorum; aced. anonymi Judæi Porta accentum (שער הננונות)' Leipzig, 1715, 8vo; 'Exercitatio de servorum Heb., acquisitione et servituti.' Leipzig, 1704, 4to.—W. L. A.

ABIDAN (אַבִּידָן), captain of the tribe of Benjamin at the Exodus (Num. i. 1; ii. 22, etc.)

ABI EL (אַבִּיֵּל), *father of strength*, *i.e.*, *strong*; Sept. 'Αβύλι). 1. The father of Kish and Ner, and grandfather of Saul the son of Kish, and of Abner the son of Ner (1 Sam. ix. 1; xiv. 51).

2. One of the thirty most distinguished men of David's army (1 Chron. xi. 32). He is called Abi-albon (אַבִּי עֲלֹבֹן) in 2 Sam. xxiii. 31; a name which has precisely the same signification (*father of strength*) as the other.—J. K.

ABIEZER (אַבִּיעֶזֶר), *father of help*; Sept. 'Αβιέζερ, Josh. xvii. 2), a son of Gilead, the grandson of Manasseh (Num. xxvi. 30), and founder of the family to which Gideon belonged, and which bore his name as a patronymic—Abiezrites (Judg. vi. 34; viii. 2). Gideon himself has a very beautiful and delicate allusion to this patronymic in his answer to the fierce and proud Ephraimites, who, after he had defeated the Midianites with 300 men, chiefly of the family of Abiezer, came to the pursuit, and captured the two Midianitish princes Zebah and Zalmunna. They sharply rebuked him for having engrossed all the glory of the transaction by not calling them into action at the first. But he soothed their pride by a remark which insinuated that their exploit, in capturing the princes, although late, surpassed his own in defeating their army:—'What have I done now in comparison with you? Is not the (grape) *gleaning* of Ephraim better than the *vintage* of Abiezer?' (Judg. viii. 1-3).—J. K.

ABIGAIL (אַבִּיגַיִל or אַבִּיגַיִל), *father of joy*; Sept. 'Αβυγάλα). 1. The wife of a prosperous sheep-master, called Nabal, who dwelt in the district of Carmel, west of the Dead Sea. She is known chiefly for the promptitude and discretion of her conduct in taking measures to avert the wrath of David, which, as she justly apprehended, had been violently excited by the insulting treatment which his messengers had received from her husband. [NABAL.] She hastily prepared a liberal supply of provisions, of which David's troop stood in much need—and went forth to meet him, to present the gift in person. When they met, he was marching to exterminate Nabal and all that belonged to him; and not only was his rage mollified by her prudent remonstrances and delicate management, but he became sensible that the vengeance which he had purposed was not warranted by the circumstances, and was thankful that he had been prevented from shedding innocent blood. The beauty and prudence of Abigail made such an impression upon David on this occasion, that when, not long after he heard of Nabal's death, he sent for her, and she became his wife (1 Sam. xxv. 14-42). By her it is usually stated that he had two sons, Chileab and Daniel; but it is more likely that the Chileab of 2 Sam. iii. 3 is the same as the Daniel of 1 Chron. iii. 1.—J. K.

2. A sister of David (1 Chron. ii. 16; 2 Sam. xvii. 25), wife of Jether an Ishmaelite, who, in Samuel is called an *Israelite*, probably by a clerical error.—W. L. A.

ABIHAIL (אַבִּיהַיִל), *father of light* or *splendour*; Sept. 'Αβιαία), the wife of Rehoboam, king of Judah. She is called the daughter of Eliab, David's elder brother (2 Chron. xi. 18); but, as David began to reign more than eighty years before her marriage, and was thirty years old when he

became king, we are doubtless to understand that he was only a descendant of Eliab. This name, as borne by a female, illustrates the remarks under AB.—J. K.

ABIHAIL (אֲבִיחַיִל, *father of might*, i. e., *mighty*; Sept. Ἀβιχαῖλ). This name, although the same as the preceding in the authorized version, is, in the original, different both in orthography and signification. It should be written ABICHAIL. The name was borne by several persons: 1. ABICHAIL, the son of Huri, one of the family-chiefs of the tribe of Gad, who settled in Bashan (1 Chron. v. 14); 2. ABICHAIL, the father of Zuriel, who was the father of the Levitical tribes of Merari (Num. iii. 35); 3. ABICHAIL, the father of queen Esther, and uncle of Mordecai (Esth. ii. 15).—J. K.

ABIHU (אֲבִיחֻ, *whose father He*, i. e., *God is*; Sept. Ἀβιουδ), the second of the sons of Aaron, who, with his brothers Nadab, Eleazar, and Ithamar, was consecrated for the priesthood (Exod. xxviii. 1). When, at the first establishment of the ceremonial worship, the victims offered on the great brazen altar were consumed by fire from heaven, it was directed that this fire should always be kept up; and that the daily incense should be burnt in censers filled with it from the great altar. But one day, Nadab and Abihu presumed to neglect this regulation, and offered incense in censers filled with 'strange' or common fire. For this they were instantly struck dead by lightning, and were taken away and buried in their clothes without the camp. [AARON.] There can be no doubt that this severe example had the intended effect of enforcing becoming attention to the most minute observances of the ritual service. As immediately after the record of this transaction, and in apparent reference to it, comes a prohibition of wine or strong drink to the priests, whose turn it might be to enter the tabernacle, it is not unfairly surmised that Nadab and Abihu were intoxicated when they committed this serious error in their ministrations (Lev. x. 1-11).—J. K.

ABIJAH (אֲבִיחַיָּה; Sept. Ἀβιά, 2 Chron. xiii. 1. *Pater Jehovah*, i. e., *vir divinus*, ut videtur, i. q. אִישׁ אֱלֹהִים, Gesenius in *Thesaur.*; [*Jehovah* is *Versorger*, Fürst; *whose father is Jehovah*, Al.]; Sept. Ἀβιά). 1. One of the sons of Samuel, whose misconduct afforded the ostensible ground on which the Israelites demanded that their government should be changed into a monarchy (1 Sam. viii. 1-5), A. V. Abiah.

2. The son and successor of Rehoboam. He is also called Abijam (אֲבִיָּם; Sept. Ἀβιού, 1 Kings xv. 1). Lightfoot (*Harm. O. T.* in loc.) thinks that the writer in Chronicles, not describing his reign as wicked, admits the sacred JAH in his name; whilst the book of Kings, charging him with following the evil ways of his father, changes this into JAM. This is not fanciful; for such changes of name were not unusual [but it is probably unnecessary, as it is doubtful whether Abijam be the correct reading, and not a merely clerical mistake, some MSS. (12 of Kenn.) giving Abijah; and this being the reading followed by the LXX. and Syr. versions]. Abijah began to reign B. C. 958 (Hales, B. C. 973), in the eighteenth year of

Jeroboam, king of Israel, and he reigned three years. At the commencement of his reign, looking on the well-founded separation of the ten tribes from the house of David as rebellion, Abijah made a vigorous attempt to bring them back to their allegiance. In this he failed, although a signal victory over Jeroboam, who had double his force and much greater experience, enabled him to take several cities which had been held by Israel. The speech which Abijah addressed to the opposing army before the battle has been much admired. It was well suited to its object, and exhibits correct notions of the theocratical institutions. His view of the political position of the ten tribes with respect to the house of David is, however, obviously erroneous, although such as a king of Judah was likely to take. The numbers reputed to have been present in this action are 800,000 on the side of Jeroboam, 400,000 on the side of Abijah, and 500,000 left dead on the field. Hales and others regard these extraordinary numbers as corruptions, and propose to reduce them to 80,000, 40,000, and 50,000 respectively, as in the Latin Vulgate of Sixtus Quintus, and many earlier editions, and in the old Latin translation of Josephus; and probably also in his original Greek text, as is collected by De Vignoles from Abarbanel's charge against the historian of having made Jeroboam's loss no more than 50,000 men, contrary to the Hebrew text (Kennicott's *Dissertations*, i. 533; ii. 201, etc. 564). The book of Chronicles mentions nothing concerning Abijah adverse to the impressions which we receive from his conduct on this occasion; but in Kings we are told that 'he walked in all the sins of his father' (1 Kings xv. 3). He had fourteen wives, by whom he had twenty-two sons and sixteen daughters. Asa succeeded him.

There is a difficulty connected with the maternity of Abijah. In 1 Kings xv. 2, we read, 'His mother's name was Maachah, the daughter of Abishalom;' but in 2 Chron. xiii. 2, 'His mother's name was Michaiah, the daughter of Uriel of Gibeah.' Maachah and Michaiah are variations of the same name; and Abishalom is in all likelihood Absalom, the son of David. The word (בת) rendered 'daughter' is applied in the Bible not only to a man's child, but to his niece, grand-daughter, or great-grand-daughter. It is therefore probable that Uriel of Gibeah married Tamar, the beautiful daughter of Absalom (2 Sam. xiv. 27), and by her had Maachah, who was thus the daughter of Uriel and grand-daughter of Absalom. [But, as it appears from 1 Kings xv. 10, that Abijah's wife was also Maachah, the daughter of Absalom, and as he could not marry his mother, and the supposition that this Maachah was the daughter of his mother by a former husband (Brentano) is burdened with the difficulty, not only that in this case daughter must mean great-grand-daughter, but that Abijah must have married his step-sister, some have supposed there were two Maachahs, the one the descendant of Absalom and the wife of Rehoboam, the other the descendant of Uriel and the wife of Abijah. In this case there is in 2 Chron. a mistake of the one Maachah for the other. See Bertheau, *Die Bücher d. Chronik*, and Thenius, *Die Bücher d. Könige*, on the places. Some, however, take mother in 1 Kings xv. 10 to mean grandmother [MAACHAH], but this is improbable.]

3. Son of Jeroboam I., king of Israel. His severe and threatening illness induced Jeroboam to

send his wife with a present,* suited to the disguise in which she went, to consult the prophet Ahijah respecting his recovery. This prophet was the same who had, in the days of Solomon, foretold to Jeroboam his elevation to the throne of Israel. Though blind with age, he knew the disguised wife of Jeroboam, and was authorized, by the prophetic impulse that came upon him, to reveal to her that, because there was found in Abijah only, of all the house of Jeroboam, 'some good thing towards the Lord,' he only, of all that house, should come to his grave in peace, and be mourned in Israel. Accordingly, when the mother returned home, the youth died as she crossed the threshold of the door. 'And they buried him, and all Israel mourned for him' (1 Kings xiv. 1-18).

4. One of the descendants of Eleazar, the son of Aaron, and chief of one of the twenty-four courses or orders into which the whole body of the priesthood was divided by David (1 Chron. xxiv. 10). Of these, the course of Abijah was the eighth. Only four of the courses returned from the captivity, of which that of Abijah was not one (Ezra ii. 36-39; Neh. vii. 39-42; xii. 1). But the four were divided into the original number of twenty-four, with the original names; and it hence happens that Zecharias, the father of John the Baptist, is described as belonging to the course of Abijah or 'Abia' (Luke i. 5).—J. K.

Other persons of this name are mentioned, 1 Chron. ii. 24; 1 Chron. vii. 8; 2 Chron. xxix. 1 [ABI]; Neh. x. 7.

ABIJAM. [ABIJAH]

ABILA, capital of the Abilene of Lysanias (Luke iii. 1); and distinguished from other places of the same name as the Abila of Lysanias ('Αβίλη τοῦ Λυσανίου), and (by Josephus) as 'the Abila of Lebanon.' It is unnecessary to reason upon the meaning of this Greek name; for it is obviously a form of the Hebrew *Abel*, which was applied to several places. This has been supposed to be the same as Abel-beth-Maacah, but without foundation, for that was a city of Naphtali, which Abila was not. An old tradition fixes this as the place where Abel was slain by Cain, which is in unison

[* "From time immemorial it has been the universal custom in the East to send presents to one another. No one waits upon an eastern prince, or any person of distinction, without a present. This is a token of respect which is never dispensed with; how mean and inconsiderable soever the gift, the intention of the giver is accepted. Plutarch informs us that a peasant happening to fall in the way of Artaxerxes, the Persian monarch, in one of his excursions, having nothing to present to his sovereign according to the Oriental custom, the countryman immediately ran to an adjacent stream, filled both his hands, and offered it to his prince. The monarch, says the philosopher, smiled, and graciously received it, highly pleased with the good dispositions this action manifested. All the books of modern travellers into the East abound with numberless examples of this universally prevalent custom of waiting upon great men with presents; unaccompanied with which, should a stranger presume to enter their houses, it would be deemed the last outrage and violation of politeness and respect" (Harwood, *Introd.* II. 287, quoted by Horne, vol. iii. p. 433)].

with the belief that the region of Damascus was the land of Eden. But the same has been said of other places bearing the name of Abel or Abila, and appears to have originated in the belief (created by the Septuagint and the versions which followed it) that the words are identical, which they are not, the one being Hebel (הֶבֶל), and the other *Abel* (אַבֶּל). However, under the belief that the place and district derived their name from Abel, a monument upon the top of a high hill, near the source of the river Barrada, which rises among the eastern roots of Anti-Libanus, and waters Damascus, has long been pointed out as the tomb of Abel, and its length (thirty yards) has been alleged to correspond with his stature! (Quaresmius, *Elucid. Terra Sancta*, vii. 7, 1; Maundrell, under May 4th). This spot is on the road from Heliopolis (Baalbec) to Damascus, between which towns—thirty-two Roman miles from the former, and eighteen from the latter—Abila is indeed placed in the Itinerary of Antoninus. About the same distance north-west of Damascus is Sûk Wady Barrada, where an inscription was found by Mr. Banks, which, beyond doubt, identifies that place with the Abila of Lysanias (*Quart. Rev.* xxvi. 388; *Hogg's Damascus*, i. 301). *Souk* means *market*, and is an appellation often added to villages where periodical markets are held. The name of Sûk (Wady) Barrada first occurs in Burckhardt (*Syria*, p. 2); and he states that there are here two villages built on the opposite sides of the Barrada. The lively and refreshing green of this neighbourhood is noticed by him and other travellers, and may be urged in support of the opinion that Abel means in Hebrew a *grassy spot* (Stanley, *Syr. and Pal.* p. 414).

ABILENE ('Αβιληνή, Luke iii. 1), the district or territory which took its name from the chief town, Abila. Its situation is in some degree determined by that of the town; but its precise limits and extent remain unknown. Northward it must have reached beyond the Upper Barrada, in order to include Abila; and it is probable that its southern border may have extended to Mount Hermon (Jebel es-Sheikh). It seems to have included the eastern declivities of Anti-Libanus, and the fine valleys between its base and the hills which front the eastern plains. This is a very beautiful and fertile region, well wooded and watered by numerous springs from Anti-Libanus. It also affords fine pastures; and in most respects contrasts with the stern and barren western slopes of Anti-Libanus.

This territory had been governed as a tetrarchy by Lysanias, son of Ptolemy and grandson of Menæus (Joseph. *Antiq.* xiv. 13, 3), but he was put to death, B.C. 36, through the intrigues of Cleopatra, who then took possession of the province (*Antiq.* xv. 4, 1). After her death it fell to Augustus, who rented it out to one Zenodorus; but as he did not keep it clear of robbers, it was taken from him, and given to Herod the Great (*Antiq.* xv. 10, 1; *Bell. Jud.* i. 20, 4). At his death, a part (the southern, doubtless) of the territory was added to Trachonitis and Iturea, to form a tetrarchy for his son Philip; but by far the larger portion, including the city of Abila, was then, or shortly afterwards, bestowed on another Lysanias, mentioned by Luke (iii. 1), who is supposed to have been a descendant of the former Lysanias, but who is nowhere mentioned by Josephus. Indeed, nothing is said by him or any other profane writer of this

part of Abilene until about ten years after the time referred to by Luke, when the emperor Caligula gave it to Agrippa I. as 'the tetrarchy of Lysanias. (Joseph. *Antiq.* xviii. 6, 10), to whom it was afterwards confirmed by Claudius. At his death it was included in that part of his possessions which went to his son Agrippa II. This explanation (which we owe to the acuteness and research of Winer), as to the division of Abilene between Lysanias and Philip, removes the apparent discrepancy in Luke, who calls Lysanias tetrarch of Abilene at the very time that, according to Josephus, (a part of) Abilene was in the possession of Philip (See *J. S. Literature*, July 1853). ['There is no evidence that a part of the territory of the older Lysanias had not remained in his family. . . . Now, since Abila is first named as belonging to the tetrarchy of a later Lysanias (Jos. *Antiq.* xix. 5, 1), and since the kingdom of the older Lysanias is nowhere called a *tetrarchy*, whilst the territory of the later Lysanias is so called, it must not be assumed that Josephus, when he mentions "Αβιλαν τῆν Δυσανλου (*Antiq.* xix. 5, 1), and speaks of a tetrarchy of Lysanias (*Antiq.* xx. 7, 1, comp. *Bell. Jud.* ii. 11, 5; ii. 12, 18), denominates the district in question from that *older* Lysanias, but that before 790, when Caligula was in power, there existed a tetrarchy of a *later* Lysanias, to whom Abila without doubt belonged as a residence. In this case it is of no moment whether this Lysanias was a descendant or relation of the former or not (See Krebs *Obs.* p. 112). Thus the notice of Luke is not proved an *error* by Josephus, but is corroborated by him' (Meyer, *Handbuch* on the place. See also the full discussion of this whole question by Wieseler in his *Chronologische Synopse Der Vier Evangelien*, pp. 174-183). It may be added that Pococke found a Greek inscription at Nebi Abel, in which Lysanias is called *Tetrarch* of Abilene; and this appears also on a coin (Pococke, *Travels*, bk. ii. ch. 7; Böckh, *Inscrip.* 4521, 4523).

ABIMELECH (אֲבִימֶלֶךְ, *father of the king*, or perhaps *royal father*; Sept. Ἀβιμελεχ), the name of several Philistine kings, and probably less a proper name than a titular distinction of these kings, like PHARAOH for the kings of Egypt, or AUGUSTUS for the emperors of Rome.

1. A king of Gerar in the days of Abraham. The latter (Gen. xx. 1 ff. B.C. 1898; Hales, B.C. 2054) removed into his territory after the destruction of Sodom; and fearing that the extreme beauty of Sarah might bring him into difficulties, he declared her to be his sister. The conduct of Abimelech in taking Sarah into his harem shews that even in those early times kings claimed the right of taking to themselves the unmarried females not only of their natural subjects, but of those who sojourned in their dominions. Another contemporary instance of this custom occurs in Gen. xii. 15; and one of later date in Esth. ii. 3. But Abimelech, obedient to a divine warning, restored her to her husband. As a mark of his respect he added valuable gifts, and offered the patriarch a settlement in any part of the country; but he nevertheless did not forbear to rebuke the deception which had been practised upon him (Gen. xx.) It appears to have been admitted, on all hands, that he had an undoubted right to appropriate to his harem whatever unmarried woman he pleased—the evil in this case being that Sarah was already married: so early

had some of the most odious principles of despotism taken root in the East. Nothing further is recorded of King Abimelech, except that a few years after, he repaired to the camp of Abraham, who had removed southward beyond his borders, accompanied by Pichol, 'the chief captain of his host,' to invite the patriarch to contract with him a league of peace and friendship. Abraham consented; and this first league on record [ALLIANCES] was confirmed by a mutual oath, made at a well which had been dug by Abraham, but which the herdsmen of Abimelech had forcibly seized without his knowledge. It was restored to the rightful owner, on which Abraham named it BEERSHEBA (*the Well of the Oath*), and consecrated the spot to the worship of Jehovah (Gen. xxi. 22-34).

2. Another king of Gerar, in the time of Isaac (about B.C. 1804; Hales, 1960), who is supposed to have been the son of the preceding. Isaac sought refuge in his territory during a famine; and having the same fear respecting his fair Mesopotamian wife, Rebekah, as his father had entertained respecting Sarah, he reported her to be his sister. This brought upon him the rebuke of Abimelech, when he accidentally discovered the truth. The country appears to have become more cultivated and populous than at the time of Abraham's visit, nearly a century before; and the inhabitants were more jealous of the presence of such powerful pastoral chieftains. In those times, as now, wells of water were of so much importance for agricultural as well as pastoral purposes, that they gave a proprietary right to the soil, not previously appropriated, in which they were dug. Abraham had dug wells during his sojourn in the country; and, to bar the claim which resulted from them, the Philistines had afterwards filled them up; but they were now cleared out by Isaac, who proceeded to cultivate the ground to which they gave him a right. The virgin soil yielded him a hundred-fold; and his other possessions, his flocks, and herds, also received such prodigious increase that the jealousy of the Philistines could not be suppressed; and Abimelech desired him to seek more distant quarters, in language which gives a high notion of the wealth of the patriarchal chiefs, and the extent of their establishments:—'Depart from us: *for thou art more and mightier than we.*' Isaac complied, and went out into the open country, and dug wells for his cattle. But the shepherds of the Philistines were not inclined to allow the claim to exclusive pasturage in these districts to be thus established; and their opposition induced the quiet patriarch to make successive removals, until he reached such a distance that his operations were no longer disputed. Afterwards, when he was at Beersheba, he received a visit from Abimelech, who was attended by Ahuzzath, his friend, and Pichol, the chief captain of his army. They were received with some reserve by Isaac; but when Abimelech explained that it was his wish to renew, with one so manifestly blessed of God, the covenant of peace and goodwill which had been contracted between their fathers, they were more cheerfully entertained, and the desired covenant was, with due ceremony, contracted accordingly. (Gen. xxvi.) From the facts recorded respecting the connection of the two Abimelechs with Abraham and Isaac, it is manifest that the Philistines, even at this early time, had a government more organized, and more in unison with that type which we now regard as Oriental,

than appeared among the native Canaanites, one of whose nations had been expelled by these foreign settlers from the territory which they occupied. [PHILISTINES.]

3. A son of Gideon, by a concubine-wife, a native of Shechem, where her family had considerable influence. Through that influence Abimelech was proclaimed king after the death of his father, who had himself refused that honour, when tendered to him, both for himself and his children (Judges ix. 1-6). In a short time, a considerable part of Israel seems to have recognised his rule. One of the first acts of his reign was to destroy his brothers, seventy in number, according to a system of barbarous state policy of which there have been frequent instances in the East. They were slain 'on one stone' at Ophrah, the native city of the family. Only one, the youngest, named Jotham, escaped; and he had the boldness to make his appearance on Mount Gerizim, where the Shechemites were assembled for some public purpose (perhaps to inaugurate Abimelech), and rebuke them in his famous parable of the trees choosing a king [JOTHAM]. In the course of three years the Shechemites repenting of what they had done, revolted in Abimelech's absence, and caused an ambuscade to be laid in the mountains, with the design of destroying him on his return. But Zebul, his governor in Shechem, contrived to apprise him of these circumstances, so that he was enabled to avoid the snare laid for him; and, having hastily assembled some troops, appeared unexpectedly before Shechem. The people of that place had meanwhile secured the assistance of one Gaal and his followers [GAAL], who marched out to give Abimelech battle. He was defeated, and returned into the town; and his inefficiency and misconduct in the action had been so manifest, that the people were induced by Zebul to expel him and his followers [Comp. Joseph. *Antiq.* v. 7, 4]. Although without his protection, the people still went out to the labours of the field. This being told Abimelech, who was at Arumah, he laid an ambuscade of four troops in the neighbourhood; and when the men came forth in the morning, two of the ambushed parties rose against them, while the other two seized the city gates to prevent their return. Afterwards the whole force united against the city, which, being now deprived of its most efficient inhabitants, was easily taken. It was completely destroyed by the exasperated victor, and the ground strewn with salt, symbolical of the desolation to which it was doomed. The fortress, however, still remained; but the occupants, deeming it untenable, withdrew to the temple of Baal-Berith, which stood in a more commanding situation. Abimelech employed his men in collecting and piling wood against this building, which was then set on fire and destroyed, with the thousand men who were in it. Afterwards Abimelech went to reduce Thebez, which had also revolted. The town was taken with little difficulty, and the people withdrew into the citadel. Here Abimelech resorted to his favourite operation, and while heading a party to burn down the gate, he was struck on the head by a large stone cast down by a woman from the wall above. Perceiving that he had received a death-blow, he directed his armour-bearer to thrust him through with his sword, lest it should be said that he fell by a woman's hand. Thus ended the first attempt to

establish a monarchy in Israel. The chapter in which these events are recorded (Judg. ix.) gives a more detailed and lively view of the military operations of that age than elsewhere occurs, and claims the close attention of those who study that branch of antiquities. Abimelech himself appears to have been a bold and able commander, but utterly uncontrolled by religion, principle, or humanity in his ambitious enterprises. His fate resembled that of Pyrrhus II., king of Epirus (Justin. xxv. 5; Pausan. i. 13; Plut. *Vit. Pyrr.*, Strabo, p. 376. The dread of the ignominy of its being said of a warrior that he died by a woman's hand was very general (Sophocl. *Trach.* 1064; Senec. *Herc. Oct.* 1176). Vainly did Abimelech seek to avoid this disgrace; for the fact of his death by the hand of a woman was long after associated with his memory (2 Sam. xi. 21).—J. K.

4. In Chron. xviii. 16, a priest named Abimelech is mentioned, but this is evidently an error for Ahimelech. Comp. ch. xxiv. 3-6; 2 Sam. viii. 17 and in the inscription of Ps. xxxiv. we have Abimelech for Achish. [ACHISH.]

ABINADAB (אַבִּינָדָב, *father of nobleness*; Sept.

'Αμωαδδβ). There are several persons of this name, all of whom are also called AMINADAB—the letters *b* and *m* being very frequently interchanged in Hebrew.

1. One of the eight sons of Jesse, and one of the three who followed Saul to the war with the Philistines (1 Sam. xvi. 8; xvii. 13).

2. One of Saul's sons, who was slain at the battle of Gilboa (1 Sam. xxxi. 2).

3. The Levite of Kirjath-jearim, in whose house, which was on a hill, the Ark of the Covenant was deposited, after being brought back from the land of the Philistines. It was committed to the special charge of his son Eleazar; and remained there seventy years, until it was removed by David (1 Sam. vii. 1, 2; 1 Chron. xiii. 7). [ARK.]—J. K.

ABIRAM (אַבִּירָם, *father of altitude*, i. e., *high*; Sept. Ἀβειράμ). 1. One of the family-chiefs of the tribe of Reuben, who, with Dathan and On of the same tribe, joined Korah, of the tribe of Levi, in a conspiracy against Aaron and Moses (Num. xvi.) [AARON.]

2. The eldest son of Hiel the Bethelite (1 Kings xvi. 34). [HIEL; JERICHO.]—J. K.

ABISHAG (אַבִּישָׁג, *father of error*; Sept. Ἀβισάγ), a beautiful young woman of Shunam, in the tribe of Issachar, who was chosen by the servants of David to be introduced into the royal harem, for the special purpose of ministering to him, and cherishing him in his old age. She became his wife; but the marriage was never consummated. Some time after the death of David, Adonijah, his eldest son, persuaded Bathsheba, the mother of Solomon, to entreat the king that Abishag might be given to him in marriage. But as rights and privileges peculiarly regal were associated with the control and possession of the harem of the deceased kings, Solomon detected in this application a fresh aspiration to the throne, which he visited with death (1 Kings i. 1-4; ii. 13-25). [ADONIJAH.]—J. K.

ABISHAI (אַבִּישָׁי, *father of a gift*; Sept.

'Αβσαδ and 'Αβισαδ), a nephew of David by his half-sister Zeruiah, and brother of Joab and Asahel. The three brothers devoted themselves zealously to the interests of their uncle during his wanderings. Though David had more reliance upon the talents of Joab, he appears to have given more of his private confidence to Abishai, who seems to have attached himself in a peculiar manner to his person, as we ever find him near, and ready for council or action, on critical occasions. Abishai was one of the two persons whom David asked to accompany him to the camp of Saul; and he alone accepted the perilous distinction (1 Sam. xxvi. 5-9). The desire he then expressed to smite the sleeping king, identifies him as the man who afterwards burned to rush upon Shimei and slay him for his abuse of David (2 Sam. xvi. 9). For when the king fled beyond the Jordan from Absalom, Abishai was again by his side: and he was entrusted with the command of one of the three divisions of the army which crushed that rebellion (2 Sam. xviii. 2). Afterwards, in a war with the Philistines, David was in imminent peril of his life from a giant named Ishbi-benob; but was rescued by Abishai, who slew the giant (2 Sam. xxi. 15-17). He was also the chief of the three 'mighties,' who, probably in the same war, performed the chivalrous exploit of breaking through the host of the Philistines to procure David a draught of water from the well of his native Bethlehem (2 Sam. xxiii. 14-17). Among the exploits of this hero it is mentioned that he withstood 300 men and slew them with his spear: but the occasion of this adventure, and the time and manner of his death, are equally unknown. In 2 Sam. viii. 13, the victory over the Edomites in the Valley of Salt is ascribed to David, but in 1 Chron. xviii. 12, to Abishai. It is hence probable that the victory was actually gained by Abishai, but is ascribed to David as king and commander-in-chief.—J. K.

ABISHALOM (אֲבִישָׁלוֹם, Αβεσσαλωμ) the father of Maachah, who was the wife of Rehoboam, and the mother of Abijah his successor on the throne of Judah (1 Kings xiv. 31; xv. 2, 10). That this name is only a fuller form of Absalom (אֲבִישָׁלוֹם) is evident from the latter being assigned by the Chronicler to the father of Maachah (2 Chron. xi. 20, 21). The party referred to was doubtless Absalom the son of David. To 2 Sam. xiv. 27, there is a clause added by the LXX. to the effect that Thamar the daughter of Absalom was the wife of Rehoboam and the mother of Abijah. This is obviously wrong, but the statement may be compared with that of Josephus, that Maachah was the daughter of Thamar (*Antiq.* viii. 10, 1). According to this, Maachah was the *grand-daughter* of Absalom. [ABIJAH; MAACHAH.]—W. L. A.

ABISHUA (אֲבִישׁוּא, *father of welfare*; Sept. 'Αβισού), the son of Phinehas, and fourth high-priest of the Jews (1 Chron. vi. 50). The commencement and duration of his pontificate are uncertain, but the latter is inferred from circumstances, confirmed by the Chronicon of Alexandria, to have included the period in which Ehud was judge, and probably the preceding period of servitude to Egion of Moab. Blair places him from B.C. 1352 to 1302—equivalent to Hales, B.C. 1513 to 1463. This high-priest is called Abiezer by Josephus (*Antiq.* v. 11, 5).—I. K.

ABIYONAH (אֲבִיּוֹנָה; Sept. κάππαρις). This word occurs only once in the Bible, Eccles. xii. 5: 'When the almond-tree shall flourish, and the grasshopper shall be a burden, and *desire* shall fail; because man goeth to his long home.' The

3. Capparis spinosa.

word translated *desire* is ABIYONAH, which by others has been considered to signify the CAPER-PLANT. The reasons assigned for the latter opinion are: that the Rabbins apply the term *abionoth* to the small fruit of trees and berries, as well as to that of the caper-bush; that the caper-bush is common in Syria and Arabia; that its fruit was in early times eaten as a condiment, being stimulating in its nature, and therefore calculated to excite desire; that as the caper-bush grows on toms, it will be liable to be destroyed when these are opened; and, finally, that as Solomon speaks here in symbols and allegories, we must suppose him to deviate from the course he had apparently prescribed to himself, if he were to express in plain words that 'desire shall fail,' instead of intimating the same thing, by the failure of that which is supposed to have been used to excite desire.

Celsius (*Herbotanicon*, i. 210) argues, on the contrary, that Solomon in other places, when treating of the pleasures of youth, never speaks of capers, but of wine and perfumes; that, had he wished to adduce anything of the kind, he would have selected something more remarkable; that capers, moreover, instead of being pleasantly stimulant, are rather acrid and hurtful, and though occasionally employed by the ancients as condiments, were little esteemed by them; and, finally, that the word *abionoth* of the Rabbins is distinct from the *abiyonah* of this passage, as is admitted even by Ursinus: 'Nam quod vocabulum אֲבִיּוֹנָה *Abionoth*, quod Rabbinis usitatum, alia quadam puncta habeat, non puto tanti esse momenti' (*Arboret. Biblicum*, xxviii. 1). To this Celsius replies: 'Immo, nisi vocales et puncta genuina in Ebraicis observentur,

Babelica fiet confusio, et cœlo terra miscbitur. Incertum pariter pro certo assumunt, qui cappares volunt proprie abionoth dici Rabbini' (l. c. p. 213).

But as the Septuagint, the Vulgate, and some other translations, have understood the caper-bush to be meant, it is desirable to give some account of it, especially as, from its ornamental nature, it could not but attract attention. There are, moreover, some points in its natural history which have been overlooked, but which may serve to shew that in the passage under review it might without impropriety have been employed in carrying out the figurative language with which the verse commences.

The caper-plant belongs to a tribe of plants, the Capparideæ, of which the species are found in considerable numbers in tropical countries, such as India, whence they extend northwards into Arabia, the north of Africa, Syria, and the south of Europe. The common caper-bush—*Capparis spinosa*, Linn. (the *C. sativa* of Persoon)—is common in the countries immediately surrounding the Mediterranean. Dioscorides describes it as spreading in a circular manner on the ground, in poor soils and rugged situations; and Pliny, 'as being set and sown in stony places especially.' Theophrastus states that it refuses to grow in cultivated ground. Dioscorides describes it as having thorns like a bramble, leaves like the quince, and fruit like the olive; characters almost sufficient to identify it. The caper is well known to the Arabs, being their

قبر kibbur; and designated also by the name اظف athuf or azuf. The bark of the root, which is still used in the East, as it formerly was in Europe, no doubt possesses some irritant property, as it was one of the five aperient roots. The unexpanded flower-buds, preserved in vinegar, are well known at our tables as a condiment by the name of capers. Parts of the plant seem to have been similarly used by the ancients.

The caper-plant is showy and ornamental, growing in barren places in the midst of the rubbish of ruins, or on the walls of buildings. It was observed by Ray on the Temple of Peace at Rome, and in other similar situations. It forms a much-branched, diffuse shrub, which annually loses its leaves. The branches are long and trailing; smooth, but armed with double curved stipular spines. The leaves are alternate, roundish or oblong-oval, a little fleshy, smooth, of a green colour, but sometimes a little reddish. The flowers are large and showy, produced singly in the axils of the leaves, on stalks which are larger than the leaves. The calyx is four-leaved, coriaceous; the petals are also four in number, white, and of an oval roundish form. The stamens are very numerous and long; and their filaments being tinged with purple, and terminated by the yellow anthers, give the flowers a very agreeable appearance. The ovary is borne upon a straight stalk, which is a little longer than the stamens, and which, as it ripens, droops and forms an oval or pear-shaped berry, enclosing within its pulp numerous small seeds.

Many of the caper tribe, being remarkable for the long stalks by which their fruit is supported, conspicuously display, what also takes place in other plants, namely, the drooping and hanging down of the fruit as it ripens. As, then, the flowering of the almond-tree, in the first part of the verse, has

been supposed to refer to the whitening of the hair, so the drooping of the ripe fruit of a plant like the caper, which is conspicuous on the walls of buildings, and on tombs, may be supposed to typify the hanging down of the head before 'man goeth to his long home.'—J. F. R.

ABLUTION, the ceremonial washing, whereby, as a symbol of purification from uncleanness, a person was considered—1. to be cleansed from the taint of an inferior and less pure condition, and initiated into a higher and purer state; 2. to be cleansed from the soil of common life, and fitted for special acts of religious service; 3. to be cleansed from defilements contracted by particular acts or circumstances, and restored to the privileges of ordinary life; 4. as absolving or purifying himself, or declaring himself absolved and purified, from the guilt of a particular act. We do not meet with any such ablutions in patriarchal times: but under the Mosaical dispensation they all occur.

A marked example of the *first* kind of ablution occurs when Aaron and his sons, on their being set apart for the priesthood, were washed with water before they were invested with the priestly robes and anointed with the holy oil (Lev. viii. 6). To this head we are inclined to refer the ablution or persons and raiment which was commanded to the whole of the Israelites, as a preparation to their receiving the law from Sinai (Exod. xix. 10-15). We also find examples of this kind of purification in connection with initiation into a higher state. Thus those admitted into the lesser or introductory mysteries of Eleusis were previously purified on the banks of the Ilissus, by water being poured upon them by the Hydranos.

The *second* kind of ablution was that which required the priests, on pain of death, to wash their hands and their feet before they approached the altar of God (Exod. xxx. 17-21). For this purpose a large basin of water was provided both at the tabernacle and at the temple. To this the Psalmist alludes when he says—'I will wash my hands in innocency, and so will I compass thine altar' (Ps. xxvi. 6). Hence it became the custom in the early Christian church for the ministers, in the view of the congregation, to wash their hands in a basin of water brought by the deacon, at the commencement of the communion (Bingham, *Antiq.* bk. xv. c. 3, § 4); and this practice, or something like it, is still retained in the eastern churches, as well as in the church of Rome, when mass is celebrated. Similar ablutions by the priests before proceeding to perform the more sacred ceremonies were usual among the heathen. The Egyptian priests indeed carried the practice to a burdensome extent, from which the Jewish priests were, perhaps designedly, exonerated; and in their less torrid climate, it was for purposes of real cleanliness, less needful. Reservoirs of water were attached to the Egyptian temples; and Herodotus (ii. 37) informs us that the priests shaved the whole of their bodies every third day, that no insect or other filth might be upon them when they served the gods, and that they washed themselves in cold water twice every day and twice every night: Porphyry says thrice a day, with a nocturnal ablution occasionally. This kind of ablution, as preparatory to a religious act, answers to the simple *Wâdû* of the Moslems, which they are required to go through five times daily before their stated prayers. This makes the ceremonies of ablution

much more conspicuous to a traveller in the Moslem East at the present day than they would appear among the ancient Jews, seeing that the law imposed this obligation on the priests only, not on the people. Connected as these Moslem ablutions are with various forms and imitative ceremonies, and recurring so frequently as they do, the avowedly heavy yoke of even the Mosaic law seems light in the comparison.

In the *third* class of ablutions washing is regarded as a purification from positive defilements. The Mosaic law recognises eleven species of uncleanness of this nature (Lev. xii. xv.), the purification for which ceased at the end of a certain period, provided the unclean person then washed his body and his clothes; but in a few cases, such as leprosy and the defilements contracted by touching a dead body, he remained unclean seven days after the physical cause of pollution had ceased. This was all that the law required: but in later times, when the Jews began to refine upon it, these cases were considered generic instead of specific—as representing classes instead of individual cases of defilement—and the causes of pollution requiring purification by water thus came to be greatly increased. This kind of ablution for substantial uncleanness answers to the Moslem *غُش* *ghash*, in

which the causes of defilement greatly exceed those of the Mosaic law, while they are perhaps equalled in number and minuteness by those which the later Jews devised. The uncleanness in this class arises chiefly from the natural secretions of human beings and of beasts used for food; and, from the ordure of animals not used for food; and as among the Jews, the defilement may be communicated not only to persons, but to clothes, utensils, and dwellings—in all which cases the purification must be made by water, or by some representative act where water cannot be applied.

Of the *last* class of ablutions, by which persons declared themselves free from the guilt of a particular action, the most remarkable instance is that which occurs in the expiation for an unknown murder, when the elders of the nearest village washed their hands over the expiatory heifer, beheaded in the valley, saying 'Our hands have not shed this blood, neither have our eyes seen it' (Deut. xxi. 1-9). It has been thought by some that the signal act of Pilate, when he washed his hands in water and declared himself innocent of the blood of Jesus (Matt. xxvii. 24), was a designed adoption of the Jewish custom: but this supposition does not appear necessary, as the custom was also common among the Greeks and Romans.

We have confined this notice to the usages of ablution as a sign of purification sanctioned or demanded by the law itself. Other practices not there indicated appear to have existed at a very early period, or to have grown up in the course of time. From 1 Sam. xvi. 5, compared with Exod. xix. 10-14, we learn that it was usual for those who presented or provided a sacrifice to purify themselves by ablution: and as this was everywhere a general practice, it may be supposed to have existed in patriarchal times, and, being an established and approved custom, not to have required to be mentioned in the law. There is a passage in the apocryphal book of Judith (xii. 7-9) which has been thought to intimate that the Jews performed ablutions before prayer. But we cannot fairly

deduce that meaning from it. It would indeed prove too much if so understood, as Judith bathed in the water, which is more than even the Moslems do before their prayers. Moreover, this authority, if clear, would not be conclusive.

But after the rise of the sect of the Pharisees, the practice of ablution was carried to such excess, from the affectation of excessive purity, that it is repeatedly brought under our notice in the New Testament through the severe animadversions of our Saviour on the consummate hypocrisy involved in this fastidious attention to the external types of moral purity, while the heart was left unclean. All the practices there exposed come under the head of purification from uncleanness;—the acts involving which were made so numerous that persons of the stricter sect could scarcely move without contracting some involuntary pollution. For this reason they never entered their houses without ablution, from the strong probability that they had unknowingly contracted some defilement in the streets; and these were peculiarly liable to be defiled; and as washing the hands (Mark vii. 1-5), because they were peculiarly liable to be defiled; and as unclean hands were held to communicate uncleanness to all food (excepting fruit) which they touched, it was deemed that there was no security against eating unclean food but by always washing the hands ceremonially before touching any meat. We say 'ceremonially,' because this article refers only to ceremonial washing. The Israelites, who, like other Orientals, fed with their fingers, washed their hands before meals, for the sake of cleanliness. But these customary washings were distinct from the ceremonial ablutions, as they are now among the Moslems. There were, indeed, distinct names for them. The former was called simply *נטילה*, or *washing*, in which water, was *poured upon* the hands; the latter was called *טבילה*, *plunging*, because the hands were *plunged in* water (Lightfoot on Mark vii. 4). It was this last, namely, the ceremonial ablution, which the Pharisees judged to be so necessary. When therefore some of that sect remarked that our Lord's disciples ate with 'unwashed hands' (Mark vii. 2), it is not to be understood literally that they did not at all wash their hands, but that they did not *plunge* them ceremonially according to their own practice. And this was expected from them only as the disciples of a religious teacher; for these refinements were not practised by the class of people from which the disciples were chiefly drawn. Their wonder was, that Jesus had not inculcated this observance on his followers, and not, as some have fancied, that he had enjoined them to neglect what had been their previous practice.

In at least an equal degree the Pharisees multiplied the ceremonial pollutions which required the ablution of inanimate objects—'cups and pots, brazen vessels and tables;' the rules given in the law (Lev. vi. 28; xi. 32-36; xv. 23) being extended to these multiplied contaminations. Articles of earthenware which were of little value were to be broken; and those of metal and wood were to be scoured and rinsed with water. All these matters are fully described by Buxtorf, Lightfoot, Gill, and other writers of the same class, who present many striking illustrations of the passages of Scripture which refer to them. The Mohammedan usages of ablution, which offer many striking analogies,

are fully detailed in the third book of the *Mischat ul Masábih*, and also in D'Ohsson's *Tableau*, liv. i. chap. i.—J. K.

ABNAIM (אַבְנַיִם). This word is the dual of אֶבֶן, *a stone*, and in this form only occurs twice, Exod. i. 16, and Jer. xviii. 3. In the latter passage it undeniably means *a potter's wheel*; but what it denotes in the former, or how to reconcile with the use of the word in the latter text any interpretation which can be assigned to it in the former, is a question which (see Rosenmüller *in loc.*) has mightily exercised the ingenuity and patience of critics and philologists. The meaning appears to have been doubtful even of old, and the ancient versions are much at variance. The LXX. evades the difficulty by the general expression *σταν ὡς πρὸς τὴν ῥάκρου*, 'when they are about to be delivered,' and is followed by the Vulgate, '*et partus tempus advenit*;' but our version is more definite, and has 'and see them upon the stools.' This goes upon the notion that the word denotes a particular kind of open stool or chair constructed for the purpose of delivering pregnant women. The usages of the East do not, however, acquaint us with any such utensil, the employment of which, indeed, is not in accordance with the simple manners of ancient times. Others, therefore, suppose the word to denote stone or other bathing troughs, in which it was usual to lave new-born infants. This conjecture is so far probable, that the midwife, if inclined to obey the royal mandate, could then destroy the child without check or observation. Accordingly, this interpretation is preferred by Gesenius (*Thesaur. s. v.* אֶבֶן), quoting in illustration Thevenot (*Ilin*, ii. 98), who states 'that the kings of Persia are so afraid of being deprived of that power which they abuse, and are so apprehensive of being dethroned, that they cause the male children of their female relations to be destroyed in the stone bathing-troughs in which newly-born children are laved.' The question, however, is not as to the existence of the custom, but its application to the case in view. Professor Lee (*s. v.*) who decides nearly in accordance with the LXX. and other ancient versions, none of which, as he remarks, say anything about *wash-pots, stools*, etc., gives reasons for understanding the command of Pharaoh thus:—'Observe, look carefully on the *two occasions* (*i. e.*, in which either a male or female child is born). If it be a son, then,' etc. [This word probably denotes here the *puḍenda muliebria*, from an analogy between them and the generative power of the potter's wheel—'When ye look upon the abnaim of the Hebrew women,' *i. e.* at the moment of parturition. See Knobel *in loc.*, and as a conversely analogous case, compare the modern usage of the word *matrix*. Comp. the rendering of the LXX.]—J. K.

ABNER (אַבְנֵר or אֲבִינֵר, *father of light*; Sept. Ἀβερρίπ), the cousin of Saul (being the son of his uncle Ner), and the commander-in-chief of his army. He does not come much before us until after the death of Saul, B.C. 1056. Then, the experience which he had acquired, and the character for ability and decision which he had established in Israel, enabled him to uphold the falling house of Saul for seven years; and he might probably have done so longer if it had suited his views. It was generally known that David had been divinely nominated to succeed Saul on the throne: when, therefore, that

monarch was slain in the battle of Gilboa, David was made king over his own tribe of Judah, and reigned in Hebron. In the other tribes an influence adverse to Judah existed, and was controlled chiefly by the tribe of Ephraim. Abner, with great decision availed himself of his state of feeling, and turned it to the advantage of the house to which he belonged, of which he was now the most important surviving member. He did not, however, venture to propose himself as king; but took Ishbosheth, a surviving son of Saul, whose known imbecility had excused his absence from the fatal fight in which his father and brothers perished, and made him king over the tribes, and ruled in his name. Ishbosheth reigned in Mahanaim, beyond Jordan, and David in Hebron. A sort of desultory warfare arose between them, in which the advantage appears to have been always on the side of David. The only one of the engagements of which we have a particular account is that which ensued when Joab, David's general, and Abner, met and fought at Gibeon. Abner was beaten and fled for his life; but was pursued by Asahel, the brother of Joab and Abishai, who was 'swift of foot as a wild roe.' Abner, dreading a blood-feud with Joab, for whom he seems to have entertained a sincere respect, entreated Asahel to desist from the pursuit; but finding that he was still followed, and that his life was in danger, he at length ran his pursuer through the body by a back thrust with the pointed heel of his spear (2 Sam. ii. 8-32). This put a strife of blood between the two foremost men in all Israel (after David); for the law of honour which had from times before the law prevailed among the Hebrews, and which still prevails in Arabia, rendered it the conventional duty of Joab to avenge the blood of his brother upon the person by whom he had been slain [BLOOD-REVENGE.]

As time went on, Abner had occasion to feel more strongly that he was himself not only the chief, but the only remaining prop of the house of Saul: and this conviction, acting upon a proud and arrogant spirit, led him to more presumptuous conduct than even the mildness of the feeble Ishbosheth could suffer to pass without question. He took to his own harem a woman who had been a concubine-wife of Saul. This act, from the ideas connected with the harem of a deceased king, was not only a great impropriety, but was open to the suspicion of a political design, which Abner may very possibly have entertained. A mild rebuke from the nominal king, however, enraged him greatly; and he plainly declared that he would henceforth abandon his cause and devote himself to the interests of David. To excuse this desertion to his own mind, he then and on other occasions avowed his knowledge that the son of Jesse had been appointed by the Lord to reign over all Israel; but he appears to have been unconscious that this avowal exposed his previous conduct to more censure than it offered excuse for his present. He, however, kept his word with Ishbosheth. After a tour, during which he explained his present views to the elders of the tribes which still adhered to the house of Saul, he repaired to Hebron with authority to make certain overtures to David on their behalf. He was received with great attention and respect; and David even thought it prudent to promise that he should still have the chief command of the armies, when the desired union of the two kingdoms took place. The political expediency of this engagement is very clear, and to that expediency the interests and claims of Joab

were sacrificed. That distinguished personage happened to be absent from Hebron on service at the time, but he returned just as Abner had left the city. He speedily understood what had passed; and his dread of the superior influence which such a man as Abner might establish with David, quickened his remembrance of the vengeance which his brother's blood required. His purpose was promptly formed. Unknown to the king, but apparently in his name, he sent a message after Abner to call him back; and as he returned, Joab met him at the gate, and, leading him aside, as if to confer peaceably and privately with him, suddenly thrust his sword into his body (E. C. 1048). The lamentations of David, the public mourning which he ordered, and the funeral honours which were paid to the remains of Abner, the king himself following the bier as chief mourner, exonerated him in public opinion from having been privy to this assassination. As for Joab, his privilege as a blood-avenger must to a great extent have justified his treacherous act in the opinion of the people; and that, together with his influence with the army, screened him from punishment (2 Sam. iii. 6-39).

For the following interesting elucidation of David's lament over Abner, we are indebted to a learned and highly valued contributor.—J. K.

David's short but emphatic lament over Abner (2 Sam. iii. 33) may be rendered, with stricter adherence to the *form* of the original, as follows:—

'Should Abner die as a villain dies?—
Thy hands—not bound,
Thy feet—not brought into fetters:
As one falls before the sons of wickedness,
fellest thou!'

As to the syntactical structure of these lines, it is important to observe that the second and third lines are two *propositions of state* belonging to the *last*, which describe the *condition in which he was when he was slain*. This kind of proposition is marked by the *subject* being placed *first*, and by the verb generally becoming a *participle*. On the right knowledge of this structure the beauty and sense of many passages altogether depend; and the common ignorance of it is to be ascribed to the circumstance, that the study of Hebrew so very seldom reaches beyond the vocabulary into the deeper-seated peculiarities of its *construction*. (See Ewald's *Hebr. Gram.* § 556). As to the sense of the words J. D. Michaelis (in his *Uebersetzung des Alten Test. mit Anmerkungen für Ungelehrte*) saw that the point of this indignant, more than sorrowful, lament, lies in the *mode* in which Abner was slain. Joab professed to kill him 'for the blood of Asahel his brother,' 2 Sam. iii. 27. But if a man claimed his brother's blood at the hand of his murderer, the latter (even if he fled to the altar for refuge, Exod. xxi. 14) would have been delivered up (bound, hand and foot, it is *assumed*) to the avenger of blood, who would then possess a legal right to slay him. Now Joab not only had no title to claim the right of the *Goel*, as Asahel was killed under justifying circumstances (2 Sam. ii. 19); but, while pretending to exercise the avenger's right, he took a lawless and private mode of satisfaction, and committed a murder. Hence David charged him in allusion to this conduct, 'with shedding the blood of war in peace' (1 Kings ii. 5); and hence he expresses himself in this lament, as if indignant that the noble Abner, instead of being surrendered

with the formalities of the law to meet an authorized penalty, was treacherously stabbed by the hands of an assassin.—J. N.

ABNET (אַבְנֵיתָ) [Meier (*Heb. Wurzel-W. B.* p. 697) derives this word = אַבְנֵיתָ from אַבְנֵיתָ, allied to Arabic أَبْنَى *he bound*; Gesenius finds its analogues in the Persic بَنْد *a band, belt* (*Theo.* p. 22) and the Sanscrit *bandha*. There is no necessity for supposing, with the late Professor Lee, that it is an Egyptian word.] It means a *band, a bandage*, and from the places in which it occurs, it appears to have been made of fine linen variously wrought, and used to bind as a girdle about the body of persons in authority, especially the Jewish priests (Exod. xxix. 9; xxviii. 39; xxxix. 29; Lev. viii. 13 Isa. xxii. 21). These girdles may be considered as fairly represented by those which we observe on such persons in the Egyptian paintings.

4
ABOAB, ISAAC, a Jewish rabbi, born at San Jan de Luz, in Portugal, Feb. 1609; died 1693. He wrote a copious Spanish commentary on the Pentateuch, *Paraphrasis commentado sobre el Pentateuco*, Amst. 1681, fol., and several works of a didactic character.

ABOMINATION (הַטְּמָאָה and טְמֵאָה; Sept. and New Test.—*ε. g.*, Matt. xxiv. 15—βδέλυμα, for both). These words describe generally any object of detestation or disgust (Lev. xviii. 22; Deut. vii. 25); and are applied to an impure or detestable action (Ezek. xxii. 11; xxxiii. 26; Mal. ii. 11, etc.); to anything causing a ceremonial pollution (Gen. xliii. 32; xlv. 34; Deut. xiv. 3); but more especially to idols (Lev. xviii. 22; xx. 13; Deut. vii. 26; 1 Kings xi. 5, 7; 2 Kings xxiii. 13); and also to food offered to idols (Zech. ix. 7); and to filth of every kind (Nahum iii. 6). There are two or three of the texts in which the word occurs,

to which, on account of their peculiar interest or difficulty, especial attention has been drawn. The first is Gen. xliii. 32: 'The Egyptians might not eat bread with the Hebrews; for that is an abomination (תועבה) unto the Egyptians.' This is best explained by the fact that the Egyptians considered themselves ceremonially defiled if they ate with any strangers. The primary reason appears to have been that the cow was the most sacred animal among the Egyptians, and the eating of it was abhorrent to them; whereas it was both eaten and sacrificed by the Jews and most other nations, who on that account were abominable in their eyes. It was for this, as we learn from Herodotus (ii. 41), that no Egyptian man or woman would kiss a Greek on the mouth, or would use the cleaver of a Greek, or his spit, or his dish, or would taste the flesh of even clean beef (that is, of oxen) that had been cut with a Grecian carving-knife. It is true that Sir J. G. Wilkinson (*Anc. Egyptians*, iii. 358) ascribes this to the repugnance of the fastidiously clean Egyptians to the comparatively foul habits of their Asiatic and other neighbours: but it seems scarcely fair to take the facts of the father of history, and ascribe to them any other than the very satisfactory reason which he assigns. We collect then that it was as foreigners, not pointedly as Hebrews, that it was an abomination for the Egyptians to eat with the brethren of Joseph. The Jews themselves subsequently exemplified the same practice; for in later times they held it unlawful to eat or drink with foreigners in their houses, or even to enter their houses, (John xviii. 28; Acts x. 28; xi. 3); for not only were the houses of Gentiles unclean (*Mishn. Oholoth*, 18, § 7), but they themselves rendered unclean those in whose houses they lodged (Maimon. *Mishcab a Morheb*, c. 12, § 12); which was carrying the matter a step further than the Egyptians (see also *Mitzvoth Toru*, pr. 148). We do not however trace these examples before the Captivity.

The second passage is Gen. xlv. 34. Joseph is telling his brethren how to conduct themselves when introduced to the king of Egypt; and he instructs them that when asked concerning their occupation they should answer: 'Thy servants' trade hath been about cattle from our youth even until now, both we and also our fathers.' This last clause has emphasis, as shewing that they were hereditary nomade pastors; and the reason is added: 'That ye may dwell in the land of Goshen,—for every shepherd is an abomination unto the Egyptians.' In the former instance they were 'an abomination' as strangers, with whom the Egyptians could not eat; here they are a further abomination as nomade shepherds, whom it was certain that the Egyptians, for that reason, would locate in the border land of Goshen, and not in the heart of the country. That it was nomade shepherds, or Bedouins, and not simply shepherds, who were abominable to the Egyptians, is evinced by the fact that the Egyptians themselves paid great attention to the rearing of cattle. This is shewn by their sculptures and paintings, as well as by the offer of this very king of Egypt to make such of Jacob's sons as were men of activity 'overseers of his cattle' (xlvii. 6). For this aversion to nomade pastors two reasons are given; and it is not necessary that we should choose between them, for both of them were, it is most likely, concurrently true. One is, that the inhabitants of Lower and Middle Egypt had previously been invaded by, and had

remained for many years subject to, a tribe of nomade shepherds, who had only of late been expelled, and a native dynasty restored—the grievous oppression of the Egyptians by these pastoral invaders, and the insult with which their religion had been treated. The other reason, not necessarily superseding the former, but rather strengthening it, is, that the Egyptians, as a settled and civilized people, detested the lawless and predatory habits of the wandering shepherd tribes, which then, as now, bounded the valley of the Nile, and occupied the Arabias. Their constantly aggressive operations upon the frontiers, and upon all the great lines of communication, must, with respect to them, have given intensity to the odium with which all strangers were regarded. If any proof of this were wanting, it is found in the fact (attested by the Rev. R. M. Macbriar and others) that, sunk as Modern Egypt is, there is still such a marked and irreconcilable difference of ideas and habits between the inhabitants and the Bedouins, whose camps are often in the near neighbourhood of their towns and villages, that the latter are regarded with dislike and fear, and no friendly intercourse exists between them. We know that the same state of feeling prevails between the settled inhabitants and the Bedouins along the Tigris and Euphrates.

The third marked use of this word again occurs in Egypt. The king tells the Israelites to offer to their god the sacrifices which they desired, without going to the desert for that purpose. To which Moses objects, that they should have to sacrifice to the Lord 'the abomination of the Egyptians,' who would thereby be highly exasperated against them (Exod. viii. 25, 26). A reference back to the first explanation shews that this 'abomination' was the cow, the only animal which all the Egyptians agreed in holding sacred; whereas, in the great sacrifice which the Hebrews proposed to hold, not only would heifers be offered, but the people would feast upon their flesh.

THE ABOMINATION OF DESOLATION. In Dan. ix. 27, שִׁקוץ מִשְׁמֶם; literally, 'the abomination of the desolator,' which, without doubt, means the idol or idolatrous apparatus which the desolator of Jerusalem should establish in the holy place. This appears to have been a prediction of the pollution of the temple by Antiochus Epiphanes, who caused an idolatrous altar to be built on the altar of burnt offerings, whereon unclean things were offered to Jupiter Olympius, to whom the temple itself was dedicated. Josephus distinctly refers to this as the accomplishment of Daniel's prophecy; as does the author of the first book of Maccabees, in declaring that 'they set up the abomination of desolation upon the altar'—*ἠκοδόμησαν τὸ βδέλυγμα τῆς ἐρημώσεως ἐπὶ τὸ θυσιαστήριον* (1 Macc. i. 54; vi. 7; 2 Macc. vi. 2-5; Joseph. *Antiq.* xii. 5, 4, 7, 6). The phrase is quoted by Jesus, in the form of *τὸ βδέλυγμα τῆς ἐρημώσεως* (Matt. xxiv. 15), and is applied by him to what was to take place at the advance of the Romans against Jerusalem. They who saw 'the abomination of desolation standing in the holy place' were enjoined to 'flee to the mountains.' And this may with probability be referred to the advance of the Roman army against the city with their image-crowned standards, to which idolatrous honours were paid, and which the Jews regarded as idols. The unexpected retreat and discomfiture of the Roman forces afforded such as were mindful of our Saviour's prophecy an opportunity of obeying the injunction

which it contained. That the Jews themselves regarded the Roman standards as *abominations* is shewn by the fact that in deference to their known aversion, the Roman soldiers quartered in Jerusalem forbore to introduce their standard into the city: and on one occasion, when Pilate gave orders that they should be carried in by night, so much stir was made in the matter by the principal inhabitants, that for the sake of peace the governor was eventually induced to give up the point (Joseph. *Antiq.* xviii. 3, 1). Those, however, who suppose that 'the holy place' of the text must be the prediction itself, may find the accomplishment of the prediction in the fact that, when the city had been taken by the Romans, and the holy house destroyed, the soldiers brought their standards in due form to the temple, set them up over the eastern gate, and offered sacrifice to them (Joseph. *Bell. Jud.* vi. 6, 1); for (as Havercamp judiciously notes from Tertullian, *Apol.* c. xvi. 162) 'almost the entire religion of the Roman camp consisted in worshipping the ensigns, swearing by the ensigns, and in preferring the ensigns before all the other gods.

5.

Nor was this the last appearance of 'the abomination of desolation, in the holy place.' for, not only did Hadrian, with studied insult to the Jews, set up the figure of a boar over the Bethlehem gate of the city (Ælia Capitolina) which rose upon the site and ruins of Jerusalem (Euseb. *Chron.* l. i. p. 45, ed. 1658), but he erected a temple to Jupiter upon the site of the Jewish temple (Dion Cass. lxi. 12), and caused an image of himself to be set up in the part which answered to the most holy place (Nicephorus Callist., iii. 24). This was a consummation of all the abominations which the iniquities of the Jews brought upon their holy place. J. K.

'We believe,' says Hävernicks, 'that of all the meanings of כנף that are sufficiently supported, none so commends itself as that of *border*, properly of a garment, e. g., 1 Sam. xv. 27; Num. xv. 36;

Ex. v. 3; Zech. viii. 23; Hag. ii. 12; then secondarily of places, regions of the earth, hence כנפות הארץ, the ends, limits, uttermost parts of the earth, Job xxxvii. 3; xxxviii. 13; Is. xi. 12; Ez. vii. 2. (LXX. *περίρρηγες τῆς γῆς*, the extremity of the earth). . . . According to this כנף would denote here *extremitas regionis*, the utmost point or

part of a district or of a place, and ער-כנף שוקועים, on the utmost height of abomination, i. e., on the highest place where abomination could be committed. But the highest point in Jerusalem was the Temple, and it must be it which is thus designated here. We admit that this meaning would be obscure before the fulfilment of the prediction; but this we hold to be only a characteristic feature of such predictions. . . . As respects the form כמשכום, most interpreters take it as *nomen participiale* for 'destruction'; but this is against the usage of the form elsewhere in Daniel (xi. 31), and the meaning is brought out much more vividly and poetically by our construction. 'On the summit of abomination is a destroyer,' probably collectively for 'destroyers' in general. . . . According to this explanation there can be no doubt that the LXX. have already rightly given the meaning of the passage when they translate *καὶ ἐπὶ τὸ ἱερόν βδέλυγμα τῶν ἐρημώσεων ἔσται*, and the Syr. Ambros. Somewhat different from this is Theodotion, *καὶ ἐπὶ τούτοις* (these two words are wanting in the Vatican Codex) *ἐπὶ τὸ ἱερόν βδέλυγμα τῆς ἐρημώσεως* (Cod. Vat. τῶν ἐρημώσεων), and so Jacob of Edessa (Ap. Bugati, p. 151), only that he seems to have read

καὶ ἐρημώσις. The Peshito gives **ܟܢܦܝܢ** **ܟܢܦܝܢ**; 'on the wings of abhorrence,' and this

Ephraem refers to the Romish eagles. The Vulg., *Et erit in templo abominatio desolatiois*; Ven., *κατὰ πτέρυγος βδέλυγματα ἐρημοῦν*. *Commentar iib. Daniel* in loc. Some codices read **ובחיכל יהיה שיקרן** (see Kennicott, *Bib. Heb.* in loc.; De Rossi *Var. Lectt.* P. iii.) This agrees with the reading of the LXX. and St. Jerome, as also of the Memphitic and Sahidic versions, and with the citation of the Evangelists. It may be a mere correction; but there is a curious fact urged by Michaelis which seems to give it some weight. Josephus in recording the destruction of the Arx Antonia says, that the Jews thus made the temple building a square, not considering that it was written in the prophecies that the city and temple should be taken when the temple was made four square (*De Bell. Jud.* vi. 5, 4). To what prediction the historian here refers has always appeared obscure, and his whole statement has been perplexing. But Michaelis argues that if the reading of Dan. ix. 27 was in his day that given above, the difficulty is solved; for we have only to suppose he read the last word *Shejjakotz* (**שׂיקוֹץ**) in which case the meaning would be 'and in the temple shall he who cuts off (from קצץ) be a desolator.' (*Orient. u. Exeget. Bibliothek* ii. p. 194). If we may take Josephus as a representative of the common opinions of his countrymen, they must have regarded these predictions as finding their fulfilment not merely in the acts of Antiochus Epiphanes, but also in the destruction of Jerusalem by the Romans (*Antiq.* x. 7). As against the opinion that שיקרן is to be understood of idolatrous objects carried by heathens into the Temple, it has been objected that this word desig-

nates idols only as adopted by the Jews. But this is wholly unfounded, as 1 Kings xi. 5, 2 Kings xxiii. 13, and other passages abundantly shew. Indeed the word is always used objectively to designate that which is an abomination not *in*, but *to* the parties spoken of.—W. L. A.

ABRAHAM (אַבְרָהָם, *father of a multitude*; Sept. Ἀβραάμ), the founder of the Hebrew nation. Up to Gen. xvii. 4, 5, he is uniformly called ABRAM (אַבְרָם, *father of elevation, or high father*; Sept. Ἀβραμ), and this was his original name; but the extended form, which it always afterwards bears, was given to it to make it significant of the promise of a numerous posterity which was at the same time made to him.

Abraham was a native of Chaldea, and descended, through Heber, in the ninth generation, from Shem the son of Noah. His father was Terah, who had two other sons, Nahor and Haran. Haran died prematurely 'before his father,' leaving a son Lot and two daughters, Milcah and Iscah. Lot attached himself to his uncle Abraham; Milcah became the wife of her uncle Nahor; and Iscah, who was also called Sarai, became the wife of Abraham (Gen. xi. 26-29; comp. Joseph. *Antiq.*, i. 6, 5). [SARAH.]

Abraham was born A.M. 2008, B.C. 1996 (Hales, A.M. 3258, B.C. 2153), in 'Ur of the Chaldees' (Gen. xi. 28). The concise history in Genesis states nothing concerning the portion of his life prior to the age of 60; and respecting a person living in times so remote no authentic information can be derived from any other source. There are indeed traditions, but they are too manifestly *built up* on the foundation of a few obscure intimations in Scripture to be entitled to any credit.*

Although Abraham is, by way of eminence, named first, it appears probable that he was the youngest of Terah's sons, and born by a second wife, when his father was 130 years old. Terah was seventy years old when the eldest son was born (Gen. xi. 32; xii. 4; xx. 12; comp. Hales, ii. 107); and that eldest son appears to have been Haran, from the fact that his brothers married his daughters, and that his daughter Sarai was only ten years younger than his brother Abraham (Gen. xvii. 17). It is shewn by Hales (ii. 107), that Abraham was 60 years old when the family quitted their native city of Ur, and went and abode in Charran. The reason for this movement does not appear in the Old Testament, but the real cause transpires in Acts vii. 2-4: 'The God of glory appeared to our father Abraham while he was (at Ur of the Chaldees) in Mesopotamia, *before he dwelt in Charran*, and said unto him, Depart from *thy land*, and from thy kindred, and come hither

to a *land* (γῆν) which I will shew thee. Then departing from the land of the Chaldees, he dwelt in Charran.' This *first* call is not recorded, but only implied in Gen. xii.: and it is distinguished by several pointed circumstances from the *second*, which alone is there mentioned. Accordingly, Abraham departed, and his family, including his aged father, removed with him. They proceeded not at once to the land of Canaan, which indeed had not been yet indicated to Abraham as his destination; but they came to Charran, and tarried at that convenient station for fifteen years, until Terah died, at the age of 205 years. Being free from his filial duties, Abraham, now 75 years of age, received a second and more pointed call to pursue his destination: 'Depart from thy land, and from thy kindred, and from thy father's house, unto the land (הארץ, ἡ γῆ γῆν), which I will shew thee' (Gen. xii. 1). A condition was annexed to this call, that he should separate from his father's house, and leave his brother Nahor's family behind him in Charran. He however took with him his nephew Lot, whom, having no children of his own, he appears to have regarded as his heir, and then went forth 'not knowing whither he went' (Heb. xi. 8), but trusting implicitly to the Divine guidance.

No particulars of the journey are given. Abraham arrived in the land of Canaan, which he found occupied by the Canaanites in a large number of small independent communities, which cultivated the districts around their several towns. The country was however but thinly peopled; and, as in the more recent times of its depopulation, it afforded ample pasture-grounds for the wandering pastors. One of that class Abraham must have appeared in their eyes. In Mesopotamia the family had been pastoral, but dwelling in towns and houses, and sending out the flocks and herds under the care of shepherds. But the migratory life to which Abraham had now been called, compelled him to take to the tent-dwelling as well as the pastoral life: and the usages which his subsequent history indicates are therefore found to present a condition of manners and habits analogous to that which still exists among the nomade pastoral, or Bedouin tribes of south-western Asia. [Abraham entered the promised land by way of the valley in which Sychem (the present Nablous as is believed) afterwards stood. All travellers concur in celebrating the richness and beauty of this district. 'All at once,' says Robinson, 'the ground sinks down to a valley running towards the west, with a soil of rich black vegetable mould. There a scene of luxuriant and almost unparalleled verdure burst upon our view. The whole valley was filled with gardens of vegetables, and orchards of all kinds of fruits, watered by several fountains, which burst forth in various parts and flow westward in refreshing streams. It came upon us suddenly like a scene of fairy enchantment. We saw nothing to compare with it in all Palestine.' *Bibl. Res.* ii. 275; Comp. Stanley *Syr. and Pal.*, p. 234. Wilson, *Lands of the Bible*, ii. 45, 71; Nugent, *Lands Classical and Sacred*, ii. 115, Knight's edition, 1846, etc.]

The rich pastures in that part of the country tempted Abraham to form his first encampment in the vale of Moreh, which lies between the mountains of Ebal and Gerizim. Here the strong faith which had brought the childless man thus far from his home was rewarded by the grand promise:—'I

* [The rabbinical traditions concerning Abraham are summarily given by Otho, *Lex. Rab.* s. v. p. 42. Josephus notices a few of these, but without seeming to lay much stress on them (*Antiq.* i. 7 ff). In a passage preserved by him (*Antiq.* i. 8 [7], 2) Nicolas of Damascus mentions Abraham as reigning at Damascus, and says his name was still honoured there, even in his day (Nic. Damasc. *Hist. Fragmenta*, ed. Orellius, p. 114). Comp. Justin, *Hist. Phil.* xxxvi. 2. Euseb. *Præp. Ev.* ix. 16-20. For oriental traditions concerning him, see Herbelot, *Bibl. Orient.* s. v.; Hottinger, *Hist. Orient.* p. 49, 50, Mill, *Dissertationes Select.* p. 15, 18, etc., Col. Chesney, *Euphrates Expedition*, ii. 68].

will make of thee a great nation, and I will bless thee and make thy name great, and thou shalt be a blessing; and I will bless them that bless thee, and curse them that curse thee: and in thee shall all the families of the earth be blessed' (Gen. xii. 2, 3). It was further promised that to his posterity should be given the rich heritage of that beautiful country into which he had come (v. 7). It will be seen that this important promise consisted of two parts, the one temporal, the other spiritual. The *temporal* was the promise of posterity, that he should be blessed himself, and be the founder of a great nation; the *spiritual*, that he should be the chosen ancestor of the Redeemer, who had been of old obscurely predicted (Gen. iii. 15), and thereby become the means of blessing all the families of the earth. The implied condition on his part was, that he should publicly profess the worship of the true God in this more tolerant land; and accordingly 'he built there an altar unto the Lord, who appeared unto him.' He soon after removed to the district between Bethel and Ai, where he also built an altar to that 'JEHOVAH' whom the world was then hastening to forget. His farther removals tended southward, until at length a famine in Palestine compelled him to withdraw into Egypt, where corn abounded. Here his apprehension that the beauty of his wife Sarai might bring him into danger with the dusky Egyptians, overcame his faith and rectitude, and he gave out that she was his sister. As he had feared, the beauty of the fair stranger excited the admiration of the Egyptians, and at length reached the ears of the king, who forthwith exercised his regal right of calling her to his harem, and to this Abraham, appearing as only her brother, was obliged to submit. As, however, the king had no intention to act harshly in the exercise of his privilege, he loaded Abraham with valuable gifts, suited to his condition, being chiefly in slaves and cattle. These presents could not have been refused by him without an insult which, under all the circumstances, the king did not deserve. A grievous disease inflicted on Pharaoh and his household relieved Sarai from her danger, by revealing to the king that she was a married woman; on which he sent for Abraham, and, after rebuking him for his conduct, restored his wife to him, and recommended him to withdraw from the country. He accordingly returned to the land of Canaan, much richer than when he left it 'in cattle, in silver, and in gold' (Gen. xii. 8; xiii. 2).

Lot also had much increased his possessions: and soon after their return to their previous station near Bethel, the disputes between their respective shepherds about water and pasturage soon taught them that they had better separate. The recent promise of posterity to Abraham himself, although his wife had been accounted barren, probably tended also in some degree to weaken the tie by which the uncle and nephew had hitherto been united. The subject was broached by Abraham, who generously conceded to Lot the choice of pasture-grounds. Lot chose the well-watered plain in which Sodom and other towns were situated, and removed thither. [LOT.] Immediately afterwards the patriarch was cheered and encouraged by a more distinct and formal reiteration of the promises which had been previously made to him, of the occupation of the land in which he lived by a posterity numerous as the dust. Not long after, he removed to the

pleasant valley of Mamre, in the neighbourhood of Hebron (then called Arba), and pitched his tent under a terebint tree (Gen. xiii.)

It appears that fourteen years before this time the south and east of Palestine had been invaded by a king called Chedorlaomer, from beyond the Euphrates, who brought several of the small disunited states of those quarters under tribute. Among them were the five cities of the Plain of Sodom, to which Lot had withdrawn. This burden was borne impatiently by these states, and they at length withheld their tribute. This brought upon them a ravaging visitation from Chedorlaomer and three other (perhaps tributary) kings, who scoured the whole country east of the Jordan, and ended by defeating the kings of the plain, plundering their towns, and carrying the people away as slaves. Lot was among the sufferers. When this came to the ears of Abraham, he immediately armed such of his slaves as were fit for war, in number 318, and being joined by the friendly Amoritic chiefs, Aner, Eschol, and Mamre, pursued the retiring invaders. They were overtaken near the springs of the Jordan; and their camp being attacked on opposite sides by night, they were thrown into disorder, and fled. Abraham and his men pursued them as far as the neighbourhood of Damascus, and then returned with all the men and goods that had been taken away. Although Abraham had no doubt been chiefly induced to undertake this exploit by his regard for Lot, it involved so large a benefit, that, as the act of a sojourner, it must have tended greatly to enhance the character and power of the patriarch in the view of the inhabitants at large. In fact, we afterwards find him treated by them with high respect and consideration. When they had arrived as far as Salem, on their return, the king of that place, Melchizedek, who was one of the few native princes, if not the only one, who retained the knowledge and worship of 'the Most High God,' whom Abraham served, came forth to meet them with refreshments, in acknowledgment for which, and in recognition of his character, Abraham presented him with a tenth of the spoils. By strict right, founded on the war usages which still subsist in Arabia (Burckhardt's *Notes*, p. 97), the recovered goods became the property of Abraham, and not of those to whom they originally belonged. This was acknowledged by the king of Sodom, who met the victors in the valley near Salem. He said, 'Give me the persons, and keep the goods to thyself.' But with becoming pride, and with a disinterestedness which in that country would now be most unusual in similar circumstances, he answered, 'I have lifted up mine hand [*i. e.*, I have sworn] unto Jehovah, the most high God, that I will not take from a thread even to a sandal-thong, and that I will not take anything that is thine, lest thou shouldst say I have made Abram rich.' (Gen. xiv.)

Soon after his return to Mamre the faith of Abraham was rewarded and encouraged, not only by a more distinct and detailed repetition of the promises formerly made to him, but by the confirmation of a solemn covenant contracted, as nearly as might be, 'after the manner of men,' [COVENANT] between him and God. It was now that he first understood that his promised posterity were to grow up into a nation under foreign bondage, and that, in 400 years after (or, strictly, 405 years, counting from the birth of Isaac to the Exode), they

should come forth from that bondage as a nation, to take possession of the land in which he sojourned (Gen. xv.)

After ten years' residence in Canaan (B.C. 1913), Sarai, being then 75 years old, and having long been accounted barren, chose to put her own interpretation upon the promised blessing of a progeny to Abraham, and persuaded him to take her woman-slave Hagar, an Egyptian, as a secondary or concubine-wife, with the view that whatever child might proceed from this union should be accounted her own. [HAGAR.] The son who was born to Abraham by Hagar, and who received the name of Ishmael [ISHMAEL], was accordingly brought up as the heir of his father and of the promises (Gen. xvi.) Thirteen years after (B.C. 1900), when Abraham was 99 years old, he was favoured with still more explicit declarations of the Divine purposes. He was reminded that the promise to him was that he should be the father of many nations; and to indicate this intention his name was now changed (as before described) from *Abram* to *Abraham*. The Divine Being then solemnly renewed the covenant to be a God to him and to the race that should spring from him; and in token of that covenant directed that he and his should receive in their flesh the sign of circumcision. [CIRCUMCISION.] Abundant blessings were promised to Ishmael; but it was then first announced, in distinct terms, that the heir of the special promises was not yet born, and that the barren Sarai, then 90 years old, should twelve months thence be his mother. Then also her name was changed from Sarai to Sarah (*the princess*); and to commemorate the laughter with which the prostrate patriarch received such strange tidings, it was directed that the name of Isaac (*laughter*) should be given to the future child. The very same day, in obedience to the Divine ordinance, Abraham himself, his son Ishmael, and his house-born and purchased slaves were all circumcised (Gen. xvii.)

Three months after this, as Abraham sat in his tent door during the heat of the day, he saw three travellers approaching, and hastened to meet them, and hospitably pressed upon them refreshment and rest. They assented, and under the shade of a terebinth tree partook of the abundant fare which the patriarch and his wife provided, while Abraham himself stood by in respectful attendance. From the manner in which one of the strangers spoke, Abraham soon gathered that his visitants were no other than the Lord himself and two attendant angels in human form. The promise of a son by Sarah was renewed; and when Sarah herself, who overheard this within the tent, laughed inwardly at the tidings, which, on account of her great age, she at first disbelieved, she incurred the striking rebuke, 'Is anything too hard for Jehovah?' The strangers then addressed themselves to their journey, and Abraham walked some way with them. The two angels went forward in the direction of Sodom, while the Lord made known to him that, for their enormous iniquities, Sodom and the other 'cities of the plain' were about to be made signal monuments of his wrath and of his moral government. Moved by compassion and by remembrance of Lot, the patriarch ventured, reverently but perseveringly, to intercede for the doomed Sodom; and at length obtained a promise that, if but ten righteous men were found therein,

the whole city should be saved for their sake. Early the next morning Abraham arose to ascertain the result of this concession: and when he looked towards Sodom, the smoke of its destruction, rising 'like the smoke of a furnace,' made known to him its terrible overthrow. [SODOM.] He probably soon heard of Lot's escape: but the consternation which this event inspired in the neighbourhood induced him, almost immediately after, to remove farther off into the territories of Abimelech, king of Gerar. By a most extraordinary infatuation and lapse of faith, Abraham allowed himself to stoop to the same mean and foolish prevarication in denying his wife, which, twenty-three years before, had occasioned him so much trouble in Egypt. The result was also similar [ABIMELECH], except that Abraham answered to the rebuke of the Philistine by stating the fears by which he had been actuated—adding, 'And yet indeed she is my sister; she is the daughter of my father, but not the daughter of my mother; and she became my wife.' This mends the matter very little, since in calling her his sister he designed to be understood as saying she was *not* his wife. As he elsewhere calls Lot his 'brother,' this statement that Sarah was his 'sister' does not interfere with the probability that she was his niece.

The same year* Sarah gave birth to the long-promised son, and, according to previous direction, the name of Isaac was given to him. [ISAAC.] This greatly altered the position of Ishmael, and appears to have created much ill-feeling both on his part and that of his mother towards the child; which was in some way manifested so pointedly on occasion of the festivities which attended the weaning, that the wrath of Sarah was awakened, and she insisted that both Hagar and her son should be sent away. This was a very hard matter to a loving father; and Abraham would probably have refused compliance with Sarah's wish, had he not been apprised in a dream that it was in accordance with the Divine intentions respecting both Ishmael and Isaac. With his habitual uncompromising obedience, he then hastened them away early in the morning, with provision for the journey. [HAGAR.]

When Isaac was about 25 years old (B.C. 1872) it pleased God to subject the faith of Abraham to a severer trial than it had yet sustained, or that has ever fallen to the lot of any other mortal man. He was commanded to go into the mountainous country of Moriah (probably where the temple afterwards stood), and there offer up in sacrifice the son of his affection, and the heir of so many hopes and promises, which his death must nullify. But Abraham's 'faith shrunk not, assured that what God had promised he would certainly perform, and that he was able to restore Isaac to him even from the dead' (Heb. xi. 17-19), and he rendered a ready, however painful obedience. Assisted by two of his servants, he prepared wood suitable for the purpose, and without delay set out upon his melancholy journey. On the third day he descried the appointed place: and informing his attendants that he and his son

* It is, however, supposed by some biblical critics that the preceding adventure with Abimelech is related out of its order, and took place at an earlier date. Their chief reason is that Sarah was now ninety years of age. But the very few years by which such a supposition might reduce this age, seem scarcely worth the discussion [SARAH].

would go some distance farther to worship, and then return, he proceeded to the spot. To the touching question of his son respecting the victim to be offered, the patriarch replied by expressing his faith that God himself would provide the sacrifice; and probably he availed himself of this opportunity of acquainting him with the Divine command. At least, that the communication was made either then or just after is unquestionable; for no one can suppose that a young man of twenty-five could, against his will, have been bound with cords and laid out as a victim on the wood of the altar. Isaac would most certainly have been slain by his father's uplifted hand, had not the angel of Jehovah interposed at the critical moment to arrest the fatal stroke. A ram which had become entangled in a thicket was seized and offered; and a name was given to the place (יהוה יראה) *Jehovah-irah*—'the Lord will provide'—in allusion to the believing answer which Abraham had given to his son's inquiry respecting the victim. The promises before made to Abraham—of numerous descendants, superior in power to their enemies, and of the blessings which his spiritual progeny, and especially the Messiah, were to extend to all mankind—were again confirmed in the most solemn manner; for Jehovah swore by himself (comp. Heb. vi. 13, 17), that such should be the rewards of his uncompromising obedience. The father and son then rejoined their servants, and returned rejoicing to Beersheba (Gen. xxii. 19).

Twelve years after (B.C. 1860), Sarah died at the age of 127 years, being then at or near Hebron. This loss first taught Abraham the necessity of acquiring possession of a family sepulchre in the land of his sojourning. His choice fell on the cave of Machpelah [MACHPELAH], and after a striking negotiation with the owner in the gate of Hebron, he purchased it, and had it legally secured to him, with the field in which it stood and the trees that grew thereon. This was the only possession he ever had in the Land of Promise (Gen. xxiii.) The next care of Abraham was to provide a suitable wife for his son Isaac. It has always been the practice among pastoral tribes to keep up the family ties by intermarriages of blood-relations (Burekhardt, *Notes*, p. 154); and now Abraham had a further inducement in the desire to maintain the purity of the separated race from foreign and idolatrous connections. He therefore sent his aged and confidential steward Eliezer, under the bond of a solemn oath, to discharge his mission faithfully, to renew the intercourse between his family and that of his brother Nahor, whom he had left behind in Charran. He prospered in his important mission [ISAAC], and in due time returned, bringing with him Rebekah, the daughter of Nahor's son Bethuel, who became the wife of Isaac, and was installed as chief lady of the camp, in the separate tent which Sarah had occupied (Gen. xxiv.) Some time after Abraham himself took a wife named Keturah, by whom he had several children. These, together with Ishmael, seem to have been portioned off by their father in his lifetime, and sent into the east and south-east, that there might be no danger of their interference with Isaac, the divinely appointed heir. There was time for this: for Abraham lived to the age of 175 years, 100 of which he had spent in the land of Canaan. He died in B.C. 1822 (Hales, 1978), and was buried by his two eldest sons in the family sepulchre which

he had purchased of the Hittites (Gen. xxv. 1-10). —J. K.

It has been supposed by some that Keturah, who is called a concubine (1 Chron. i. 32, comp. Gen. xxv. 6), was taken by Abraham before Sarah's death, and lived with him, along with her, as a secondary wife. This seems more probable than that at the advanced age of nearly 140 years he should marry and beget children, especially as Paul speaks of him as being as good as dead for such acts when he was forty years younger (Rom. iv. 19; Heb. xi. 12). The sons of Abraham by Keturah became the heads of Arab tribes, 'ה בני קדם or 'children of the East' (Judg. vi. 3). His name was thus widely spread, and to this day it continues to be revered alike by Jew, Mohammedan, and Christian. 'Innumerable,' says Kurz, 'are his descendants. Peoples have risen and passed away, but the posterity of Abraham pass through the centuries unmingled and unchanged. Nor is their history yet ended; they still retain the blessing given to Abraham's seed, unhurt by the pressure of peoples and times. But it is not his human and national character that constitutes the most remarkable distinction of Abraham; it is his spiritual character. Wherever this is reproduced in any of his posterity, or through their instrumentality in any belonging to the other nations of the world, these are the true children of Abraham (Gal. iii. 7, 29; Rom. ix. 6-8). Abraham's place and significance consequently in the history of the world and of redemption, is rightly apprehended only as he is recognised as the Father of the Faithful. And numberless as the stars of heaven, shining as they, is his spiritual seed, are the children of his faith. Abraham's faith, which was reckoned to him for righteousness, is the prototype of the Christian faith. Anticipating a development of two thousand years, there may be found in his life a clear representation of what is the kernel and star of Christianity (Rom. iv.) The apostle James gives him the honourable title of 'Friend of God,' and by the Mohammedans of the East this is still his ordinary name (Khalil Allah, or simply el-Khalil). Herzog's *Real-Encycl.* s. v.—W. L. A.

ABRAHAM'S BOSOM. There was no name which conveyed to the Jews the same associations as that of Abraham. As undoubtedly he was in the highest state of felicity of which departed spirits are capable, 'to be with Abraham' implied the enjoyment of the same felicity; and 'to be in Abraham's bosom' meant to be in repose and happiness with him. The latter phrase is obviously derived from the custom of sitting or reclining at table which prevailed among the Jews in and before the time of Christ. [ACCUBATION.] By this arrangement, the head of one person was necessarily brought almost into the bosom of the one who sat above him, or at the top of the triclinium; and the guests were so arranged that the most favoured were placed so as to bring them into that situation with respect to the host (comp. John xiii. 23; xxi. 20). These Jewish images and modes of thought are amply illustrated by Lightfoot, Schoettgen, and Wetstein, who illustrate Scripture from rabbinical sources. It was quite usual to describe a just person as being with Abraham, or lying on Abraham's bosom; and as such images were unobjectionable, Jesus accommodated his speech to them, to render himself the more intelligible by familiar notions, when, in the

beautiful parable of the rich man and Lazarus, he describes the condition of the latter after death under these conditions (Luke xvi. 22, 23).—J. K.

ABRAM. [ABRAHAM.]

ABRAM, NICHOLAS, was born at Xaroval, in the department of the Vosges, in the year 1589. He was received into the Society of the Jesuits in 1623; and being skilled as a linguist, he was employed as a teacher in several of their seminaries. He died at Pont-a-Mousson on the 7th of September 1655. Besides many treatises on subjects connected with classical literature, and an edition of Nonnus's Paraphrase on John (Paris, 1623), he wrote several tracts on biblical questions, which are collected in his 'Pharus Veteris Testamenti, sive Sacrarum Questionum libri 15,' etc. He published also 'Dissertatio de Tempore Habitationis filiorum Israel in Egypto,' reprinted by De Tourne mine in his supplement to Menochius.—W. L. A.

ABRAVANEL (also called Abarbanel, Ravanella, and Barbanella), RABBI DON ISAAC BEN JEHUDAH, a celebrated Jewish statesman, philosopher, theologian, and commentator, and a very voluminous writer, was born in Lisbon in 1437, of an ancient family which traced its descent from the royal house of David, and which emigrated into Spain after the destruction of Jerusalem. His parents gave him an education becoming their renowned lineage; and Abravanel, possessing great natural talent, soon distinguished himself in such a manner as to attract the notice of Alfonso V., who intrusted him with the management of affairs of state. This high position of honour and trust he occupied till the end of 1481, when his august patron died, and John II. succeeded to the throne. The ill-treatment which Abravanel, in common with many of the favourites of the departed monarch, had to endure from the new sovereign, made him flee to Spain, the residence of his ancestors, in 1483, where his brilliant powers speedily secured for him the friendship of Ferdinand, and elevation to a post of honour as a minister of state. This he faithfully filled for eight years, from 1484 to 1492, when, at the instigation of the cruel Dominican Torquemada, the Queen's confessor and Inquisitor-General, the infamous edict for the expulsion of the Jews was signed on the 30th of March, and he, with 300,000 of his unhappy brethren, had to quit the country. He arrived at Naples in the beginning of 1493, and immediately obtained the favour of Ferdinand I., which, however, was of short duration, as the king died the same year; and as his successor, Alfonso II., accompanied by Abravanel, had to retire to Mazzara, where he died within twelve months. Abravanel then went to Corfu in 1495, thence to Monopoli, and afterwards to Venice, where he was again made a minister of state, and died in 1508, whilst engaged in the important negotiations between the Republic and Portugal. His remains were conveyed with great pomp to be deposited in Padua. His principal exegetical and theological works, in their chronological order, are,—1. A juvenile treatise upon Exod. xxiii. 20, 'Behold I send an angel before thee,' wherein he discussed, in twenty-five sections, the most important articles of faith. 2. A commentary on Deuteronomy, which he began in Lisbon, and finished in 1472. 3. Commentaries on *Joshua*, *Judges*, and *Samuel*, written in Castilian in 1483-84; and on *Kings*, which he wrote whilst at the

court of the king of Naples in 1493. 4. Commentaries on *Isaiah* and *Daniel*, written in Corfu in 1497-98. 5. Three treatises, called *מגדולי ישועות* comprising *a שמנים ה'שים*, a philosophical dissertation on Maimonides' View of the Creation; *b במשמיע ישועה*, a dissertation on all the Messianic passages in the Old Testament, a polemical work against Christianity; and *c ישועות משיחו*, a dissertation on the doctrine of the Messiah according to the Talmud and Midrashim. 6. *The fundamental Doctrines of Religion* (ראש אמונה), and a

Treatise upon the Creation (מפועלות אלהים). 7. Commentaries on *Jeremiah*, *Ezekiel*, and the *minor Prophets*, which he wrote at Venice, and on *Genesis*, *Exodus*, *Leviticus*, and *Numbers*, written most probably at the same place. The chief importance of his commentaries to the student of the Bible consists in their polemical character, and in the fact that they anticipate much of what has been advanced as new by modern theologians. Abravanel never skips over any difficulty in the text, but always tries to explain it. No student can consult his commentaries without profit.—The best edition of the commentary on the Pentateuch is by Professor Bashuysen, Hanau, 1710, fol.; of that on the earlier Prophets by Professor Pfeiffer and F. A. Christiani, Leipzig, 1686, fol.; on the later and minor Prophets, Amsterdam, 1641, fol.; and on Daniel, Venice, 1652, 4to. Comp. Cornoly, in *אוצר נחמד*, ii. p. 47, etc.; Jost, *Geschichte des Judenthums*, etc. iii. p. 104, etc.; Fürst, *Bibliotheca Judaica*, i. p. 11, etc.—C. D. G.

ABRECH (אַבְרֵךְ). This word occurs only in Gen. xli. 43, where it is used in proclaiming the authority of Joseph. Something similar happened in the case of Mordecai; but then several words were, employed (Esth. vi. 11). If the word be Hebrew, it is probably an imperative of בָּרַךְ in Hiphil, and would then mean, as in our version, 'bow the knee!' We are indeed assured by Wilkinson (*Anc. Egyptians*, ii. 24) that the word *abrek* is used to the present day by the Arabs, when requiring a camel to kneel and receive its load. [The Targum of Jonathan and the Jerusalem Targum explain it as a compound of אב, *father*, and רך, *tender*, and suppose it refers to Joseph's wisdom being that of a father, while his years were those of a youth. With this Jerome accords, and Origen also mentions it. The latter approves the rendering given by Aquila, and followed in the A. V., 'bow the knee.' Onkelos, some of the Talmudists, Tawus the Persian translator, Luther and others, regard the word as, a compound of אבנא and רך, *kingdom*. Onk. *רין אבנא למוכנא*; Luth., *Der ist des Landes Vater*. The prevailing opinion among scholars now is that it is of Egyptian origin. Pfeiffer identifies it with the Copt. *arrek*, reverence; Jablonski with *oube-reck*, bend down; and Knobel and Delitzsch, with *abork*, throw thyself down. See Cartwright, *Electa Tarzum. Rabbin*. in loc.; Pfeiffer, *Opp. Om.* p. 95; Jablonski, *Opusc.* i. 4; Knobel, *Genesis* in loc.; Delitzsch, *Genausgel.* in loc.; De Rossi, *Etym. Egypt.* p. 1. Lee, *Heb. Lex.* on the word.]

ABRESCH, FR. LUD., was born at Hesse-Homburg, Dec. 29th, 1699. He filled the post first

of conrector, and then of rector of the Gymnasium at Middelburg, in Seeland, from 1723 till 1741, when he was removed to the same office at Zwoll. He died there in 1782. His works are chiefly devoted to the elucidation of the classics. In two of them, however, he directs some attention to the N. T. 'Animadversionum ad Æschylum Libri Tres.; accedunt annotationes ad quaedam loca N. T.,' 2 tom.; Zwollæ 1763. 'Dilucidationes Thucydidæ quibus et passim N. T. loca illustrantur,' Traj. 1753, 55. These works are not of much value.—W. L. A.

ABRESCH, PETER, Professor of Theology at Gröningen, where he died in 1812. 'Paraphrasis et Anott. in Ep. ad Hebræos,' Pt. I. Leyden, 1786, II. 1787, 8vo, embracing ch. i.-iv. He published also 'Specimen Philol. in Obadiæ ver. 1-8.' Utr. 1757, 4to.—W. L. A.

ABSALOM (אַבְשָׁלוֹם, *father of peace*; Sept. Ἀβσσσαλώμ; Vulg. *Absalom*), the third son of David, and his only son by Maachah, daughter of Talmai, king of Geshur (2 Sam. iii. 3). He was deemed the handsomest man in the kingdom; and was particularly noted for the profusion of his beautiful hair, which appears to have been regarded with great admiration; but of which we can know nothing with certainty, except that it was very fine and very ample. We are told that when its inconvenient weight compelled him at times (מִקֵּץ) 'כּוֹסִים לִימִים' does not necessarily mean 'every year,' as in the A. V.) to cut it off, it was found to weigh '200 shekels after the king's weight;' but as this has been interpreted as high as 112 ounces (Geddes) and as low as 7½ ounces (A. Clarke), we may be content to understand that it means a quantity unusually large. David's other child by Maachah was a daughter named Tamar, who was also very beautiful. She became the object of lustful regard to her half-brother Amnon, David's eldest son; and was violated by him. In all cases where polygamy is allowed, we find that the honour of a sister is in the guardianship of her full brother, more even than in that of her father, whose interest in her is considered less peculiar and intimate. We trace this notion even in the time of Jacob (Gen. xxxiv. 6, 13, 25, sqq.) So in this case the wrong of Tamar was taken up by Absalom, who kept her secluded in his own house, and said nothing for the present, but brooded silently over the wrong he had sustained, and the vengeance which devolved upon him. It was not until two years had passed, and when this wound seemed to have been healed, that Absalom found opportunity for the bloody revenge he had meditated. He then held a great sheep-shearing feast at Baal-hazor near Ephraim, to which he invited all the king's sons; and, to lull suspicion, he also solicited the presence of his father. As he expected, David declined for himself, but allowed Amnon and the other princes to attend. They feasted together; and when they were warm with wine, Amnon was set upon and slain by the servants of Absalom, according to the previous directions of their master. The other princes took to their mules and fled to Jerusalem, filling the king with grief and horror by the tidings which they brought. As for Absalom, he hastened to Geshur, and remained there three years with his grandfather, king Talmai.

Now Absalom, with all his faults, was eminently

dear to the heart of his father. His beauty, his spirit, his royal birth, may be supposed to have drawn to him those fond paternal feelings which he knew not how to appreciate. At all events, David mourned every day after the banished fratricide, whom a regard for public opinion and a just horror of his crime forbade him to recall. His secret wishes to have home his beloved though guilty son were however discerned by Joab, who employed a clever woman of Tekoah to lay a supposed case before him for judgment; and she applied the anticipated decision so adroitly to the case of Absalom, that the king discovered the object and detected the interposition of Joab. Regarding this as in some degree expressing the sanction of public opinion, David gladly commissioned Joab to 'call home his banished.' Absalom returned; but David, still mindful of his duties as a king and father, controlled the impulse of his feelings, and declined to admit him to his presence. After two years, however, Absalom, impatient of his disgrace, found means to compel the attention of Joab to his case; and through his means a complete reconciliation was effected, and the father once more indulged himself with the presence of his son (2 Sam. xiii. xiv.)

By the death of Amnon and that of Chileab, his two elder brothers, Absalom was now, according to the law of primogeniture, the heir of the crown, a claim which his royal descent by the mother's side would probably have conferred on him, even had they lived. But under the peculiar theocratical institutions of the Hebrews, the Divine king reserved and exercised a power of dispensation, over which the human king, or viceroy, had no control; and although the law of primogeniture was allowed to take in general its due course, the Divine king had exercised his power in the family of David by the preference of Solomon, who was at this time a child, as the successor of his father. David had known many years before that his dynasty was to be established in a son not yet born (2 Sam. vii. 12); and when Solomon was born, he could not be ignorant, even if not specially instructed, that he was the destined heir. This fact must have been known to many others as the child grew up, and probably the mass of the nation was cognizant of it. In this we find a motive for the rebellion of Absalom; he wished to secure the throne which he deemed to be his in right by the laws of primogeniture, during the lifetime of his father; lest delay, while awaiting the natural term of his days, should so strengthen the cause of Solomon with his years, as to place his succession beyond all contest.

The fine person of Absalom, his superior birth, and his natural claims predisposed the people to regard his pretensions with favour; and this predisposition was strengthened by the measures which he took to win their regard. By the state and attendance with which he appeared in public, he enhanced the show of condescending sympathy with which he accosted the suitors who repaired for justice or favour to the royal audience, he inquired into their various cases, and hinted at what might be expected if he were on the throne, and had the power of accomplishing his own large and generous purposes. By these influences 'he stole the hearts of the men of Israel;' and when at length, four years after his return from Geshur, he repaired to Hebron, and there pro-

claimed himself king, the great body of the people declared for him. So strong ran the tide of opinion in his favour, that David found it expedient to quit Jerusalem and retire to Mahanaim, beyond the Jordan.

When Absalom heard of this, he proceeded to Jerusalem and took possession of the throne without opposition. Among those who had joined him was Ahithophel, who had been David's counsellor, and whose profound sagacity caused his counsels to be regarded like oracles in Israel. This defection alarmed David more than any other single circumstance in the affair, and he persuaded his friend Hushai to go and join Absalom, in the hope that he might be made instrumental in turning the sagacious counsels of Ahithophel to foolishness. The first piece of advice which Ahithophel gave Absalom was that he should publicly take possession of that portion of his father's harem which had been left behind in Jerusalem. This was not only a mode by which the succession to the throne might be confirmed [ABISHAG : comp. Herodotus, iii. 68], but in the present case, as suggested by the wily counsellor, this villainous measure would dispose the people to throw themselves the more unreservedly into his cause, from the assurance that no possibility of reconciliation between him and his father remained. Hushai had not then arrived. Soon after he came, when a council of war was held, to consider the course of operations to be taken against David, Ahithophel counselled that the king should be pursued that very night, and smitten, while he was 'weary and weak handed, and before he had time to recover strength.' Hushai, however, whose object was to gain time for David, speciously urged, from the known valour of the king, the possibility and fatal consequences of a defeat, and advised that all Israel should be assembled against him in such force as it would be impossible for him to withstand. Fatally for Absalom, the counsel of Hushai was preferred to that of Ahithophel; and time was thus given to enable the king, by the help of his influential followers, to collect his resources, as well as to give the people time to reflect upon the undertaking in which so many of them had embarked. The king soon raised a large force, which he properly organized and separated into three divisions, commanded severally by Joab, Abishai, and Ittai of Gath. The king himself intended to take the chief command; but the people refused to allow him to risk his valued life, and the command then devolved upon Joab. The battle took place in the borders of the forest of Ephraim; and the tactics of Joab, in drawing the enemy into the wood, and there hemming them in, so that they were destroyed with ease, eventually, under the providence of God, decided the action against Absalom. Twenty thousand of his troops were slain, and the rest fled to their homes. Absalom himself fled on a swift mule; but as he went, the boughs of a terebinth tree caught the long hair in which he gloried, and he was left suspended there. The charge which David had given to the troops to respect the life of Absalom prevented any one from slaying him: but when Joab heard of it, he hastened to the spot, and pierced him through with three darts. His body was then taken down and cast into a pit there in the forest, and a heap of stones was raised upon it.

David's fondness for Absalom was unextinguished

by all that had passed; and as he sat, awaiting tidings of the battle, at the gate of Mahanaim, he was probably more anxious to learn that his son lived, than that the battle was gained; and no sooner did he hear that Absalom was dead, than he retired to the chamber above the gate, to give vent to his paternal anguish. The victors as they returned, slunk into the town like criminals, when they heard the bitter wailings of the king:—'O my son Absalom! my son, my son Absalom! would God I had died for thee, O Absalom, my son, my son!' The consequences of this weakness—not in his feeling, but in the inability to control it—might have been most dangerous, had not Joab gone up to him, and after sharply rebuking him for thus discouraging those who had risked their lives in his cause, induced him to go down and cheer the returning warriors by his presence (2 Sam. xiii. 8).—J. K.

ABSALOM'S TOMB. A remarkable monument bearing this name makes a conspicuous figure in the Valley of Jehoshaphat, outside Jerusalem; and it has been noticed and described by almost all travellers. It is close by the lower bridge over the Kedron, and is a square isolated block hewn out from the rocky ledge so as to leave an area or niche around it. The body of this monument is

6

about 24 feet square, and is ornamented on each side with two columns and two half columns of the Ionic order, with pilasters at the corners. The architrave exhibits triglyphs and Doric ornaments. The elevation is about 18 or 20 feet to the top of the architrave, and thus far it is wholly cut from the rock. But the adjacent rock is here not near so high as in the adjoining tomb of Zecharias (so called), and therefore the upper part of the tomb has been carried up with mason-work of large stones. This consists, first of two square layers, of which the upper one is smaller than the lower; and then a small dome or cupola runs up into a low spire, which appears to have spread out a little at the top, like an opening flame. This mason-work is perhaps 20 feet high, giving to the whole an elevation of about forty feet. There is a small excavated

chamber in the body of the tomb, into which a hole had been broken through one of the sides several centuries ago.

The old travellers who refer to this tomb, as well as Calmet after them, are satisfied that they find the history of it in 2 Sam. xviii. 18, which states that Absalom, having no son, built a monument to keep his name in remembrance, and that this monument was called 'Absalom's Hand'—that is, *index, memorial, or monument*. [HAND.] With our later knowledge, a glance at this and the other monolithic tomb-bearing the name of Zecharias, is quite enough to shew that they had no connection with the times of the persons whose names have been given to them. 'The style of architecture and embellishment,' writes Dr. Robinson, 'shews that they are of a later period than most of the other countless sepulchres round about the city, which, with few exceptions, are destitute of architectural ornament. Yet, the foreign ecclesiastics, who crowded to Jerusalem in the fourth century, found these monuments here; and of course it became an object to refer them to persons mentioned in the Scriptures. Yet, from that day to this, tradition seems never to have become fully settled as to the individuals whose names they should bear. The *Itin. Hieros.* in A. D. 333, speaks of the two monolithic monuments as the tombs of Isaiah and Hezekiah. Adamnus, about A. D. 697, mentions only one of these, and calls it the tomb of Jehoshaphat. . . . The historians of the Crusades appear not to have noticed these tombs. The first mention of a tomb of Absalom is by Benjamin of Tudela, who gives to the other the name of King Uzziah; and from that time to the present day the accounts of travellers have been varying and inconsistent' (*Biblical Researches*, i. 519, 520).—J. K.

ABSINTHIUM (*ἄψινθος* in N. T., while *ἀψιθιον* is that by which Aquila renders the Heb. *הַנְּזֵל*; A. V. *wormwood*). This proverbially bitter plant is used in the Hebrew, as in most other languages, metaphorically, to denote the moral bitterness of distress and trouble (Deut. xxix. 18; Prov. v. 4; Jer. ix. 15; xxiii. 15; Lam. iii. 15, 19; Amos v. 7; vi. 12). [Hence the Sept. render it by *ἀνάγκη, πικρία, ὀδύνη*, once by *ὑψος*.] *Artemisia* is the botanical name of the genus of plants in which the different species of wormwoods are found. The plants of this genus are easily recognised by the multitude of fine divisions into which the leaves are usually separated, and the numerous clusters of small, round, drooping, greenish-yellow, or brownish flower-heads with which the branches are laden. It must be understood that our common wormwood (*Artemisia absinthium*) does not appear to exist in Palestine, and cannot therefore be that specially denoted by the Scriptural term. Indeed it is more than probable that the word is intended to apply to *all* the plants of this class that grew in Palestine, rather than to any one of them in particular. The examples of this genus that have been found in that country are:—1. *Artemisia Judaica*, which, if a particular species be intended, is probably the Absinthium of Scripture. Rauwolf found it about Bethlehem, and Shaw in Arabia and the deserts of Numidia plentifully. This plant is erect and shrubby, with stem about eighteen inches high. Its taste is very bitter; and both the leaves and seeds are much used in Eastern

medicine, and are reputed to be tonic, stomachic, and anthelmintic. 2. *Artemisia Romana*, which was found by Hasselquist on Mount Tabor (p. 281). This species is herbaceous, erect, with stem one or two feet high (higher when cultivated in gardens), and nearly upright branches. The plant has a pleasantly aromatic scent; and the bitterness of its taste is so tempered by the aromatic flavour as scarcely to be disagreeable. 3. *Artemisia abrotanum*, found in the south of Europe, as well as in Syria and Palestine, and eastward even to China. This a hoary plant, becoming a shrub in warm countries; and its branches bear loose panicles of nodding yellow flower-heads. It is bitter and aromatic, with a very strong scent. It is not much used in medicine; but the branches are employed in imparting a yellow dye to wool.

7. *Artemisia Judaica*.

ABSTINENCE is refraining from the use of certain articles of food usually eaten; or from all food during a certain time for some particular object. It is distinguished from TEMPERANCE, which is moderation in ordinary food; and from FASTING, which is abstinence from a religious motive. The first example of abstinence which occurs in Scripture is that in which the use of blood is forbidden to Noah (Gen. ix. 4). [BLOOD.] The next is that mentioned in Gen. xxxii. 32: 'The children of Israel eat not of the sinew which shrank, which is upon the hollow of the thigh, *unto this day*, because he (the angel) touched the hollow of Jacob's thigh in the sinew that shrank.' This practice of commemorative abstinence is here mentioned as having been kept up from the time of Jacob to that of the writer, as the phrase 'unto this day' intimates. No actual instance of the practice occurs in the Scripture itself, but the usage has always been kept up; and to the present day the Jews generally abstain from the whole hind-quarter on account of the trouble and expense of extracting the particular sinew (Allen's *Modern Judaism*, p. 421). By the law, abstinence from blood was confirmed, and the use of flesh of even lawful animals was forbidden, if the manner of their death rendered it impossible that they should be, or uncertain that they were duly exsanguinated (Exod. xxii. 31; Duet. xiv. 21). A broad rule was also laid down by the law, defining whole classes of animals that might not be eaten (Lev. xi.) [ANIMAL; FOOD.] Certain parts of lawful animals, as being sacred to the altar, were also interdicted. These were the large lobe of the liver, the kidneys and the fat upon them, as well as the tail of the 'fat-tailed' sheep (Lev. iii. 9-11). Everything consecrated to idols was also forbidden (Exod. xxxiv. 15). In conformity with these rules the Israelites abstained generally from food which was more or less in use among other people. Instances of abstinence from allowed food are not frequent, except in commemorative or afflictive fasts. The forty days' abstinence of Moses, Elijah, and Jesus are

peculiar cases requiring to be separately considered. [FASTING.] The priests were commanded to abstain from wine previous to their actual ministrations (Lev. x. 9), and the same abstinence was enjoined to the Nazarites during the whole period of their separation (Num. vi. 3). A constant abstinence of this kind was, at a later period, voluntarily undertaken by the Rechabites (Jer. xxxv. 1-19). Among the early Christian converts there were some who deemed themselves bound to adhere to the Mosaic limitations regarding food, and they accordingly abstained from flesh sacrificed to idols, as well as from animals which the law accounted unclean; while others contemned this as a weakness, and exulted in the liberty wherewith Christ has made his followers free. This question was repeatedly referred to St. Paul, who laid down some admirable rules on the subject, the purport of which was that every one was at liberty to act in this matter according to the dictates of his own conscience; but that the strong-minded had better abstain from the exercise of the freedom they possessed, whenever it might prove an occasion of stumbling to a weak brother (Rom. xiv. 1-3; I Cor. viii.) In another place the same apostle reproves certain sectaries who should arise, forbidding marriage and enjoining abstinence from meats which God had created to be received with thanksgiving (I Tim. iv. 3, 4). The counsel of the apostles at Jerusalem decided that no other abstinence regarding food should be imposed upon the converts than 'from meats offered to idols, from blood, and from things strangled' (Acts xv. 19).

The Essenes, a sect among the Jews which is not mentioned by name in the Scriptures, led a more abstinent life than any recorded in the sacred books. [ESSENES.]

That abstinence from ordinary food was practised by the Jews medicinally is not shewn in Scripture, but is more than probable, not only as a dictate of nature, but as a common practice of their Egyptian neighbours, who, we are informed by Diodorus (i. 82), 'being persuaded that the majority of diseases proceed from indigestion and excess of eating, had frequent recourse to *abstinence*, emetics, slight doses of medicine, and other simple means of relieving the system, which some persons were in the habit of repeating every two or three days.'

ABYSS ("Αβυσσος = ἄβυθος without bottom). The LXX. use this word to represent three different Hebrew words:—1. *בְּצֹלָה*, a *depth* or *deep* place, Job xli. 23; or *צֹלָה*, the *deep*, the *sea*, Is. xlv. 27; 2. *רֹחַב*, *breadth*, a *broad* place, Job xxxvi. 16; 3. *תְּהוֹמֹת*, a *mass of waters*, the *sea*, Gen. viii. 2, etc.; the chaotic mass of waters, Gen. i. 2; Ps. civ. 6; the subterraneous waters, 'the deep that lieth under,' Gen. xlix. 25; 'the deep that coucheth beneath,' Deut. xxxiii. 13. In the N. T. it is used always with the article, to designate the abode of the dead, Hades, especially that part of it which is also the abode of devils and the place of woe (Rom. x. 7; Luke viii. 31; Rev. ix. 1, 2, 11; xi. 7; xvii. 8; xx. 1, 3). In the Revelation the word is always translated in the A. V. 'bottomless pit,' by Luther 'abgrund.' In ch. ix. 1 mention is made of 'the key of the bottomless pit' (ἡ κλεῖς τοῦ φρέατος τῆς ἄβ. the *key of the pit of the abyss*), where Hades is represented as a boundless depth, which is entered by means of a shaft covered by a

door, and secured by a lock (Alford, Stuart, Ewald, De Wette, Düsterdieck). In ver. 11 mention is made of 'the angel of the abyss,' by whom some suppose is intended Satan or one of his angels. [ABADDON.]—W. L. A.

ABYSSINIA. 'There is no part of Africa, Egypt being excepted, the history of which is connected with so many objects of interest as Abyssinia. A region of Alpine mountains, ever difficult of access by its nature and peculiar situation, concealing in its bosom the long-sought sources of the Nile, and the still more mysterious origin of its singular people, Abyssinia has alone preserved, in the heart of Africa, its peculiar literature and its ancient Christian church. What is still more remarkable, it has preserved existing remains of a previously existing and wide-spread Judaism, and with a language approaching more than any living tongue to the Hebrew, a state of manners, and a peculiar character of its people, which represent in these latter days the habits and customs of the ancient Israelites in the times of Gideon and of Joshua. So striking is the resem-

Female. Priests. Warrior. 8.

blance between the modern Abyssinians and the Hebrews of old, that we can hardly look upon them but as branches of one nation; and if we had not convincing evidence to the contrary, and knew not for certain that the Abrahamidae originated in Chaldea, and to the northward and eastward of Palestine, we might frame a very probable hypothesis, which should bring them down as a band of wandering shepherds from the mountains of Habesh (Abyssinia), and identify them with the pastor kings, who, according to Manetho, multiplied their bands of the Pharaohs, and being, after some centuries expelled thence by the will of the gods, sought refuge in Judea, and built the walls of Jerusalem. Such an hypothesis would explain the existence of an almost Israelitish people, and the preservation of a language so nearly approaching to the Hebrew, in intertropical Africa. It is certainly untrue, and we find no other easy explanation of the facts which the history of Abyssinia presents, and particularly the early extension of the Jewish religion and customs through that

country' (Prichard's *Physical History of Man*, pp. 279, 280).

The above paragraph will suggest the grounds which appear to entitle Abyssinia to a place in a Biblical Cyclopædia. But as the country has no physical connection with Palestine—which is, geographically, our central object—a particular description of it is not necessary, and it will suffice to notice the points of inquiry suggested by the quotation. A brief outline is all that seems requisite.

'ABYSSINIA' is an European improvement upon the native name of 'HABESH.' That this country lies to the south of Nubia, which separates it from Egypt, and to the west of the Gulf of Bab-el-Mandah and the southern part of the Arabian sea, will sufficiently indicate its position. Abyssinia is a high country, which has been compared by Humboldt to the lofty Plain of Quito. By one of those beautiful synthetical operations of which his writings offer so many examples, the greatest living geographer, Carl Ritter of Berlin, has established, from the writings of various travellers, that the high country of Habesh consists of three terraces, or distinct table-lands, rising one above another, and of which the several grades of ascent offer themselves in succession to the traveller as he advances from the shores of the Red Sea (*Erdkunde*, th. i. s. 168). The *first* of these levels is the plain of Baharnegash: the *second* level is the plain and kingdom of Tigré, which formerly contained the kingdom of Axum: the *third* level is High Abyssinia, or the kingdom of Amhara. This name of Amhara is now given to the whole kingdom, of which Gondar is the capital, and where the Amharic language is spoken eastward of the Takazzé. Amhara Proper is, however, a mountainous province to the south-east, in the centre of which was Tegulat, the ancient capital of the empire, and at one period the centre of the civilization of Abyssinia. This province is now in the possession of the Gallas, a barbarous people who have overcome all the southern parts of Habesh. The present kingdom of Amhara is the heart of Abyssinia, and the abode of the emperor, or *Negush*. It contains the upper course of the Nile, the valley of Dembea, and the lake Tzana, near which is the royal city of Gondar, and likewise the high region of Gojam, which Bruce states to be at least two miles above the level of the sea.

Abyssinia is inhabited by several distinct races, who are commonly included under the name of Habesh or Abyssins. They are clearly distinguished from each other by their languages, but have more or less resemblance in manners and physical character. These races are—1. The *Tigrani*, or Abyssins of the kingdom of Tigré, which nearly coincides in extent with the old kingdom of Axum. They speak a language called by Tellez and Ludolph *lingua Tigrania*. It is a corruption or modern dialect of the Gheez or old Ethiopic, which was the ancient vernacular tongue of the province; but is now a dead language consecrated to literature and religious uses [ETHIOPIC LANGUAGE], and the modern language of Tigré has been for more than five centuries merely an oral dialect. 2. The *Amharas*, who have been for ages the dominant people in Abyssinia; the genuine Amhara being considered as a higher and nobler caste, as the military and royal tribe. Their language—the Amharic—now extends over all the eastern parts of Abyssinia, including various pro-

vinces, some of which appear at one time to have had vernacular languages of their own. 3. The *Agows*, which name is borne by two tribes, who speak different languages and inhabit different parts of Abyssinia. These are the Agows of Damot, one of the most extensive of the southern provinces, where they are settled about the sources and on the banks of the Nile; and the Agows of Lasta, who according to Bruce, are Troglodytes, living in caverns and paying the same adoration to the river Takazzé which those of the Damot pay to the Nile. These last are called by Salt the Agows of Takazzé; and although they scarcely differ from the other Abyssinians in physical character, their language shews them to be a distinct race from the *Persian* as well as from the Amhara. 4. The *Falasha*, a people whose present condition suggests many curious inquiries, and the investigation of whose history may hereafter throw light upon that of the Abyssins, and of their literature and ecclesiastical antiquities. They all profess the Jewish religion, and probably did so before the era of the conversion of the Abyssins to Christianity. They themselves profess to derive their origin from Palestine; but their language, which is said to have no affinity with the Hebrew, seems sufficiently to refute this pretension (Vater, *Mithridates*, t. iii.) According to Bruce the Falasha were very powerful at the time of the conversion of the Abyssins to Christianity. They were formerly a caste of potters and tile-makers in the low country of Dembea, but, owing to religious animosities, and being weakened by long wars, they were driven out thence, and took refuge among rugged and almost inaccessible rocks, in the high ridge called the mountains of Samen, where they live under princes of their own, bearing Hebrew names, and paying tribute to the Negush. It is conjectured that the Falasha and the Agows were at one time the principal inhabitants of the south-eastern parts of Abyssinia. 5. The *Gafats*, a pagan tribe, with a distinct language, living on the southern banks of the Nile, near Damot. 6. The *Gongas* and *Enareans*. The former inhabit the province of Gonga, and have a language distinct from all the preceding, but the same which is spoken by the people of Narea, or Enarea, to the southward of Habesh. 7. To these we should perhaps now add the *Gallas*, a race of wandering herdsmen, extensively spread in eastern intertropical Africa, who have become, during the last century, very formidable by their numbers, and threaten to overwhelm the Abyssinian empire.

The Abyssinians are to be regarded as belonging to the *black* races of men, but this is to be received with some explanation. Without entering into particulars, it may be observed, after Ruppell (*Reise in Abyssinien*), that there are two physical types prevalent among the Abyssinians. The greater number are a finely-formed people of the European type, having a countenance and features precisely resembling those of the Bedouins of Arabia. To this class belong most of the inhabitants of the high mountains of Samen, and of the plains around Lake Tzana, as well as the Falasha, or Jews, the heathen Gafats, and the Agows, notwithstanding the variety of their dialects. The other and very large division of the Abyssinian people is identified, as far as physical traits are concerned, with the race which has been distinguished by the name of Ethiopian. This race is indicated by a somewhat flattened nose, thick lips, long and rather dull eyes, and by very

strongly crisped and almost woolly hair, which stands very thickly upon the head. They are therefore one of the connecting links between the Arabian and the Negro races, being separated from the former by a somewhat broader line than from the latter. In their essential characteristics they agree with the Nubians, Berberines, and native Egyptians (Prichard's *Nat. Hist. of Man*, p. 285).

Abyssinia has for ages been united under one governor, who during the earliest periods resided at Axum, the ancient capital of Tigré; but who for some centuries past has resided at Gondar, a more central part of the kingdom. For ages also the Abyssins have been Christians, but with a strange mixture of the Judaism which appears to have been previously professed, and with the exceptions which have been already indicated. Tigré, in which was the ancient capital of the empire, was the country in which Judaism appears to have been in former times the most prevalent. It was also the country which possessed, in the Gheez or ancient Ethiopic, a Semitic language. It was, moreover, the seat of civilization, which, it is important to observe, appears to have been derived from the opposite coast of Arabia, and to have had nothing Egyptian or Nubian in its character.

These observations have brought us back again to the difficulty stated at the commencement of this article, in the words of Dr. Prichard, which has hitherto been considered insuperable. There is no doubt, however, that this difficulty has chiefly arisen from attempting to explain *all* the phenomena on a single principle; whereas two causes at least contributed to produce them, as the following remarks will clearly shew:—

The former profession of Judaism in the country is sufficient to account for the class of observances and notions derivable from the Jewish ritual, which are very numerous, and appear singular, mixed up as they are with a professedly Christian faith. This, however, does not account for Jewish manners and customs, or for the existence of a language so much resembling the Hebrew, and so truly a Semitic dialect as the Gheez, or old Ethiopian. For nations may adopt a foreign religion, and maintain the usages arising from it, without any marked change of their customs or language. But all which this leaves unsolved may, to our apprehension, be very satisfactorily accounted for by the now generally admitted fact, that at least the people of Tigré, who possessed a Semitic language so nearly resembling the Hebrew, are a Semitic colony, who imported into Abyssinia not only a Semitic language, but Semitic manners, usages, and modes of thought. Whether this may or may not be true of the Amhara also, depends in a great degree upon the conclusion that may be reached respecting the Amharic language, which, through the large admixture of Ethiopic and Arabic words, has a Semitic appearance, but may, notwithstanding, prove to be fundamentally African. At all events, the extent to which the Gheez language has operated upon it would afford a proof of the influence of the Semitic colony upon the native population: which is all that can reasonably be desired to account for the phenomena which have excited so much inquiry and attention.

If it should be objected that it is not sufficient to

identify as Semitic the manners and usages which have been described as Hebrew, we would beg to call attention to that passage, in the commencing extract, which, with an unintended significance, intimates that these customs are those of the early times of Gideon and Joshua, when the Hebrews had not been long subject to the peculiar modifying influences of the Mosaic institutions. This is very much the same as to say that the customs and usages in view are in accordance with the general type of Semitic manners, rather than with the particular type which the Mosaic institutions produced; or, in other words, that they resemble the manners of the Hebrews most when those manners had least departed from the general standard of usages which prevailed among the Semitic family of nations. They are, therefore, less Hebrew manners than Semitic manners, and as such, are accounted for by the presence of Semitic races in the country. In point of fact, travellers who derive their first notions of the East from the Bible, when they come among a strange people, are too ready to set down as *specifically* Hebrew some of the more striking usages which attract their notice; whereas, in fact, they are generically *Oriental*, or at least Semitic, and are Hebrew also merely because the Hebrews were an Oriental people, and had Oriental features, habits, and usages. Our conclusion, then, is, that the former prevalence of the Jewish religion in Abyssinia accounts for the existence of the Jewish ritual usages; and that the presence of one (perhaps more than one) paramount Semitic colony accounts for the existence, in this quarter, of a Semitic language, and Semitic (and therefore Hebrew) manners and usages. We entertain a very strong conviction that this conclusion will be corroborated by all the research into Abyssinian history and antiquities which may hereafter be made.

Having thus considered the question which alone authorized the introduction of this article, we reserve for other articles [CANDACE; ETHIOPIA; SHEBA, QUEEN OF] some questions connected with other points in the history of Abyssinia, especially the introduction of Judaism into that country. Of the numerous books which have been written respecting Abyssinia, the *Histories* of Tellez and Ludolph, and the *Travels* of Kramp, Bruce, Salt, and Ruppell, are the most important; and an admirable digest of existing information may be found in Ritter's *Erakunde*, th. i., and (as far as regards ethnography and languages) in Prichard's *Researches*, vol. ii. ch. vi., and his *Natural History of Man*, sec. 26.—J. K.

ACCAD (אֲכַד; Sept. Ἀρχάδ), one of the four cities in 'the land of Shinar' or Babylonia, which are said to have been built by Nimrod, or rather to have been 'the beginning of his kingdom' (Gen. x. 10). Their situation has been much disputed. Ælian (*De Animal.* xvi. 42) mentions that in the district of Sittacene was a river called Ἀρχάδης, which is so near the name Ἀρχάδ which the LXX. give to this city, that Bochart was induced to fix Accad upon that river (*Phaleg.* iv. 17). It seems that several of the ancient translators found in their Hebrew MSS. Achar (אֲחַר) instead of Accad (אֲכַד) (Ephraem Syrus, Pseudo-Jonathan, *Targum Hierv.*, Jerome, Abulfaragi, etc.); and the ease with which the similar letters א and ח might be

interchanged in copying, leaves it doubtful which was the real name. Achar was the ancient name of Nisibis; and hence the Targumists give Nisibis or Nisibin (נִיִּבִין) for Accad, and they continued to be identified by the Jewish literati in the times of Jerome. But the Jewish literati have always been deplorable geographers, and their unsupported conclusions are worth very little. Nisibis is unquestionably too remote northward to be associated with Babel, Erech, and Calneh, 'in the land of *Shinar*.' These towns could not have been very distant from each other; and when to the analogy of names we can add that of situation and of tradition, a strong claim to identity is established. These circumstances unite at a place in the ancient Sittacene, to which Bochart had been led by other analogies. The probability that the original name was *Achar* having been established, the attention is naturally drawn to the remarkable pile of ancient buildings called *Akker-koof*, in Sittacene, and which the Turks know as *Akker-i-Nimrood* and *Akker-i-Babil*. The late Col. Taylor, formerly British resident at Baghdad, who gave much attention to the subject, was the first to make out this identification, and to collect evidence in support of it; and to his unpublished communications the writer and other recent travellers are indebted for their statements on the subject. The Babylonian Talmud might be expected to mention the site; and it occurs accordingly under the name of *Aggada*. It occurs also in Maimonides (*Jud. Chaz. Tract. Madee*, fol. 25, as quoted by Hyde), who says, 'Abraham xl. annos natus cognovit creatorem suum;' and immediately adds, 'Extat Aggada tres annos natus.'

Akker-koof is about nine miles west of the Tigris, at the spot where that river makes its nearest approach to the Euphrates. The heap of ruins to which the name of Nimrod's Hill—*Tell-i-Nimrood*,

9

is more especially appropriated, consists of a mound surmounted by a mass of brick-work, which looks like either a tower or an irregular pyramid, according to the point from which it is viewed. It is about 400 feet in circumference at the bottom, and rises to the height of 125 feet above the sloping elevation on which it stands. The mound, which seems to form the foundation of the pile, is a mass of rubbish accumulated by the decay of the superstructure. In the ruin itself, the layers of sun-dried bricks, of which it is composed, can be traced very distinctly. They are cemented together by lime or bitumen, and are divided into courses

varying from 12 to 20 feet in height, and are separated by layers of reeds, as is usual in the more ancient remains of this primitive region. Travellers have been perplexed to make out the use of this remarkable monument, and various strange conjectures have been hazarded. The embankments of canals and reservoirs, and the remnants of brick-work and pottery occupying the place all around, evince that the *Tel* stood in an important city; and, as its construction announces it to be a Babylonian relic, the greater probability is that it was one of those pyramidal structures erected upon high places, which were consecrated to the heavenly bodies, and served at once as the temples and the observatories of those remote times. Such buildings were common to all Babylonian towns; and those which remain appear to have been constructed more or less on the model of that in the metropolitan city of Babylon.—J. K.

ACCARON. [EKRON.]

ACCENT. This term is often used with a very wide meaning; as when we say that a person has 'a Scotch accent,' in which case it denotes all that distinguishes the Scotch from the English pronunciation. We here confine the word, in the first place, to mean those peculiarities of sound for which grammarians have invented the *marks* called accents; and we naturally must have a principal reference to the Hebrew and the Greek languages. Secondly, we exclude the consideration of *such* a use of accentual marks (so called) as prevails in the French language; in which they merely denote a certain change in the quality of a sound attributed to a vowel or diphthong. It is evident that had a sufficient number of alphabetical vowels been invented, the accents (in such a sense) would have been superseded. While the Hebrew and Greek languages are here our chief end, yet in order to pass from the known to the unknown, we shall throughout refer to our own tongue as the best source of illustration. In this respect, we undoubtedly overstep the proper limits of a Biblical Cyclopædia; but we are in a manner constrained so to do, since the whole subject is misrepresented or very defectively explained in most English grammars: and if we abstained from this full exposition, many readers would most probably, after all, misunderstand our meaning.

Even after the word accent has been thus limited, there is an ambiguity in the term; it has still a double sense, according to which we name it either oratorical or vocubular. By the latter, we mean the accent which a word in isolation receives; for instance, if we read in a vocabulary: while by oratorical accent we understand that which words actually have when read aloud or spoken as parts of a sentence.

The Greek men of letters, who, after the Macedonian kingdoms had taken their final form, invented accentual marks to assist foreigners in learning their language, have (with a single uniform exception) been satisfied to indicate the vocubular accent: but the Hebrew grammarians aimed, when the pronunciation of the old tongue was in danger of being forgotten, at indicating by marks the traditional inflections of the voice with which the Scriptures were to be read aloud in the synagogues. In consequence, they have introduced a very complicated system of accentuation to direct the reader. Some of their accents (so called) are in fact, *stops*,

others syntactical notes, which served also as guides to the voice in chanting.

In intelligent reading or speaking, the vocal organs execute numerous intonations which we have no method of representing on paper; especially such as are called *inflections* or *slides* by teachers of elocution: but on these a book might be written; and we can here only say, that the Masoretic accentuation of the Hebrew appears to have struggled to depict the *rhythm* of sentences; and the more progress has been made towards a living perception of the language, the higher is the testimony borne by the learned to the success which this rather cumbrous system has attained. The rhythm, indeed, was probably a sort of chant; since to this day the Scriptures are so recited by the Jews, as also the Koran by the Arabs or Turks: nay, in Turkish, the same verb (*oqumaq*) signifies to sing and to read. But this chant by no means attains the sharp *discontinuity* of European singing; on the contrary the voice *slides* from note to note. Monotonous as the whole sounds, a deeper study of the expression intended might probably lead to a fuller understanding of the Masoretic accents.

Wherein the accent consists.—In ordinary European words, one syllable is pronounced with a peculiar stress of the voice; and is then said to be accented. In our own language, the most obvious accompaniment of this stress on the syllable is a greater clearness of sound in the vowel; inasmuch that a *very* short vowel cannot take the primary accent in English. Nevertheless, it is very far from the truth, that accented vowels and syllables are necessarily long, or longer than the unaccented in the same word; of which we shall speak afterwards. In illustration, however, of the loss of clearness in a vowel, occasioned by a loss of accent, we may compare *a contest* with *to contest*; *equal* with *equality*; in which the syllables *con*, *qual*, are sounded with a very obscure vowel when unaccented.

Let us observe, in passing, that when a vowel sound changes through transposition of the accent, the Hebrew grammarians—instead of trusting that the voice will of itself modify the vowel when the accent is shifted—generally think it necessary to depict the vowel differently: which is one principal cause of the complicated changes of the vowel points.

A second concomitant of the accent is less marked in English than in Italian or Greek; namely—a musical elevation of the voice. On a piano or violin we of course separate entirely the *stress* given to a note (which is called *forte* and *staccato*) from its elevation (which may be A, or C, or F); yet in speech it is natural to execute in a higher tone, or as we improperly term it, in a higher *key*, a syllable on which we desire to lay stress: possibly because sharp sounds are more distinctly heard than flat ones. Practically, therefore, accent embraces a slide of the voice into a higher note, as well as an emphasis on the vowel; and in Greek and Latin it would appear that this slide upwards was the most marked peculiarity of accent, and was that which gained it the names *προσῳδία*, *accentus*. Even at the present day, if we listen to the speech of a Greek or Italian, we shall observe a marked elevation in the slides of the voice, giving the appearance of great vivacity, even where no peculiar sentiment is intended. Thus, if a Greek be requested to pronounce the words *σοφία* (wisdom),

παραβολή (parable), his voice will rise on the *l* and *h* in a manner never heard from an Englishman. In ancient Greek, however, yet greater nicety existed; for the voice had *three kinds* of accent, or slides, which the grammarians called flat, sharp, and circumflex; as in *τις*, *τις*; *ποι*. It is at the same time to be remarked, that this flat accent was solely oratorical; for when a word was read in a vocabulary, or named in isolation, or indeed at the end of a sentence, it never took the flat accent, even on the last syllable; except, it would seem, the word *τις*, a certain one. In the middle of a sentence, however, the simple accent (for we are not speaking of the circumflex) on a penultima or antepenultima was always sharp, and on a last syllable was flat. Possibly a stricter attention to the speech of the best educated modern Greeks, or, on the contrary, to that of their peasants in isolated districts, might detect a similar peculiarity: but it is generally believed that it has been lost, and some uncertainty therefore naturally rests on the true pronunciation. On the whole, it is most probable that the flat accent was a stress of the voice uttered in a lower note, much as the second accent in *grandfather*; that the sharp accent was that which prevails in modern Greek, and has been above described; and that the circumflex combined an upward and a downward slide on the same vowel. The last was naturally incapable of being executed, unless the vowel was *long*; but the other two accents could exist equally well on a short vowel.

In English elocution various slides are to be heard, more complicated than the Greek circumflex; but with us they are wholly oratorical, never vocabulary. Moreover, they are peculiar to vehement or vivacious oratory; being abundant in familiar or comic speech, and admissible also in high pathetic or indignant declamation: but they are almost entirely excluded from tranquil and serious utterance.

Secondary Accent.—On the same word, when it consists of many syllables, a double accent is frequently heard, certainly in English, and probably in most languages; but in our own tongue one of the two is generally feebler than the other, and may be called secondary. If we agree to denote this by the flat accent (˘) of the Greeks, we may indicate as follows our double accent:

consideration, disobédience, unpretending;
secondary, accessory, preémporarily.

We have purposely selected as the three last examples cases in which the secondary accent falls on a very short or obscure vowel, such as can never sustain the primary accent.

In some cases *two* syllables intervene between the accents, and it may then be difficult to say which accent is the principal. In *aristocrat*, *equalize*, *antidote*, the first syllable has a stronger accent than the last; but in *aristocratic*, *equalization*, *antediluvian*, they seem to be as equal as possible, though the latter catches the ear more. In *aristocracy*, the former is beyond a doubt secondary; but here the two are separated by only one syllable. *Prédetermination* has three accents, of which the middlemost is secondary.

In the Greek language a double accent is sometimes found on one word; but only when the latter is superinduced by some short and subordinate word which hangs upon the other. Such short words are called *enclitics*, and form a class by themselves in the language, as they cannot be known by

their meaning or form. By way of example we may give, *τίραννός τις* (a certain usurper), *οὐδ' αὖτε* (I know thee). In these cases, we observe that the two accents, if both are sharp, are found on alternate syllables, as in English; but whether one of them was secondary we do not know. If the former is a circumflex, the latter is on the following syllable. Occasionally, two or more enclitics follow each other in succession, and produce a curious combination; as, *εἰπὰς τοῦ τί μοι*. These accents, however, are not vocalular, but oratorical.

The Hebrews have in many cases, secondary accents, called a *foretone*, because with them it always precedes the principal accent (or 'tone'), as, *כְּתִיב־* *kātebēl*; the intermediate and unaccented vowel being in such cases exceedingly short and obscure, so that some grammarians refuse to count it at all. This foretone is described as a stress of the voice uttered in a lower note, and therefore may seem identical in sound with the flat accent of the Greeks. It differs, however, in being always accompanied with the sharp accent on the same word, and in being vocalular, not merely oratorical.

On the Place of the Accent.—A great difference exists between different languages as to the place of the accent. In Hebrew it is found solely on the last syllable and last but one, and is assumed systematically by many grammatical terminations, as in *Mélek* (for *Málk*), a king, pl. *Mel'ākīm*. This is so entirely opposed to the analogies of English, that it has been alleged (Latham *On the English Language*) that *Princēss* is the only word in which our accent falls on a final inflection. The radical contrast of all this to our own idiom leads to a perverse pronunciation of most Hebrew names: thus we say Isaiáh, Nehemíah, Cánani, Israél—although with their true accent they are Isaiáh, Nehemyáh, Canán-an, Isra-él; to say nothing of other peculiarities of the native sound. In Greek, the accent is found on any of the three last syllables of a word; the circumflex only on the two last. In the Latin language, it is very remarkable that (except in the case of monosyllables) the accent never fell on the last syllable, but was strictly confined to the penultima and antepenultima. This peculiarity struck the Greek ear, it is said, more than anything else in the sound of Latin, as it gave to it a pompous air. It is the more difficult to believe that any thoughtful Greek seriously imputed it to Roman pride, since we are told that the Æolic dialect of Greek itself agreed in this respect with the Latin (See Foster *On Accent and Quantity*, ch. iv.) The Latin accentuation is remarkable for having the place of the accent dictated solely by euphony, without reference to the formation or meaning of the word; in which respect the Greek only partly agrees with it, chiefly when the accent falls on the penultima or antepenultima. The Latin accent, however, is guided by the quantity of the penultimate syllable; the Greek accent by the quantity of the ultimate vowel. The rules are these:—

1. Greek: 'When the last vowel is long, the accent is on the penultima; when the last vowel is short, the accent is on the antepenultima.' *Oxytons* are herein excepted. 2. Latin: 'When the penultimate syllable is long, the accent is upon it; when short, the accent is on the antepenultima. Every dissyllable is accented on the penultima.' Accordingly, the Greek accent, even on the cases of the

very same noun, shifted in the following curious fashion: N. *ἄνθρωπος*, G. *ἀνθρώπου*, D. *ἀνθρώπου*, Ac. *ἄνθρωπον*; and in Latin, rather differently, yet with an equal change, N. *Sermo*, G. *Sermonis*, etc. It is beyond all question that the above rule in Greek is genuine and correct (though it does not apply to *oxytons*, that is, to words accented on the last syllable, and has other exceptions which the Greek grammars will tell); but there is a natural difficulty among Englishmen to believe it, since we have been taught to pronounce Greek with the accentuation of Latin; a curious and hurtful corruption, to which the influence of Erasmus is said to have principally contributed. It deserves to be noted that the modern Greeks, in pronouncing their ancient words, retain, with much accuracy on the whole, the ancient rules of accent; but in words of recent invention or introduction they follow the rule, which seems natural to an Englishman, of keeping the accent on the same syllable through all cases of a noun. Thus, although they sound as of old, N. *ἄνθρωπος*, G. *ἀνθρώπου*, yet in the word *κοκῶνη*, a lady, which is quite recent, we find (plural), N. *αἱ κοκῶνες*, G. *τῶν κοκῶνων*, etc. Similarly, *ὁ καπιτάνος*, the captain, G. *τοῦ καπιτάνου*, etc. This is only one out of many marks that the modern Greek has lost the nice appreciation of the quantity or time of vowel sounds, which characterized the ancient.

In all Latin or Greek words which we import into English, so long as we feel them to be foreign, we adhere to the Latin rules of accentuation as well as we know how: thus, in *démocrat*, *démocracy*, *démocráttical*; *philósophy*, *philósophical*; *astrónomy*, *astronómical*; *domestic*, *domesticity*, *domestication*; *póssible*, *póssibility*; *bárbarous*, *bárbarity*. But the moment we treat any of these words as natives, we follow our own rule of keeping the accent on the radical syllable; as in *bárbarousness*, where the Saxon ending, *ness*, is attached to the foreign word. With the growth of the language, we become more and more accustomed to hear a long train of syllables following the accent. Thus, we have *comfórt*, *comfórtáble*, *comfórtábleness*; *párlíament*, *párlíamentary*, which used to be *párlíamentary*.

In many provinces of England, and in particular families, the older and better pronunciations, *contráry*, *índustry*, keep their place instead of the modern *contráry*, *índustry*. The new tendency has innovated in Latin words so far, that many persons say *inimical*, *contémpplate*, *inculcate*, *décorous*, *sónorous*, and even *concórdance*, for *inimical*, *contémpplaté*, etc. 'Alexánder has supplanted 'Alexánder.' In the cases of *concórdance*, *clámorous*, and various others, it is probable that the words have been made to follow the pronunciation of *concórd*, *clámor*, as in native English derivatives. The principle of change, to which we have been pointing, is probably deep-seated in human speech; for the later Attics are stated to have made a similar innovation in various words; for example, Æschylus and Thucydides said *ὁμοίος*, *τροπαίον*, but Plato and Aristotle, *ὁμοίως*, *τρόπαιον*.

If the principal accent is very distant from one end of a long word, a great obscurity in the distant vowel-sounds results, which renders a word highly unmusical, and quite unmanageable to poetry. This will be seen in such pronunciations as *párlíamentary*, *péremptóriy*.

In Hebrew the same phenomenon is exhibited

in a contrary way, the early vowels of a word being apt to become extremely short, in consequence of the accent being delayed to the end. Thus, אֹהֶל, *ohél*, a tent, pl. אֹהֶלִים, *ohélim*; קָטְלוּ, *qátelú*, they killed; קָטְלוּהוּ, *qátalíhu*, they killed him. Oratorical reasons occasionally induce a sacrifice of the legitimate vocabular accent. In English this happens chiefly in cases of antithesis; as when the verbs, which would ordinarily be sounded *incrēase* and *decrēase*, reverse their accent in order to bring out more clearly the contrasted syllables: 'He must *incrēase*, but I must *decrēase*.'

This change is intended, not for mere euphony, but to assist the meaning. Variety and energy seem to be aimed at in the following Hebrew example, which Ewald has noticed, and which seems to indicate that more of the same sort must remain to be discovered: *Judges v. 12, Uri, 'uri, Debōrah: 'úri, 'úri, dabbiri shír*; which, after Ewald, we may imitate by translating thus, 'Up then, up then, Deborah: up then, up then, utter a song.' The Greek and Hebrew languages, moreover, in the *pause* of a sentence, modified the accent without reference to the meaning of the words. Thus the verb ordinarily sounded גָּדְלוּ, *gādélú*, with a very short penultimate vowel, becomes at the end of the sentence גָּדְלוּ, *gādélú*, with a long and accented penultima (See Ewald's *Hebrew Gram.* § 131, 133). The Greek language also at the end of a sentence changes a flat accent into a sharp one; for instance, the word *ruih* (honour) before a pause becomes *ruih̄*; but no elongation of vowels ever accompanies this phenomenon.

Accent in Compound Words.—It is principally by the accent that the syllables of a word are joined into a single whole; and on this account a language with well-defined accentuation is (*cæteris paribus*) so much the easier to be understood when heard, as well as so much the more musical. This function of the accent is distinctly perceived by us in such words of our language as have no other organized union of their parts. To the eye of a foreigner reading an English book, *steam-boat* appears like two words; especially as our printers have an extreme dislike of hyphens, and omit them whenever the corrector of the press will allow it. In Greek or Persian two such words would be united into one by a vowel of union, which is certainly highly conducive to euphony, and the compound would appear in the form *steamiboat* or *steamobōtos*. As we are quite destitute of such apparatus (in spite of a few such exceptions as *handicraft*, *mountebank*), the accent is eminently important; by which it is heard at once that *steamboat* is a single word. In fact, we thus distinguish between a *stonebox* and a *stone box*; the former meaning a box for holding stones, the latter a box made of stone. Mr. Latham (*Engl. Language*, § 234) has ingeniously remarked that we may read the following line from Ben Jonson in two ways:

'An'd thy silvershining quiver'—
or, 'An'd thy silver shining quiver'—
with a slight difference of sense.

The Hebrew language is generally regarded as quite destitute of compound words. It possesses, nevertheless, something at least closely akin to

them in (what are called) *nouns in regimen*. Being without a genitive case, or any particle devoted to the same purpose as the English preposition *of*, they make up for this by sounding two words as if in combination. The former word loses its accent, and thereby often incurs a shortening and obscurity of its vowels; the voice hurrying on to the latter. This may be illustrated by the English pronunciation of *ship of wár, man of wár, man at arms*, phrases which, by repetition, have in spirit become single words, the first accent being lost. Many such exist in our language, though unregistered by grammarians—in fact, even in longer phrases the phenomenon is observable. Thus, *Secretary at Wár, Court of Queen's Bench*, have very audibly but one predominating accent, on the last syllable. So, in Hebrew, from הַיָּוֵן, *hayyáyon*, a vision, comes הַיָּוֵן לַיְלָה, *hayyōn-láilá*, vision of the night (Job xx. 8). That every such case is fairly to be regarded as a compound noun was remarked by Dr. Campbell of Aberdeen, who urged that otherwise, in Isaiah ii. 20, we ought to render the words 'the idols of his silver;' whereas, in fact, the exact representation of the Hebrew in Greek is not εἰδῶλα ἀργύρου-αὐτοῦ, but, so to say, ἀργυρεῖδωλα αὐτοῦ. In Greek compounds the position of the accent is sometimes a very critical matter in distinguishing active and passive meanings of epithets. Thus, *μητρόκτονος* means *mother-slain*, or slain by one's mother; while *μητροκτόνος* is *mother-slaying*, or slaying one's mother. Such distinctions, however, seem to have been confined to a very small class of compounds.

Sense of a simple word modified by the Accent.—It is familiarly remarked in our English grammars, that (in words of Latin origin, generally imported from French) we often distinguish a verb from a noun by putting the accent on the penultimate syllable of the noun and the ultimate of the verb. Thus, we say, *an insult, to insult; a contest, to contest*; etc. etc. The distinction is so useful, that in doubtful cases it appears desirable to abide by the rule, and to say (as many persons do say) *a perfume, to perfume; details, to detail; the contents of a book, to content*; etc. It is certainly curious that the very same law of accent pervades the Hebrew language, as discriminating the simplest trilateral noun and verb. Thus, we have מֶלֶךְ, *mélék*, king; מָלַךְ, *málákh*, he ruled.

In the Greek language the number of nouns is very considerable in which the throwing of the accent on the last syllable seriously alters the sense; as, *τρόπος*, a manner; *τροπὸς*, the leather of an oar; *θύμος*, anger or mind; *θύμος*, garlic: *κρίβων*, judging; *κρινών*, a lily-bed: *ῶμος*, a shoulder; *ὠμός*, cruel. A very extensive vocabulary of such cases is appended to Scapula's *Greek Lexicon*.

Relation of Accent to Rhythm and Metre.—Every sentence is necessarily both easier to the voice and pleasanter to the ear when the whole is broken up into symmetrical parts, with convenient pauses between them. The measure of the parts is marked out by the number of principal beats of the voice (or oratorical accents) which each clause contains; and when these are so regulated as to attain a certain musical uniformity without betraying art, the sentence has the pleasing *rhythm* of good prose. When art is not avowed, and yet is manifest, this is displeasing, as seeming to proceed

from affectation and insincerity. When, however, the art is avowed, we call it no longer rhythm, but *metre*; and with the cultivation of poetry, more and more melody has been exacted of versifiers.

To the English ear, three and four beats of the voice give undoubtedly the most convenient length of clauses. Hence, in what is called *poetical prose*, it will be found that any particularly melodious passage, if broken up into lines or verses, yields generally either three or four beats in every verse. For example :

‘Where is the máid of Ar’van?
Góne, as a vision of the night.
Whère shall her lóver look for her?
The háll, which ónce she gláddened, is désolate.’

But no poetical prose, not even translations of poetry which aim at a half-metrical air, will be found to retain constantly the *threefold* and *fourfold* accent. To produce abruptness, *half* lines, containing but two accents, are thrown in; and in smoother feeling clauses of five accents, which often tend to become the true English blank verse. All *longer* clauses are composite, and can be resolved into three and three, four and three, four and four, etc. To illustrate this, let us take a passage of the *Old Testament* in the common English translation. Habakkuk iii. 2 :

‘O’h, Lórd!
I have héard thy spéech; and was afraid.
O’h Lórd!
Revíve thy wórk in the mídst of the yeárs!
In the mídst of the yeárs make knówn!
In wráth reméber mércy!
Gód cáme from Téman,
And the Hóly One from Móunt Páran.
His glóry cóvered the héavens,
And the éarth was fúll of his práise.
His brightness was ás the light,
He had hórn coming óut of his hánd,
And thére was the híding of his pówer.’ etc. etc.

The accent which we have been here describing as the source of rhythm is strictly the *oratorical* accent. As this falls only on the more emphatic words of the sentence, it is decidedly strong, and, in comparison with it, all the feebler and secondary accents are unheard, or at least uncounted. Nor is any care taken that the successive accents should be at equable distances. Occasionally they occur on successive syllables; much oftener at the distance of two, three, or four syllables. Nevertheless, this poetical rhythm, as soon as it becomes avowedly cultivated, is embryo-metre; and possibly this is the real state of the Hebrew versification. Great pains have been taken, from Gomarus in 1630 to Bellermann and Saalschütz in recent times, to define the laws of Hebrew metre. A concise history of these attempts will be found in the Introduction to De Wette’s *Commentary on the Psalms*. But although the occasional use of *rhyme* or *assonance* in Hebrew seems to be more than accidental, the failure of so many efforts to detect any real metre in the old Hebrew is decisive enough to warn future inquirers against losing their labour. (See the article *Parallelismus* in Ersch and Gruber’s *Encyclopedie*.) The modern Jews, indeed, have borrowed accentual metre from the Arabs; but, although there is nothing in the genius of the tongue to resist it, perhaps the fervid, practical genius of the Hebrew prophets rejected any such trammel. Repetition and amplification mark their style as too

declamatory to be what we call poetry. Nevertheless, in the Psalms and lyrical passages, increasing investigation appears to prove that considerable artifice of composition has often been used (See Ewald’s *Poetical Books of the Old Test.* vol. i.)

In our own language, it is obvious to every considerate reader of poetry that the metres called *anapestic* depend far more on the oratorical accent than on the vocabular (which is, indeed, their essential defect); and on this account numerous accents, which the voice really utters, are passed by as counting for nothing in the metre. We offer as a single example, the two following lines of Campbell, in which we have denoted by the flat accent those syllables the stress upon which is subordinate and *extra metrum*:

‘Sáy, rúsh’d the bóld eaglé exúltingly fórth
From his hóme, in the dárk-rolling clóuds of
the hórt?’

Such considerations, drawn entirely out of *oratory*, appear to be the only ones on which it is any longer useful to pursue an inquiry concerning Hebrew metres.

Confusion of Accent with Quantity.—It is a striking fact that Foster, the author of a learned and rather celebrated book intended to clear up this confusion, succeeded in establishing the truth concerning Greek and Latin, by help of ancient grammarians, but himself fell into the popular errors whenever he tried to deal with the English language. Not only does he allege that ‘the voice dwells longer’ on the first syllable of *honestly*, *character*, etc., than on the two last (and improperly writes them *hōnēstly*, *chārāctēr*), but he makes a general statement that accent and quantity, though separated in Greek and Latin, are inseparable in English. The truth is so far otherwise, that probably in three words out of four we separate them. As single instances, consider the words *honestly*, *character*, just adduced. The accent is clearly on the first syllable; but that syllable in each is very short. On the other hand, the second syllable of both, though unaccented, yet by reason of the consonants *s t l*, *c t z*, is long, though less so than if its vowel likewise had been long. The words are thus, like the Greek *κίλινδρος*, a *cylinder*, accented on the first syllable, yet as to quantity an amphibrach (⊖—⊖). Until an Englishman clearly feels and knows these facts of his own tongue, he will be unable to avoid the most perplexing errors on this whole subject.

Invention of Accents.—We have already said that the accentual marks of the Greeks were invented not long after the Macedonian conquests. To Aristophanes of Byzantium, master of the celebrated Aristarchus, is ascribed the credit of fixing both the punctuation and the accentuation of Greek. He was born near the middle of the second century B.C.; and there seems to be no doubt that we actually have before our eyes a pronunciation which cannot have greatly differed from that of Plato. As for the Hebrew accentuation generally called *Masoretic*, the learned are agreed that it was a system only gradually built up by successive additions; the word *Masora* itself meaning *tradition*. The work is ascribed to the schools of Tiberias and Babylon, which arose after the destruction of Jerusalem by the Romans; but it cannot be very accurately stated in how many centuries the system of vowel-points and accentuation attained the fully-developed state in which we have

received it. There is, however, no question among the ablest scholars that these marks represent the utterance of a genuine Hebrew period; the pronunciation, it may be said with little exaggeration, of Ezra and Nehemiah.—F. W. N.

ACCABISH (עַכְבִּישׁ). This word occurs Job viii. 14 and Is. lix. 5, in both which places it is translated *spider* in the A. V. That this is the correct rendering cannot be doubted; all the ancient versions support it, and the context in both places fully accords with it. Gesenius supposes the word to be a compound of עֲכַב, Arab. عَكَب *agile*, *swift*, and عָשׂ to *weave* (as a spider), q. d. *swift weaver*. Bochart proposes to derive it, by reversing the radicals, from the verb עָכַב or עָכַר to *interweave* (*Hieroz.* ii. p. 603).—W. L. A.

ACCHO (עַכּוֹ); (Sept. "Ακχω), a town and haven within the nominal territory of the tribe of Asher, which however never acquired possession of it (*Judg.* i. 31). The Greek and Roman writers call it "Ακη, ACE (*Strab.* xvi. 877; *Diod. Sic.* xix. 93; *C. Nep.* xiv. 5); but it was eventually better known as PTOLEMAIS (*Plin. Hist. Nat.* v. 19), which name it received from the first Ptolemy, king of Egypt, by whom it was much improved. By this name it is mentioned in the Apocrypha (*I Macc.* x. 56; xi. 22, 24; xii. 45, 48; *2 Macc.* xiii. 24), in the New Testament (*Acts* xxi. 7), and by Josephus (*Antiq.* xiii. 12, 2, *seq.*). It was also called *Colonia Claudii Caesaris*, in consequence of its receiving the privileges of a Roman city from the emperor Claudius (*Plin.* v. 17; xxxvi. 65). But the names thus imposed or altered by foreigners never took with the natives, and the place is still known in the country by the name of عَاكَا AKKA. It continued to be called Ptolemais by the Greeks of the Lower empire, as well as by Latin authors, while the Orientals adhered to the original designation. This has occasioned some speculation. Vitriacus, who was bishop of the Place, produces the opinion (*Hist. Orient.* c. 25) that the town was founded by twin-brothers Ptolemæus and Acon. Vinisauf imagines that the old town retained the name of Accho, while that of Ptolemais was confined to the more modern additions northward, towards the hill of Turon (*G. Vinisauf*, i. 2, p. 248), but the truth undoubtedly is that the natives never adopted the foreign names of this or any other town. The word Accho, or Akka [which is traced by Gesenius to the root עָכַב], is, Sir W. Drummond alleges (*Origines*, b. v. c. 3), clearly of Arabian origin, and derived from عَاكَا *ak*, which signifies sultry. The neighbourhood was famous for the sands which the Sidonians employed in making glass (*Plin. Hist. Nat.* v. 19; *Strabo*, xvi. 877); and the Arabians denote a sandy shore heated by the sun by the word عَاكَا *akeh*, or عَاكَا *akei*, for (with the nunation) *aketon*. During the Crusades the place was usually known to Europeans by the name of ACON: afterwards, from the occupation of the knights of St. John of Jerusalem, as St. JEAN D'ACRE or simply ACRE.

This famous city and haven is situated in N. lat. 32° 55', and E. long. 35° 5', and occupies the north-western point of a commodious bay, called the Bay of Acre, the opposite or south-western

point of which is formed by the promontory of Mount Carmel. The city lies on the plain to which it gives its name. Its western side is washed by the waves of the Mediterranean, and on the south lies the bay, beyond which may be seen the town of Caïpha, on the site of the ancient Calamos, and, rising high above both, the shrubby heights of Carmel. The mountains belonging to the chain of Anti-Libanus are seen at the distance of about four leagues to the north, while to the east the view is bounded by the fruitful hills of the Lower Galilee. The bay, from the town of Acre to the promontory of Mount Carmel, is three leagues wide and two in depth. The port, on account of its shallowness, can only be entered by vessels of small burden; but there is excellent anchorage on the other side of the bay, before Caïpha, which is in fact the roadstead of Acre (*Turner*, ii. 111; *G. Robinson*, i. 198). In the time of Strabo Accho was a great city (*Πτολεμαίς ἐστὶ μεγάλη πόλις ἢν Ἄκη ἠνόμενον πρότερον*, xvi. p. 877), and it has continued to be a place of importance down to the present time. But after the Turks gained possession of it, Acre so rapidly declined, that the travellers of the sixteenth and seventeenth centuries concur in describing it as much fallen from its former glory, of which, however, traces still remained. The missionary Eugene Roger (*La Terre Sainte*, 1645, pp. 44-46), remarks that the whole place had such a sacked and desolated appearance, that little remained worthy of note except the palace of the grand-master of the Knights Hospitaliers, and the church of St. Andrew; all the rest was a sad and deplorable ruin, pervaded by a pestiferous air, which soon threw strangers into dangerous maladies. This account is confirmed by other travellers, who add little or nothing to it (*Doubdan*, *Cotovicus*, *Zuallart*, *Morison*, *Nau*, *D'Arvieux*, and others). *Morison*, however, dwells more on the ancient remains, which consisted of portions of old walls of extraordinary height and thickness, and of fragments of buildings, sacred and secular, which still afforded manifest tokens of the original magnificence of the place. He (ii. 8) affirms that the metropolitan church of St. Andrew was equal to the finest of those he had seen in France and Italy, and that the church of St. John was of the same perfect beauty, as might be seen by the pillars and vaulted roof, half of which still remained. An excellent and satisfactory account of the place is given by *Nau* (*liv. v. ch. 19*), who takes particular notice of the old and strong vaults on which the houses are built; and the present writer, having observed the same practice in Baghdad, has no doubt that *Nau* is right in the conjecture that they were designed to afford cool underground retreats to the inhabitants during the heat of the day in summer, when the climate of the plain is intensely hot. This provision might not be necessary in the interior and cooler parts of the country. *Maudrell* gives no further information, save that he mentions that the town appears to have been encompassed on the land side by a double wall, defended with towers at small distances; and that without the walls were ditches, ramparts, and a kind of bastions faced with hewn stones (*Journey*, p. 72). *Pococke* speaks chiefly of the ruins. After the impulse given to the prosperity of the place by the measures of Sheikh Daher, and afterwards of Djeddar Pasha, the descriptions differ. Much of the old ruins had disappeared from the natural progress of decay, and

View of the coast of the island of Sumatra, near the mouth of the river of the same name, from the ship of the author, on the 10th of August, 1811.

from their materials having been taken for new works. It is, however, mentioned by Buckingham, that, in sinking the ditch in front of the then (1816) new outer wall, the foundations of small buildings were exposed, twenty feet below the present level of the soil, which must have belonged to the earliest ages, and probably formed part of the original *Accho*. He also thought that traces of *Ptolemæis* might be detected in the shafts of grey and red granite and marble pillars, which lie about or have been converted into thresholds for large doorways, of the Saracenic period; some partial remains might be traced in the inner walls; and he is disposed to refer to that time the now old *khan*, which, as stated above, was really built by the Emir Fakred-din. All the Christian ruins mentioned by the travellers already quoted had disappeared. In actual importance, however, the town had much increased. The population in 1819, was computed at 10,000, of whom 3000 were Turks, the rest Christians of various denominations (Connor, in Jowett, i. 423). Approached from Tyre the city presented a beautiful appearance, from the trees in the inside, which rise above the wall, and from the ground immediately around it on the outside being planted with orange, lemon, and palm trees. Inside, the streets had the usual narrowness and filth of Turkish towns; the houses solidly built with stone, with flat roofs; the bazaars mean, but tolerably well supplied (Turner, ii. 113). The principal objects were the mosque, the pasha's seraglio, the granary, and the arsenal (Irby and Mangles, p. 195). Of the mosque, which was built by Djezzar Pasha, there is a description by Pliny Fisk (*Life*, p. 337; also G. Robinson, i. 200). The trade was not considerable; the exports consisted chiefly of grain and cotton, the produce of the neighbouring plain; and the imports chiefly of rice, coffee, and sugar from Damietta (Turner, ii. 112). As thus described, the city was all but demolished in 1832 by the hands of Ibrahim Pasha; and although considerable pains were taken to restore it, yet, as lately as 1837, it still exhibited a most wretched appearance, with ruined houses and broken arches in every direction (Lord Lindsay, *Letters*, ii. 81).—J. K.

ACCOMMODATION. The general idea expressed by this term is that some object is presented, not in its absolute reality, not as it is in itself, but under some modification, or under some relative aspect, so as the better to secure some end at which the writer or speaker aims. Of this general concept there are several modifications, which are known among biblical scholars under the general heads of *formal* and *material* accommodation. We shall attempt a somewhat fuller analysis.

1. Real Accommodation. This takes place when a person is set forth as being, or as acting, under some modified character, accommodated to the capacity for conceiving him, or the inclination to receive him, of those to whom the representation is addressed. Thus, God is frequently in Scripture described anthropomorphically or anthropopathically; *i. e.*, not as He is in Himself, but relatively to human modes of thought and capacities of apprehending Him. [ANTHROPOMORPHISM.] So also the Apostle describes himself as becoming all things to all men, that by all means he might save some; *i. e.*, he accommodated himself to men's habits, usages, and modes of thought, and even prejudices,

in order that he might disarm their opposition, and secure a favourable reception for the gospel of salvation which he preached. This species of accommodation is what the Christian Fathers usually have in view under the terms *συγκατάβασις*, or *condescensio*, and *Οικονομία*, or *dispensatio*. They apply these terms also to the incarnation and state of humiliation of Christ, which they regarded as an accommodation to the necessities of man's case for his redemption. See Suicer, *Thesaurus Eccl.* on *συγκατάβασις* and *οικονομία* and Chapman's *Miscellaneous Tracts relating to Antiquity*. Lond. 1742. To this head may be referred many of the symbolical actions of the prophets.

2. Verbal Accommodation. This takes place when a passage or expression used by one writer is cited by another, and applied with some modification of the meaning to something different from that to which it was originally applied. Such accommodations are common in all languages. Writers and speakers lay hold of the utterances of others for the sake of giving to their own ideas a more graceful and a more forcible clothing than they feel themselves able to give them, or for the purpose of procuring for them acceptance, by uttering them in words which some great writer has already made familiar and precious to the general mind. Sometimes this is done almost unconsciously. 'Wherever,' says Michaelis, 'a book is the object of our daily reading and study, it cannot be otherwise than that passages of it should frequently flow into our pen in writing; sometimes accompanied with a conscious recollection of the place where we have read them; at other times without our possessing any such consciousness. Thus the lawyer speaks with the *corpus juris* and the laws, the scholar with the Latin authors, and the preacher with the Bible' (*Einleit.* I. 223). Our own literature is full of exemplifications of this, as is too well known to need illustrative proof. In the writings of Paul we find him making use in this way of passages from the classics (Acts xvii. 19; 1 Cor. xv. 34; Tit. i. 12), all of which are of course applied by him to Christian subjects only by accommodation. We need not be surprised, then, to find the later biblical writers quoting in this way from the earlier, especially the N. T. writers, from the great classic of their nation, the *ἱερὰ γράμματα* of the former dispensation. As instances may be adduced, Rom. x. 18 from Ps. xix. 4, and Rom. xii. 20 from Prov. xxv. 21, 22. See also Matt. ii. 15, 18, with Calvin's notes thereon. 'They have done this,' says Michaelis, 'in many places where it is not perceived by the generality of readers of the N. T., because they are too little acquainted with the Septuagint.'

3. Rhetorical Accommodation. This takes place when truth is presented not in a direct and literal form, but through the medium of symbol, figure, or apologue. Thus, in the prophetic writings of Scripture, we have language used which cannot be interpreted literally, but which, taken symbolically, conveys a just statement of important truth; comp. *e. gr.* Is. iv. 5; xxvii. 1; xxxiv. 4; Joel ii. 28-31; Zech. iv. 2, 10, etc. Many instances occur in Scripture where truth is presented in the form of parable, and where the truth taught is to be obtained only by extracting from the story the spiritual, or moral, or practical lesson it is designed to enforce. And in all the sacred books there are instances constantly occurring of words and state-

ments which are designed to convey, under the vehicle of figure, a truth analogous to, but not really that they literally express. (See Knobel, *Prophetismus der Hebräer*, § 30-33; Smith, *Summary View and Explanation of the Writings of the Prophets*, Prel. Obs. pp. 1-22; Glassius, *Phil. Sac.* Lib. v. p. 669 ff. ed. 1711; Lowth, *De Sac. Poesi Heb.*, pl. locc.; Davidson, *Sacred Hermeneutics*, ch. ix.

4. *Logical Accommodation.* In arguing with an opponent it is sometimes advantageous to take him on his own ground, or to argue from principles which he admits, for the purpose of shutting him up to a conclusion which he cannot refuse, if he would retain the premises. It does not follow from this that his ground is admitted to be the right one, or that assent is given to his principles; the argument is simply *one ad hominem*, and may or may not be also *ad veritatem*. When it is not, that is, when its purpose is merely to shut the mouth of an opponent by a logical inference from his own principles, there is a case of logical accommodation.

5. *Doctrinal Accommodation.* This takes place when opinions are advanced or statements made merely to gratify the prejudices or gain the favour of those to whom they are addressed, without regard to their inherent soundness or truthfulness. If, for instance, the N. T. writers were found introducing some passage of the O. T. as a prediction which had found its fulfilment in some fact in the history of Jesus Christ or his church, merely for the purpose of overcoming Jewish prejudices, and leading those who venerated the O. T. to receive more readily the message of Christianity; or if they were found not only clothing their ideas in language borrowed from the Mosaic ceremonial, but asserting a correspondence of meaning between that ceremonial and the fact or doctrines they announced when no such reality existed, thereby warping truth for the sake of subduing prejudice; they would furnish specimens of this species of accommodation.

In both respects, a charge to this effect has been brought against them. It has been alleged that when they say of any event they record, that in it was fulfilled such and such a statement of the O. T., or that the event occurred that such and such a statement might be fulfilled, they did so merely in accommodation to Jewish feeling and prejudices. A fitter place will be found elsewhere for considering the import of the formulæ *ἡνα πληρωθῆ, τότε ἐπληρώθη* and the like. [QUOTATIONS.] At present it may suffice to observe, that it may be admitted that these formulæ are occasionally used where there can have been no intention on the part of the writer to intimate that in the event to which they relate there was the fulfilment of a prediction; as, for instance, where some gnome or moral maxim contained in the O. T. is said to be fulfilled by something recorded in the N. T., or some general statement is justified by a particular instance (comp. Matt. xiii. 35; John xv. 25; Rom. i. 17; Jam. ii. 23; 2 Pet. ii. 22, etc.) It may be admitted also, that there are cases where a passage in the O. T. is said to be fulfilled in some event recorded in the N. when all that is intended is that a *similarity* or *parallelism* exists between the two, as is the case, according to the opinion of most, at least, in Matt. ii. 17, 18. But whilst these admissions throw the *onus probandi* on those who, in any special in-

stance, maintain that there is in it an actual fulfilment of an ancient prediction, it would be preposterous from them to foreclose the question, and maintain that in *no* case is the N. T. passage to be understood as affirming the fulfilment in fact of an ancient prediction recorded in the Old. Because some accommodations of the kind specified are admitted, it would be folly to conclude that nothing but accommodation characterises such quotations. If this position were laid down, it would not be easy to defend the N. T. writers, nay our Lord himself, from the charge of insincerity and duplicity.

Still more emphatically does this last observation apply in respect of the notion that our Lord and his apostles accommodated their teaching to the current notions and prejudices of the Jews of their own times. It might seem almost incredible that any one should venture to impute to them so unworthy and so improbable a course, were it not that we find the imputation broadly made, and the making of it defended by some very eminent men of the anti-supernaturalist school, especially in Germany. By them it has been asserted that our Lord and his disciples publicly taught many things which privately they repudiated, and an attempt has been made to save them from the charge of downright dishonesty which this would involve by an appeal to the usage of many ancient teachers who had an exoteric doctrine for the multitude, and an esoteric for their disciples. (Semler, *Programm. Acad. Sel. Hal.* 1779; Corrodi, *Beyträge zur beförderung des vernünftigen Denkens in d. Religion*, 15th part, p. 1-25; P. Van Hemert, *Ueber Accom. in N. T.* Leipz. 1797, etc.) The prompt and thorough repudiation of such views even by such men as Wegscheider and Bretschneider renders it unnecessary to enlarge on the formal refutation of them. 'Cujus rei,' says the former, 'certa vestigia in libris sacris frustra quaeruntur.' (*Inst. Theologica* p. 105, 6th ed.; see also Bretschneider, *Handbuch der Dogmatik*, I. 260-265, 2d ed.) These writers, however, contend that though our Lord and his apostles did not make use of a *positive* accommodation of their doctrine to the prejudices or ignorance of the Jews, they did not refrain from a *negative* accommodation; by which they intend the use of *reserve* in the communication of truth or refutation of error, and the allowing of men to retain opinions not authorised by truth without express or formal correction of them. They adduce as instances, John xvi. 12; vi. 15; Luke xxiv. 21; Acts, i. 6; 1 Cor. iii. 1, 2; viii. 9, etc. By these passages, however, nothing more is proved than that in teaching men truth our Lord and his apostles did not tell them *everything at once*, but led them on from truth to truth as they were able to receive it or bear it. In this there is no accommodation of the *material* of doctrine; it is simply an accommodation of *method* to the capacity of the learner. In the same way Paul's assertion, which they have also cited, that he became all things to all men, that he might by all means save some (1 Cor. ix. 22), is to be regarded as relating merely to the mode and order of his presenting Christian truth to man, not to his modifying in any respect the substance of what he taught. When he spoke to Jews, he opened and alleged out of their own Scriptures that Jesus was the Christ (Acts xvii. 2, 3). When he spoke to the Athenians on Mar's Hill, he started from the

ground of natural religion, and addressed the reason and common sense of his audience; but in either case it was the same Jesus that he preached, and the same gospel that he published. Had he done otherwise, he would have been found a false witness for God.

This Accommodation theory is often spoken of as identical with the historical principle of interpreting Scripture. It is so, however, only as the historical principle of interpretation means the treating of the statements of our Lord and his apostles as merely expressing the private opinions of the individual, or as historically traceable to the prevailing opinions of their day. This is not to be confounded with that true and sound principle of historical interpretation, which allows due weight to historical evidence in determining the meaning of words, and to the circumstances in which statements were made as determining their primary application and significance. (Tittmann, *Meletemata Sacra in Joannem*, Pref. (translated in the Biblical Cabinet); Storr, *De Sensu Historico Scriptura Sacre*, in his *Opusc. Acad.* vol. I.; *Abhandl. ueb. d. Zweck des Todes Jesu*, § 10; *Lehrb. d. Chr. Dogmatik* § 13 (Eng. tr. by Schmucker, p. 67, Lond. 1836); *Haupt's Bemerkungen über die Lehrart Jesu*; Heringa, *Verhandlung, ten betooge, dat Jesus end zyn Apostelen zich doorgaans niet geschikt hebben naar de Verkeerde denkbeelden van hunne tydgenooten*; Planck's *Introduction to Theological Sciences*, in *Biblical Cabinet*, vol. vii.; Less's *Letters on the Principle of Accommodation*; Davidson, *Hermeneutics*, p. 199 ff.; Smith, J. P. *First Lines of Christian Theology*, p. 518; Seiler's *Hermeneutics* by Wright, § 264-276, pp. 418-438; Alexander, *Connection and Harmony of the Old and New Testaments*, pp. 45-48; 148-157, 416, 2d. ed.)—W. L. A.

ACCUBATION, the posture of reclining on couches at table, which prevailed among the Jews in and before the time of Christ. We see no reason to think that, as commonly alleged, they borrowed this custom from the Romans after Judea had been subjugated by Pompey. But it is best known to us as a Roman custom, and as such must be described. The dinner-bed, or *triclinium*, stood in the middle of the dining-room, clear of the walls, and formed three sides of a square which enclosed the table. The open end of the square, with the central hollow, allowed the servants to attend and serve the table. In all the existing representations of the dinner-bed it is shewn to have been higher than the enclosed table. Among the Romans the

10.

usual number of guests on each couch was three, making nine for the three couches, equal to the number of the Muses; but sometimes there were four to each couch. The Greeks went beyond this number (Cic. *In Pis.* 27); the Jews appear to have

had no particular fancy in the matter, and we know that at our Lord's last supper *thirteen* persons were present. As each guest leaned, during the greater part of the entertainment, on his left elbow, so as to leave the right arm at liberty, and as two or more lay on the same couch, the head of one man was near the breast of the man who lay behind him, and he was, therefore, said 'to lie in the bosom' of the other. This phrase was in use among the Jews (Luke xvi. 22, 23; John i. 18; xiii. 23), and occurs in such a manner as to shew that to lie next below, or 'in the bosom' of the master of the feast, was considered the most favoured place; and is shewn by the citations of Kypke and Wetstein (on John xiii. 23) to have been usually assigned to near and dear connections. So it was 'the disciple whom Jesus loved' who 'reclined upon his breast' at the last supper. Lightfoot and others suppose that as, on that occasion, John lay next below Christ, so Peter, who was also highly favoured, lay next above him. This conclusion is founded chiefly on the fact of Peter beckoning to John that he should ask Jesus who was the traitor. But this seems rather to prove the contrary—that Peter was not himself near enough to speak to Jesus. If he had been there, Christ must have lain near *his* bosom, and he would have been in the best position for whispering to his master, and in the worst for beckoning to John. The circumstance that Christ was able to reach the sop to Judas when he had dipped it, seems to us rather to intimate that *he* was the one who filled that place. Any person who tries the posture may see that it is not easy to deliver anything but to the person next above or next below. And this is not in contradiction to, but in agreement with, the circumstances. The morsel of favour was likely to be given to one in a favoured place; and Judas being so trusted and honoured as to be the treasurer and almoner of the whole party, might, as much as any other of the apostles, be expected to fill that place. This also gives more point to the narrative, as it aggravates by contrast the turpitude and baseness of his conduct.

The frame of the dinner-bed was laid with mattresses variously stuffed, and, latterly, was furnished with rich coverings and hangings. Each person was usually provided with a cushion or bolster on which to support the upper part of his person in a somewhat raised position; as the left arm alone could not long without weariness sustain the weight. The lower part of the body being extended diagonally on the bed, with the feet outward, it is at once perceived how easy it was for 'the woman that was a sinner' to come behind between the dinner-bed and the wall, and anoint the feet of Jesus (Luke vii. 37, 38; John xii. 3).

The dinner-beds were so various at different times, in different places, and under different circumstances, that no one description can apply to them all. Even among the Romans they were at first (after the Punic war) of rude form and materials, and covered with mattresses stuffed with rushes or straw; mattresses of hair and wool were introduced at a later period. At first the wooden frames were small, low, and *round*; and it was not until the time of Augustus that square and ornamented couches came into fashion. In the time of Tiberius the most splendid sort were venerated with costly woods or tortoiseshell and were covered with valuable embroideries, the richest of which came

from Babylon, and cost large sums (U.K.S. *Pompeii*, ii. 88). The Jews perhaps had all these varieties, though it is not likely that the usage was ever carried to such a pitch of luxury as among the Romans; and it is probable that the mass of the people fed in the ancient manner—seated on stools or on the ground. It appears that couches were often so low, that the feet rested on the ground; and that cushions or bolsters were in general use. It would also seem, from the mention of two and of three couches, that the arrangement was more usually square than semicircular or round (Light-foot, *Hor. Heb.* in John xiii. 23).

11.

It is utterly improbable that the Jews derived this custom from the Romans, as is constantly alleged. They certainly knew it as existing among the Persians long before it had been adopted by the Romans themselves (Esth. i. 6; vii. 8); and the presumption is that they adopted it while subject to that people. The Greeks also had the usage (from the Persians) before the Romans; and with the Greeks of Syria the Jews had very much intercourse. Besides, the Romans adopted the custom from the Carthaginians (Val. Max. xii. 1, 2; Liv. xxviii. 28); and, that they had it, implies that it previously existed in Phœnicia, in the neighbourhood of the Jews. Thus, that in the time of Christ the custom had been lately adopted from the Romans, is the last of various probabilities. It is also unlikely that in so short a time it should have become usual and even (as the Talmud asserts) obligatory to eat the Passover in that posture of indulgent repose, and in no other. All the sacred and profane literature of this subject has been most industriously brought together by Stuckius (*Antiq. Convivialium*, ii. 34); and the works on Pompeii and Herculaneum supply the more recent information. [BANQUETS.]—J.K.

ACCURSED. [ANATHEMA.]

ACCUSER. [JUDICATURE.]

ACELDAMA (Ἀκελδαμά, from the Syro-Chaldaic, אַקֶּלְדָּמָא, *field of blood*), the field purchased with the money for which Judas betrayed Christ, and which was appropriated as a place of burial for strangers (Matth. xxvii. 8; Acts i. 19). [There is an apparent discrepancy between the statement of Matthew and that of Peter in the Acts. According to the former, what had been called the potter's field was purchased by the chief priests with the money which Judas had cast down in the temple, and from this came to be

called the field of blood (ἀγρός αἵματος); whereas Peter, as reported by Luke, seems to intimate that Judas bought the field himself with the reward of his iniquity, and that it was called the field of blood (χλωὸν αἵματος), from the tragical manner of his own death. It is possible, however, that Peter, speaking rhetorically, may attribute to Judas himself a purchase, which was really made by others, with the money he had received as the reward of his iniquity; and as respects the *naming* of the locality, Peter's statement may be understood to mean that from the notoriety the *whole* affair, including both the purchase with the price of blood and Judas's own bloody death, had acquired, it was called the field of blood. See the notes of Bloomfield (N. T.) and Lechler (in Lange's *Bibelwerk*) on the passage in Acts, and the notes of Meyer and Lange himself on that in Matthew.] The field now shewn as Aceldama lies on the slope of the Hills beyond the valley of Hinnom, south of Mount Zion. This is obviously the spot which Jerome points out (*Onomast. s. v.* 'Acheldamach'), and which has since been mentioned by almost every one who has described Jerusalem. Sandys thus writes of it: 'On the south side of this valley, neere where it meeteth with the valley of Jehoshaphat, mounted a good height on the side of the mountain, is *Aceldama*, or the field of blood, purchased with the restored reward of treason, for a burial place for strangers. In the midst whereof a large square room was made by the mother of Constantine; the south side, walled with the naturall rocke; flat at the top, and equall with the vpper level; out of which ariseth certaine little cupoloes, open in the midst to let doune the dead bodies. Thorow these we might see the bottome, all covered with bones, and certaine corses but newly let doune, it being now the sepulchre of the Armenians. A greedy graue, and great enough 'to devour the dead of a whole nation. For they say (and I believe it), that the earth thereof within the space of eight and forty hours will consume the flesh that is laid thereon' (*Relation of a Journey*, p. 187). He then relates the common story, that the empress referred to caused 270 ship-loads of this flesh-consuming mould to be taken to Rome, to form the soil of the Campo Sancto, to which the same virtue is ascribed.

The plot of ground originally bought 'to bury strangers in,' seems to have been early set apart by the Latins, as well as by the Crusaders, as a place of burial for pilgrims (Jac. de Vitriaco, p. 64). The charnel-house is mentioned by Sir John Mandeville, in the fourteenth century, as belonging to the Knights Hospitallers. Sandys shews that, early in the seventeenth century, it was in the possession of the Armenians. Eugene Roger (*La Terre Sainte*, p. 161) states that they bought it for the burial of their own pilgrims, and ascribes the erection of the charnel-house to them. They still possessed it in the time of the Maundrell, or rather rented it, at a sequin a day, from the Turks. Corpses were still deposited there; and the traveller observes that they were in various stages of decay, from which he conjectures that the grave did not make that quick despatch with the bodies committed to it which had been reported. 'The earth hereabouts,' he observes, 'is of a chalky substance; the plot of ground was not above thirty yards long by fifteen wide; and a moiety of it was occupied by the charnel-house which was twelve yards high'

(*Journey*, p. 136). Richardson (*Travels*, p. 567) affirms that bodies were thrown in as late as 1818; but Dr. Robinson alleges that it has the appearance of having been for a much longer time abandoned: 'The field is not now marked by any boundary to distinguish it from the rest of the hillside; and the former chamel-house, now a ruin, is all that remains to point out the site. . . . The bottom was empty and dry excepting a few bones much decayed' (*Biblical Researches*, i. 524, *Narrative of a voyage along the shores of the Mediterranean*, by Dr. Wilde, 1844).—J. K.

ACHAIA (Ἀχαΐα), a region of Greece, which in the restricted sense occupied the north-western portion of the Peloponnese, including Corinth and its isthmus (Strabo, viii. p. 438, sq.) By the poets it was often put for the whole of Greece, whence Ἀχαιοί, the Greeks. Under the Romans, Greece was divided into two provinces, Macedonia and Achaia, the former of which included Macedonia proper, with Illyricum, Epirus, and Thessaly; and the latter, all that lay southward of the former (Cellar. i. p. 1170, 1022). It is in this latter acceptation that the name of Achaia is always employed in the New Testament (Acts xviii. 12, 27; xix. 21; Rom. xv. 26; xvi. 5; 1 Cor. xvi. 15; 2 Cor. i. 1; ix. 2; xi. 10; 1 Thess. i. 7, 8). Achaia was at first a senatorial province, and as such, was governed by proconsuls (Dion Cass. liii. p. 704). Tiberius changed the two into one imperial province under procurators (Tacit. *Annal.* i. 76); but Claudius restored them to the senate and to the proconsular form of government (Suet. *Claud.* 25). Hence the exact and minute propriety with which St. Luke expresses himself in giving the title of proconsul (ἀνθύπατος, A. V. 'deputy') to Gallio, who was appointed to the province in the time of Claudius (Acts xviii. 12).—J. K.

ACHAICUS (Ἀχαιικός), a follower of the apostle Paul. He, with Fortunatus, was probably a member of the family of Stephanas, along with whom they are mentioned in 1 Cor. xvi. 17. Grotius thinks they belonged to the household of Cloe; but Cloe was probably an Ephesian (Meyer on 1 Cor. i. 11).—W. L. A.

ACHAN (עֲכָן; Sept. Ἀχαν, or Ἀχαρ, Josh. vii. 1; in 1 Chron. ii. 7 spelt עֲכָר, *troubler*), the name of a man who when Jericho was taken and devoted to destruction fell under the temptation of secreting an ingot of gold, a quantity of silver, and a costly Babylonish garment, which he buried in his tent, deeming that his sin was hid. For this which, as a violation of a vow made by the nation as one body, had involved the whole nation in his guilt, the Israelites were defeated with serious loss, in their first attack upon Ai; and as Joshua was well assured that this humiliation was designed as the punishment of a crime which had incriminated the whole people, he took immediate measures to discover the criminal. As in other cases the matter was referred to the Lord by the lot, and the lot ultimately indicated the actual criminal. The conscience-stricken offender then confessed his crime to Joshua; and his confession being verified by the production of his ill-gotten treasure, the people, actuated by the strong impulse with which men tear up, root and branch, a polluted thing, hurried away not only Achan, but his tent, his goods, his spoil, his cattle, his children, to

the valley (afterwards called) of Achor, north of Jericho, where they stoned him, and all that belonged to him; after which the whole was consumed with fire, and a cairn of stones raised over the ashes. The severity of this act, as regards the family of Achan, has provoked some remark. Instead of vindicating it, as is generally done, by the allegation that the members of Achan's family were probably accessories to his crime after the fact, we prefer the supposition that they were included in the doom by one of those sudden impulses of indiscriminate popular vengeance to which the Jewish people were exceedingly prone, and which, in this case, it would not have been in the power of Joshua to control by any authority which he could under such circumstances exercise. It is admitted that this is no more than a conjecture: but as such it is at least worth as much, and assumes considerably less, than the conjectures which have been offered by others (Josh. vii.)—J. K.

ACHAR. [ACHAN.]

ACHASHDARPENIM (אֲחַשְׁדָּרְפָּנִים; Sept. σατραπαί and σατραπηγός; Vulg. *Satrāpē*; A. V. 'rulers of provinces.' It occurs in Ez. viii. 36; Esth. iii. 12; viii. 9; ix. 3; and with the Chaldee termination *in*, in Dan. iii. 2, 3, 27; vi. 2, 3). The word is undoubtedly merely another form of writing the Persian word *satrap*, the origin of which has been much disputed, and does not claim to be here considered.* These satraps are known in ancient history as the governors or viceroys of the provinces into which the Persian empire was divided. Strictly speaking, they had an extended civil jurisdiction over several smaller provinces, each of which had its own פַּרְהָה or governor. Thus Zerubabel and Nehemiah were 'governors' of Judea, under the Persian satraps of Syria (Ezra, iv. 3, 6; Neh. ii. 9). The power and functions of the Persian satraps were not materially different from those of the modern Persian governors and Turkish pashas; and, indeed, the idea of provincial government by means of viceroys, entrusted with almost regal powers in their several jurisdictions, and responsible only to the king, by whom they are appointed, has always been prevalent in the East. The important peculiarity and distinction in the ancient Persian government, as admirably shewn by Heeren (*Researches*, i. 489, sq.), was that the

[* Gesenius has collected the different explanations of this word, which have been proposed, in his *Thesaurus*, s. v. He himself adopts that of Benfey and Lassen, who trace it to the Indian *ksatrapa*, i. e. 'warrior of the host'; to which corresponds the Gr. ἐξαρπάτης, ἐξαυπάτης (Boeckh, *Corp. Inscr.* 2691 c.) Hitzig thinks the word should be rendered 'Protector of the Province,' like the zend *shōthrapaiti* (*Das B. Daniel erklärt*, p. 46). Hengstenberg and Hävernick, following De Sacy, regard it as a compound of *kschetr* province, and *Bau* guardian, and render it 'Ruler of a province' (De Sacy *Memoires de l'Institut, Classe de l'histoire et de litterat. ancienne*, t. ii. p. 229 ff. Hengstenberg, *Beiträge* I. 347. Hävernick *Comment. ueb. Dan.* p. 97). The word occurs twice on col. iii. of the great inscription at Behistun, where it is spelt *khshatrapa*. Sir H. Rawlinson derives it from *khshatram*, crown or empire, and *pa* keeper, preserver. Rawlinson's *Herodotus* ii. 481.]

civil and military powers were carefully separated: the satrap being a very powerful civil and political chief, but having no immediate control over the troops and garrisons, the commanders of which were responsible only to the king. The satraps in their several provinces, employed themselves in the maintenance of order and the regulation of affairs; and they also collected and remitted to the court the stipulated tribute, clear of all charges for local government and for the maintenance of the troops (Xenoph. *Cyrop.* viii. 6, § 1-3). In later times this prudent separation of powers became neglected, in favour of royal princes and other great persons (Xenoph. *Anab.* i. 1, § 2), who were entrusted with the military as well as civil power in their governments; to which cause may be attributed the revolt of the younger Cyrus, and the other rebellions and civil wars, which, by weakening the empire, facilitated its ultimate subjugation by Alexander.

ACHBAR (עֲבָר *achbar*; perhaps generically including *aliarbai* or *jerboa*, or فَارَس *parah* of the Arabs, Sept. *μῦς*). The word occurs where, it seems, the nomenclature in modern zoology would point out two distinct genera or species (Lev. xi. 29; 1 Sam. vi. 4, 5, 11, 18; Is. lxvi. 17). The radical meaning of the name, according to Bochart, designates a field ravager, one that devours the produce of agriculture, and therefore is applicable to several genera of Rodentia, etc., notwithstanding that the learned etymologist would confine it to the *jerboa* or jumping-mouse of Syria and Egypt, although that animal is not abundant in the first-mentioned region, and even in the second is restricted almost exclusively to the desert, as it can live without water. Bochart, it is true, cites examples of the ravages committed by murine animals in divers localities; but among them several are pointed out where the *jerboa* is rare, or not found at all; consequently they apply not to that species, but to some other Rodent. It is likely that the Hebrews extended the acceptance of the word *achbar*, in the same manner as was the familiar custom of the Greeks, and still more of the Romans, who included within their term *mus*, insectivora of the genus *sorex*, that is 'shrews'; carnivora, among which was the *Mustela erminea*, 'stoat' or 'ermine,' their *Mus ponticus*; and in the systematic order Rodentia, the *muride* contain *Myoxus glis* or fat dormouse; *Dipus jaculus* or Egyptian *jerboa*; *Mus*, rats and mice properly so called, constituting several modern genera; and *cricetus* or hamster, which includes the marmot or Roman *Mus Alpinus*. This was a natural result of the imperfect state of zoological science, where a somewhat similar external appearance was often held sufficient for bestowing a general name which, when more remarkable particulars required further distinction, received some trivial addition of quality or native country, or a second local designation, as in the present case; for, according to some biblical critics, the *jerboa* may have been known also by the name of שֶׁפָן *shaphan*. In the above texts, all in 1 Sam. vi. apparently refer to the short-tailed field-mouse, which is still the most destructive animal to the harvests of Syria, and is most likely the species noticed in antiquity and during the crusades; for, had they been *jerboas* in shape and resembled miniature kangaroos, we would expect William of Tyre to have mentioned the peculiar form of the

destroyers, which was then unknown to Western Europe; whereas, they being of species or appearance common to the Latin nations, no particulars were required. But in Leviticus and Isaiah, where the mouse is declared an unclean animal, the species most accessible and likely to invite the appetite of nations who, like the Arabs, were apt to covet all kinds of animals, even when expressly forbidden, were, no doubt, the hamster and the dormouse; and both are still eaten in common with the *jerboa*, by the Bedouins, who are but too often driven to extremity by actual want of food. [Bochart, *Hieroz* l. iii. c. 34].—C. H. S.

ACHBOR (עֲבָרִי q. עֲבָר, *a mouse* or *weasel*; Ἀχσώβω) 1. An Idumean prince, father of Baalhanan (Gen. xxxvi. 38, 39; 1 Chr. i. 49). 2. A courtier of Josiah (2 Kings xxii. 12, 14), called Abdon, probably by a clerical error in 2 Chr. xxxiv. 20; and doubtless the same as the person mentioned, Jer. xxvi. 22; xxxvi. 12.

ACHIM (Ἀχιμ, probably the Heb. יָכִין for which the LXX. give Ἀχιμ, Gen. xlv. 10, and Ἀχιμ 1 Chr. xxv. 17), the son of Sadoc in the genealogy of our Lord, and the fifth in succession from Joseph (Matt. i. 14).

ACHISH (אַכִּישׁ, signification uncertain; Sept. Ἀγχοῦς, also Ἀρχίς, Ἀχίς, called Abimelech in the title of Ps. xxxiv.), the Philistine king of Gath, with whom David twice sought refuge when he fled from Saul (1 Sam. xxi. 10-15; xxvii. 1-3). The first time David was in imminent danger; for he was recognized and spoken of by the officers of the court as one whose glory had been won at the cost of the Philistines. This talk filled David with such alarm that he feigned himself mad when introduced to the notice of Achish, who, seeing him 'scrabbling upon the doors of the gate, and letting his spittle fall down upon his beard,' rebuked his people sharply for bringing him to his presence, asking, 'Have I need of madmen, that ye have brought this fellow to play the madman in my presence? Shall this fellow come into my house?' After this David lost no time in quitting the territories of Gath. Winer illustrates David's conduct by reference to the similar proceeding of some other great men, who feigned themselves mad in difficult circumstances—as Ulysses (Cic. *Off.* iii. 26; Hygin. f. 95, *Schol. ad Lycophr.* 818), the astronomer Meton (Ælian, *Hist.* xiii. 12), L. Junius Brutus (Liv. i. 56; Dion. Hal. iv. 68), and the Arabian king Bacha (Schultens, *Anth. Vet. Hamasa*, p. 535). About four years after, when the character and position of David became better known, and when he was at the head of not less than 600 resolute adherents, he again repaired with his troop to King Achish, who received him in a truly royal spirit, and treated him with a generous confidence, of which David took rather more advantage than was creditable to him. [DAVID.]—J. K.

ACHLAMAH (אֲחֻלָּמָה; Sept. Ἀμῆθυστος; Vulg. *Amethystus*), a precious stone, mentioned in Scripture as the ninth in the breastplate of the high-priest (Exod. xxviii. 19; xxxix. 12); and the twelfth in the foundations of the New Jerusalem (Rev. xxi. 20). The concurrence of various circumstances leave little doubt that the stone anciently known as the *amethyst* is really denoted by the Hebrew word;

and as the stone so called by the ancients was certainly that which still continues to bear the same name, their identity may be considered as established.

The transparent gems to which this name is applied are of a colour which seems composed of a strong blue and deep red; and according as either of these prevails, exhibit different tinges of purple, sometimes approaching to violet, and sometimes declining even to a rose colour. From these differences of colour the ancients distinguished five species of the amethyst; modern collections afford at least as many varieties, but they are all comprehended under two species, the *Oriental Amethyst* and the *Occidental Amethyst*. These names, however, are given to stones of essentially different natures; which were, no doubt, anciently confounded in the same manner. The *Oriental amethyst* is very scarce, and of great hardness, lustre, and beauty. It is in fact a rare variety of the adamantine spar, or corundum. Next to the diamond, it is the hardest substance known. It contains about 90 per cent of alumine, a little iron, and a little silica. Of this species, emery, used in cutting and polishing glass, etc., is a granular variety. To this species also belongs the sapphire, the most valuable of gems next to the diamond; and of which the *Oriental amethyst* is merely a violet variety. Like other sapphires, it loses its colour in the fire, and comes out with so much of the lustre and colour of the diamond, that the most experienced jeweller may be deceived by it.

The more common, or *Occidental amethyst*, is a variety of quartz, or rock crystal, and is found in various forms in many parts of the world, as India, Siberia, Sweden, Germany, Spain; and even in England very beautiful specimens of tolerable hardness have been discovered. This also loses its colour in the fire.

Amethysts were much used by the ancients for rings and cameos; and the reason given by Pliny—because they were easily cut—'Sculpturis faciles' (*Hist. Nat.* xxxvii. 9), shews that the *Occidental* species is to be understood. The ancients believed that the amethyst possessed the power of dispelling drunkenness in those who wore or touched it, and hence its Greek name ('ab a privativo et μεθύω ebrius sum'—Martini, *Excurs.* p. 158). In like manner, the Rabbins derive its Jewish name from its supposed power of procuring dreams to the wearer, חלום signifying 'to dream' (Brückmann, *Abhandlung von der Edelsteine*; Hill's *Theophrastus*, notes; Braun, *de Vest. Sac. Heb.* ii. 16; Hillier, *Tract de xii. Gemmis in Pector. Pontif. Hebræorum*; Winer, *Biblisches Realwörterbuch*; Rosenmüller, *Mineralogy*, etc., of the Bible).—J. K.

ACHMETHA (אֲחַמֶּתָּה, Ezra vi. 2; Ἐκβάτανα, 2 Macc. ix. 3; Judith i. 1, 2; Tob. iii. 7; Joseph. *Antiq.* x. 11, 7; xi. 4, 6; also, in Greek authors, Ἐκβάτανα and Ἀγβάτανα), a city in Media. The derivation of the name is doubtful; but Sir H. Rawlinson (*Journal of Geogr. Soc.* x. 134) has left little question that the title was applied exclusively to cities having a fortress for the protection of the royal treasures. In Ezra we learn that in the reign of Darius Hystaspes the Jews petitioned that search might be made in the king's treasure-house at Babylon for the decree which Cyrus had made in favour of the Jews (Ezra v. 17). Search was

accordingly made in the record-office ('house of the rolls'), where the treasures were kept at Babylon (vi. 1): but it appears not to have been found there, as it was eventually discovered 'at Achmetha, in the palace of the province of the Medes' (vi. 2). It is here worthy of remark, that the LXX. regarded 'Achmetha,' in which they could hardly avoid recognizing the familiar title of Ecbatana, as the generic name for a city, and act, accordingly, rendered it by πόλις; and that Josephus, as well as all the Christian Greeks, while retaining the proper name of Ecbatana, yet agree with the Greek Scriptures, in employing the word βάσις to express the Hebrew בֵּיתָה, *Birtha* ('the palace'), which is used as the distinctive epithet of the city.

In Judith i. 2-4, there is a brief account of Ecbatana, in which we are told that it was built by Arphaxad, king of the Medes, who made it his capital. It was built of hewn stones, and surrounded by a high and thick wall, furnished with wide gates and strong and lofty towers. Herodotus ascribes its foundation to Dejoces, in obedience to whose commands the Medes erected 'that great and strong city, now known under the name of Agbatana, where the walls are built circle within circle, and are so constructed that each inner circle overtops its outer neighbour by the height of the battlements alone. This was effected partly by the nature of the ground, a conical hill, and partly by the building itself. The number of the circles was seven, and within the innermost was the palace of the treasury. The battlements of the first circle were white, of the second black, of the third scarlet, of the fourth blue, of the fifth orange; all these were brilliantly coloured with different pigments; but the battlements of the sixth circle were overlaid with silver, and of the seventh with gold. Such were the palace and the surrounding fortification that Dejoces constructed for himself: but he ordered the mass of the Median nation to construct their houses in a circle around the outer wall' (Herodot. i. 98). It is contended by Sir H. Rawlinson (*Geogr. Journal*, x. 127) that this story of the seven walls is a fable of Sabæan origin, the seven colours mentioned being precisely those employed by the Orientals to denote the seven great heavenly bodies, or the seven climates in which they revolve. He adds (p. 128), 'I cannot believe that at Agbatana the walls were really painted of these colours: indeed, battlements with gold and silver are manifestly fabulous; nor do I think that there ever could have been even seven concentric circles; but in that early age, where it is doubtful whether mithraicism, or fire-worship, had originated in this part of Asia, it is not at all improbable that, according to the Sabæan superstitions, the city should have been dedicated to the seven heavenly bodies, and perhaps a particular part assigned to the protection of each, with some coloured device emblematic of the tutelary divinity.*'

This Ecbatana has been usually identified with the present Hamadan [which is confirmed by the spelling *Hagnatan* in the cuneiform inscriptions]. Sir H. Rawlinson, however, while admitting that Hamadan occupies the site of the Median Ecbatana, has a learned and most elaborate paper in the *Geographical Journal* (x. 65-158; *On the Site of the*

[* The Rev. G. Rawlinson thinks the account of Herodotus not improbable. *Tr. of Herodotus*, i. p. 242, 243.]

Atropatenian Ecbatana), in which he endeavours to shew that the present Takht-i-Suleiman was the site of another, the Atropatenian Ecbatana; and that to it, rather than to the proper Median Ecbatana, the statement in Herodotus and most of the other ancient accounts are to be understood to refer. Our only business is with the Achmetha of Ezra; and that does not require us to enter into this question. Sir Henry, indeed, seems inclined to consider the Ecbatana of the apocryphal books as his Atropatenian Ecbatana; but is rather more doubtful in claiming it as the Achmetha of Ezra. But without undertaking to determine what amount of ancient history should be referred to the one or to the other, we feel bound to conclude that Hamadan was the site of the Achmetha of Ezra, and the Ecbatana of the Apocrypha: 1. Because it is admitted that the Median Ecbatana was a more ancient and more anciently great city than the Atropatenian metropolis. 2. Because the name 'Achmetha' may easily, through the Syrian Ahmethan, and the Armenian Ahmetan, be traced in the Persian Hamadan. 3. And because all the traditions of the Jews refer to Hamadan as the site of the Achmetha and Ecbatana of their Scriptures.

Hamadan is still an important town, and the seat of one of the governments into which the Persian kingdom is divided. It is situated in north lat. $34^{\circ} 53'$, east long. 40° , at the extremity of a rich and fertile plain, on a gradual ascent, at the base of the Elwund Mountains, whose higher summits are covered with perpetual snow. Some remnants of ruined walls of great thickness, and also of towers of sun-dried bricks, present the only positive evidence of a more ancient city than the present on the same spot. Heaps of comparatively recent ruins, and a wall fallen to decay, attest that Hamadan has declined from even its modern importance. The population is said by Southgate to be about 30,000, which, from what the present writer has seen of the place, he should judge to exceed the truth very considerably. It is little distinguished, inside, from other Persian towns of the same rank, save by its excellent and well-supplied bazaars, and the unusually large number of khans of rather a superior description. This is the result of the extensive transit trade of which it is the seat, it being the great centre where the routes of traffic between Persia, Mesopotamia, and Persia converge and meet. Its own manufactures are chiefly in leather. Many Jews reside here, claiming to be descended from those of the Captivity who remained in Media. Benjamin of Tudela says that in his time the number was 50,000. Modern travellers assign them 500 houses; but the Rabbi David de Beth Hillel (*Travels*, pp. 85-87, Madras, 1832), who was not likely to understate the fact, and had the best means of information, gives them but 200 families. He says they are mostly in good circumstances, having fine houses and gardens, and are chiefly traders and goldsmiths. They speak the broken Turkish of the country, and have two synagogues. They derive the name of the town from 'Haman' and 'Mede,' and say that it was given to that foe of Mordecai by King Ahasuerus. In the midst of the city is a tomb which is in their charge, and which is said to be that of Mordecai and Esther. It is a plain structure of brick, consisting of a small cylindrical tower and a dome (the whole about 20 feet high), with small projections

or wings on three sides. Within are two apartments—a small porch formed by one of the wings, and beyond it the tomb-chamber, which is a plain room paved with glazed tiles. In the midst, over the spots where the dead are supposed to lie, are two large wooden frames or chests, shaped like sarcophagi, with inscriptions in Hebrew and flowers carved upon them. There is another inscription on the wall, in bas-relief, which, as translated by Sir Gore Ouseley, describes the present tomb as having been built over the graves of Mordecai and Esther by two devout Jews of Cashan, in A.M. 4474. The original structure is said to have been destroyed when Hamadan was sacked by Timour. As Ecbatana was then the summer residence of the Persian court, it is probable enough that Mordecai and Esther died and were buried there; and traditional testimony taken in connection with this fact, and with such a monument in a place where Jews have been permanently resident, is better evidence than is usually obtained for the allocation of ancient sepulchres. The tomb is in charge of the Jews, and is one of their places of pilgrimage. Kinneir, Ker Porter, Morier, Frazer, and Southgate furnish the best accounts of modern Hamadan.—J. K.

ACHOR (עֶכּוֹר; Sept. Ἀχώρ), a valley between Jericho and Ai, which received this name (signifying *trouble*) from the trouble brought upon the Israelites by the sin of Achan (Josh. vii. 24). [ACHAN.] [It lay on the northern boundary of Judah (Josh. xv. 7), and therefore cannot have been, as Jerome makes it, to the north of Jericho.]

ACHSAH (עֶכְבָּה, *an eklet*; Sept. Ἀχσά), the daughter of Caleb, whose hand her father offered in marriage to him who should lead the attack on the city of Debir, and take it. The prize was won by his nephew Othniel; and as the bride was conducted with the usual ceremony to her future home, she alighted from her ass, and sued her father for an addition of springs of water to her dower in lands. It is probable that custom rendered it unusual or at least ungracious, for a request tendered under such circumstances by a daughter to be refused; and Caleb, in accordance with her wish, bestowed upon her the upper and the nether springs' (Josh. xv. 16-19; Judg. i. 9-15).—J. K.

ACHSELRAD, BENEDET, a Jewish rabbi at Ostroh, called also Ben Joseph Ha-Levi, born at Lemberg. His works are *בְּנֵי עֵדֶת* (*Son of Knowledge*), a series of 150 expository lectures on the Psalms, printed with the text of the Psalms, and a commentary entitled *קַב וְנִקִּי* by another rabbi, at Hanau in 1616, 4to; *רוּשׁוֹ עַל עֵשֶׂת הַדְּבָרֹת*; Homilies on the ten commandments, Hanau 1616, 4to; *עֵבוֹרַת הַלֵּל*, intended as a commentary on the Pentateuch, but reaching only to the end of Genesis, Cracow 1639, fol.—W. L. A.

ACHSHAPH (אֶחְשָׁף; Sept. Ἀχσάφ, Ἀχσάφ), and Ἀχ(σ)φ), a royal city of the Canaanites (Josh. xi. 1), has been supposed by many to be the same as Achziv, both being in the tribe of Asher. But a careful consideration of Josh. xix. 25 and 29, will make it probable that the places were different. There is more reason in the conjecture (Hamelsveld, iii. 237) that Achshaph was another name for Achcho or Acre, seeing that Achcho otherwise does not

occur in the list of towns in the lot of Asher, although it is certain, from Judg. i. 31, that Achco was in the portion of that tribe.—J. K.

ACHSHUB (אֲחִישׁוּבַי, Sept. *áchshub*). This word occurs only Ps. cxl. 3, where it is rendered in the A. V. by 'adder.' It designates some species of venomous serpent. Bochart contends that it is the viper (*Hieroz.* ii. 379), and in this he is followed by most. Colonel Hamilton Smith (in the former edition of this work) identified it with the puff-adder, 'a reptile,' says he, 'about three feet in length, and about six inches in circumference at the middle of the body; the head is larger than is usual in serpents; the eyes are large, and very brilliant; the back beautifully marked in half circles, and the colours black, bright yellow, and dark brown; the belly yellow; the appearance at all times, but chiefly when excited, extremely brilliant; the upper jaw greatly protruding, somewhat like what occurs in the shark, places the mouth back towards the throat, and this structure is said to be connected with the practice of the animal, when intending to bite, to swell its skin till it suddenly rises up, and strikes backwards as if it fell over. It is this faculty which appears to be indicated by the Hebrew name *achshub*, and therefore we believe it to refer to that species, or to one nearly allied to it. The Dutch name (puff-adder, or spooch-adder) shews that, in the act of swelling, remarkable eructations and spittings take place, all which no doubt are so many warnings, the bite being fatal. The puff-adder usually resides among brushwood in stony places and rocks, is fond of basking in the sun, rather slow in moving, and is by nature timid.'

ACHU (אֲחֻ). This word occurs in Job viii. 11, where it is said, 'Can the rush grow up without mire? can the FLAG grow without water?' Here *flag* stands for *achu*; which would seem to indicate some specific plant, as *gome*, or rush, in the first clause of the sentence, may denote the papyrus. *Achu* occurs also twice in Gen. xli. 2, 18, 'And, behold there came up out of the river seven well-favoured kine and fat-fleshed, and they fed in a meadow;' here it is rendered *meadow*, and must, therefore, have been considered by our translators, as a general, and not a specific term. In this difficulty it is desirable to ascertain the interpretation put upon the word by the earlier translators. Dr. Harris has already remarked that 'the word is retained in the Septuagint, in Gen. *ἐν τῷ ἄχαι*; and is used by the son of Sirach, Ecclesiastic. xl. 16, *ἄχι* or *ἄχει*, for the copies vary.' Jerome, in his Hebrew questions or traditions on Genesis, writes '*Achi* neque Græcus sermo est, nec Latinus, sed et Hebræus ipse corruptus est.' The Hebrew *vau* and *iod* being like one another, differing only in length, the LXX., he observes, wrote אֲחִי, *achi*, for אֲחֻ, *achu*, and according to their usual custom put the Greek χ for the double aspirate π (*Nat. Hist. of the Bible*, in 'Flag').

From the context of the few passages in which *achu* occurs, it is evident that it indicates a plant or plants which grew in or in the neighbourhood of water, and also that it or they were suitable as pasturage for cattle. Now it is generally well known that most of the plants which grow in water, as well as many of those which grow in its vicinity, are not well suited as food for cattle; some being

very watery, others very coarse in texture, and some possessed of acrid and even poisonous properties. None, therefore, of the *Algæ* can be intended, nor any species of *Butomus*. The different kinds of *Juncus*, or rush, though abounding in such situations, are not suited for pasturage, and in fact are avoided by cattle. So are the majority of the *Cyperaceæ* or sedge tribe; and also the numerous species of *Carex*, which grow in moist situations, yet yield a very coarse grass, which is scarcely if ever touched by cattle. A few species of *Cyperus* serve as pasturage, and the roots of some of them are esculent and aromatic; but these must be dug up before cattle can feed on them. Some species of *scirpus*, or club-rush, however, serve as food for cattle: *S. cespitosus*, for instance, is the principal food of cattle and sheep in the highlands of Scotland, from the beginning of March till the end of May. Varieties of *S. maritimus*, found in different countries, and a few of the numerous kinds of *Cyperaceæ* common in Indian pastures, as *Cyperus dubius* and *hexastachyus*, are also eaten by cattle. Therefore if any specific plant is intended, as seems implied in what goes before, it is perhaps one of the edible species of *scirpus* or *cyperus*, perhaps *C. esculentus*, which, however, has distinct Arabic names: or it may be a true grass; some species of *panicum*, for instance, which form excellent pasture in warm countries, and several of which grow luxuriantly in the neighbourhood of water.

12. *Cyperus esculentus*.

But it is well known to all acquainted with warm countries, subject to excessive drought, that the only pasturage to which cattle can resort is a green strip of different grasses, with some sedges, which runs along the banks of rivers or of pieces of water, varying more or less in breadth according to the height of the bank, that is, the distance of water from the surface. Cattle emerging from rivers, which they may often be seen doing in hot countries, as has been well remarked by the editor of the 'Pictorial Bible' on Gen. xli. 2, would naturally go to such green herbage as intimated in this passage of Genesis, and which, as indicated in Job viii. 11, could not grow without water in a warm dry country and climate. As no similar name is known to be applied to any plant or plants in Hebrew, endeavours have been made to find a similar one so applied in the cognate languages; and, as quoted by Dr. Harris, the learned Chappelow says, 'we have no radix for אֲחֻ unless we derive it, as Schultens does, from

the Arabic *achi*, to bind or join together.' Hence it has been inferred that it might be some one of the grasses or sedges employed in former times, as some still are, for making ropes. But there is probably some other Arabic root which has not yet been ascertained, or which may have become obsolete; for there are numerous words in the Arabic language having reference to greenness, all of which have *akh* as a common element. Thus *أخياس* *akhyas*, thickets, dark groves, places full of reeds or flags, in which animals take shelter; *أخواس* *akhevas*, putting forth leaves; so *akhairar*, greenness, verdure; *akhchishab*, abounding in grass. These may be connected with *kah*, a common term for grass in Northern India, derived from the Persian, whence amber is called *kah-robeh*, grass-attracter. So Jerome, with reference to *achu*, says, 'Cum ab eruditiss quærerem, quid hic sermo significaret audivi ab Ægyptiis hoc nomine lingua eorum omne quod in palude virens nascitur appellari.'—J. F. R.

ACHZIB (אֲחִיב). There were two places of this name, not usually distinguished.

1. ACHZIB (Sept. Ἀσχαζιβ, Ἐχασόβ), in the tribe of Asher nominally, but almost always in the possession of the Phœnicians; being, indeed, one of the places from which the Israelites were unable to expel the former inhabitants (Judg. i. 31). In the Talmud it is called CHEZIB. The Greeks called it ECDIPPA, from the Aramaean pronunciation אַכְדִּיב (Ptol. v. 15); and it still survives under the name of ZIB. It is upon the Mediterranean coast, about ten miles north of Acre. It stands on an ascent close by the sea-side, and is described as a small place, with a few palm-trees rising above the dwellings (Pococke, ii. 115; Richter, p. 70; Maundrell, p. 71; Irby and Mangles, p. 196; Buckingham, ch. iii.).

2. ACHZIB (Sept. Κεῖζιβ, Ἀχέζιβ), in the tribe of Judah (Josh. xv. 44; Mic. i. 14), of which there is no historical mention, but, from its place in the catalogue, it appears to have been in the middle part of the western border-land of the tribe, towards the Philistines. This is very possibly the Chezib (כִּיב) of Gen. xxxviii. 5.—J. K.

ACKERMANN, PETER FOURER, D.D., ordinary professor of Old Testament language, literature, and theology at Vienna, and choirmaster of the monastery or cathedral of Klosterneuburg, was born 17th Nov. 1771 at Vienna, and died 9th Sept. 1831. He was the author of *Introductio in Libb. sacc. V. T. usibus academicis accommodata*, Vien. 1825; *Archæologia biblica breviter exposita*, Vien. 1826; *Prophete Minores perpet. annot. illustrati*, Vien. 1830. The first two of these works are mere redactions of works under the same titles by Jahn, expurgated so as to rescue them from the Index Expurgatorius, into which they had been put by Pius VII. Mr. Horne pronounces his commentary on the minor prophets 'valuable' (*Introd.* ii. 2 p. 294), but this judgment can hardly be sustained. Any value it has is derived exclusively from the extracts it gives from Rosenmüller and the older writers of the Romish Church. The author himself has added nothing of any worth. The whole work is pervaded by a slavish deference to the authority of the Romish Church:—'puto,' says the author in his preface, 'me ne unquam

contra eum sensum exposuisse quem tenuit sancta mater ecclesia cujus judicio hoc opus per omnia lubens subijcio' (See Wiseman's *Recollections of the Four Last Popes*, p. 374, 5).—W. L. A.

ACRA (Ἄκρα), a Greek word signifying a *citadel*, in which sense אֲכֵרָה also occurs in the Syriac and Chaldaic. Hence the name of Acra was acquired by the eminence north of the Temple, on which a citadel was built by Antiochus Epiphanes, to command the holy place. It thus became in fact, the Acropolis of Jerusalem. Josephus describes this eminence as semicircular; and reports that when Simon Maccabæus had succeeded in expelling the Syrian garrison, he not only demolished the citadel, but caused the hill itself to be levelled, that no neighbouring site might henceforth be higher than or so high as that on which the temple stood. The people had suffered so much from the garrison, that they willingly laboured day and night, for three years, in this great work (*Antiq.* xiii. 6, 7; *Bell. Jud.* v. 4, 1). At a later period the palace of Helena, queen of Adiabene, stood on the site, which still retained the name of Acra, as did also, probably, the council-house, and the repository of the archives (*Bell. Jud.* vi. 6, 3; see also *Descript. Urbis Ierosolymæ*, per J. Heydenum, lib. iii. cap. 2).—J. K.

ACRABATTINE. 1. A district or toparchy of Judæa, extending between Shechem (now Nâbulus) and Jericho inclining east. It was about twelve miles in length; it is not mentioned in Scripture, but it occurs in Josephus (*Bell. Jud.* ii. 12, 4; iii. 3, 4, 5). It took its name from a town called Acrabi in the *Onomasticon*, s. v. Ἀκραβῆβει, where it is described as a large village, nine Roman miles east of Neapolis, on the road to Jericho. In this quarter Dr. Robinson (*Bib. Researches*, iii. 103) found a village still existing under the name of Akrabel.

2. Another district in that portion of Judæa, which lies towards the south end of the Dead Sea, occupied by the Edomites during the Captivity, and afterwards known as Idumæa. It is mentioned in 1 Macc. v. 3; *Jos. Antiq.* xii. 8, 1. It is assumed to have taken its name from the Maaleh Akrabbim (מַעְלֵה עַקְרָבִים), or *Steep of the Scorpions*, mentioned in Num. xxxiv. 4, and Josh. xv. 3, as the southern extremity of the tribe of Judah. [AKRABBIM.]—J. K.

ACRE. [ACCHO.]

ACTS OF THE APOSTLES. (Πράξεις τῶν Ἀποστόλων). This title has been borne by the fifth historical book of the N. T. from a very early period [(*Canon Muratori*, Clem. Alex. *Strom.* v. 12 p. 606, ed. Potter, Tertullian *Cont. Marc.* v. 2, *De Jejun* 10, *De bapt.* 10.)] Perhaps the earliest title was simply *πράξεις ἀποστόλων*, as the subject of the book is not the doings of the apostles as a body, but of only a few of the more eminent, especially Peter and Paul. Commencing with a reference to an account given in a former work of the sayings and doings of Jesus Christ before his ascension, its author proceeds to conduct us to an acquaintance with the circumstances attending that event, the conduct of the disciples on their return from witnessing it, the outpouring on them of the Holy Spirit according to Christ's promise to them before his crucifixion, and the amazing success which, as a consequence of this, attended the first

announcement by them of the doctrine concerning Jesus as the promised Messiah and the Saviour of the World. After following the fates of the mother-church at Jerusalem up to the period when the violent persecution of its members by the rulers of the Jews had broken up their society and scattered them, with the exception of the apostles, throughout the whole of the surrounding region; and after introducing to the notice of the reader the case of the remarkable conversion of one of the most zealous persecutors of the church, who afterwards became one of its most devoted and successful advocates, the narrative takes a wider scope and opens to our view the gradual expansion of the church by the free admission within its pale of persons directly converted from heathenism and who had not passed through the preliminary stage of Judaism. The first step towards this more liberal and cosmopolitan order of things having been effected by Peter, to whom the honour of laying the foundation of the Christian church, both within and without the confines of Judaism, seems, in accordance with our Lord's declaration concerning him (Matt. xvi. 18), to have been reserved, Paul, the recent convert and the destined apostle of the Gentiles, is brought forward as the main actor on the scene. On his course of missionary activity, his successes and his sufferings, the chief interest of the narrative is thenceforward concentrated, until, having followed him to Rome, whither he had been sent as a prisoner to abide his trial, on his own appeal, at the bar of the emperor himself, the book abruptly closes, leaving us to gather further information concerning him and the fortunes of the church from other sources.

Respecting the *authorship* of this book there can be no ground for doubt or hesitation. It is, unquestionably, the production of the same writer by whom the third of the four Gospels was composed, as is evident from the introductory sentences of both (comp. Luke i. 1-4, with Acts i. 1). That this writer was Luke may be very satisfactorily proved in both cases. With regard to the book now under notice, tradition is firm and constant in ascribing it to Luke (Irenæus, *Adv. Her.* lib. iii. c. 14, § 1; c. 15, § 1; Clem. Alex. *Strom.* v. 12, p. 696; Tertullian *Adv. Marcion.* v. 2; *De Jejun.* c. 10; Origen, apud Euseb. *Hist. Eccles.* vi. 23, etc. Eusebius himself ranks this book among the *ὁμολογούμενα*, *H. E.* iii. 25). From the book itself, also, it appears that the author accompanied Paul to Rome when he went to that city as a prisoner (xxviii.) Now, we know from two epistles written by Paul at that time, that *Luke* was with him at Rome (Col. iv. 14; Phil. 24), which favours the supposition that he was the writer of the narrative of the apostle's journey to that city. The only parties in primitive times by whom this book was rejected were certain heretics, such as the Ebionites, the Marcionites, the Severians, and the Manicheans, whose objections were entirely of a dogmatical, not of a historical nature; indeed, they can hardly be said to have questioned the authenticity of the book; they rather cast it aside because it did not favour their peculiar views. At the same time, whilst this book was acknowledged as genuine where it was known, it does not appear to have been at first so extensively circulated as the other historical books of the New Testament; for we find Chrysostom asserting that by many in his day it was not so much as known

(*Hom. i. in Act.* sub init), an assertion in which, however, there is perhaps some rhetorical exaggeration. The resemblance of style in this book to that of the third gospel, also favours the opinion that Luke was its author.

Attempts have been made to shew that the book is not the work of one writer throughout. But these have only had the effect of bringing out more clearly and fully the evidences of the opinion they are designed to overthrow. The linguistic peculiarities of the book, its pervading style, the references from one part to another, the unity of the leading ideas, and the connection of the whole, conspire to support the position that it is the production of one author (Gersdorf, *Beiträge zur Sprach-Charakteristik d. Schriftsteller d. N. T.*, p. 160; Credner, *Einl.* i. p. 132; Lekebusch, *Composition und Entstehung d. Apostelgesch.* p. 37; De Wette, *Einl.* § 115; Meyer, *Kr. Exeget. Comment. üb. d. N. T.* iii. 3; Davidson, *Introduction* ii. p. 4). Attempts have also been made to ascribe the authorship of the book, in whole or in part, to others than Luke, especially to Timothy (Schleiermacher, *Einleit. ins N. T.*; Bleek, *Stud. und Krit.* 1836, p. 1025; Ulrich *Ibid.* 1837, p. 367, 1840 p. 1003; De Wette, *Einl.* p. 114; Mayerhoff, *Einl. in d. Petrin. Schriften* p. 6), and to Silas (Schwanbeck, *Ueb. die Quellen d. Schriften d. Lukas*; Conder, *Literary History of the N. T.*); but the gratuitousness and utter untenability of these hypotheses have been fully exposed by several writers (Davidson, *Introduct.* p. 9 ff.; Schneckengerber *Ueb. d. Zweck d. Apostelgeschichte*; Zeller, in his *Jahrbuch* for 1849, Pt. 1.; Alford, *Greek Test.*, vol. ii.; Meyer, *Comment. üb. N. T.* vol. iii.; Lange *Apostol. Zeitalter* i. 1, p. 90).

Many critics are inclined to regard the Gospel by Luke and the Acts of the Apostles as having formed originally only one work, consisting of two parts. For this opinion, however, there does not appear to be any satisfactory authority; and it is hardly accordant with Luke's own description of the relation of these two writings to each other; being called by him, the one the former and the other the latter *tractate* (λόγος), a term which would not be appropriate had he intended to designate by it the first and second parts of the *same* treatise. It would be difficult, also, on this hypothesis to account for the two, invariably and from the earliest times, appearing with *distinct titles*.

That the author of the Acts was a companion of Paul in the travels which this book records, and that consequently he was a witness of most of the events he records, is a position which modern criticism has set itself earnestly to disprove, but without effect. It has been alleged that there are passages in the Acts which are contradicted by the Pauline epistles, that some of the accounts are unsatisfactory, that things are omitted which a companion of Paul would have detailed, that the early part of the book has an unhistoric character, and that it is full of what is un-Pauline (De Wette *Einl.*; Schwegler *Nach-apostolisch. Zeitalter*; Zeller, *Jahrbuch*, etc.) To this it may suffice here to reply, on the one hand, that we can never know so certainly what is Pauline and what un-Pauline, as to be able to say that any statement is so absolutely the latter, that it *could* not have proceeded from one who had been the companion of Paul; and on the other hand, that even were it made out that some things in the Acts are not

wholly in accordance with some things in Paul's epistles, and that from the latter source some things are to be supplied which the former omits, there is no proof in this that a companion of Paul did not write the Acts. Such cavilling objections are of no avail to set aside the constant tradition of the church as to the authorship of this book, especially as the use of the first person *quærit* by the writer falls in with this and the numerous undesigned coincidences between this book and Paul's epistles, so happily elucidated by Paley in his *Horæ Paulinæ*, confirm it.

The writer begins to narrate in the first person at ch. xvi. 11, where he is for the first time introduced into the narrative, and where he speaks of accompanying Paul to Philippi. He then disappears from the narrative until Paul's return to Philippi, more than two years afterwards, when it is stated that they left that place in company (xx. 6); from which it may be justly inferred that Luke spent the interval in that town. From this time to the close of the period embraced by his narrative he appears as the companion of the apostle. For the materials, therefore, of all he has recorded from ch. xvi. 11, to xxviii. 31, he may be regarded as having drawn upon his own recollection or on that of the apostle. To the latter source, also, may be confidently traced all he has recorded concerning the earlier events of the apostle's career; and as respects the circumstances recorded in the first twelve chapters of the Acts, and which relate chiefly to the church at Jerusalem and the labours of the apostle Peter, we may readily suppose that they were so much matter of general notoriety among the Christians with whom Luke associated, that he needed no assistance from any other merely human source in recording them. Some of the German critics have laboured hard to shew that he must have had recourse to written documents, in order to compose those parts of his history which record what did not pass under his own observation, and they have gone the length of supposing the existence of a work in the language of Palestine, under the title of *מְעוּבֵי דְרַבִּינָא* or *מְכֻרְוָנָא*, of which the Apocryphal books, *Ἰπτάξις Ἡέρου* and *Κήρυγμα Ἡέρου*, mentioned by Clement of Alexandria and Origen, were interpolated editions (Heinrichs, *Prolegg.* in *Acta App.* p. 21; Kuinoel, *Prolegg.* p. 14). All this, however, is mere ungrounded supposition (Heinrichs l. c. p. 21). Nor have the attempts which have been made to shew from the book itself that the author used written documents, proved very successful. We may admit, indeed, that the letters cited, xv. 23-29, and xviii. 26-30, which are *avowedly* copies of written documents, were given from such sources; but beyond this, we see no adequate evidence of the truth of the assertion. We cannot trace the alleged difference in point of style between the earlier and later portions of the book; and as for the speeches of Peter and Paul resembling, in style and sentiment, the writings of those apostles, this is only a matter of course if they are faithfully reported, *whatever* was the source of Luke's acquaintance with them. There is not the shadow of evidence that any written documents were extant from which Luke could have drawn his materials, and with regard to the alleged impossibility of his learning from traditionary report the minute particulars he has recorded (which is what these critics chiefly insist on), it is to be remembered that, in common with

all the sacred writers, he enjoyed the superintending and inspiring influence of the Divine Spirit, whose office it was to preserve him from all error and to guide him into all truth.

A more important inquiry respects the *design* of the evangelist in writing this book. A prevalent popular opinion on this head is, that Luke, having in his Gospel given a history of the life of Christ, intended to follow that up by giving in the Acts a narrative of the establishment and early progress of his religion in the world. That this, however, could not have been his design is obvious from the very partial and limited view which his narrative gives of the state of things in the church generally during the period through which it extends. As little can we regard this book as designed to record the official history of the apostles Peter and Paul, for we find many particulars concerning both these apostles mentioned incidentally elsewhere, of which Luke takes no notice (comp. 2 Cor. xi.; Gal. i. 17; ii. 11; 1 Pet. v. 13. See also Michaelis, *Introduction*, vol. iii. p. 328. Haenlein's *Einleitung*, th. iii. s. 150). Heinrichs, Kuinoel, and others are of opinion that no particular design should be ascribed to the evangelist in composing this book beyond that of furnishing his friend Theophilus with a pleasing and instructive narrative of such events as had come under his own personal notice, either immediately through the testimony of his senses or through the medium of the reports of others; but such a view savours too much of the lax opinions which these writers unhappily entertained regarding the sacred writers, to be adopted by those who regard all the sacred books as designed for the permanent instruction and benefit of the church universal. Much more deserving of notice is the opinion of Haenlein, with which that of Michaelis substantially accords, that 'the general design of the author of this book was, by means of his narratives, to set forth the co-operation of God in the diffusion of Christianity, and along with that, to prove, by remarkable facts, the dignity of the apostles and the perfectly equal right of the Gentiles with the Jews to a participation in the blessings of that religion' (*Einleitung*, th. iii. s. 156. Comp. Michaelis, *Introduction*, vol. iii. p. 330). Perhaps we should come still closer to the truth if we were to say that the design of Luke in writing the Acts was to supply, by select and suitable instances, an illustration of the power and working of that religion which Jesus had died to establish. In his gospel he had presented to his readers an exhibition of Christianity as embodied in the person, character, and works of its great founder; and having followed him in his narration until he was taken up out of the sight of his disciples into heaven, this second work was committed to shew how his religion operated when committed to the hands of those by whom it was to be announced 'to all nations, beginning at Jerusalem' (Luke xxiv. 47). In this point of view the recitals in this book present a theme that is practically interesting to Christians in all ages of the church and all places of the world; for they exhibit to us what influences guided the actions of those who laid the foundations of the church, and to whose authority all its members must defer—what courses they adopted for the extension of the church—what ordinances they appointed to be observed by those Christians who, under their auspices, associated together for mutual edification—and what diffi-

culties, privations, and trials were to be expected by those who should zealously exert themselves for the triumph of Christianity. We are thus taught not by dogmatical statement, but by instructive narrative, under what sanctions Christianity appears in our world, what blessings she offers to men, and by what means her influence is most extensively to be promoted and the blessings she offers to be most widely and most fully enjoyed.

Respecting the *time* when this book was composed it is impossible to speak with certainty. As the history is continued up to the close of the second year of Paul's imprisonment at Rome, it could not have been completed before A.D. 63; it was probably, however, finished very soon after, so that we shall not err far if we assign the interval between the year 63 and the year 65 as the period of its completion. Still greater uncertainty hangs over the *place* where Luke composed it, but as he accompanied Paul to Rome, perhaps it was at that city and under the auspices of the apostle that it was prepared.

The *style* of Luke in the Acts is, like his style in his Gospel, much purer than that of most other books of the New Testament. The Hebraisms which occasionally occur are almost exclusively to be found in the speeches of others which he has reported. These speeches are indeed, for the most part, to be regarded rather as summaries than as full reports of what the speaker uttered; but as these summaries are given in the speakers' own

words, the appearance of Hebraisms in them is as easily accounted for as if the addresses had been reported in full. His mode of narrating events is clear, dignified, and lively; and, as Michaelis observes, he 'has well supported the character of each person whom he has introduced as delivering a public harangue, and has very faithfully and happily preserved the manner of speaking which was peculiar to each of his orators' (*Introduction*, vol. iii. p. 332).

Whilst, as Lardner and others have very satisfactorily shewn (Lardner's *Credibility*, Works, vol. i.; Biscoe, *On the Acts*; Paley's *Horæ Paulinæ*; Benson's *History of the First Planting of Christianity*, vol. ii. etc.), the *credibility* of the events recorded by Luke is fully authenticated both by internal and external evidence, very great obscurity attaches to the *chronology* of these events. Of the many conflicting systems which have been published for the purpose of settling the questions that have arisen on this head, it is impossible within such limits as those to which this article is necessarily confined, to give any minute account. As little do we feel ourselves at liberty to attempt an original investigation of the subject, even did such promise to be productive of any very satisfactory result. The only course that appears open to us is to present, in a tabular form, the dates affixed to the leading events by those writers whose authority is most deserving of consideration in such an inquiry.

	Usher. ¹	Pearson. ²	Michaelis. ³	Hug. ⁴	Haenlein. ⁵	Greswell. ⁶	Anger. ⁷
The Ascension of Christ	33	33	33	31	33	30	31
Stoning of Stephen	34	34	—	—	36	37	37
Conversion of Paul	35	35	37?	35	36-38	37	38
Paul's first journey to Jerusalem (Acts ix. 26)	38	38	—	38	39	41	41
James's Martyrdom, etc.	44	44	44	44	44	43	43
Paul's second journey to Jerusalem (Acts xi. 30)	44	44	44	44	44	43	44
Paul's first missionary tour	45-46	44-47	—	44	—	44	44
Paul's third journey to Jerusalem (Acts xv.) .	53	49	—	52	49?	48	48
Paul arrives at Corinth	54	52	54?	53	54	50	52
Paul's fourth journey to Jerusalem (Acts xviii. 22)	56	54	—	55	54	52	54
Paul's abode at Ephesus	56-59	54-57	—	56-58	—	53-55	55-59
Paul's fifth journey to Jerusalem (Acts xxi. 17)	59	58	60	59	60	56	58
Paul arrives in Rome	63	62	63	62	63	59	61

The majority of these dates can only be regarded as approximations to the truth, and the diversity which the above table presents shews the uncertainty of the whole matter. The results at which Mr. Greswell and Dr. Anger have arrived are, in many cases, identical, and upon the whole the earlier date which they assign to the ascension of Christ seems worthy of adoption. We cannot help thinking, however, that the interval assigned by these writers to the events which transpired between the ascension of Christ and the stoning of Stephen is much too great. The date which they assign to Paul's first visit to Jerusalem is also plainly too late, for Paul himself tells us that his flight from Damascus occurred whilst that town was under the authority of Aretas, whose tenure of it cannot be extended beyond the year 38 of the common era

(2 Cor. xi. 32. See also Neander's remarks on these in *Geschichte der Pflanzung und Leitung der Christlichen Kirche*, Bd. i. s. 80). Perhaps the following is the true order of the events of the apostle's early career as a Christian. In Gal. ii. 1, he speaks himself of going up to Jerusalem fourteen

years, or about fourteen years, after his conversion (for so we understand his words). Now this visit could not have been that recorded in Acts xv., because we cannot conceive that *after* the events detailed in that chapter Peter would have acted as Paul describes in Gal. ii. 11. We conclude, therefore, that the visit here referred to was one earlier than that mentioned in Acts xv. It must, therefore, have been that mentioned in Acts xi. 30. Now, this being at the time of the famine, its date is pretty well fixed to the year 45, or thereabouts. Subtract 14 from this, then, and we get 31 as the date of Paul's conversion, and adding to this the three years that elapsed between his conversion and his first visit to Jerusalem (Gal. i. 18), we get the year 34 as the date of this latter event. If this arrangement be not adopted, the visit to Jerusalem mentioned in Gal. ii. 1, must, for the reason just mentioned, be intercalated between the commencement of Paul's first missionary tour and his visit to Jerusalem at the time of the holding of the so-called council; so that the number of Paul's visits to that city would be *six*, instead of *five*. Schrader adopts somewhat of a similar view, only he places this additional visit between the fourth and fifth of those mentioned in the Acts (*Der Apostel Paulus*, 4 Th. Leipz. 1830-1838).

ACTS, SPURIOUS. [APOCRYPHA.] This term has been applied to several ancient writings, pretended to have been composed by, or to supply historical facts respecting our Blessed Saviour and his disciples, or other individuals whose actions are recorded in the holy Scriptures. Of these spurious or pseudographical writings several are still extant; others are only known to have existed by the accounts of them which are to be met with in ancient authors.

ACTS OF CHRIST, SPURIOUS. Several sayings attributed to our Lord, and alleged to be handed down by tradition, may be included under this head, as they are supposed by some learned men to have been derived from histories which are no longer in existence. As explanatory of our meaning it will suffice to refer to the beautiful sentiment cited by St. Paul (Acts xx. 35), *Μακάριόν ἐστι μᾶλλον δοῦναι ἢ λαμβάνειν*, to which the term apocryphal has been sometimes applied, inasmuch as it is not contained in any of the written biographies

of our Lord. This term is so applied by M. Gausson of Geneva, in his *Theopneustia* (English translation, Bagster, 1842). The learned Heinsius is of opinion that the passage is taken from some lost apocryphal book, such as that entitled, in the *Recognitions of Clement*, 'the Book of the Sayings of Christ,' or the pretended *Constitutions of the Apostles*. Others, however, conceive that the apostle, in Acts xx. 35, does not refer to any one saying of our Saviour's in particular, but that he deduced Christ's sentiments on this head from several of his sayings and parables (see Matt. xix. 21; xxv.; and Luke xvi. 9). But the probability is that St. Paul received this passage by tradition from the other apostles.

There is also a saying ascribed to Christ to be found in the *Epistle of Barnabas*, a work at least of the second century: 'Let us resist all iniquity, and hate it;' and again, 'So they who would see me, and lay hold on my kingdom, must receive me through much suffering and tribulation;' but it is not improbable that these passages contain merely an illusion to some of our Lord's discourses.

Clemens Romanus, the third bishop of Rome after St. Peter (or the writer who passes under the name of Clement), in his *Second Epistle to the Corinthians*, ascribes the following saying to Christ:—'Though ye should be united to me in my bosom, and yet do not keep my commandments, I will reject you, and say, Depart from me, I know not whence ye are, ye workers of iniquity.' This passage seems evidently to be taken from St. Luke's gospel, xiii. 25, 26, 27.

There are many similar passages, which several eminent writers, such as Grabe, Mill, and Fabricius, have considered as derived from apocryphal gospels, but which seem with greater probability to be nothing more than loose quotations from the Scriptures, which were very common among the apostolical Fathers.

There is a saying of Christ's, cited by Clement in the same epistle, which is found in the apocryphal gospel of the Egyptians:—'The Lord, being asked when his kingdom should come, replied, *When two shall be one, and that which is without as that which is within, and the male with the female neither male nor female.*' [GOSPELS, APOCRYPHAL.]

We may here mention that the genuineness of the Second Epistle of Clement is itself disputed, and is rejected by Eusebius, Jerome, and others; at least Eusebius says of it, 'We know not that this is as highly approved of as the former, or that it has been in use with the ancients' (*Hist. Eccles.* iii. 38, Cruse's translation, 1842).

Eusebius, in the last chapter of the same book, states that Papias, a companion of the apostles, 'gives another history of a woman who had been accused of many sins before the Lord, which is also contained in the Gospel according to the Nazarenes.' As this latter work is lost, it is doubtful to what woman the history refers. Some suppose it alludes to the history of the woman taken in adultery; others, to the woman of Samaria. There are two discourses ascribed to Christ by Papias, preserved in Irenæus (*Adversus Hæres.* v. 33), relating to the doctrine of the Millennium, of which Papias appears to have been the first propagator. Dr. Grabe has defended the truth of these traditions, but the discourses themselves are unworthy of our blessed Lord.

There is a saying ascribed to Christ by Justin Martyr, in his *Dialogue with Trypho*, which has been supposed by Dr. Cave to have been taken from the *Gospel of the Nazarenes*. Mr. Jones conceives it to have been an allusion to a passage in the prophet Ezekiel. The same Father furnishes us with an apocryphal history of Christ's baptism, in which it is asserted that 'a fire was kindled in Jordan.' He also acquaints us that Christ worked, when he was on earth, at the trade of a carpenter, making ploughs and yokes for oxen.

There are some apocryphal sayings of Christ preserved by Ireneus, but his most remarkable observation is that Christ 'lived and taught beyond his fortieth or even fiftieth year.' This he finds partly on absurd inferences drawn from the character of his mission, partly on John viii. 57, and also on what he alleges to have been John's own testimony, delivered to the presbyters of Asia. It is scarcely necessary to refute this absurd idea, which is in contradiction with all the statements in the genuine gospels. There is also an absurd saying attributed to Christ by Athenagoras, *Legat. pro Christianis*, cap. 28.

There are various sayings ascribed to our Lord by Clemens Alexandrinus and several of the Fathers. One of the most remarkable is, 'Be ye skilful money-changers.' This is supposed to have been contained in the *Gospel of the Nazarenes*. Others think it to have been an early interpolation into the text of Scripture. Origen and Jerome cite it as a saying of Christ's.

In Origen, *Contra Celsum*, lib. i. is an apocryphal history of our Saviour and his parents, in which it is reproached to Christ that he was born in a mean village, of a poor woman who gained her livelihood by spinning, and was turned off by her husband, a carpenter. Celsus adds that Jesus was obliged by poverty to work as a servant in Egypt, where he learned many powerful arts, and thought that on this account he ought to be esteemed as a god. There was a similar account contained in some apocryphal books extant in the time of St. Augustine. It was probably a Jewish forgery. Augustine, Epiphanius, and others of the Fathers equally cite sayings and acts of Christ, which they probably met with in the early apocryphal gospels.

There is a spurious hymn of Christ's extant, ascribed to the Priscillianists by St. Augustine. There are also many such acts and sayings to be found in the *Koran* of Mahomet, and others in the writings of the Mohammedan doctors (see Toland's *Nazarenes*).

There is a prayer ascribed to our Saviour by the same persons, which is printed in Latin and Arabic in the learned Selden's *Commentary on Eutychius's Annals of Alexandria*, published at Oxford, in 1650, by Dr. Pococke. It contains a petition for pardon of sin, which is sufficient to stamp it as a forgery.

We must not omit to mention here the two curious acts of Christ recorded, the one by Eusebius, and the other by Evagrius. The first of these included a letter said to have been written to our Saviour by Agbarus (or Abarus), king of Edessa, requesting him to come and heal a disease under which he laboured. The letter, together with the supposed reply of Christ, are preserved by Eusebius. This learned historian asserts that he obtained the documents, together with the history, from the public registers of the city of Edessa, where they

existed in his time in the Syriac language, from which he translated them into Greek.

These letters are also mentioned by Ephraem Syrus, deacon of Edessa, at the close of the fourth century. Jerome refers to them in his comment on Matt. x., and they are mentioned by Pope Gelasius, who rejects them as spurious and apocryphal. They are, however, referred to as genuine by Evagrius and later historians. Among modern writers the genuineness of these letters has been maintained by Dr. Parker, in the preface to his *Demonstration of the Law of Nature, and the Christian Religion*, part ii. § 16, p. 235; by Dr. Cave, in his *Historia Literaria*, vol. i. p. 23; and by Grabe, in his *Spicilegium Patrum*, particularly p. 319. On the other hand, most writers, including the great majority of Roman Catholic divines, reject them as spurious. Mr. Jones, in his valuable work on the *Canonical Authority of the New Testament*, although he does not venture to deny that the Acts were contained in the public registers of the city of Edessa, yet gives it, as a probable conjecture, in favour of which he adduces some strong reasons, drawn from internal evidence, that this whole chapter (viz. the 13th of the first book) in the *Ecclesiastical History* of Eusebius is itself an interpolation. [EPISTLES, SPURIOUS.]

The other apocryphal history related by Evagrius, out of Procopius, states that Agbarus sent a limner to draw the picture of our Saviour, but that not being able to do it by reason of the brightness of Christ's countenance, our 'Saviour took a cloth, and laying it upon his divine and life-giving face, he impressed his likeness on it.' This story of Christ's picture is related by several, in the Second Council of Nice, and by other ancient writers, one of whom (Leo) asserts that he went to Edessa, and saw 'the image of Christ, not made with hands, worshipped by the people.' This is the first of the four likenesses of Christ mentioned by ancient writers. The second is that said to have been stamped on a handkerchief by Christ, and given to Veronica, who had followed him to his crucifixion. The third is the statue of Christ, stated by Eusebius to have been erected by the woman whom he had cured of an issue of blood, and which the learned historian acquaints us he saw at Cæsarea Philippi (Eusebius, *Hist. Eccles.* vii. 18). Sozomen and Cassiodorus assert that the emperor Julian took down this statue and erected his own in its place. It is, however, stated by Asterius, a writer of the fourth century, that it was taken away by Maximinus, the predecessor of Constantine. The fourth picture is one which Nicodemus presented to Gamaliel, which was preserved at Berytus, and which having been crucified and pierced with a spear by the Jews, there issued out from the side blood and water. This is stated in a spurious treatise concerning the passion and image of Christ, falsely ascribed to Athanasius. Eusebius the historian asserts (*loc. cit.*) that he had here seen the pictures of Peter, Paul, and of Christ himself, in his time (See also Sozomen, *Hist. Eccles.* v. 21).

ACTS OF THE APOSTLES, SPURIOUS.

Of these several are extant, others are lost, or only fragments of them are come down to us.

Of the following we know little more than that they once existed. They are here arranged chronologically:—*The Preaching of Peter*, referred to by Origen in his *Commentary on St. John's Gospel*, lib. xiv., also referred to by Clemens Alexandrinus;

The Acts of Peter, supposed by Dr. Cave to be cited by Serapion; *The Acts of Paul and Thecla*, mentioned by Tertullian, *Lib. de Baptismo*, cap. xvii.—this is, however, supposed by some to be the same which is found in a Greek MS. in the Bodleian Library, and has been published by Dr. Grabe, in his *Spicil. Patrum Secul. I.*; *The Doctrine of Peter*, cited by Origen, 'Proem.' in *Lib. de Princip.*; *The Acts of Paul*, ib. *de Princip.* i. 2; *The Preaching of Paul*, referred to by St. Cyprian, *Tract. de non iterando Baptismo*; *The Preaching of Paul and Peter at Rome*, cited by Lactantius, *De vera Sap.* iv. 21; *The Acts of Peter*, thrice mentioned by Eusebius, *Hist. Eccles.* iii. 3—'as to that work, however, which is ascribed to him, called "The Acts" and the "Gospel according to Peter," we know nothing of their being handed down as Catholic writings, since neither among the ancient nor the ecclesiastical writers of our own day has there been one that has appealed to testimony taken from them;' *The Acts of Paul*, ib.; *The Revelation of Peter*, ib.; *The Acts of Andrew and John*, ib. cap. 25. 'Thus,' he says, 'we have it in our power to know . . . those books that are adduced by the heretics, under the name of the apostles, such, viz., as compose the gospels of Peter, Thomas, and Matthew. . . and such as contain the Acts of the Apostles by Andrew and John, and others of which no one of those writers in the ecclesiastical succession has condescended to make any mention in his works; and, indeed, the character of the style itself is very different from that of the apostles, and the sentiments and the purport of those things that are advanced in them, deviating as far as possible from sound orthodoxy, evidently proves they are the fictions of heretical men; whence they are to be ranked not only among the spurious writings, but are to be rejected as altogether absurd and impious.'—*The Acts of Peter, John, and Thomas*, Athanasius, *Synops.* § 76; *The Writings of Bartholomew the Apostle*, mentioned by the pseudo-Dionysius; *The Acts, Preaching, and Revelation of Peter*, cited by Jerome, in his *Catal. Script. Eccles.*; *The Acts of the Apostles by Seleucus*, ib. *Epist. ad Chrom.*, etc.; *The Acts of Paul and Thecla*, ib. *Catalog. Script. Eccles.*; *The Acts of the Apostles, used by the Ebionites*, cited by Epiphanius, *Adversus Hæres.* § 16; *The Acts of Leucius, Lentius, or Lenticus*, called the Acts of the Apostles, Augustin. *Lib. de Fid.* c. 38; *The Acts of the Apostles, used by the Manichees*; *The Revelations of Thomas, Paul, Stephen*, etc., Gelasius, *de Lib. Apoc. apud Gratian. Distinct.* 15, c. 3.

To these may be added the *genuine Acts of Pilate*, appealed to by Tertullian and Justin Martyr, in their *Apologies*, as being then extant. Tertullian describes them as 'the records which were transmitted from Jerusalem to Tiberius concerning Christ.' He refers to the same for the proof of our Saviour's miracles.

The following is a catalogue of the principal spurious Acts still extant:—*The Creed of the Apostles*; *The Epistles of Barnabas, Clement, Ignatius, and Polycarp*; *The Recognitions of Clement*, or the *Travels of Peter*; *The Shepherd of Hermas*; *The Acts of Pilate* (spurious), or the *Gospel of Nicodemus*; *The Acts of Paul*, or the *Martyrdom of Thecla*; *Abdias's History of the Twelve Apostles*; *The Constitutions of the Apostles*; *The Canons of the Apostles*; *The Liturgies of the Apostles*; *St. Paul's Epistle to the Laodiceans*; *St. Paul's Letters*

to *Seneca*. Together with some others, for which see Cotelerius's *Ecclesiaz Græca Monumenta*, Paris, 1677-92; Fabricius, *Codex Apocryphus*, N. T.; Du Pin, *History of the Canon of the New Testament*, London, 1699; Grabe's *Spicilegium Patrum*, Oxford, 1714; Lardner's *Credibility*, etc.; Jones's *New and Just Method of Settling the Canonica Authority of the New Testament*; Birch's *Auctarium*, Hafniae, 1804; Thilo's *Acta St. Thomæ*, Lips. 1823, and *Codex Apocryphus*, N. T., Lips. 1832; Tischendorf, *Acta App. Apocrypha*, Lips. 1857.—W. W.

ADAD is the name of the chief deity of the Syrians, the *sun*, according to Macrobius, whose words are (*Saturnal*, i. 23): 'Accipe quid Assyrii de Solis potentia opinentur; deo enim, quem summum maximumque venerant, Adad nomen dedunt. Ejus nominis interpretatio significat unus. . . . Simulacrum, Adad insigne cernitur radiis inclinat, quibus monstratur vim cœli in radiis esse Solis, qui demittuntur in terram.' Moreover, Pliny (*Hist. Nat.* xxxvii. 11, 71), speaking of remarkable stones named after parts of the body, mentions some called 'Adadunepros, ejusdem oculus ac digitus dei;' and adds, 'et hic colitur a Syris.' He is also called 'Ἀδάδος βασιλεὺς θεῶν' by Philo Byblius (in Eusebii *Præpar. Evan.* i. 10), where the occurrence of the long *o* for *a* is to be ascribed to the characteristic pronunciation of the Western Aramæan dialect. The passage of Hesychius which Harduin adduces in his note to Pliny, concerning the worship of this god by the Phrygians, only contains the name 'Ἀδάδος' by an emendation of Salmasius, which Jablonski declares to be inadmissible (*De Ling. Lycaonica*, p. 64).

This Syrian deity claims some notice here, because his name is most probably an element in the names of the Syrian kings Benhadad and Hadadezer. Moreover, several of the older commentators have endeavoured to find this deity in Isaiah lxvi. 17; either by altering the text there to suit the name given by Macrobius; or by adapting the name he gives to his interpretation and to the reading of the Hebrew, so as to make that extract bear testimony to a god *Achad*. Michaelis has argued at some length against both these views: and the modern commentators, such as Gesenius, Hitzig, Böttcher (in *Proben Alttest. Schrifterklär.*), and Ewald, do not admit the name of any deity in that passage.—J. N.

ADAD-RIMMON, properly HADAD-RIMMOM (הַרְרִימוֹן; Sept. ἰσῶν, a garden of pomegranates), a city in the valley of Jezreel, where was fought the famous battle between King Josiah and Pharaoh-Necho (2 Kings xxiii. 29; Zech. xii. 11). Adad-rimmon was afterwards called Maximianopolis, in honour of the emperor Maximian (Jerome, *Comment. in Zach.* xii.) It was seventeen Roman miles from Cæsarea, and ten miles from Jezreel (*Itin. Hieros.*)—J. K.

ADAH (אָדָה, adornment, comeliness; Sept. 'Adâ): 1. One of the wives of Lamech (Gen. iv. 19). 2. One of the wives of Esau, daughter of Elon the Hittite (Gen. xxxvi. 2). She is called Bashemath in Gen. xxvi. 34.

ADAM (אָדָם), the word by which the Bible designates the first human being. This word occurs for the first time, Gen. i. 26. 'Let us

make man [Adam] in our image;’ (i. 27), ‘And God created the man [the Adam] in his own image.’ The next instance (ii. 7) expresses the source of derivation, a character or property, namely, the material of which the human body was formed: ‘And the Lord God [Jehovah Elohim] formed the man [the Adam] dust from the ground [the adamah].’ The meaning of the primary word is, most probably, any kind of *reddish tint*, as a beautiful human complexion (Lam. iv. 7); but its various derivatives are applied to different objects of a red or brown hue, or approaching to such. The word *Adam*, therefore, is an appellative noun made into a proper one. It is further remarkable that, in all the other instances in the second and third chapters of Genesis, which are nineteen, it is put with the article, *the man*, or *the Adam*. It is also to be observed that, though it occurs very frequently in the Old Testament, and though there is no grammatical difficulty in the way of its being declined by the dual and plural terminations and the pro-nominal suffixes (as its derivative דָּם, *dam*, blood, is), yet it never undergoes those changes; it is used abundantly to denote *man* in the general and collective sense—*mankind*, *the human race*, but it is never found in the plural number. When the sacred writers design to express *men* distributively, they use either the compound term, *sons of men* (אֲדָמָה בְּנֵי אָדָם, *benei adam*), or the plural of אָדָם אֲנָשִׁים, or אֲנָשִׁים *ish*.

That men and other animals have existed from eternity, by each individual being born of parents and dying at the close of his period, that is, by an infinite succession of finite beings, has been asserted by some: whether they really believed their own assertion may well be doubted. Others have maintained that the first man and his female mate, or a number of such, came into existence by some spontaneous action of the earth or the elements, a chance-combination of matter and properties, without an intellectual designing cause. We hold these notions to be unworthy of a serious refutation. An upright mind, upon a little serious reflection, must perceive their absurdity, self-contradiction, and impossibility. To those who may desire to see ample demonstration of what we here assert, we recommend Dr. Samuel Clarke *On the Being and Attributes of God*; Mr. Samuel Drew’s *Essays*; or an admirable work not known in a manner corresponding to its worth, *Discourses on Atheism*, by the Rev. Thomas Allin, 1828.

It is among the clearest deductions of reason, that men and all dependent beings have been *created*, that is, produced or brought into their first existence by an intelligent and adequately powerful being. A question, however, arises, of great interest and importance. Did the Almighty Creator produce only one man and one woman, from whom all other human beings have descended?—or did he create several parental pairs, from whom distinct stocks of men have been derived. The affirmative of the latter position has been maintained by some, and, it must be confessed, not without apparent reason. The manifest and great differences in complexion and figure, which distinguish several races of mankind, are supposed to be such as entirely to forbid the conclusion that they have all descended from one father and one mother. The question is usually regarded as equivalent to this: whether there is only one species of men, or there are several. But we cannot, in strict

fairness, admit that the questions are identical. It is hypothetically *conceivable* that the Adorable God might give existence to any number of creatures, which should all possess the properties which characterize identity of species, even without such differences as constitute varieties, or with any degree of those differences. A learned German divine, Dr. de Schrank, thinks it right to maintain that, of all organized beings besides man, the Creator gave existence to innumerable individuals, of course in their proper pairs (*Comm. in Gen.* p. 69, Sulzbach, 1835). His reason probably is, that otherwise there would not be a provision of food; but whether the conjecture be admitted or not, it is plain that it involves no contradiction, and that therefore distinct races of men might have been created, differing within certain limits, yet all possessing that which physiologists lay down as the only proper and constant character, the perpetuity of propagation.

But the admission of the possibility is not a concession of the reality. So great is the evidence in favour of the derivation of the entire mass of human beings from one pair of ancestors, that it has obtained the suffrage of the men most competent to judge upon a question of comparative anatomy and physiology. The late illustrious Cuvier and Blumenbach, and our countryman Mr. Lawrence, are examples of the highest order. But no writer has a claim to deference upon this subject superior to that of the late Dr. J. C. Prichard. He has devoted a large work to this subject and others allied to it—*Researches into the Physical History of Mankind*, 3d Edition, 1841-1847, and one more at least to come, 1836-1841; also another work, just completed, *The Natural History of Man*, of which a third edition appeared in 1848. In the Introductory Observations contained in the latter work, we find a passage which we cite as an example of that noble impartiality and disregard of even sacred prepossessions with which the author has pursued his laborious investigation: ‘I shall not pretend that in my own mind I regard the question now to be discussed as one of which the decision is indifferent either to religion or to humanity. But the strict rule of scientific scrutiny exacts, according to modern philosophers, in matters of inductive reasoning, an exclusive homage. It requires that we should close our eyes against all presumptive and extrinsic evidence, and abstract our minds from all considerations not derived from the matters of fact which bear immediately on the question. The maxim we have to follow in such controversies is, *fiat justitia, ruat cælum*. In fact, what is actually true, it is always most desirable to know, whatever consequences may arise from its admission.’

The animals which render eminent services to man, and peculiarly depend upon his protection, are widely diffused—the horse, the dog, the hog, the domestic fowl. Now of these the varieties in each species are numerous and different, to a degree so great, that an observer ignorant of physiological history would scarcely believe them to be of the same species. But man is the most widely diffused of any animal. In the progress of ages and generations, he has naturalized himself to every climate, and to modes of life which would prove fatal to an individual man suddenly transferred from a remote point of the field. The alterations produced affect every part of the body, internal and external, with-

out extinguishing the marks of the specific identity. A further and striking evidence is, that when persons of different varieties are conjugally united, the offspring, especially in two or three generations, becomes more prolific, and acquires a higher perfection in physical and mental qualities than was found in either of the parental races. From the deepest African black to the finest Caucasian white, the change runs through imperceptible gradations; and, if a middle hue be assumed, suppose some tint of brown, all the varieties of complexion may be explained upon the principle of divergence influenced by outward circumstances. The conclusion may be fairly drawn, in the words of the able translators and illustrators of Baron Cuvier's great work:—'We are fully warranted in concluding, both from the comparison of man with inferior animals, so far as the inferiority will allow of such comparison, and, beyond that, by comparing him with himself, that the great family of mankind loudly proclaim a descent, at some period or other, from one common origin.' (*Animal Kingdom*, with the Supplements of Mr. E. Griffith, Col. Hamilton Smith, and Mr. Pidgeon, vol. i. p. 179.)

Thus, by an investigation totally independent of historical authority, we are brought to the conclusion of the inspired writings, that the Creator 'hath made of one blood all nations of men, for to dwell on all the face of the earth.' (Acts xvii. 26.)

We shall now follow the course of those sacred documents in tracing the history of the first man, persuaded that their right interpretation is a sure basis of truth. At the same time we shall not reject illustrations from natural history and the reason of particular facts.

It is evident upon a little reflection, and the closest investigation confirms the conclusion, that the first human pair must have been created in a state equivalent to that which all subsequent human beings have had to reach by slow degrees, in growth, experience, observation, imitation, and the instruction of others: that is, a state of prime maturity, and with an infusion, concretion, or whatever we may call it, of knowledge and habits, both physical and intellectual, suitable to the place which man had to occupy in the system of creation, and adequate to his necessities in that place. Had it been otherwise, the new beings could not have preserved their animal existence, nor have held rational converse with each other, nor have paid to their Creator the homage of knowledge and love, adoration and obedience; and reason clearly tells us that the last was the noblest end of existence. Those whom unhappy prejudices lead to reject revelation must either admit this, or must resort to suppositions of palpable absurdity and impossibility. If they will not admit a direct action of Divine power in creation and adaptation to the designed mode of existence, they must admit something far beyond the miraculous, an infinite succession of finite beings, or a spontaneous production of order, organization, and systematic action, from some unintelligent origin. The Bible coincides with this dictate of honest reason, expressing these facts in simple and artless language, suited to the circumstances of the men to whom revelation was first granted. That this production in a mature state was the fact with regard to the vegetable part of the creation, is declared in Gen. ii. 4, 5: 'In the day of Jehovah God's making the earth and the heavens, and every shrub of

the field before it should be in the earth, and every herb of the field before it should bud.' The reader sees that we have translated the verbs (which stand in the Hebrew future form) by our potential mood, as the nearest in correspondence with the idiom called by Dr. Nordheimer the 'Dependent Use of the Future' (*Critical Grammar of the Heb. Lang.*, vol. ii., p. 186; New York, 1841). The two terms, shrubs and herbage, are put, by the common synecdoche, to designate the whole vegetable kingdom. The reason of the case comprehends the other division of organized nature; and this is applied to man and all other animals, in the words, 'Out of the ground—dust out of the ground—Jehovah God formed them.'

It is to be observed that there are two narratives at the beginning of the Mosaic records, different in style and manner, distinct and independent; at first sight somewhat discrepant, but when strictly examined, perfectly compatible, and each one illustrating and completing the other. The first is contained in Gen. i. 1, to ii. 3; and the other, ii. 4, to iv. 26. As is the case with the Scripture history generally, they consist of a few principal facts, detached anecdotes, leaving much of necessary implication which the good sense of the reader is called upon to supply; and passing over large spaces of the history of life, upon which all conjecture would be fruitless.

In the second of these narratives we read, 'And Jehovah God formed the man [*Heb.* the Adam], dust from the ground [*Heb.* האדמה, *hadamah*], and blew into his nostrils the breath of life; and the man became a living animal' (Gen. ii. 7). Here are two objects of attention, the organic mechanism of the human body, and the vitality with which it was endowed.

The mechanical material, formed (moulded, or arranged, as an artificer models clay or wax) into the human and all other animal bodies, is called 'dust from the ground.' This would be a natural and easy expression to men in the early ages, before chemistry was known or minute philosophical distinctions were thought of, to convey, in a general form, the idea of *earthy matter*, the constituent substance of the ground on which we tread. To say, that of this the human and every other animal body was formed, is a position which would be at once the most easily apprehensible to an uncultivated mind, and which yet is the most exactly true upon the highest philosophical grounds. We now know, from chemical analysis, that the animal body is composed, in the inscrutable manner called *organization*, of carbon, hydrogen, oxygen, nitrogen, lime, iron, sulphur, and phosphorus. Now all these are mineral substances, which in their various combinations form a very large part of the solid ground.

Some of our readers may be surprised at our having translated *נפש חיה* *nephesh chayya* by *living animal*. There are good interpreters and preachers who, confiding in the common translation, *living soul*, have maintained that here is intimated the distinctive pre-eminence of man above the inferior animals, as possessed of an immaterial and immortal spirit. But, however true that doctrine is, and supported by abundant argument from both philosophy and the Scriptures, we should be acting unfaithfully if we were to affirm its being contained or implied in this passage. The two words are frequently conjoined in the Hebrew, and the mean-

ing of the compound phrase will be apparent to the English reader, when he knows that our version renders it, in Gen. i. 20, 'creature that hath life;' in verse 24, 'living creature,' and so in ch. ii. 19; ix. 12, 15, 16; and in ch. i. 30, 'wherein there is life.'

This expression therefore sets before us the ORGANIC LIFE of the animal frame, that mysterious something which man cannot create nor restore, which baffles the most acute philosophers to search out its nature, and which reason combines with Scripture to refer to the immediate agency of the Almighty—'in him we live, and move, and have our being.'

The other narrative is contained in these words, 'God created man in his own image: in the image of God created he him; male and female created he them' (Gen. i. 27). *The image* (לצלם *tselem*, resemblance, such as a shadow bears to the object which casts it) of God is an expression which breathes at once archaic simplicity and the most recondite wisdom: for what term could the most cultivated and copious language bring forth more suitable to the purpose? It presents to us man as made in a resemblance to the author of his being, a true resemblance, but faint and shadowy; an outline, faithful according to its capacity, yet infinitely remote from the reality: a distant form of the *intelligence, wisdom, power, rectitude, goodness, and dominion* of the Adorable Supreme. To the inferior sentient beings with which he is connected man stands in the place of God. We have every reason to think that none of them are capable of conceiving a being higher than man. All, in their different ways, look up to him as their superior; the ferocious generally flee before him, afraid to encounter his power, and the gentle court his protection and shew their highest joy to consist in serving and pleasing him. Even in our degenerate state it is manifest that if we treat the domesticated animals with wisdom and kindness, their attachment is most ardent and faithful.

Thus had man the shadow of the divine *dominion* and *authority* over the inferior creation. The attribute of *power* was also given to him, in his being made able to convert the inanimate objects and those possessing only the vegetable life, into the instruments and the materials for supplying his wants, and continually enlarging his sphere of command.

In such a state of things *knowledge* and *wisdom* are implied: the one quality, an acquaintance with those substances and their changeful actions which were necessary for a creature like man to understand, in order to his safety and comfort; the other, such sagacity as would direct him in selecting the best objects of desire and pursuit, and the right means for attaining them.

Above all, *moral excellence* must have been comprised in this 'image of God;' and not only forming a part of it, but being its crown of beauty and glory. The Christian inspiration, than which no more perfect disclosure of God is to take place on this side eternity, casts its light upon this subject: for the apostle Paul, in urging the obligations of Christians to perfect holiness, evidently alludes to the endowments of the first man in two parallel and mutually illustrative epistles; '—the new man, renewed in knowledge after the image of HIM that created him; the new man which,

after [κατά, according to] GOD, is created in righteousness and true holiness' (Col. iii. 10; Eph. iv. 24).

In this perfection of faculties, and with these high prerogatives of moral existence, did human nature, in its first subject, rise up from the creating hand. The whole Scripture-narrative implies that this STATE of existence was one of correspondent *activity* and *enjoyment*. It plainly represents the DEITY himself as condescending to assume a *human form* and to employ *human speech*, in order to instruct and exercise the happy creatures whom (to borrow the just and beautiful language of the Apocryphal 'Wisdom') 'God created for incorruptibility, and made him an image of his own nature.'^{*} The only plausible objection to this is, that the condescension is too great, an objection which can be no other than a presumptuous limiting of the Divine goodness. It was the voice of reason which burst through the trammels of an infidel philosophy, when the celebrated German, Fichte, wrote, 'Who, then, educated the first human pair? A spirit bestowed its care upon them, as is laid down in an ancient and venerable original record, which, taken altogether, contains the profoundest and the loftiest wisdom, and presents those results to which all philosophy must at last return' (cited in the German Bible of Brentano, Dereser, and Scholz, vol. i., p. 16, Frankfort, 1820-1833).

The noble and sublime idea that man thus had his Maker for his teacher and guide, precludes a thousand difficulties. It shews us the simple, direct, and effectual method by which the newly formed creature would have communicated to him all the intellectual knowledge, and all the practical arts and manipulations, which were useful and beneficial for him. The universal management of the 'garden in Eden eastward' (Gen. ii. 8), the treatment of the soil, the use of water, the various training of the plants and trees, the operations for insuring future produce, the necessary implements and the way of using them;—all these must have been included in the words 'to dress it and to keep it' (ver. 15). To have gained these attainments and habits without any instruction previous or concomitant, would have required the experience of men in society and co-operation for many years, with innumerable anxious experiments, and often the keenest disappointment. If we suppose that the first man and woman continued in their primitive state but even a few weeks, they must have required some tools for 'dressing and keeping the garden:' but if not, the condition of their children, when severe labour for subsistence became necessary, presented an obvious and undeniable need. They could not do well without *iron* instruments. Iron, the most useful and the most widely diffused of all the metals, cannot be brought into a serviceable state without processes and instruments which it seems impossible to imagine could have been first possessed *except in the way of supernatural communication*. It would, in all reasonable estimation, have required the difficulties and the experience of some centuries, for men to have discovered the

* Wisd. Sol. ii. 23. ἐπ' ἀφθαρσία, *incorruptibility*, often denoting *immortality*. We have translated ἰδύρνης, *nature*, not being able to find a better word. The exact meaning of the Greek is, the whole combination of characteristic peculiarities.

means of raising a sufficient heat, and the use of fluxes : and, had that step been gained, the fused iron would not have answered the purposes wanted. To render it malleable and ductile, it must be beaten, at a white heat, by long continued strokes of prodigious hammers. To *make* iron (as is the technical term) requires previous iron. If it be said that the first iron used by man was native metallic iron, of which masses have been found, the obvious reply is, not only the rarity of its occurrence, but that, when obtained, it also requires previous iron instruments to bring it into any form for use. Tubal-cain most probably lived before the death of Adam ; and he acquired fame as ‘a hammerer, a universal workman in brass and iron’ (Gen. iv. 22). This is the most literal translation of this grammatically difficult clause. In this brief description it is evident that much is implied beyond our power of ascertaining. The necessity and importance of the greatest hammers seem to be included. Considering these instances as representatives of many similar, we are confirmed in our belief that God not only gave to the earliest human families such *knowledge* as was requisite, but the *materials* and the *instruments* without which knowledge would have been in vain.

Religious knowledge and its appropriate habits also required an immediate infusion : and these are pre-eminently comprehended in the ‘image of God.’ On the one hand, it is not to be supposed that the newly created man and his female companion were inspired with a very ample share of the doctrinal knowledge which was communicated to their posterity by the successive and accumulating revolutions of more than four thousand years : nor, on the other, can we believe that they were left in ignorance upon the existence and excellencies of the Being who had made them, their obligations to him, and the way in which they might continue to receive the greatest blessings from him. It is self-evident that, to have attained such a kind and degree of knowledge, by spontaneous effort, under even the favourable circumstances of a state of negative innocence, would have been a long and arduous work. But the sacred narrative leaves no room for doubt upon this head. In the primitive style it tells of God as speaking to them, commanding, instructing, assigning their work, pointing out their danger, and shewing how to avoid it. All this, reduced to the dry simplicity of detail, is equivalent to saying that the Creator, infinitely kind and condescending, by the use of forms and modes adapted to their capacity, fed their minds with truth, gave them a ready understanding of it, and that delight in it which constituted holiness, taught them to hold intercourse with himself by direct addresses in both praise and prayer, and gave some disclosures of a future state of blessedness when they should have fulfilled the conditions of their probation.

An especial instance of this instruction and infusion of practical habits is given to us in the narrative : ‘Out of the ground Jehovah God formed every beast of the field and every fowl of the air [*Hebr.* of the heavens] ; and brought them unto the man [*Hebr.* the Adam], to see what he would call them’ (Gen. ii. 19). This, taken out of the style of condescending anthropomorphism, amounts to such a statement as the following : the Creator had not only formed man with organs of speech, but he taught him the use of them, by an immediate

communication of the practical faculty and its accompanying intelligence ; and he guided the man, as yet the solitary one of his species, to this among the first applications of speech, the designating of the animals with which he was connected, by appellative words which would both be the help of his memory and assist his mental operations, and thus would be introductory and facilitating to more enlarged applications of thought and language. We are further warranted, by the recognised fact of the anecdotal and fragmentary structure of the Scripture history, to regard this as the selected instance for exhibiting a whole kind or class of operations or processes ; implying that, in the same or similar manner, the first man was led to understand something of the qualities and relations of vegetables, earthy matters, the visible heavens, and the other external objects to which he had a relation.

The next important article in this primeval history is the creation of the human female. It has been maintained that the Creator formed Adam to be a sole creature, in some mode of androgynous constitution capable of multiplying from his own organization without a conjugate partner. This notion was advanced by Jacob (or James) Boehmen, the Silesian ‘Theosophist,’ and one very similar to it has been recently promulgated by Baron Giraud (*Philosophie Catholique de l’Histoire*, Paris, 1841), who supposes that the ‘deep sleep’ (Gen. ii. 21) was a *moral fainting* (‘dépaiillance’), the first step in departing from God, the beginning of sin, and that Eve was its personified product by some sort of ‘divine concurrence or operation. To mention these vagaries is sufficient for their refutation. Their absurd and unscriptural character is stamped on their front. The narrative is given in the more summary manner in the former of the two documents :—‘Male and female created he them’ (Gen. i. 27). It stands a little more at length in a *third* document, which begins the fifth chapter, and has the characteristic heading or title by which the Hebrews designated a separate work. ‘This, the book of the generations of Adam. In the day God created Adam ; he made him in the likeness [דמות] *demuth*, a different word from that already treated upon, and which merely signifies *resemblance*] of God, male and female he created them ; and he blessed them, and he called their name Adam, in the day of their being created’ (ver. 1, 2). The reader will observe that, in this passage, we have translated the word for *man* as the proper name, because it is so taken up in the next following sentence.

The second of the narratives is more circumstantial : ‘And Jehovah God said, it is not good the man’s being alone : I will make for him a help suitable for him.’ Then follows the passage concerning the review and the naming of the inferior animals ; and it continues—‘but for Adam he found not a help suitable for him. And Jehovah God caused a deep sleep to fall upon the man [the Adam], and he slept : and he took one out of his ribs, and closed up the flesh in its place : and Jehovah God built up the rib which he had taken from the man into a woman, and he brought her to the man : and the man said, this is the *hit* ; bone out of my bones, and flesh out of my flesh ; this shall be called woman [*ishah*]’, for this was taken from out of man [*ish*]’ (Gen. ii. 18-23).

Two remarkable words in this passage demand

attention. 'Suitable for him' (כִּנְגֻדוֹ *chenegdo*), literally, according to his front-presence, than which no words could better express a perfect adaptation or correspondence. That we render הפעם *hap-paam*, the *hit*, seems strange and even vulgar; but it appears necessary to the preservation of rigorous fidelity. The word, indeed, might have acquired a secondary adverbial meaning, like our English *now*, when very emphatical and partaking of the nature of an interjection; but there is only one passage in which that signification may be pleaded, and it is there repeated—'now in the open place, now in the streets' (Prov. vii. 12). It properly means a smart, bold, successful *stroke*, and is used to signify *hitting the precise time* of any action or requirement. In this first and primitive instance it is equivalent to saying, this is the very thing, this hits the mark, this reaches to what was desired.

This peculiar manner of the creation of the woman has, by some, been treated as merely a childish fable; by others, as an allegorical fiction intended to represent the close relation of the female sex to the male, and the tender claims which women have to sympathy and love. That such was the intention we do not doubt; but why should that intention be founded upon a mythic allegory? Is it not taught much better, and impressed much more forcibly, by its standing not on a fiction, but on a fact? We have seen that, under the simple archaic phrase that man was made of the 'dust of the ground,' is fairly to be understood the truth, which is verified by the analysis of modern chemistry; and, in the case of the woman, it is the same combination of materials, the same carbon, and hydrogen, and lime, and the rest; only that, in the first instance, those primordial substances are taken *immediately*, but in the second, *mediately*, having been brought into a state of organization. Let an unprejudiced mind reflect, and we think that he must see in this part of the will and working of the Almighty, at once, a simplicity gentle and tender, adapted to affect, in the strongest manner, the hearts of primitive men; and yet, a sublimity of meaning worthy of 'Jehovah of hosts,' at whose command stand all atoms and organisms, and 'who is wonderful in counsel and excellent in working.'

The form of direct speech which appears here and in every part of these most ancient writings, and is a characteristic of the Hebrew and other ancient writings, should make no difficulty. It is the natural language of lively description; and it is equal to saying, such was the wise and benevolent will of God, and such were the feelings and thoughts of Adam. The 24th verse is a comment or doctrinal application of the inspired writer; pointing out the great law of marriage as founded in the original constitution of human nature.

The next particular into which the sacred history leads us, is one which we cannot approach without a painful sense of its difficulty and delicacy. It stands thus in the authorized version: 'And they were both naked, the man and his wife; and were not ashamed' (ii. 25). The common interpretation is, that, in this respect, the two human beings, the first and only existing ones, were precisely in the condition of the youngest infants, incapable of perceiving any incongruity in the total destitution of artificial clothing. But a little reflection will tell us, and the more carefully that reflection is

pursued the more it will appear just, that this supposition is inconsistent with what we have established on solid grounds, the supernatural infusion into the minds of our first parents and into their nervous and muscular faculties, of the knowledge and practical habits which their descendants have had to acquire by the long process of instruction and example. We have seen the necessity that there must have been communicated to them, directly by their Creator, no inconsiderable measure of natural knowledge and the methods of applying it, or their lives could not have been secured; and of moral and spiritual 'knowledge, righteousness, and true holiness,' such a measure as would belong to the sinless state, and would enable them to render an intelligent and perfect worship to the Glorious Deity. It seems impossible for that state of mind and habits to exist without a correct sensibility to proprieties and decencies which infant children cannot understand or feel; and the capacities and duties of their conjugal state are implied in the narrative. Further, it cannot be overlooked that, though we are entitled to ascribe to the locality of Eden the most bland atmosphere and delightful soil, yet the action of the sun's rays upon the naked skin, the range of temperature through the day and the night, the alternations of dryness and moisture, the various labour among trees and bushes, and exposure to insects, would render some protective clothing quite indispensable.

From these considerations we feel ourselves obliged to understand the word עָרוֹם (*arom*) in that which is its *most usual* signification in the Hebrew language, as importing *not an absolute*, but a *partial or comparative* nudity. It is one of a remarkable family of words which appear to have branched off in different ways from the same root, originally עָר (*ar or er*), but assuming several early forms, and producing five or six divergent participials: but they all, and especially this *arom*, are employed to denote a stripping off of the upper garment, or of some other usual article of dress, when all the habiliments were not laid aside; and this is a more frequent signification than that of entire destitution. If it be asked, Whence did Adam and Eve derive this clothing? we reply, that, as a part of the divine instruction which we have established, they were taught to take off the inner bark of some trees, which would answer extremely well for this purpose. If an objection be drawn from Gen. iii. 7, 10, 11, we reply, that, in consequence of the transgression, the clothing was disgracefully injured.

Another inquiry presents itself. How long did the state of paradisiac innocence and happiness continue? Some have regarded the period as very brief, not more even than a single day; but this manifestly falls very short of the time which a reasonable probability requires. The first man was brought into existence in the region called Eden; then he was introduced into a particular part of it, the garden, replenished with the richest productions of the Creator's bounty for the delight of the eye and the other senses: the most agreeable labour was required 'to dress and to keep it,' implying some arts of culture, preservation from injury, training flowers and fruits, and knowing the various uses and enjoyments of the produce; making observation upon the works of God, of which an investigation and designating of animals

is expressly specified; nor can we suppose that there was no contemplation of the magnificent sky and the heavenly bodies: above all, the wondrous communion with the condescending Deity, and probably with created spirits of superior orders, by which the mind would be excited, its capacity enlarged, and its holy felicity continually increased. It is also to be remarked, that the narrative (Gen. ii. 19, 20) conveys the implication that some time was allowed to elapse, that Adam might discover and feel his want of a companion of his own species, 'a help correspondent to him.'

These considerations impress us with a sense of probability, amounting to a conviction, that a period not very short was requisite for the exercise of man's faculties, the disclosures of his happiness, and the service of adoration which he could pay to his Creator. But all these considerations are strengthened by the recollection that they attach to man's solitary state; and that they all require new and enlarged application when the addition of conjugal life is brought into the account. The conclusion appears irresistible that a duration of many days, or rather weeks or months, would be requisite for so many and important purposes.

Thus divinely honoured and happy were the progenitors of mankind in the state of their creation.

The next scene which the sacred history brings before us is a dark reverse. Another agent comes into the field and successfully employs his arts for seducing Eve, and by her means Adam, from their original state of rectitude, dignity, and happiness.

Among the provisions of divine wisdom and goodness were two vegetable productions of wondrous qualities and mysterious significancy; 'the tree of life in the midst of the garden, and the tree of knowledge of good and evil' (Gen. ii. 9). It would add to the precision of the terms, and perhaps aid our understanding of them, if we were to adhere strictly to the Hebrew by retaining the definite prefix: and then we have 'the tree of the life' and 'the tree of the knowledge.' Thus would be indicated THE particular *life* of which the one was a symbol and instrument, and THE fatal *knowledge* springing from the abuse of the other. At the same time, we do not maintain that these appellations were given to them at the beginning. We rather suppose that they were applied afterwards, suggested by the events and connection, and so became the historical names.

We see no sufficient reason to understand, as some do, 'the tree of the life,' collectively, as implying a species, and that there were many trees of that species. The figurative use of the expression in Rev. xxii. 2, where a plurality is plainly intended, involves no evidence of such a design in this literal narrative. The phraseology of the text best agrees with the idea of a single tree, designed for a special purpose, and not intended to perpetuate its kind. Though in the state of innocence, Adam and Eve might be liable to some corporal suffering from the changes of the seasons and the weather, or accidental circumstances; in any case of which occurring, this tree had been endowed by the bountiful Creator with a medicinal and restorative property, probably in the way of instantaneous miracle. We think also that it was designed for a sacramental or symbolical purpose, a representation and pledge of 'the life,' emphatically so called, heavenly immortality when the term of probation should be happily completed. Yet we by no means suppose that

this 'tree of the life' possessed any intrinsic property of communicating immortality. In the latter view, it was a sign and seal of the divine promise. But, with regard to the former intention, we see nothing to forbid the idea that it had most efficacious medicinal properties in its fruit, leaves, and other parts. Such were called *trees of life* by the Hebrews (Prov. iii. 18; xi. 30; xiii. 12; xv. 4).

The 'tree of the knowledge of good and evil' might be any tree whatever; it might be of any species, even yet remaining, though, if it were so, we could not determine its species, for the plain reason, that no name, description, or information whatever is given that could possibly lead to the ascertainment. One cannot but lament the vulgar practice of painters representing it as an apple-tree; and thus giving occasion to profane and silly witticisms.

Yet we cannot but think the more reasonable probability to be, that it was a tree having poisonous properties, stimulating, and intoxicating, such as are found in some existing species, especially in hot climates. On this ground, the prohibition to eat or even touch the tree was a beneficent provision against the danger of pain and death. Should any cavil at the placing of so perilous a plant in the garden of delights, the abode of sinless creatures, we reply, that virulent poisons, mineral, vegetable, and animal, though hurtful or fatal to those who use them improperly, perform important and beneficial parts in the general economy of nature.

But the revealed object of this 'tree of the knowledge of good and evil' was that which would require no particular properties beyond some degree of external beauty and fruit of an immediately pleasant taste. That object was to be a *test of obedience*. For such a purpose, it is evident that to select an indifferent act, to be the object prohibited, was necessary; as the obligation to refrain should be only that which arises simply, so far as the subject of the law can know, from the sacred will of the lawgiver. This does not, however, nullify what we have said upon the possibility, or even probability, that the tree in question had noxious qualities: for upon either the affirmative or the negative of the supposition, the subjects of this positive law, having upon all antecedent grounds the fullest conviction of the perfect rectitude and benevolence of their Creator, would see in it the simple character of a test, a means of proof, whether they would or would not implicitly confide in him. For so doing they had every possible reason; and against any thought or mental feeling tending to the violation of the precept, they were in possession of the most powerful motives. There was no difficulty in the observance. They were surrounded with a paradise of delights, and they had no reason to imagine that any good whatever would accrue to them from their seizing upon anything prohibited. If perplexity or doubt arose, they had ready access to their divine benefactor for obtaining information and direction. But they allowed the thought of disobedience to form itself into a disposition and then a purpose.

Thus was the seal broken, the integrity of the heart was gone, the sin was generated, and the outward act was the consummation of the dire process. Eve, less informed, less cautious, less endowed with strength of mind, became the more ready victim. 'The woman, being deceived, was

in the transgression;’ but ‘Adam was not deceived’ (1 Tim. ii. 14). He rushed knowingly and deliberately to ruin. The offence had grievous aggravations. It was the preference of a trifling gratification to the approbation of the Supreme Lord of the universe; it implied a denial of the wisdom, holiness, goodness, veracity, and power of God; it was marked with extreme ingratitude; and it involved a contemptuous disregard of consequences, awfully impious as it referred to their immediate connection with the moral government of God, and cruelly selfish as it respected their posterity.

The instrument of the temptation was a serpent; whether any one of the existing kinds it is evidently impossible for us to know. Of that numerous order many species are of brilliant colours and playful in their attitudes and manners; so that one may well conceive of such an object attracting and fascinating the first woman. Whether it spoke in an articulate voice, like the human, or expressed the sentiments attributed to it by a succession of remarkable and significant actions, may be a subject of reasonable question. The latter is possible, and it seems the preferable hypothesis, as, without a miraculous intervention, the mouth and throat of no serpent could form a vocal utterance of words; and we cannot attribute to any wicked spirit the power of working miracles.

This part of the narrative begins with the words ‘And the serpent was crafty above every animal of the field’ (Gen. iii. 1). It is to be observed that this is not said of the order of serpents, as if it were a general property of them, but of *that* particular serpent. Had the noun been intended generically, as is often the case, it would have required to be without the substantive verb; for such is the usual Hebrew method of expressing universal propositions: of this the Hebrew scholar may see constant examples in the Book of Proverbs.

Indeed, this ‘cunning craftiness, lying in wait to deceive’ (Eph. iv. 14), is the very character of that malignant creature of whose wily stratagems the reptile was a mere instrument. The existence of spirits, superior to man, and of whom some have become depraved, and are labouring to spread wickedness and misery to the utmost of their power, has been found to be the belief of all nations, ancient and modern, of whom we possess information. It has also been the general doctrine of both Jews and Christians, that one of those fallen spirits was the real agent in this first and successful temptation. Of this doctrine, the declarations of our Lord and his apostles contain strong confirmation. In the same epistle in which St. Paul expresses his apprehension of some of the Corinthian Christians being seduced into error and sin, he adverts to the temptation of Eve as a monitory example: ‘Lest Satan should get an advantage over us, for we are not ignorant of his devices. I fear, lest by any means, as the serpent beguiled Eve through his subtlety, so your minds should be corrupted from the simplicity that is in Christ. Such are false apostles, deceitful workers, transforming themselves into apostles of Christ; and no marvel; for even Satan himself is transformed into an angel of light’ (2 Cor. ii. 11; xi. 3, 14). In the book of the Revelation the great tempter is mentioned as ‘that old (*ἀρχαῖος*, *he of antiquity*) serpent, who is called the devil and the

Satan, who deceiveth the whole world (Rev. xii. 9; xx. 2). The language of Jesus is a very definite allusion to the guilty transaction of Eden: ‘Ye are of your father the devil. And the desires of your father ye are determined (*θέλετε*) to do. He was a man-murderer (*ἀνθρωποκτόνος*) from the beginning; and in the truth he stood not, for truth is not in him. When he speaketh falsehood, out of his own (stores) he speaketh, for a liar is he, and the father of it (*i. e.* of falsehood)’ (John viii. 44). The summary of these passages presents almost a history of the Fall—the tempter, his manifold arts, his serpentine disguises, his falsehood, his restless activity, his bloodthirsty cruelty, and his early success in that career of deception and destruction. The younger Rosenmüller says upon this passage, ‘That it was not a natural serpent that seduced Eve, but a wicked spirit which had assumed the form of a serpent; and although Moses does not expressly say so, from the fear of affording a handle to superstition, yet it is probable that he designed to intimate as much, from the very fact of his introducing the serpent as a rational being, and speaking; also, that this opinion was universal among the nations of Central and Upper Asia, from the remotest antiquity, appears from this, that, in the system of Zoroaster, it is related that Ahriman, the chief of wicked spirits, seduced the first human beings to sin by putting on the form of a serpent’ (*Schol. in Gen. iii. 1*; and he refers to Kleuker’s German version of the *Zendavesta*, and his own *Alle u. neue Morgenland*).

The condescending Deity, who had held gracious and instructive communion with the parents of mankind, assuming a human form and adapting all his proceedings to their capacity, visibly stood before them; by a searching interrogatory drew from them the confession of their guilt, which yet they aggravated by evasions and insinuations against God himself; and pronounced on them and their seducer the sentence due. On the woman he inflicted the pains of child-bearing, and a deeper and more humiliating dependence upon her husband. He doomed the man to hard and often fruitless toil, instead of easy and pleasant labour. On both, or rather on human nature universally, he pronounced the awful sentence of death. The denunciation of the serpent partakes more of a symbolical character, and so seems to carry a strong implication of the nature and the wickedness of the concealed agent. The human sufferings threatened are all, excepting the last, which will require a separate consideration, of a remedial and corrective kind. The pains and subjection of the female sex, when they come into connection with the benignant spirit of the gospel, acquire many alleviations, and become means of much good in relative life, which reacts with a delightful accumulation of benefit upon the Christian wife, mother, daughter, sister, friend. So also human labour, in the cultivation of the various soils, in all geognostic operations, in all fabrics and machinery, in means of transit by land, and in the wonders of navigation over the ocean, which for many ages was regarded as the barrier sternly forbidding intercourse;—while these have been the occasion of much suffering, they have been always towering over the suffering, counteracting and remedying it, diminishing the evil, and increasing the sum of good. Further, under the influence of true Christianity, these and all the other mechanical and liberal arts are conse-

crated to the universal improvement of mankind; they afford means of spreading the gospel, multiplying every kind of good agency and increasing its force. Thus, 'in all labour there is profit,' and 'labour itself becomes a pleasure.'

Of a quite different character are the penal denunciations upon the serpent. If they be understood literally, and of course applied to the whole order of Ophidia (as, we believe, is the common interpretation), they will be found to be so flagrantly at variance with the most demonstrated facts in their physiology and economy, as to lead to inferences unfavourable to belief in revelation. Let us examine the particulars:—

'Because thou hast done this, cursed art thou above all cattle; very properly so rendered, for we have not an English singular noun to answer to *בהמה*, so as to effect a literal translation of 'above every *behemah*.' But the *serpent* tribe cannot be classed with that of the *behemoth*. The word is of very frequent occurrence in the Old Testament; and though, in a few instances, it seems to be put for brevity so as to be inclusive of the flocks as well as the herds, and in poetical diction it sometimes stands metonymically for *animals* generally (as Job xviii. 3; Ps. lxxiii. 22; Eccles. iii. 18, 19, 21); yet its proper and universal application is to the large animals (pachyderms and ruminants), such as the elephant, camel, deer, horse, ox, rhinoceros, hippopotamus, etc. [BEHEMOTH.]

As little will the declaration, 'cursed —,' agree with natural truth. It may, indeed, be supposed to be verified in the shuddering which persons generally feel at the aspect of any one of the order of serpents; but this takes place also in many other cases. It springs from fear of the formidable weapons with which some species are armed, as few persons know beforehand which are venomous and which are harmless; and, after all, this is rather an advantage than a curse to the animal. It is an effectual defence without effort. Indeed, we may say that no tribe of animals is so secure from danger, or is so able to obtain its sustenance and all the enjoyments which its capacity and habits require, as the whole order of serpents. If, then, we decline to urge the objection from the word *behemah*, it is difficult to conceive that serpents have more causes of suffering than any other great division of animals, or even so much.

Further, 'going upon the belly' is to none of them a punishment. With some differences of mode, their progression is produced by the pushing of scales, shields, or rings against the ground, by muscular contractions and dilatations, by elastic springings, by vertical undulations, or by horizontal wriggings; but, in every variety, the *entire organization*—skeleton, muscles, nerves, integuments—is *adapted* to the mode of progression belonging to each species. That mode, in every variety of it, is sufficiently easy and rapid (often very rapid) for all the purposes of the animal's life and the amplitude of its enjoyments. To imagine this mode of motion to be, in any sense, a change from a prior attitude and habit of the erect kind, or being furnished with wings, indicates a perfect ignorance of the anatomy of serpents. Yet it has been said by learned and eminent theological interpreters, that, before this crime was committed, the serpent probably did 'not go upon his belly, but moved upon the hinder part of his body, with his head, breast, and belly upright' (Clarke's *Bible*,

p. 1690). This notion may have obtained credence from the fact that some of the numerous serpent species, when excited, raise the neck pretty high; but the posture is to strike, and they cannot maintain it in creeping except for a very short distance.

Neither do they 'eat dust.' All serpents are carnivorous; their food, according to the size and power of the species, is taken from the tribes of insects, worms, frogs, and toads, and newts, birds, mice, and other small quadrupeds, till the scale ascends to the pythons and boas, which can master and swallow very large animals. The excellent writer just cited, in his anxiety to do honour, as he deemed it, to the accuracy of Scripture allusions, has said of the serpent, 'Now that he creeps with his very mouth upon the earth, he must necessarily take his food out of the dust, and so lick in some of the dust with it.' But this is not the fact. Serpents habitually obtain their food among herbage or in water; they seize their prey with the mouth, often elevate the head, and are no more exposed to the necessity of swallowing adherent earth than are carnivorous birds or quadrupeds. At the same time, it may be understood figuratively. '*Eating the dust*' is but another term for grovelling in the dust; and this is equivalent to being reduced to a condition of meanness, shame, and contempt.—See Micah vii. 17' (Bush on *Genesis*, vol. i. p. 84. New York, 1840).

But these and other inconsistencies and difficulties (insuperable they do indeed appear to us) are swept away when we consider the fact before stated, that the Hebrew is *היה הנחש האיה* *hannachash haiah*, *THE serpent was*, etc., and that it refers specifically and personally to a rational and accountable being, *the spirit of lying and cruelty, the devil, the Satan, the old serpent*. That God, the infinitely holy, good, and wise, should have permitted any one or more celestial spirits to apostatize from purity, and to be the successful seducers of mankind, is indeed an awful and overwhelming mystery. But it is not more so than the permitted existence of many among mankind, whose rare talents and extraordinary command of power and opportunity, combined with extreme depravity, have rendered them the plague and curse of the earth; and the whole merges into the awful and insoluble problem, Why has the All-perfect Deity permitted evil at all? We are firmly assured that He will bring forth, at last, the most triumphant evidence that 'He is righteous in all his ways, and holy in all his works.' In the mean time, our happiness lies in the implicit confidence which we cannot but feel to be due to the Being of Infinite Perfection.

The remaining part of the denunciation upon the false and cruel seducer sent a beam of light into the agonized hearts of our guilty first parents: 'And enmity will I put between thee and the woman, and between thy seed and her seed: he will attack thee [on] the head, and thou wilt attack him [at] the heel.' The verb here used twice, occurs in only two other places of the O. T.: Job ix. 17, 'Who breaketh upon me with a tempestuous horror;' and Ps. cxxxix. 11, 'And if I say, Surely darkness will burst upon me,' *i. e.*, as a sudden and impervious covering. The meaning is established by Genesius after Umbreit as the idea of a *violent and eager assault*. Christian interpreters generally regard this as the *Protevangelium*, the first gospel-promise, and we think with good reason. It was a manifestation of mercy: it revealed a

Deliverer, who 'should be a human being, in a peculiar sense the offspring of the female, who should also, in some way not yet made known, counteract and remedy the injury inflicted, and who, though partially suffering from the malignant power, should, in the end, completely conquer it and convert its very success into its own punishment' (J. Pye Smith, *Scripture testimony to the Messiah*, vol. i. p. 226).

The awful threatening to man was, 'In the day that thou eatest of it, thou wilt die the death.' *Beyom*, literally *in the day*, was also used as a general adverb of time, denoting *when*, without a strict limitation to a natural day. The verbal repetition is a Hebrew idiom to represent not only the *certainty* of the action, but its *intensity and efficacy*: we therefore think that the phrase, *die the death*, would more exactly convey the sense of the original than what some have proposed, *dying thou shalt die*. The infliction is *Death* in the most comprehensive sense, that which stands opposite to *Life*, the life of not only animal enjoyment, but holy happiness, the life which comported with the image of God. This was lost by the fall; and the sentence of physical death was pronounced, to be executed in due time. Divine mercy gave a long respite.

The same mercy was displayed in still more tempering the terrors of justice. The garden of delights was not to be the abode of rebellious creatures. But before they were turned out into a bleak and dreary wilderness, God was pleased to direct them to make clothing suitable to their new and degraded condition, of the skins of animals. That those animals had been offered in sacrifice is a conjecture supported by so much probable evidence, that we may regard it as a well-established truth. Any attempt to force back the way, or gain anew the tree of life, and take violent or fraudulent possession, would have been equally impious and nugatory. The sacrifice (which all approximative argument obliges us to admit), united with the promise of a deliverer, and the provision of substantial clothing, contained much hope of pardon and grace. The terrible debarring by lightning flashes and their consequent thunder, and by visible supernatural agency (Gen. iii. 22-24), from a return to the bowers of bliss, are expressed in the characteristic patriarchal style of anthropopathy; but the meaning evidently is, that the fallen creature is unable by any efforts of his own to reinstate himself in the favour of God, and that whatever hope of restoration he may be allowed to cherish must spring solely from free benevolence. Thus, in laying the first stone of the temple which shall be an immortal habitation of the Divine glory, it was manifested that 'Salvation is of the Lord,' and that 'grace reigneth through righteousness unto eternal life.'

From this time we have little recorded of the lives of Adam and Eve. Their three sons are mentioned with important circumstances in connection with each of them. See the articles CAIN, ABEL, and SETH. Cain was probably born in the year after the fall; Abel, possibly some years later; Seth, certainly one hundred and thirty years from the creation of his parents. After that, Adam lived eight hundred years, and had sons and daughters, doubtless by Eve, and then he died, nine hundred and thirty years old. In that prodigious period many events, and those of great im-

portance, must have occurred; but the wise providence of God has not seen fit to preserve to us any memorial of them, and scarcely any vestiges or hints are afforded of the occupations and mode of life of men through the antediluvian period. [ANTEDILUVIANS.]—J. P. S.

ADAM (אָדָם), a city mentioned, Josh. iii. 16, as near to Zarethán. The A. V. follows the *K'ri* here, which reads מֵאָדָם *from Adam*, whereas the textual reading is בְּאָדָם *in or at Adam*. The latter seems the preferable reading. The statement of the historian is not that the waters 'stood and rose up upon an heap very far from Adam,' but that they 'rose into one mass, very far away (*i. e.*, from the Israelites), at Adam.' (See Maurer, *Com. Crit.* in loc.) Zarethán, as we learn from 1 Kings iv. 12, was situated not far from Succoth, which was on the east bank of Jordan (Gen. xxxiii. 17; Josh. xiii. 27; Judg. viii. 5); so that Adam was on the same side of the river as that on which the Israelites were, at the time referred to. As the ground around Zarethán was 'clay ground' (1 Kings vii. 46), *i. e.*, rich loamy soil (הַמְעֵכָה הָאֲדָמָה), it is probable that Adam received its name from this.—W. L. A.

ADAM, THOMAS, Rector of Winttingham, Lincolnshire, was born at Leeds 25th Feb. 1701, and died 31st March 1784. His biblical works are, *A Paraphrase and Annotations on the first eleven chapters of St. Paul's Epistle to the Romans*, 1771, 8vo; and *An Exposition of the Four Gospels* (including *Lectures on Matthew*, which had been published before separately), 2 vols. 8vo, Lond. 1837, edited from the author's MSS. by the Rev. A. Westbody, M.A. These works will not much aid the student in ascertaining the meaning of the parts of the N. T. to which they are devoted; they are homiletical rather than exegetical; but they are full of original and fresh thinking, and are imbued with a spirit of the richest piety.—W. L. A.

ADAMAH. [ADMAH.]

ADAMANT. [SHAMIR.]

ADAMI (אֲדָמִי, 'Αρμε), one of the border towns of Naphtali (Josh. xix. 33).

ADAMS, RICHARD, an English nonconforming minister, was born 1630, and died Feb. 1698. He was one of the 'judicious and learned divines' who continued Poole's *Annotations* after his death. The portion allotted to Mr. Adams comprised the Epistles to the Philippians and Colossians.—W. L. A.

ADAR (properly Addar, אָדָר, 'Εδραδα), a place on the southern border of Judah (Josh. xv. 3), an abbreviation of *Hazar Addar* (Num. xxxiv. 4).

ADAR (אָדָר, 'Αδάρ, Esth. iii. 7; the Macedonian Δύστροπος) is the sixth month of the civil and the twelfth of the ecclesiastical year of the Jews. The name was first introduced after the Captivity. The following are the chief days in it which are set apart for commemoration:—The 7th is a fast for the death of Moses (Deut. xxxiv. 5, 6). There is some difference, however, in the date assigned to his death by some ancient authorities. Josephus (*Antiq.* iv. 8) states that he died on the *first* of this month; which also agrees with Midrash Megillat Esther, cited by Reland (*Antiq. Hebr.* iv. 10):

whereas the Talmudical tracts Kiddushim and Sota give the *seventh* as the day. It is at least certain that the latter was the day on which the fast was observed. On the 9th there was a fast in memory of the contention or open rupture of the celebrated schools of Hillel and Shammai, which happened but a few years before the birth of Christ. The cause of the dispute is obscure (Wolf's *Biblioth. Hebr.* ii. 826). The 13th is the so-called 'Fast of Esther.' Iken observes (*Antiq. Hebr.* p. 150) that this was not an actual fast, but merely a commemoration of Esther's fast of three days (Esth. iv. 16), and a preparation for the ensuing festival. Nevertheless, as Esther appears, from the date of Haman's edict, and from the course of the narrative, to have fasted in Nisan, Buxtorf adduces from the Rabbins the following account of the name of this fast, and of the foundation of its observance in Adar (*Synag. Jud.* p. 554): that the Jews assembled together on the 13th, in the time of Esther, and that, after the example of Moses, who fasted when the Israelites were about to engage in battle with the Amalekites, they devoted that day to fasting and prayer, in preparation for the perilous trial which awaited them on the morrow. In this sense, this fast would stand in the most direct relation to the feast of Purim. The 13th was also, 'by a common decree,' appointed as a festival in memory of the death of Nicanor (2 Macc. xv. 36). The 14th and 15th were devoted to the feast of Purim (Esth. ix. 21). In case the year was an intercalary one, when the month of Adar occurred twice, this feast was first moderately observed in the intercalary Adar, and then celebrated with full splendour in the ensuing Adar. The former of these two celebrations was then called the *lesser*, and the latter the *great Purim*. These designations do not apply, as Horne has erroneously stated (*Introduction*, iii. 177) to the two days of the festival in an ordinary year, but to its double celebration in an intercalary year.—J. N.

ADARCONIM (אֲדַרְכּוֹנִים *i. q.* דְּרַבְמַנִּים ;

Sept. δραχμή and χρυσός; Ὑλγ, *drachma* and *aureus*). Gesenius and most others are of opinion that these words, which occur in 1 Chron. xxix. 7; Ezra viii. 27; ii. 69; Neh. vii. 70-72, denote the *Persian Daric*, a gold coin, which must have been in circulation among the Jews during their subjection to the Persians. The א is prosthetic; and דַּרְכּוֹן occurs in the Rabbins. Dr. Lee disputes the etymology of the word with Gesenius: but it is sufficient to observe that the *Daric*, which is radically included in these words, is not, as might be fancied, derived from the name of any particular king, but from the Persian دَارَا *dara*, a king. The

last of these words seems to identify itself with the Greek δραχμή; and, observing that in some of the texts it is manifestly connected with words denoting weight, and in none with names of coins, he expresses some doubt of its being the δαρεικός (*daric*) of the Greeks. He is rather inclined to suppose, with Salmasius, that the Arabic *dirhem*

درهم or درم presents us with the same word.

The opinion of Heeren (*Researches*, i. 410) would, indirectly, go to discountenance the notion that the *daric* is to be here understood. He affirms that 'before the time of Darius Hystaspes the Persians had no coinage of their own, and that the *daricus*

coined by him was probably a medal (Herod. iv. 166) of the finest gold. When the *darics* became current, especially after the mercenary troops were paid in them, their numbers must have been greatly augmented: yet Strabo assures us (l. xv. p. 1068) that the coin was by no means abundant among the Persians, and that gold was employed by them rather in decoration than as a circulating medium.' This, however, is of little real consequence; for it proceeds on the erroneous supposition that the coin derived its name from the first Darius, and could not have previously existed. In the later day of Strabo the coin may have become scarce, although once plentiful. Be this as it may, the *daric* is of interest, not only as the most ancient gold coin of which any specimens have been preserved to the present day, but as the earliest coined money which, we can be sure, was known to and used by the Jews. The distinguishing mark of the coin was a crowned archer, who appears with some slight variations on different specimens. His garb is the

13.

same which is seen in the sculptures at Persepolis, and the figure on the coin is called, in numismatics, Sagittarius. The specimens weighed by Dr. Bernard were fifteen grains heavier than an English guinea, and their intrinsic value may, therefore, be reckoned at twenty-five shillings (Eckhel, *Doctrina Numorum Veterum*; Bernard, *De Mensuris et Ponderibus*).—J. K.

ADARGAZ'RIN (אֲדַרְגַּזְרִין). This is a Chaldee word which occurs in Dan. iii. 2, 3, where the titles of the Babylonian officers are enumerated. It is difficult, perhaps impossible, to determine the particular office which the word describes; and opinions and versions have differed greatly. The Sept., which is followed by the Vulgate, has τραπεζῶν. Our version has 'treasurers;' and although we do not know the reason on which they proceeded, we may find one in the fact that *gaza* (גַּזָּא), which seems the principal element of the word, means a treasury, and was avowedly adopted by the Greeks from the Persians. Jacchiades, who identifies all these officers with those of the Turkish court and government, compares the present to the *defterdars*, who have the charge of the receipts and disbursements of the *public treasury*. Gesenius and others conceive that the word means *chief-judges* (from אָרַא, *magnificent*, and גָּזְרִין, *deciders*); but Dr. Lee, while admitting the uncertainty of the whole matter, seems to prefer seeking its meaning in the Persian آذر *fire*, and گذر *passing*; and hence concludes that the Adargazerin were probably officers of state who presided over the ordeals by fire, and other matters connected with the government of Babylon. This last explanation is not, however, new, being the one rejected by Gesenius.—J. K.

ADASA, or ADARSA (Ἀδασά), called also by Josephus ADAZER, ADACO, and ACODACO, a city in the tribe of Ephraim, said to have been four miles from Beth-horon, and not far from Gophna (Joseph. *Antiq.* xii. 10, 5; Euseb. *Onomast.* in Ἀδασά). It was the scene of some important transactions in the history of the Maccabees (1 Mac. vii. 40, 45; Joseph. *Antiq.* xii. 10, 5; *Bell. Jud.* i. 1, 6).—J. K.

ADASHIM (עֲדָשִׁים; Sept. φακός; Vulg. lens).

'LENTILES' is the interpretation given by our own and most other versions, and there is no reason to question its accuracy. In Syria lentiles are still called in Arabic عدس *addas* (Russell, *N. H. of*

Aleppo, i. 74). Lentiles appear to have been chiefly used for making a kind of pottage. The red pottage for which Esau bartered his birthright was of lentiles (Gen. xxv. 29-34). The term *red* was, as with us, extended to *yellowish brown*, which must have been the true colour of the pottage, if derived from lentiles. The Greeks and Romans also called lentiles red (see authorities in Celsius, i. 105). Lentiles were among the provisions brought to David when he fled from Absalom (2 Sam. xvii. 28), and a field of lentiles was the scene of an exploit of one of David's heroes (2 Sam. xxiii. 11). From Ezek. iv. 9, it would appear that lentiles were sometimes used as bread. This was, doubtless, in times of scarcity, or by the poor. Sonnini (*Travels*, p. 603, English translation) assures us that in southernmost Egypt, where corn is comparatively scarce, lentiles mixed with a little barley form almost the only bread in use among the poorer classes. It is called *bettan*, is of a golden yellow character, and is not bad, although rather heavy. In that country, indeed, probably even more than in Palestine, lentiles anciently, as now, formed a chief article of food among the labouring classes. This is repeatedly noticed by ancient authors; and so much attention was paid to the culture of this useful pulse, that certain varieties became remarkable for their excellence. The lentiles of Pelusium, in the part of Egypt nearest to Palestine, were esteemed both in Egypt and foreign countries (Virg. *Georg.* i. 228); and this is probably the valued Egyptian variety which is mentioned in the *Mishna* (tit. *Kilvim*, xviii. 8) as neither large nor small. Large quantities of lentiles were exported from Alexandria (Augustin. *Comm. in Ps.* xlvi.) Pliny, in mentioning two Egyptian varieties, incidentally lets us know that one of them was red, by remarking that they like a red soil, and by speculating whether the pulse may not have thence derived the reddish colour which it imparted to the pottage made with it (*Hist. Nat.* xviii. 12). This illustrates Jacob's red pottage. Dr. Shaw (i. 257) also states that these lentiles easily dissolve in boiling, and form a red or chocolate coloured pottage, much esteemed in North Africa and Western Asia. Putting these facts together, it is likely that the reddish lentile, which is now so common in Egypt (*Descript. de l'Egypte*, xix. 65), is the sort to which all these statements refer.

The tomb-paintings actually exhibit the operation of preparing pottage of lentiles, or, as Wilkinson (*Anc. Egyptians*, ii. 387) describes it, 'a man engaged in cooking lentiles for a soup or porridge; his companion brings a bundle of faggots for the fire, and the lentiles themselves are seen

standing near him in wicker baskets.' The lentiles of Palestine have been little noticed by travellers. Nau (*Voyage Nouveau*, p. 13) mentions lentiles along with corn and pease, as a principal article of traffic at Tortoura; D'Arvieux (*Mémoires*, ii. 237) speaks of a mosque, originally a Christian church, over the patriarchal tomb at Hebron, connected with which was a large kitchen, where

14

lentile pottage was prepared every day, and distributed freely to strangers and poor people, in memory of the transaction between Esau and Jacob, which they (erroneously) believe to have taken place at this spot.

The lentile (*Ervum lens*) is an annual plant, and the smallest of all the leguminosæ which are cultivated. It rises with a weak stalk about eighteen inches high, having pinnate leaves at each joint composed of several pairs of narrow leaflets, and terminating in a tendril, which supports it by fastening about some other plant. The small flowers,

15. (Lentiles Cicer lens.)

which come out of the sides of the branches on short peduncles, three or four together, are purple, and are succeeded by the short and flat legumes, which contain two or three flat round seeds slightly curved in the middle. The flower appears in May, and the seeds ripen in July. When ripe, the plants are rooted up, if they have been sown along with other plants, as is sometimes done; but they are cut down when grown by themselves. They are threshed, winnowed, and cleared like corn.—J. K.

ADBEEL (אֲבֵיֵל, *miracle of God*; Sept. Ναββεήλ), one of the twelve sons of Ishmael, and founder of an Arabian tribe (Gen. xxv. 13, 16).

ADDAN (אֲדָן, 'Hδάν). [ADDON.]

ADDAR (אֲדָר, 'Aδάρ), a son of Bela (1 Chron. viii. 3); ARD (Gen. xlv. 21, Num. xxvi. 40.)

ADDER. [ACHSHUB; PETHEN; SHEPHIPHON; TSPHONI.]

ADDI (אָדִי, probably = אֲדַי אֲדִי), son of Cosam in our Lord's genealogy (Luke iii. 28).

ADDON (אָדוֹן), one of several places mentioned in Neh. vii. 61, being towns in the land of captivity, from which those who returned to Palestine were unable to 'shew their father's house, or their seed, whether they were of Israel.' This, probably, means that they were unable to furnish such undeniable legal proof as was required in such cases. And this is in some degree explained by the subsequent (v. 63) mention of priests who were expelled the priesthood because their descent was not found to be genealogically registered. [In Ezra ii. 59, the word is spelt Addan].—J. K.

ADIABENE (Ἀδιαβηνή), the principal of the six provinces into which Assyria was divided. Pliny (*Hist. Nat.* v. 12) and Ammianus (xxiii. 6, § 20) comprehend the whole of Assyria under this name, which, however, properly denoted only the province which was watered by the rivers Diab and Adiab, or the great and little Zab (Dhab), which flow into the Tigris below Nineveh (Mosul), from the north-east. (Joseph. *Antiq.* xx. 2-4; *Bell. Jud.* ii. 16, 19; v. 4, 6, 11).—J. K.

ADIDA (אָדִידָא; Vulg. *Addus*), a fortified town in the tribe of Judah. In 1 Macc. xii. 38, we read that Simon Maccabæus set up 'Adida in the Sephela (אָדִידָא עַן טַף סֶפְהֵלָא), and made it strong with bolts and bars. Eusebius says that the Sephela was the name given in his time to the open country about Eleutheropolis. And this Adida in the Sephela is probably the same which is mentioned in the next chapter (xiii. 13) as 'Adida over against the plain,' where Simon Maccabæus encamped to dispute the entrance into Judæa of Tryphon, who had treacherously seized on Jonathan at Ptolemais. In the parallel passage Josephus (*Antiq.* xiii. 6, 5) adds that this Adida was upon a hill, before which lay the plains of Judæa. Lightfoot, however, contrives to multiply the single place mentioned in the Maccabees and Josephus into four or five different towns (see *Chomg. Decad.* § 3). One of the places which Josephus calls Adida (*Bell. Jud.* iv. 9, 1) appears to have been near the Jordan, and was probably the Hadid of Ezra ii. 33 [and the Adithaim of Josh. xv. 36].—J. K.

ADJURATION. This is a solemn act or appeal, whereby one man, usually a person vested with natural or official authority, imposes upon another the obligation of speaking or acting as if under the solemnity of an oath. We find the word אָדִירָא used in this sense in Cant. ii. 7; iii. 5, etc. In the New Testament the act of adjuration is performed with more marked effect; as when the high-priest thus calls upon Christ, 'I adjure thee by the living God, tell us,' etc.—Ἐξορκίζω σε κατὰ τοῦ Θεοῦ τοῦ ζῶντος, etc. (Matt. xxvi. 63). The word used here is that by which the LXX. render the Hebrew (see also Mark v. 7; Acts xix. 13; 1 Thess. v. 27). An oath, although thus imposed upon one without his consent, was not only binding, but solemn in the highest degree; and when connected with a question, an answer was compulsory, which answer being as upon oath, any falsehood in it would be perjury. Thus our Saviour, who had previously disdained to reply to the

charges brought against him, now felt himself bound to answer the question put to him. The abstract moral right of any man to impose so serious an obligation upon another without his consent, may very much be doubted,—not, indeed, as compelling a true answer, which a just man will give under all circumstances, but as extorting a truth which he might have just reasons for withholding.—J. K.

ADLER, JAC. G. CHR., a learned orientalist, was born in December 1755 at Arnis, in Schleswig. He passed his youth at Rome, in the study of the oriental languages, and on his return to his native country, in 1783, was appointed professor of Syriac, and subsequently of Theology at the University of Copenhagen in 1788. He died in 1805. His writings include *Codicis sacri recte scribendi leges, ad recte destinandos codices manuscriptorum antiquos, etc.*, 1799; *Descriptio codicum quorundam cuficorum in bibliotheca regia Hafniensi servatorum*, 1780; *Museum cuficum Borgianum*, 1782-92; *Bibliotheca biblica Wurttembergici ducis, olim Lorchiana*, 1787; *Novi Testamenti versiones Syriacæ, Simplex, Philoxen. et Hierosolymitana denuo examinata, novis obs. etc. illustrata*, 4to, Hafn. 1798. This last is his most valuable contribution to biblical learning.

ADMAH, one of the cities in the vale of Sid-dim (Gen. x. 19), which had a king of its own (Gen. xiv. 2). It was destroyed along with Sodom and Gomorrah (Gen. xix. 24; Hos. xi. 8).

ADONAI (אֲדוֹנָי; Sept. Κύριος, *lord, master*), the old plural form of the noun אָדוֹן *adon*, similar to that with the suffix of the first person; used as the *pluralis excellentiæ*, by way of dignity, for the name of JEHOVAH. The similar form *with the suffix* is also used of men, as of Joseph's master (Gen. xxxix. 2, 3, *sq.*); of Joseph himself (Gen. xlii. 30, 33; so also Isaiah xix. 4). The Jews, out of superstitious reverence for the name JEHOVAH, always, in reading, pronounce *Adonai* where *Jehovah* is written; and hence the letters יהוה are usually written with the points belonging to *Adonai* [JEHOVAH]. [Gesenius, who at first thought this an old form of the plural (*Gram.* § 106, 2, *b*), came latterly, with Ewald (*Ausf. Lehrb. d. Heb. Sprache*, § 177, *a*), to regard it as a plural followed by the suffix = *my Lord*, in which the force of the suffix came gradually to be lost, as in Fr. *monsieur* (*Thes.* s. v. אָדוֹן).] This seems just, though rather disapproved by Professor Lee (*Lex.* in אָדוֹן). The latter adds that 'Our English bibles generally translate יהוה by LORD, in capitals; when preceded by יהוה, they translate it GOD; when followed by צְבָאוֹת *tebaoth* follows, by LORD; as in Isaiah iii. 1, 'The Lord, the LORD of Hosts.'" The copies now in use are not, however, consistent in this respect.—J. K.

ADONIBEZEK (אֲדוֹנִי-בֶזֶק; *lord of Bezek*; Sept. Ἀδωνιβεζέκ), king or lord of Bezek, a town which Eusebius (in *Bezék*) places 17 miles east of Neapolis or Shechem. The small extent of the kingdoms in and around Palestine at the time of its invasion by the Hebrews is shewn by the fact that this petty *melek* had subdued no less than seventy of them. We find him at head of the confederated Canaanites and Perizzites, against whom the tribes of Judah and Simeon marched after the death of

Joshua. His army was routed and himself taken prisoner. The victors cut off his thumbs and great toes, thereby inflicting on him the punishment which he had himself inflicted on others. His conscience was thus awakened to the enormity of his conduct, and in his own treatment he recognised a severe but just application of the *lex talionis*. Adonibezeek was taken to Jerusalem, where he died, B.C. 1449. (Jud. i. 4).—J. K.

ADONIJAH (אֲדוֹנִיָּהוּ; *my Lord Jehovah*; Sept. Ἀδωνίας), 1. The fourth son of David, by Haggith. He was born after his father became king, but when he reigned over Judah only (2 Sam. iii. 4). According to the Oriental notion developed in the article ABSALOM, Adonijah might have considered his claim superior to that of his eldest brother Amnon who was born while his father was in a private station; but not to that of Absalom, who was not only his elder brother, and born while his father was a king, but was of royal descent on the side of his mother. When, however, Amnon and Absalom were both dead, he became, in order of birth, the heir-apparent to the throne. But this order had been set aside in favour of Solomon, who was born while his father was king of all Israel. Absalom perished in attempting to assert his claim of primogeniture, in opposition to this arrangement. Unawed by this example, Adonijah took the same means of showing that he was not disposed to relinquish the claim of primogeniture which now devolved upon him. He assumed the state of an heir-apparent, who, from the advanced age of David, must soon be king. But it does not appear to have been his wish to trouble his father as Absalom had done; for he waited till David appeared at the point of death, when he called around him a number of influential men, whom he had previously gained over, and caused himself to be proclaimed king. This was a formidable attempt to subvert the appointment made by the Divine king of Israel; for Adonijah was supported by such men as Joab, the general-in-chief, and Abiathar, the high-priest; both of whom had followed David in all his fortunes. In all likelihood, if Absalom had waited till David was on his death-bed, Joab and Abiathar would have given him their support; but his premature and unnatural attempt to dethrone his father, disgusted these friends of David, who might not otherwise have been adverse to his claims. This danger was avoided by Adonijah; but his plot was, notwithstanding, defeated by the prompt measures taken by David, who directed Solomon to be at once proclaimed and crowned, and admitted to the real exercise of the sovereign power. Adonijah then saw that all was lost, and fled to the altar, which he refused to leave without a promise of pardon from King Solomon. This he received, but was warned that any further attempt of the same kind would be fatal to him. Accordingly, when, some time after the death of David, Adonijah covertly endeavoured to reproduce his claim through a marriage with Abishag, the virgin widow of his father [ABISHAG], his design was at once penetrated by the king, by whose order he was instantly put to death (1 Kings i. ii. 13-25).—J. K.

2. A Levite, who was one of those appointed by Jehoshaphat to teach the people the law (2 Chron. xvii. 8). 3. A chief of the people in the time of Ezra (Neh. x. 16).—W. L. A.

ADONIRAM (אֲדוֹנִירָם; *lord of height*, i. q. *high lord*; Sept. Ἀδωνιράμ, 1 Kings iv. 6). This name is exhibited in the contracted form of ADORAM (אֲדוֹרָם) in 2 Sam. xx. 24; 1 Kings xii. 18; and of Hadoram (הַדּוֹרָם) in 2 Chron. x. 18.

A person of this name is mentioned as receiver-general of the imposts in the reigns of David, Solomon, and Rehoboam. Commentators have been at a loss to determine whether the office was held by one person for so long a period, or by two or three persons of the same name. It appears very unlikely that even two persons of the same name should successively bear the same office, in an age when no example occurs of the father's name being given to his son. We find also that not more than forty-seven years elapse between the first and last mention of the Adoniram who was 'over the tribute;' and as this, although a long term of service, is not too long for one life, and as the person who held the office in the beginning of Rehoboam's reign had served in it long enough to make himself odious to the people, it appears on the whole most probable that one and the same person is intended throughout. When the ten tribes seceded from the house of David, and made Jeroboam king, Rehoboam sent Adoniram among them for the purpose, we may presume, of collecting the usual imposts, but the people rose upon him, and stoned him till he died. Rehoboam, who was not far off, took warning by his fate, and, mounting his chariot, returned with all speed to Jerusalem (1 Kings xii. 18).—J. K.

ADONI-ZEDEK (אֲדוֹנִי־צֶדֶק; Sept. Ἀδωνι-βεζέκ, confounding him with Adonibezeek). The name denotes *lord of justice*, i. e. *just lord*, but some would rather have it to mean *king of Zedek*. He was the king of Jerusalem when the Israelites invaded Palestine; and the similarity of the name to that of a more ancient king of (as is supposed) the same place, Melchi-zedek (*king of justice*, or *king of Zedek*), has suggested that Zedek was one of the ancient names of Jerusalem. Be that as it may, this Adonizedek was the first of the native princes that attempted to make head against the invaders. After Jericho and Ai were taken, and the Gibeonites had succeeded in forming a treaty with the Israelites, Adonizedek was the first to rouse himself from the stupor which had fallen on the Canaanites (Josh. x. 1, 3); and he induced four other Amoritical kings, those of Hebron, Jarmuth, Lachish, and Eglon, to join him in a confederacy against the enemy. They did not, however, march directly against the invaders, but went and besieged the Gibeonites, to punish them for the discouraging example which their secession from the common cause had afforded. Joshua no sooner heard of this than he marched all night from Gilgal to the relief of his allies; and falling unexpectedly upon the besiegers, soon put them to utter rout [JOSHUA]. Adonizedek and his confederates having been taken, the Hebrew chiefs set their feet upon the necks of the prostrate monarchs—an ancient mark of triumph, of which the monuments of Assyria and Egypt still afford illustrations. They were then slain, and their bodies hung on trees until the evening, when, as the law forbade a longer exposure of the dead (Deut. xxi. 23), they were taken down, and cast into the cave, the mouth of which was filled up with large stones,

which remained long after (Josh. x. 1-27). The severe treatment of these kings by Joshua has been censured and defended with equal disregard of the real circumstances, which are, that the war was avowedly one of extermination, no quarter being given or expected on either side; and that the war-usages of the Jews were neither worse nor better than those of the people with whom they fought, who would most certainly have treated Joshua and the other Hebrew chiefs in the same manner, had they fallen into their hands.—J. K.

ADOPTION. The Old Testament does not contain any word equivalent to this; and it may be doubted whether the act occurs in any form answering to the word. The New Testament has the word *υιοθεσια* often (Rom. viii. 15, 23; ix. 4; Gal. iv. 5; Eph. i. 5); but no example of the act occurs. The term itself is well defined, and the act described, in the *literal* signification of the Greek word. It is the *placing as a son* of one who is not so by birth.

The practice of adoption had its origin in the desire for male offspring among those who have, in the ordinary course, been denied that blessing, or have been deprived of it by circumstances. This feeling is common to our nature; but its operation is less marked in those countries where the equalizing influences of high civilization lessen the peculiar privileges of the paternal character, and where the security and the well-observed laws by which estates descend and property is transmitted, withdraw one of the principal inducements to the practice. If found at all, then, in the Bible we may look for instances in the patriarchal period. The law of Moses, by settling the relations of families and the rules of descent, and by formally establishing the Levirate law, which in some sort secured a representative posterity even to a man who died without children, would necessarily put a check upon this custom. The allusions in the New Testament are mostly to practices of adoption which then existed among the Greeks and Romans, and rather to the latter than to the former; for among the more highly civilized Greeks adoption was less frequent than among the Romans. In the East the practice has always been common, especially among the Semitic races, in whom the love of offspring has at all times been strongly manifested. And here it may be observed that the additional and peculiar stimulus which the Hebrews derived from the hope of giving birth to the Messiah, was inoperative with respect to adoption, through which that privilege could not be realized.

It is scarcely necessary to say that adoption was confined to sons. The whole Bible history affords no example of or allusion to the adoption of a female; for the Jews certainly were not behind any Oriental nation in the feeling expressed in the Chinese proverb—'He is happiest in daughters who has only sons' (*Mém. sur les Chinois*, t. x. 149).

As instances of adoption amongst the patriarchs, the act of Sarah in giving Hagar to Abraham, and of Rachel and Leah giving their maids to Jacob, so as to raise up children to themselves, have been adduced; but clearly these were not in any proper sense acts of adoption, though in this way the greatest possible approximation to a natural relation was produced. The child was the son of the husband, and, the mother being the property of the wife, the

progeny must be her property also; a fact indicated by the statement that, at the time of birth, the handmaid brought forth her child 'upon the knees' of her mistress (Gen. xxx. 3). Strange as this custom may seem, it is in accordance with the notions of *representation* which we find very prevalent in analogous states of society. In this case the vicarious bearing of the handmaid for the mistress was as complete as possible; and the sons were regarded as fully equal in right of heritage with those by the legitimate wife. This privilege could not, however, be conferred by the adoption of the wife, but by the natural relation of such sons to the husband. A curious fact is elicited by the peculiar circumstances in Sarah's case, which were almost the only circumstances that could have arisen to try the question, whether a mistress retained her power, as such, over a female slave whom she had thus vicariously employed, and over the progeny of that slave, even though by her own husband. The answer is given, rather startlingly, in the affirmative in the words of Sarah, who, when the birth of Isaac had wholly changed her feelings and position, and when she was exasperated by the offensive conduct of Hagar and her son, addressed her husband thus, 'Cast forth this *bondswoman* and her son; for *the son of this bondswoman* shall not be heir with *my son*, even with Isaac' (Gen. xxi. 10).

The case of Abraham's regarding one of his servants as his heir has also been adduced as an instance of adoption; and this may possibly have been the case, though the mere fact that one born in his house was his heir by no means proves that he was his adopted son. The practice of slave adoption existed, however, among the Romans; and, as such, is more than once referred to by St. Paul (Rom. viii. 15; Gal. iv. 5, 6), the transition from the condition of a slave to that of a son, and the privilege of applying the tender name of 'Father' to the former 'Master,' affording a beautiful illustration of the change which takes place from the bondage of the law to the freedom and privileges of the Christian state.

The act of Jacob in placing his grandsons by Joseph on an equality with his sons, as if they had been his own children, is a nearer approach to a case of adoption; though still the difference is great between this and the act to which the term adoption is usually applied.

The adoption of Moses by Pharaoh's daughter (Exod. ii. 1-10) is an incident rather than a practice; and besides it cannot be held as any evidence of patriarchal usage in this matter.

The right of a man who married an heiress to represent her in the family genealogy, was not a case of adoption proper, but a right secured by the law of property.

The following are among the foreign customs connected with adoption which are supposed to be alluded to in the New Testament. In John viii. 36, 'If the Son shall make you free, ye shall be free indeed,' is supposed by Grotius and other commentators to refer to a custom in some of the cities of Greece, and elsewhere, called *αδελφοθεσια*, whereby the son and heir was permitted to adopt brothers, and admit them to the same rights which he himself enjoyed. But it seems more likely that the reference was to the more familiar Roman custom, by which the son, after his father's death, often made free such as were born slaves in his house (Theophil. Antecensor, *Institut. Imp. Justinian.* i.

6, 5). In Rom. viii. 23, *υιοθεσίαν ἀπεκδεχόμενοι*, 'anxiously waiting for the adoption,' the former word appears to be used in a sense different from that which it bears in ver. 15, and to signify the *consummation* of the act there mentioned; in which point of view it is conceived to apply to the twofold ceremony among the Romans. The one was the private act between the parties; and if the person to be adopted was not already the slave of the adopter, this private transaction involved the *purchase of him from his parents*, when practicable. In this manner Caius and Lucius were purchased from their father Agrippa before their adoption by Augustus. The other was the public acknowledgment of that act on the part of the adopter, when the adopted person was solemnly avowed and declared to be his son. The peculiar force and propriety of such an allusion in an epistle to the *Romans* must be very evident.

In Gal. iv. 5, 6, there is a very clear allusion to the privilege of adopted slaves to address their former master by the endearing title of *Abba*, or *Father*. Selden has shewn that slaves were not allowed to use this word in addressing the master of the family to which they belonged, nor the corresponding title of *Mama*, mother, when speaking to the mistress of it (*De Succ. in Bona Defunct. secund. Hebr. c. iv.*)

A more minute investigation than would here be in place, might discover other allusions to the custom of adoption. The ideas and usages connected with the adoption of an official successor are considered elsewhere. [KINGS, PRIESTS, PROPHETS.]

ADORAIM (אָדוֹרַיִם; Sept. Ἀδωραῖμ), a town in the south of Judah, enumerated along with Hebron and Mareshah as one of the cities fortified by Rehoboam (2 Chron. xi. 9). Under the name of Adora it is mentioned in the Apocrypha (1 Macc. xiii. 20), and also often by Josephus *Antiq.* viii. 10, I; xiii. 6, 4; 15, 4; *Bell. Jud.* i. 2, 6; 8, 4), who usually connects Adora with Maressa, as cities of the later Idumæa. It was captured by Hyrcanus at the same time with Maressa, and rebuilt by Gabinius (*Joseph. Antiq.* xiii. 9, 1; xiv. 5, 3). This town does not occur in any writer after Josephus, until the recent researches of Dr. Robinson, who discovered it under the name of Dura, the first feeble letter having been dropped. It is situated five miles W. by S. from Hebron, and is a large village, seated on the eastern slope of a cultivated hill, with olive-groves and fields of grain all around.—J. K.

ADORAM. [ADONIRAM.]

ADORATION. [ATTITUDES.]

ADRAMMELECH (אֲדַרְמֶלֶךְ; Ἀδραμέλεχ) is mentioned, together with Anammelech, in 2 Kings xvii. 31, as one of the idols whose worship the inhabitants of Sepharvaim established in Samaria, when they were transferred thither by the king of Assyria, and whom they worshipped by the sacrifice of their children by fire. This constitutes the whole of our certain knowledge of this idol. With regard to the etymology of the name, the two most probable modes of interpretation are those which assume, either that, as the latter half of the word is evidently Semitic, the former is so too, and that it means *the magnificence of the king* (and this is the view which Gesenius now favours); or, according to a suggestion first made by Reland (in his *Dissertat.*

Miscell. ii. 113), that the former member is Assyrian, and that the word means *the king of fire*. It is to be observed that, although it has been disputed to what family of languages the Assyrian belongs, some modern scholars incline to consider it as Medo-Persian (Gesenius, *Geschichte der Hebr. Sprache*, p. 62), and that, in this case, the position of that member of the compound which would be dependent on the other as the genitive, is exactly the converse of that which is necessary in Hebrew and the other Syro-Arabian languages. As to the figure under which this idol was worshipped, the Babylonian Talmud (cited at length in Carpov's *Apparatus*, p. 516) asserts that he was adored under that of a *mule*; whereas Kimchi says it was under that of a *peacock*; statements upon which little reliance can be placed. There is greater unanimity in the opinion that the power adored under this name was one of the heavenly bodies, in general accordance with the astrological character of the Assyrian idolatry (Gesenius, *Fesata*, iii. 327, seq.) Selden (*De Diis Syris*, i. 6) and others have identified him with Moloch, chiefly on the ground that the sacrifice of children by fire, and the general signification of the name, are the same in both. Authorities of nearly equal weight may be adduced for the opinion that Adrammelech represents the planet *Saturn*, or the *Sun*: the kind of sacrifice being in favour of the former: the etymology of the name in favour of the latter. [MOLOCH.]

Selden has also maintained (*De Diis Syris*, ii. 9) that Adrammelech and Anammelech are only names of one and the same idol. The contrary, however, is asserted by most ancient and modern authorities. No argument for their identity can be drawn from the *kethib* in 2 Kings xvii. 31, because the singular אֱלֹהִים is not found in *prose* prior to the Captivity (and even if it were, it would be *defectively* written here, of which there is only one instance in our present text, unless when it has a prefix or suffix). Besides, upwards of seventy MSS. and several early editions read the plural אֱלֹהִים in the text here (*De Rossi, Var Lect.* ad loc.); and it is also the *keri* of our printed copies.—J. N.

2. One of the sons and murderers of Sennacherib, king of Assyria (2 Kings xix. 37; Isaiah xxxvii. 38). This name, as borne by two Assyrian kings anterior to Sennacherib, has been deciphered in the Nineveh inscriptions (Layard, *Nin. and Bab.* p. 623; Rawlinson, *Outlines of Assyrian History*; see also Rev. G. Rawlinson, *Bampton Lect.* p. 143).—W. L. A.

ADRAMYTTIUM (Ἀδραμύττιον), a sea-port town in the province of Mysia in Asia Minor, opposite the isle of Lesbos, and an Athenian colony (Strabo, xiii. p. 606; Herod. vii. 42). It is mentioned in Scripture only (Acts xxvii. 2) from the fact that the ship in which Paul embarked at Cæsarea as a prisoner on his way to Italy, belonged to Adramyttium. It was rare to find a vessel going direct from Palestine to Italy. The usual course, therefore, was to embark in some ship bound to one of the ports of Asia Minor, and there go on board a vessel sailing for Italy. This was the course taken by the centurion who had charge of Paul. The ship of Adramyttium took them to Myra in Lycia, and here they embarked in an Alexandrian vessel bound for Italy. Some commentators (Hammond, Grotius, Witsius, etc.) strangely suppose

that *Adrametum* in Africa (Plin. v. 3; Ptol. iv. 3) was the port to which the ship belonged. *Adramyttium* is still called '*Adramyt*.' It is built on a hill, contains about 1500 houses, and is still a place of some commerce (Turner, *Tour*, iii. 265).—J. K.

ADRIA, ADRIAS (Ἀδρίας, Acts xxvii. 27). The modern Adriatic is the gulf lying between Italy on one side, and the coasts of Dalmatia and Albania on the other. But in St. Paul's time, *Adrias* meant all that part of the Mediterranean between Crete and Sicily. Thus Ptolemy (iii. 16) says that Sicily was bounded on the east by the Adriatic, and that Crete was bounded by the Adriatic on the west; and Strabo (ii. p. 185; vii. p. 488) says that the Ionian gulf was a part of what was in his time called the Adriatic Sea. The fact is of importance, as relieving us from the necessity of finding the island of Melita, on which Paul was shipwrecked, in the present Adriatic gulf; and consequently removing the chief difficulty in the way of the identification of that island with the present Malta. To this use it has been skilfully applied by Dr. Falconer in his tractate *On the Voyage of St. Paul*.—J. K.

ADRICHIOMIUS, CHRISTIAN, a Dutch Roman Catholic priest, was born at Delft in 1533, and died at Cologne, whither he had retired, on the 20th of June 1585. His most celebrated work is the *Theatrum Terræ Sanctæ*, with geographical maps, Colon. 1590, 1593, 1600, 1613, 1623, 1682, in folio. It contains very minute descriptions of places mentioned in Scripture, drawn chiefly from the writings of the Fathers and the classics.

ADRIEL (אֲדִרְיֵאל, *the flock of God*; Sept.

Ἀδριήλ), the person to whom Saul gave in marriage his daughter Merab, who had been originally promised to David (1 Sam. xviii. 19). Five sons sprang from this union, who were taken to make up the number of Saul's descendants, whose lives, on the principle of blood-revenge, were required by the Gibeonites to avenge the cruelties which Saul had exercised towards their race. In 2 Sam. xxi. 8, the name of *Michal* occurs as the mother of these sons of Adriel; but as it is known that Merab, and not Michal, was the wife of Adriel, and that Michal had never any children (2 Sam. vi. 23), there only remains the alternative of supposing either that Michal's name has been substituted for Merab's by some ancient copyist, or that the word which properly means *bare* ('which Michal *bare* unto Adriel'), should be rendered *brought up* or educated ('which Michal *brought up* for Adriel'). The last is the choice of our public version, and also of the Targum. The Jewish writers conclude that Merab died early, and that Michal adopted her sister's children, and brought them up for Adriel (*T. Bab.*

Sanhed. fol. 19, 2). But, as the word יָרָה cannot take any other sense than '*she bare*,' the change of names seems the only explanation. [Codd. Kenn. 198, 250, read מֵרַב].—J. K.

ADULLAM (אָדּוּלָאָם; Sept. Ὀδωλλάμ), an old city (Gen. xxxviii. 1, 12, 20) in the plain country of the tribe of Judah (Josh. xv. 35), and one of the royal cities of the Canaanites (Josh. xii. 15). It was one of the towns which Rehoboam fortified (2 Chron. xi. 7; Micah i. 15), and is mentioned after the Captivity (Neh. xi. 30; 2 Macc. 12, 38). Eusebius and Jerome state that it existed in their time as a large village, ten miles to the east of

Eleutheropolis; but they follow the Sept. in confounding it with Eglon (עִגְלוֹן), whereas it is certain that these were different places, and had distinct kings in the time of Joshua (xii. 12, 15). It is evident that Adullam was one of the cities of 'the valley' or plain between the hill country of Judah and the sea; and from its place in the lists of names (especially 2 Chron. xi. 7), it appears not to have been far from the Philistine city of Gath. This circumstance would suggest that the 'cave of Adullam' (1 Sam. xxii. 1), to which David withdrew immediately from Gath, was near the city of that name. But there is no passage of Scripture which connects the city and the cave, and it is certainly not in a plain that one would look for a cave capable of affording a secure retreat to 400 men; nor has any such cave been found in that quarter. It is therefore far from improbable that the cave of Adullam was in the mountainous wilderness in the east of Judah towards the Dead Sea, where such caves occur, and where the western names (as Carmel) are sometimes repeated. This conjecture is favoured by the fact that the usual haunts of David were in this quarter; whence he moved into the land of Moab, which was quite contiguous, whereas he must have crossed the whole breadth of the land, if the cave of Adullam had been near the city of that name. Other reasons occur which would take too much room to state; but the result is, that there appear at length good grounds for the local tradition which fixes the cave on the borders of the Dead Sea, although there is no certainty with regard to the particular cave usually pointed out. The cave so designated is at a point to which David was far more likely to summon his parents, whom he intended to take from Bethlehem into Moab, than to any place in the western plains. It is about six miles south-west of Bethlehem, in the side of a deep ravine (Wady Khureitun) which passes below the 'Frank mountain' [so called] on the south. It is an immense natural cavern, the mouth of which can be approached only on foot along the side of the cliff. Irby and Mangles, who visited it without being aware that it was the reputed cave of Adullam, state that it 'runs in by a long winding, narrow passage, with small chambers or cavities on either side. We soon came to a large chamber with natural arches of great height; from this last there were numerous passages, leading in all directions, occasionally joined by others at right angles, and forming a perfect labyrinth, which our guides assured us had never been perfectly explored, the people being afraid of losing themselves. The passages are generally four feet high by three feet wide, and were all on a level with each other. There were a few petrifications where we were: nevertheless the grotto was perfectly clean, and the air pure and good' (*Travels*, pp. 340, 341; see also Thomson, *The Land and the Book*, ch. 39, vol. ii. p. 424). It seems probable that David, as a native of Bethlehem, must have been well acquainted with this remarkable spot, and had probably often availed himself of its shelter when out with his father's flocks. It would, therefore, naturally occur to him as a place of refuge when he fled from Gath: and his purpose of forming a band of followers was much more likely to be realized here, in the neighbourhood of his native place, than in the westward plain, where the city of Adullam lay. These circumstances have considerable weight when taken in connection with what has already been adduced;

but the question is one which there is no means of deciding with certainty.—J. K.

ADULTERY. In the common acceptance of the word, adultery denotes the sexual intercourse of a married woman with any other man than her husband, or of a married man with any other woman than his wife. But the crime is not understood in this extent among Eastern nations, nor was it so understood by the Jews. With them, adultery was the act whereby any married man was exposed to the risk of having a spurious offspring imposed upon him. An adulterer was, therefore, any man who had illicit intercourse with a married or betrothed woman; and an adulteress was a betrothed or married woman who had intercourse with any other man than her husband. An intercourse between a married man and an unmarried woman was not, as with us, deemed adultery, but fornication—a great sin, but not, like adultery, involving the contingency of polluting a descent, of turning aside an inheritance, or of imposing upon a man a charge which did not belong to him. Adultery was thus considered a great social wrong, against which society protected itself by much severer penalties than attended an unchaste act not involving the same contingencies.

It will be seen that this Oriental limitation of adultery is intimately connected with the existence of polygamy. If adultery be defined as a breach of the marriage covenant, then, where the contract is between one man and one woman, as in Christian countries, the man as much as the woman infringes the covenant, or commits adultery, by every act of intercourse with any other woman: but where polygamy is allowed—where the husband may marry other wives, and take to himself concubines and slaves, the marriage contract cannot and does not convey to the woman a legal title that the man should belong to her alone. If, therefore, a Jew associated with a woman who was not his wife, his concubine, or his slave, he was guilty of unchastity, but committed no offence which gave a wife reason to complain that her legal rights had been infringed. If, however, the woman with whom he associated was the wife of another, he was guilty of adultery—not by infringing his own marriage covenant, but by causing a breach of that which existed between that woman and her husband (Michaelis, *Mosaïches Recht*, art. 259; Jahn's *Archäologie*, th. i. b. 2, § 183). By thus excluding from the name and punishment of adultery, the offence which did not involve the enormous wrong of imposing upon a man a supposititious offspring, in a nation where the succession to landed property went entirely by birth, so that a father could not by his testament alienate it from any one who was regarded as his son—the law was enabled, with less severity than if the inferior offence had been included, to punish the crime with death. It is still so punished wherever the practice of polygamy has similarly operated in limiting the crime—not, perhaps, that the law expressly assigns that punishment, but it recognises the right of the injured party to inflict it, and, in fact, leaves it, in a great degree, in his hands. Now, death was the punishment of adultery before the time of Moses; and if he had assigned a less punishment, his law would have been inoperative, for private vengeance, sanctioned by usage, would still have inflicted death. But by adopting it into the law, those restrictions

were imposed upon its operation which necessarily arise when the calm inquiry of public justice is substituted for the impulsive action of excited hands. Thus, death would be less frequently inflicted and that this effect followed seems to be implied in the fact that the whole biblical history offers no example of capital punishment for the crime. Indeed, Lightfoot goes further, and remarks, 'I do not remember that I have anywhere, in the Jewish Pandect, met with an example of a wife punished for adultery with death. There is mention (*T. Hieros. Sanhed.* 242) of the daughter of a certain priest burned for committing fornication in her father's house; but she was not married' (*Hor. Hebr.* ad Matt. xix. 8). Eventually, divorce superseded all other punishment. There are indeed some grounds for thinking that this had happened before the time of Christ, and we throw it out as a matter of inquiry, whether the Scribes and Pharisees, in attempting to entrap Christ in the matter of the woman taken in adultery, did not intend to put him in the dilemma of either declaring for the revival of a practice which had already become obsolete, but which the law was supposed to command; or, of giving his sanction to the apparent infraction of the law which the substitution of divorce involved (John viii. 1-11). In Matt. v. 32, Christ seems to assume that the practice of divorce for adultery already existed. In later times it certainly did; and Jews who were averse to part with their adulterous wives, were compelled to put them away (Maimon. in *Gerushin*, c. 2). In the passage just referred to, our Lord does not appear to render divorce compulsory, even in case of adultery; he only permits it in that case alone, by forbidding it in every other.

In the law which assigns the punishment of death to adultery (Lev. xx. 10), the mode in which that punishment should be inflicted is not specified, because it was known from custom. It was not, however, *strangulation*, as the Talmudists contend, but *stoning*, as we may learn from various passages of Scripture (e. g. Ezek. xvi. 38, 40; John viii. 5); and as, in fact, Moses himself testifies, if we compare Exod. xxxi. 14; xxxv. 2; with Num. xv. 35, 36. If the adulteress was a bondmaid, the guilty parties were both scourged with a leathern whip (בקרר), the number of blows not exceeding forty. In this instance the adulterer, in addition to the scourging, was subject to the further penalty of bringing a trespass offering (a ram) to the door of the tabernacle, to be offered in his behalf by the priest (Lev. xix. 20-22). Those who wish to enter into the reasons of this distinction in favour of the bondmaid, may consult Michaelis (*Mosaïches Recht*, art. 264). We only observe that the Moslem law, derived from the old Arabian usage, only inflicts upon a slave, for this and other crimes, half the punishment incurred by a free person.

It seems that the Roman law made the same important distinction with the Hebrew, between the infidelity of the husband and of the wife. 'Adultery' was defined by the civilians to be the violation of another man's bed (*violatio tori alieni*); so that the infidelity of the husband could not constitute the offence. The more ancient laws of Rome, which were very severe against the offence of the wife, were silent as to that of the husband. The offence was not capital until made so by Constantine, in imitation of the Jewish law; but under Leo and Marcian the penalty was abated to

perpetual imprisonment, or cutting off the nose; and, under Justinian, the further mitigation was granted to the woman, that she was only to be scourged, to lose her dower, and to be shut up in a convent.

The punishment of cutting off the nose brings to mind the passage in which the prophet Ezekiel (xxiii. 25), after, in the name of the Lord, reproving Israel and Judah for their adulteries (*i. e.* idolatries) with the Assyrians and Chaldeans, threatens the punishment—'thy shall take away thy nose and thy ears,' which Jerome states was actually the punishment of adultery in those nations. One or both of these mutilations, most generally that of the nose, were also inflicted by other nations, as the Persians and Egyptians, and even the Romans; but we suspect that among the former, as with the latter, it was less a judicial punishment than a summary infliction by the aggrieved party. It is more than once alluded to as such by the Roman poets: thus Martial asks,

'Quis tibi persuasit nares abscondere mœcho?' and in Virgil (*Æn.* vi. 496) we read—

'Ora, manusque ambas, populataque tempora
raptis
Auribus, et truncas inhonesto vulnere nares.'

It would also seem that these mutilations were more usually inflicted on the male than the female adulterer. In Egypt, however, cutting off the nose was the female punishment, and the man was beaten terribly with rods (Diod. Sic. i. 89, 90). The respect with which the conjugal union was treated in that country in the earliest times is manifested in the history of Abraham (Gen. xii. 19).

ADULTERY, TRIAL OF. It would be unjust to the spirit of the Mosaic legislation to suppose that the trial of the suspected wife by the bitter water, called the *Water of Jealousy*, was by it first produced. It is to be regarded as an attempt to mitigate the evils of, and to bring under legal control, an old custom which could not be entirely abrogated. The original usage, which it was designed to mitigate, was probably of the kind which we still find in Western Africa, where in cases of murder, adultery, or witchcraft, the accused is required to drink for purgation from the charge of a mixture called the red water. The differences, however, between this and the usage sanctioned by Moses are marked, and, in fact, all-important. According to the usage in Africa, if a party is accused and denies the crime, he is required to drink the red water, and, on refusing, is deemed guilty of the offence. The trial is so much dreaded that innocent persons often confess themselves guilty, in order to avoid it. And, yet, the immediate effect is supposed to result less from the water itself than from the terrible oath with which it is drunk; for there are instances which shew that the draught is the seal and sanction of the most solemn oath which barbarous imaginations have been able to devise. The person who drinks the red water invokes the Fetish to destroy him if he is really guilty of the offence with which he is charged. The drink is made by an infusion in water of pieces of a certain tree, or of herbs. It is highly poisonous in itself; and, if rightly prepared, the only chance of escape is the rejection of it by the stomach, in which case the party is deemed innocent; as he also is if, being retained, it has no sensible effect, which can only be the case when

the priests (so to call them), who have the management of the matter, are influenced by private considerations, or by reference to the probabilities of the case, to prepare the draught with a view to acquittal. The imprecations upon the accused if he be guilty, are repeated in an awful manner by the priests, and the effect is watched very keenly. If the party seems affected by the draught, like one intoxicated, and begins to foam at the mouth, he is considered undoubtedly guilty, and is slain on the spot; or else he is left to the operation of the poisonous draught, which causes the belly to swell and burst, and occasions death (Bahot, p. 126; Bosman, p. 148; Artus, in De Bry, vi. 62; Villault, p. 191; Corry's *Windward Coast*, p. 71; *Church Missionary Paper*, No. 17; Davis's *Journal*, p. 24).

The resemblances and the differences between this and the trial by bitter water, as described in Num. v. 11-31, will be apparent on comparison. The object, namely, to discover a crime incapable of being proved by evidence, is the same; the oath and a draught as its sanction, are essentially the same; and similar also are the effects upon the guilty, but as the draught prescribed by Moses was composed of perfectly harmless ingredients, whereas that used in Africa is poisonous, these effects were in the former case entirely judicial, whereas in the latter they are natural from the action of the poison. Similar practices may be produced from other quarters. Hesiod [*Theog.* 775-95] reports that when a falsehood had been told by any of the gods, Jupiter was wont to send Iris to bring some water out of the river Styx in a golden vessel; upon this an oath was taken, and if the god swore falsely, he remained for a whole year without life or motion. There was an ancient temple in Sicily, in which were two very deep basins, called Delli, always full of hot and sulphurous water, but never running over. Here the more solemn oaths were taken; and perjurers were immediately punished most severely (Diod. Sic. xi. 67). This is also mentioned by Aristotle, Silius Italicus, Virgil, and Macrobius; and from the first it would seem that the oath was written upon a ticket and cast into the water. The ticket floated if the oath was true, and sank if it was false. In the latter case the punishment which followed was considered as an act of Divine vengeance.

The result at which we arrive is, that the trial for suspected adultery by the bitter water amounted to this—that a woman suspected of adultery by her husband was allowed to repel the charge by a public oath of purgation, which oath was designedly made so solemn in itself, and was attended by such awful circumstances, that it was in the highest degree unlikely that it would be dared by any woman not supported by the consciousness of innocence. And the fact that no instance of the actual application of the ordeal occurs in Scripture, affords some countenance to the assertion of the Jewish writers—that the trial was so much dreaded by the women, that those who were really guilty generally avoided it by confession; and that thus the trial itself early fell into disuse. And if, as we have supposed, this mode of trial was only tolerated by Moses, the ultimate neglect of it must have been desired and intended by him. In later times, indeed, it was disputed in the Jewish schools, whether the husband was bound to prosecute his wife to this extremity, or whether it was not law

ful for him to connive at and pardon her act, if he were so inclined. There were some who held that he was bound by his duty to prosecute, while others maintained that it was left to his pleasure (*T. Hieros. tit. Sotah, fol. 16, 2*).

From the same source we learn that this form of trial was finally abrogated about forty years before the destruction of Jerusalem. The reason assigned is, that the men themselves were at that time generally adulterous; and that God would not fulfil the imprecations of the ordeal oath upon the wife while the husband was guilty of the same crime (John viii. 1-8).

ADULTERY, in the symbolical language of the Old Testament, means idolatry and apostasy from the worship of the true God (Jer. iii. 8, 9; Ezek. xvi. 32; xxiii. 37; also Rev. ii. 22). Hence an *Adulteress* meant an apostate church or city, particularly 'the daughter of Jerusalem,' or the Jewish church and people (Is. i. 21; Jer. iii. 6, 8, 9; Ezek. xvi. 22; xxiii. 7). This figure resulted from the primary one, which describes the connection between God and his separated people as a marriage between him and them. By an application of the same figure, 'An adulterous generation' (Matt. xii. 39; xvi. 4; Mark viii. 38) means a faithless and impious generation.—J. K.

ADUMMIM (אֲדַמִּים; Sept. Ἀδαμμιν; various readings are Ἀδομμιν, Ἀδομμ, and Ἐδωμμ), a place which is only twice named in Scripture. The first instance is Josh. xv. 7, where, from the context, it seems to indicate the border between Judah and Benjamin, and that it was an ascending road (מַעְלָה אֲדַמִּים) between Gilgal (and also Jericho) and Jerusalem. The second notice (Josh. xviii. 17) adds no further information, but repeats 'the ascent to Adummim.' Most commentators take the name to mean the *place of blood* (from the Heb. אֲדָמָה), and follow Jerome, who finds the place in the dangerous or mountainous part of the road between Jerusalem and Jericho, and supposes that it was so called from the frequent effusion of blood by the robbers, by whom it was much infested. In his time it was called *Maledomim*; in Greek, ἀνάβασις πύρρων; in Latin *Ascensus ruforum sive rubentium*.^{*} These are curious interpretations of the original word, which is most likely from אֲדָמָה, and merely denotes the redness of the soil or rock, though this must be regarded only as a probable conjecture. [Stanley (*Sin. and Pal.* p. 424) suggests that the name is derived from some tribe of red men, the early occupants of the district. This is more probable, as the rocks there are of white limestone.] In all ages probably it was the resort of robbers; indeed, the character of the road was so notorious, that Christ lays the scene of the parable of the good Samaritan (Luke x.) upon it; and Jerome informs us that Adummim or Adommim was believed to be the place where the traveller (taken as a real person) 'fell among thieves.' He adds that a fort and garrison was maintained here for the safeguard of travellers (*in Loc. Heb. ADDOMIM, et in Epit. Paula*). In the sixteenth and seventeenth centuries, the ruins of a castle, supposed to be the same as that mentioned by Jerome, remained (*Zuallart. iv. 30*; but Nau

(*Voyage Nouveau de la Terre Sainte, p. 349*) perceived that this castle belonged to the time of the Crusades. Near this spot was a khan, called the 'Samaritan's khan' (*le Khân du Samaritain*), in the belief that it was the 'inn' to which the Samaritan brought the wounded traveller. The travellers of the present century mention the spot and neighbourhood nearly in the same terms as those of older date; and describe the ruins as those of 'a convent and a khan' (Hardy, 193). They all represent the road as still infested by robbers, from whom some of them (as Sir F. Henniker) have not escaped without danger. The place thus indicated is about eight miles from Jerusalem, and four from Jericho.—J. K.

ADVENT, THE SECOND (ἡ παρουσία τοῦ υἱοῦ τοῦ ἀνθρώπου Matt. xxiv. 27, τοῦ κυρίου 1 Thes. iii. 13), a phrase used in reference to the revelation of Christ from heaven, predicted in the New Testament; his 'appearing, the second time, without sin, unto salvation.' This stupendous event was often foretold by Christ himself, and is prominently exhibited throughout the Apostolic writings. 'The Son of Man (said Jesus) shall come in the glory of his Father with his angels' (Matt. xvi. 27). After his ascension, the announcement was made to his disciples: 'This same Jesus . . . shall so come in like manner as ye have seen him go into heaven' (Acts i. 11). 'Behold, he cometh with clouds (says John), and every eye shall see him' (Rev. i. 7). 'When he shall appear, we shall be like him' (1 John iii. 2). St. Paul represents Christians as 'looking,' and 'waiting for the coming of the Lord Jesus Christ' (1 Cor. i. 7). As to the *time* of his coming, we find him saying to his disciples: 'There be some standing here who shall not taste of death, till they see the Son of Man coming in his kingdom' (Matt. xvi. 28). 'Ye shall not have gone over the cities of Israel, until the Son of Man be come' (Matt. x. 23). 'They shall see the Son of Man coming in the clouds of heaven with power and great glory. . . . This generation shall not pass away till all these things be fulfilled' (Matt. xxiv. 30-34). 'The coming of the Lord draweth nigh' (James v. 8). As to the *purpose* of his coming, we read:—'Then shall he reward every man according to his works' (Matt. xvi. 27). 'The Lord himself shall descend from heaven with a shout . . . and the dead in Christ shall rise first' (1 Thes. iv. 16). 'He shall judge the quick and the dead at his appearing and his kingdom' (2 Tim. iv. 1). 'Behold, I come quickly, and my reward is with me, to give every man according as his work shall be' (Rev. xxii. 12).

Various opinions have prevailed as to the meaning of these and similar declarations, and as to the time and manner of their accomplishment. In some of the Apostolic churches, as, for instance, at Thessalonica, there were some who regarded the advent as imminent. At any hour Christ might come! That this, however, was not the apostolic belief, is evident from 2 Thes. ii. 3, 4, where St. Paul affirms that 'that day shall not come, except there come a falling away first, and that man of sin be revealed, the son of perdition.' Events were thus to occur, prior to the advent, which rendered its being so near as they supposed impossible.

* ["Qui locus usque hodie vocatur *Maledomim*; et Græce dicitur ἀνάβασις πύρρων, Latine autem appellari potest *Ascensus ruforum*." *De Loc. Heb.*]

Among the early post-apostolic Christians, we find the expectation of the advent becoming blended with that of the millennium, or thousand years of

rest and blessedness anticipated for the Church on the earth. Persecuted by the Pagan oppressor, it was a delightful solace to believers, in those dark and evil days, to regard Christ as being about to come in person to terminate the sufferings of his faithful people, and receive them to be partakers of his glory. Then, at his appearing, his enemies should be overthrown, his departed saints raised from their graves to meet him, and his entire Church exalted to a position of security and triumph, in which they should reign with him over the earth, and thus enjoy a rich prelibation of the everlasting blessedness of heaven. These expectations, as cherished by some, were doubtless characterised by scriptural sobriety and judiciousness; but, in the minds of others, they were tinged with much that was fanciful and extravagant, and that was evidently derived rather from the Jewish synagogue, than from the school of the apostles.*

After the triumph of Christianity over Paganism, at the opening of the fourth century, these views began to decline. Basking in the sunshine of imperial favour, and giving law from the throne of the Cæsars, the Church seemed to herself to have already entered on the millennial rest. The advent, therefore, came to be regarded as an event which should follow, not precede, the millennium. It was thus projected into the far distant future, and was to be the prelude to the consummation of all things.

Some of the early reformers, among whom was Luther, entertained a view similar, in some respects, to this. To them, at that advanced period of the world's history, it seemed that the millennium must have already run its course, and as if, therefore, the coming of Christ and the end of the world were nigh. Others, however, recognizing in Papal Rome the mystic Babylon of the Apocalypse, and finding themselves engaged in the very heat of conflict with it, and unable, moreover, to discern, in the dark ages that had preceded, anything like the blessed rest they anticipated for the Church, were led to the adoption of views more in accordance with those generally entertained at the present day. These may be epitomized as follows:—

There are many earnest and devout Christians who maintain it to be the duty of the Church to anticipate the advent as nigh, and to live in daily expectation of the coming of her Lord. Her attitude (say they) should be that expressed in the words of the apostle: 'Looking for the blessed hope, and the glorious appearing of the great God and our Saviour Jesus Christ, who gave himself for us' (Titus ii. 13). The command of Christ to his disciples is obligatory on his people—'Be ye 'like unto men that wait for their Lord' (Luke xii. 36). 'Watch, therefore, for ye know not what hour your Lord doth come' (Matt. xxiv. 42).

* Among the orthodox fathers who embraced Chilastic notions may be mentioned Papius (*Euseb. H. E. iii. 39*), Justin Martyr (*Apol. i. 11*; *Dial. cum Tryph. § 80, 81*), Tertullian (*Adv. Haer., v. 33*). These views were keenly opposed by Origen (*Prol. in Canticum Cant., Opp. T. iv., p. 28 D.*; *De Princ. ii. 11, 2, etc.*) Augustine, who at first seemed inclined to Chilastic notions, though in a spiritual sense, ultimately repudiated them (*comp. Sermo 159, Opp. T. v., p. 1060, with De Civit. Dei, Bk. 20, c. 7 ff.*) See Neander, *Ch. Hist., i. 428*; Gieseler, *Eccles. Hist., i. 166, 242, 362*.

But, how (they ask) can the Church maintain this attitude of expectation, if she believes that a thousand years are to elapse before the advent? The advent, therefore, must be *pre-millennial*. Christ will soon appear visibly, to establish his kingdom, and introduce his universal reign. The Church, with her present agencies and instrumentalities, is inadequate to the conversion of the world. Her present work, therefore, is, by the preaching of the gospel to make up the number of the elect. These, at his coming, shall constitute 'the Bride, the Lamb's wife'; that 'glorious Church' which Christ 'shall then present to himself, having neither spot, nor wrinkle, nor any such thing.' Then all his enemies shall be put under his feet. The earth shall be purified by fire, and wickedness consumed out of it. Along with the fulness of the Gentiles, the Jews shall be brought into the Church, and restored to their own land. Then, either in the earthly Jerusalem below, or, as some imagine, in the heavenly Jerusalem visibly manifested above it, Christ will reign with his risen and glorified saints. Then 'all nations whom he has made shall come and worship before him,' and 'all the ends of the earth see the salvation of God.'

There are others to whom these anticipations, fascinating as they are to many, seem based on erroneous interpretations of scripture. Christ's kingdom (they argue) is not a kingdom of the future merely; it has already come. It began when he ascended, and sat down as 'Lord of all' (Acts x. 36) at the right hand of the Father. Then he was 'made head over all things to the Church' (Eph. i. 22). Christ, therefore, reigns now, and 'must reign, till he hath put all enemies under his feet' (1 Cor. xv. 25). 'All power in heaven and on earth' having been 'given' to him, he already possesses all that is requisite for the fulfilment of his purposes, and the extension of his reign, visibly and manifestly, throughout the world. His kingdom, which began to be manifested when, on the day of Pentecost, through the outpouring of the Spirit, multitudes were brought to the obedience of the faith, will come with growing power and fulness till it has come universally, and the Father's 'will is done on earth, even as it is done in heaven.'

As to its being the duty of the Church to be looking and waiting for the coming of her Lord, they maintain that several, at least, of the passages from which this is inferred have been misunderstood, and have reference, not to that real and personal coming which is yet future, but to that spiritual coming, in the exercise of judgment on the Jewish church and nation, which is now past. They affirm, moreover, that even those who maintain this to be the duty of the Church, are themselves unable to fulfil it, inasmuch as, expecting, as they do, certain events to precede the advent, they must necessarily be looking out rather for those events than for the advent which is to follow them. For example, from certain Old Testament prophecies, it is generally maintained by them that, prior to the advent, the Jews, while yet unbelieving, will be restored to their own land; that after dwelling there for a season in peace, and attaining to considerable prosperity, a confederacy of nations will be formed against them; that they will be assailed by the armies of Gog; and that, just in this crisis of their fate, Christ will appear visibly for their deliverance. Then, converted to the faith of the gospel, they will say—'Blessed is he that cometh

in the name of the Lord!' How then, can pre-millennarians, entertaining such expectations, be looking daily for the coming of the Lord? They must necessarily be looking rather for those events which they believe shall precede it. But this is precisely the position of post-millennarians, though the events anticipated by them, including, as they do, the millennium, must occupy a much more lengthened interval of time. The advent, however (say they), is an event of such surpassing interest and importance, that, however far distant in the future it may be, to the eye of faith it should ever appear as nigh. They insist, moreover, on this, as inconsistent with a pre-millennial advent, that there is not, in the New Testament, any passage, having undeniable reference to the advent, in which Christ is said to come for the purpose of reigning on the earth. He is represented as coming to raise the dead, to judge the world, and distribute to men their final awards; but never as coming to establish his kingdom, or begin his reign. Why not? Because (say they) his kingdom is already established, and his reign already begun. The advent, therefore, cannot be pre-millennial. It must be a post-millennial event.

Resembling this view, though, in one important respect, differing from it, is that held by a third class of Christians. Believing that Christ's coming is to follow the millennium, not precede it, they maintain that the character of this era has been altogether misunderstood; that, instead of being a period of rest and triumph for the Church, it is to be a period of trial and conflict; and that, if not already past, it is rapidly hastening to a close. According to this view, the coming of Christ, with the end of all things, is drawing nigh.

This article would be incomplete, were we not to notice another view which has recently been put forth with considerable power, and is now finding acceptance with many. According to this hypothesis, the second advent is past already. Christ himself foretold its nearness. He was to 'come in his kingdom' before some of his disciples 'tasted death;' before they had 'gone over the cities of Israel;' before that generation had 'passed away.' Christ's own declarations regarding his advent (say they) thus invariably either affirmed or implied that it was near. They were fulfilled, partly, in his coming, by the outpouring of his Spirit on the day of Pentecost, to establish his reign among men; and partly in the judgments which, in that generation, fell on the Jewish community, by which the Mosaic economy was abolished, and the age (*αἰών*) or 'world' that then was, brought to a final end. The references to the advent in the 'Acts of the Apostles,' and in the Epistles (they maintain), are but reproductions, somewhat varied, of Christ's own declarations; while, in nearly all of them, it is evident, either from the language employed, or the connection in which it stands, that the writers were looking for the advent before the passing away of the then existing generation. Along with Dr. Owen (see his Sermons on 2 Pet. iii. 11), they imagine the prediction of St. Peter—'the earth and the works that are therein shall be burned up'—to foretell, not the destruction of the world, but the destruction of Judaism, and the passing away of the heavens and earth of the levitical dispensation. Believing the Apocalypse to have been written prior to the destruction of Jerusalem, they think it has reference mainly to that event, and

perhaps, in connection with it, to the overthrow of Pagan Rome.

According to this hypothesis, Christ has already come. He is already seated 'on the throne of his glory, and before him even now are gathered all nations.' The judgment is now going on; the wicked are passing away 'into everlasting punishment, and the righteous into life eternal.' Men become *consciously* the subjects of this judgment, as they pass from the sphere of the visible among unseen and everlasting things.

It will be perceived that this hypothesis leads to the following conclusions:—That scripture nowhere foretells the destruction of our world; that the human race may be propagated on this earth for ever; that if the advent be past already, so also is the resurrection which was to precede it, and which must, therefore, have been a resurrection of souls from Hades, and not of bodies from the grave; or, if a resurrection of bodies, then not a visible resurrection; and finally, that the resurrection now takes place at death, in the emerging from the mortal frame of a body, which, invisible to human eye, is spiritual, incorruptible, and glorious.

Many grave and, apparently, insuperable objections to this hypothesis will at once suggest themselves to the mind of the thoughtful reader, but it is not necessary that these should be stated here. Bickersteth, *Practical Guide to the Prophecies*; Birks, *Outlines of Unfulfilled Prophecy*; Urwick, *The Second Advent of Christ the Blessed Hope of the Church*, Dublin, 1839; Brown *On the Second Advent*; Lyon, *Millennial Studies*; Waldegrave's *Bampton Lectures*; Desprez, *The Apocalypse Fulfilled*; Maurice, *Lectures on the Apocalypse*, etc. —W. P. L.

ADVOCATE (*Παράκλητος*), one who pleads the cause of another; also one who exhorts, defends, comforts, prays for another. It is an appellation given to the Holy Spirit by Christ (John xiv. 16; xv. 26; xvi. 7), and to Christ himself by an apostle (1 John ii. 1; see also Rom. viii. 34; Heb. vii. 25).

In the forensic sense, advocates or pleaders were not known to the Jews until they came under the dominion of the Romans, and were obliged to transact their law affairs after the Roman manner. Being then little conversant with the Roman laws, and with the forms of the jurists, it was necessary for them, in pleading a cause before the Roman magistrates, to obtain the assistance of a Roman lawyer or *advocate*, who was well versed in the Greek and Latin languages (*Otti Spicil. Crim.* p. 325). In all the Roman provinces such men were found, who devoted their time and labour to the pleading of causes and the transacting of other legal business in the provincial courts (*Lamprid. Vit. Alex. Sev.* c. 44). It also appears (*Cic. pro Caelio*, c. 30) that many Roman youths who had devoted themselves to forensic business used to repair to the provinces with the consuls and prætors, in order, by managing the causes of the provincials, to fit themselves for more important ones at Rome. Such an advocate was Tertullus, whom the Jews employed to accuse Paul before Felix (*Acts* xxiv. 1); for although *ἑντάωπος*, the term applied to him, signifies primarily an *orator* or *speaker*, yet it also denotes a pleader or *advocate* (*Kuinoel, Comment.* and Bloomfield, *Recens. Synopt.* ad Act. xxiv. 2). [JUDICATURE.]

ADYTUM, that which is inaccessible or impenetrable; and hence considered as descriptive of the holy of holies in the temple of Jerusalem, and of the innermost chambers, or penetralia, of other edifices accounted sacred, and of the secret places to which the priests only were admitted. It is used metaphorically by ecclesiastical writers; and employed to signify the heart and conscience of a man, and sometimes the deep, spiritual meaning of the Divine word.—H. S.

ÆGYPT. [EGYPT.]

ÆLIA CAPITOLINA. [JERUSALEM.]

ÆNON (Αἰνών, from עֵינָן, *fountain*; Buxt.

Lex. Ch. Rab. Talm. 1601, [but regarded as an intensive of עַיִן by Rosen., De Wette, as a comp. of עַיִן and עֵינָן, *dove-fount*, by Syr. Vers., Meyer, and of עַיִן and עֵינָן, *fish-fount*, by Ar. Vers., Casaubon.]), a place near Salim, where John baptized (John iii. 23). On the situation of Ænon nothing certain has been determined, although Eusebius places it eight Roman miles south of Scythopolis (Bethshan), and fifty-three north-east of Jerusalem. [Robinson found a Salim to the east of Nablus, at which there were two copious springs, and near to this he supposes Ænon to have been. *Res.* ii. 279; iii. 298; comp. Stanley, *Sin. and Pal.* p. 250, 311.]

ÆRA. [CHRONOLOGY.]

ÆTHIOPIA. [ETHIOPIA.]

AFFENDOPULO, CALEB, called also Abē (אבנא), *i. e.* Affendopule ben Elijah, a Jewish rabbi, who flourished at Belgrade and Constantinople in the present century. The name Affendopulo is a compound of the Turkish *effendi* and the Greek *πυλος*, *son*. He wrote סִיפְשֵׁרָה מְאֵמְרוֹת, a commentary on the Song of Solomon and Psalm 119, with introductions and epilogues to each section having reference to the divergence of the Caraites from the Rabbins, Vien. 1830, 4to, besides other works of a polemical character.—W. L. A.

AFFINITY is relationship by marriage, as distinguished from *consanguinity*, which is relationship by blood. Marriages between persons thus related, in various degrees, which previous usage, in different conditions of society, had allowed, were forbidden by the Law of Moses. These degrees are enumerated in Lev. xviii. 7, *sq.* The examples before the law are those of Cain and Abel, who, as the case required, married their sisters. Abraham married Sarah, the daughter or grand-daughter of his father by another wife; and Jacob married the two sisters Leah and Rachel. In the first instance, and even in the second, there was an obvious consanguinity, and only the last offered a previous relationship of affinity merely. So also, in the prohibition of the law, a consanguinity can be traced in what are usually set down as degrees of affinity merely. The degrees of real affinity interdicted are, that a man shall not (nor a woman in the corresponding relations) marry—1. his father's widow (not his own mother); 2. the daughter of his father's wife by another husband; 3. the widow of his paternal uncle; 4. nor his brother's widow if he has left children by her; but, if not, he was bound to marry her to raise up children to his deceased brother [MARRIAGE]. The other restrictions are connected with the condition of polygamy, and they prohibit a man from having

—1. a mother and her daughter for wives at the same time; 2. or two sisters for wives at the same time. These prohibitions have been imported into our canon law. [The passage, Lev. xviii. 18, in which the last of these prohibitions is contained, has been the subject of much discussion in modern times, very different views having been taken of its meaning and intention. By the Canonists it is regarded as forbidding the marrying of two sisters successively, the one after the death of the other; in accordance with their fundamental principle 'quoto gradu aliquis junctus est marito, eodem adfinitatis gradu erit junctus ejus uxori, et contra.' By others it is looked on as designed merely to prohibit the marrying of two sisters at the same time; whilst it implicitly allows the marrying of a wife's sister after her decease. Others, again, regard the injunction as prohibiting polygamy altogether, translating the verse thus, 'Thou shalt not take one wife to another to vex her,' etc., according to a well-known Hebrew idiom by which one thing to another of the same kind is denoted by calling it 'a man to his brother,' or 'a woman to her sister,' comp. Exod. xvi. 15; xxvi. 3, etc. Thus the law, which some regard as expressly forbidding polygamy, is held by others as implicitly sanctioning it; and the law which some regard as prohibiting the marrying of a deceased wife's sister is held by others as implicitly permitting it. This is a strange uncertainty to belong to a law, the first condition of which should be clearness and precision; but the fault rests very much with those who refuse to take the passage in its obvious meaning. Most commentators are agreed in giving it the second of the meanings above stated; indeed, not one of any note, Jewish or Christian, has assigned to it any other meaning.] The sense given by the Canonists has been extracted, by connecting the words 'vex her' with the words 'in her lifetime,' instead of reading 'take her sister to her, in her lifetime.' Under this view it is explained, that the married sister should not be 'vexed' in her lifetime by the prospect that her sister might succeed her. It may be safely said that such an idea would never have occurred in the East, where unmarried sisters are far more rarely than in Europe brought into such acquaintance with the husband of the married sister as to give occasion for such 'vexation' or 'rivalry' as this. It may be remarked, that in those codes of law which most resemble that of Moses on the general subject, no prohibition of the marriage of two sisters in *succession* can be found. (Dwight, *The Hebrew Wife*, Glas. 1837; Robinson, *Bib. Sac.* p. 283; Edin. Rev. 97, 315).—J. K.

AFFIRMATIVES. Among the Jews the formula of assent or affirmation was כִּן יְבִרַת, *כן אָמַרְתָּ*, *thou hast said*, or, *thou hast rightly said*. It is stated by Aryda and others that this is the prevailing mode in which a person expresses his assent, at this day, in Lebanon, especially when he does not wish to assert anything in express terms. This explains the answer of our Saviour to the high-priest Caiaphas (Matt. xxvi. 64), when he was asked whether he was the Christ, the son of God, and replied *ὁ εἶπας* (see also Matt. xxvi. 25). Instances occur in the Talmud; thus, 'A certain man was asked, 'Is Rabbi N. dead?' He answered, 'Ye have said:' on which they rent their clothes'—taking it for granted from this answer that it was so (*T. Hieros. Kilaim*, xxxii. 2).

All readers, even of translations, are familiar with a frequent elegance of the Scriptures, or rather of the Hebrew language, in using an affirmative and negative together, by which the sense is rendered more emphatic: sometimes the negative first, as Ps. cxviii. 17, 'I shall not die, but live,' etc.; sometimes the affirmative first, as Is. xxxviii. 1, 'Thou shalt die, and not live.' In John i. 20, there is a remarkable instance of emphasis produced by a negative being placed between two affirmatives—*καὶ ὡμολόγησε, καὶ οὐκ ἠρνήσατο, καὶ ὡμολόγησεν*—'And he confessed, and denied not, but confessed, I am not the Christ.'—J. K.

AFRICA. This 'quarter of the world' is not mentioned as such by any general name in Scripture, although some of its regions are indicated. It is thought by some, however, that Africa, or, as much of it as was then known, is denoted by 'the land of Ham' in several of the Psalms. But we are inclined to think that the context rather restricts this designation to Egypt. Whether Africa was really 'the land of Ham,' that is, was peopled by the descendants of Ham, is quite another question. [HAM.]—J. K.

AGABUS (*Ἀγαβος*; either from the Hebrew אַבָּב, a locust, or אַבָּב, to love), the name of 'a prophet,' supposed to have been one of the seventy disciples of Christ. He, with others, came from Judæa to Antioch, while Paul and Barnabas (A. D. 43) were there, and predicted an approaching famine, which actually occurred the following year. Some writers suppose that the famine was general; but most modern commentators unite in understanding that the large terms of the original, Ὁλην τὴν οἰκουμένην, apply not to the whole world, nor even to the whole Roman empire, but, as in Luke ii. 1, to Judæa only. Statements respecting four famines, which occurred in the reign of Claudius, are produced by the commentators who support this view; and as all the countries put together would not make up a tenth part of even the Roman empire, they think it plain that the words must be understood to apply to that famine which, in the fourth year of Claudius, overspread Palestine. The poor Jews, in general, were then relieved by the Queen of Adiabene, who sent to purchase corn in Egypt for them (Joseph. *Antiq.* xx. 2, 6); and for the relief of the Christians in that country contributions were raised by the brethren at Antioch, and conveyed to Jerusalem by Paul and Barnabas (Acts xi. 27-30). Many years after, this same Agabus met Paul at Cæsarea, and warned him of the sufferings which awaited him if he prosecuted his journey to Jerusalem (Acts xxi. 10, 11). [See Baumgarten, *Apostolic History*, vol. i. 300, vol. ii. 396, E. T.]—J. K.

AGAG (אַגַּג; Sept. Ἀγάγ), the name of two kings of the Amalekites, and perhaps a common name of all their kings, like Pharaoh in Egypt (comp. Num. xxiv. 7; 1 Sam. xv. 8, 9, 20, 32). The first of these passages would imply that the king of the Amalekites was, then at least, a greater monarch, and his people a greater people, than is commonly imagined. [AMALEKITES.] The latter references are to that king of the Amalekites who was spared by Saul, contrary to the solemn vow of devotedness to destruction, whereby the nation, as such, had of old precluded itself from giving any quarter to that people (Exod. xvii. 14; Deut. xxv.

17-19). Hence, when Samuel arrived in the camp of Saul, he ordered Agag to be brought forth, and to be cut in pieces; and the expression which he employed—'As thy sword hath made women childless, so shall thy mother be childless among women'—indicates that, apart from the obligations of the vow, some such example of retributive justice was intended, as had been exercised in the case of Adonibezek; or, in other words, that Agag had made himself infamous by the same treatment of some prisoners of distinction (probably Israelites) as he now received from Samuel. The unusual mode in which his death was inflicted strongly supports this conclusion.—J. K.

AGAGITE, used as a Gentile name for Amalekite in Est. iii. 1, 10; viii. 3, 5. [AMALEKITES.]

AGAPE, ΑΓΑΠΗ (*ἀγάπη, ἀγάπαι*), the Greek term for *love*, used by ecclesiastical writers (most frequently in the plural) to signify the social meal of the primitive Christians, which generally accompanied the Eucharist. Much learned research has been spent in tracing the origin of this custom; but though considerable obscurity may rest on the details, the general historical connection is tolerably obvious. It is true that the *ἔρανοι* and *ἐταίρια*, and other similar institutions of Greece and Rome, presented some points of resemblance which facilitated both the adoption and the abuse of the Agapæ by the Gentile converts of Christianity; but we cannot consider them as the direct models of the latter. If we reflect on the profound impression which the transactions of 'the night on which the Lord was betrayed' (1 Cor. xi. 23) must have made on the minds of the apostles, nothing can be conceived more natural, or in closer accordance with the genius of the new dispensation, than a wish to perpetuate the commemoration of his death in connection with their social meal (Neander, *Leben Jesu*, p. 643; or Eng. Transl. *The life of Jesus Christ*, translated from the fourth German edition; Bohn 1851, p. 431. *Geschichte der Pflanzung und Leitung*, etc., 4th ed., vol. i. p. 36; Eng. Transl. *History of the Planting and Training of the Christian Church*, etc., vol. i. p. 23). The celebration of the Eucharist impressed a sacredness on the previous repast (comp. *ἐσθιόντων αὐτῶν*, Matt. xxvi. 26; Mark xiv. 22, with *μετὰ τὸ δεῖπνήσαι*, Luke xxii. 20; 1 Cor. xi. 25); and when to this consideration we add the ardent faith and love of the new converts on the one hand, and the disruption of old connections and attachments on the other, which must have heightened the feeling of brotherhood, we need not look further to account for the institution of the Agapæ, at once a symbol of Christian love and a striking exemplification of its benevolent energy. However soon its purity was soiled, at first it was not undeserving of the eulogy pronounced by the great orator of the church—*ἔθος κάλλιστον καὶ χρησιμώτατον*—*καὶ γὰρ ἀγάπης ὑπόθεσις ἦν, καὶ πείνας παραμυθία, καὶ πλοῦτον σωφροσύνης, καὶ ταπεινοφροσύνης διδασκαλία*. 'A custom most beautiful and most beneficial; for it was a supporter of love, a solace of poverty, a moderator of wealth, and a discipline of humility!'

Thus the common meal and the Eucharist formed together one whole, and were conjointly denominated *δεῖπνον τοῦ κυρίου, δεῖπνον κυριακόν*, and *ἀγάπη*. They were also signified (according to Mosheim, Neander, and other eminent critics) by

the phrases κλώντες ἄρτον (Acts ii. 46), κλάσαι τοῦ ἄρτου (Acts ii. 42), κλάσαι ἄρτον (Acts xx. 7). We find the term ἀγάπαι thus applied once, at least, in the New Testament (Jude 12), 'These are spots in your feasts of charity' (ἐν ταῖς ἀγάπαις ὑμῶν). The reading in 2 Pet. ii. 13 is of doubtful authority: 'Spots and blemishes, living luxuriously in their Agapæ' (ἐντρύφωτες ἐν ταῖς ἀγάπαις αὐτῶν); the common reading is ἐν ταῖς ἀπάταις αὐτῶν, 'in their own deceivings.' The phrase ἀγάπην ποιεῖν was early employed in the sense of celebrating the Eucharist; thus in the epistle of Ignatius to the church at Smyrna, § viii, οὐκ ἔξόν ἐστίν χωρὶς τοῦ ἐπισκόπου, οὕτε βαπτίζειν, οὕτε ἀγάπην ποιεῖν. In § vii. ἀγαπᾶν appears to refer more especially to the Agapæ.

By ecclesiastical writers several synonyms are used for the Agapæ, such as συμπόσια (Balsamon, ad Can. xxvii. Concil. Laodicen.); κοιναὶ τράπεζαι, εὐωχία, κοιναὶ ἐστιάσεις, κοινὰ συμπόσια (Chrysostom); δείπνα κοινὰ (Eccumenius); συσστία καὶ συμπόσια (Zonaras).

The Agapæ are not alluded to in Justin Martyr's description of the Eucharist (*Apol.* i. § 65, 67); Tertullian, on the contrary, in his account of the Agapæ, makes no distinct mention of the Eucharist. 'The nature of our *Cæna*,' he says, 'may be gathered from its name, which is the Greek term for love (*dilectio*). However much it may cost us, it is real gain to incur such expense in the cause of piety: for we aid the poor by this refreshment; we do not sit down to it till we have first tasted of prayer to God (*non prius discumbitur, quam oratio ad Deum prægustetur*); we eat to satisfy our hunger; we drink no more than befits the temperate; we feast as those who recollect that they are to spend the night in devotion; we converse as those who know that the Lord is an ear-witness. After water for washing hands, and lights have been brought in, every one is required to sing something to the praise of God, either from the Scriptures or from his own thoughts; by this means, if any one has indulged in excess, he is detected. The feast is closed with prayer.' Contributions or oblations of provisions and money were made on these occasions, and the surplus was placed in the hands of the presiding elder (ὁ προεστὴς—compare 1 Tim. v. 17, οἱ προεστῶτες πρεσβύτεροι), by whom it was applied to the relief of orphans and widows, the sick and destitute, prisoners and strangers (Tertull. *Apol.* § 39; Justin. *Apol.* i. 67). In the first age of the Church, the Eucharist was celebrated after the Agapæ, but in Chrysostom's time the order was frequently reversed. (*Homill.* xxii. xxvii. *in 1 Cor.* xi).

Allusions to the κυριακὸν δείπνον are to be met with in heathen writers. Thus Pliny, in his celebrated epistle to the emperor Trajan, after describing the meeting of the Christians for worship, represents them as assembling again at a later hour, 'ad capiendum cibum, promiscuum tamen et innocuum.' By the phrase 'cibum promiscuum' (Augusti remarks) we are not to understand merely food partaken in common with others, but common food, such as is usually eaten; the term *innocuum* also intimates that it was perfectly wholesome and lawful, not consisting, for example, of human flesh (for, among other odious imputations, that of cannibalism had been cast upon the Christians; which, to prejudiced minds, might derive some apparent support from a misinterpretation of our

Lord's language in John vi. 53, 'Except ye eat the flesh of the Son of man, and drink his blood,' etc.), nor of herbs prepared with incantations and magical rites. Lucian, also, in his account of the philosopher Peregrinus, tells us that when imprisoned on the charge of being a Christian, he was visited by his brethren in the faith, who brought with them δείπνα ποικίλα, which is generally understood to mean the provisions which were reserved for the absent members of the church at the celebration of the Lord's Supper, Gesner remarks, on this expression, 'Agapæ offerente unoquoque aliquid, quod una consumerent; hinc ποικίλα, non à luxu.'

From the passages in the Epistles of Jude and Peter, already quoted, and more particularly from the language of Paul in 1 Cor. xi., it appears that at a very early period the Agapæ were perverted from their original design: the rich frequently practised a selfish indulgence, to the neglect of their poorer brethren: ἕκαστος τὸ ἴδιον δείπνον προλαμβάνει (1 Cor. xi. 21); i.e. the rich feasted on the provisions they brought, without waiting for the poorer members, or granting them a portion of their abundance. They appear to have imitated the Grecian mode of entertainment called δείπνον ἀπὸ σπιρίδος (see Xenophon's *Memorabilia*, iii. 14; Neander *Geschichte der Pflanzung*, etc., vol. i. 407; *History of the Planting of the Christian Church*, vol. i. (English transl.), p. 249).

On account of these and similar irregularities, and probably in part to elude the notice of their persecutors, the Christians, about the middle of the second century, frequently celebrated the Eucharist by itself and before daybreak (*antelucanis cælibus*) (Tertullian, *De Cor. Militis*, § 3). From Pliny's *Epistle* it also appears that the Agapæ were suspected by the Roman authorities of belonging to the class of Heteriæ (*εταίρια*), unions or secret societies, which were often employed for political purposes, and as such denounced by the imperial edicts; for he says (referring to the 'cibum promiscuum,' etc.), 'quod ipsum facere desiisse post edictum meum, quo secundum mandata tua Heterias esse vetuimus' (Plin. *Ep.* 96, al. 97; Lardner, *Works*, vii. 311-314, London, 1788).

At a still later period the Agapæ were subjected to strict regulation by various councils. Thus by the 28th canon of the Council of Laodicea it was forbidden to hold them in churches: *ὅτι οὐ δεῖ ἐν τοῖς κυριακοῖς ἢ ἐν ταῖς ἐκκλησίαις τὰς λεγομένας ἀγάπαις ποιεῖν, καὶ ἐν τῷ οἴκῳ τοῦ Θεοῦ ἐσθλεῖν καὶ ἀκούβιτα στρωθῆναι.* At the Council of Carthage (A.D. 397) it was ordered (Can. 29) that none should partake of the Eucharist unless they had previously abstained from food: 'Ut sacramenta altaris non nisi à jejunis hominibus celebrentur excepto uno die anniversario, quo cæna domini celebratur.' The same prohibition was repeated at the Council of Orleans (Can. 12), A.D. 533; in the Trullanian Council at Constantinople, A. D. 692; and in the council held at Aix-la-Chapelle, A.D. 816. Yet these regulations were not intended to set aside the Agapæ altogether. In the Council of Gangra in Paphlagonia (about A.D. 360) a curse was denounced (*ἀνάθεμα ἐστω*) on whoever despised the partakers of the Agapæ or refused to join in them. When Christianity was introduced among the Anglo-Saxons by Austin (A.D. 596), Gregory the Great advised the celebration of the Agapæ, in booths formed of the branches of trees, at the con-

secration of churches. Neander, *Gen. Hist.* iii. 461; v. 20.

Besides the Eucharistic Agapæ, three other kinds are mentioned by ecclesiastical writers: 1. *Agapæ natalitia*, held in commemoration of the martyrs (Theodoret, *Evang. Verit.* viii. pp. 923-924, edit. Schulz); 2. *Agapæ connubiales*, or marriage-feasts (Greg. Naz. *Epist.* i. 14); 3. *Agapæ funerales*, funeral feasts (Greg. Naz. *Carm. X.*), probably similar to the *περὶδειπνον* or *νεκρὸδειπνον* of the Greeks.

In modern times social meetings bearing a resemblance to the Agapæ, and, in allusion to them, termed Love-feasts, have been regularly held by the Church of the United Brethren, or Moravians, and the Wesleyan Methodists; also in Scotland, by the followers of Mr. Robert Sandeman.

AGATE. [SHEBO, KADKOD.]

AGE. [CHRONOLOGY; GENERATION; LONGEVITY.]

AGE, OLD. The strong desire of a protracted life, and the marked respect with which aged persons were treated among the Jews, are very often indicated in the Scriptures. The most striking instance which Job can give of the respect in which he was once held, is that *even* old men stood up as he passed them in the streets (Job xxix. 8), the force of which is illustrated by the injunction in the law, 'Before the hoary head thou shalt stand up, and shalt reverence the aged' (Lev. xix. 32). Similar injunctions are repeated in the Apocrypha, so as to shew the dehortment expected from young men towards their seniors in company. Thus, in describing a feast, the author of Ecclesiasticus (xxxii. 3, 7) says, 'Speak thou that art the elder, for it becometh thee. Speak, young man, if there be need of thee, and yet scarcely, when thou art twice asked.'

The attainment of old age is constantly promised or described as a blessing (Gen. xv. 15; Job v. 26), and communities are represented as highly favoured in which old people abound (Is. lxx. 20; Zech. viii. 4), while premature death is denounced as the greatest of calamities to individuals, and to the families to which they belong (1 Sam. ii. 32); the aged are constantly supposed to excel in understanding and judgment (Job xii. 20; xv. 10; xxxii. 9; 1 Kings xii. 6, 8), and the mercilessness of the Chaldeans is expressed by their having 'no compassion' upon the 'old man, or him who stooped for age' (2 Chron. xxxvi. 17).

The strong desire to attain old age was necessarily in some degree connected with or resembled the respect paid to aged persons; for people would scarcely desire to be old, were the aged neglected or regarded with mere sufferance.

Michaelis, carrying out a hint of Montesquieu, fancies that veneration for old age is 'peculiarly suitable to a democracy,' and, consequently, 'to

the republican circumstances of the Israelites.' He adds, 'In a monarchy or aristocracy, it is birth and office alone which give rank. The more pure a democracy is, the more are all on an equal footing; and those invested with authority are obliged to bear that equality in mind. Here great actions confer respect and honour; and the right discharge of official duties, or the arrival of old age, are the only sources of rank. For how else can rank be established among those who have no official situation, and are by birth perfectly equal' (*Mos. Raht.*, art. cxi.) This is ingenious, and partly true. It would perhaps be wholly so, if, instead of connecting it with 'republican circumstances,' the respect for age were rather regarded in connection with a certain state of society, short of high civilization, in which the sources of distinction, from whatever causes, are so limited, that room is left for the natural condition of age itself to be made a source of distinction. Of all marks of respect that to age is most willingly paid; because every one who does homage to age, may himself eventually become an object of such homage. We almost invariably observe that where civilization advances, and where, in consequence, the claims to respect are multiplied, the respect for old age in itself diminishes; and, like other conditions, it is estimated by the positive qualities which it exhibits. In the East, at present, this respect is manifested *under every* form of government. In the United States the aged are certainly not treated with *more* consideration than under the monarchical and aristocratical governments of Europe. Professor C. Stowe (in *Am. Bib. Repos.*), who had unusual means of comparison, says they are there treated with *less*; and this seems to prove satisfactorily, that it is rather the condition of civilization than the condition of government, which produces the greater or less respect for age.

Attention to age was very general in ancient times; and is still observed in all such conditions of society as these through which the Israelites passed. Among the Egyptians, the young men rose before the aged, and always yielded to them the first place (Herod. ii. 80). The youth of Sparta did the same, and were silent—or, as the Hebrews would say, laid their hand upon their mouth—whenever their elders spoke. At Athens, and in other Greek states, old men were treated with corresponding respect. In China deference for the aged, and the honours and distinctions awarded to them, form a capital point in the government (*Mém. sur les Chinois*, vol. i. p. 450); and among the Moslems of Western Asia, whose usages offer so many analogies to those of the Hebrews, the same regard for seniority is strongly shewn. Among the Arabs, it is very seldom that a youth can be permitted to eat with men (Lane, *Arabian Nights*, c. xi. note 26). With the Turks, age, even between brothers, is the object of marked deference (Urquhart, *Spirit of the East*, ii. 471).

In all such instances, which might be accumulated without number, we see the respect for age providentially implanted the most strongly in those states of social existence in which some such sentiment is necessary to secure for men of decayed physical powers, that safety and exemption from neglect, which are ensured to them in higher conditions of civilization by the general rather than the particular and exemptive operation of law and softened manners.

AGMON (אֲגֹמֹן) occurs in Job xii. 2; xli. 20; Isaiah ix. 14; xix. 15; lviii. 5; in the first of which passages it is translated in our authorized version by *hook*; in the second by *caldron*; in the two next by *rush*; and in the last by *bulrush*. As no plant is known under this name in the Hebrew or cognate languages, its nature has been sought for by tracing the word to its root, and by judging of its nature from the context. Thus אֲגֹמֹן *agmon* is said to mean a lake or pool of water, also a reed; and in Arabic أَجَام, pronounced *ijam*, is translated reed-bed, cane-bed. *Agom* is also considered to be derived from the same root as אֲגֹמֹן *goma*, the papyrus. Some have even concluded that both names indicate the same thing, and have translated them by *juncus*, or *rush*.

Celsius is of opinion that in all the above passages *agmon* should be translated by *arundo*, or reed. Dr. Harris (art. 'Reed') has suggested that in Job xli. 2, instead of 'Canst thou put an *hook* into his nose,' we should read 'Canst thou tie up his mouth with a *rush rope*,' as had previously been suggested by others (Celsius, *Hiero-Bot.* vol. i. 467); and that in ver. 20 we should read 'out of his nostrils goeth smoke, and the *rushes* are kindled before it,' instead of 'as out of a seething pot or caldron,' as in the authorized version.

Lobo, in his *Voyage d' Abyssinie*, speaking of the Red Sea, says, 'Nous ne l'avons pas jamais vue rouge, que dans les lieux où il y a beaucoup de Gouemon.' 'Il y a beaucoup de cette herbe dans la Mer rouge.' What this herb is does not elsewhere appear. Forskal applies the name of *ghobeibe* to a species of *arundo*, which he considered closely allied to *A. phragmites*, the plant which Celsius conceived to be the *agmon* of Scripture. M. Bové, in his *Voyage Botanique en Egypte*, observed, especially on the borders of the Nile, quantities of *Saccharum aegyptiacum* and of *Arundo aegyptiaca*, which is, perhaps, only a variety of *A. donax*, the cultivated Spanish or Cyprus reed, or, as it is usually called in the south of Europe, *Canna* and *Cana*. In the neighbourhood of Cairo he found *Poa cynosuroides* (the *koosha*, or *cusa*, or sacred grass of the Hindoos), which, he says, serves 'aux habitans pour faire des cordes, chauffer leurs fours, et cuire des briques et poteries. Le *Saccharum cylindricum* est employé aux mêmes usages.' The Egyptian species of *arundo* is probably the *A. isiaca* of Delile, which is closely allied to *A. phragmites*, and its uses may be supposed to be very similar to those of the latter. This species is often raised to the rank of a genus under the name of *phragmites*, so named from being employed for making partitions, etc. It is about six feet high, with annual stems, and is abundant about the banks of pools and rivers, and in marshes. The panicle of flowers is very large, much subdivided, a little drooping and waving in the wind. The plant is used for thatching, making screens, garden fences, etc.; when split it is made into string, mats, and matches. It is the *gemeine rohr* of the Germans, and the *Canna* or *Cana palustre* of the Italians and Spaniards.

Any of the species of reed here enumerated will suit the different passages in which the word *agmon* occurs; but several species of *saccharum*, growing to a great size in moist situations, and reed-like in appearance, will also fulfil all the conditions re-

quired, as affording shelter for the behemoth or hippopotamus, being convertible into ropes, forming a contrast with their hollow stems to the solidity and strength of the branches of trees, and when dry easily set on fire: and when in flower their light and feathery inflorescence may be bent down by the slightest wind that blows.—J. F. R.

AGONY (Ἄγῶν), a word generally denoting *contest*, and especially the contests by wrestling, etc. in the public games; whence it is applied metaphorically to a severe *struggle* or *conflict* with pain and suffering. *Agony* is the actual struggle with present evil, and is thus distinguished from *anguish*, which arises from the reflection on evil that is past. In the New Testament the word is only used by Luke (xxii. 44), and is employed by him with terrific significance to describe the fearful struggle which our Lord sustained in the garden of Gethsemane. [JESUS CHRIST.]

AGORA (Ἄγορά), a word of frequent occurrence in the New Testament: it denotes generally any place of public resort in towns and cities where the people came together; and hence more specially it signifies, 1. A public place, a broad street, etc., as in Matt. xi. 16; xx. 3; xxiii. 7; Mark vi. 56; xii. 38; Luke vii. 32; xi. 43; xx. 46. 2. A forum or market-place, where goods were exposed for sale, assemblies or public trials held (Acts xvi. 19; xvii. 17), and where the idle were accustomed to lounge (Matt. xx. 3; Acts xvii. 5). In Mark vii. 4, it is doubtful whether *ἀγορά* denotes the market itself, or is put for that which is brought from the market; but the known customs of the Jews suggest a preference of the former signification. [Kühnlö], Paulus, and some others, take our Lord as saying that the Jews eat not anything brought from the market unless they first wash it. But this is to construe *βαπτίζονται* in a way which is hardly allowable; and, besides, such an act would afford no evidence of rigid scrupulosity on the part of the Jews such as our Lord wishes to adduce. What he means to say is, that coming from the market-place, where they had to mingle with and be touched by common men, they hastened to purify themselves by the bath before they satisfied even the cravings of hunger.]

AGRARIAN LAW. [PROPERTY.]

AGRICULTURE. The antiquity of agriculture is indicated in the brief history of Cain and Abel, when it tells us that the former was a 'tiller of the ground,' and brought some of the fruits of his labour as an offering to God (Gen. iv. 2, 3), and that part of the ultimate curse upon him was: 'when thou tillest the ground, it shall not henceforth yield to thee her strength' (iv. 12). Of the actual state of agriculture before the deluge we know nothing. It must have been modified considerably by the conditions of soil and climate, which are supposed by many to have undergone some material alterations at the flood. Whatever knowledge was possessed by the old world was doubtless transmitted to the new by Noah and his sons; and that this knowledge was considerable is implied in the fact that one of the operations of Noah, when he 'began to be a husbandman,' was to plant a vineyard, and to make wine with the fruit (Gen. ix. 20). There are few agricultural notices belonging to the patriarchal period, but they suffice to show that the land of Canaan was

in a state of cultivation, and that the inhabitants possessed what were at a later date the principal products of the soil in the same country. It is reasonable, therefore, to conclude that the modes of operation were then similar to those which we afterwards find among the Jews in the same country, and concerning which our information is more exact.

In giving to the Israelites possession of a country already under cultivation, it was the Divine intention that they should keep up that cultivation, and become themselves an agricultural people; and in doing this they doubtless adopted the practices of agriculture which they found already established in the country. This may have been the more necessary, as agriculture is a practical art; and those of the Hebrews who were acquainted with the practices of Egyptian husbandry had died in the wilderness; and even had they lived, the processes proper to a hot climate and alluvial soil, watered by river inundation, like that of Egypt, although the same in essential forms, could not have been altogether applicable to so different a country as Palestine.

As the nature of the climate and of the seasons affects all agricultural operations, it should be noticed that the variations of sunshine and rain, which with us extend throughout the year, are in Palestine confined chiefly to the latter part of autumn and the winter. During all the rest of the year the sky is almost uninterruptedly cloudless, and rain very rarely falls. The autumnal rains usually commence at the end of October, or at the beginning of November, not suddenly, but by degrees, which gives opportunity to the husbandman to sow his wheat and barley. The rains continue during November and December, but afterwards they occur at longer intervals; and rain is rare after March, and almost never occurs as late as May. The cold of winter is not severe; and as the ground is never frozen, the labours of the husbandman are not entirely interrupted. Snow falls in different parts of the country, but never lies long on the ground. In the plains and valleys the heat of summer is oppressive, but not in the more elevated tracts. In these high grounds the nights are cool, often with heavy dew. The total absence of rain in summer soon destroys the verdure of the fields, and gives to the general landscape, even in the high country, an aspect of drought and barrenness. No green thing remains but the foliage of the scattered fruit-trees, and occasional vineyards and fields of millet. In autumn the whole land becomes dry and parched; the cisterns are nearly empty; and all nature, animate and inanimate, looks forward with longing for the return of the rainy season. In the hill country the time of harvest is later than in the plains of the Jordan and of the sea-coast. The barley harvest is about a fortnight earlier than that of wheat. In the plain of the Jordan the wheat harvest is early in May; in the plains of the coast and of Esdraelon, it is towards the latter end of that month; and in the hills, not until June. The general vintage is in September, but the first grapes ripen in July; and from that time the towns are well supplied with this fruit (Robinson, *Biblical Researches*, ii. 96-100).

SOIL, *etc.*—The geological characters of the soil in Palestine have never been satisfactorily stated; but the different epithets of description which travellers employ, enable us to know that it differs

considerably, both in its appearance and character, in different parts of the land; but wherever soil of any kind exists, even to a very slight depth, it is found to be highly fertile. As parts of Palestine are hilly, and as hills have seldom much depth of soil, the mode of cultivating them in terraces was anciently, and is now, much employed. A series of low stone walls, one above another, across the face of the hill, arrest the soil brought down by the rains, and afford a series of levels for the operations of the husbandmen. This mode of cultivation is usual in Lebanon, and is not unfrequent in Palestine, where the remains of terraces across the hills, in various parts of the country, attest the extent to which it was anciently carried. This terrace cultivation has necessarily increased or declined with the population. If the people were so few that the valleys afforded sufficient food for them, the more difficult culture of the hills was neglected; but when the population was too large for the valleys to satisfy with bread, then the hills were laid under cultivation.

In such a climate as that of Palestine, water is the great fertilizing agent. The rains of autumn and winter, and the dews of spring, suffice for the ordinary objects of agriculture; but the ancient inhabitants were able, in some parts, to avert even the aridity which the summer droughts occasioned, and to keep up a garden-like verdure, by means of aqueducts communicating with the brooks and rivers (Ps. i. 3; lxxv. 10; Prov. xxi. 1; Is. xxx. 25; xxxii. 2. 20; Hos. xii. 11). Hence springs, fountains, and rivulets were as much esteemed by husbandmen as by shepherds (Josh. xv. 19; Judg. i. 15). The soil was also cleared of stones, and carefully cultivated; and its fertility was increased by the ashes to which the dry stubble and herbage were occasionally reduced by being burned over the surface of the ground (Prov. xxiv. 31; Is. vii. 23; xxxii. 13). Dung, and, in the neighbourhood of Jerusalem, the blood of animals, were also used to enrich the soil (2 Kings ix. 37; Ps. lxxxiii. 10; Is. xxv. 10; Jer. ix. 22; Luke xv. 34, 35).

That the soil might not be exhausted, it was ordered that every seventh year should be a sabbath of rest to the land: there was then to be no sowing or reaping, no pruning of vines or olives, no vintage or gathering of fruits; and whatever grew of itself was to be left to the poor, the stranger, and the beasts of the field (Lev. xxv. 1-7; Deut. xv. 1-10). But such an observance required more faith than the Israelites were prepared to exercise. It was for a long time utterly neglected (Lev. xxvi. 34, 35; 2 Chron. xxxvi. 21), but after the Captivity it was more observed. By this remarkable institution the Hebrews were also trained to habits of economy and foresight, and invited to exercise a large degree of trust in the bountiful providence of their Divine King.

FIELDS.—Under the term *דגן* *dagan*, which we translate 'grain' and 'corn,' the Hebrews comprehended almost every object of field culture Syria, including Palestine, was regarded by the ancients as one of the first countries for corn (Pliny, *Hist. Nat.* xviii. 7). Wheat was abundant and excellent; and there is still one bearded sort, the ear of which is three times as heavy, and contains twice as many grains, as our common English wheat (Irby and Mangles, p. 472). Barley was also much cultivated, not only for bread, but because it was the only kind of corn which was

given to beasts; for oats and rye do not grow in warm climates. Hay was not in use; and therefore the barley was mixed with chopped straw to form the food of cattle (Gen. xxiv. 25, 32; Judg. xix. 19, etc.) Other kinds of field culture were millet, spelt, various species of beans and peas, pepperwort, cummin, cucumbers, melons, flax, and, perhaps, cotton. Many other articles might be mentioned as being now cultivated in Palestine; but, as their names do not occur in Scripture, it is difficult to know whether they were grown there in ancient times, or not.

Anciently, as now, in Palestine and the East the arable lands were not divided into fields by hedges, as in this country. The ripening products therefore presented an expanse of culture unbroken, although perhaps variegated, in a large view, by the difference of the products grown. The boundaries of lands were therefore marked by stones as landmarks, which, even in patriarchal times, it was deemed a heinous wrong to remove (Job xxiv. 2); and the law pronounced a curse upon those who, without authority, removed them (Deut. xix. 14; xxvii. 17). The walls and hedges which are occasionally mentioned in Scripture belonged to orchards, gardens, and vineyards.

16.

AGRICULTURAL OPERATIONS.—Of late years much light has been thrown upon the agricultural operations and implements of ancient times, by the discovery of various representations on the sculptured monuments and painted tombs of Egypt. As these agree surprisingly with the notices in the Bible, and, indeed, differ little from what we find employed in Syria and Egypt, it is very safe to receive them as guides on the present subject (See Gosse's *Assyria*, p. 560).

Ploughing.—This has always been a light and superficial operation in the East. At first, the ground was opened with pointed sticks; then, a kind of hoe was employed; and this, in many parts of the world, is still used as a substitute for the

17.

plough. But the plough was known in Egypt and Syria before the Hebrews became cultivators (Job. i. 14). In the East, however, it has always been a light and inartificial implement. At first,

it was little more than a stout branch of a tree, from which projected another limb, shortened and pointed. This, being turned into the ground, made the furrow; while at the farther end of the larger branch was fastened a transverse yoke, to which the oxen were harnessed. Afterwards a handle to guide the plough was added. Thus the plough consisted of—1. the pole; 2. the point or share; 3. the handle; 4. the yoke. The Syrian plough is, and doubtless was, light enough for a man to carry in his hand (Russell's *Nat. Hist. of Aleppo*, i. 73). We annex a figure of the ancient Egyptian plough, which had the most resemblance

18.

to the one now used (as figured in No. 16), and the comparison between them will probably suggest a fair idea of the plough which was in use among the Hebrews. The following cut (from Mr. Fellowes' work on Asia Minor) shews the parts of a still

19.

- 1. The plough. 2. The pole. 3. Shares (various).
- 4. Handle. 5. Yokes. 6. Ox-goad.

lighter plough used in Asia Minor and Syria, with but a single handle, and with different shares according to the work it has to execute.

The plough was drawn by oxen, which were sometimes urged by a scourge (Is. x. 26; Nahum iii. 2); but oftener by a long staff, furnished at one end with a flat piece of metal for clearing the plough, and at the other with a spike for goading the oxen. This ox-goad might be easily used as a spear (Judg. iii. 31; 1 Sam. xiii. 21). Sometimes men followed the plough with hoes to break the clods (Is. xxviii. 24); but in later times a kind of harrow was employed, which appears to have been then, as now, merely a thick block of wood pressed down by a weight, or by a man sitting on it and drawn over the ploughed field.

Sowing.—The ground, having been ploughed as soon as the autumnal rains had mollified the soil, was fit, by the end of October, to receive the seed; and the sowing of wheat continued, in different situations, through November into December. Barley was not generally sown till January and February. The seed appears to have been

sown and harrowed at the same time; although sometimes it was ploughed in by a cross furrow.

20.

Ploughing in the Seed.—The Egyptian paintings illustrate the Scriptures by shewing that in those soils which needed no previous preparation by the

hoe (for breaking the clods) the sower followed the plough, holding in the left hand a basket of seed, which he scattered with the right hand, while another person filled a fresh basket. We also see that the mode of sowing was what we call 'broadcast,' in which the seed is thrown loosely over the field (Mat. xiii. 3-8). In Egypt, when the levels were low, and the water had continued long upon the land, they often dispensed with the plough altogether; and probably, like the present inhabitants, broke up the ground with hoes, or simply dragged the moist mud with bushes after the seed had been thrown upon the surface. To this cultivation without ploughing Moses probably alludes (Deut. xi. 10), when he tells the Hebrews that the land to which they were going was *not* like the land of Egypt, where they 'sowed their seed and watered it with their foot as a garden of herbs.' It seems, however, that even in Syria, in sandy soils, they sow without ploughing, and then plough down the seed (Russell's *N. H. of Aleppo*, i. 73, etc.) It does not appear that any instrument resembling our *harrow* was known; the word rendered to *harrow*, in Job xxxix. 10, means literally

21.

to break the clods, and is so rendered in Is. xxviii. 24; Hos. x. 11; and for this purpose the means used have been already indicated. The passage in Job, however, is important. It shews that this breaking of the clods was not always by the hand, but that some kind of instrument was drawn by an animal over the ploughed field, most probably the rough log which is still in use.

Harvest.—It has been already mentioned that the time of the wheat harvest in Palestine varies, in different situations, from early in May to late in June; and that the barley harvest is about a fortnight earlier than that of wheat. Among the Israelites, as with all other people, the harvest was a season of joy, and as such is more than once alluded to in Scripture (Ps. cxxvi. 5; Is. ix. 3).

Reaping.—Different modes of reaping are indicated in Scripture, and illustrated by the Egyptian monuments. In the most ancient times, the corn was plucked up by the roots, which continued to

choice between these modes of operation was probably determined, in Palestine, by the consideration pointed out by Russell (*N. H. of Aleppo*, i. 74), who states that 'wheat, as well as barley in general, does not grow half as high as in Britain; and is therefore, like other grain, not reaped with the sickle, but plucked up by the roots with the hand. In other parts of the country, where the corn grows ranker, the sickle is used.' When the sickle was used, the wheat was either cropped off under the ear or cut close to the ground. In the former case, the straw was afterwards plucked up for use; in

23.

the latter, the stubble was left and burnt on the ground for manure. As the Egyptians needed not such manure, and were economical of straw, they generally followed the former method; while the Israelites, whose lands derived benefit from the burnt stubble, used the latter; although the practice of cutting off the ears was also known to them (Job xxiv. 24). Cropping the ears short, the Egyptians did not generally bind them into sheaves, but removed them in baskets. Sometimes, however, they bound them into *double* sheaves; and

22.

be the practice with particular kinds of grain after the sickle was known. In Egypt, at this day, barley and dourra are pulled up by the roots. The

such as they plucked up were bound into single long sheaves. The Israelites appear generally to

reapers drinking, and gleaners applying to share the draught. Among the Israelites, gleaning was

24.

have made up their corn into sheaves (Gen. xxxvii. 7; Lev. xxiii. 10-15; Ruth ii. 7, 15; Job xxiv. 10; Jer. ix. 22; Mich. iv. 12), which were collected into a heap, or removed in a cart (Amos ii. 13) to the threshing-floor. The carts were probably similar to those which are still employed for the same purpose. The sheaves were never made up into *shocks*, as with us, although the word occurs in our translation of Judg. xv. 5; Job v. 26; for the original term signifies neither a shock composed of a few sheaves standing temporarily in the field, nor a stack of many sheaves in the home-yard, properly thatched, to stand for a length of time; but a heap of sheaves laid loosely together, in order to be trodden out as quickly as possible, in the same way as is done in the East at the present day (Brown, *Antiq. of the Jews*, ii. 591).

With regard to sickles, there appear to have been two kinds, indicated by the different names *chermesh* (חרמש) and *meggol* (מגול); and as the former occurs only in the Pentateuch (Deut. xvi. 9; xxiii. 25), and the latter only in the Prophets (Jer. l. 16; Joel iii. 13), it would seem that the one was the earlier and the other the later instrument. But as we observe two very different kinds of sickles in use among the Egyptians, not only at the same time, but in the same field (see cut, No. 25), it may have been so with the Jews also. The figures of these Egyptian sickles probably mark the difference between them. One was very much like our common reaping-hook, while the other had more resemblance in its shape to a scythe, and in the Egyptian examples appears to have been toothed. This last is probably the same as the Hebrew *meggol*, which is indeed rendered by *scythe* in the margin of Jer. l. 16. The reapers were the owners and their children, men-

25.

servants and women-servants, and day-labourers (Ruth ii. 4, 6, 21, 23; John iv. 36; James v. 4). Refreshments were provided for them, especially drink, of which the gleaners were allowed to partake (Ruth ii. 9). So in the Egyptian harvest-scenes, we perceive a provision of water in skins, hung against trees, or in jars upon stands, with the

20.

one of the stated provisions for the poor: and for their benefit the corners of the field were left un-reaped, and the reapers might not return for a forgotten sheaf. The gleaners, however, were to obtain in the first place the express permission of the proprietor or his steward (Lev. xix. 9, 10; Deut. xxiv. 19; Ruth ii. 2, 7).

27.

Threshing.—The ancient mode of threshing, as described in Scripture and figured on the Egyptian monuments, is still preserved in Palestine. Formerly the sheaves were conveyed from the field to the threshing-floor in carts; but now they are borne, generally, on the backs of camels and asses. The threshing-floor is a level plot of ground, of a circular shape, generally about fifty feet in diameter, prepared for use by beating down the earth till a hard floor is formed (Gen. l. 10; Judg. vi. 37; 2 Sam. xxiv. 16, 24). Sometimes several of these floors are contiguous to each other. The sheaves are spread out upon them; and the grain is trodden out by oxen, cows, and young cattle, arranged five abreast, and driven in a circle, or rather in all directions, over the floor. This was the common mode in the Bible times; and Moses forbade that the oxen thus employed should be muzzled to prevent them from tasting the corn (Deut. xxv. 4; Is. xxvii. 28). *Flails*, or sticks, were only used in threshing small quantities, or for the lighter kinds of grain (Ruth. ii. 17; Is. xxviii. 27). There were, however, some kinds of threshing-machines, which are still used in Palestine and Egypt. One of them, represented in the annexed figure, is very much used in Palestine. It is composed of two thick planks, fastened together

28.

side by side, and bent upwards in front. Sharp fragments of stone are fixed into holes bored in the

bottom. This machine is drawn over the corn by oxen—a man or boy sometimes sitting on it to increase the weight. It not only separates the grain, but cuts the straw and makes it fit for fodder (2 Kings xiii. 7). This is, most probably, the *Charutz* חרוץ, or ‘corn-drag,’ which is mentioned in Scripture (Is. xxviii. 27; xli. 15; Amos i. 3, rendered ‘threshing instrument’), and would seem to have been sometimes furnished with iron points instead of stones. The bible also notices a machine called a *Moreg*, מורג (2 Sam. xxiv. 22; 1 Chron. xxi. 23; Is. xli. 15), which is unquestionably the same which bears in Arabic the name of نوج *Norej*. This is explained by

Freytag (from the Kamoos Lex.) by—‘tribulum, instrumentum, quo fruges in area teruntur (in Syria), sive ferreum, sive ligneum.’ This machine is not now often seen in Palestine; but is more used in some parts of Syria, and is common in Egypt. It is a sort of frame of wood, in which are inserted three wooden rollers, armed with iron teeth, etc. It bears a sort of seat or chair, in which the driver sits to give the benefit of his weight. It is generally drawn over the corn by two oxen, and separates the grain, and breaks up the straw even more effectually than the drag. In all these processes the corn is occasionally turned by a fork; and, when sufficiently threshed, is thrown up by the same fork against the wind to separate the grain, which is then gathered up and winnowed.

29.

Winnowing.—This was generally accomplished by repeating the process of tossing up the grain against the wind with a fork (Jer. iv. 11, 12), by which the broken straw and chaff were dispersed while the grain fell to the ground. The grain

30.

afterwards passed through a sieve to separate the bits of earth and other impurities. After this, it underwent a still further purification, by being tossed up with wooden scoops or short-handed shovels, such as we see in Egyptian paintings (Is. xxx.

AGRIELAIA (Ἀγριελαία; New Test. ἀγριέλαιος). The wild olive-tree is mentioned by St. Paul in Romans xi. 17, 24. Here different opinions have been entertained, not only with respect to the plant, but also with respect to the explanation of the metaphor. One great difficulty has arisen from the same name having been applied to different plants. Thus by Dioscorides (*De Mater. Med.* i. 137) it is stated that the Ἀγριελαία, or wild olive-tree, is by some called *Cotinus*, and by others, the Ethiopic olive. So, in the notes to Theop. ed Boda Stapel, p. 224, we read, ‘Sed hic κόρυθος lego cum Athenæo, id est oleaster. Est vero alius cotinus, frutex, de quo Plinius, xvi. 18. Est et in Apennino frutex qui vocatur Cotinus, ad lineamenta modo conchylii colore insignis.’ Hence the wild olive-tree has been confounded with *rhus cotinus*, or Venetian sumach, with which it has no point of resemblance. Further confusion has arisen from the present *Elaeagnus angustifolia* of botanists having been at one time called *Olea sylvestris*. Hence it has been inferred that the Ἀγριελαία is this very *Elaeagnus*, *E. angustifolia*, or the narrow-leaved Oleaster-tree of Paradise of the Portuguese. In many points it certainly somewhat resembles the true olive-tree—that is, in the form and appearance of the leaves, in the oblong-shaped fruit (edible in some of the species), also in an oil being expressed from the kernels; but it will not explain the present passage, as no process of grafting will enable the *Elaeagnus* to bear olives of any kind.

If we examine a little further the account given by Dioscorides of the Ἀγριελαία, we find in i. 141, Περὶ δακρύου ἐλαίας Ἀθηστικῆς, that our olives and wild olives exude tears—that is, a gum or resin, like the Ethiopic olive. Here it is important to remark that the wild olive of the Grecians is distinguished from the wild olive of Ethiopia. What plant the latter may be, it is not perhaps easy to determine with certainty; but Arabian authors translate the name by *zait-al-Soudan*, or the olive of Ethiopia. Other synonyms for it are *lous-al-bur*, or wild almond; and *badam kohee*, *i. e.*, mountain almond. Under the last name the writer has obtained the kernels of the apricot in Northern India, and it is given in Persian works as one of the synonymes of the *burkookh*, or apricot, which was originally called apricock and præcocia, no doubt from the Arabic *burkookh*. The apricot is extensively cultivated in the Himalayas, chiefly on account of the clear beautiful oil yielded by its kernels, on which account it might well be compared with the olive-tree. But it does not serve better than the *Elaeagnus* to explain the passage of St. Paul.

From the account of Dioscorides, however, it is clear that the Ethiopic was distinguished from the wild, and this from the cultivated olive; and as the plant was well known both to the Greeks and Romans, there was no danger of mistaking it for any other plant except itself in a wild state, that is, the true *'Αγριελαια*, Oleaster, or *Olea europæa*, in a wild state. That this is the very plant alluded to by the apostle seems to be proved from its having been the practice of the ancients to graft the wild upon the cultivated olive tree. Thus Pliny (*Hist. Nat.* xvii. 18) says, 'Africa peculiari quidem in oleastro est inserere. Quadam æternitate consensescunt proxima adoptioni virga emissa, atque ita alia arbore ex eadem juvenescunt: iterumque et quoties opus sit, ut ævis eadem oliveta constent. Inseritur autem oleaster calamo, et inoculatione.' In the 'Pictorial Bible' this practice has already been adduced as explaining the text; and Theophrastus and Columella (*De Re Rust.* v. 9) also refer to it. The apostle, therefore, in comparing the Romans to the wild olive tree grafted on a cultivated stock, made use of language which was most intelligible, and referred to a practice with which they must have been perfectly familiar.—J. F. R.

AGRIPPA. [HERODIAN FAMILY.] Although of the two Herods, father and son, who also bore the name of Agrippa, the latter is best known by his Roman name, it seems proper to include him with the other members of the Herodian dynasty, under the name which he bore among his own people.

AGUR (אגור), the author of the sayings contained in Prov. xxx., which the inscription describes as composed of the precepts delivered by 'Agur, the son of Jakeh,' to his friends 'Ithiel and Ucal.' Beyond this everything that has been stated of him, and of the time in which he lived, is pure conjecture. Some writers have regarded the name as an appellative, but differ as to its signification. The Vulgate has 'Verba Congregantis filii Voments.' Most of the fathers think that Solomon himself is designated under this name; and if the word is to be understood as an appellative, it may be as well to look for its meaning in the Syriac, where, according to Bar Bahlul in Castell.

אגור means *qui sapientia studiis se applicat*. The Septuagint omits the chapter ascribed to Agur, as well as the first nine verses of the following chapter.

'AGUR (עגור). This word occurs Is. xxxviii. 14 and Jer. viii. 7; in both cases in connection with דוס, but in the latter the two words are connected by the copulative ו, while in the former this is wanting. In the A. V. it is translated *swallow* in both places, while דוס is translated *crane*. Bochart, however, reverses this, and maintains that 'Agur is the proper Hebrew designation of the crane. He compares the word with the Chald. כורכיא *kur-keya*, the Arab. كركي *kurki*, the Gr. γράνος, the Welsh *garan*, and the Germ. *kran*, all of which are like it onomatopoeic. In Is. xxxviii. 14 the 'Agur is a bird that utters a twittering or querulous sound (צפצפה), and in Jer. viii. 7 it is ranked with migratory birds. Both these characteristics meet in the crane; its cry is often compared by the poets with that of a person in dis-

ress or grief, and its migratory habits are frequently dwelt upon by ancient writers (see the passages collected on both points by Bochart). This view has been followed by Rosenmüller, Maurer, and Henderson, in their comments on Isaiah, and by Winer (*R. W. B.* on *Schwaalbe*). Gesenius, though seeming to favour this view in his commentary on Isaiah, repudiates it in his *Thesaurus*, where he treats 'Agur as a verbal adjective signifying *chattering* or *twittering*, and regards it as an epithet of the swallow in the passage in Isaiah, and as a designation of the swallow in that in Jeremiah. This is followed by Knobel (*D. Pr. Ies. verklärt*). It is in favour of this, that in the former the copulative is wanting between the two words; but this may be explained as a case of asyndeton (as in Hos. vi. 3; Hab. iii. 11, etc.); whereas the insertion of the ו in the other passage seems clearly to prove that 'Agur and Sus denote different birds. Hitzig, indeed, proposes to strike out this copula, but without sufficient reason. Maurer derives עגור from Arab. عكر *turbavit aquam*, so as to designate an aquatic bird; Knobel would trace it to حاور *to mourn piteously*.—W. L. A.

AH (אח, *brother*) or rather ACH, is frequently found, according to the inadequate representation of the guttural which is followed in our version, as the first syllable of compound Hebrew proper names. The observations already offered in the article AB may be referred to for some illustration of the metaphorical use of the term *brother* in such combinations, as well as for the law of their construction, whenever the two members are nouns of which one is dependent as a genitive on the other.—J. N.

AHAB (אחאב, *father's brother*; Sept. Ἀχαβ),
 1. The son of Omri, and the seventh king of Israel, who reigned twenty-two years, from B.C. 918 to 897. Ahab was, upon the whole, the weakest of all the Israelitish monarchs; and although there are occasional traits of character which shew that he was not without good feelings and dispositions, the history of his reign proves that weakness of character in a king may sometimes be as injurious in its effects as wickedness. Many of the evils of his reign may be ascribed to the close connection which he formed with the Phœnicians. There had long been a beneficial commercial intercourse between that people and the Jews; and the relations arising thence were very close in the times of David and Solomon. After the separation of the kingdoms, the connection appears to have been continued by the nearer kingdom of Israel, but to have been nearly, if not quite, abandoned by that of Judah. The wife of Ahab was Jezebel, the daughter of Ethbaal, or Ithobaal, king of Tyre. She was a woman of a decided and energetic character, and, as such, soon established that influence over her husband which such women always acquire over weak, and not unfrequently also over strong, men. Ahab, being entirely under the control of Jezebel, sanctioned the introduction, and eventually established the worship of the Phœnician idols, and especially of the sun-god Baal. Hitherto the golden calves in Dan and Bethel had been the only objects of idolatrous worship in Israel, and they were intended as symbols of JEHOVAH. But all reserve and limitation were now abandoned.

The king built a temple at Samaria, and erected an image, and consecrated a grove to Baal. A multitude of the priests and prophets of Baal were maintained. Idolatry became the predominant religion; and Jehovah, with the golden calves as symbolical representations of him, were viewed with no more reverence than Baal and his image. So strong was the tide of corruption, that it appeared as if the knowledge of the true God was soon to be for ever lost among the Israelites. At length the judgment of God on Ahab and his house was pronounced by Elijah, who announced that, during the reign of his son, his whole race should be exterminated. Ahab died of the wounds which he received in a battle with the Syrians, according to a prediction of Micaiah, which the king disbelieved, but yet endeavoured to avert by disguising himself in the action (1 Kings xvi. 29; xxii. 40).

2. A false prophet, who, in conjunction with Zedekiah, deceived the Israelites at Babylon. For this they were threatened by Jeremiah, who foretold that they should be put to death by the king of Babylon in the presence of those whom they had beguiled; and that in following times it should become a common malediction to say, 'The Lord make thee like Ahab and Zedekiah whom the king of Babylon roasted in the fire' (Jer. xxix. 21, 22).—J. K.

AHALIM (אֶהָלִים) and AHALOTH (אֶהָלוֹת), usually translated ALOES, occur in several passages of the Old Testament, as in Ps. xlv. 8, 'All thy garments smell of myrrh, and ahaloth, and cassia'; Prov. vii. 17, 'I have perfumed my bed with myrrh, with cinnamon and ahalim'; Canticles iv. 14, 'Spikenard and saffron, calamus and cinnamon, with all trees of frankincense, myrrh, and ahaloth, with all the chief spices.' From the articles which are associated with ahaloth and ahalim (both names indicating the same thing), it is evident that it was some odoriferous substance, probably well known in ancient times. Why these words have been translated 'aloes,' not only in the English, but in most of the older versions, it may not be easy to ascertain; but there is little doubt that the odoriferous ahaloth of the above passages ought not to be confounded with the bitter and nauseous aloes famed only as a medicine. The latter, no doubt, has some agreeable odour, when of the best quality from the island of Socotra, and when freshly-imported pieces are first broken; some not unpleasant odour may also be perceived when small pieces are burnt. But common aloes is usually disagreeable in odour and nauseous in taste, and could never have been employed as a perfume. Its usual name in Arabic, *sibbar*, has no resemblance to its European name. The earliest notice of aloes seems to be that of Dioscorides, iii. 25; the next that of Pliny (*Nat. Hist.* xxvii. 5). Both describe it as being brought from India, whence also probably came its name, which is *elwa* in Hindee.

The oldest and most complete account with which we are acquainted of the fragrant and aromatic substances known to the ancients is that given in the first twenty-eight chapters of the first book of Dioscorides. There, along with Iris, Acorum, Pyperum, Cardamomum, several Nards, Asarum, Phu, Malabathrum, Cassia, Cinnamon, Costus, Schænus, Calamus aromaticus, Balsamum,

Aspalatus, Crocus, etc., mention is also made of *Agallochum*, which is described as a wood brought from India and Arabia. In this list, which we shall afterwards have frequent occasion to refer to, we find *Agallochum* associated with most of the same substances which are mentioned along with it in the above passages of Scripture, whereas the author describes the true aloes in a very different part of his work. Subsequently to the time of Dioscorides, we find *Agallochum* mentioned by Orobasius, Ætius, and P. Ægineta; but they add nothing to the first description. The Arabs, however, as Rhases, Serapion, and Avicenna, were well acquainted with this substance, of which they describe several varieties, mostly named from the places where they were produced, and give other particulars respecting it, besides quoting Dioscorides and previous authors of their own country. In the Latin translation of Avicenna these descriptions appear under *Agallochum*, *Xilaloe*, and *Lignum aloes*; but in the Arabic edition of the same author, under *اغالوخي* *Aghlajoon*, *اغالوخي* *Aghalookhi*, but most fully under *عود* 'Aod, pronounced *ood*. This is one instance, and many others might be added, of the Arabs describing the same thing under two names, when they found a substance described by the Greeks—that is, Galen and Dioscorides, under one name, and were themselves acquainted with it under another. In the Persian works on *Materia Medica* (*vide* ABARTICHIM) we are informed that *agalokhee* is the Greek name of this substance, and that the Hindee name of one kind, by them called *aod-i-hindee* is *aggur*. Having thus traced a substance which was said to come from India to the name by which it is known in that country, the next process would perhaps naturally have been to procure the substance, and trace it to the plant which yielded it. We, however, followed the reverse method; having first obtained the substance called *Aggur*, we traced it, through its Asiatic synonyms, to the *Agallochum* of Dioscorides, and, as related in the *Illustr. of Himalayan Botany*, p. 171, obtained in the bazaars of Northern India three varieties of this far-famed and fragrant wood—1. *aod-i-hindee*; 2. a kind procured by commerce from Surat, which, however, does not appear to differ essentially from the third, *aod-i-kimaree*, which was said to come from China, and is, no doubt, the *alcamericum* of Avicenna.

In the north-western provinces of India *aggur* is said to be brought from Surat and Calcutta. Garcia ab Horto (Clusius, *Exotic. Hist.*), writing on this subject near the former place, says that it is called 'in Malacca *garro*, selectissimum autem Calambac.' Dr. Roxburgh, writing in Calcutta, states that *ugooroo* is the Sanscrit name of the incense or aloe-wood, which in Hindee is called *ugoor*, and in Persian *aod-hindee*; and that there is little or no doubt that the real *calambac* or *agallochum* of the ancients is yielded by an immense tree, a native of the mountainous tracts east and south-east from Silhet, in about 24° of N. latitude. This plant, he says, cannot be distinguished from thriving plants exactly of the same age of the *Garro de Malacca* received from that place, and then in the Botanic Garden of Calcutta. He further states that small quantities of *agallochum* are sometimes imported into Calcutta by sea from

the eastward ; but that such is always deemed inferior to that of Silhet (*Flora Ind.* ii. 423).

The *Garo de Malacca* was first described by Lamarck from a specimen presented to him by Sonnerat as that of the tree which yielded the *bois d'aigle* of commerce. Lamarck named this tree *Aquilaria Malaccensis*, which Cavanilles afterwards changed unnecessarily to *A. ovata*. As Dr. Roxburgh found that his plant belonged to the same genus, he named it *Aquilaria Agallochum*, but it is printed *Agallocha* in his *Flora Indica*, probably by an oversight. He is of opinion that the *Agallochum secundarium* of Rumphius (*Amb.* ii. 34, t. 10), which that author received under the name of *Agallochum malaccense*, also belongs to the same genus, as well as the *Sinfoo* of Kæmpfer (*Aman. Exot.* p. 903), and the *Ophispermum sinense* of Loureiro.

31. *Aquilaria Agallochum*.

These plants belong to the Linnæan class and order *Decandria monogynia*, and the natural family of *Aquilarinæ*; at all events, we have two trees ascertained as yielding this fragrant wood—one, *Aquilaria Agallochum*, a native of Silhet; and the other, *A. ovata* or *malaccensis*, a native of Malacca. The missionary Loureiro, in his description of the flora of Cochin-China, describes a third plant, which he names *Aloexylum*, 'idem est ac lignum aloë,' and the species *A. Agallochum*, represented as a large tree growing in the lofty mountains of Champava belonging to Cochin-China, about the 13th degree of N. latitude, near the great river 'Lavum.' 'Omnes vero aloës ligni species ex hac arbore procedunt, etiam pretiosissima, quæ dici solet Calambæ.' This tree, belonging to the class and order *Decandria monogynia* of Linnæus, and the natural family of *Leguminosæ*, has always been admitted as one of the trees yielding *Agallochum*. But as Loureiro himself confesses that he had only once seen a mutilated branch of the tree in flower, which, by long carriage, had the petals, anthers, and stigma much bruised and torn, it is not impossible that this may also belong to the genus *Aquilaria*, especially as his tree agrees in so many points with that described by Dr. Roxburgh, as already observed by the latter in his *Hist. Flor. Ind.* l. c. Rumphius has described and figured a third plant, which he named *arbor excæcans*; from 'Blindhout,' in consequence of its acrid juice destroying sight—whence the generic name of *Excæ-*

caria; the specific one of *agallochum* he applied, because its wood is similar to and often substituted for *agallochum*; 'Lignum hoc tantam habet cum *agallocho* similitudinem.' And he states that it was sometimes exported as such to Europe, and even to China. This tree, the *Excæcaria agallochum*, of the Linnæan class and order *Diocia triandria*, and the natural family of *Euphorbiacæ*, is also very common in the delta of the Ganges, where it is called *Geria*; 'but the wood-cutters of the Sunderbunds,' Dr. Roxburgh says, 'who are the people best acquainted with the nature of this tree, report the pale, white, milky juice thereof to be highly acrid and very dangerous.' The only use made of the tree, as far as Dr. Roxburgh could learn, was for charcoal and firewood. *Agallochum* of any sort is, he believed, never found in this tree, which is often the only one quoted as that yielding *agila*-wood; but, notwithstanding the negative testimony of Dr. Roxburgh, it may, in particular situations, as stated by Rumphius, yield a substitute for that fragrant and long-famed wood.

Having thus traced the *agallochum* of commerce to the trees which yield it, it is extremely interesting to find that the Malay name of the substance, which is *agila*, is so little different from the Hebrew; not more, indeed, than may be observed in many well-known words, where the hard *g* of one language is turned into the aspirate in another. It is therefore probable that it was by the name *agila* (*aghil*, in Rosenmüller, *Bibl. Bot.* p. 234) that this wood was first known in commerce, being conveyed across the Bay of Bengal to the island of Ceylon or the peninsula of India, which the Arab or Phœnician traders visited at very remote periods, and where they obtained the early-known spices and precious stones of India. It is not a little curious that Captain Hamilton (*Account of E. Indies*, i. 68) mentions it by the name of *agula*, an odoriferous wood at Muscat. We know that the Portuguese, when they reached the eastern coast from the peninsula, obtained it under this name, whence they called it *pao d'aguila*, or eagle-wood; which is the origin of the generic name *Aquilaria*.

The term *agila*, which in Hebrew we suppose to have been converted into *ahel*, and from which were formed *ahalim* and *ahaloth*, appears to have been the source of its confusion with aloes. Sprengel has observed that the primitive name seems to be preserved in the Arabic appellations اللوة *al-luwa* and اللية *al-liya*, which may be read *alloeh* (or *alioet*) and *allieh*. These come extremely near *ايلاو aelwa*,

pronounced *elwa*—the Hindoo name of the medicinal aloë. Hence the two names became confounded, and one of them applied to two very different substances. But it was soon found necessary to distinguish the *agallochum* by the term *εὐλαλόνη*, which has been translated into *lign-aloë*. That the name aloë was considered to be synonymous with *ahalim*, at an early period, is evident, as 'the Chaldee translation of the Psalms and Canticles, the old Latin version of the Proverbs and Canticles, and the Syriac translation, have all rendered the Hebrew word by aloës' (Rosenmüller, *l. c.* p. 234). There can be little or no doubt that the same odoriferous *agila* is intended in the passage of John xix. 39. When the body of our Saviour was taken down from the cross, Nicodemus, we are told,

brought myrrh and aloes for the purpose of winding it in linen clothes with these spices. But the quantity (100 lbs.) used has been objected to by some writers, and therefore Dr. Harris has suggested, that, 'instead of *ἐκατόν*, it might originally have been *δεκατόν*, 10 lbs. weight.' It is well known, however, that very large quantities of spices were occasionally used at the funerals of Jews. But before objecting to the quantity of this expensive wood, disputants should have ascertained the proportions in which it was mixed with the myrrh, an article sufficiently abundant and of moderate price, because easily obtained by the Arabians from the opposite coast of Africa. Dr. Harris has, moreover, objected, that 'the Indian lign-aloes is so odoriferous and so agreeable, that it stands in no need of any composition to increase or moderate its perfume.' But this very excellence makes it better suited for mixing with less fragrant substances, and, however large the quantity of these substances, like the broken vase, 'the scent of the roses will hang round it still.'

The only passage where there is any difficulty is that in which there is the earliest mention of the *ahaloth* (Num. xxiv. 6). Here Balaam, referring to the flourishing condition of the Israelites, says, 'as the trees of *ahalim*, which the Lord hath planted, and as cedar trees beside the waters.' Whether the expression is here to be understood literally, or merely as a poetical form, is doubtful, especially as authorities differ as to the true reading; some versions, as the Septuagint, Vulgate, Syriac, and Arabic, having 'tents' instead of 'lign-aloes,' from which it would seem that, in place of *אֲהָלִים*, *ahalim*, they had found in their copies *אֲהָלִים*, *ahalim* (Rosenmüller, p. 235).

In Arabian authors numerous varieties of agallochum are mentioned. These are enumerated by various writers (Cels. *Hierobot.* p. 143). Persian authors mention only three:—1. *Aod-i-hindee*, that is, the Indian; 2. *Aod-i-chinee*, or Chinese kind (probably that from Cochin-China); while the third, or *Sumunduree*, a term generally applied to things brought from sea, may have reference to the inferior variety from the Indian islands. In old works, such as those of Bauhin and Ray, three kinds are also mentioned:—1. Agallochum præstantissimum, also called *Calambac*; 2. A. Officinarium, or *Palo de Aguilla* of Linschoten; 3. A. sylvestre, or *Aguilla brava*. But besides these varieties, obtained from different localities, perhaps from different plants, there are also distinct varieties, obtainable from the same plant. Thus in a MS. account by Dr. Roxburgh, to which we have had access, and where, in a letter, dated 8th Dec. 1808, from R. K. Dick, Esq., judge and magistrate at Silhet, it is stated that four different qualities may be obtained from the same tree:—1st, *Ghurkee*, which sinks in water, and sells from 12 to 16 rupees per seer of 2 lbs.; 2d, *Doim*, 6 to 8 rupees per seer; 3d, *Siniula*, which floats in water, 3 to 4 rupees; and 4th, *Choorum*, which is in small pieces, and also floats in water, from 1 to 1½ rupee per seer (the three last names mean only 2d, 3d, and 4th kinds); and that sometimes 80 lbs. of these four kinds may be obtained from one tree. All these *tuggur*-trees, as they are called, do not produce the *Aggur*, nor does every part of even the most productive tree. The natives cut into the

wood until they observe dark-coloured veins yielding the perfume; these guide them to the place containing the *aggur*, which generally extends but a short way through the centre of the trunk or branch. An essence, or *attur*, is obtained by bruising the wood in a mortar, and then infusing it in boiling water, when the *attur* floats on the surface. Early decay does not seem incident to all kinds of agallochum, for we possess specimens of the wood gorged with fragrant resin (*Illustr. Him. Bot.* p. 173) which shew no symptoms of it; but still it is stated that the wood is sometimes buried in the earth. This may be for the purpose of increasing its specific gravity. A large specimen in the museum of the East India House displays a cancellated structure, in which the resinous parts remain, the rest of the wood having been removed, apparently by decay.—J. F. R.

AHASUERUS (אֲחַשְׁוֵרֶשׁ), or ACHASHVEROSH, is the name, or rather the *title*, of four Median and Persian monarchs mentioned in the Bible. The earlier attempts of Simonis and others to derive this name from the Persian *achash* are unworthy of notice. Hyde (*De Relig. Vet. Pers.* p. 43) more boldly proposed to disregard the Masoretic punctuation, and to read the consonants, *Acuare*, so as to correspond with *Ὀξυδάρας*, a Persian royal title. Among those who assume the identity of the names Achashverosh and Xerxes, Grotefend believes he has discovered the true orthography of Xerxes in the arrowhead inscriptions of Persepolis. He has deciphered signs representative of the sounds *khshhêrshê*, and considers the first part of the word to be the Zend form of the later *shah*, 'king' (Heeren's *Ideen*, i. 2, 350). Gesenius also (in his *Thesaurus*) assents to this, except that (as Reland had done before) he takes the first part of the word to be the original form of *shîr*, a lion, and the latter to be that of *shah*. The Hebrew Achashverosh might thus be a modification of *khshhêrshê*: the prosthetic aleph being prefixed (as even Scaliger suggested), and a new vowel being inserted between the first two sounds, merely to obviate the difficulty which, as is well known, all Syro-Arabians find in pronouncing two consonants *before* a vowel. One of the highest authorities in such questions, however, A. F. Pott (*Etymol. Forschungen*, i. p. lxx.), considers Xerxes to be a compound of the Zend *csathra*, king (with loss of the *i*), and *csahya*, also meaning king, the original form of *shah*; and suggests that Achashverosh—its identity with Xerxes, as he thinks, not being established—may be the Pelvi *huzvaresh*, 'hero' (from *hu*, 'good,' and *zour*, 'strength'), corresponding to *ἀπῆτος*, which Herodotus (vi. 98) says is the true sense of *Xerxes*. Jahn, indeed, first proposed the derivation from *zwaresh* (in his *Archæol.* ii. 2, 244); but then he still thought that the first part of the name was *achash*—a modern Persian word, which only seems to denote *price, value*. Lastly, it deserves notice that the *kethib*, in Esther x. 1, has אֲחַשְׁוֵרֶשׁ, pointed *Achashresh*; and that the Syriac version always (and sometimes the Arabic also, as in Dan. ix. 1) writes the name *Achshêresh*. Igen adopts the *kethib* as the authentic consonants of the name; but changes the vowels to *Achshâresh*, and modifies his etymology accordingly.

The first Ahasuerus (Sept. *Ἀασούνηρος*, Theodotion, *Ξέπεξης*) is incidentally mentioned, in Dan. ix. 1, as the father of Darius the Mede. It is generally

agreed that the person here referred to is the Astyages of profane history. See the article DARIUS.

The second Ahasuerus (Sept. Ἀσούηρος) occurs in Ezra iv. 6, where it is said that in the beginning of his reign the enemies of the Jews wrote an accusation against them, the result of which is not mentioned. The whole question, as to the Persian king here meant, depends on the light in which the passage of this chapter, from ver. 6 to 24, is regarded. The view which Mr. Howes seems to have first proposed, and which Dr. Hales adopted in his *Analysis of Chronology*, proceeds on the theory that the writer of this chapter, after mentioning the interruption to the building of the temple from the time of Cyrus down to that of Darius, king of Persia (ver. 1-5), is led, by the association of the subject, to enter into a detail of the hindrances thrown in the way of building and fortifying the city (after the temple had been completed), under the successors of Darius Hystaspis (ver. 6-23); and that, after this digressive anticipation of events posterior to the reign of Darius, he returns (in ver. 24) to the history of the building of the temple under that prince. This view necessarily makes the Achashverosh and Artachshasta of ver. 6 and 7 to be the successors of Darius Hystaspis, *i. e.*, to be Xerxes and Artaxerxes Longimanus. The main argument on which this theory rests, seems to be the circumstance that, in the whole passage, there is no mention whatever of the temple; but, on the contrary, that the setting up of the walls of the rebellious city forms the sole ground of complaint: so that the passage must refer to what occurred after the temple was finished (see the extract from Howes in the *Pictorial Bible*, *ad loc.*)

There are, however, some objections against the conclusiveness of this reasoning; for, first, even assuming the object of the enemies of the Jews, in this accusation, to have been to hinder the building of the temple, it is yet easy to conceive how the omission of all mention of the temple might be compatible with their end, and dependent on the means they were obliged to employ. They could only obtain their object through the Persian king; they therefore used arguments likely to weigh with him. They appealed to motives of state policy. Accordingly, they sought to alarm his jealousy lest the rebellious city should become strong enough to resist tribute, and refuse to allow the transit of his armies; they drew attention to the rebuilding of the defences, as the main point of the argument; and said nothing about the temple, because that would be a matter of secondary importance in the only point of view in which the subject would appear to the Persian king. But, secondly, it has been shewn by a minute inquiry by Trendelenburg (in Eichhorn's *Einleit. in die Apocryph. Schrift*, p. 351), that the first hook of the apocryphal Esdras is principally a free, but in parts continuous, translation of the canonical Ezra. It is, therefore, remarkable that the author of Esdras, who has taken this very account of the accusation from Ezra, was so far from discerning the omission of the temple, and the conclusion that Mr. Howes has drawn from it, that his letter (ii. 16-30) states, that 'The Jews, being come into Jerusalem, that rebellious city, do build the market-place, and repair the walls of it, and do lay the foundation of the temple . . . And forasmuch as the things pertaining to the temple are

now in hand, we think it meet not to neglect such a matter.' Josephus also (*Antiq.* xi. 2, 1), conformably to his general adherence, in this part, to the apocryphal Esdras, both uses, in his letter, the same terms about the reconstruction of the temple being then commenced, and even tells the whole story as referring to *Cambyses*, which makes it clear that he understood the passage of the immediate successor of Cyrus. Thirdly, it is even probable, *à priori*, that the rebuilding of the temple and of the city itself would, to a certain extent, necessarily go on together. The Jews must have had sufficient time and need, in the fifteen years between the accession of Cyrus and that of Darius Hystaspis, to erect some buildings for the sustenance and defence of the colony, as well as for carrying on the structure of the temple itself. As we read of 'ceiled houses' in Haggai i. 4, they may have built defences sufficient to give a colour to the statements of the letter; and enough to free a critic from the necessity of transferring the passage in Ezra to the time of Artaxerxes Longimanus, solely because it speaks of the erection of the walls. Moreover, as Ezra (ix. 9) speaks of God having enabled the Jews to repair the temple, and of his having 'given them a wall in Jerusalem,' we find that, when the temple was finished (and no evidence shews how long before that), they actually had built a wall. Josephus also (*Antiq.* xi. 4, 4) mentions even 'strong walls with which they had surrounded the city' before the temple was completed. (It is worth while to remark that Dr. Hales, speaking of this wall of Ezra, endeavours, consistently with his theory, to make it 'most probably mean the fence of a shepherd's fold, here figuratively taken for their establishment in their own land.' But any lexicon will shew that גרר means a fence, a wall, generally; and that it is only limited by the context to mean the wall of a garden, the fence of a fold.) Again, it is assumed that Nehemiah shews that the walls of the city were not built until his time. Not such, nor the same, as he erected, granted. But—to borrow a remark of J. D. Michaelis—when we read in Neh. i. 3, of the Jews who returned to Persia, and who answered Nehemiah's inquiry after the fate of the colony, by informing him that 'the wall of Jerusalem is broken down and the gates thereof burned with fire,' is it possible that they can refer to the destruction of the walls by Nebuchadnezzar, 144 years before? Was such news so long in reaching Nehemiah? Is it not much easier to believe that the Jews, soon after their return, erected some defences against the hostile and predatory clans around them; and that, in the many years which intervene between the books of Nehemiah and Ezra (of which we have no record), there was time enough for those tribes to have burnt the gates and thrown down the walls of their imperfect fortifications? Lastly, the view of Mr. Howes seems to require peculiar philological arguments, to reconcile the construction of the digression with the ordinary style of Hebrew narrative, and to point out the particles, or other signs disjunctive, by which we may know that ver. 24 is to be severed from the preceding. Nor is it altogether a trivial objection to his theory, that no scholar appears to have entertained it before himself. The nearest approach to it has been made by Vitringa, who, in his *Hypotyposi Temporum* (cited in Michaelis's *Adnot. Überior.*), suggests, indeed, that ver. 6

refers to Xerxes, but explains all the rest of the passage as applying to Cambyses.

If the arguments here adduced are satisfactory, the Ahasuerus of our passage is the immediate successor of Cyrus—the frantic tyrant Cambyses, who came to the throne B.C. 529, and died after a reign of seven years and five months; and the discrepancy between Ezra and the apocryphal Esdras and Josephus—both of whom leave out ver. 6, and mention only the king of whom the detailed story of the letter is related, whom the one calls *Ariaxerxes*, and the other *Cambyses*—may be reconciled, by supposing that they each make the reigns of Cambyses and of the impostor Smerdis into one.

The *third* Ahasuerus (Sept. *Αραξέρξης*) is the Persian king of the book of Esther. The chief facts recorded of him there, and the *dates* of their occurrence, which are important in the subsequent inquiry, are these: In the *third* year of his reign he made a sumptuous banquet for all his nobility, and prolonged the feast for 180 days. Being on one occasion merry with wine, he ordered his queen Vashti to be brought out, to shew the people her beauty. On her refusal to violate the decorum of her sex, he not only indignantly divorced her, but published an edict concerning her disobedience, in order to insure to every husband in his dominions the rule in his own house. In the *seventh* year of his reign he married Esther, a Jewess, who however concealed her parentage. In the *twelfth* year of his reign, his minister Haman, who had received some slights from Mordecai the Jew, offered him 10,000 talents of silver for the privilege of ordering a massacre of the Jews in all parts of the empire on an appointed day. The king refused this immense sum, but acceded to his request; and couriers were despatched to the most distant provinces to enjoin the execution of this decree. Before it was accomplished, however, Mordecai and Esther obtained such an influence over him, that he so far annulled his recent enactment as to despatch other couriers to empower the Jews to defend themselves manfully against their enemies on that day; the result of which was, that they slew 800 of his native subjects in Shushan, and 75,000 of them in the provinces.

Although almost every Medo-Persian king, from Cyaxares I. down to Artaxerxes III. (Ochus), has in his turn found some champion to assert his title to be the Ahasuerus of Esther, yet the present inquiry may reasonably be confined within much narrower limits than would be requisite for a discussion of all the rival claims which have been preferred. A succinct statement, principally derived from Justi's ingenious *Versuch über den König Ahasuerus* (in Eichhorn's *Repertorium*, xv. 1-38), will suffice to shew that Darius Hystaspis is the earliest Persian king in whom the plainest marks of identity are not evidently wanting; that Darius Hystaspis himself is, nevertheless, excluded on less obvious, but still adequate grounds; and that the whole question lies, and with what preponderance of probability, between Xerxes and his successor Artaxerxes Longimanus.

As Ahasuerus reigned from India to Ethiopia (Esth. i. 1), and imposed a tribute (not necessarily for the *first* time) on the land and isles of the sea (x. 1); and laid the disobedience of Vashti before the seven princes which see the king's face, and sit first in the kingdom (i. 14); it is argued that

these three circumstances concur, according to the testimony of profane history, to exclude all the predecessors of Darius Hystaspis. For Darius was the first Persian king who subdued India, which thenceforth formed the twentieth province of his empire; and, as for Ethiopia, Cambyses, who first invaded it, only obtained a partial conquest there (Herod. iv. 44; iii. 25, 94). Darius was also the first who imposed a stated tribute on the different provinces of the empire, as, from the times of Cyrus, the revenue depended on the voluntary gifts of the people (Herod. iii. 89). Lastly, the seven princes, and their privilege of seeing the king's face, are traced to the events attending the elevation of Darius to the throne: when the seven conspirators who slew the usurper Smerdis stipulated, before ever it was decided which of their number should obtain the crown, that all the seven should enjoy special privileges, and, among others, this very one of seeing the king at any time without announcement (Herod. iii. 84). This is confirmed by the fact, that although the Persian counsellors of the time anterior to Darius are often mentioned (as when Cambyses laid before them a question parallel to that about Vashti, Herod. iii. 31), yet the definite number *seven* does not occur; whereas, after Darius, we find the seven counsellors both in Esther and again in the reign of Artaxerxes Longimanus (Ezra vii. 14). (It is an oversight to appeal to this account of the seven conspirators in order to find the precise number of *seven* princes. For the narrative in Herodotus shews that, as Darius was chosen king from among the seven, there could only be *six* persons to claim the privilege of seeing the king's face; not to insist that Otanes, who made a separate demand for himself, and who withdrew from the party before those stipulations were made, may *possibly* have reduced the number of privileged counsellors to *five*.)

But neither can it be Darius Hystaspis himself, although he possesses all these marks of agreement with the person intended in the book of Esther. For, first, not only can none of the names of the seven conspirators, as given either by Herodotus or by Ctesias, be brought to accord with the names of the seven princes in Esther; but, what is of greater importance, it is even more difficult to find the name of Darius himself in Achashverosh. For, notwithstanding the diverse corruptions to which proper names are exposed when transmitted through different foreign languages, there is yet such an agreement between the Zend name found by Grotefend in the cuneiform inscriptions, and the *Darius* of the Greeks, and *Darjävesh* (the name by which Darius Hystaspis is undoubtedly designated elsewhere in the Old Testament), that the genuineness of this title is open to less suspicion than that of almost any other Persian king. It would, therefore, be inexplicable that the author of the book of Esther above all others should not only not call him by the authentic name of sacred as well as profane history, but should apply to him a name which has been shewn to be given, in almost all contemporary books of the Old Testament, to other Persian kings. Secondly, the moral evidence is against him. The mild and just character ascribed to Darius renders it highly improbable that, after favouring the Jews from the second to the sixth year of his reign, he should become a senseless tool in the hands of Haman, and consent

to their extirpation. Lastly, we read of his marrying two daughters and a granddaughter of Cyrus, and a daughter of Otanes—and these only; would Darius have repudiated one of these for such a trifle, when his peculiar position, as the first king of his race, must have rendered such alliances indispensable?

It only remains now to weigh the evidence against Artaxerxes, in order to lead more cogently to the only alternative left—that it is Xerxes. As Artaxerxes allowed Ezra to go to Jerusalem with a colony of exiles in the seventh year of his reign (Ezra vii. 1-7); and as he issued a decree in terms so exceedingly favourable to the religious as well as civil interests of the Jews (giving them liberal grants and immunities, speaking of their law as the law of the God of heaven, and threatening punishment to whoever would not do the law of God and of the king, Ezra vii. 11-26): how could Haman, *five years afterwards*, venture to describe the Jews to him as a people whom, on the very account of their law, it was not for the king's profit to suffer? And how could Haman so directly propose their extermination, in the face of a decree so signally in their favour, and so recently issued by the same king? especially as the laws of the Medes and Persians might not be altered! Again, as Artaxerxes (assuming always that *he* is the Artachshast of Ezra vii. 1, and not Xerxes, as is nevertheless maintained by J. D. Michaelis, Jahn, and De Wette) was capable of such liberality to the Jews in the seventh year of his reign, let us not forget that, if he is the Ahasuerus of the book of Esther, it was in that same year that he married the Jewess. Now, if—by taking the first and tenth months in the seventh year of the king (the dates of the departure of Ezra, and of the marriage of Esther) to be the first and tenth months of the *Hebrew year* (as is the usual mode of notation; see Hitzig, *Die xii Kleinen Propheten*, note to Haggai i. 1), and not the first and tenth from the period of his *accession*—we assume that the departure of Ezra took place *after* his marriage with her, his clemency might be the effect of her influence on his mind. Then we have to explain how he could be induced to consent to the extirpation of the Jews in the twelfth year of his reign, notwithstanding that her influence still continued—for we find it evidently at work in the twelfth year. But if, on the other hand, his indulgence to Ezra was *before* his marriage, then we have even a greater difficulty to encounter. For then Artaxerxes must have acted from his own unbiassed lenity, and his purposed cruelty in the twelfth year would place him in an incongruous opposition with himself. As we, moreover, find Artaxerxes again propitious to their interests, in the twentieth year of his reign—when he allowed Nehemiah to return to Jerusalem—it is much easier to believe that he was also favourably disposed to them in the twelfth. At any rate, it would be allowing Esther a long time to exercise an influence on his disposition, if his clemency in the twentieth year was due to her, and not to his own inclination. Besides, the fact that neither Ezra nor Nehemiah gives the least hint that the liberal policy of Artaxerxes towards them was owing to the influence of their countrywoman, is an important negative point in the scale of probabilities. In this case also there is a serious difficulty in the name. As Artaxerxes is called *Artachshast* in Ezra and Nehemiah, we certainly might

expect the author of the book of Esther to agree with them in the name of the king whom they all had had such occasion to know. Nor is it, perhaps, unimportant to add, that Norberg asserts, on the authority of native Persian historians, that the *mother* of Bahman, *i. e.*, Artaxerxes Longimanus, was a *Jewess* (*Opuscula Acad.* iii. 218). This statement would agree excellently with the theory that Xerxes was Ahasuerus. Lastly, the joint testimony borne to his clemency and magnanimity by the acts recorded of him in Ezra and Nehemiah, and by the accordant voice of profane writers (Plutarch, *Artaxerxes*; Diodor. Sic. xi. 71; Ammian. Marcell. xxx. 8), prevents us from recognising Artaxerxes in the debauched, imbecile, and cruel tyrant of the book of Esther.

On the ground of moral resemblance to that tyrant, however, every trait leads us to Xerxes. The king who scourged and fettered the sea; who beheaded his engineers because the elements destroyed their bridge over the Hellespont; who so ruthlessly slew the eldest son of Pythius because his father besought him to leave him one sole support of his declining years; who dishonoured the remains of the valiant Leonidas; and who beguiled the shame of his defeat by such a course of sensuality, that he publicly offered a reward for the inventor of a new pleasure—is just the despot to divorce his queen because she would not expose herself to the gaze of drunken revellers; is just the despot to devote a whole people, his subjects, to an indiscriminate massacre; and by way of preventing that evil, to restore them the right of self-defence (which it is hard to conceive how the first edict ever could have taken away), and thus to sanction their slaughtering thousands of his other subjects.

There are also remarkable coincidences of date between the history of Xerxes and that of Ahasuerus. In the third year of his reign the latter gave a grand feast to his nobles, which lasted 180 days (Esth. i. 3); the former, in *his* third year, also assembled his chief officers to deliberate on the invasion of Greece (Herod. vii. 8). Nor should we wonder to find no nearer agreement in the two accounts than is expressed in the mere fact of the nobles being assembled. The two relations are quite compatible; each writer only mentioning that aspect of the event which had interest for him. Again, Ahasuerus married Esther at Shushan, in the seventh year of his reign: in the same year of *his* reign, Xerxes returned to Susa with the mortification of his defeat, and sought to forget himself in pleasure;—not an unlikely occasion for that quest for fair virgins for the harem (Esth. ii. 2). Lastly, the tribute imposed on the land and isles of the sea also accords with the state of his revenue, exhausted by his insane attempt against Greece. In fine, these arguments, negative and affirmative, render it so highly probable that Xerxes is the Ahasuerus of the book of Esther, that to demand more conclusive evidence, would be to mistake the very nature of the question.

The *fourth* Ahasuerus (*Ἀρόβριος*) is mentioned in Tobit xiv. 15, in connection with the destruction of Nineveh. That circumstance points out Cyaxares I. as the person intended (Herod. i. 106, Rawlinson, *Bampton Lecture*, p. 185).—J. N.

AHAVA (אָהַוָּה; Sept. 'Αουέ, Ezra viii. 21, 31, and *Edel*, verse 15), the river by which the Jewish exiles assembled their second caravan under Ezra, when returning to Jerusalem. It would seem from ch. viii. 15, that it was designated from a town of the same name: 'I assembled them at the river that flows towards Ahava.' In that case, it could not have been of much importance in itself; and possibly it was no other than one of the numerous canals with which Babylonia then abounded. This is probably the true reason that Biblical geographers have failed to identify it. Some have sought the Ahava in the Lycus or Little Sab, finding that this river was anciently called Adiaba or Diaba. But these names would, in Hebrew characters, have no resemblance to אָהַוָּה; and it is exceedingly unlikely that the rendezvous for a Palestine caravan should have been north-east of the Tigris in Assyria, with the two great rivers, Tigris and Euphrates, between them and the plains they were to traverse. It is not so clear, however, that Rosenmüller is right in supposing that it probably lay to the south-west of Babylonia, because that was in the direction of Palestine. It is too much forgotten by him and other writers, that caravan routes seldom run in straight lines between two places. In this case, a straight line would have taken the caravan through the whole breadth of a desert seldom traversed but by the Arabs; and to avoid this, the usual route for large caravans lay, and still lies, north-west through Mesopotamia, much above Babylonia; and then, the Euphrates being crossed, the direction is south-west to Palestine. The greater probability, therefore, is, that the Ahava was one of the streams or canals of Mesopotamia communicating with the Euphrates somewhere in the north-west of Babylonia.—J. K.

AHAZ (אָחָז, *possessor*; Sept. 'Αχαζ; Joseph.

Αχάζης), son of Jotham, and eleventh king of Judah, who reigned sixteen years, from B.C. 741 to 726. Ahaz was the most corrupt monarch that had hitherto appeared in Judah. He respected neither Jehovah, the law, nor the prophets; he broke through all the restraints which law and custom had imposed upon the Hebrew kings, and had regard only to his own depraved inclinations. He introduced the religion of the Syrians into Jerusalem, erected altars to the Syrian gods, altered the temple in many respects after the Syrian model, and at length ventured to shut it up altogether. Such a man could not exercise that *faith* in Jehovah, as the political head of the nation, which ought to animate the *courage* of a Hebrew king. Hence, after he had sustained a few repulses from Pekah and Rezin, his allied foes, when the Edomites had revolted from him, and the Philistines were making incursions into his country, notwithstanding a sure promise of divine deliverance, he called Pul, the king of Assyria, to his aid [ASSYRIA]. He even became tributary to that monarch, on condition of his obliging Syria and Israel to abandon their design of destroying the kingdom of Judah. The Assyrians, as might be expected, acted only with a view to their own interests, and afforded Ahaz no real assistance; on the contrary, they drove him to such extremities that he was scarcely able, with all the riches of the temple, of the nobility, and of the royal treasury, to purchase

release from his troublesome protectors. He died at the age of thirty-six (2 Kings xvi.; 2 Chron. xxviii.; Is. vii.; Jahn, *Biblisches Archäologie*, ii. 185; iii. 145; Hales, *Analysis*, ii. 417-419). [From 2 Kings xviii. 2, it appears that Hezekiah, Ahaz's son, succeeded him when he was twenty-five years old. But if Ahaz was only thirty-six when he died, he must have been a father at eleven to have had a son twenty-five years of age at that time. As this is incredible, we must suppose an error in the statement that Ahaz was only twenty when he came to the throne. The LXX. and the Peshito (2 Chron. xxviii. 1) make him twenty-five.]—J. K.

AHAZIAH (אָחִזְיָהוּ and אָחִזְיָהוּ, *holder of Jehovah*; Sept. 'Οχοζίας), 1. The son and successor of Ahab, and eighth king of Israel. He reigned two years, B.C. 897-896. It seems that Jezebel exercised over her son the same influence which had guided her husband; and Ahaziah pursued the evil courses of his father. The most signal public event of his reign was the revolt of the Moabites, who took the opportunity of the defeat and death of Ahab to discontinue the tribute which they had paid to the Israelites. Ahaziah became a party in the attempt of Jehoshaphat, king of Judah, to revive the maritime traffic by the Red Sea; in consequence of which the enterprise was blasted, and came to nothing (2 Chron. xx. 35-37). Soon after, Ahaziah, having been much injured by a fall from the roof-gallery of his palace, had the infatuation to send to consult the oracle of Baal-zebub, the god of Ekron, respecting his recovery. But the messengers were met and sent back by Elijah, who announced to the king that he should rise no more from the bed on which he lay (1 Kings xxii. 51, to 2 Kings i. 18).

2. Son of Jehoram by Athaliah, daughter of Ahab and Jezebel, and sixth king of Judah, called also Azariah, 2 Chron. xxii. 6, and Jehoahaz, 2 Chron. xxi. 17. He reigned but one year (B.C. 885), and that ill, suffering himself in all things to be guided by the wicked counsels of his idolatrous mother, Athaliah. He cultivated the connections which had unhappily grown up between the two dynasties, and which had now been cemented by marriage. Hence he joined his uncle Jehoram of Israel in an expedition against Hazael, king of Damascus-Syria, for the recovery of Ramoth-Gilead; and afterwards paid him a visit while he lay wounded in his summer palace of Jezreel. The two kings rode out in their several chariots to meet Jehu; and when Jehoram was shot through the heart, Ahaziah attempted to escape, but was pursued, and being mortally wounded, had only strength to reach Megiddo, where he died. His body was conveyed by his servants in a chariot to Jerusalem for interment (2 Kings ix. 28). In 2 Chron. xxii. 7-9, the circumstances are somewhat differently stated; but the variation is not substantial, and requires no particular notice. It appears from that passage, however, that Jehu was right in considering Ahaziah as included in his commission to root out the house of Ahab. [In 2 Kings viii. 26, Ahaziah is said to have been twenty-two years old when he began to reign; but in 2 Chron. xxii. 2, his age then is stated as forty-two. The former is undoubtedly correct, as the latter makes him older than his father. Compare 2 Chron. xxi. 5, 20.]—J. K.

AHHASHTERANIM (אַהַשְׁתְּרָנִים). This word occurs Esth. viii. 10, and is translated in the A. V. *camels*. That this is an error is now universally conceded. Bochart contends that the word designates *mules*, and regards the words that follow בְּנֵי הַמָּרְכָּוִים, *sons of mares*, as in apposition with it, and as descriptive of a class of mules remarkable for their swiftness. That in this respect the hybrid between the ass and the mare is much superior to the hybrid between the horse and the ass is abundantly attested (Aristot. *Rhetor.* iii. 2; Plin. *Hist. Nat.* viii. 44, etc.); which is in favour of Bochart's hypothesis. He derives the word from the Persian *استر* *asthar* or *ester*, a mule; and in this Gesenius concurs, comparing the Sanscrit *agwatara*. In this scholars may be regarded as concurring.—W. L. A.

AHIAH (אֲחִיָּהּ, *brother, (i. e. friend) of Jehovah*; Sept. Ἀχιδ, 1 Sam. xiv. 3), 1. Son of Ahitub, and high-priest in the reign of Saul, and brother and predecessor of the Abimelech whom Saul slew for assisting David. Seeing that Abimelech, a son of Ahitub, was also high-priest in the same reign (1 Sam. xxii. 11), some have thought that both names belonged to the same person; but this seems less likely than the explanation which has just been given.

2. One of the two secretaries of Solomon (1 Kings iv. 3). Another person of this name occurs in 1 Chron. viii. 7.—J. K.

AHIAH, one of David's thirty heroes (2 Sam. xxiii. 33).

AHIEZER, the hereditary chief or prince of the tribe of Dan at the time that the Israelites quitted Egypt (Num. i. 12).

AHIHUD, 1. a prince of the tribe of Asher, who, with the other chiefs of tribes, acted with Joshua and Eleazer in dividing the Promised Land (Num. xxxiv. 27).

[2. The chief of a body of archers of the tribe of Benjamin in the time of David, 1 Chron. xii. 3.]

AHIJAH (same name as **AHIAH**), a prophet residing in Shiloh in the times of Solomon and Jeroboam. He appears to have put on record some of the transactions of the former reign (2 Chron. ix. 29). It devolved on him to announce and sanction the separation of the ten tribes from the house of David, as well as the foundation (1 Kings xi. 29-39), and, after many years, the sub-division of the dynasty of Jeroboam (1 Kings xiv. 7-11). [**JEROBOAM**.] [Four other persons of this name are mentioned, 1 Kings xv. 27, 33; 1 Chron. ii. 25; xi. 36; xxvi. 20.]—J. K.

AHIKAM, one of the four persons of distinction whom Josiah sent to consult Huldah, the prophetess (2 Kings xxii. 12-14). Ahikam and his family are honourably distinguished for their protection of the prophet Jeremiah (Jer. xxvi. 24; xxxix. 14).

AHIMAAZ (אֲחִימָעִי, *brother of anger, i. e., irascible*; Sept. Ἀχιμαάς, 1. Father of Ahinoam, Saul's wife (1 Sam. xiv. 50). 2. Son and successor of Zadok, who was joint high-priest in the reign of David, and sole high-priest in that of Solomon. His history chiefly belongs to the time of David, to whom he rendered an important service during

the revolt of Absalom. David having refused to allow the ark of God to be taken from Jerusalem when he fled thence, the high-priests, Zadok and Abiathar, necessarily remained in attendance upon it; but their sons, Ahimaz and Jonathan, concealed themselves outside the city, to be in readiness to bear off to David any important information respecting the movements and designs of Absalom which they might receive from within. Accordingly, Hushai having communicated to the priests the result of the council of war, in which his own advice was preferred to that of Ahithophel [**ABSALOM**], they instantly sent a girl (probably to avoid suspicion) to direct Ahimaz and Jonathan to speed away with the intelligence. The transaction, however, was witnessed and betrayed by a lad, and the messengers were so hotly pursued that they took refuge in a dry well, over which the woman of the house placed a covering, and spread thereon parched corn. She told the pursuers that the messengers had passed on in haste; and when all was safe, she released them, on which they made their way to David (2 Sam. xv. 24-37; xvii. 15-21). As may be inferred from his being chosen for this service, Ahimaz was swift of foot. Of this we have a notable example soon after, when, on the defeat and death of Absalom, he prevailed on Joab to allow him to carry the tidings to David. Another messenger, Cush, had previously been despatched, but Ahimaz outstripped him, and first came in with the news. He was known afar off by the manner of his running, and the king said, 'He is a good man, and cometh with good tidings;' and this favourable character is justified by the delicacy with which he waived that part of his intelligence concerning the death of Absalom, which he knew would greatly distress so fond a father as David (2 Sam. xviii. 19-33).—J. K.

3. A son-in-law of Solomon, and one of the twelve officers whose duty it was to provide victuals for the king and his household (1 Kings iv. 7, 15), each for a month. Rosenmüller calls these officers *head collectors of taxes* (*Alt. u. N. Morgenland* iii. 166), and Ewald thinks they were *stewards of the royal domains*; but Thenius (*Exeg. Hb. in loc.*) holds that they were officers of higher rank, of whose duties the supply of the royal table formed only a part. Josephus calls them ἡγεμόνες (*Ant. Jud.* viii. 2, 4). The province of Ahimaz was in Naphtali. By some this Ahimaz is identified with No. 2, but this is improbable.—W. L. A.

AHIMAN, one of three famous giants, of the race of Anak, who dwelt at Hebron when the Hebrew spies explored the land (Num. xiii. 22).

AHIMELECH (אֲחִימֶלֶךְ, *brother of the king* i. e., *the king's friend*; Sept. Ἀχιμέλεχ; Cod. Alex. Ἀχιμέλεχ), son of Ahitub, and brother of Ahiah, who was most probably his predecessor in the high-priesthood [**AHIAH**]. When David fled from Saul, he went to Nob, a city of the priests in Benjamin, where the tabernacle then was; and by representing himself as on pressing business from the king, he obtained from Ahimelech, who had no other, some of the sacred bread which had been removed from the presence-table. He was also furnished with the sword which he had himself taken from Goliath, and which had been laid up as a trophy in the tabernacle (1 Sam. xxi. 1-9). These circumstances were witnessed by Doeg, an

Edomite in the service of Saul, and were so reported by him to the jealous king as to appear acts of connivance at, and support to, David's imagined disloyal designs. Saul immediately sent for Ahimelech and the other priests then at Nob, and laid this treasonable offence to their charge; but they declared their ignorance of any hostile designs on the part of David towards Saul or his kingdom.

This, however, availed them not; for the king commanded his guard to slay them. Their refusal to fall upon persons invested with so sacred a character might have brought even Saul to reason; but he repeated the order to Doeg himself, and was too readily obeyed by that malignant person, who, with the men under his orders, not only slew the priests then present, eighty-six in number, but marched to Nob, and put to the sword every living creature it contained. The only priest that escaped was Abiathar, Ahimelech's son, who fled to David, and afterwards became high priest (1 Sam. xxii.) [ABIATHAR].—J. K.

AHINADAB, one of the twelve officers who raised supplies of provisions in monthly rotation for the royal household. Ahinadab's district was the southern half of the region beyond the Jordan (1 Kings iv. 14).—J. K.

AHINOAM (אֲחִינוֹאִם, *brother of grace*; Sept. Ἀχινῶαμ), 1. Saul's wife (1 Sam. xiv. 50); 2. A woman of Jezreel, one of the wives of David, and mother of Amnon. She was taken captive by the Amalekites when they plundered Ziklag, but was recovered by David (1 Sam. xxv. 43; xxvii. 3; xxx. 5; 2 Sam. ii. 2; iii. 2).

AHIO (אֲחִיּוֹ, *brotherly*; Sept., as an appellative, *his* [Uzzah's] *brothers*—*οἱ ἀδελφοὶ αὐτοῦ*), one of the sons of Abinadab, who, with his brother Uzzah, drove the new cart on which the ark was placed when David first attempted to remove it to Jerusalem. Ahio went before to guide the oxen, while Uzzah walked by the cart (2 Sam. vi. 3, 4.) [UZZAH.]

AHIRA, chief of the tribe of Naphtali when the Israelites quitted Egypt (Num. i. 15).

AHIRAM, a son of Benjamin (Num. xxvi. 38), called Ehi in Gen. xlv. 21.

AHISHAR, the officer who was 'over the household' of King Solomon (1 Kings iv. 6). This has always been a place of high importance and great influence in the East.

AHITHOPHEL (אֲחִיתּוֹפֵל, *brother of foolishness* i. e., *foolish*; Sept. Ἀχίτοφελ), the very singular name of a man who, in the time of David, was renowned throughout all Israel for his worldly wisdom. He is, in fact, the only man mentioned in the Scriptures as having acquired a reputation for political sagacity among the Jews; and they regarded his counsels as oracles (2 Sam. xvi. 23). He was of the council of David; but was at Giloh, his native place, at the time of the revolt of Absalom, by whom he was summoned to Jerusalem; and it shews the strength of Absalom's cause in Israel that a man so capable of foreseeing results, and estimating the probabilities of success, took his side in so daring an attempt (2 Sam. xv. 12). The news of his defection appears to have occasioned David more alarm than any other single incident in the rebellion. He earnestly prayed God to turn

the sage counsel of Ahithophel 'to foolishness (probably alluding to his name); and being immediately after joined by his old friend Hushai, he induced him to go over to Absalom with the express view that he might be instrumental in defeating the counsels of this dangerous person (xv. 31-37). Psalm lv. is supposed to contain (12-14) a further expression of David's feelings at this treachery of one whom he had so completely trusted, and whom he calls 'My companion, my guide, and my familiar friend.' The detestable advice which Ahithophel gave Absalom to appropriate his father's harem, committed him absolutely to the cause of the young prince, since after that he could hope for no reconciliation with David (2 Sam. xvi. 20-23). His proposal as to the conduct of the war undoubtedly indicated the best course that could have been taken under the circumstances; and so it seemed to the council, until Hushai interposed with his plausible advice, the object of which was to gain time to enable David to collect his resources. [ABSALOM]. When Ahithophel saw that his counsel was rejected for that of Hushai, the far-seeing man gave up the cause of Absalom for lost; and he forthwith saddled his ass, returned to his home at Giloh, deliberately settled his affairs, and then hanged himself, and was buried in the sepulchre of his fathers, B. C. 1023 (ch. xvii). This is the only case of suicide which the Old Testament records, by any one not engaged in actual warfare.—J. K.

AHITUB (אֲחִיתּוּב, *brother of goodness or benignity*, i. e., *benign*; Sept. Ἀχίτωβ), 1. Son of Phinehas, and grandson of the high-priest Eli. His father Phinehas having been slain when the ark of God was taken by the Philistines, he succeeded his grandfather Eli, B. C. 1141, and was himself succeeded by his son Ahiah about B. C. 1093.

2. The father of Zadok, who was made high-priest by Saul after the death of Ahimelech (2 Sam. viii. 17; 1 Chron. vi. 8). There is not the slightest ground for the notion that this Ahitub was ever high-priest himself—indeed, it is historically impossible.—J. K.

AHOLAH and AHOLIBAH (אֲהוֹלָה and אֲהוֹלִיבָה, two fictitious or symbolical names adopted by Ezekiel (xxiii. 4) to denote the two kingdoms of Samaria (Israel) and Judah. There is a significant force in these names which must be noted. AHOLAH, אֲהוֹלָה [pr. *Aholah*], usually rendered 'a tent,' is properly, *tentorium suum* (habet illa), 'she has her own tent or temple,' signifying that she has a tent or tabernacle of her own or of human invention. AHOLIBAH, אֲהוֹלִיבָה [*Aholibah*] means 'my tent is in her,' that is to say—I, Jehovah, have given her a temple and religious service. They are both symbolically described as lewd women, adulteresses, prostituting themselves to the Egyptians and the Assyrians, in imitating their abominations and idolatries; wherefore Jehovah abandoned them to those very people for whom they shewed such inordinate and impure affection. The allegory is an epitome of the history of the Jewish church.—J. K.

AHOLIAB, of the tribe of Dan, a skilful artificer appointed along with Bezaleel to construct the Tabernacle (Exod. xxxv. 34).

AHOLIBAMAH (אֲהוֹלִיבָמָה, Ὀλιβεμᾶ), one of the wives of Esau, supposed to be the same who is called Judith, Gen. xxvi. 34. All Esau's wives except one appear to have had a double name (comp. Gen. xxvi. 34; xxviii. 9; xxxvi. 2, 3), unless we suppose him to have had five wives. Also, the seat and name of an Edomitish tribe (Gen. xxxvi. 40, 41).—W. L. A.

AHUZZATH (אֲחֻצָּת, a possession), the 'friend' of Abimelech II., king of Gerar, who attended him on his visit to Isaac (Gen. xxvi. 26). In him occurs the first instance of that unofficial but important personage in ancient Oriental courts, called 'the king's friend,' or favourite. Several interpreters, following the Chaldee and Jerome, take *Ahuzzath* to be an appellative, denoting a *company of friends*, who attended Abimelech. The Sept. has Ὁχοῦθῶ ὁ συμφορεῶνος αὐτοῦ.—J. K.

AI [אֵי], Gen. xi. 8; xiii. 3; Josh. vii. 2. The ה here is the article without which this form is never used. The forms אֵי אַיָּא (Neh. xi. 31), אֵיָּא אַיָּא (Is. x. 28) also occur, (Sept. Ἀγγαί, Ἀγγαί and Αἶ; Vulg. *Hai*), a royal city of the Canaanites, which lay east of Bethel. It existed in the time of Abraham, who pitched his tent between it and Bethel (Gen. xii. 8; xiii. 3); but it is chiefly noted for its capture and destruction by Joshua (vii. 2-5; viii. 1-29). [AMBUSCADE.] At a later period Ai was rebuilt, and is mentioned by Isaiah (x. 28), and also after the captivity. The site was known, and some scanty ruins still existed in the time of Eusebius and Jerome (*Onomast. in Agai*), but Dr. Robinson was unable to discover any certain traces of either. He remarks (*Bib. Researches*, ii. 313), however, that its situation with regard to Bethel may be well determined by the facts recorded in Scripture. That Ai lay to the east of Bethel is distinctly stated; and the two cities were not so far distant from each other, but that the men of Bethel mingled in the pursuit of the Israelites when they feigned to flee before the king of Ai, and thus both cities were left defenceless (Josh. vii. 17); yet they were not so near but that Joshua could place an ambush on the west (or south-west) of Ai, without its being observed by the men of Bethel, while he himself remained behind in a valley to the north of Ai (Josh. viii. 4, 11-13). A little to the south of a village called Deir Diwan, and one hour's journey from Bethel, the site of an ancient place is indicated by reservoirs hewn in the rock, excavated tombs, and foundations of hewn stone. This, Dr. Robinson inclines to think, may mark the site of Ai, as it agrees with all the intimations as to its position. Near it, on the north, is the deep Wady el-Mutyâh, and towards the south-west other smaller wadys, in which the ambuscade of the Israelites might easily have been concealed.—J. K.

AIATH. [AI.]

AIJA. [AI.]

AIL (אֵיל), a ram. So the word is used, Gen. xv. 9; xxii. 13; Ps. cxiv. 4; Is. lx. 7; Dan. viii. 4, 6; Sept. κρῖος. Bochart derives this name from אֵל, *strength*; but Gesenius, with greater probability we think, derives it from אָל, *to roll, to twist*, in allusion to the twisted or crooked horns of the ram. The term *ail* may be viewed as the

generic appellation of all animals with twisted or rolled up horns; and hence the various species of antelopes are called intensively אָל, *large or wild rams*. [AJAL; SEH; TSON.—W. L. A.]

AJAL (אָל; Sept. ελαφος; *hart*, in Deut. xii. 15; Ps. xlii. 1; Is. xxxv. 6), the feminine of which is

AJALAH (אָלָה; Sept. στέλεχος; *hind*, in Gen. xlix. 21; 2^d Sam. xxii. 34; Job xxxix. 1; Ps. xviii. 33; Prov. v. 19; Cant. ii. 7; Jer. xiv. 5; Habak. iii. 19).

32. Cervus barbarus.

The *hart* and *hind* of our versions and of the older comments; but this interpretation is generally rejected by recent writers, who either suppose different species of antelope to be meant, or, with Dr. Shaw, consider the term to be generic for several species of deer taken together. Sir J. G. Wilkinson believes Ajal to be the Ethiopian oryx, with nearly straight horns. In the article ANTELOPE it will be shewn under what terms the Oryges appear to be noticed in the Bible, and at present we only observe that an Ethiopian species could not well be meant where the clean animals fit for the food of Hebrews are indicated, nor where allusion is made to suffering from thirst, and to high and rocky places as the refuge of females, or of both, since all the species of oryx inhabit the open plains, and are not remarkable for their desire of drinking; nor can either of these propensities be properly ascribed to the true antelopes, or gazellæ, of Arabia and Syria, all being residents of the plain and the desert; like the oryges, often seen at immense distances from water, and unwilling to venture into forests, where their velocity of flight and delicacy of structure impede and destroy them. Taking the older interpretation, and reviewing all the texts where hart and hind are mentioned, we find none where these objections truly apply. Animals of the stag kind prefer the security of forests, are always most robust in rocky mountain covers, and seek water with considerable anxiety; for of all the light-footed ruminants, they alone protrude the tongue when hard pressed in the chase. Now, comparing these qualities with several texts, we find them perfectly appropriate to the species of these genera alone. Ajal appears to be a mutation of a common name with ελαφος; and although no great

stress should be laid on names which, more particularly in early times, were used without much attention to specific identity, yet we find the Chaldee Ajal and Saramatic Jelen strictly applied to stag. Hence the difficulty lay in the modern denial that ruminants with branched deciduous horns existed in the south-west of Asia and Egypt; and Cuvier for some time doubted, notwithstanding Virgil's notice, whether they were found in any part of Africa; nevertheless, though not abundant where water is rare, their existence from Morocco to the Nile and beyond it cannot be denied; and it is likely that an Asiatic species still appears sometimes in Syria, and, no doubt, was formerly common there.

The first species here referred to is now known by the name of Cervus Barbarus, or Barbary stag, in size between our red and fallow deer, distinguished by the want of a bisantler, or second branch on the horns, reckoning from below, and by a spotted livery, which is effaced only in the third or fourth year. This species is figured on Egyptian monuments, is still occasionally seen about the Natron lakes west of the Nile, and, it seems, was observed by a reverend friend in the desert east of the Dead Sea, on his route from Cairo towards Damascus. We take this to be the Igal or Ajal of the Arabs, the same which they accuse of eating fish—that is, the ceps, lizards, and snakes, a propensity common to other species, and similarly ascribed to the Virginian and Mexican deer.

The other is the Persian stag, or Maral of the Tahtar nations, and Gewazen of Armenia, larger than the stag of Europe, clothed with a heavy mane, and likewise destitute of bisantlers. We believe this species to be the Soëgar of Asiatic Turkey, and Mara of the Arabs, and therefore residing on the borders of the mountain forests of Syria and Palestine. One or both of these species were dedicated to the local *bona dea* on Mount Libanus—a presumptive proof that deer were found in the vicinity.

Of the hind it is unnecessary to say more than that she is the female of the stag, or hart, and that in the manners of these animals the males always are the last to hurry into cover.*—C. H. S.

AIJALON. [AJALON.]

AIJALETH-SHAHAR. [PSALMS.]

AIN (אֵין, usually *En* in the English version), the Hebrew word for a *fountain-spring* [as distinguished from *Beer*, an artificial tank or well], which signification it also bears in Arabic, Syriac, and Ethiopic. It chiefly attracts notice as combined with the proper names of various places; and in all such cases it points to some remarkable or important fountain near or at the spot. Thus, אֵין גֵּדִי, *En-gedi*, 'fountain of kids' [EN-GEDI];

En-gannim (Josh. xv. 34), 'fountain of the gardens'; אֵין דּוֹר, *En-dor*, 'house-fountain' (*fontu habitationis*, Gesenius) [EN-DOR]; אֵין חַרְדָּה, *En-haddah* (Josh. xix. 21), 'sharp,' *i. e.* 'swift fountain'; אֵין מִשְׁפַּט, *En-mishpat* (Gen. xiv. 7), 'fountain of judgment'; there also called קִדְשׁ, but proleptically, as that name appears to have originated at a later period (Num. xx. 14), [KADESH]; אֵין עֲגַלַּיִם, *En-eglaim*, 'fountain of two calves' (Ezek. xlvi. 10) [EN-EGLAİM]; אֵין שֶׁמֶשׁ, *En-she-mesh* (Josh. xv. 7), 'fountain of the sun'; אֵין רֹגֵל, *En-rogel* (2 Sam. xvii. 17, etc.), literally 'fountain of the foot,' which is construed in the Targum 'fuller's fountain,' because the fullers there trod the cloths with their feet; others, 'fountain of the spy' [EN-ROGEL]. There are other names with which אֵין is thus used in composition; but these are the most important. In one case אֵין occurs with the article as the name of a place in the north-east of Palestine (Num. xxxiv. 11), where it is named to point out more clearly the position of Riblah, one of the northern border cities. [The reference here is probably to some spring by its relation to which Riblah is pointed out:—Riblah on the east side of the spring. There was, however, a city called Ain on the uttermost border of Judah to the south (Josh. xv. 32), which was afterwards assigned to Simeon (Josh. xiv. 7; 1 Chr. iv. 32).* It occurs in the plural in John iii. 23, as אֵינן or fountains.

AINSWORTH, HENRY, an English divine of the Brownist party. Of the time and place of his birth, and of his early life, nothing is known. He is first mentioned by Bishop Hall as connected with the church of the exiled Brownists at Amsterdam in 1592-93. He was for some time pastor of that church, and died abroad in 1622. His attainments as a Hebraist were eminent, and though he lived in extreme poverty, and his mind was much distracted with controversy on points of ecclesiastical polity, he found leisure to devote himself extensively to biblical studies. The fruit of these appears in his Annotations on the Pentateuch, the Psalms, and Solomon's Song, published at first separately, between 1612 and 1623; afterwards collectively, in one vol. folio, in 1627; again in 1639, and recently in 2 vols. 8vo, Glasg. 1843. They are for the most part incorporated by Foole in his *Synopsis*, who says of them, 'tanto acumine et judicio, tanta fide et peritia exarata, ut digna ausim pronuntiare quæ in exteris linguis transfundantur.' A Dutch translation of them by Sibrandus Vomelius was published at Leeuwarden in 1690. The work has always commanded higher respect on the continent than it found in this country, perhaps from the author's ecclesiastical relations. Vomelius declares that 'in its own sphere it shines as the moon among the stars,' and the editors of the *Acta Eruditorum Lipsiensium* (Anno 1691, pp. 340-342) introduce it to their readers in terms of hardly feebler encomium.

* In Gen. xlix. 21, Bochart's version appears to be preferable to our present translation—'Naphtali is a hind let loose; he giveth goodly words;' this, by a slight alteration of the punctuation in the Hebrew, he renders 'Naphtali is a spreading tree, shooting forth beautiful branches.' In Ps. xxix. 9, instead of 'The voice of the Lord maketh the hind to calve, and discovereth the forests,' Bishop Lowth gives, 'The voice of the Lord striketh the oak, and discovereth the forests,' which is also an improvement.

[* A mistake in the division of verses has led some to find a puzzle in the places enumerated in this passage being called both villages אֵין הַצִּיּוֹן, and cities עָרִים. But the former of these belongs to the preceding verse:—'These were their cities unto the reign of David and their villages, Etam and Ain, Rimmon and Tochen, and Ashan, five cities, and all their villages that were round about the same cities, etc.' See Bertheau *Exeg. Hdb. in loc.*]

It must be confessed that the work does not come up to the expectations which such praises are calculated to excite. The notes are for the most part judicious, and illustrate the text by copious citations of parallel passages and from the writings of the Rabbins; but they do not exhibit much exegetical ability, and cannot be said to add much to our means of understanding scripture. The translation which accompanies them is often obscurely literal, though occasionally felicitous readings occur.—W. L. A.

AIR (ἀήρ), the atmosphere, as opposed to the other (αἰθήρ), or higher and purer region of the sky (Acts xxii. 23; 1 Thess. iv. 17; Rev. ix. 2; xvi. 17). The phrase *εἰς ἀέρα καλεῖν*—to speak into the air (1 Cor. xiv. 9), is a proverbial expression to denote speaking in vain, like *ventis verba profundero* in Latin (Lucret. iv. 929), and a similar one in our own language; and *εἰς ἀέρα δέρεω*, to beat into the air (1 Cor. ix. 26), denotes acting in vain, and is a proverbial allusion to an abortive stroke into the air in pugilistic contests. The later Jews, in common with the Gentiles, especially the Pythagoreans, believed the air to be peopled with spirits, under the government of a chief, who there held his seat of empire (Philo, [*De Confus. Ling* p. 346; *De Somn.* p. 586, ed. Hoerschel. 1791]; Diog. Laert. viii. 32). These spirits were supposed to be powerful, but malignant, and to incite men to evil. That the Jews held this opinion is plain from the Rabbinical citations of Lightfoot, Wetstein, etc. Thus in *Pirke Aboth* 83, 2, they are described as *filling the whole air*, arranged in troops, in regular subordination. The early Christian fathers entertained the same belief (Ignat. *Ad. Ephes.* § 13), which has indeed come down to our own times. It is to this notion that St. Paul is supposed to allude in Eph. ii. 2, where Satan is called ἀρχὸν τῆς ἐξουσίας τοῦ ἀέρος, ‘prince of the power (i. e., of those who exercise the power) of the air.’ Some, however, explain ἀήρ here by *darkness*, a sense which it bears also in profane writers (See Lightfoot, Whitby, Koppe, Wetstein, Bloomfield, Eadie, Alford, *in loc.*)—J. K.

AIRAY, HENRY, D.D., provost of Queen’s College, Oxford, was born in Westmoreland in 1559. He received his education under the auspices of the famous Bernard Gilpin, and was by him sent to St. Edmund’s Hall in 1579. He was subsequently chosen fellow of Queen’s; soon after which he entered into holy orders, and in due time became provost of his college. He died in 1616. Besides some polemical works, he wrote *Lectures upon the whole Epistle of St. Paul to the Philippians*, Lond. 1618, 4to, which affords a favourable specimen of the ordinary style of Puritan commentary.—W. L. A.

AJAH or AYAH (אֵיָה), the name of an unclean bird, Lev. xi. 14; Deut. xiv. 13; Job xxviii. 7. In the first of these passages the LXX render by ἰκτινος, and in the second and third by γούψ. The Vulg. renders it by *vulture*. In the A. V. it is rendered in the first two passages by *kite*, in the last by *vulture*. Fürst thinks it was a general name for birds of the vulture tribe, and this is favoured to some extent by the addition of למיניו, *after its kind*, in the first two passages. The extraordinary powers of sight possessed by the vulture accord well also with the tenor of the passage in Job.

Bochart contends that it should be restricted to the *Falco aesalon*, the merlin. He identifies it with the Arabic *يوز* *juz*, and derives the name from the peculiar cry of the bird. But in either case it is from this that the bird is named, for those who think it means vulture derive the name from *אָה* *to cry*, or *אָה* *a cry*. On the whole, the evidence seems in favour of the opinion that by this term is described the vulture tribe or falcon tribe generally. Onkelos renders it by *תרפיאת*, and Jonathan by *דהיית תרפיאת*.—W. L. A.

AJALON (אֵילָן: Sept. *Αἰαλών*), a town and valley in the tribe of Dan (Josh. xix. 42), which was given to the Levites (Josh. xxi. 24; 1 Chron. vi. 69). It was not far from Bethshemesh (2 Chron. xxviii. 18), and was one of the places which Rehoboam fortified (2 Chron. xi. 10), and among the strongholds which the Philistines took from Ahaz (2 Chron. xxviii. 18). But the town, or rather the valley to which the town gave name, derives its chief renown from the circumstance that when Joshua, in pursuit of the five kings, arrived at some point near Upper Beth-horon, looking back upon Gibeon and down upon the noble valley before him, he uttered the celebrated command: ‘Sun, stand thou still on Gibeon, and thou moon, in the valley of Ajalon’ (Josh. x. 12). From the indications of Jerome, who places Ajalon two Roman miles from Nicopolis, on the way to Jerusalem, joined to the preservation of the ancient name in the form of Yálo, Dr. Robertson (*Bibl. Researches*, iii. 63) appears to have identified the valley and the site of the town. From a house-top in Beit Ur (Beth-horon) he looked down upon a broad and beautiful valley, which lay at its feet, towards Ramleh. This valley runs out west by north through a tract of hills, and then bends off south-west through the great western plain. It is called Merj Ibn ’Omeir. Upon the side of the long hill which skirts the valley on the south, a small village was perceived, called Yálo, which cannot well be any other than the ancient Ajalon; and there can be little question that the broad wady to the north of it is the valley of the same name.—J. K.

AKERSLOOT, THEODORE, a Dutch theologian of the seventeenth century. He wrote *De Sendbrief van Paulus an de Galaten*, Leyd. 1695, 4to; and *Uitlegginge over den Zendbrief van Paulus aan de Ebreven*, Haag. 1697, 4to. Both these works have been translated into German; the former by Konrad Brussken, Brem. 1669, and the latter by Ulrich Plesken, Brem. 1714, both in 4to.—W. L. A.

AKILAS. [AQUILA.]

AKKO (אֶקֶק: for אֶקֶק), a clean beast, mentioned Deut. xiv. 5. In the A. V. this word is translated *wild goat*; the Sept., which the Vulg. follows, gives *τραγέλαφος*, the Targums *יעלף*, as also the Syriac version. That some species of goat is intended cannot be doubted. Gesenius concludes in favour of the *webuck*; while others prefer the *chamois*, and others the *gazelle*. Gesenius derives it from Arab. *عناق anak*, whilst Fürst says it is to be traced to a ‘radix nominalis,’ common to both the Sanscrit and Semitic tongues]. Schul-tens (*Origines Hebræicæ*) conjectures that the name

arose 'ob fugacitatem,' from its shyness and consequent readiness to flee; and Dr. Harris points out what he takes to be a confirmation of this conjecture in Shaw's travels; who, from the translations of the Sept. and Vulgate, makes it a goat-deer, or Tragelaphus, such as the Lerwee or Fishtall, by mistake referred to *Capra Mambrica* of Linnæus; whereas that naturalist (*System. Nat.* 13th ed. by Gmelin) places Lerwee among the synonyms of *Ant. Cervicapra*, which does not suit Shaw's notice, and is not known in Western Asia. The Fishtall is, however, a ruminant of the African desert, possibly one of the larger Antilopidæ, with long mane, but not as yet scientifically described. Akko, therefore, if it be not a second name of the Zamor, which we refer to the Kებსch, or wild sheep (Chamois), as the species must be sought among ruminants that were accessible for food to the Hebrews, we should be inclined to view as the name of one of the Gazelles, probably the Ahu (*Ant. Subgutturosa*), unless the Abyssinian Ibex (*Capra Wallie*) had formerly extended into Arabia, and it could be shewn that it is a distinct species. We may here also remark upon the researches of Rüppell and of Hemprich and Ehrenberg, that they naturally sought in vain for the Abyssinian Ibex as it is figured in Griffith's Cuvier, because, by some mistake of the letter engraver, he has affixed that name to the representation of Ovis Tragelaphus or Kებსch.—C. H. S.

AKRAB (עֲקָרָב, Sept. σκορπιος), the scorpion;

so Syr. ܐܩܪܒܐ. Bochart regards the word as equivalent to עֲקָרָב, a great sting, μακρόκεντρον = the large-stinged animal; but this is fanciful. [SCORPION.]—W. L. A.

AKRABBIM (מְעֵלָה עֲקָרָבִים, *Scorpion height*; Sept. Ἀνάβασις Ἀκραβίμ), an ascent, hill, or chain of hills, which, from the name, would appear to have been much infested by scorpions and serpents, as some districts in that quarter certainly were (Deut. viii. 15; comp. Volney, ii. 256). It was one of the points which are only mentioned in describing the frontier-line of the Promised Land southward (Judg. i. 36). Shaw conjectures that Akrabbim may probably be the same with the mountains of Akabah, by which he understands the easternmost range of the μέλανα ὄρη, 'black mountains' of Ptolemy, extending from Paran to Judæa. This range has lately become well known as the mountains of Edom, being those which bound the great valley of Arabah on the east (*Travels*, ii. 120). More specifically, he seems to refer Akrabbim to the southernmost portion of this range, near the fortress of Akabah, and the extremity of the eastern gulf of the Red Sea; where, as he observes, 'from the badness of the roads, and many rocky passes that are to be surmounted, the Mohammedan pilgrims lose a number of camels, and are no less fatigued than the Israelites were formerly in getting over them.' Burckhardt (*Syria*, p. 509) reaches nearly the same conclusion, except that he rather refers 'the ascent of Akrabbim,' to the acclivity of the western mountains from the plain of Akabah. This ascent is very steep, 'and has probably given to the place its name of Akabah, which means a cliff, or steep declivity.' The probability of this identification depends upon the question, whether the south-

eastern frontier of Judah would be laid down so far to the south in the time of Moses and Joshua. If so, the identification is fair enough; but if not, it is of no weight or value in itself. The apparent analogy of names can be little else than accidental, when the *signification* in the two languages is altogether different.—J. K.

AKROTHINION (Ἀκροθίνιον). This Greek word, which occurs in Heb. vii. 4, means *the best of the spoils*. The Greeks, after a battle, were accustomed to collect the spoils into a heap, from which an offering was first made to the gods: this was the ἀκροθίνιον (Xenoph. *Cyrop.* vii. 5, 35; Herodot. viii. 121, 122; Pind. *Nem.* 7, 58). In the first-cited case, Cyrus, after the taking of Babylon, first calls the magi, and commands them to choose the ἀκροθίνια of certain portions of the ground for sacred purposes.—J. K.

ALABASTER (Ἀλάβαστρον). This word occurs in the New Testament only in the notice of the 'alabaster box,' or rather vessel, of 'ointment of spikenard, very precious,' which a woman broke, and with its valuable contents anointed the head of Jesus, as he sat at supper in Bethany in the house of Simon the leper (Matt. xxvi. 7; Mark xiv. 3). At Alabastron, in Egypt, there was a manufactory of small pots and vessels for holding perfumes, which were made from a stone found in the neighbouring mountains. The Greeks gave to

33.

these vessels the name of the city from which they came, calling them *alabastrons*. This name was eventually extended to the stone of which they were formed: and at length the term *alabastra* was applied without distinction to all perfume vessels, of whatever materials they consisted. Theocritus speaks of golden alabastra, Συρία μύρω χρύσει' ἀλάβαστρα (*Idyl.* xv. 114); and perfume vessels of different kinds of stone, of glass, ivory bone, and shells, have been found in the Egyptian tombs (Wilkinson, iii. 379). It does not, therefore, by any means follow that the alabastron which the woman used at Bethany was really of alabaster; but a probability that it was such arises from the fact that vessels made of this stone were deemed peculiarly suitable for the most costly and powerful perfumes (Plin. *Hist. Nat.* xiii. 2; xxxvi. 8, 24). The woman is said to have 'broken' the

vessel; which is explained by supposing that it was one of those shaped somewhat like a Florence oil-flask, with a long and narrow neck; and the mouth being curiously and firmly sealed up, the usual and easiest way of getting at the contents was to break off the upper part of the neck.

The alabastra were not usually made of that white and soft gypsum to which the name of alabaster is now for the most part confined. Dr. John Hill, in his useful notes on Theophrastus, sets this matter in a clear light:—‘The *alabastrum* and *alabastrites* of naturalists, although by some esteemed synonymous terms, and by others confounded with one another, are different substances. The *alabastrum* is properly the soft stone [the common ‘alabaster’] of a gypseous substance, burning easily into a kind of plaster; and the *alabastra*, the hard, bearing a good polish, and approaching the texture of marble. This stone was by the Greeks called also sometimes *onyx*, and by the Latins *marmor onychites*, from its use in making boxes to preserve precious ointments; which boxes were commonly called ‘onyxes’ and ‘alabasters.’ Thus Dioscorides, *ἀλαβαστρίτης ὁ καλούμενος ὄνυξ*. And hence have arisen a thousand mistakes in the later authors, of less reading, who have misunderstood Pliny, and confounded the onyx marble, as the alabaster was frequently called, with the precious stone of that name.’

This is now better understood. It is apprehended that, from certain appearances common to both, the same name was given not only to the common alabaster, called by mineralogists *gypsum*, and by chemists *sulphate of lime*; but also to the *carbonate of lime*, or that harder stone from which the alabastra were usually made. In the ruins of Nineveh Mr. Layard found fragments of alabaster vases, and one perfect specimen. The latter is in the British Museum.—J. K.

ALAH (אלה), the name of a tree, which, both in its singular and plural form, occurs often in the Scriptures. It is variously rendered in ancient and modern versions—as *oak*, *terebinth*, *teyl* (linden) *tree*, *elm*, and even a *plain*. This has occasioned more of apparent perplexity than now really belongs to the subject. In the masculine singular (אֵלֶּה) it occurs only in Gen. xiv. 6, in connection with Paran, or as *El-Paran*. This the Sept. renders by *terebinth* (τερεβίνθου τῆς Παράν); Aquila, Symmachus, and Theodotus by ‘oak,’ *quercus*; and the Samaritan, Onkeios, Kimchi, Jerome, etc., by ‘plain,’ which is also adopted in the margin of our Bibles. The primary import of the word is *strength, power*; whence some hold that it denotes any mighty tree, especially the terebinth and the oak. But the oak is *not* a mighty tree in Palestine; and as it possesses its own distinct name [ALON], which is shewn, by the apposition of the names in Is. vi. 13, and Hos. iv. 13, to denote a different tree from *alah*, one can have little hesitation in restricting the latter to the terebinth. Indeed, this conclusion has not been much questioned since it was shewn by Celsius (*Hierobotan.* ii. 34-58) that the terebinth was most probably denoted by the Hebrew *alah*; that the terebinth is the *but'm* بطم of the Arabs; and that the Arabian *but'm* is frequent in Palestine. The first position is of course incapable of absolute proof; the second has

been confirmed by Forskal and Ehrenberg; and the third is attested by a host of travellers, who speak of it under both names. Celsius exhibits the testimonies which existed in his time: to which those of Forskal, Hasselquist, and Dr. Robinson may now be added.* The last-named traveller gives the best account of the tree as it is found in Palestine. At the point where the roads from Gaza to Jerusalem, and from Hebron to Ramleh, cross each other, and about midway between the two last-named towns, this traveller observed an immense but'm-tree, the largest he saw anywhere

34. [*Pistacia Terebinthus*].

in Palestine. ‘This species (*Pistacia Terebinthus*) is, without doubt,’ he adds, ‘the terebinth of the Old Testament; and under the shade of such a tree Abraham may well have pitched his tent at Mamre. The but'm is not an evergreen, as is often represented; but its small feathered lancet-shaped leaves fall in the autumn, and are renewed in the spring. The flowers are small, and followed by small oval berries, hanging in clusters from two to five inches in length, resembling much the clusters of the vine when the grapes are just set. From incisions in the trunk there is said to flow a sort of transparent balsam, constituting a very pure and fine species of turpentine, with an agreeable odour, like citron or jessamine, and a mild taste, and hardening gradually into a transparent gum. In Palestine nothing seems to be now known of this product of the but'm. The tree is found also in Asia Minor (many of them near Smyrna), Greece, Italy, the south of France, Spain, and in the north of Africa; and is described as not usually rising to the height of more than twenty feet. It often exceeded that size as we saw it in the mountains; but here in the plains it was very much larger.’

In Palestine and the neighbouring countries the terebinth seems to be regarded with much the same distinction as the oak is in our northern latitudes. The tree is long-lived; and it is certain that there were in the country ancient terebinths, renowned for their real or supposed connection with scriptural

* [But see, on the other side, Thomson, *Lana and Book*, i. 373.]

incidents. Thus, about the time of Christ, there was at Mamre, near Hebron, a venerable terebinth, which a tradition, old in the time of Josephus, alleged to be that (rendered 'plain' in our version of Gen. xiii. 18) under which Abraham pitched his tent; and which, indeed, was believed to be as old as the creation of the world (Joseph. *Bell. Jud.* iv. 9, 7). The later tradition was content to relate that it sprang from the staff of one of the angels who appeared there to Abraham (Gen. xviii. 2). Having, from respect to the memory of the patriarch, and as one of the spots consecrated by the presence of 'commissioned angels,' become a place of great resort and pilgrimage both of Jews and Christians, the Phœnicians, Syrians, and Arabians were attracted to it with commercial objects; and it thus became a great fair. At this fair thousands of captive Jews were sold for slaves by order of Hadrian in A. D. 135 (Jerome, *Comm. in Zech.* xi. 4, *De Locis Heb.* 87; Euseb. *Dem. Ev.* v. 9, *Onomast* in Ἀρβῶ; Sozom. *Hist. Eccles.* ii. 4, 5; Niceph. viii. 30; Reland, *Palæst.* p. 714). Being a place of such heterogeneous assemblage, great abominations and scandals, religious and moral, arose, to which a stop was at length put by Eusebius of Cæsarea and the other bishops of Palestine, who, by order of Constantine, cast down all the pagan altars, and built a church by or under the tree. It is said that the tree dried up in the reign of Theodosius the Younger; but that the still vital trunk threw off shoots and branches, and produced a new tree, from which Brocard (vii. 64), Salignac (x. 5), and other old travellers declare that they brought slips of the new and old wood to their own country. Zuallart, who alleges that some of its wood was given to him by the monks at Jerusalem, candidly admits the difficulty of believing the stories which were told of its long duration: but he satisfies himself with the authority of the authors we have mentioned, and concludes that God may have specially interfered to preserve it (*Voyage de Jerusalem*, iv. 1). The tree was accidentally destroyed by fire in 1646 A. D. (Mariti, p. 520). See Dr. Kitto's *Daily Bible Illustrations*, vol. i. p. 262.—J. K.

ALAMOTH. [PSALMS.]

ALBELDA, MOSES (called also Ben Jacob), a Jewish rabbi in Saloniki, the ancient Thessalonica, in the beginning of the sixteenth century. He wrote *דרש משה*, a homiletical commentary on the *Pentateuch*, to which are added several occasional homilies, Ven. 1603 fol.; *עולת תמיד*, *Essays on the Pentateuch*, partly exegetical and partly philosophical, Ven. 1526, 1601, fol., besides other works of a dogmatical or polemical character.—W. L. A.

ALBER, JOHN NEPOMUK, a Roman Catholic divine, professor of Oriental languages and biblical literature at Pesth. He wrote *Interpretatio Sacre Scripture per omnes Vet. et Novi Test. Libros*, 16 vols. 8vo, Pesth, 1801-4. Mr. Horne, who has described this work somewhat fully, says—'Dr. Alber professes to have consulted the various exegetical labours both of Protestants and of Romanists; and that he has endeavoured to state the various points of difference between them without asperity, and with Christian candour. In this endeavour the author has succeeded. Whenever an occasion presents itself, he fails not to impugn and refute the opinions of the anti-supernaturalist divines of Germany, as well as of the enemies of

Divine revelation. The profoundest reverence to the opinions of the Fathers of the Christian Church, and to the doctrinal decisions and decrees of the Romish Church, pervades this exposition.' (*Introduction*, ii. 2, p. 252). Dr. Alber also published *Institutiones Hermeneutica Scripture Sac. N. T.*, 3 vols. 8vo, Pest. 1818, and *Instit. Herm. Script. Sac. V. T.*, 3 vols. 8vo, Pest. 1827. These works embrace Biblical Introduction and Archæology, as well as Hermeneutics. They do not seem to be of much value. 'Their utility is vastly disproportionate to their extent' (Davidson, *Sac. Hermeneutics*, p. 705).—W. L. A.

ALBERTI, JOANNES, a Dutch philosopher and divine, was born at Assen in 1698, and died in 1762. He studied at Franeker under the celebrated Lambert Bos, and was appointed pastor at Haarlem, and subsequently professor of theology at the university of Leyden. He published *Observationes philologica in sacros Novi Fœderis libros in 1725*, in which he collected all the parallel passages from profane authors in justification of the Greek style of the evangelists and the apostles; *Periculum criticum, etc.* 1727; *Glossarium Græcum in sacros Novi Fœderis libros*, 1735. Alberti likewise prepared the first volume of the Lexicon to Hesychius, of which the second volume was completed, and both published by Ruhkenius in 1766.

ALCIMUS, or JACIMUS (Ἄλκιμος ὁ καὶ Ἰάκειμος, Joseph. *Antiq.* xii. 9, 7, Græcised forms of Eliakim and Joachim—names often interchanged in the Hebrew), an usurping high-priest of the Jews in the time of Judas Maccabæus. [MACCABEES; PRIESTS.]

ALCUIN (called also FLACCUS ALBINUS) was born in or near York about the year 735. Educated under the care of Egbert, archbishop of York, he at the death of that prelate succeeded him in the work of instruction, and inherited his library. Being sent on a mission to Rome, he on his return became known to Charlemagne, which led to his settling in France. He died at Tours on the 19th of May 804. His writings are numerous. They are principally of a practical character; a few are polemical, and the following are exegetical:—*Interrogationes et Responsiones in Genesim*; *Expositio in Psalmos penitentiales et Ps.* 118, *et in Cantica Graduum*; *Commentaria in Ecclesiasten*; *Com. in Evang. Johannis*; *Com. in Epp. Pauli ad Titum, ad Philemonum et ad Hebræos*. Some of these were published separately; they all appear in his collected works, edited by And. Quercetanus (Duchesne), Par. 1617 fol., and by Frubenius, 2 vols. fol. Ratisbon 1777. They do not contain much original matter; that on Genesis is compiled from Jerome's questions and the *Moralia* of Gregory; on Ecclesiastes he also follows Jerome; his commentaries on John are taken from Augustine, Ambrose, Gregory, and Bede; on Timothy, Titus, and Philemon, Jerome is again his guide; and on Hebrews he follows Chrysostom. His commentaries are properly *catena*, remarkable as the products of the age in which they appeared, but not offering much advantage to the modern student (Lorentz, *Alcuin's Leben*, Halle 1829; Wright, *Biographia Brit. Liter.* p. 349 ff.)—W. L. A.

ALES or ALESIOUS, ALEXANDER, a Scottish divine, whose proper name was probably

Hales.* He was born at Edinburgh, April 23, 1500; was educated at the University of St. Andrews; and ultimately became one of the canons of the priory or cathedral church in that city. Having imbibed the doctrines of the reformation, he was obliged to flee to the continent in 1531, though to what part is not certainly known. In 1533 we find him in Cologne; some years later (probably in 1535) he went to Cambridge by order of Henry VIII. 'to read a lecture of Scripture there,' but finding the feeling strong against him he relinquished his appointment, and set himself to study medicine under one Dr. Nicolas. Whilst thus engaged, he was met one day on the street by Cromwell, who carried him with him to the meeting of convocation in 1536, and presented him to the assembled bishops as 'the King's Scholar.' In the dispute upon the sacraments he, at Cromwell's request, took part, and advocated the Protestant view of the sacraments, supporting his opinions with much ability and learning. He gave so much offence by his boldness, and his views were so much in advance of those of the king and his adherents, that it was needful for him to leave England and again return to the continent. This time he settled at Wittenberg, and shortly after he was appointed Professor of Divinity at Frankfurt on the Oder. In 1537 he was called to a chair in Leipsic, and there he remained and laboured till his death, which took place on the 17th March 1565. Ales deserves a place in a work devoted to Biblical literature, partly on account of his noble defence of vernacular translations of the Holy Scriptures, in his letters addressed to James V. of Scotland, partly on account of his exegetical comments on parts of Scripture. He wrote *Disputatio in utrumque Ep. ad Timotheum et ad Titum* Leip. 1550, 8vo; *Commentarius in Evang. Joannis*, Basle 1553, 8vo; *Disputationes in Ep. ad Romanos*, Wittenberg 1553, 8vo. He was the author also of a commentary on a portion of the book of Psalms. (Bayle, *Dictionnaire*, s. v., M'Crie's *Life of Knox*, Note I. Anderson, *Annals of the English Bible*, i. 498, ii. 427 ff.)—W. L. A.

ALESSANDRO, BENJAMIN, a Jewish rabbi in Reggio. He was a native of Alexandria in Piedmont, and flourished in the latter half of the seventeenth century and the beginning of the eighteenth.

His biblical works are *גְּלוֹן בְּכוֹת*, a commentary on the Lamentations; printed with the text at Venice 1713, 4to; and *סֵפֶר יְשִׁירָה הַמְעֻלּוֹת*, a commentary on the Psalms of Degrees, Ven. 1713, 4to.—W. L. A.

ALEXANDER THE GREAT. This mighty king is named in the opening of the first book of Maccabees, and is alluded to in the prophecies of Daniel. These, however, are not the principal reasons for giving his name a place in this work: he is chiefly entitled to notice here because his military career permanently affected the political state of the Jewish people, as well as their philo-

sophy and literature. It is not our part, therefore, to detail even the outlines of his history, but to point out the causes and nature of this great revolution, and the influence which, formerly through Alexander, Greece has exerted over the religious history of the West.

35-

The conquest of Western Asia by Greeks was so thoroughly provided for by predisposing causes, as to be no mere accident ascribable to Alexander as an individual. The wars which were carried on between Greece and Persia in the reigns of Darius, Xerxes, and Artaxerxes—from B. C. 490 to B. C. 449—sufficiently shewed the decisive superiority in arms which the Greeks possessed, though no Greek as yet aspired to the conquest of Persia. Brave freemen, attached to their own soil, would not risk abandoning it for ever for the satisfaction of chasing their foe out of his home. But after the convulsions of the Peloponnesian War (B. C. 431-404) had filled Greece with exiles, whose sole trade was that of soldiers, a devoted standing army could be had for money. By the help of such mercenaries, Cyrus, younger brother of Artaxerxes II., attempted to seize the crown of Persia (B. C. 401); and although he was himself slain, this, in its results (which cannot be here properly detailed), did but shew more signally that Greeks might force their way to the very palace of the great king, just as they afterwards triumphantly retreated through the heart of his empire. Soon after this, Agesilaus, king of Sparta, appears to have had serious designs of founding a Spartan province in Asia Minor, where he met with easy success; but he was recalled by troubles at home (B. C. 394). About the year B. C. 374, Jason, the chief man of Pheræ, in Thessaly, and virtually monarch of the whole province, having secured the alliance of Macedon, seriously meditated the conquest of the Persian empire; and he (or his son) might probably have effected it, had he not been assassinated, B. C. 370. The generation who heard of that event witnessed the rise of Macedon to supremacy under the great Philip, whose reign reached from B. C. 359 to B. C. 338. He too had proposed to himself the invasion and conquest of Persia as the end of all his campaigns and the reward of all his labours; and he too was suddenly taken off by the assassin's dagger. He was succeeded by his greater son, for whom it was reserved to accomplish that of which Grecian generals had now for seventy years dreamed. It seems therefore clear that Greece was destined to overflow into Asia, even without Alexander, for Persia was not likely to have such a series of able

* On the title page of a translation of one of his works, his tract *De Autoritate Verbi Dei*, in reply to Stokesley, Bishop of London, he is called *Alane*; but as the translator's name was Allen, there is probably a blunder here arising out of some confusion of the two.

monarchs, and such an exemption from civil wars, as alone could have hindered the event. The personal genius of the Macedonian hero, however, determined the form and the suddenness of the conquest; and, in spite of his premature death, the policy which he pursued seems to have left some permanent effects. It is indeed possible that, in regard to the toleration of Oriental customs and religions, no other policy than his could have held the empire together. Since the Romans in Asia and the British in India have followed the same procedure, any other Greek conquerors of Persia might have done the same had Alexander never existed. Be this as it may, it is certain that his conciliatory policy was copied by his successors for at least a century and a half.

His respectful behaviour to the Jewish high-priest has been much dwelt on by Josephus (*Antiq.* xi. 8, 4-6), a writer whose trustworthiness has been greatly overrated. Special reasons for questioning the story may be found in Thirlwall (*Hist. of Greece*, vi. 206); but in fact, as it evidently rests on mere tradition, even a knowledge of human nature, and of the particular author, justifies large deductions from the picturesque tale. Some of the results, however, can hardly be erroneous, such as, that Alexander guaranteed to the Jews, not in Judæa only, but in Babylonia and Media, the free observance of their hereditary laws, and on this ground exempted them from tribute every seventh (or Sabbatical) year. From the Romans in later times they gained the same indulgence, and it must no doubt have been enjoyed under the Persian king also, to whom they paid tribute at the time of Alexander's invasion. It is far from improbable then that the politic invader affected to have seen and heard the high-priest in a dream (as Josephus relates), and shewed him great reverence, as to one who had declared 'that he would go before him and give the empire of Persia into his hand.' The profound silence observed concerning Judæa by all the historians of Alexander, at any rate proves that the Jews passed over without a struggle from the Persian to the Macedonian rule.

Immediately after, he invaded and conquered Egypt, and shewed to its gods the same respect as to those of Greece. Almost without a pause he founded the celebrated city of Alexandria (B.C. 332), an event which, perhaps more than any other cause, permanently altered the state of the East, and brought about a direct interchange of mind between Greece, Egypt, and Judæa. Sidon had been utterly ruined by Artaxerxes Ochus (B.C. 351), and Tyre, this very year, by Alexander: the rise of a new commercial metropolis on the Mediterranean was thus facilitated; and when the sagacious Ptolemy became master of Egypt (B.C. 323), that country presently rose to a prosperity which it never could have had under its distant and intolerant Persian lords. The Indian trade was diverted from its former course up the Euphrates into the channel of the Red Sea; and the new Egyptian capital soon became a centre of attraction for Jews as well as Greeks. Under the dynasty of the Ptolemies the Hellenic race enjoyed such a practical ascendancy (though on the whole to the benefit of the native Egyptians) that the influx of Greeks was of course immense. At the same time, owing to the proximity of the Egyptian religion, both the religion and the philosophy of the Greeks assumed here a modified form; and the monarchs,

who were accustomed to tolerate and protect Egyptian superstition, were naturally very indulgent to Jewish peculiarities. Alexandria, therefore, became a favourite resort of the Jews, who here lived under their own laws, administered by a governor (*ἐθνάρχης*) of their own nation; but they learned the Greek tongue, and were initiated more or less into Greek philosophy. Their numbers were so great as to make them a large fraction of the whole city; and out of their necessities arose the translation of the Old Testament into Greek. The close connection which this Egyptian colony maintained with their brethren in Palestine produced various important mental and spiritual effects on the latter. [ESSENES.] The most accessible specimen of rhetorical morality produced by the Hebrew culture of Greek learning is to be seen in the book called the Wisdom of Solomon: the most elaborate development of Hebrew Platonism is contained in the works of Philo. In the writing called the Third Book of the Maccabees is a sufficiently unfavourable specimen of an attempt at rhetorical history by a mind educated in the same school. How deep an impress has been left on the Christian Church by the combination of Greek and Hebrew learning which characterized Alexandria, it needs many pages for the ecclesiastical historian to discuss. The Grecian cities afterwards built in northern Palestine [DECAPOLIS] seem to have exerted little spiritual influence on the south; for a strong repulsion existed in the strictly Jewish mind against both Samaria and Galilee.

The tolerant policy of Alexander was closely followed by his great successor Seleucus, who admitted the Jews to equal rights with Macedonians in all his new cities, even in his capital of Antioch (*Joseph. Antiq.* xii. 3, 1); and similar or greater liberality was exercised by the succeeding kings of that line, down to Antiochus Epiphanes. [ANTIOCHUS.] It can scarcely be doubted that on this to a great extent depended the remarkable westward migration of the Jews from Media and Babylon into Asia Minor, which went on silently and steadily until all the chief cities of those parts had in them the representatives of the twelve tribes. This again greatly influenced the planting of Christianity, the most favourable soil for which, during the time of its greatest purity, was in a Greek population which had previously received a Jewish culture. In passing we may remark, that we are unable to find the shadow of a reason for the popular assumption that the modern European Jews are descendants of the *two* more than of the other *ten* or eleven tribes.

The great founder of Alexandria died in his thirty-second year, B.C. 323. The empire which he then left to be quarrelled for by his generals comprised the whole dominions of Persia, with the homage and obedience of Greece superadded. But on the final settlement which took place after the battle of Ipsus (B.C. 301), Seleucus, the Greek representative of Persian majesty, reigned over a less extended district than the last Darius. Not only were Egypt and Cyprus severed from the eastern empire, but Palestine and Cœlesyria also fell to their ruler, placing Jerusalem for nearly a century beneath an Egyptian monarch. On this subject, see further under ANTIOCHUS.

The word Alexander means *the helper or rescuer of men*, denoting military prowess. It is Homer's ordinary name for Paris, son of Priam, and was borne by two kings of Macedon before the great

Alexander. The history of this conqueror is known to us by the works of Arrian and Quintus Curtius especially, besides the general sources for all Greek history. Neither of these authors wrote within four centuries of the death of Alexander; but they had access to copious contemporary narratives since lost.—F. W. N.

ALEXANDER BALAS [perhaps from אֱלֵבָּאִי, *lord*], a personage who figures in the history of the Maccabees and in Josephus. His extraction is doubtful; but he professed to be the natural son of

36.

Antiochus Epiphanes, and in that capacity, out of opposition to Demetrius Soter, he was recognised as king of Syria by the king of Egypt, by the Romans, and eventually by Jonathan Maccabæus on the part of the Jews. The degree of strength and influence which the Jewish chief possessed, was sufficient to render his adhesion valuable to either party in the contest for the throne. As he was obliged to take a side, and had reason to distrust the sincerity of Demetrius, Jonathan yielded to the solicitations of Alexander, who, on arriving at Ptolemais, sent him a purple robe and a crown of gold, to induce him to espouse his cause (1 Macc. x. 18). Demetrius was not long after slain in battle, and Balas obtained possession of the kingdom. He then sought to strengthen himself by a marriage with the king of Egypt's daughter. This marriage was celebrated at Ptolemais, and was attended by Jonathan, who received marks of high consideration from the Egyptian (Ptolemy Philometor) and Syrian kings (1 Macc. x. 51-58; Joseph. *Antiq.* xiii. 4). Prosperity ruined Alexander; he soon abandoned himself to voluptuousness and debauchery, leaving the government in the hands of ministers whose misrule rendered his reign odious. This encouraged Demetrius Nicator, the eldest son of the late Demetrius Soter, to appear in arms, and claim his father's crown. Alexander took the field against him; and in the brief war that followed, although his father-in-law Ptolemy (who had his own designs upon Syria) abandoned his cause, Jonathan remained faithful to him, and rendered him very important services, which the king rewarded by bestowing on him a golden chain, such as princes only wore, and by giving him possession of Ekron (Ἐκκάρων). The defection of the Egyptian king, however, was fatal to the cause of Balas; he was defeated in a pitched battle, and fled with 500 cavalry to Abæ in Arabia, and sought refuge with the emir Zabdiel. The Arabian murdered his confiding guest in the fifth year of his reign over Syria, and sent his head to Ptolemy, who himself died the same year, B.C. 145. Balas left a young son, who was eventually made king of Syria by Tryphon, under the name

of Antiochus Theos (1 Macc. xi. 13-18; Joseph. *Antiq.* xiii. 5).—J. K.

ALEXANDER JANNÆUS, the first prince of the Maccabæan dynasty who assumed the title of king. [MACCABEES.]

ALEXANDER, son of Herod the Great and Mariamne. [HERODIAN FAMILY.]

ALEXANDER in the N. T.—1. Son of Simon, a Cyrenian, whom they compelled to bear the cross for Christ (Mark xv. 21).

2. One of the kindred of the high-priest Annas (Acts iv. 6), supposed by some to be identical with the Alexander mentioned by Josephus (*Antiq.* xviii. 8, 1; xix. 5, 1).

3. A Jew of Ephesus, known only from the part which he took in the uproar about Diana, which was raised there by the preaching of Paul. As the inhabitants confounded the Jews and Jewish Christians, the former put forward Alexander to speak on their behalf, but he was unable in the tumult to obtain a hearing (Acts xix. 33). Some suppose that this person is the same with 'Alexander the coppersmith,' of 2 Tim. iv. 14, but this is by no means probable: the name of Alexander was in those times very common among the Jews.

4. A coppersmith or brazier (mentioned in 1 Tim. i. 20; 2 Tim. iv. 14), who with Hymenæus and others broached certain heresies touching the resurrection, for which they were excommunicated by St. Paul. These persons, and especially Alexander, appear to have malignèd the faith they had forsaken, and the character of the apostle.

ALEXANDER, JOS. ADDISON, D.D., an American divine, recently deceased. He was born at Philadelphia in 1809; graduated at Princeton in 1826; and filled successively the chairs of ancient languages and literature, of biblical criticism and ecclesiastical history, and of biblical and ecclesiastical history in Princeton. His works on the Bible are: *The Earlier Prophecies of Isaiah*, 8vo, New York and London 1846; *The Later Prophecies of Isaiah*, 8vo, *ibid.*, 1847; both reprinted in one vol. 8vo, with an Introduction by Prof. Eadie, Glasgow 1848; *The Psalms translated and explained*, 3 vols. 12mo, New York 1850; *The Gospel according to Mark explained*, 12mo, 1858; *The Acts of the Apostles explained*, 2 vols. 12mo; *The Gospel according to Matthew*, 12mo 1861; *Notes on New Testament Literature and Ecclesiastical History*, 12mo 1861. The last two are posthumous publications. Dr. Alexander's merits as a commentator stand high. [COMMENTARY.] His work on Isaiah is the most copious and satisfactory on that book in our language. In preparing it use has been made of the best commentaries and translations, British and Continental. His other works hardly come up to the promise given by this his first work in this department. They are, however, well deserving of being consulted; though the author has been accused of occasionally allowing a dogmatical bias to warp his exegesis.—W. L. A.

ALEXANDRE, or SALOME, wife of Alexander Jannæus. [MACCABEES.]

ALEXANDRIA (Ἀλεξάνδρεια, 3 Macc. iii. 1), the chief maritime city, and long the metropolis of Lower Egypt. As this city owed its foundation to Alexander the Great, the Old Testament canon

had closed before it existed; nor is it often mentioned in the Apocrypha, or in the New Testament. But it was in many ways most importantly connected with the later history of the Jews—as well from the relations which subsisted between them and the Ptolemies, who reigned in that city, as from the vast numbers of Jews who were settled there, with whom a constant intercourse was maintained by the Jews of Palestine. It is perhaps safe to say that, from the foundation of Alexandria to the destruction of Jerusalem, and even after, the former was of all foreign places that to which the attention of the Jews was most directed. And this appears to have been true even at the time when Antioch first, and afterwards Rome, became the seat of the power to which the nation was subject.

Alexandria is situated on the Mediterranean, twelve miles west of the Canopic mouth of the Nile, in 31° 13' N. lat. and 25° 53' E. long. It owes its origin to the comprehensive policy of

Alexander, who perceived that the usual channels of commerce might be advantageously altered; and that a city occupying this site could not fail to become the common emporium for the traffic of the eastern and western worlds, by means of the river Nile, and the two adjacent seas, the Red Sea and the Mediterranean: and the high prosperity which, as such, Alexandria very rapidly attained, proved the soundness of his judgment, and exceeded any expectations which even he could have entertained. For a long period Alexandria was the greatest of known cities; for Nineveh and Babylon had fallen, and Rome had not yet risen to pre-eminence: and even when Rome became the mistress of the world, and Alexandria only the metropolis of a province, the latter was second only to the former in wealth, extent, and importance; and was honoured with the magnificent titles of the second metropolis of the world, the city of cities, the queen of the East, a second Rome (Diod. Sic.

37. Alexandria.

xvii.; Strab. xvii.; Ammian Marcell. xxii.; Joseph. *Bell. Jud.* iv. 11, 5).

The city was founded in B.C. 332, and was built under the superintendence of the same architect (Dinocrates) who had rebuilt the Temple of Diana at Ephesus. As a foreign city, not mentioned at all in the Old Testament, and only accidentally in the New (Acts vi. 9; xviii. 24; xxvii. 6), it is introduced into this work only on account of its connection with the history and condition of the Jewish people. To the facts resulting from or bearing on that connection, our notice must therefore be limited, without entering into those descriptions of the ancient or of the modern city which are given in general and geographical cyclopædias. It may suffice to mention that the ancient city appears to have been of seven times the extent of the modern. If we may judge from the length of the two main streets (crossing each other at right angles) by

which it was intersected, the city was about four miles long by one and a half wide; and in the time of Diodorus it contained a free population of 300,000 persons, and altogether probably 600,000, if we double the former number, as Mannert suggests, in order to include the slaves. The *port* of Alexandria is described by Josephus (*Bell. Jud.* iv. 10, 5); and his description is in perfect conformity with the best modern accounts. It was secure, but difficult of access; in consequence of which, a magnificent pharos, or lighthouse, was erected upon an islet at the entrance, which was connected with the mainland by a dyke. This pharos was accounted one of the 'seven' wonders of the world. It was begun by Ptolemy Soter, and completed under Ptolemy Philadelphus, by Sostratus of Cnidus, B.C. 283. It was a square structure of white marble, on the top of which fires were kept constantly burning for the direction of mariners. It was erected at a

cost of 800 talents, which, if Attic, would amount to £165,000, if Alexandrian, to twice that sum. It was a wonder in those times, when such erections were almost unknown; but, in itself, the Eddystone lighthouse is, in all probability, ten times more wonderful.

The business of working out the great design of Alexander could not have devolved on a more fitting person than Ptolemy Soter. From his first arrival in Egypt, he made Alexandria his residence; and no sooner had he some respite from war, than he bent all the resources of his mind to draw to his kingdom the whole trade of the East, which the Tyrians had, up to his time, carried on by sea to Elath, and from thence, by the way of Rhinocorura, to Tyre. He built a city on the west side of the Red Sea, whence he sent out fleets to all those countries to which the Phœnicians traded from Elath. But, observing that the Red Sea, by reason of rocks and shoals, was very dangerous towards its northern extremity, he transferred the trade to another city, which he founded at the greatest practicable distance southward. This port, which was almost on the borders of Ethiopia, he called, from his mother, Berenice; but the harbour being found inconvenient, the neighbouring city of Myos Hormos was preferred. Thither the products of the east and south were conveyed by sea; and were from thence taken on camels to Coptus, on the Nile, where they were again shipped for Alexandria, and from that city were dispersed into all the nations of the west, in exchange for merchandise which was afterwards exported to the East (Strabo, xxii. p. 805; Plin. *Hist. Nat.* vi. 23). By these means, the whole trade was fixed at Alexandria, which thus became the chief mart of all the traffic between the East and West, and which continued to be the greatest emporium in the world for above seventeen centuries, until the discovery of the passage by the Cape of Good Hope opened another channel for the commerce of the East.

Alexandria became not only the seat of commerce, but of learning and the liberal sciences. This distinction also it owed to Ptolemy Soter, himself a man of education, who founded an academy, or society of learned men, who devoted themselves to the study of philosophy, literature, and science. For their use he made a collection of choice books, which, by degrees, increased under his successors until it became the finest library in the world, and numbered 700,000 volumes (Strab. xvii. p. 791; Euseb. *Chron.*) It sustained repeated losses, by fire and otherwise, but these losses were as repeatedly repaired; and it continued to be of great fame and use in those parts, until it was at length burnt by the Saracens when they made themselves masters of Alexandria in A.D. 642. Undoubtedly the Jews at Alexandria shared in the benefit of these institutions, as the Christians did afterwards; for the city was not only a seat of heathen, but of Jewish, and subsequently of Christian learning. The Jews never had a more profoundly learned man than Philo, nor the Christians men more erudite than Origen and Clement; and if we may judge from these celebrated natives of Alexandria, who were remarkably intimate with the heathen philosophy and literature—the learning acquired in the Jewish and Christian schools of that city must have been of that broad and comprehensive character which its large and liberal

institutions were fitted to produce. It will be remembered that the celebrated translation of the Hebrew Scriptures into Greek [SEPTUAGINT] was made, under every encouragement from Ptolemy Philadelphus, principally for the use of the Jews in Alexandria, who knew only the Greek language; but partly, no doubt, that the great library might possess a version of a book so remarkable, and, in some points, so closely connected with the ancient history of Egypt. The work of Josephus against Apion affords ample evidence of the attention which the Jewish Scriptures excited.

At its foundation Alexandria was peopled less by Egyptians than by colonies of Greeks, Jews, and other foreigners. The Jews, however much their religion was disliked, were valued as citizens; and every encouragement was held out by Alexander himself and by his successors in Egypt, to induce them to settle in the new city. The same privileges as those of the first class of inhabitants (the Greeks) were accorded to them, as well as the free exercise of their religion and peculiar usages: and this, with the protection and security which a powerful state afforded against the perpetual conflicts and troubles of Palestine, and with the inclination to traffic, which had been acquired during the Captivity, gradually drew such immense numbers of Jews to Alexandria, that they eventually formed a very large portion of its vast population, and at the same time constituted a most thriving and important section of the Jewish nation. The Jewish inhabitants of Alexandria are therefore often mentioned in the later history of the nation; and their importance as a section of that nation would doubtless have been more frequently indicated, had not the Jews of Egypt thrown off their ecclesiastical dependence upon Jerusalem and its temple, and formed a separate establishment of their own, at On or Heliopolis. They were thus left with less inducement or occasion than they would otherwise have had to mix themselves up with the affairs of the parent country: but they were not wanting in becoming patriotism; and they were on more than one occasion involved in measures directed against the Jews as a nation, and occasionally experienced some effects of that anger in the ruling powers, or of exasperation in the populace, of which the Jews in Palestine were the primary objects, or which resulted from the course which they had taken.

The inhabitants of Alexandria were divided into three classes: 1. The Macedonians, the original founders of the city; 2. the mercenaries who had served under Alexander; 3. the native Egyptians. Through the favour of Alexander and Ptolemy Soter, the Jews were admitted into the first of these classes, and this privilege was so important that it had great effect in drawing them to the new city (Hecateus, in Joseph. *Contra Apion.* ii. 4; *Bell. Jud.* ii. 18. 7; Q. Curt. iv. 8). These privileges they enjoyed undisturbed until the time of Ptolemy Philopator, who, being exasperated at the resistance he had met with in attempting to enter the temple at Jerusalem, wreaked his wrath upon the Jews of Alexandria, on his return to Egypt. He reduced to the third or lowest class all but such as would consent to offer sacrifices to the gods he worshipped; but of the whole body only 300 were found willing to abandon their principles in order to preserve their civil advantages. The act of the general body in excluding the 300 apostates from their congregations was so represented to the king as to

move his anger to the utmost, and he madly determined to exterminate all the Jews in Egypt. Accordingly, as many as could be found were brought together, and shut up in the spacious hippodrome of the city, with the intention of letting loose 500 elephants upon them; but the animals refused their horrid task, and, turning wildly upon the spectators and the soldiers, destroyed large numbers of them. This, even to the king, who was present, seemed so manifest an interposition of Providence in favour of the Jews, that he not only restored their privileges, but loaded them with new favours. This story, as it is omitted by Josephus and other writers, and only found in the third book of Maccabees (ii. v.), is considered doubtful.

The dreadful persecution which the Jews of Alexandria underwent in A. D. 39, shews that, notwithstanding their long establishment there, no friendly relations had arisen between them and the other inhabitants, by whom in fact they were intensely hated. This feeling was so well known, that at the date indicated, the Roman governor Avillius Flaccus, who was anxious to ingratiate himself with the citizens, was persuaded that the surest way of winning their affections was to withdraw his protection from the Jews, against whom the emperor was already exasperated by their refusal to acknowledge his right to divine honours, which he insanely claimed, or to admit his images into their synagogues. The Alexandrians soon found out that they would not be called to account for any proceedings they might have recourse to against the Jews. The insult and bitter mockery with which they treated Herod Agrippa when he came to Alexandria, before proceeding to take possession of the kingdom he had received from Caligula, gave the first intimation of their dispositions. Finding that the governor connived at their conduct, they proceeded to insist that the emperor's images should be introduced into the Jewish synagogues; and on resistance being offered, they destroyed most of them, and polluted the others by introducing the imperial images by force. The example thus set by the Alexandrians was followed in other cities of Egypt, which contained at this time about a million of Jews; and a vast number of oratories—of which the largest and most beautiful were called synagogues—were all either levelled with the ground, consumed by fire, or profaned by the emperor's statues (Philo, *In Flacc.* p. 968-1009, ed. 1640; *De Leg.* ix.; Euseb. *Chron.* 27, 28).

Flaccus soon after declared himself openly, by publishing an edict depriving the Jews of the rights of citizenship, which they had so long enjoyed, and declaring them aliens. The Jews then occupied two out of the five quarters (which took their names from the five first letters of the alphabet) into which the city was divided; and as they were in those times, before centuries of oppression had broken their spirit, by no means remarkable for their submission to wrongous treatment, it is likely that they made some efforts towards the maintenance of their rights, which Philo neglects to record, but which gave some kind of pretence for the excesses which followed. At all events, the Alexandrians, regarding them as abandoned by the authorities to their mercy, openly proceeded to the most violent extremities. The Jews were forcibly driven out of all the other parts of the city, and confined to one quarter; and the houses from which they had been driven, as well as their shops and

warehouses, were plundered of all their effects. Impoverished, and pent up in a narrow corner of the city, where the greater part were obliged to lie in the open air, and where the supplies of food were cut off, many of them died of hardship and hunger; and whoever was found beyond the boundary, whether he had escaped from the assigned limits, or had come in from the country, was seized and put to death with horrid tortures. So likewise, when a vessel belonging to the Jews arrived in port, it was boarded by the mob, pillaged, and then burnt, together with the owners.

At length king Herod Agrippa, who stayed long enough in Alexandria to see the beginning of these atrocities, transmitted to the emperor such a report of the real state of affairs as induced him to send a centurion to arrest Flaccus, and bring him a prisoner to Rome. This put the rioters in a false position, and brought some relief to the Jews; but the tumult still continued, and as the magistrates refused to acknowledge the citizenship of the Jews, it was at length agreed that both parties should send delegates, five on each side, to Rome, and refer the decision of the controversy to the emperor. At the head of the Jewish delegation was the celebrated Philo, to whom we owe the account of these transactions; and at the head of the Alexandrians was the noted Apion. The latter chiefly rested their case upon the fact that the Jews were the only people who refused to consecrate images to the emperor, or to swear by his name. But on this point the Jewish delegates defended themselves so well, that Caligula himself said, 'These men are not so wicked as ignorant and unhappy, in not believing me to be a god!' The ultimate result of this appeal is not known, but the Jews of Alexandria continued to be harassed during the remainder of Caligula's reign; and their alabarch, Alexander Lysimachus (brother of Philo), was thrown into prison, where he remained till he was discharged by Claudius, upon whose accession to the empire the Alexandrian Jews betook themselves to arms. This occasioned such disturbances that they attracted the attention of the emperor, who, at the joint entreaty of Herod and Agrippa, issued an edict conferring on the Jews of Egypt all their ancient privileges (Philo, *In Flacc.* Op. p. 1019-1043; Joseph. *Antiq.* xviii. 10 (9); xix. 5). The state of feeling in Alexandria which these facts indicate, was very far from being allayed when the revolt of the Jews in Palestine caused even those of the nation who dwelt in foreign parts to be regarded as enemies, both by the populace and the government. In Alexandria, on a public occasion, they were attacked, and those who could not save themselves by flight were put to the sword. Only three were taken alive, and they were dragged through the city to be consigned to the flames. At this spectacle the indignation of the Jews rose beyond all bounds. They first assailed the Greek citizens with stones, and then rushed with lighted torches to the amphitheatre, to set it on fire and burn all the people who were there assembled. The Roman prefect Tiberius Alexander, finding that milder measures were of no avail, sent against them a body of 17,000 soldiers, who slew about 50,000 of them, and plundered and burned their dwellings (Joseph. *Bell. Jud.* ii, 18, 7; comp. *Matt.* xxiv. 6).

After the close of the war in Palestine, new disturbances were excited in Egypt by the Sicarii,

many of whom had fled thither. They endeavoured to persuade the Jews to acknowledge no king but God, and to throw off the Roman yoke. Such persons as opposed their designs and tendered wiser counsels to their brethren, they secretly assassinated, according to their custom. But the principal Jews in Alexandria having in a general assembly earnestly warned the people against these fanatics, who had been the authors of all the troubles in Palestine, about 600 of them were delivered up to the Romans. Several fled into the Thebaid, but were apprehended and brought back. The most cruel tortures which could be devised had no effect in compelling them to acknowledge the emperor for their sovereign; and even their children seemed endowed with souls fearless of death, and bodies incapable of pain. Vespasian, when informed of these transactions, sent orders that the Jewish temple in Egypt should be destroyed. Lupus the prefect, however, only shut it up, after having taken out the consecrated gifts: but his successor Paulinus stripped it completely, and excluded the Jews entirely from it. This was in A. D. 75, being the 343d year from its erection by Onias.

St. Mark is said to have introduced the Christian religion into Alexandria, which early became one of the strongholds of the true faith. The Jews continued to form a principal portion of the inhabitants, and remained in the enjoyment of their civil rights till A. D. 415, when they incurred the hatred of Cyril the patriarch, at whose instance they were expelled, to the number of 40,000, and their synagogues destroyed. However, when Amrou, in A. D. 640, took the place for the caliph Omar, he wrote to his master in these terms:—‘I have taken the great city of the west, which contains 4000 palaces, 4000 baths, 400 theatres, 12,000 shops for the sale of vegetable food, and 40,000 tributary Jews.’ From that time the prosperity of Alexandria very rapidly declined; and when, in 969, the Fatemite caliphs seized on Egypt and built New Cairo, it sunk to the rank of a secondary Egyptian city. The discovery of the passage to the east by the Cape, in 1497, almost annihilated its remaining commercial importance. The commercial and maritime enterprises of Mehemet Ali have again raised Alexandria to some distinction, and it is now an important station in the overland route to India, and a railway is now (1854) being constructed between it and Cairo. When Benjamin of Tudela visited the place (*Itin.* i. 158, ed. Asher), the number of Jews was not more than 3000, and does not now exceed 500 (J. A. St. John, *Egypt*, ii. 384). The entire population is about 60,000 (Wilkinson’s *Modern Egypt*; Hogg’s *Visit to Alexandria*). [For details regarding Alexandrian learning and philosophy, Jewish and Christian, see Dähne, *Geschichtliche Darstellung d. Jüdisch-Alexandrinischen Religion und philosophie*, Halle, 1834; Jost, *Gesch. d. Judenthums*, Leipz. 1857; Dörner, *Entwicklungsgesch. der Lehre von d. Person Christi*, i. 21 ff., E. PHILOSOPHY in this work.]

ALEXANDRIUM, a castle built by Alexander Jannæus on a mountain near Coreæ (*Κορέαι*), one

of the principal cities of northernmost Judæa towards Samaria. The princes of the founder’s family were mostly buried here; and hither Herod carried the remains of his sons Alexander and Aristobulus (who were maternally of that family), after they had been put to death at Sebaste (Joseph. *Antiq.* xiv. 6, 10, 27; xvi. 17, *B. J.* i. 17). [The situation of Coreæ, which determines that of the castle, is not known; but Dr. Robinson (*Bib. Researches*, iii. 83) conjectures that he may have found it in the modern Kuriyetz, which is about eight miles S. by E. from Shechem. But this place seems too far north to have been within even the northernmost limits of Judæa.]

ALGUM (אַלְגוּמִים), or ALMUG TREES (אַלְמֻגִים).

These are, no doubt, two forms of the same word, as they occur in passages referring to the same events, and differ only in the transposition of letters. In 1 Kings x. 11, it is said, ‘And the navy also of Hiram, that brought gold from Ophir, brought in from Ophir great plenty of almug-trees and precious stones. And the king made of the almug trees pillars for the house of the Lord, and for the king’s house, harps also and psalteries for singers.’ In the parallel passages of 2 Chron. ix. 10, 11, the word *algum* is substituted for *almug*, and it is added, ‘There were none such seen before in the land of Judah.’ As no similar name has yet been discovered which is applicable to any kind of wood from the countries whence the almug-trees are supposed to have been brought, various conjectures have been formed respecting them. It is necessary first to settle whence these trees were brought. To us there appears no doubt that Ophir was to the southward of the Red Sea, and was most probably in some part of India (*Pictorial Bible*, ii. 349-366). The products brought from thence, such as gold, precious stones, ivory, apes, and peacocks, were all procurable only from that country. Even tin, obtained at a later period from Tartessus, was probably first procured from an earlier Tarshish, as it is abundant in Tenneserim, the Malayan peninsula, the island of Banca, etc. Its uses were well known to the Indians, who received it also in exchange when brought to them by the Red Sea, as it no doubt was, at the time when the Periplus of the Erythrean Sea was written.

Various trees have been attempted to be identified with the almug. These it is unnecessary to enumerate at length, as only a few of them seem deserving of attention. The Greek translator of the book of kings explains the Hebrew word by ἄμυλα ἀπελέκητα, ‘unhewn wood;’ but in both the places in Chronicles it is rendered ἄμυλα πύκινα, ‘pine-wood.’ This is also the interpretation of the old Latin version in 2 Chron. ii. 8; but in the two other passages that version gives it the acceptance of ‘thyne-wood’ (*Ligna thyina*). The thyne-wood which is mentioned in Rev. xviii. 12, is no doubt the Lignum thynum, which was also called citrinum, citron-wood. It was highly valued by the Romans, and employed by them for the doors of their temples and the images of their gods. This wood was obtained from the north of Africa, where the tree producing it has recently been rediscovered. If *algum*-wood was brought from the north coast of Africa, there certainly does not appear any tree more worthy to be considered as such than *Thuya articulata*, or *Callitris quadrivalvis*. [THYNE WOOD.] From the passage of 2 Chron.

ii. 8:—'Send me also cedar-trees, fir-trees, and algum-trees out of Lebanon,' it has been inferred that this might be one of the pine tribe procurable in that mountain: but in the parallel passage in 1 Kings v. 8, only timber of cedar and timber of fir are mentioned. On this Rosenmüller observes, 'that the addition of 'almug' in the book of Chronicles appears to have been the interpolation of a transcriber' (*Bibl. Bot.* p. 245). If the almug had been a tree of Lebanon, we should have a difficulty in understanding how, after the time of Solomon, 'there came no such almug-trees nor were such seen unto this day' (1 Kings x. 12).

We feel satisfied, however, that almug-trees were brought from southern regions by the Red Sea; and it could not have been more difficult to convey them from thence to the Mediterranean than it must have been to transport timber from Joppa to Jerusalem. If we consider the great deficiency of timber on the coasts both of Arabia and of Egypt—a deficiency which, from the general dryness of the soil and climate, must have been experienced in remote ages, as well as at the present time—we should expect that, where we have notices of so much shipping, there must early have been established a trade in timber. Forskal particularly mentions the importation of timber-woods from India into Arabia. Of the kinds enumerated, it has been shewn that *saj*, *abnoos*, and *shishum* are teak, ebony, and sissoo (*Essay on Hindoo Medicine*, p. 128). Forskal also mentions the teak as imported into Egypt: 'Carina navis fundatur Ligno saj ساج ex India allato,' p. lvi.

Having been brought from so great a distance, and thought sufficiently remarkable to be worthy of special record, it is reasonable to suppose that almug-trees possessed properties not common in the timber usually met with in Palestine, whether in appearance, in colour, or in odour. Several Indian trees have been enumerated as likely to have been the almug. Of these, bukkum, or sapan wood (*Casalpinia sappan*), much used in dyeing, belongs to the same genus as Brazil wood of South America, but its nearest locality is the eastern side of the Bay of Bengal. The teak, highly valued from its indestructible nature, great size, and strength, might be more reasonably adduced, because more easily procurable, from the greater accessibility of the Malabar coast; but being a coarse-grained wood, it might not be so well suited for musical instruments. If one of the pine tribe be required, none is more deserving of selection than the deodar (*deo*, god; *dar*, wood; *Pinus deodara*), as it grows to a large size, yields excellent timber, which is close-grained and fragrant; but the tree is found only in very inaccessible situations.

Others have been in favour of sandal-wood, but have confounded with the true and far-famed kind what is called red sandal-wood, the product of *Pterocarpus santalinus*, as well as of *Adenanthera pavonina*. But there are two kinds of fragrant sandal-wood, the yellow and the white, both mentioned in old works on *Materia Medica*. Both these are thought by some to be the produce of the same tree, the younger and outer layers of wood forming the white, while the centre layers become coloured, and form the yellow.

Recent investigations confirm the opinion of Garcias, that the yellow and white sandal-woods

are the produce of different trees, both of which, however, belong to the same genus, *Santalum*. M. Gaudichaud has described the species, which he has named *S. Freycinetianum*, as that yielding the yellow sandal-wood so much valued by the Chinese, and obtained by them from the Feejee, Marquesas, and Molucca Islands.

But the most common sandal-wood is that which is best known and most highly esteemed in India. It is produced by the *Santalum album*, a

38. *Santalum album*.

native of the mountainous parts of the coast of Malabar, where large quantities are cut for export to China, to different parts of India, and to the Persian and Arabian gulfs. The outer parts of this tree are white and without odour; the parts near the root are most fragrant, especially of such trees as grow in hilly situations and stony ground. The trees vary in diameter from 9 inches to a foot, and are about 25 or 30 feet in height, but the stems soon begin to branch. This wood is white, fine-grained, and agreeably fragrant, and is much employed for making rosaries, fans, elegant boxes and cabinets. The Chinese use it also as incense both in their temples and private houses, and burn long slender candles formed by covering the ends of sticks with its sawdust mixed with rice-paste.

As sandal-wood has been famed in the East from very early times, it is more likely than any other to have attracted the notice of, and been desired by, more northern nations. We do not, however, trace it by its present or any similar name at a very early period in the writings of Greek authors; it may, however, have been confounded with agilawood, or agallochum, which like it is a fragrant wood and used as incense. Sandal-wood is mentioned in early Sanscrit works, and also in those of the Arabs. Actuarius is the earliest Greek author that expressly notices it, but he does so as if it had been familiarly known. In the *Periplus of Arrian* it is mentioned as one of the articles of commerce obtainable at Omana, in Gedrosia, by the name *Ἐὐθα Σαγάλωα*, which Dr. Vincent remarks may easily have been corrupted from *Σανδάλωα*. As it was produced on the Malabar coast, it could easily be obtained by the merchants who conveyed the cinnamon of Ceylon and other Indian products to the Mediterranean. That sandal-wood has often

been employed in buildings is evident from J. Barb, 'Viaggio alla Persia': 'La porta della camera ora de sandali entarsiata con file d'oro,' etc. The Hindoo Temple of Somnat, in Guzerat, which was plundered and destroyed by Mahomed of Ghizni, had gates made of sandal-wood. These were carried off by the conqueror, and afterwards formed the gates of his tomb, whence, after 800 years, they were taken by the British conquerors of Ghizni, and brought back to India in 1842.

That sandal-wood, therefore, might have attained celebrity, even in very early ages, is not at all unlikely; that it should have attracted the notice of Phœnician merchants visiting the west coast of India is highly probable; and also that they should have thought it worthy of being taken as a part of their cargo on their return from Ophir. That it is well calculated for musical instruments, the author is happy to adduce the opinion of Professor Wheatstone, who says, 'I know no reason why sandal-wood should not have been employed in ancient days for constructing musical instruments. It is not so employed at present, because there are many much cheaper woods which present a far handsomer appearance. Musical instruments would appear very unfinished to modern taste unless varnished or French-polished, and it would be worse than useless to treat fragrant woods in this way. Formerly perhaps it might have been more the fashion to delight the senses of smell and hearing simultaneously than it is with us, in which case odoriferous woods would be preferred for things so much handled as musical instruments are.'—J. F. R.

ALISGEMA (Ἀλισγημα), a Hellenistic word, which occurs in Acts xv. 20 (comp. ver. 29 and 1 Cor. viii.), with reference to meat sacrificed to idols, and there means *defilement, pollution*. The Apostle in these passages alludes to the customs of the Gentiles, among whom, after a sacrifice had been concluded and a portion of the victim had been assigned to the priests, it was usual to hold a sacrificial feast in honour of the god, on which occasion they ate the residue of the flesh. This feast might take place either in the temple, or in a private house. But there were many who, from need or avarice, salted and laid up the remnants for future use (Theoph. Char. c. x.), or even gave them to the butchers to sell in the shambles (Schoettg. *Hor. Heb.* on Acts xv. 20; 1 Cor. viii.) This flesh, having been offered to idols, was held in abomination by the Jews; and they considered not only those who had been present at these feasts, but also those who ate the flesh which had been offered up, when afterwards exposed for sale in the shambles, as infected by the contagion of idolatry. The council at Jerusalem, therefore, at the suggestion of St. James, directed that converts should refuse all invitations to such feasts, and abstain from the use of all such meat, that no offence might be given to those Christians who had been Jews. See Kuinoel on Acts xv. 20. [Meyer, Lechler, etc., take ἀλισγήματα as referring to *all* the evils specified by James.]

ALKABAS, SALOMON (called also Ha-Levi ben Mosè), a native of Saloniki, who flourished in former half of the sixteenth century. He wrote

אֲלֵת הַחַיִּים, a commentary on the Song of Solomon, written in the year 1536, published at Venice in

1552, 4to; מִנְחֹת הַלֵּי, a commentary on Esther, to which are added some homilies. Ven. 1583, 4to; אֲלֵת רֻת, a commentary on Ruth, Constant. 1561, 4to, Lublin, 1597, 4to.—W. L. A.

ALLEGORY (Ἀλληγορία). This word is found in the Authorized Version of Gal. iv. 24, but it does not actually exist as a noun in the Greek Testament, nor even in the Septuagint. In the passage in question Saint Paul cites the history of the free-born Isaac and the slave-born Ishmael, and in proceeding to apply it spiritually says, ἀτῶνά ἐστιν ἀλληγορούμενα, which does not mean, as in the A. V., 'which things are an allegory,' but 'which things are allegorized.' This is of some importance; for in the one case the Apostle is made to declare a portion of Old Testament history an allegory, whereas in truth he only speaks of it as allegorically applied. Allegories themselves are, however, of frequent occurrence in Scripture although that name is not there applied to them.

An ALLEGORY has been sometimes considered as only a lengthened metaphor; at other times, as a continuation of metaphors. But the nature of allegory itself, and the character of allegorical interpretation, will be best understood by attending to the origin of the term which denotes it. Now the term 'Allegory,' according to its original and proper meaning, denotes a representation of one thing which is intended to excite the representation of another thing. Every allegory must therefore be subjected to a twofold examination: we must first examine the *immediate representation*, and then consider what *other representation* it is intended to excite. In most allegories the immediate representation is made in the form of a narrative; and, since it is the object of the allegory itself to convey a moral, not an historic truth, the narrative itself is commonly fictitious. The *immediate representation* is of no further value than as it leads to the *ultimate representation*. It is the application or the moral of the allegory which constitutes its worth.

Since, then, an allegory comprehends two distinct representations, the interpretation of an allegory must comprehend two distinct operations. The first of them relates to the immediate representation, and the second to the ultimate representation. The immediate representation is understood from the words of the allegory; the ultimate representation depends upon the immediate representation applied to the proper end. In the interpretation, therefore, of the former, we are concerned with the interpretation of *words*; in the interpretation of the latter, we are concerned with the *things signified* by the words. Now, whenever we speak of allegorical interpretation, we have always in view the ultimate representation, and, consequently, are then concerned with the interpretation of things. The interpretation of the words, which attaches only to the immediate representation, or the plain narrative itself, is commonly called the *grammatical* or the *literal* interpretation; although we should speak more correctly in calling it the *verbal* interpretation, since even in the plainest narratives, even in narratives not designed for moral application, the use of words is never restricted to their mere *literal* senses. Custom, however, having sanctioned the use of the term 'literal,' instead of the term 'verbal' in-

terpretation, to mark the opposition to allegorical interpretation, we must understand it accordingly. But whatever be the term, whether verbal or literal, which we employ to express the interpretation of the words, it must always be borne in mind that the allegorical interpretation is the interpretation of things—the things signified by the words, not of the words themselves.

Bishop Marsh, from the fifth of whose *Lectures on the Criticism and Interpretation of the Bible* these principles are derived, proceeds, in that Lecture, to apply them to a few of the Scriptural examples. Every parable is a kind of allegory; and therefore the parable of the sower (Luke viii. 5-15), being especially clear and correct, is taken as the first example. In this we have a plain narrative, a statement of a few simple and intelligible facts, such, probably, as had fallen within the observation of the persons to whom our Saviour addressed himself. When he had finished the narrative, or the immediate representation of the allegory, he then gave the explanation or ultimate representation of it; that is, he gave the allegorical interpretation of it. And that the interpretation was an interpretation, not of the words, but of the things signified by the words, is evident from the explanation itself: 'The seed is the word of God; those by the wayside are they that hear,' etc. (v. 11, etc.). The impressive and pathetic allegory addressed by Nathan to David affords a similar instance of an allegorical narrative accompanied with its explanation (2 Sam. xii. 1-14). Allegories thus accompanied, constitute a kind of simile, in both parts of which the words themselves are construed either literally or figuratively, according to the respective use of them; and then we institute the comparison between the things signified in the former part, and the things signified in the latter part.

But allegorical narratives are frequently left to explain themselves, especially when the resemblance between the immediate and ultimate representation is sufficiently apparent to make an explanation unnecessary. Of this kind we cannot have a more striking example than that beautiful one contained in the 80th Psalm: 'Thou broughtest a vine out of Egypt,' etc.

The use of allegorical interpretation is not, however, confined to mere allegory, or fictitious narratives, but is extended also to history, or real narratives. And in this case the grammatical meaning of a passage is called its *historical* meaning, in contradistinction to its *allegorical* meaning. There are two different modes in which Scripture history has been thus allegorized. According to one mode, facts and circumstances, especially those recorded in the Old Testament, have been applied to other facts and circumstances, of which they have been described as *representative*. According to the other mode, these facts and circumstances have been described as mere *emblems*. The former mode is warranted by the practice of the sacred writers themselves; for when facts and circumstances are so applied, they are applied as *types* of those things to which the application is made. But the latter mode of allegorical interpretation has no such authority in its favour, though attempts have been made to procure such authority. For the same things are there described not as types or as real facts, but as mere *ideal* representations, like the immediate representations in allegory. By this mode, therefore, history is not *treated* as allegory,

but *converted* into allegory. That this mode of interpretation cannot claim the sanction of St. Paul, from his treatment of the history of Isaac and Ishmael, has already been shewn: the consideration, however, of the allegorical modes of dealing with the real histories of Scripture is a different subject from that of allegories and their interpretation, and belongs to another place (Lowth, *De Sac. Poes. Heb.* Pr. 10; Davidson, *Sacred Hermen.* p. 305). [INTERPRETATION, BIBLICAL.]—J. K.

ALLELUIA. [HALLELUJAH.]

ALLIANCES. From a dread lest the example of foreign nations should draw the Israelites into the worship of idols, they were made a peculiar and separate people, and intercourse and alliance with such nations were strongly interdicted (Lev. xviii. 3, 4; xx. 22, 23). The tendency to idolatry was in those times so strong, that the safety of the Israelites lay in the most complete isolation that could be realized; and it was to assist this object that a country more than usually separated from others by its natural boundaries was assigned to them. It was shut in by the sea on the west, by deserts on the south and east, and by mountains and forests on the north. Among a people so situated we should not expect to hear much of alliances with other nations.

By far the most remarkable alliance in the political history of the Hebrews is that between Solomon and Hiram king of Tyre. It is in a great degree connected with considerations which belong to another head. [COMMERCE.] But it may primarily be referred to a partial change of feeling which originated in the time of David, and which continued to operate among his descendants. During his wanderings he was brought into contact with several of the neighbouring princes, from some of whom he received sympathy and support, which, after he ascended the throne, he gratefully remembered (2 Sam. x. 2). There was probably more of this friendly intercourse than the Scripture has had occasion to record. Such timely aid, combined with the respect which his subsequently victorious career drew from foreign nations, must have gone far to modify in him and those about him that aversion to strangers which the Hebrews generally had been led to entertain. He married the daughter of a heathen king, and had by her his favourite son (2 Sam. iii. 3); the king of Moab protected his family (1 Sam. xxii. 3, 4); the king of Ammon shewed kindness to him (2 Sam. x. 2); the king of Gath showered favours upon him (1 Sam. xxvii.; xxviii. 1, 2); the king of Hamath sent his own son to congratulate him on his victories (2 Sam. viii. 10); in short, the rare power which David possessed of attaching to himself the good opinion and favour of other men, extended even to the neighbouring nations, and it would have been difficult for a person of his disposition to repel the advances of kindness and consideration which they made. Among those who made such advances was Hiram, king of Tyre; for it eventually transpires that 'Hiram was ever a lover of David' (1 Kings v. 1); and it is probable that other intercourse had preceded that relating to the palace which Hiram's artificers built for David (2 Sam. v. 11). The king of Tyre was not disposed to neglect the cultivation of the friendly intercourse with the Hebrew nation which had thus been opened. He sent an embassy to condole with Solomon on the

death of his father, and to congratulate him on his accession (1 Kings v. 1). The plans of the young king rendered the friendship of Hiram a matter of importance, and accordingly 'a league' was formed (1 Kings v. 12) between them: and that this league had a reference not merely to the special matter then in view, but was a general league of amity, is evinced by the fact that more than 250 years after, a prophet denounces the Lord's vengeance upon Tyre, because she 'remembered not the brotherly covenant' (Amos i. 9). Under this league large bodies of Jews and Phœnicians were associated, first in preparing the materials for the temple (1 Kings v. 6-18), and afterwards in navigating the Red Sea and the Indian Ocean (1 Kings ix. 26-28); and this increasing intercourse with the heathen appears to have considerably weakened the sentiment of separation, which, in the case of the Hebrews, it was of the utmost importance to maintain. The disastrous consequences of even the seemingly least objectionable alliances may be seen in the long train of evils, both to the kingdom of Israel and of Judah, which ensued from the marriage of Ahab with Jezebel, the king of Tyre's daughter. [AHAB; JEZEBEL.] These consequences had been manifested even in the time of Solomon; for he formed matrimonial alliances with most of the neighbouring kingdoms, and to the influence of his idolatrous wives are ascribed the abominations which darkened the latter days of the wise king (1 Kings xi. 1-8).

The prophets, who were alive to these consequences, often raised their voices against such dangerous connections (1 Kings xi. 11; 2 Chron. xvi. 7; xix. 2; xxv. 7, etc.; Is. vii. 17); but it was found a difficult matter to induce even the best kings to place such absolute faith in Jehovah, the Head of their state, as to neglect altogether those human resources and alliances by which other nations strengthened themselves against their enemies. The Jewish history, after Solomon, affords examples of several treaties with different kings of Syria, and with the kings of Assyria and Babylon. Asa, one of the most pious monarchs that ever sat on the throne of Judah, finding his kingdom menaced and his frontier invaded, sent to Benhadad, who reigned in Damascus, the most costly presents, reminding him of the league which had long subsisted between them and their fathers, and conjuring him not to succour the enemies of Judah, nor renounce the obligations of their old alliance (1 Kings xv. 16-20). Attacked by another king of Israel, whom another king of Damascus protected, Ahaz implored the king of Assyria for aid, and with the treasures of the temple and the palace purchased a defensive alliance (2 Kings xvi. 5, etc.; 2 Chron. xxviii. 16, etc.) In later times, the Maccabees appear to have considered themselves unrestrained by any but the ordinary prudential considerations in contracting alliances; but they confined their alliances to distant states, which were by no means likely ever to exercise that influence upon the religion of the people which was the chief object of dread. The most remarkable alliances of this kind in the whole Hebrew history are those which were contracted with the Romans, who were then beginning to take a part in the affairs of Western Asia. Judas claimed their friendly intervention in a negotiation then pending between the Jews and Antiochus Eupator (2 Macc. xi. 34, *sq.*); and two years after he sent ambassadors to the

banks of the Tiber to propose a treaty of alliance and amity. By the terms of this treaty the Romans ostensibly threw over the Jews the broad shield of their dangerous protection, promising to assist them in their wars; and forbidding any one who were at peace with themselves to be at war with the Jews, or to assist directly or indirectly those who were so. The Jews, on their part, engaged to assist the Romans to the utmost of their power in any wars they might wage in those parts. The obligations of this treaty might be enlarged or diminished by the mutual consent of the contracting parties. This memorable treaty, having been concluded at Rome, was graven upon brass and deposited in the Capitol (1 Macc. viii. 22-28; Josephus, *Antiq.* xii. 10, 6: other treaties with the Romans are given in lib. xiii.)

Anterior to the Mosaic institutions, such alliances with foreigners were permitted, or at least tolerated. Abraham was in alliance with some of the Canaanitish princes (Gen. xiv. 13); he also entered into a regular treaty of alliance, being the first on record, with the Philistine king Abimelech (ch. xxi. 22, *sq.*), which was renewed by their sons (ch. xxvi. 26-30). This primitive treaty is a model of its kind; instead of minute stipulations, it leaves all details to the honest interpretation of the contracting parties. Abimelech says: 'Swear unto me here by God that thou wilt not deal falsely with me, nor with my son, nor with my son's son; but according to the kindness that I have done unto thee, thou shalt do unto me, and unto the land wherein thou hast sojourned.' Even after the law, it appears, from some of the instances already adduced, that such alliances with distant nations as could not be supposed to have any dangerous effect upon the religion or morals of the people, were not deemed to be interdicted. The treaty with the Gibeonites is a remarkable proof of this. Believing that the ambassadors came from a great distance, Joshua and the elders readily entered into an alliance with them; and are condemned for it only on the ground that the Gibeonites were in fact their near neighbours (Josh. ix. 3-27).

From the time of the patriarchs, a covenant of alliance was sealed by the blood of some victim. [COVENANT.] The perpetuity of covenants of alliance thus contracted is expressed by calling them 'covenants of salt' (Num. xviii. 19; 2 Chron. xiii. 5), salt being the symbol of incorruption. The case of the Gibeonites affords an exemplary instance, scarcely equalled in the annals of any nation, of scrupulous adherence to such engagements. The Israelites had been absolutely cheated into the alliance; but, having been confirmed by oaths, it was deemed to be inviolable (Josh. ix. 19). Long afterwards, the treaty having been violated by Saul, the whole nation was punished for the crime by a dreadful famine in the time of David (2 Sam. xxi. 1, *sqq.*) The prophet Ezekiel (xvii. 12-21) pours terrible denunciations upon king Zedekiah for acting contrary to his sworn covenant with the king of Babylon. In this respect the Jews were certainly most favourably distinguished among the ancient nations; and, from numerous intimations in Josephus, it appears that their character for fidelity to their engagements was so generally recognised after the Captivity, as often to procure for them highly favourable consideration from the rulers of Western Asia and of Egypt.—J. K.

ALLIOLI, JOSEPH FRANZ VON, a German theologian, was born at Sulzbach in 1793, and studied theology at Munich, Amberg, and Landshut. He was made professor of biblical literature at Landshut in 1824, and professor of Oriental languages and biblical archaeology, at Munich, in 1826. He obtained the rectorate of this college in 1830. From 1838 he held the post of grandvicar of Augsburg. He wrote *Die Heil. Schrift des A. und N. T. aus der Vulgata mit Bezug auf d. Grundtext neu übersetzt; u. mit kurzen Anmerkungen erläutert*, 6 vols. 8vo, Nürnberg. 1830-32, 3d ed. Landshut 1838; also, *Handbuch der biblischen Alterthumskunde* in 1841.—W. L. A.

ALLIX, PETER, a learned French divine of the Reformed church, was born at Alençon in 1641, and died in London in March 1717. He was originally pastor of a French church; but after the revocation of the Edict of Nantes, he came to England, and opened a church in London for the French refugees. In 1690 he was made canon of Salisbury by Bishop Burnet, and his learning gained for him the degree of D.D. from both Oxford and Cambridge. His writings are in French, Latin, and English, and are very numerous. His biblical works are not so numerous as his polemical and doctrinal. Among them may be reckoned the following: *Reflections on the Books of Holy Scripture*, 2 vols. 8vo, Lond. 1688, 1 vol. 8vo, Oxf. 1822 (published in Bishop Watson's Theological Tracts, and translated into French and German); *Judgment of the Ancient Church against the Unitarians*, 8vo, Lond. 1699, Oxf. 1822; *Book of Psalms, with an abridgment of each Psalm*, etc., 8vo, 1701; *De Messie Duplici adventu Dissert. Duæ*, 12mo, Lond. 1701; *Diatribe de F. Christi D. N. anno et mense natali*, 8vo, Lond. 1707, 1710. In these works, though bearing evidences of abundant reading and some acuteness, there is not much to reward the biblical student. The author was too much of a polemic to be always trustworthy, either in his citations or his reasonings. His 'Reflections' are of value as bearing on the evidences of Christianity.—W. L. A.

ALLON (אֱלוֹן; Sept. *Bálavos*; Vulg. *Quercus*; Auth. Vers. OAK). The Hebrew word, thus pointed, as it occurs in Gen. xxxv. 8; Josh. xxiv. 26; Is. ii. 13; vi. 13; xlv. 14; Hos. iv. 13; Amos ii. 9; Zech. xi. 2, was understood by the ancient translators, and has been supposed by most interpreters, to denote the oak, and there is no reason to disturb this conclusion. In our version other words are also rendered by 'oak,' particularly *Alah* (אֱלָה), which more probably denotes the terebinth-tree. [ALAH.] The oak is, in fact, less frequently mentioned in the original than in the A. V., where it occurs so often as to suggest that the oak is as conspicuous and as common in Palestine as in this country. But in Syria oaks are by no means common, except in hilly regions, where the elevation gives the effect of a more northern climate; and even in such circumstances they do not attain the size in which they often appear in our latitudes. Indeed, Syria has not the species (*Quercus robur*) which forms the glory of our own forests. The 'oaks of Bashan' are in Scripture mentioned with peculiar distinction (Is. ii. 13; Ezek. xxxvii. 6; Zech. xi. 2), as if in the hills beyond the Jordan the oaks had been more abundant and

of larger growth than elsewhere. This is the case even at the present day. In the hilly regions of Bashan and Gilead, Burckhardt repeatedly mentions forests of thick oaks—thicker than any forests he had seen in Syria. He speaks gratefully of the shade thus afforded; and doubtless it was the presence of oaks which imparted to the scenery that European character which he notices (*Syria*, 265, 348). On that side of the river a thick oak-forest occurs as far south as the vicinity of Amman, the capital of the Ammonites (p. 356). Oaks of low stature are frequent in the hills and plains near the sources of the Jordan (pp. 45, 312, 315); and some of large dimensions are found in different parts of the country, beside the natural reservoirs of water fed by springs (pp. 193, 315). On the lower slopes

39. Branch of *Quercus Ægilops*.

of Lebanon low oak-trees are numerous, and the inhabitants employ their branches in the construction of the flat roofs of their dwellings (pp. 4, 7, 18, 193, 312, etc.) Next to Burckhardt, Lord Lindsay is the traveller who makes the most frequent mention of oaks in Palestine. He confirms their existing abundance in the countries of Bashan and Gilead. He calls them 'noble prickly oaks,' and 'evergreen oaks,' and notices a variety of the latter with a broader leaf than usual (*Travels*, ii. 122, 124, 127).

But oak-trees are by no means wanting on the west of the Jordan, in the proper Land of Canaan. Lord Lindsay describes the hills of southern Judæa about Hebron as covered to the top with low shrubs of the prickly oak. Fine park scenery, composed chiefly of prickly and evergreen oaks, occurs between Samaria and Mount Carmel. The same trees abound on the southern prolongations of that mountain, and on the banks of the Kishon. The thick woods which cover Mount Tabor are composed chiefly of oaks and pistachio-trees; and oaks are found in the valleys which trend from that mountain (Lindsay, ii. 51, 77, 85). Hasselquist found groves of the Kermes oak (*Q. Coccifera*) in the valleys beyond the plain of Acre, on the road to Nazareth (*Travels*, p. 153).

From the above and other notices we collect that the species of oak found in Palestine, and probably all comprehended under the word ALLON, are—1. The Evergreen Oak (*Quercus ilex*),

which is met with not only in Western Asia, but in Northern Africa and Southern Europe. This is a tall but not wide-spreading tree; and the timber, being very hard, is much used for purposes in which compactness and durability are required. 2. The Holly-leaved Montpellier Oak (*Q. grammuntia*), another evergreen, which may be inserted on the authority of Pococke. This tree also, as its name imports, is a native of Southern Europe, and is markedly distinguished from the former by its numerous straggling branches and the thick underwood of its leaves. 3. The Hairy-cupped Oak (*Q. crinata*), so called from the bristly appearance of the calyx. It grows to a considerable size, and furnishes an excellent timber, much used by the Turks in the building of ships and houses. But although this species exists in Syria, it is much more common in Asia Minor. 4. The Great Prickly-cupped Oak (*Q. Ægilops* or *Valonia*), which takes its name from its large prickly calyx. This species is common in the Levant, where it is a handsome tree, which it is not in our ungenial climate, though it has long been cultivated. The wood of this species is of little worth; but its acorns form the valonia of commerce, of which 150,000 cwt. are yearly imported into this country for the use of tanners. 5. The Kermes Oak (*Q. coccifera*) takes its name from an insect (*kermes*, of the genus *coccus*) which adheres to the branches of this bushy evergreen shrub, in the form of small reddish balls about the size of a pea. This affords a crimson dye, formerly celebrated, but now superseded by cochineal. This dye was used by the

ancient Hebrews; for the word תולת, which denotes a worm, and particularly the kermes worm, denotes also the dye prepared from it (Is. i. 18; Lam. iv. 5), and is accordingly rendered κόκκινον in those passages where it occurs.

40. *Quercus Ægilops* or *Valonia*

From the hints of travellers there appear to be some other species of oaks in Palestine, but their information is not sufficiently distinct to enable us to identify them.—J. K.

ALLON, the name of a place mentioned as belonging to Naphtali (Josh. xix. 32). Many codices read אֶלֹן for אֶלֹן here, and this is probably to be preferred; comp. Jud. iv. 11. Some translate the word 'Oak in Zaananim.'

ALLON-BACHUTH (אֶלֹן-בַּחֻת), oak of weeping or tears, a place in Bethel, where Rebekah's nurse was buried (Gen. xxxv. 8). In 1 Sam. x. 3, mention is made of an Allon-Tabor, rendered in the E. V. 'plain of Tabor,' which, as it lay near Bethel, has been supposed to be the same as that called Allon-Bachuth in Gen. xxxv. 8. An additional argument in favour of this has been attempted to be supplied by the hypothesis that Tabor is a popular mistake for Deborah (Thenius on Sam. x. 3; Ewald, *Gesch.* iii. 29); but this is mere trifling. This oak has also been identified with the tree mentioned Jud. iv. 5, but for this there is no ground.—W. L. A.

ALLUPH. [ELEPH.]

ALMESNINO, SAL., a Jewish rabbi in Saloniki. He wrote a *Commentary on the Twelve Minor Prophets*, under the title פְּרֻשִׁים עַל תְּרֵי עֶסֶד, which is printed in the Commentary on the Bible of Moses of Frankfort, Amst. 1724-27 fol. He wrote also a Commentary on Rashi's Commentary on the Pentateuch, printed along with other works of the same kind at Constantinople, without date, but towards the beginning of the sixteenth century.—W. L. A.

ALMODAD (אֶלְמוֹדָד), one of the sons of Joktan (Gen. x. 26), and head of an Arab tribe. The Arab writers mention a tribe, the Kahtanites, whose original seat was in Yemen, and from whom was derived the sept of the Djormites, which emigrated from Yemen to Hedjaz. Among the latter, the name Modad, or with the article, Al Modad, occurs frequently as the name of their chief; and from this it is concluded that they represent the descendants of Almodad, the son of Joktan or Kohtan. Bochart (*Phaleg* ii. 16) suggests that the Ἀλουμαιῶται mentioned by Ptolemy (vi. 7) derived their name from Almodad. As these had their site near the Gerrhæans, and as Gerrha lay somewhere in the district bordering on the south-east of the Arabian gulf, where the descendants of Almodad are usually placed, there is considerable probability in this.—W. L. A.

ALMON (עֵלְמוֹן); Sept. Ἄλμων, Alex. Γάμ-αλα, Vat.), one of the four cities which belonged to the priests in the tribe of Benjamin (Josh. xxi. 18). It is supposed to be the same as the Alemeth of 1 Chron. vi. 60. Jarchi and Kimchi identify it with Bahurim, which name the Targum (2 Sam. iii. 16) renders by Almeth—both words signifying 'youth.' The site is unknown.

ALMON-DIBLATHAIM, one of the stations of the Israelites on their way from Mount Hor to the plains of Moab, round by Mount Seir (Num. xxxiii. 46).

ALMOND-TREE. [LUZ, SHAKED.]

ALMS, what is given spontaneously to the poor for their relief. This word is a contraction from the Saxon *ælmesse*, which is generally believed to be the Greek ἐλεημοσύνη derived to the Teutonic

dialects through the Latin *eleemosyna*. In the English Bible, the word *alms* invariably represents this word in the original, Matt. vi. 1 being no exception, as the reading here of the text from which the A. V. was made, was ἐλεημοσύνη; and not δακαιοσύνη. The word does not occur in the O. T., nor had the Hebrews any word for alms. The Syriac synonyme in the N. T. is ܐܠܡܝܢ, and this is allied to the צדקה of the Hebrew, and the צדקה of the Chaldee. It is doubtful, however, whether these words are ever used in the sense of *alms*, or even of *benefit*, though the LXX. translates the former occasionally (comp. Deut. vi. 25; xxiv. 18; Is. i. 27), and the latter, in the only place where it occurs (Dan. iv. 24), by ἐλεημοσύνη. The passages which have been adduced to prove this are of no weight for this purpose. Gesenius indicates two, Prov. x. 2 and Mic. vi. 5, in addition to Dan. iv. 24; but in all these passages the word is best taken in its proper meaning of *righteousness*. It may be doubted even whether the word ever occurs in the sense of *kindness*, *generosity*, though the lexicons confidently affirm this. Certainly such passages as Ps. xxiv. 5, cxlv. 6, Prov. xi. 4, those commonly adduced, do not prove it; on the contrary, they rather oppose it, for much of the force of the passage is lost by taking צדקה in any but its proper sense.

Wherever a legal provision is made for the poor, the sphere of almsgiving is necessarily contracted, and that in proportion to the completeness of the provision made by the law. It can hardly be said that by the Mosaic code such provision was made for the poor among the Hebrews, at least in the sense which modern usage would attach to such a statement. At the same time, the law recognized the possibility of poverty existing even in the favoured land, and made such provision to meet it that such a thing as destitution and beggary was probably unknown during the earlier ages of the Hebrew commonwealth. The provisions for the poor made by the law were these:—1. Every third year the second tithe, or a third tithe [TITHES], was to be distributed between the Levites and the stranger, the fatherless, and the widow which were within the gates (Deut. xiv. 28, 29; xxvi. 12); hence these were called "the poor's tithes." 2. Whatever grew spontaneously in field or vineyard on the sabbatic year was to be left unreaped and ungathered, so as that all might have free use of it (Lev. xxv. 5). 3. In ordinary years, in reaping the harvest, the fields and vineyards were not so to be cleared of their produce as to leave nothing for the gleaner, nor were the corners of their fields to be reaped; these were for the poor and the stranger (Lev. xix. 9, 10; xxiii. 22); it was even forbidden, should a sheaf be left in the field by mistake, to return for it; this also was to be the property of the poor (Deut. xxiv. 19). 4. Any person was allowed to pluck and eat grapes in a vineyard, or to pluck and eat ripe grain in a field belonging to another, provided he did not carry any away with him (Deut. xxiii. 24, 25). 5. On certain festive occasions the poor were to be invited that they might share in the entertainment (Deut. xvi. 10, 11). Besides these special enactments, the law inculcated, in the general, a benevolent regard to the poor, and those who were in straits (Deut. xv. 7-11). Such provisions are cer-

tainly very different from the stringent enactments of a poor law; still they placed the poor on a footing very different from that under which the duty of almsgiving contemplates such, and this may be one reason at least why the Hebrews had no word for *alms*. The Hebrews were thus habituated to regard the helping of the poor rather as what their poverty entitled them to in equity than as an act of generosity. Hence the latter usage of צדקה among the Rabbins. The same idea appears frequently in the Koran (Jahn, *Bibl. Archæol.* Th. i. Bd. 2, p. 341). The earliest mention of beggary in Scripture is in Ps. xxxvii. 25, but there the writer speaks of it as something already well known. So in Ps. cix. 10 this is imprecated as a curse, the nature of which was well known, on the wicked man who is the object of the writer's indignation. Doubtless, as society advanced, the same causes which operate to produce beggary elsewhere, would be familiar to the Hebrews in their own land. In the days of our Lord there were many beggars in Judæa who seem to have subsisted chiefly by alms; this they solicited sitting in the streets, or round the entrances to the houses of the wealthy, or at the gate of the Temple, and perhaps also at the doors of the synagogues (Mark x. 46; Luke xvi. 20; Acts iii. 2). The alms given was either money or food (Matt. xxvi. 9; Mark x. 46; Luke xvi. 21).

The duty of almsgiving is one which natural ethics recognizes, and which the Scripture clearly enforces. Job, in referring to the blessedness of his former estate, says, "When the ear heard me, then it blessed me; and when the eye saw me, it gave witness to me; because I delivered the poor that cried, and the fatherless, and him that had none to help him;" and he takes to himself, as a proud title that then belonged to him, the title of "father of the poor" (xxix. 11, 12, 16). The benevolent aspect of the Jewish law towards the poor has been already noticed. In the ethical parts of the O. T., the duty of considering, and helping, and protecting the poor, is forcibly urged; and God is continually represented as on the side of the poor, ready to avenge their cause against those who oppress them, and to reward those who shew them kindness (Ps. xii. 5; xli. 1; cvii. 41; cix. 16; Prov. xiv. 21, 31; xix. 17; xxii. 16; xxix. 7; Is. iii. 14, 15; Am. ii. 6, 7; Zech. vii. 10, etc.). In the predictions concerning the Messiah, a prominent feature of his reign, on which the prophets dwell, is his regard for the poor (Ps. lxxii. 4, 13; Is. xi. 4, etc.); and in the spirit of these our Lord, as the Christ, constantly acted when He came on the earth. He inculcated the duty of giving alms (Luke xi. 41; xii. 33); he taught that "it is more blessed to give than to receive;" and though Himself often dependent on the benevolence of others, there can be no doubt that when He had the means, He exemplified in practice his own maxim (John xiii. 29). By his apostles, the duty of almsgiving is not only strongly commended to Christians, but is elevated to a superior place among the duties incumbent upon them as Christians (Acts ix. 36; x. 4; Rom. xv. 26; 2 Cor. viii. 1-7; ix. 1-6; Gal. ii. 20; vi. 10; Jam. ii. 15, 16, etc.).

Among the Jews of post-biblical times, almsgiving has been regarded with a feeling which is excessive. The poor are proclaimed to be the people of God (*Tanch.* fol. 29, col. 4); the rich man who gives to the poor is as if he kept all the

commandments (*Ibid.* fol. 29, col. 4). Alms satisfy for sins (*Berechot*, p. 183); him who gives alms God will keep from all harm (*Hievs. Peah*, fol. 15, 2); whoever shall give a halfpenny to a poor man in alms shall be a partaker of the beatific vision (*Baba Bathra*, fol. 10, 1, *Midrash Tillin* in Ps. xvii. 15), etc. (*Otho, Lex. Rab.* on Eleemosynæ and Pauperes).—W. L. A.

ALOE. [AHALIM.]

ALPHA [A].

ALPHABET. The origin of alphabetical writing belongs to a period long antecedent to the date of any historical testimonies, or ancient monuments, which have come down to us. This want of documentary evidence, however, has left a wider field for conjecture; and a mistaken and sometimes disingenuous zeal for the honour of the Scriptures has not only led many learned men to ascribe the invention of letters to Adam, Seth, Enoch, and Noah, but to produce copies of the very alphabets they employed. Several such alphabets, derived chiefly from Bonaventura, Hepburn, Roccha, and Athanasius Kircher, may be seen in Bangii *Celum Orientis* (or, according to the new title which was subsequently prefixed to it, *Exercitationes de Ortu et Progressu Litterarum*), Hafniæ, 1657, p. 99, sqq. Our own time also has produced an attempt to prove, from the astrological character of the Hebrew alphabet—*i. e.*, from its representing the relations of the zodiac and seven planets—that it was discovered probably by Noah, on the 7th Sept. B. C. 3446 (Seyfiart's *Unser Alphabet ein Abbild des Thierkreises*, Leipz. 1834).

The earliest and surest data, however, on which any sound speculation on this subject can be based, are found in the genuine palæographical monuments of the Phœnicians; in the manifest derivation of all other Syro-Arabian and almost all European characters from that type; and in the testimony which history bears to the use and transmission of alphabetical writing.

The true principles of comparative Syro-Arabian palæography are a discovery of almost modern date. Bochart, Bernard, and others, in their early attempts, did not even possess the Phœnician alphabet at all, but only the *Samaritan* of printed books or of the Hasmonæan coins; for Rhenferd was the first that produced the genuine alphabet, in 1705. Besides, there was a very general prejudice that our present square Hebrew character was the primitive type (a list of some of the champions of which opinion is given in Carpzov's *Crit. Sacr.* p. 227); and the want of documents long concurred with that notion in hindering any important effort in the right direction. It was reserved for Kopp to make (in his *Bilder und Schriften der Vorzeit*, Mannheim, 1819) the first systematic representation of the genealogy of ancient Syro-Arabian alphabets. The latter portion of his second volume contains elaborate tabular views of the characters of a wide ethnographical circle, arranged according to their proximity to the parent type; and, by the breadth of his comparison, as well as by his deductions from the laws affecting the art of writing, he first succeeded in establishing a number of new and unexpected truths, which have had a permanent influence on all subsequent inquiries. Lastly, Gesenius, who possesses infinite philological advantages over Kopp, and who has

also long devoted a more exclusive attention to Phœnician remains, has recently given accurate copies of the completest collection of them ever published, and has illustrated the characters and the language of the monuments themselves, and the general subject of palæography, with great learning and acumen: *Scripturæ Linguaeque Phœnicicæ Monumenta*, P. III., Lips. 1837—to which this article has many obligations.

Seventy-seven inscriptions and numerous coins—found chiefly at Tyre and Sidon, in Malta and Cyprus, in Sicily, the north of Africa, and on the coast of Spain—have preserved to us the earliest form of that alphabet from which all others have been derived. These remains themselves belong generally to the period between Alexander the Great and the reign of Augustus; yet one is supposed to belong to the year B. C. 394, and the latest to be of the year A. D. 203. They are thus much later than the oldest Greek inscriptions; but that, nevertheless, does not affect their claim of preserving the most ancient known form of the primitive alphabet.

The characters of this alphabet, as seen on these monuments, are remarkable for their very angular and comparatively complex shape. This is an evidence of their antiquity; as this is just that feature which the tachygraphy and softer writing-materials of later times would naturally tend to obliterate. They also approach nearer to rude resemblances of the physical objects after which they are named, than those in any other Syro-Arabian alphabet, and, as another confirmation, resemble most their nearest descendant, the oldest Greek letters. This alphabet may be said to consist solely of consonants; as in it **יין** do not, except under the very narrowest limitations, possess the power of denoting the place and quality of a vowel, as they do in Hebrew. The mode of writing is, to use a technical term, in every respect much more *defective* than in Hebrew, especially in the middle of a word. There are no vestiges of vowel-points nor of final letters. Words are chiefly written continuously, yet sometimes with intervals, and with a rudimental interpunction. The use of diacritical marks seems to have been known; and that of abbreviations is very frequent. The course of the writing is from right to left, and there are no traces of the alternate or *βοστροφηδόν* order. This alphabet was evidently invented, or first used, by a people speaking a Syro-Arabian language; as an alphabet consisting so exclusively of consonants is possible only in that family of language in which the vowels express merely the accidental part, the modifications and relations of the idea, and not its essence. It is, moreover, fully adequate to denote all the sounds of their speech; for it distinguishes that remarkable series of gutturals which is peculiar to the Syro-Arabians; and is able to express every sound without compound letters, to which other nations, who adapted Phœnician characters to their own native sounds, have been obliged to have recourse. The names of the twenty-two characters, and the order of their arrangement, can only be gathered (but then with considerable certainty) from the Hebrew and Greek alphabets. The names are evidently Syro-Arabian; and, as they appear in Hebrew, belong, as to their form, to a period anterior to the development of that language as we find it in the earliest books of the Old Testament; and, as they appear in the Greek,

they have undergone modifications which (although some have considered them to betray signs of the Aramaic *status emphaticus*) are explained by Gesenius to be chiefly the effect of an influence which is seen in other words (בבל, *váβλα*; מלכ, *μάλθα*) which the Greeks derived from the Phœnicians.

In tracing the derivation of all other alphabets from this type, the records of the intercourse of nations with each other and of their gradual acquisition of the arts of civilization furnish indeed an important evidence; but the eye, especially when trained in the school of such observation, is alone qualified to test the truth of even historical deductions on such a subject. It is, therefore, only the attentive view of accurate plates which will enable the reader fully to understand the following

genealogical table of alphabets, which is taken from Gesenius. To give it entire is, nevertheless, the shortest way of laying before the student the results of a tedious inquiry; and will, at the same time, secure the opportunity of subsequent reference, by which the treatment of the several Syro-Arabian languages, under their respective heads, may be materially facilitated.

The lines which run between the different names are intended to mark the channel, and sometimes the distinct yet convergent channels through which any given character has been derived. Thus, to give an illustration, the square Hebrew of our printed books is shewn to descend from the old Aramæan of Egypt, but to be modified by the influence of the Palmyrene.

This primitive alphabet underwent various changes in its transmission to cognate and alien nations. The former class will be incidentally noticed when treating of the Syro-Arabian languages separately. Among the latter, those modifications which were necessary to adapt it to the Greek language are the most remarkable. The ancient Greek alphabet is an immediate descendant of the Phœnician; and its letters correspond, in name, figure, and order, to those of its prototype. Even the course of the writing, from right to left, was at first observed in short inscriptions; and then half retained in the *βουτροφῆδον*. But as the characters were reversed in the alternate lines of the *βουτροφῆδον*, and the order from left to right became at length the standard one, the systematic reversal of the characters became the law. This of itself was a striking departure from

the Phœnician mode of writing. A more important change was produced by the nature of the language. The Greeks found the numerous gutturals superfluous, and at the same time felt the indispensable necessity of characters to denote their vowels. Accordingly, they converted *Aleph*, *He*, *Jod*, and *Ain* into A, E, I, O. This last transmutation (which is the only surprising one) is accounted for by Gesenius, on the ground that the Phœnician *Ain* leaned so much to the O sound, that it was written in Phœnician inscriptions to express that vowel (in cases when it arose from the fusion of the sounds A and I), and that the Greeks, when writing a Phœnician word in their own way, represented it by O, as *βωλαθῆς* = בעלתִי. Moreover, the LXX. appear to have felt the same influence, as *Μωχά* for *Μωכה*, Gen. xxii. 24 (*Vide Gesenii Monumenta*, p. 431). *Cheth* also

became the rough breathing, and subsequently was appropriated to the long E.

The two alphabets correspond as follows :

Α	A	Θ	Θ	Υ	O
Β	B	Ι	I	Φ	Π
Γ	Γ	Κ	K	Ψ	—
Δ	Δ	Λ	Λ	Ϟ	Κόππα
Ε	E	Μ	M	Ρ	P
Ζ	F Baû	Ν	N	Σ	Σάβ
Ζ	Z	Ξ	Ξ	Τ	T
Η	H	Ω	Ω		

There is evidence that the Greeks received all these letters (except Tsade), because they continued to employ them as numerals after they had ceased to use them as letters. The loss of Tsade, however, affected the numerical value of all letters below its place in the series. They subsequently rejected three letters in writing; Baû, the Roman F; κόππα, the Roman Q; and one of the sibilants. Gesenius explains the last case thus: The ancient alphabet had adopted Zeta for Zain, Sigma properly for Samech, and San for Shin. As the sound *sh* was disagreeable to the ear of the Greeks, it was dropped. Having thus no need of two characters to express their single S, the two letters gradually coalesced, and were indiscriminately called Sigma and San. But the S retained the position of the Shin, and not of the Samech; and when Xi was introduced, it usurped the place of the Samech. He also thinks that, in the statement of Pliny (*Hist. Nat.* vii. 56), about sixteen or eighteen Cadmean letters, the first number is decidedly too small; but finds some ground for the eighteen of Aristotle, in the facts that the Greeks rejected three, and so rarely used Z, that the actual number of current letters was reduced to that amount.

The historical testimonies respecting the use and transmission of letters disagree much as to the nation to which the discovery is to be ascribed.

There are, however, only three nations which can compete for the honour—the Babylonians, the Phœnicians, and the Egyptians. Many eminent men, among whom are Kopp and Hoffmann, support the Babylonian claim to the priority of use. The chief arguments, as stated by them (*Bilder und Schriften*, ii. 147; *Gram. Syr.* p. 61), are based on the very early civilization of Babylon; on numerous passages which attribute the discovery to the Σύριοι, Syri, and Χαλδαῖοι (quoted in Hoffmann, *l. c.*); and especially on the existence of a Babylonian brick containing an inscription in characters resembling the Phœnician. To these arguments Gesenius has replied most at length in the article *Palæographie*, in Ersch and Gruber's *Allgemeine Encyclopædie*. He especially endeavours to invalidate the evidence drawn from the brick (of which Kopp possessed an inaccurate transcript, and was only able to give an unsatisfactory interpretation), and asserts that the characters are Phœnician, but by no means those of the most antique shape. He considers the language of the inscription to be Aramaic; and maintains that the only conclusion which can fairly be drawn from the existence of such an inscription there, is, that during the time of the Persian kings the Babylonians possessed a common alphabet almost entirely agreeing with the Phœnician. And, indeed, as this inscription only contains seven letters, its claim to originality is not a matter of much mo-

ment; for, in the only practical question of palæography, the Phœnician alphabet still continues to be, to us at least, the primitive one. He also objects that it is, in itself, improbable that the alphabet was invented by the Aramæans, on the ground that, in their dialect, as far as it is known to us, 'Υ Ψ Σ are very weak and indistinct; whereas the existence of such letters in the primitive alphabet at all, is an evidence that they were well marked consonants, at least to the people who felt the necessity of denoting them by separate signs.

Nearly an equal number of ancient authorities might be cited as testimonies that the discovery of letters was ascribed to the Phœnicians and to the Egyptians (see Walton's *Prolegomena*, ii. 2). And, indeed, there is a view, suggested by Gesenius (*Palæographie*, *l. c.*), by which their rival claims might, to a certain extent, be reconciled; that is, by the supposition that the hieroglyphical was, indeed, the earliest kind of all writing; but that the Phœnicians, whose commerce led them to Egypt, may have borrowed the first germ of alphabetical writing from the *phonetic* hieroglyphs. There is at least a remarkable coincidence between the Syro-Arabian alphabet and the phonetic hieroglyphs, in that in both the figure of a material object was made the sign of that sound with which the name of the object began. To follow this further would lead beyond the object of this article. But, if this theory were true, it would still leave the Phœnicians the possibility of having actually developed the first alphabetical writing; and that, together with the fact that the earliest monuments of the Syro-Arabians have preserved *their* characters, and the unanimous consent with which ancient writers ascribe to them the transmission of the alphabet to the Greeks (Herod. v. 58; Diod. Sic. v. 74), may make the probabilities preponderate in their favour. [WRITING.—J. N.]

ALPHABETICAL SOUNDS. In connection with the subject of the Hebrew and Greek alphabets, we may be allowed to enter on some considerations which are seldom duly developed in the grammars of either language; and which will besides throw some light on the Greek spelling of Hebrew names.

Let us first request the reader to bestow a little study on the following table of consonants.

The names annexed to the left-hand of the rows are not perfectly satisfactory. To 'Labial' no objection can be made. Neither 'Dental' nor 'Palatal' fitly describes the second row, in which the sounds are produced by *contact* (more or less slight and momentary) of the tongue with the teeth, gums, or palate; while the third row, on the contrary, does not need contact. The term 'Guttural' is apt, improperly, to give the idea of a roughness which does not exist in *k* and *g*. The soft palatal sounds of *χ*, *γ*, *ch*, cannot be named absolutely 'Palatals,' without confounding them with those of the row above. The word 'Aspirate' (or breathing) has in English been generally appropriated to a 'rough' breathing; and it is against our usage to conceive of the liquid *y* as a *breathing* at all.

Those consonants are called *explosive* on which the voice cannot dwell when they terminate a word; as *ap*, *ak*, *ad*. At their end a rebound of the organs takes place, giving the sound of an obscure vowel; as *apphè* for *ap*: for if this final sound be withheld, but half of the consonant is enunciated. The Latins, following the Greeks, called these 'Mutes.' On the contrary, we name those *con-*

tinuous the sound of which can be indefinitely prolonged, as *affff* . . . , *assss* . . .

For the names *thin* and *full*, others say sharp and flat; or hard and soft; or surd and sonant; or whispering and vocal. It would appear that in whispering the two are merged in one; for instance, *p* cannot be distinguished from *b*, nor *z* from *s*. Yet the 'Aspirates' (or fourth row) will not *strictly* bear this test.

By the Greek letters θ , δ , χ , γ , we understand the sounds given to them by the modern Greeks; in which θ = English *th* in *thin*; δ = English *th* in *that*; χ = German or Irish *ch*; γ = Dutch *g*. To conceive of the last sound, when we know that

of χ , it is only requisite to consider that the following proportion strictly holds:—*g* (hard) : *k* :: γ : χ . At the same time, γ and χ have a double pronunciation, rougher and smoother, as *ch* in German has. When their roughness is much exaggerated, they give the Arabic sounds ح (*kha*) and ع (*ghain*), which last is the consonant *gh* heard in gargling. As for the softer sounds, when their softness is exaggerated, the χ passes through the softest German *ch* into a mere *y*; while the γ is gradually merged in the soft imperfect *r* of lispers, and finally in *w*.

But the fourth row, or the 'Aspirates,' yet more

	EXPLOSIVE.		CONTINUOUS.				
	Thin.	Full.	Thin.	Full.	Liquid.	Nasal.	
Labial	<i>p</i>	<i>b</i>	<i>f</i>	<i>v</i>	<i>w</i>	<i>m</i>	(1)
Dental or Palatal	{ ת <i>t</i> ט	<i>d</i>	θ	δ	<i>l</i>	<i>n</i>	(2)
Guttural or Palatal	{ כ <i>k</i> פ	<i>g</i>	χ ח	γ ע	Softest German <i>ch</i> or <i>g</i>	<i>ng</i>	(3)
Aspirate	\aleph	\aleph	ה <i>h</i>	ח? ח <i>hh</i>	<i>y</i>	French <i>n</i>	(4)
Sibilant or Vibratory			{ ס ס ש <i>sh</i> ז	<i>z</i> French <i>j</i>	{ }	<i>r</i>	(5)

urgently need explanation to an Englishman. The *explosive* aspirates come under the general head of what is called the Soft Breathing in Greek grammar (although \aleph in the Arab mouth is far enough from *soft*), while the *continuous* aspirates are Rough Breathings. Moreover, \aleph is a fuller and stronger \aleph , just as \aleph is a fuller and stronger \aleph ; and although the relation does not seem to be precisely that of *b*:*p*, or *d*:*t*, it is close enough to justify our tabular arrangement. As for \aleph , it is rather softer than our English *h*: and \aleph , or *hh*, is the *Irish h*, a wheezing sound. The consonant \aleph is the hiatus heard between the vowels in the Greek word *Igne*, and \aleph is the same sound exaggerated by a compression of the throat. The last is, in short, a jerking hiatus, such as a stuttering man often prefixes to a vowel-sound, when with effort he at length utters it. That \aleph , \aleph , are explosive, and \aleph , \aleph , continuous, is evident on trial. It is also clear that the hiatus \aleph readily softens itself into the liquid *y*. Just so, for the name מַלְאֲכֵיֶל (Mal'ak'el) the Sept. reads Μαλελεήλ, where the ε before ηλ is in fact meant for an English *y*. On this ground we have put *y* into the fourth row.

It is important to observe *how* the consonants of different nations differ. For instance, the German

p and *b* are *intermediate* to the English *p* and *b*, so as to be difficult to our ears to distinguish, and the Armenians have two different *p*'s. So the English *h* is intermediate in strictness to \aleph and \aleph , if at least we assume that these Hebrew letters had the sound of the Arabic ح and ع . Now this

is a general phenomenon, in comparing the Indo-European with the Syro-Arabian sounds. Our *k* is between the two Hebrew or Arab *k*'s; our *t* is between their two *t*'s; and so on. To explain this, observe that we may execute a *t* in various ways; first, by slapping the tongue flat against the teeth, as an Irishman or a man of Cumberland does when he says *water*; secondly (what is rather less broad), by slightly touching the root of the teeth, as a Frenchman or Italian does; thirdly, by touching only the gums, which is the English method; fourthly, by touching the palate, or by pressing on the gums with a muscular jerk. One or other of the last is the Hebrew ט , the Arab ط ; hence some call it a palatal, others a strong *t*. In touching the palate, the throat is involuntarily opened, and a guttural sound is imparted to the letter *and to the following vowel*; for which reason it has been also called a guttural *t*. The other

method, of pressing the tongue firmly, but not on the palate, is an Armenian *z*, but perhaps not the true Syro-Arabian.

What we have here to insist on is, that differences which with us are provincialisms, with them constitute differences of elementary sounds. To a Hebrew, *ת* differs from *ט*, or *כ* from *ק*, as decidedly as with us *β* from *ב*. On the other hand, *ז* and *ז* (*thin*), as *ד* and *ז* (*full*), which with us have an elementary distinction, are but euphonic variations in Hebrew.

After this, we have to explain that *כ* was originally sounded forwarder on the palate than English *k*, as *פ* was far backwarder, at the root of the tongue. So *ס* was probably forwarder, and *צ* certainly backwarder than our *s*, each of them being nevertheless, a kind of *s*. That *צ* was not *z* is seen by צללה, ציון, מצרים, etc. etc., which are written Σελλά, Σιών, Μεσαίτη, etc. etc. in the Sept., as well as from the analogy of the Arabic

ص. The *z* pronunciation is a late invention, as is the *ng* sound, which has been arbitrarily assigned to *ע*. Nevertheless, out of צור the Greeks made Τύρος, which is contrary to the analogy of Σιδών for צירון: yet the adjective *Sarranus*, instead of *Zyrius*, used by Virgil, may prove that *Sarr* or *Sour* was in ancient, as in modern days, the right pronunciation of *Tyre*. In English we have the double sound *s* and *sh*, which is illustrative of *ת* and *ט*, *כ* and *ק*, etc., to which modification it is closely analogous. For *sh* is only a modified *s*, being formed with the broad or central part of the tongue, instead of the tip. In this action the forefront of the tongue forms itself into a sort of cup, the whole rim of which comes near to the palate while the breath rushes between. On the contrary, in sounding *צ*, only a single transverse section of the tongue approaches the palate; but this section is far back, and the lips are protruded and smacked, so as to constitute a mouthing *s*. Farther, the alliance of *r* to *s*, so strongly marked in the Greek and Latin languages, justifies our arranging them in one row. The *r* is formed by a vibration along the tongue, which bears some analogy to the rush of the breath along its surface, on which the *s* and *sh* depend. The Armenians have a twofold *r*, of which one, if we mistake not, is related to the other, as our *sh* to *s*.

The Hebrews were commonly stated to have given two sounds to each of the letters נ כ ר ת ב פ נ כ ר ת ב פ נ כ ר ת ב פ; but it is now generally admitted that it was not so originally. The Greeks (at least provincially), even in early days, pronounced Βήρα, *Vēta*, as they now also say *Ghamma*, *Dhēlta*; and the Italians for Latin *β* sometimes have *v*, sometimes *b*. The Hebrew corruption was however so early as constantly to shew itself in the Sept.; indeed, as a general rule, we must regard the thin consonants כ ת פ as having assumed the *continuos*, instead of the *explosive*, pronunciation; *i. e.* they were become *f*, *θ*, *χ*. Thus פשון, הובל, כנען are written Φισών, Θοβέλ, Χαναάν, in spite of the *dagesh lenē* by which the later Masorites directed the initial letters to be sounded P, T, K. Yet there is no immovable rule. Thus the פתים is in the same book variously rendered Χερτείμ and Κιτιέωμ (1 Macc. i. 1, and viii. 5). It will be observed that a decidedly dental *t* is very near to

th, and a *k*, very mincing and forward in the mouth, easily melts into *ky*, as in the Turkish language, and thence into soft *χ*. In this way, *θ* and *χ* having been adopted for *ת* and *כ*, *τ* and *κ* were left as the general representatives of *ט* and *ק*. It is well known that the Ephraimites at an early period said *s*, at least in some words, for *sh*, as in the celebrated tale of Shabboleth; but this corruption went on increasing after the orthography had been fixed, so that it became requisite to denote by a dot many a *ש* *sh*, the sound of which had degenerated into *ס* *s*. It is rather perplexing to find *ס* occupy the same place in the Hebrew alphabet as *Ξ* in the Greek, a fact which perhaps still needs elucidation.

But we must turn to an important subject—the tendency of aspirates to degenerate into vowels. The muscular language of barbarians seems to love aspirates; in fact, a vowel energetically sounded is itself an aspirate, as an aspirate softened is a vowel. Let it be noticed in passing that an over-vocalised language is by no means soft. Such a word as *ἴηε* has of necessity strong hiatuses between the vowels, which hiatuses, although not written in Western languages, are virtually consonantal aspirates; in which respect an English representation of some barbarous languages is very misleading. The Hebrew spelling of Greek names often illustrates this; for example, *Ἀντιόχου* is אַנְטִיאוֹכוֹס, where the central *ס* indicates the hiatus between *i* and *o*. That the letters ה (final), י, ו, from the earliest times were used for the long vowels A, I, U, seems to be beyond doubt. At a later period, perhaps, *ס* was used for another A: the Greeks adopted *ϕ* for O, and finally *η* for a long E. It is probable that a corruption in the Hebrew pronunciation of ה and η had already come in when the Sept. adopted the spelling of proper names which we find. As for ה, it is the more remarkable that the Greek aspirate should not have been used for it; for both in Greece and in Italy the *h* sound must have been very soft, and ultimately has been lost. So we find in the Sept. Ἀβέλ for הבל *Hebel*, Ὠσηὲ for הושע *Hōshē'a*; and even the rougher and stronger aspirate η often vanishes. Thus Ἐνώχ for חנוך *Ehenōk*; Πρωβόθ for רהבֹת *Rehhot*, etc. Sometimes, however, the η becomes *χ*, as in Χάμ for חם, Χαλάχ for בלח; which may possibly indicate that η, at least in proper names, occasionally retained the two sounds of Arabic and ח *hh* and ח *kh*. The *υ* was of necessity omitted in Greek, since, at least when it was between two vowels, no nearer representation could be made than by leaving a hiatus. Where it has been denoted by Greek *γ*, as in Γυμορία, Γαιδάδ, Σηγύρωρ, there is no doubt that it had the force of the Arabic *ġ* (*ghain*), whether or not this sound ever occurred in Hebrew except in proper names.

Respecting the vowels, we may add that it is now historically established, alike in the Syro-Arabian and in the Indo-European languages, that the sounds *ē* and *ō* (pronounced as in *maid* and *boat*) are later in time than those of *ā*, *i*, *ū*, and are in fact corruptions of the diphthongs *ai*, *au*. Hence, originally, three long vowels, *ā*, *i*, *ū*, with three vowel-points for the same when short, appeared to suffice. On the four very short vowels

of Hebrew a needless obscurity is left in our grammars by its not being observed that we have the same number in the English language, really distinct; as in *sudden* (or *castlè*), *contrary*, *nobdody*, *beneath*; although it is probable that with ן the vowel was clearer and sharper than in any short English *a*. We have even the *furtive vowel* of which the Hebrew grammars speak; namely, when a word ends in *r*, preceded by a long accented vowel or diphthong. In this case, a very short *a* is heard in true English speech, but not in Irish, before the *r*, as in *beer*, *shore*, *flour* (whence the orthography *flower*, *bowyer*, etc.), which corresponds to the Hebrew רוּחַ, רֵעַ. The Arabs have it also when the final letter is ק.—F. W. N.

ALPHÆUS (Ἀλφαῖος). 1. The father of James the Less (Matt. x. 3; Luke vi. 15); and husband of that Mary who with others stood by the cross of Christ (John xix. 25), if Alphæus be the same with Cleophas—a supposition which has been educed by the comparison of John xix. 25, with Luke xxiv. 10, and Matt. x. 3. On that supposition, Alphæus is conceived to have been his Greek, and Cleophas (more correctly Clopas) his Hebrew or Syriac name, according to the custom of the provinces or of the time, when men had often two names, by one of which they were known to their friends and countrymen, and by the other to the Romans or strangers. Possibly, however, the double name in Greek might arise, in this instance, from a diversity in pronouncing the ן in his Aramæan name, חלפִי, a diversity which is common also in the Septuagint (See Kuinoel in *Joan.* xix. 25). [NAMES.]

2. The father of the evangelist Levi or Mattheu (Mark ii. 14). Many identify this with the former; but in that case we should expect to find Mattheu classed with James the Less in these lists of the Apostles, which he is not (Matt. x. 3; Mark iii. 18; Luke vi. 15; Acts i. 13). חלפִי was not so rare a name but that two men connected with James might have borne it.

ALSHEICH, also called ALSHECH, MOSES, son of R. Chayim, was born in Safet, Upper Galilee, about 1520. He was the pupil of the famous Joseph Caro, and became one of the most distinguished commentators and popular Jewish preachers of the sixteenth century. He was chosen chief rabbi in his native place, where he died about 1595. His merits as an exponent of Scripture consist chiefly in his having simplified the exegetical labours of his predecessors. He generally gives the literal interpretation first, and then endeavours to evolve the recondite and allegorical sense; so that his commentaries may be regarded as a useful synopsis of the various Midrashic and Cabbalistic views of Scripture. He wrote a *commentary on the Pentateuch*, called קוּרַת מִשֶׁה, Amsterdam 1777; *commentaries on the Song of Songs*, Offenbach 1721; a *commentary on the Psalms*, called רוּמּוֹת אֵל, Amsterdam 1695; a *commentary on Proverbs*, called רֵב פְּנִינִים, Venice 1601; a *commentary on Job*, called חֵלֶקֶת מוֹהֲרֵק, Venice 1603; *commentaries on the earlier Prophets*, called מִרְאוֹת הַצּוֹבְאוֹת, Amsterdam 1719; *commentaries on the later*

Prophets, including the twelve minor Prophets, called הַצּוֹבְאוֹת הַקְּטָנִים, Fürth 1765.—C. D. G.

ALTAR (מִזְבֵּחַ) from זָבַח, to *slay* (a victim). but used also for the altar of *incense*; Sept. generally θυσιαστήριον, sometimes βωμῶς). The first altar we read of in the Bible was that erected by Noah on leaving the ark. According to a Rabbinical legend, it was partly formed from the remains of one built by Adam on his expulsion from Paradise, and afterwards used by Cain and Abel, on the identical spot where Abraham prepared to offer up Isaac (*Zohar, In Gen.* fol. 51, 3, 4; Targum of Jonathan, Gen. viii. 20). Mention is made of altars erected by Abraham (Gen. xii. 7; xiii. 4; xxii. 9); by Isaac (xxvi. 25); by Jacob (xxxiii. 20; xxxv. 1, 3); by Moses (Exod. xvii. 15). After the giving of the law, the Israelites were commanded to make an altar of earth (מִזְבֵּחַ אֶרֶץ); they were also permitted to employ stones, but no iron tool was to be applied to them. This has been generally understood as an interdiction of sculpture, in order to guard against a violation of the second commandment. Altars were frequently built on high places (בְּמוֹת, בְּמוֹת, βωμοί); the word being used not only for the elevated spots, but for the sacrificial structures upon them. Thus Solomon built an high place for Chemosh (1 Kings xi. 7), and Josiah brake down and burnt the high place, and stamped it small to powder (2 Kings xxiii. 15); in which passage בְּמוֹת is distinguished from מִזְבֵּחַ. This practice, however, was forbidden by the Mosaic law (Deut. xii. 13; xvi. 5), except in particular instances, such as those of Gideon (Judg. vi. 26) and David (2 Sam. xxiv. 18). It is said of Solomon 'that he loved the Lord, walking in the statutes of David, his father, only he sacrificed and burnt incense in the high places' (1 Kings iii. 3). Altars were sometimes built on the roofs of houses in 2 Kings xxiii. 12, we read of the altars that were on the top of the upper chamber of Ahaz. In the tabernacle, and afterwards in the temple, two altars were erected, one for sacrifices, the other for incense: the table for the shew-bread is also sometimes called an altar.

I. The altar of burnt-offering (מִזְבֵּחַ הָעוֹלָה). 1. That belonging to the tabernacle was a hollow square, five cubits in length and breadth, and three cubits in height; it was made of Shittim-wood [SHITTIM], and overlaid with plates of brass. In the middle there was a ledge or projection, בְּרֵכָה, *deambulacrum*, on which the priest stood while officiating; immediately below this, a brass grating was let down into the altar to support the fire, with four rings attached, through which poles were passed, when the altar was removed. Some critics have supposed that this grating was placed perpendicularly, and fastened to the outward edge of the בְּרֵכָה, thus making the lower part of the altar larger than the upper. Others have imagined that it extended horizontally beyond the בְּרֵכָה, in order to intercept the coals or portions of the sacrifice which might accidentally fall off the altar. Thus the Targumist Jonathan says, 'Quod si cadat frustum aut pruna ignis ex altari, cadat super craticulam nec pertingat ad terram; tum capient illic sacerdotes ex craticula et reponent in altari.' But for such a purpose (as Dr. Bähr remarks) a grating seems very unsuitable. As the priests were forbidden to go up by steps to the altar (Exod. xx. 26), a

slope of earth was probably made rising to a level with the כרובב. According to the Jewish tradition this was on the south side, which is not improbable; for on the east was 'the place of the ashes' (מקום החרשן, *Lev. i. 16*, and the laver of brass was probably near the western side, so that only the north and south sides were left. Those critics who suppose the grating to have been perpendicular or on the outside, consider the injunction in *Exod. xx. 24*, as applicable to this altar, and that the inside was filled with earth; so that the boards of Shittim-wood formed merely a case for the real altar. Thus Jarchi, on *Exod. xxvii. 5*, says, 'Altare terreum est hoc ipsum aeneum altare, cuius concavum terrâ implebatur cum castra metarentur.'

In *Exod. xxvii. 3*, the following utensils are mentioned as belonging to the altar, all of which were to be made of brass. (1) סירות *siroth*, pans or dishes to receive the ashes that fell through the grating. (2) יעים *yaim*, shovels (*forripes*, *Vulg.*) for cleaning the altar. (3) מזוקות *mizrakoth* (*bassons*, *Auth. Vers.*; φιάλαι, *Sept.*; *patera sacrificia*, *Gesenius*), vessels for receiving the blood and sprinkling it on the altar. (4) מזלגות *mizlagoth* ('*flesh-hooks*,' *Auth. Vers.*; κρεάτραι, *Sept.*; *fuscivulæ*, *Vulg.*), large forks to turn the pieces of flesh or to take them off the fire (see *i Sam. ii. 13*). (5) מחתות *machthoth* ('*fire-pans*,' *Auth. Vers.*; τὸ πυρεῖον, *Sept.*): the same word is elsewhere translated *censers*, *Num. xvi. 17*; but in *Exod. xxv. 38*, '*snuff-dishes*,' ὑποθέματα, *Sept.*

2. The altar of burnt-offering in Solomon's temple was of much larger dimensions, 'twenty cubits in length and breadth, and ten in height' (*2 Chron. iv. 1*), and was made entirely of brass. It is said of Asa that he renewed (חרשן), that is, either repaired (in which sense the word is evidently used in *2 Chron. xxiv. 4*) or reconsecrated (*ἐνεκαίνισε*, *Sept.*) the altar of the Lord that was before the porch of the Lord (*2 Chron. xv. 8*). This altar was removed by king Ahaz (*2 Kings xvi. 14*; it was 'cleansed' (בחר, ἀγλίω) by Hezekiah; and in the latter part of Manasseh's reign was repaired or rebuilt (יבן יבן ketib; יבן kerî).

3. Of the altar of burnt-offering in the second temple, the canonical scriptures give us no information excepting that it was erected before the foundations of the temple were laid (*Ezra iii. 3, 6*) on the same place where it had formerly been built, ἐφ' οὗ καὶ πρότερον ἦν ἀνικοδομημένον τόπου (*Joseph. Antiq. xi. 4, 1*). From the Apocrypha, however, we may infer that it was made, not of brass, but of unhewn stone, for in the account of the restoration of the temple service by Judas Maccabæus, it is said, 'They took whole stones (*ἄθους ὀλοκλήρους*), according to the law, and built a new altar according to the former (*i Macc. iv. 47*). When Antiochus Epiphanes pillaged Jerusalem, Josephus informs us that he left the temple bare, and took away the golden candlesticks and the golden altar [of incense] and table [of shew-bread], and the altar of burnt-offering, τὰ θυσιαστήρια (*Antiq. xii. 5, 4*).

4. The altar of burnt-offering erected by Herod is thus described by Josephus (*De Bell. Jud. v. 5, 6*): 'Before this temple stood the altar, fifty cubits high, and equal both in length and breadth, each of which dimensions was fifty cubits. The figure it was built in was a square, and it had corners like horns (*κερατοειδῆς προανέχων γωνίας*), and the pas-

sage up to it was by a gentle acclivity from the south. It was formed without any iron tool, nor did any iron tool so much as touch it at any time.' The dimensions of this altar are differently stated in the Mishna. It is there described as a square 32 cubits at the base; at the height of a cubit it is reduced 1 cubit each way, making it 30 cubits square; at 5 cubits higher it is similarly contracted, becoming 28 cubits square, and at the base of the horns, 26 cubits; and allowing a cubit each way for the deambulacrum, a square of 24 cubits is left for the fire on the altar. Other Jewish writers place the deambulacrum 2 feet below the surface of the altar, which would certainly be a more suitable construction. The Mishna states, in accordance with Josephus, that the stones of the altar were unhewn, agreeably to the command in *Exod. xx. 25*; and that they were whitewashed every year at the Passover and the feast of tabernacles. On the south side was an inclined plane, 32 cubits long and 16 cubits broad, made likewise of unhewn stones. A pipe was connected with the south-west horn, through which the blood of the victims was discharged by a subterraneous passage into the brook Kedron. Under the altar was a cavity to receive the drink-offerings, which was covered with a marble slab, and cleansed from time to time. On the north side of the altar several iron rings were fixed to fasten the victims. Lastly, a scarlet thread was drawn round the middle of the altar to distinguish between the blood that was to be sprinkled above or below it.

II. The second altar belonging to the Jewish Cultus was the altar of incense, מזבח המוקטר, *Sept.*; *θυσιαστήριον θυμιάματος*, *Sept.*; *θυμιατήριον*, *Josephus*; called also the golden altar (*Num. iv. 11*) מזבח הזהב. It was placed between the table of shew-bread and the golden candlestick, in the most holy place.

1. This altar in the tabernacle was made of Shittim-wood overlaid with gold plates, one cubit in length and breadth, and two cubits in height. It had horns (*Lev. iv. 7*) of the same materials; and round the flat surface was a border (זו, *ערוג*, *Auth. Vers.*; *στρεπτὴν στεφάνην χρυσῆν*, *Sept.*) of gold, underneath which were the rings to receive 'the staves (בדים, *σκυτάλαι*) made of Shittim-wood, overlaid with gold to bear it withal' (*Exod. xxx. 1-5*; *Joseph. Antiq. iii. 6, 8*).

2. The altar in Solomon's Temple was similar, but made of cedar (*i Kings vi. 20*; *vii. 48*; *i Chron. xxviii. 18*) overlaid with gold.

3. The altar in the second temple was taken away by Antiochus Epiphanes (*i Macc. i. 21*), and restored by Judas Maccabæus (*i Macc. iv. 49*). On the arch of Titus there appears no altar of incense; it is not mentioned in *Heb. ix.*, nor by *Joseph. Antiq. xiv. 4, 4* (*vide Tholuck On the Hebrews*, vol. ii. p. 8; *Biblical Cabinet*, vol. xxxix.) (*Winer's Realwörterbuch*, articles 'Altar,' 'Brandopfer altar,' 'Raucheraltar,' *Bähr's Symbolik des Mosaischen Cultus*, bd. i. Heidelberg, 1837).—J. E. R.

ALTARS, FORMS OF. The direction to the Israelites, at the time of their leaving Egypt, to construct their altars of unhewn stones or of earth, is doubtless to be understood as an injunction to follow the usage of their patriarchal ancestors; and not to adopt the customs, full of idolatrous associations, which they had seen in Egypt, or might see in the land of Canaan. As they were also strictly

enjoined to destroy the altars of the Canaanites, it is more than probable that the direction was levelled against such usages as those into which that people had fallen. The conclusion deducible from this, that the patriarchal altars were of unhewn stones or of earth, is confirmed by the circumstances under which they were erected, and by the fact that they are always described as being 'built.' The provision that they *might* be made of earth, applies doubtless to situations in which stones could not be easily obtained, as in the open plains and wildernesses. Familiar analogies lead to the inference that the largest stones that could be found in the neighbourhood would be employed to form the altar; but where no large stones could be had, that heaps of smaller ones might be made to serve.

[An attempt has been made to shew that in the *cromlech* we have a specimen of these primitive altars (Kitto, *Pictorial Hist. of Palestine*, Supp. Notes to b. iii. chs. 1, 3, 4). But this opinion is now universally renounced by well-informed antiquaries, by whom the *cromlech* is regarded as a sepulchral and not a sacrificial monument (see the decisive paper of Mr. F. L. Lukis in the *Archaeological Journal*, vol. i. p. 142, 222.)]

The injunction that there should be no ascent by steps to the altar appears to have been imperfectly understood. There are no accounts or figures of altars so elevated in their fabric as to require such steps for the officiating priests; but when altars are found on rocks or hills, the ascent to them is sometimes facilitated by steps *cut in the rock*. This, therefore, may have been an indirect way of preventing that erection of altars in high places which the Scriptures so often reprobate.

It is usually supposed, however, that the effect of this prohibition was, that the tabernacle altar, like most ancient altars, was so low as to need no ascent; or else that some other kind of ascent was provided. The former is Calmet's view, the latter Lamy's. Lamy gives a sloping ascent, while Calmet merely provides a low standing-board for the officiating priest. The latter is probably right, for the altar was but three cubits high, and was designed to be portable. There is one error in these and other figures of the Jewish altars composed from the descriptions; namely, with regard to the 'horns,' which were placed at the corners, called 'the horns of the altar' (Exod. xxvii. 2; xxix. 12; 1 Kings ii. 28), and to which the victims were tied at the time of sacrifice. The word horn (קֶרֶן *keren*) was applied by the Jews as an epithet descriptive of any point

41.

projecting in any direction after the manner of a horn (not necessarily like a horn in shape); and there is no reason to doubt that the horns of the successive altars of burnt-offerings resembled those corners projecting upwards which are seen in many

ancient altars. These are shewn in the view now given (from the *Pictorial Bible*), which, although substantially the same, is, in this and other respects, a considerable improvement upon that of Calmet.

42.

By the time of Solomon it appears to have been understood that the interdiction of steps of ascent did not imply that the altar was to be low, but rather that it was to be high, and that only a particular mode of ascent was forbidden. The altar of the temple was not less than ten cubits high, and some means of ascent must have been provided. The usual representations of Solomon's altar are formed chiefly from the descriptions of that in Herod's temple given by Josephus and the Rabbins; and although this last was almost one-third higher and larger than the other, it was doubtless upon the same model. The altar of the first temple had been seen, and could be described, by many of those who were present when that of the second temple was erected; and the latter was known to those by whom Herod's altar was built. Very different figures, however, have been formed from these descriptions.

43.

The first figure is taken from Calmet's original work, and exhibits the form which, with slight variation, is also preferred by Bernard Lamy, and by Prideaux (*Connection*, i. 200). It is excellently conceived; but is open to the objection that the slope, so far from being 'insensible,' as Josephus describes it, is steep and inconvenient; and yet, on the other hand, a less steep ascent to an object so elevated must have been inconveniently extended.

Calmet gives the above only as in accordance with the Rabbinical descriptions. His own view

44.

of the matter is conveyed in the annexed figure. This is certainly a very handsome altar in itself, but it would be scarcely possible to devise one more unsuitable for the actual, and occasionally extensive, services of the Jewish altar. None of these objections apply to the next figure, derived from Surenhusius (*Mishna*, tom. ii. p. 261), which,

45.

for use and effect, far exceeds any other representation that has hitherto been attempted. An ascent by an inclined plane to an altar so high as that of Solomon must either have been inconveniently steep, or have had an unseemly extension—objections obviated by the provision of three ascents, of four steps each, conducting to successive platforms. In the description of Ezekiel's temple, 'steps' (מעלות) are placed on the east side of the altar (Ezek. xliii. 17); and as it is generally supposed that the details of that description agree with those of Solomon's temple, it is on that authority the steps are introduced. If they actually existed, it may be asked how this was consistent with the law, which forbade steps altogether. The obvious answer is, that, as public decency was the ostensible ground of the prohibition (Exod. xx. 26), it might be supposed that it was not imperative if steps could be so disposed that decency should not be violated; and that, if a law may be interpreted by the reason of its enactment, this law could only be meant to forbid a *continuous* flight of steps, and not a broken ascent. If it is still urged against this view that, according to Josephus, the ascent in the temple of Herod was by an insensible slope, an answer is found in the fact, that, at the time of its erection, a mode of interpreting the law according to the dead letter, rather than the spirit, had arisen; and we have no doubt that even had it

been then known that steps actually existed in Solomon's altar, or in that of the second temple, this would have been regarded as a serious departure from the strict letter of the law, not to be repeated in the new altar. In a similar way the student of the Bible may account for some other discrepancies between the temples of Solomon and Ezekiel, and that of Herod.

46.

THE ALTAR OF INCENSE, being very simple in its parts and uses, has been represented with so little difference, except in some ornamental details, that one of the figures designed from the descriptions may suffice. It is the same as the one inserted in the *Pictorial Bible* (Exod. xxx.); and, as to the corners ('horns'), etc., is doubtless more accurate than those given by Calmet and others.

It is not our object to describe the altars of other nations, but, to supply materials for comparison and illustration, a group of the altars of the prin-

47.

1, 2, 3. Greek. 4. Egyptian. 5. Babylonian.
6. Roman. 7, 8. Persian.

cipal nations of Oriental and classical antiquity is here introduced. One obvious remark occurs, namely, that all the Oriental altars are square or oblong, whereas those of Greece and Rome are

more usually round; and that, upon the whole, the Hebrew altars were in accordance with the general Oriental type. In all of them we observe bases with corresponding projections at the top; and in some we find the true model of the 'horns,' or prominent and pointed angles.

The altars of the Assyrians appear, from the recent discoveries, to have been much like those of the Persians. See *Nineveh and its Remains*, ii. 468, 469; *Nineveh and Babylon*, pp. 351-9. For the uses of the altar see [CENSER; INCENSE; SACRIFICE; ASYLUM].—J. K.

ALTARS OF BRICK (לְבִנִים) are mentioned Is. lxxv. 3. By some these are supposed to have been connected with some superstitious rites, and to have been formed of the baked bricks used by the Babylonians in offering incense; specimens of which are still extant, covered with figures and cuneiform inscriptions (Rosenmüller, Gesenius, Maurer, etc.) Others think the reference is to altars hastily and rudely formed, and covered with a tile, such as Ovid refers to *Fast.* ii. 537 (Knobel, Alexander). Others prefer understanding an allusion here to idolatrous offerings on the roofs of the houses (comp. 2 Kings xxiii. 12; Jer. xix. 13, etc.), and translate the word *roofing tiles* (Bochart, Henderson, Ewald).—W. L. A.

ALTAR AT ATHENS. St. Paul, in his address before the judges of the Areopagus at Athens, declares that he perceived that the Athenians were in all things too superstitious,* for that, as he was passing by and beholding their devotions, he found an altar, inscribed, 'TO THE UNKNOWN GOD;' and adds, 'Him whom ye worship without knowing (ὃν οὐκ ἠγνοῦντες εὐσεβεῖτε), I set forth unto you' (Acts xvii. 22, 23). The questions suggested by the mention of an altar at Athens, thus inscribed 'to the unknown God,' have engaged much attention; and different opinions have been, and probably will continue to be, entertained on the subject.

The principal difficulty arises from this, that the Greek writers, especially such as illustrate the Athenian antiquities, make mention of *many altars* dedicated ἀγνωστος Θεός, to the unknown gods, but not of *any one* dedicated ἀγνωστω Θεῷ, to the unknown god. The passage in Lucian (*Philopat.* § 9), which has often been appealed to as evidence that there existed at Athens an altar dedicated, in the singular, to the unknown God ἀγνωστω Θεῷ, is of little worth for the purpose. For it has been shewn by Eichhorn, and Niemeyer (*Interp. Orat. Paul. Ath. in Areop. hab.*), that this witty and profane writer only repeats the expression of St. Paul, with the view of casting ridicule upon it, as he does on other occasions. The other passages from Greek writers only enable us to conclude that there were altars at Athens dedicated to *many unknown gods* (Pausan. i. 1; Philostrat. *Vit. Ap. vi.*

3). It has also been supposed that the allusion may be to certain *anonymous* altars, which were erected by the philosopher Epimenides, in the time of a terrible pestilence, as a solemn expiation for the country (Diog. Laert. *Vit. Epimen.* i. 29). Dr. Doddridge, among others, dwells much on this. But it is a strong objection to the view which he has taken, that the sacrifices on these altars were to be offered not ἀγνωστω Θεῷ, but τῷ προσήκοντι Θεῷ, i. e., to the God to whom this affair appertains, or the God who can avert the pestilence, whoever he may be; and such, no doubt, would have been the inscription, if there had been any. But these altars are expressly said to have been θεοὶ ἀνόνομοι, i. e., *anonymous altars*, evidently not in the sense of altars inscribed to the unknown God, but altars without the name of any God on them.

Now, since the ancient writers tell us that there were at Athens many altars inscribed to the unknown gods, Erasmus, Le Clerc, Brodæus, and many others, have maintained that St. Paul changed the plural number into the singular in *accommodation* to his purpose. Of this opinion was Jerome (*Comment. in Tit.* i. 12), who testifies that this inscription (which, he says, had been read by him) was, Θεοῖς Ἀσίας καὶ Εὐρώπης καὶ Λιβύης, Θεοῖς ἀγνωστος καὶ ξένοις, 'To the gods of Asia, Europe, and Africa; to the unknown and strange gods.' Bretschneider, relying on this authority, supposes (*Lex. N. T.*, s. v. ἀγνωστος) the inscription to have been ἀγνωστος Θεός, i. e., to the gods of foreign nations, unknown to the Athenians; indicating that either foreigners might sacrifice upon that altar to their own gods, or that Athenians, who were about to travel abroad, might first by sacrifice propitiate the favour of the gods of the countries they were about to visit. He quotes the sentiment of Tertullian: 'I find, indeed, altars prostituted to *unknown* gods, but idolatry is an Attic tenet; also to *uncertain* gods, but superstition is a tenet of Rome.' To the view that such was the inscription which Paul noticed, and that he thus accommodated it to his immediate purpose, it has been very justly objected that, if this interpretation be admitted, the whole strength and weight of the apostle's argument are taken away; and that his assertion might have been convicted of falsity by his opponents. Therefore, while admitting the authorities for the fact, that there were altars inscribed to the unknown gods, they contend that St. Paul is at least equally good authority, for the fact that one of these altars, if not more, was inscribed in the singular, to the unknown God. Chrysostom (*In Acta App.*), who objects strongly to the preceding hypothesis, offers the conjecture that the Athenians, who were a people exceedingly superstitious, being apprehensive that they might have overlooked some divinity and omitted to worship him, erected altars in some part of their city inscribed to the unknown God; whence St. Paul took occasion to preach to the Areopagites Jehovah as a God, with respect to them truly unknown; but whom they yet, in some sort, adored without knowing him. Similar to this in essential import is the conjecture of Eichhorn (*Allgem. Biblioth.* iii. 414) to which Niemeyer subscribes, that there were standing at Athens several very ancient altars, which had originally no inscription, and which were afterwards not destroyed, for fear of provoking the anger of the gods to whom they

* Δεισιδαιμονεστέρους—a word that only occurs here, and is of ambiguous signification, being capable of a good, bad, or indifferent sense. Most modern, and some ancient, expositors hold that it is here to be taken in a good sense (*very religious*), as it was not the object of the apostle to give needless offence. This explanation also agrees best with the context, and with the circumstances of the case. A man may be 'very religious,' though his religion itself may be false.

had been dedicated, although it was no longer known who these gods were. He supposes, therefore, that the inscription ἀγνώστῳ Θεῷ, *to an [some] unknown God*, was placed upon them; and that one of these altars was seen by the apostle, who, not knowing that there were others, spoke accordingly. To this we may add the notion of Kuinoël (*Comm. in Act. xvii. 23*), who considers it proved that there were several altars at Athens on which the inscription was written in the plural number; and believes that there was *also one* altar with the inscription in the singular, although the fact has been recorded by no other writer. For no argument can be drawn from this silence, to the discredit of a writer, like St. Paul, of unimpeached integrity. The altar in question, he thinks, had probably been dedicated ἀγνώστῳ Θεῷ, on account of some remarkable benefit received, which seemed attributable to *some* God, although it was uncertain to whom.

Some have held that the Athenians, under the appellation of the *unknown God*, really worshipped the true one, having received some dim notion of Him from the Jews (Wolf, *Cura* in loc.) Others have sought to connect this inscription with that on the temple of Isis at Saïs, Ἐγὼ εἰμι ΠΑΝ τὸ γεγονός, καὶ ὄν, καὶ ἐσόμενον καὶ τῶν ἐμῶν πέπλον οὐδεὶς πῶ θνητὸς ἀπεκάλυψεν—'I am ALL that has been, and is, and shall be; and *my veil no mortal hath yet uncovered*,' and to refer both to that remote 'unknowable' WISDOM, far beyond all known cases, whom the heathen dimly guessed at under obscure metaphors and recondite phrases; but whom the Hebrews *knew* under the name of Jehovah (Olearius, cited by Wolf; Hales' *Chronology*, iii. 519-531); but these are mere conjectures without any true support. The conclusion to which the soundest inquirers have come is that expressed by Robinson (*Add. in Am. Edit. of Calmet*): 'So much at least is certain, that altars to an unknown god or gods existed at Athens. But the attempt to ascertain definitely whom the Athenians worshipped under this appellation must ever remain fruitless for want of sufficient data. The inscription afforded to Paul a happy occasion of proclaiming the Gospel; and those who embraced it found indeed that the being whom they had thus 'ignorantly worshipped,' was the one only living and true God.'—J. K.

AL-TASHCHITH. [PSALMS.]

ALTER, FRANZ CARL, a learned Jesuit, keeper of the imperial library at Vienna, and professor of Greek in the Gymnasium of St. Anna, was born at Engelsberg in Silesia, 27th January 1749, and died at Vienna, 24th March 1804. His principal work is his *Novum Testamentum, ad codicem Vindobonensem Græce expressum*, 2 vols. 8vo. Vien. 1786-1787. In this critical edition of the N. T., Professor Alter has followed in the text a manuscript in the royal library of Vienna (*Cod. Lamb. 1, Nessel. 23*), but not strictly, for he has introduced, from the text of Stephen's ed. of 1546, alterations where he thought the codex incorrect. With this text he has collated twenty-four MSS., in which larger or smaller portions of the N. T. are contained, and the Slavonic and Coptic versions of some parts of the N. T.; the result of which is placed at the end of the volume in separate portions, as each codex or version was examined by the editor. In the second volume

the various readings are arranged according to the lines of the MS. collated, so that one has to search what word each refers to. The whole edition is most inconveniently arranged, so that any value it possesses for critical purposes is thereby greatly diminished. Griesbach, in his second edition, made use of what additions Alter's diligence had made to the critical apparatus of the N. T., and reduced to order and utility what the original collator had left a 'rudis indigestaque moles.'—W. L. A.

ALTING, JAMES, a German divine, was born Sept. 27, 1618, at Heidelberg, where his father was an eminent professor of systematic theology. After completing his education at Groningen, he visited England in 1640, and was ordained by Bp. Prideaux. In 1643 he returned to the continent, and became professor of Hebrew at Groningen. Though involved in a series of vexing disputes with one of his colleagues, he found time and leisure to write several works bearing on the philology and exegesis of Scripture. He wrote a treatise on the Hebrew points, and a Synopsis of Chaldee and Syriac Grammar, Groning. 1654-5; a Commentary on Jeremiah, Amst. 1688; a Commentary on the Epistle to the Romans, etc. His works have been collected, and published in 5 vols. fol., Amst. 1687. His style is prolix, but his writings are full of learning, and his views in general accordant with Scripture. He died 20th Aug. 1679.—W. L. A.

ALTMANN, JOHN GEORGE, a Swiss divine, was born at Zoffingen in 1697. From 1734 he was professor of Greek and moral philosophy at Berne, and in 1757 he was pastor at Ins, where he died 19th March 1758. In conjunction with Breitingher he published the *Tempe Helvetica*, 6 vols. 8vo, Zur. 1735-43. He published also *Meletemata Philologico-Critica quibus difficilioribus N. T. locis ex antiquitate lux affunditur*, 3 vols. 4to, Utr. 1753.—W. L. A.

ALTSCHUL, NAPHTALI, called also BEN ASHER, a Jewish printer, who lived at Prague in the middle of the seventeenth century. He wrote *חֲזוֹן שְׁלֵמֹה*, *A Simple and Grammatical Commentary on the whole of Scripture, collected from the best Commentaries*, fol. Kracow 1552-1595. A new edition appeared in 6 vols. 8vo, Amst. 1777-78. Both editions contain the text.—W. L. A.

ALUKAH (הַרְלֵעַ; Sept. Βόελλα; Vulg. *Sanguisuga*; A. V. 'Horse-leech') occurs only in Prov. xxx. 15 (genus, *vermes*; order, *insectina*, Linn. Viviparous, brings forth only one offspring at a time; many species). 'The horse-leech' is properly a species of leech discarded for medical purposes on account of the coarseness of its bite. There is no ground for the distinction of species made in the English Bible.

Although the Hebrew word is translated *leech* in all the versions, there has been much dispute whether that is its proper meaning. *Against the received translation*, it has been urged that, upon an examination of the context in which it occurs, the introduction of the leech seems strange; that it is impossible to understand what is meant by its 'two daughters,' or *three*, as the Septuagint, Syriac, and Arabic versions assign to it; and that, instead of the incessant craving apparently attributed to it, the leech drops off when filled. In order to evade

these difficulties it has been attempted, but in vain, to connect the passage either with the preceding or subsequent verse. It has also been attempted to give a different sense to the Hebrew word. But as it occurs nowhere besides, in Scripture, and as the root from which it would seem to be derived is never used as a verb, no assistance can be obtained from the Scriptures themselves in this investigation. Recourse is therefore had to the Arabic. The following is the line of criticism pursued by the learned Bochart (*Hierozoicon*, a Rosenmüller, iii. 785, etc.) The Arabic word for leech is *alukah*, which is derived from a verb signifying to hang or to adhere to. But the Hebrew word, *alukah* he would derive from another Arabic root, *aluk*, which means 'fate, heavy misfortune, or impending calamity'; and hence he infers that *alukah* properly means destiny, and particularly the *necessity of dying* which attaches to every man by the decree of God. He urges that it is not strange that *offspring* should be ascribed to this divine appointment, since, in Prov. xxvii. 1, offspring is attributed to time, a day—'Thou knowest not what a day may bring forth.' And the Hebrews call events the children of time. We also speak of the womb of time. Thus, then, Bochart considers that destiny, or the divine decree concerning death, is here personified and represented as having, 'two daughters crying, give, give'; namely, שְׁוֹל, Hades, or the state of departed souls, and the grave. He cites Prov. xxvii. 20, as a parallel passage: 'Hell (*sheol*) and the grave are never full,' which the Vulgate renders 'infernum et perditio.' Hence he supposes that *sheol* and the *grave* are the two daughters of *Alukah* or *Destiny*; each cries 'give' at the same moment—the former asks for the soul, and the latter for the body of man in death; both are insatiable, for both involve all mankind in one common ruin. He further thinks that both these are called daughters, because each of the words is of the feminine, or, at most, of the common gender; and in the 16th verse, the grave (*sheol*) is specified as one of the 'things that are never satisfied.' In further confirmation of this view, Bochart cites rabbinical writers, who state that by the word *alukah*, which occurs in the Chaldee paraphrase on the Psalms, they understand destiny to be signified; and also remark that it has two daughters—Eden and Gehenna, Paradise and Hell—the former of whom never has enough of the souls of the righteous, the latter of the souls of the wicked.

In behalf of the received translation, it is urged that it is scarcely credible that all the ancient translators should have confounded *alukah* with *alakah*; that it is peculiarly unlikely that this should have been the case with the Septuagint translator of the book of Proverbs, because it is believed that 'this ranks next to the translation of the Pentateuch for ability and fidelity of execution,' and that the author of it must have been well skilled in the two languages (Horne's *Introduction*, ii. 43, ed. 1828). It is further pleaded that the application of Arabic analogies to Hebrew words is not decisive; and finally, that the theory proposed by Bochart is not essential to the elucidation of the passage. In the preceding verse the writer (not Solomon—see verse 1) speaks of 'a generation, whose teeth are as swords, and their jaw-teeth as knives to devour the poor from off the earth, and the needy from among men,' and then after the abrupt and picturesque style of the East, especially in

their proverbs, which is nowhere more vividly exemplified than in this whole chapter, the leech is introduced as an illustration of the covetousness of such persons, and of the two distinguishing vices of which it is the parent, avarice and cruelty. May not also the 'two daughters of the leech, crying, Give, give,' be a figurative description of the two lips of the creature (for these it has, and perfectly formed), which are a part of its very complicated mouth? It certainly is agreeable to the Hebrew style to call the offspring of inanimate things *daughters*, for so branches are called daughters of trees (Gen. xlix. 22—margin). A similar use of the word is found in Eccles. xii. 4, 'All the daughters of music shall be brought low,' meaning the lips, front teeth, and other parts of the mouth. It is well remarked by Professor Paxton, that 'this figurative application of the entire genus is sufficient to justify the interpretation. The leech, as a symbol, in use among writers of every class and in all ages, for avarice, rapine, plunder, rapacity, and even assiduity, is too well known to need illustration' (Plau. *Epidic.* art. 2; Cicero, *ad Attic.*; Horace, *Ars Poet.* 476; Theocritus, *Pharmaceut.* 56, 57; etc. etc.)—J. F. D.

ALUSH (אַלֻשׁ; Sept. Αλουός), one of the places at which the Hebrews rested on their way to Mount Sinai (Num. xxxiii. 13). It was between Dophkah and Rephidim. The Jewish Chronology (*Seder Olam Rabba*, c. 5, p. 27) makes it twelve miles from the former and eight from the latter station. The Targum of Jonathan calls it 'a strong fort'; and it is alleged (upon an interpretation of Exod. xvi. 30) that it was in Alush that the observance of the Sabbath-day was enforced upon the emancipated Israelites.—J. K.

AMALEK (אַמְלֵק; Sept. Ἀμαλῆκ), a son of Eliphaz (the first-born of Esau) by his concubine Timna: he was the chieftain, or Emir (אֵמִיר, Sept. ἡγεμών, Auth. V. Duke), of an Idumæan tribe (Gen. xxxvi. 12, 16).—J. K.

AMALEKITES, the name of a nation inhabiting the country to the south of Palestine between Idumæa and Egypt, and to the east of the Dead Sea and Mount Seir. 'The Amalekites dwell in the land of the south' (בְּאֶרֶץ הַיָּבֵשׁ, Num. xiii. 29). 'Saul smote the Amalekites from Havilah until thou comest to Shur, that is over against Egypt' (1 Sam. xv. 7). 'David went up and invaded the Geshurites, and Gezrites, and the Amalekites, for those nations were of old the inhabitants of the land as thou goest to Shur, even unto the land of Egypt' (1 Sam. xxvii. 8). In 1 Chron. iv. 42, it is said that the sons of Simeon went to Mount Seir and smote the rest of the Amalekites that were escaped. According to Josephus (*Antiq.* iii. 2, § 1) the Amalekites inhabited Gobolitis (גְּבֹלוּטִית, Ps. lxxxiii. 7; Γέβωλα, Γάβαλα, Stephanus Byz.; Γεβαλνηή, Γαβαλνηή, Euseb.) and Petra, and were the most warlike of the nations in those parts; οὗ τε τὴν Γοβωλιτῶν καὶ τὴν Πέτραν κατοικοῦντες, οἱ καλοῦνται μὲν Ἀμαλκήται, μαχημῶτατοι δὲ τῶν ἐκείσε ἐθνῶν ὑπὸ ἡρχον. In another passage he says, 'Aliphaz had five legitimate sons, Theman, Omer, Saphus, Gotham, and Kanaz; for Amalek was not legitimate, but by a concubine, whose name was Thamna. These dwell in that part of Idumæa called Gobolitis, and that called Amalekitis, from

Amalek' (*Antiq.* ii. 1); and elsewhere he speaks of them as 'reaching from Pelusium of Egypt to the Red Sea' (*Antiq.* vi. 7). We find, also, that they had a settlement in that part of Palestine which was allotted to the tribe of Ephraim. Abdon, one of the judges of Israel, was buried in Pirathon, in the land of Ephraim, in the mount of the Amalekites, **בְּהַר הָעֲמֻלִיקִי**. In Deborah's triumphal ode it is said **מִנֵּי אֶפְרַיִם שָׂרֵשׁ בְּעֲמֻלִיקִי**, 'out of Ephraim was there a root of them against Amalek' (Auth. Vers.), which Ewald (*Die Poetischen Bücher des Alten Bundes*, etc., Göttingen, 1839, Band, i. 129) translates 'Von Ephraim die, deren Wurzel ist in Amalek,' 'of Ephraim those whose root is in Amalek,' *i. e.*, the Ephraimites who dwelt in the mount of the Amalekites. On comparing this text and Joshua xvi. 10, 'they drave not out the Canaanites that dwelt in Gezer (**בְּנֹזֵר**), but the Canaanites dwelt among the Ephraimites unto this day'—with 1 Sam. xxvii. 8, 'David invaded the Geshurites, and Gezrites, and the Amalekites,' etc.,—it seems probable that the Gezrites (**גְּזֵרִיתִי**) were the inhabitants of Gezer (**גְּזֵרָה**) (*v.* Gesenius); but in that case David must have marched northward instead of southward, and the southern position of the Amalekites is expressly stated. The first mention of the Amalekites in the Bible is Gen. xiv. 7; Chedorlaomer and his confederates returned and came to En-mishpat, which is Kadesh, and smote all the country of the Amalekites, and also the Amorites that dwelt in Hazezon-tamar.' From this passage it has been inferred that the Amalekites existed as an independent nation at that time, and were, therefore, totally distinct from the descendants of the son of Eliphaz. On the other hand, it has been remarked that while several other nations are specified ('the Rephains, the Zuzims, the Emims,' v. 5, 'the Horites,' v. 6, and 'the Amorites,' v. 7), the phrase 'all the country of the Amalekites' (**כָּל-שֵׂרָף**) may have been used by the sacred historian to denote the locality not then, but long afterwards, occupied by the posterity of Amalek (Hengstenberg's *Die Authentie des Pentateuches*, Band ii. 305). The LXX. appear to have read **כָּל-שֵׂרָף**, all the princes, instead of **כָּל-שֵׂרָף**, all the country, *κατέκοψαν πάντας τοὺς ἀρχοντας Ἀμαλήκ;* a reading which, if correct, would be in favour of the former supposition. Origen says (*In Numer. Homil.* xix.), *interfecerunt omnes principes Amalek*, Rufinus's Latin version. After starting the question, whether this name belonged to two nations, without attempting to settle it, he turns off to its allegorical interpretation (*Opera*, x. 230, Berol. 1840). The Amalekites were the first assailants of the Israelites after their passage through the Red Sea (*Exod.* xvii.). In v. 13 it is said 'Joshua discomfited Amalek and his people with the edge of the sword.' Amalek may here be employed as the name of the chief of the tribe, as Pharaoh was the name of the successive kings of Egypt, and in this case the words must mean the prince and his army. But if 'Amalek' stand for the nation, 'his people' must mean their confederates. It has been thought improbable that in so short a period the descendants of Esau's grandson could have been sufficiently numerous and powerful to attack the host of Israel; but within nearly the same period the tribe of Ephraim had increased so that it could muster

40,500 men able to bear arms, and Manasseh 32,200; and admitting in the case of the Israelites an extraordinary rate of increase (*Exod.* i. 12, 20), still, if we consider the prostrating influence of slavery on the national character, and the absence of warlike habits, it is easy to conceive that a comparatively small band of marauders would be a very formidable foe to an undisciplined multitude, circumstanced as the Israelites were, in a locality so adapted to irregular warfare. It appears, too, that the attack was made on the most defenceless portion of the host. 'Remember (said Moses) what Amalek did unto thee by the way when ye were come forth out of Egypt; how he met thee by the way and smote the hindmost of the thee, even all that were feeble behind thee (**הַנְּחֻשִׁים**); Sept. *κοπιῶντες*, *Vulg. lassii*), when thou wast faint and weary' (*Deut.* xxv. 17-18). In Balaam's prophecy (*Num.* xxiv.) Amalek is denominated 'the first of the nations' **רֵאשִׁית נַיִם**. The Targumists and several expositors, both Jewish and Christian, have taken this to mean 'the first of the nations that warred against Israel' (*Marg.* reading, *Auth. Vers.*) But it appears more agreeable to the antithetical character of Oriental poetry to interpret it of the rank held by the Amalekites among the surrounding nations, their pre-eminence as a warlike tribe, here contrasted with their future downfall and extinction. Or, if we understand the term **רֵאשִׁית נַיִם**, of priority in time, of the antiquity of the nation, this would become a striking contrast with 'his latter end' (**אַחֲרֵיתוֹ**). In the Pentateuch, the Amalekites are frequently mentioned in connection with the Canaanites (*Num.* xv. 25, 43, 45), and, in the book of Judges, with the Moabites and Ammonites (*Judg.* iii. 13); with the Midianites, (*Judg.* vi. 3; vii. 12: 'The Midianites and the Amalekites, and all the children of the East lay along in the valley like grasshoppers for multitude; and their camels were without number, as the sand by the sea-side for multitude'); with the Kenites, 1 Sam. xv. 6. By divine command, as a retribution for their hostility to the Israelites on leaving Egypt (1 Sam. xv. 2), Saul invaded their country with an army of 210,000 men, and 'utterly destroyea (**הַחֲרִים**), strangely taken for a proper name in the Sept.: *πάντα τὸν λαὸν καὶ τὴν ἐπίμ. ἀπέκτεινεν*) all the people with the edge of the sword;' but he preserved their king Agag alive, and the best of the cattle, and by this act of disobedience forfeited the regal authority over Israel. Josephus states the number of Saul's army to be 400,000 men of Israel, and 30,000 of Judah. He also represents Saul as besieging and taking the cities of the Amalekites, 'some by warlike machines, some by mines dug underground, and by building walls on the outside; some by famine and thirst, and some by other methods' (*Antiq.* vi. 7, § 2). About twenty years later they were attacked by David during his residence among the Philistines (1 Sam. xxvii.) It is said 'that he smote the land, and left neither man nor woman alive,' this language must be taken with some limitation, for shortly after the Amalekites were sufficiently recovered from their defeat to make reprisals, and burnt Ziklag with fire (1 Sam. xxx.) David, on his return from the camp of Achish, surprised them while celebrating their success, 'eating, and drinking, and dancing,' and 'smote them from twilight even unto the evening of the next day, and there escaped not a man of them save 400 young men which rode upon camels, and

fled' (1 Sam. xxx. 17). At a later period, we find that David dedicated to the Lord the silver and gold of Amalek and other conquered nations (2 Sam. viii. 12). The last notice of the Amalekites as a nation is in 1 Chron. iv. 43, from which we learn that in the days of Hezekiah, king of Judah, 500 men of the sons of Simeon 'went to Mount Seir, and smote the rest of the Amalekites that were escaped.'

In the book of Esther, Haman is called the Agagite, and was probably a descendant of the royal line (Num. xxiv. 7; 1 Sam. xv. 8). Josephus says that he was by birth an Amalekite (*Antiq.* xi. 6, § 5).

The editor of Calmet supposes that there were no less than three distinct tribes of Amalekites.—1. Amalek the ancient, referred to in Gen. xiv. 7; 2. A tribe in the region east of Egypt, between Egypt and Canaan (Exod. xvii. 8; 1 Sam. xv., etc.); 3. Amalek, the descendants of Eliphaz. No such distinction, however, appears to be made in the Biblical narrative; the national character is everywhere the same, and the different localities in which we find the Amalekites may be easily explained by their habits, which evidently were such as belong to a warlike nomade people. Le Clerc was one of the first critics who advocated the existence of more than one Amalek. Hengstenberg infers from 1 Chron. iv. 42, 43, that in a wider sense Amalekites might be considered as belonging to Idumaea, and urges, in behalf of the descent of the Amalekites from the son of Eliphaz, the improbability that a people who acted so conspicuous a part in the Israelitish history should have their origin concealed, and be, as he terms it, 'ἀγνευσαλόγητος, contrary to the whole plan of the Pentateuch' (*v. Die Authentie*, etc., ii. 303). Arabian writers mention *عماليق*, *عماليق*, *Amalika*,

Amalik, *Imlik*, as an aboriginal tribe of their country, descended from Ham (Abulfeda says from Shem), and more ancient than the Ishmaelites. They also give the same name to the Philistines and other Canaanites, and assert that the Amalekites who were conquered by Joshua passed over to North Africa. Philo (*Vita Moysis*, i. 39) calls the Amalekites who fought with the Israelites on leaving Egypt, Phœnicians (Φοινίκες). The same writer interprets the name Amalek as meaning 'a people that licks up or exhausts;' ὁ Ἀμαλῆκ, ὅς ἐρμηνεύεται λαὸς ἐκλεῖχων (*Legis Allegor.* iii. 66, *Lib. de Migr.* Abr. 26, *Cong. erud. grat.* 11).—J. E. R.

AMAM (אָמָם; Sept. Σήν, var. read. Ἀσημ, Ἀμαμ), a city in the southern part of the tribe of Judah (Josh. xv. 26).

AMAMA, SIXTIN, a Protestant theologian, and professor of Hebrew at Franeker, was born there Oct. 15, 1593, and died Nov. 9, 1639. He visited England in 1613, and resided for some time at Exeter College, Oxford. He wrote *Censura Vulgata Latine Editionis Pentateuchi*, 1620, which was attacked by Mersenne. To him Amama replied in his *Antibarbarus Biblicus*, 4to, Franc., 1628, in which also he continued his stricture on the Vulgate through the Historical books, the Psalms, and the writings of Solomon. After his death a new edition appeared, containing, in addition, his strictures on Isaiah and Jeremiah. He published also a collation of the Dutch version with the originals

(*Bybelsche Conferencie*, Amst., 1623), and a Hebrew Grammar, Amst. 1625; and edited some posthumous works of Drusius.—W. L. A.

AMANA (אָמָנָה), a mountain mentioned in Cant. iv. 8. Some have supposed it to be Mount Amanus in Cilicia, to which the dominion of Solomon is alleged to have extended northward. But the context, with other circumstances, leaves little doubt that this Mount Amana was rather the southern part or summit of Anti-Libanus, and was so called perhaps from containing the sources of the river Amana or Abana. [ABANA.]—J. K.

AMARIAH (אָמָרְיָהוּ, or אָמָרְיָהוּ [*whom Jehovah said*, i. e., *promised*, comp. Θεόφραστος, Ges.; *Jehovah's allotment*, Fürst]; Sept. Ἀμαρία, Ἀμαρίας). A person mentioned in 1 Chron. vi. 7; Ezr. vii. 3, in the list of the descendants of Aaron by his eldest son Eleazer. He was the son of Meraioth and the father of Ahitub, who was (not the grandson and successor of Eli of the same name, but) the father of that Zadok in whose person Saul restored the high-priesthood to the line of Eleazer. The years during which the younger line of Ithamar enjoyed the pontificate in the persons of Eli, Ahitub, and Ahimelech (who was slain by King Saul at Nob) doubtless more than cover the time of Amariah and his son Ahitub; and it is therefore sufficiently certain that they never were high-priests in fact, although their names are given to carry on the direct line of succession to Zadok.

2. The high-priest at a later period, the son of Azariah, and also father of a second Ahitub (1 Chron. vi. 11). In like manner, in the same list, there are three high-priests bearing the name of Azariah.

3. The great-grandfather of the prophet Zephaniah (Zeph. i. 1).—J. K.

[Other persons of this name are mentioned, 1 Chron. xxiii. 19, and xxiv. 23; 2 Chron. xxxi. 15; Neh. x. 3; xii. 2, 13; Ezr. x. 42; Neh. xii. 4.]

AMASA (אָמָסָה, a burden; Sept. Ἀμωσα), son of Abigail, a sister of king David. As his name does not occur prior to Absalom's rebellion (2 Sam. xvii. 25), he must have been neglected by David in comparison with Joab and Abishai, the sons of his other sister Zeruiah, who had before then been raised to great power and influence. This apparent estrangement may perhaps be connected with the fact that Abigail had married an Ishmaelite called Jether, who was the father of Amasa. This is the more likely, as the fact is pointedly mentioned (1 Chron. ii. 17), or covertly indicated (2 Sam. xvii. 25) whenever the name of Abigail occurs, whereas we are quite ignorant who was the husband of the other sister, Zeruiah, and father of her distinguished sons. We may thus form a conjecture of the grounds on which Amasa joined Absalom, and obtained the command of the rebel army. He was defeated by his cousin Joab, who commanded the army of David, but that monarch eventually offered him not only pardon, but the command of the army in the room of Joab (2 Sam. xix. 13), whose overbearing conduct had become intolerable to him, and to whom he could not entirely forgive the death of Absalom. On the breaking out of Sheba's rebellion, Amasa was so tardy in his movements (probably from the reluctance of the troops to follow him), that David despatched

Abishai with the household troops in pursuit of Sheba, and Joab joined his brother as a volunteer. When they reached 'the great stone of Gibeon,' they were overtaken by Amasa with the force he had been able to collect. Joab thinking this a favourable opportunity of getting rid of so dangerous a rival, saluted Amasa, asked him of his health, and took his beard in his *right* hand to kiss him, while with the unheeded *left* hand he smote him dead with his sword. Joab then put himself at the head of the troops, and continued the pursuit of Sheba; and such was his popularity with the army, that David was unable to remove him from the command, or call him to account for this bloody deed: B.C. 1022. [ABNER; ABSALOM; JOAB.]

2. A chief of Ephraim, who, with others, vehemently resisted the retention as prisoners of the persons whom Pekah, king of Israel, had taken captive in a successful campaign against Ahaz, king of Judah (2 Chron. xxviii. 12).—J. K.

AMASAI (אַמַּסַּי), the principal leader of a considerable body of men from the tribes of Judah and Benjamin, who joined David at Ziklag. The words with which David received them indicate some apprehension, which was instantly dissipated by a fervent declaration of attachment from Amasai (1 Chron. xii. 16-18). [By many this person is identified with Amasa (Berthean, *Büch. d. Chron.* in loc.), but this is not quite certain.]

AMATH. [HAMATH.]

AMATHITIS, the district in Syria of which Amath or Hamath on the Orontes was the capital (1 Macc. xii. 25). [HAMATH.]

AMATHUS (Ἀμαθοῦς), a fortified town beyond the Jordan, which the *Onomast.* (s. v. *Æmeth*) places 21 Roman miles south of Pella. (Joseph. *Bell. Jud.* i. 4, 2; *Antiq.* xiii. 13, 5) (*Antiq.* xiv. 5, 4; *Bell. Jud.* i. 8, 5) (*Antiq.* xvii. 10, 6.)

AMAZIAH (אַמַּזְיָהּ, *strength of Jehovah*; Sept. Ἀμαζίας; Vulg. Ἀμασίας, *Amasias*), son of Joash, and eighth king of Judah. He was 25 years old when he began to reign, and he reigned 29 years—from B.C. 838 to B.C. 809. He commenced his sovereignty by punishing the murderers of his father; and it is mentioned that he respected the law of Moses, by not including the children in the doom of their parents, which seems to shew that a contrary practice had previously existed. In the twelfth year of his reign Amaziah attempted to reimpose upon the Edomites the yoke of Judah, which they had cast off in the time of Jehoram. The strength of Edom is evinced by the fact that Amaziah considered the unaided strength of his own kingdom unequal to this undertaking, and therefore hired an auxiliary force of 100,000 men from the king of Israel for 100,000 talents of silver. This is the first example of a mercenary army that occurs in the history of the Jews. It did not, however, render any other service than that of giving Amaziah an opportunity of manifesting that he knew his true place in the Hebrew constitution, as the viceroy and vassal of the King JEHOVAH. [KING.] A prophet commanded him, in the name of the Lord, to send back the auxiliaries, on the ground that the state of alienation from God in which the kingdom of Israel lay, rendered such assistance not only useless but dangerous. The king obeyed this seemingly hard command, and

sent the men home, although by doing so he not only lost their services, but the 100,000 talents, which had been already paid, and incurred the resentment of the Israelites, who were naturally exasperated at the indignity shewn to them. This exasperation they indicated by plundering the towns and destroying the people on their homeward march.

The obedience of Amaziah was rewarded by a great victory over the Edomites, ten thousand of whom were slain in battle and ten thousand more savagely destroyed by being hurled down from the high cliffs of their native mountains. But the Edomites afterwards were avenged; for among the goods which fell to the conqueror were some of their idols, which, although impotent to deliver their own worshippers, Amaziah betook himself to worship. This proved his ruin. Puffed up by his late victories, he thought also of reducing the ten tribes under his dominion. In this attempt he was defeated by king Joash of Israel, who carried him a prisoner to Jerusalem. Joash broke down great part of the city wall, plundered the city, and even laid his hands upon the sacred things of the temple. He, however, left Amaziah on the throne, but not without taking hostages for his good behaviour. The disasters which Amaziah's infatuation had brought upon Judah probably occasioned the conspiracy in which he lost his life. On receiving intelligence of this conspiracy he hastened to throw himself into the fortress of Lachish; but he was pursued and slain by the conspirators, who brought back his body 'upon horses' to Jerusalem for interment in the royal sepulchre (2 Kings xiv. 2; 2 Chron. xxv.)

2. The priest of the golden calves at Bethel, in the time of Jeroboam II. He complained to the king of Amos's prophecies of coming evil, and urged the prophet himself to withdraw into the kingdom of Judah and prophesy there (Amos vii. 10-17).—J. K.

AMBASSADOR. The relations of the Hebrews with foreign nations were too limited to afford much occasion for the services of ambassadors. Still, the long course of their history affords some examples of the employment of such functionaries, which enable us to discover the position which they were considered to occupy. Of ambassadors resident at a foreign court they had, of course, no notion; all the embassies of which we read being 'extraordinary,' or for special services and occasions, such as to congratulate a king on his accession or victories, or to condole with him in his troubles (2 Sam. viii. 10; x. 2; 1 Kings v. 1), to remonstrate in the case of wrong (Judg. xi. 12), to solicit favours (Num. xx. 14), or to contract alliances (Josh. ix. 3, *sqq.*; 1 Macc. viii. 17).

The notion that the ambassador represented the *person* of the sovereign who sent him, or the dignity of the state from which he came, did not exist in ancient times in the same sense as now. He was a highly distinguished and privileged messenger, and the inviolability of his person (2 Sam. x. 1-5) was rather that of our heralds than of our ambassadors. It may have been owing, in some degree, to the proximity of all the nations with which the Israelites had intercourse, that their ambassadors were intrusted with few if any discretionary powers, and could not go beyond the letter of their instructions. In general their duty was limited to the

delivering of a message and the receiving of an answer; and if this answer was such as required a rejoinder, they returned for fresh instructions, unless they had been authorized how to act or speak in case such an answer should be given.

The largest act performed by ambassadors appears to have been the treaty of alliance contracted with the Gibeonites (Josh. ix.), who were supposed to have come from 'a far country;' and the treaty which they contracted was in agreement with the instructions with which they professed to be furnished. In allowing for the effect of proximity, it must be remembered that the ancient ambassadors of other nations, even to countries distant from their own, generally adhered to the letter of their instructions, and were reluctant to act on their own discretion. Generals of armies must not, however, be confounded with ambassadors in this respect.—J. K.

AMBER. [CHASML.]

AMBIDEXTER, one who can use the left hand as well as the right, or, more literally, one whose hands are both right hands. It was long supposed that both hands are naturally equal, and that the preference of the right hand, and comparative incapacity of the left, are the result of education and habit. But it is now known that the difference is really physical (see Bell's *Bridgewater Treatise on the Hand*), and that the ambidexterous condition of the hands is *not* a natural development.

The capacity of equal action with both hands was highly prized in ancient times, especially in war. Among the Hebrews this quality seems to have been most common in the tribe of Benjamin, as all the persons noticed as being endowed with it were of that tribe. By comparing Judg. iii. 15, xx. 16, with 1 Chron. xii. 2, we may gather that the persons mentioned in the two former texts as 'left-handed,' were really ambidexters. In the latter text we learn that the Benjamites who joined David at Ziklag were 'mighty men, helpers of the war. They were armed with bows, and could use both the right hand and the left in hurling [slinging] and shooting arrows out of a bow.' There were thirty of them; and as they appear to have been all of one family, it might almost seem as if the greater commonness of this power among the Benjamites arose from its being a hereditary peculiarity of certain families in that tribe. It may also partly have been the result of cultivation; for although the left hand is not naturally an equally strong and ready instrument as the right hand, it may doubtless be often rendered such by early and suitable training.

AMBROSE (AMBROSIUS), Bishop of Milan, was born about the year 340, as is commonly believed, at Treves, where his father held the office of 'Præfectus prætorio Galliarum.' He was trained for what we should now call a diplomatic career, but whilst engaged in this he was suddenly called by the unanimous and vehement voice of the people of Milan to be their bishop. He occupied that see for twenty-three years, and died A. D. 397, on the 4th of April. His writings are numerous, and several collections of them have been printed. The best is that of the Benedictines, Par. 1686-90, 2 vols. fol. His exegetical works embrace an exposition of the Gospel according to St. Luke (August. 1476 fol.), and commentaries on portions of the Psalms. His homiletical work on the history of the Creation

(*In Hexaëmeron Libri Sex*, first ed. printed by John Schubler, August. 1472) may also be ranked among his exegetical labours. He belongs to the allegorical and mystical school of interpreters. Proceeding on the principle that there are more senses than one in each passage, he seeks to find mysteries in the plainest historical narrative, and spiritual truths in the most simple statement of facts. In this he goes beyond even Origen; and fully deserves the censure which Jerome utters of him, 'in verbis ludens,' though one does not exactly see the propriety of what follows, 'in sentiis dormitans,' for Ambrose is anything but a sleepy writer, unless it means merely that he was careless as to ascertaining the true meaning of the passage.—W. L. A.

AMBROSIASTER or PSEUDAMBROSIUS, the name given to the unknown author of the *Commentaria in xii. epistolas Pauli*, in the second volume of the Benedictine edition of the works of Ambrose, Bishop of Milan. Of his person and history nothing is known. From his saying of the Church at Rome 'cujus rector hodie est Damasus' (on 1 Tim. iii. 15), it is concluded that he must have written some time between 366-384, which was the period of Damasus's episcopate, Augustine (*Cont. duas epp. Pelagii*), quotes a brief passage which is found in this commentary, and says it is from Hilary, which has led some to conclude that the author was the deacon of this name under Damasus; but the passage is one which might occur in *any* commentary, and as Augustine calls the Hilary from whom he quotes 'sanctus,' it is not probable that he refers to the Hilary who was deacon under Damasus because he passed over to the heresy of the Luciferians. The work is so much of a compilation that nothing certain can be argued from the style of it, except the strong probability that it is not the production of Ambrose. In all the higher qualities of a commentary it is superior to what we have from him.—W. L. A.

AMBUSCADE and AMBUSH, in military phraseology, are terms used promiscuously, though it is understood that the first more properly applies to the act, and the second to the locality, of a stratagem which consists mainly in the concealment of an army, or of a detachment, where the enemy, if he ventures, in ignorance of the measure, within the sphere of its action, is suddenly taken at a disadvantage, and liable to be totally defeated. The principles which must guide the contrivers of an ambushade have been nearly the same in all ages; embracing concealment from the observation of an enemy so as to create no suspicion; a position of advantage in case of being attacked by superior forces, and having the means of retreating, as well as of issuing forth to attack, without impediment, when the proper moment is arrived. The example of Joshua at the capture of Ai shews the art to have been practised among the Jews on the best possible principles. The failure of a first attempt was sure to produce increased confidence in the assailed, who, being the armed, but not disciplined, inhabitants of a strong place, were likely not to be under the control of much caution. Joshua, encamping within sight, but with a valley intervening, when he came up to make a false attack, necessarily appeared to disadvantage, the enemy being above him, and his retreat towards his own camp rendered difficult by its being likewise above him on the

other side, and both sides no doubt very steep, as they are in general in the hills of these parts. His men therefore fled, as directed, not towards the north, where the camp was, but eastward, towards the plain and desert; while in the hills, not behind, but on the west side, lay the ambuscade, in sufficient force alone to vanquish the enemy. This body of Israelites had not therefore the objectionable route to take from behind the city, a movement that must have been seen from the walls, and would have given time to close the gates, if not to warn the citizens back; but, rising from the woody hills, it had the shortest distance to pass over to come down directly to the gate; and, if an accident had caused failure in the army of Joshua, the detachment could not itself be intercepted before reaching the camp of the main body; while the citizens of Ai, pursuing down hill, had little chance of returning up to the gates in time, or of being in a condition to make an effectual onset. This example, as a military operation, may be cited as perfect in all its details. In the attempt to surprise Shechem (Judg. ix. 30, *sqq.*) the operation, so far as it was a military manoeuvre, was unskilfully laid, although ultimately successful in consequence of the party spirit within, and the intelligence which Abimelech maintained in the fortress.—C. H. S.

AMEN (אָמֵן; New Test. Ἀμήν). This word is strictly an adjective, signifying 'firm,' and metaphorically, 'faithful.' Thus in Rev. iii. 14, our Lord is called 'the *amen*, the faithful and true witness.' In Is. lxxv. 16, the Heb. has 'the God of amen,' which our version renders 'the God of truth,' i. e., of *fidelity*. In its adverbial sense amen means *certainly, truly, surely*. It is used in the beginning of a sentence by way of emphasis—rarely in the Old Test. (Jer. xxviii. 6), but often by our Saviour in the New, where it is commonly translated 'verily.' In John's gospel alone it is often used by him in this way, double, i. e., 'verily, verily.' In the end of a sentence it often occurs singly or repeated, especially at the end of hymns or prayers, as 'amen and amen' (Ps. xli. 14; lxxii. 19; lxxxix. 53). The proper signification of it in this position is to confirm the words which have preceded, and invoke the fulfilment of them: 'so be it,' *fiat*; Sept. γένοιτο. Hence in oaths, after the priest has repeated the words of the covenant or imprecation, all those who pronounce the amen bind themselves by the oath (Num. v. 22; Deut. xxvii. 15, 17; Neh. v. 13; viii. 6; 1 Chron. xvi. 36; comp. Ps. cvi. 48).—J. K.

AM ENDE, JOHANN GOTHFRIED, D. D., superintendent at Neustadt, on the Orla, was born at Voigtsberg in 1752, and died 17th February 1821. He published *Pauli Ep. ad Philipp. Gr. ex recensione Griesbachiana, nova versione Lat., et annotatione perpetua illustrata*. Wittemb. 1798, 8vo.—W. L. A.

AMI (אָמִי; Sept. Ἠμεῖ), one of the servants of Solomon (Ezr. ii. 57). In Neh. vii. 59 he is called Amon, of which Gesenius says Ami seems to be a corrupted form.—W. L. A.

AMINADAB [more correctly AMMINADAB] (אֲמִינָדָב, *famulus principis*; Sept. Ἀμινάδαβ). I. One of the ancestors of David and of Christ (Matt. i. 4). He was the son of Aram, and the father of

Naasson, and of Elisheba, who became the wife of Aaron (Exod. vi. 23).

[2. A person summoned by David to aid in bringing the ark to its place (1 Chron. xv. 11-12). He was the chief of the sons of Uzziel of the family of the Kohathites (ver. 10).

3. In 1 Chron. vi. 22 (7), the son of Kohath is called Amminadab, whilst elsewhere he is called Izhar. These may have been two names of the same man, but more probably, as Amminadab (1) was the father-in-law of Aaron, the grandson of Kohath, and the nephew of Izhar, the transcriber, in casting his eye over the lists may have confounded the two.]

4. In Cant. vi. 12. The chariots of this Amminadab are mentioned as proverbial for their swiftness. Of himself we know nothing more than what is here glanced at, from which he appears to have been, like Jehu, one of the most celebrated charioteers of his day. In many MSS. the Hebrew term is divided into two words עָמִי נָדִיב, *Amminadib*; in which case, instead of the name of a person, it means 'of my willing' or 'loyal people.' This division has been followed in the Syriac, by the Jews in the Spanish version, and by many modern translators; but, taken in this way, it is difficult to assign any satisfactory meaning to the passage. See Good's *Song of Songs*, note on vi. 12. [Heiligstedt (ap. Maurer, *Comment. Crit.* in loc.) renders thus: 'Nescivi, anima mea posuit me inter currus populi mei nobilissimi' and thus explains it, 'inopinato translata me sensi inter currus popularium meorum nobilium.']

AMIR (אָמִיר; Sept. ἐπ' ἄκρου μετεώρου in Is. xvii. 6, and οἱ Ἀμορῆται in ver. 9; Vulg. *summitate rami*; Auth. Vers. 'uppermost bough'). The word occurs only in Is. xvii. 6, 9. It has been usual to derive it from the Arabic أمير, and to take its signification from امير, which means a general, or Emir, and hence, in the present text, the higher or upper branches of a tree. Gesenius admits that this interpretation is unsatisfactory;

48.

and Lee, who regards it as very fanciful, endeavours (Lex. *in voce*) to establish that it denotes the caul or sheath in which the fruit of the date-palm is enveloped. According to this view he translates the verse thus: 'Two or three berries in the head (or upper part) of the caul (or pod, properly sheath), four or five in its fissures.' On this he remarks: 'סעי' signifies any fissure, and is also applied to those of rocks. If, therefore, the word אמיר signifies this caul or pod, the word סעי' in the following context, applies well to its opening, but is quite unintelligible in any other sense.' This is at least ingenious; and if it be admitted as a sound interpretation of a passage confessedly difficult, this text is to be regarded as affording the only scriptural allusion to the fact that the fruit of the date-palm is, during its growth, contained in a sheath, which rends as the fruit ripens, and at

first partially, and afterwards more fully, exposes its precious contents. [TAMAR.]

AMITTAI (אַמִּיתַי, true; Sept. Ἀμαθι), the father of the prophet Jonah (2 Kings xiv. 25; Jon. i. 1). This is the same name as the N. T. Ματθαῖος or Matthew; Syr. ܐܡܝܬܝܐ.—W. L. A.

AMMAH (אַמָּה, Sept. Ἀμμάν), the name of a hill in front of Giach, at which night overtook Joab in his pursuit of Abner (2 Sam. ii. 24). The Vulg. renders it *acqua ductilis*, with which Aquila and Theodotion agree. The Syriac has ܐܡܡܐ, *the sea*. This would seem to indicate that these translators had some different reading in the MSS. they used (perhaps ܐܡ), and that by them Ammah was understood of the watercourse of which נַיִח was probably the fountain. Robinson found an 'excavated fountain' near Gibeon; but this, though it may account for the term *Giach* (which means the breaking forth as of a fountain), in no wise helps to account for the rendering given of Ammah by the translators above mentioned.—W. L. A.

AMMAN. [RABBAH.]

AMMIEL (עַמְיִיל, *servant of God*; Sept. Ἀμμιήλ), the father of Bathsheba (1 Chron. iii. 5), called also (2 Sam. ii. 3) אֱלִיאִם, Eliam, by the transposition of the first and last syllables.

AMMON. [AMON; THEBES.]

AMMONITES (עַמּוֹנִים, בְּנֵי עַמּוֹן; Sept. ἄμμων, Ἀμμωνῖται), the descendants of the younger son of Lot (Gen. xix. 38). They originally occupied a tract of country east of the Amorites, and separated from the Moabites by the river Arnon. It was previously in the possession of a gigantic race called Zamzummins (Deut. ii. 20), 'but the Lord destroyed them before the Ammonites, and they succeeded them and dwelt in their stead.' The Israelites, on reaching the borders of the Promised Land, were commanded not to molest the children of Ammon, for the sake of their progenitor Lot. But, though thus preserved from the annoyance which the passage of such an immense host through their country might have occasioned, they shewed them no hospitality or kindness; they were therefore prohibited from 'entering the congregation of the Lord' (*i. e.*, from being admitted into the civil community of the Israelites) 'to the tenth generation for ever' (Deut. xxiii. 3). This is evidently intended to be a perpetual prohibition, and was so understood by Nehemiah (Neh. xiii. 1). The first mention of their active hostility against Israel occurs in Judges iii. 13: 'The king of Moab gathered unto him the children of Ammon and Amalek, and went and smote Israel.' About 140 years later we are informed that the children of Israel forsook Jehovah and served the gods of various nations, including those of the children of Ammon, 'and the anger of Jehovah was hot against them, and he sold them into the hands of the Philistines and of the children of Ammon' (Judg. x. 7). The Ammonites crossed over the Jordan, and fought with Judah, Benjamin, and Ephraim, so that 'Israel was sore distressed.' In answer to Jephthah's messengers (Judg. xi. 12), the king of Ammon charged the Israelites with having taken away that part of his territories which lay

between the rivers Arnon and Jabbok, which, in Joshua xiii. 25, is called 'half the land of the children of Ammon,' but was in the possession of the Amorites when the Israelites invaded it; and this fact was urged by Jephthah, in order to prove that the charge was ill-founded. Jephthah 'smote them from Aroer to Minnith, even twenty cities, with a very great slaughter' (Judg. xi. 33; Joseph. *Antiq.* v. 7). The Ammonites were again signally defeated by Saul (B. C. 1095) (1 Sam. xi. 11), and, according to Josephus, their king Nahash was slain (*Antiq.* vi. 5). His successor, who bore the same name, was a friend of David, and died some years after his accession to the throne. In consequence of the gross insult offered to David's ambassadors by his son Hanun (2 Sam. x. 4; Joseph. *Antiq.* vii. 6), a war ensued, in which the Ammonites were defeated, and their allies the Syrians were so daunted 'that they feared to help the children of Ammon any more' (2 Sam. x. 19). In the following year David took their metropolis, Rabbah, and great abundance of spoil, which is probably mentioned by anticipation in 2 Sam. viii. 12 (2 Sam. x. 14; xii. 26-31; Joseph. *Antiq.* vii. 7). In the reign of Jehoshaphat (B. C. 896) the Ammonites joined with the Moabites and other tribes belonging to Mount Seir,* to invade Judah; but, by the divine intervention, were led to destroy one another. Jehoshaphat and his people were three days in gathering the spoil (2 Chron. xx. 25). The Ammonites 'gave gifts' to Uzziah (2 Chron. xxvi. 8), and paid a tribute to his son Jotham for three successive years, consisting of 100 talents of silver, 10,000 measures of wheat, and as many of barley (2 Chron. xxvii. 5). When the two and a half tribes were carried away captive, the Ammonites took possession of the towns belonging to the tribe of Gad (Jerem. xlix. 1). 'Bands of the children of Ammon' and of other nations came up with Nebuchadnezzar against Jerusalem (B. C. 607), and joined in exulting over its fall (Ezek. xxv. 3, 6). Yet they allowed some of the fugitive Jews to take refuge among them, and even to intermarry (Jer. xl. 11; Neh. xiii. 23). On the return of the Jews from Babylon the Ammonites manifested their ancient hostility by deriding and opposing the rebuilding of Jerusalem (Neh. iv. 3, 7, 8). Both Ezra and Nehemiah expressed vehement in-

* In 2 Chron. xx. 1, it is said, 'It came to pass after this also, that the children of Moab and the children of Ammon, and with them [other] beside the Ammonites, came against Jehoshaphat to battle.' Auth. Vers. מְבַרְכִים would be correctly translated 'part (or some) of the Ammonites,' as in Exod. xvii. 5, מְבַרְכֵי, 'some of the elders'; 2 Sam. xi. 17; Gen. xxxiii. 15, מְבַרְכֵי, 'some of the people.' But as the children of Ammon had already been mentioned, a doubt arises as to the correctness of the present reading. As the inhabitants of Mount Seir are joined with the Moabites and Ammonites, in verses 10, 22, 23, possibly the word מְבַרְכִים, 'some of the Edomites,' stood in the original text, or, by a slight transposition of two letters, we may read מְבַרְכֵינוּם, 'some of the Mehunims;' Sept. ἐκ τῶν Μωαβιτῶν, a tribe mentioned in 2 Chron. xxvi. 7, ἐπὶ τοῖς Μωαβιτοῖς. In the 8th verse, for 'the Ammonites gave gifts,' the Sept. reads ἐδωκαν οἱ Μωαβίτοι δῶρα; v. Maurer, *Comment. Grammat. Crit. in Vet. Test.*, Lips. 1835, i. 240. [Berthele on *Chronicles*, Edin. 1857.]

dignation against those Jews who had intermarried with the heathen, and thus transgressed the divine command (Deut. vii. 3; Ezra x. ; Neh. xiii. 25). Judas Maccabæus (B.C. 164) fought many battles with the Ammonites, and took Jazer with the towns belonging to it: (1 Mac. v. 6-18). Justin Martyr affirms that in his time the Ammonites were numerous: Ἄμμωνίων ἔστι νῦν πολὺ πλῆθος (*Dial. cum Tryph.* § 119). Origen speaks of their country under the general denomination of Arabia. Josephus says that the Moabites and Ammonites were inhabitants of Coele-Syria (*Antiq.* i. 11, § 5).

Their national idol was Moloch or Milcom [MOLOCH], whose worship was introduced among the Israelites by the Ammonitish wives of Solomon (1 Kings xi. 5, 7); and the high places built by that sovereign for this 'abomination' were not destroyed till the reign of Josiah (B.C. 622) (2 Kings xxiii. 13).

Besides Nahash and Hanun, an Ammonitish king Baalis (בעלים; Sept. Βελεισά and Βελισά) is mentioned by Jeremiah (xl. 14). Sixteen manuscripts read בעלים, Baalim; and Josephus Βαάλειμ (*Antiq.* x. 9, § 3).

In the writings of the prophets terrible denunciations are uttered against the Ammonites on account of their rancorous hostility to the people of Israel; and the destruction of their metropolis, Rabbah, is distinctly foretold (Zeph. ii. 8; Jer. xlix. 1-6; Ezek. xxv. 1-5, 10; Amos i. 13-15). [RABBAH.]—J. E. R.

AMNON (אֲמֹנִים, *faithful*), the eldest son of David, by Ahinoam of Jezreel. He was born at Hebron about B.C. 1056. He is only known for his atrocious conduct towards his half-sister Tamar, which her full-brother Absalom revenged two years after, by causing him to be assassinated while a guest at his table, in B.C. 1032 (2 Sam. xiii.) [ABSALOM.] [Another Amnon, son of Shimon, is mentioned 1 Chron. iv. 20.]

AMOMUM (ἄμμωνον). This word occurs only in Rev. xviii. 13, where it is omitted in the received text, and consequently does not appear in the A. V. The ancients seem to have applied the term ἄμμωνον to every odour which was pure and sweet (Salmasius *ad Solin.* p. 284); but the term was also specifically applied to an unguent which was pressed from the berry of a shrub of the same name (Plin. *Hist. Nat.* xii. 13; Theophrast. *Hist. Plant.* ix. 7; Dioscor. i. 14). This ointment was used for the hair (Ovid. *Heroid.* xxi. 166; Sil. Ital. x. 402; Martial, *Epig.* vii. 77, etc.).—W. L. A.

AMON (אֲמֹן, Jer. xlv. 25) is the name of an Egyptian god, in whom the classical writers unanimously recognise their own Zeus and Jupiter. The primitive seat of his worship appears to have been at Mercé, from which it descended to Thebes, and thence, according to Herodotus (ii. 54), was transmitted to the Oasis of Siwah and to Dodona; in all which places there were celebrated oracles of this god. His chief temple and oracle in Egypt, however, were at Thebes, a city peculiarly consecrated to him, and which is probably meant by the No and No Amon of the prophets. He is generally represented on Egyptian monuments by the seated figure of a man with a ram's head, or by that of an entire ram, and of a blue colour. In honour of him, the inhabitants of the Thebaid abstained from the flesh of sheep, but they annually sacrificed a ram to him and dressed his image in the hide. A

religious reason for that ceremony is assigned by Herodotus (ii. 42); but Diodorus (iii. 72) ascribes his wearing horns to a more trivial cause. There appears to be no account of the manner in which his oracular responses were given; but as a sculpture at Qarnâq, which Creuzer has copied from the *Description d'Égypte*, represents his portable tabernacle mounted on a boat and borne on the shoulders

49.

of forty priests, it may be conjectured, from the resemblance between several features of that representation and the description of the oracle of Jupiter Ammon in Diodorus, xvii. 50, that his responses were communicated by some indication during the solemn transportation of his tabernacle.

As for the power which was worshipped under the form of Amon, Macrobius asserts (*Saturnal.* i. 21) that the Libyans adored the setting sun under that of their Ammon; but he points to the connection between the ram's horns of the god and Aries in the Zodiac. Jablonski, however, has endeavoured to shew that Amon represented the sun at the vernal equinox (*Pantheon*, i. 165, *sqq.*) This again has been questioned by Jomard (in the *Descript. d'Égypte*), who maintains that the ancient vernal equinox was in Taurus, and considers Amon to denote the overflow of the Nile at the autumnal equinox. The precise ground of this objection is not apparent; for the Egyptian year was movable, and in every 119 years the vernal equinox must have fallen in a different sign of the Zodiac (Ideler, *Handbuch der Chronologie*, i. 94). But Creuzer (*Symbolik*, ii. 205) still adheres to Jablonski's opinion; and the fact that Amon bears some relation to the sun seems placed beyond doubt by enchorial inscriptions, in which *Amon Ra* is found, *Ra* meaning sun (Kosegarten, *De Prisca Egyptiorum Literatura*, p. 31). F. S. de Schmidt also, in his essay *De Zodiaci Origine Egyptia*, p. 33, *sqq.* (inserted in his *Opuscula quibus Res Egyptiaca illustrantur*, Carlsruhe, 1765), endeavours by other arguments to prove the connection between Amon and Aries. In doing this he points out the coincidence of the festival of Amon, and of the sacrifice of the ram, with the period and with the kind of offering of the Jewish Passover, as if the appointment of the Paschal lamb was in part intended to separate the Jews more entirely from the Egyptians. For this he not only cites the passage of Tacitus, *caso arietis velut in contumeliam Hammoris* (*Hist.* v. 4), but adduces an extract to

the same effect from Rabbi Abrah. Seba; Bähr, however (in his *Symbolik des Mosaischen Cultus*, ii. 641), when objecting to Baur's attempt to draw a similar parallel between the festival of Amon and the Passover, justly remarks that the Hebrew text, besides allowing the Paschal offering to be a *kid*, always distinguishes between a male lamb and a *ram*, and that the latter is not the sacrifice of the Passover (*Ibid.* p. 296).

The etymology of the name is obscure. Eustathius says that, according to some, the word means *shepherd*. Jablonski proposed an etymology by which it would signify *producing light*; and Champollion, in his latest interpretation, assigned it the sense of *hidden*. There is little doubt that the pointed Hebrew text correctly represents the Egyptian name of the god, and, besides what may be gathered from the forms of the name in the classical writers, Kosegarten argues that the enchorial Amn was pronounced Amon, because names in which it forms a part are so written in Greek, as Ἀμοραιοσύνη. Moreover, Ἀμῶν and Ἀμούν are found in Iamblicus and Plutarch; and the latter expressly says that the Greeks changed the native name into Ἀμμων.

There is no reason to doubt that the name of this god really occurs in the passage, 'Behold, I will visit Amon of No,' in Jer. xlv. 25. The context and all internal grounds are in favour of this view. The Sept. has rendered it by Ἀμμῶν, as it has also called No, in Ezek. xxx. 14, Δύσσορος. The Peshito likewise takes it as a proper name, as אַמּוֹן does not exist in Syriac in the signification which it bears as a pure Hebrew word. The Targum of Jonathan and the Vulgate, however, have rendered the passage 'the multitude of Alexandria;' taking אַמּוֹן to mean 'multitude,' perhaps because, in Ezek. xxx. 15, we read הַמּוֹן, which does bear that sense. Nevertheless, modern scholars are more disposed to emend the latter reading by the former, and to find Amon, the Egyptian god, in both places.—J. N. [Wilkinson, *Anc. Egyptians*, 2d ser. i. 243.]

AMON (אַמּוֹן, *artificer*; Sept. Ἀμῶν and Ἀμῶν). 1. The son of Manasseh, and fourteenth king of Judah, who began to reign B.C. 644, and reigned two years. He appears to have derived little benefit from the instructive example which the sin, punishment, and repentance of his father offered; for he restored idolatry, and again set up the images which Manasseh had cast down. He was assassinated in a court conspiracy; but the people put the regicides to death, and raised to the throne his son Josiah, then but eight years old (2 Kings xxi. 19-26; 2 Chron. xxxiii. 21-25).

[2. The governor of Jerusalem in the time of Ahab (1 Kings xxii. 26; 2 Chron. xviii. 25). 3. AMI.]

AMORITES (הַאֲמֹרִי; Sept. Ἀμορῆαιοι, the descendants of one of the sons of Canaan: אֲמֹרִי; Sept. τὸν Ἀμορῆαῖον; Auth. Vers. the Emorite), the most powerful and distinguished of the Canaanitish nations. We find them first noticed in Gen. xiv. 7.—'the Amorites that dwell in Hazezon-tamar,' חֲצִנְזַן תְּמָר, *the cutting of the palm-tree*, afterwards called Engedi, עֵיִן גִּדִי, *fountain of the kid*, a city in the wilderness of Judæa not far from the Dead Sea. In the promise to Abraham (Gen. xv. 21), the Amorites are specified as one of the

nations whose country would be given to his posterity. But at that time three confederates of the patriarch belonged to this tribe; Mamre, Aner, and Eschol (Gen. xiv. 13, 24). When the Israelites were about to enter the promised land, the Amorites occupied a tract on both sides of the Jordan. That part of their territories which lay to the east of the Jordan was allotted to the tribes of Reuben, Gad, and half the tribe of Manasseh. They were under two kings—Sihon, king of Heshbon (frequently called king of the Amorites), and Og, king of Bashan, who 'dwelt at Ashtaroth [and] in [at] Edrei,' בְּעִשְׁתָּרֹת בְּאֲדֵרַי (Deut. i. 4, compared with Josh. xii. 4; xiii. 12). Before hostilities commenced messengers were sent to Sihon, requesting permission to pass through his land; but Sihon refused, and came to Jahaz and fought with Israel; and Israel smote him with the edge of the sword, and possessed his land from Arnon (Modjeb) unto Jabbok (Zerka) (Num. xxi. 24). Og also gave battle to the Israelites at Edrei, and was totally defeated. After the capture of Ai, five kings of the Amorites, whose dominions lay within the allotment of the tribe of Judah, leagued together to wreak vengeance on the Gibeonites for having made a separate peace with the invaders. Joshua, on being apprised of their design, marched to Gibeon and defeated them with great slaughter (Josh. x. 10). Another confederacy was shortly after formed on a still larger scale; the associated forces are described as 'much people, even as the sand upon the sea-shore in multitude, with horses and chariots very many' (Josh. xi. 4). Josephus says that they consisted of 300,000 armed foot-soldiers, 10,000 cavalry, and 20,000 chariots (*Antiq.* v. 1, 18). Joshua came suddenly upon them by the waters of Merom (the lake Samachonitis of Josephus, *Antiq.* v. 1, 17, and the modern Bahrat-al-Huleh), and Israel smote them until they left none remaining (Josh. xi. 8, 7). Still, after their severe defeats, the Amorites, by means of their war-chariots and cavalry, confined the Danites to the hills, and would not suffer them to settle in the plains: they even succeeded in retaining possession of some of the mountainous parts. 'The Amorites

would (יֹאמַר) *obstinaverunt se*, J. H. Michaelis) dwell in Mount Heres in Aijalon, and in Shaalbim, yet the hand of the house of Joseph prevailed, so that they became tributaries. And the coast of the Amorites was from the *going up to Akkrabbim*,

מַעְלֵה עֲקָרְבִים (*the steep of Scorpions*) from the rock and upwards' (Judg. i. 34-36). It is mentioned as an extraordinary circumstance that in the days of Samuel there was peace between Israel and the Amorites (1 Sam. vii. 14). In Solomon's reign a tribute of bond-service was levied on the remnant of the Amorites and other Canaanitish nations (1 Kings ix. 21; 2 Chron. viii. 8).

A discrepancy has been supposed to exist between Deut. i. 44, and Num. xiv. 45, since in the former the *Amorites* are said to have attacked the Israelites, and in the latter the *Amalekites*; the obvious explanation is, that in the first passage the Amalekites are not mentioned, and the Amorites stand for the Canaanites in the second passage. From the language of Amos (ii. 9) it has been inferred that the Amorites in general were of extraordinary stature, but perhaps the allusion is to an individual, Og, king of Bashan, who is described by Moses as being the last 'of the remnant of the

giants' (Deut. iii. 11). The Gibeonites in Josh. ix. 7, are called *Hivites*, yet in 2 Sam. xxi. 2, are said to be 'of the remnant of the *Amorites*,' probably because they were descended from a common stock, and were subject to an Amoritish prince.' (See *Journal of Sacred Literature*, April 1852, and January 1853).—J. E. R.

I. AMOS (עֲמוֹס, Ἀμώς), *carried, or a burden*;

one of the twelve minor prophets, and a contemporary of Isaiah and Hosea. Gesenius conjectures that the name may be of Egyptian origin, and the same as Amasis or Amosis, which means *son of the moon* (v. Gesenii *Thesaur. s. v. עֲמוֹס* and מִשְׁעָה). He was a native of Tekoah, about six miles S. of Bethlehem, inhabited chiefly by shepherds, to which class he belonged, being also a dresser of sycamore-trees. Though some critics have supposed that he was a native of the kingdom of Israel, and took refuge in Tekoah when persecuted by Amaziah; yet a comparison of the passages Amos i. 1; vii. 14, with Amaziah's language vii. 12, leads us to believe that he was born and brought up in that place. The period during which he filled the prophetic office was of short duration, unless we suppose that he uttered other predictions which are not recorded. It is stated expressly that he prophesied in the days of Uzziah, king of Judah, and in the days of Jeroboam, the son of Joash, king of Israel, two years before the earthquake (Amos i. 1). As Jeroboam died in the fifteenth year of Uzziah's reign, this earthquake, to which there is an allusion in Zechariah (xiv. 5), could not have happened later than the seventeenth year of Uzziah. Josephus indeed (*Antiq.* ix. 10, 4) and some other Jewish writers represent the earthquake as a mark of the divine displeasure against Uzziah (in addition to his leprosy) for usurping the priest's office. This, however, would not agree with the sacred narrative, which informs us that Jotham, his son, acted as regent during the remainder of his reign, was twenty-five years old when he became his successor, and consequently was not born till the twenty-seventh year of his father's reign. As Uzziah and Jeroboam were contemporaries for about fourteen years, from B. C. 798 to 784, the latter of these dates will mark the period when Amos prophesied.

In several of the early Christian writers, Amos the prophet is confounded with Amoz (אֲמוֹז), the father of Isaiah. Thus Clement of Alexandria (*Strom.* i. 21, § 118), *προφητεύουσι δὲ ἐπ' αὐτοῦ Ἀμώς καὶ Ἰσαΐας ὁ υἱὸς αὐτοῦ*; this mistake arose from their ignorance of Hebrew, and from the name Ἀμώς being applied to both in the Septuagint. In our Authorized Version the names are, as above, correctly distinguished, though, strange to say, some commentators have asserted that the two individuals are named alike.

When Amos received his commission, the kingdom of Israel, which had been 'cut short' by Hazael (2 Kings x. 32) towards the close of Jehu's reign, was restored to its ancient limits and splendour by Jeroboam the Second (2 Kings xiv. 25). But the restoration of national prosperity was followed by the prevalence of luxury, licentiousness, and oppression, to an extent that again provoked the divine displeasure, and Amos was called from the sheep-folds to be the harbinger of the coming judgments. Not that his commission was limited entirely to Israel. The thunder-storm (as Rückert poetically expresses it) rolls over all the surround-

ing kingdoms touches Judah in its progress, and at length settles upon Israel. Chap. i.; ii. 1-5, form a solemn prelude to the main subject; nation after nation is summoned to judgment, in each instance with the striking idiomatic expression (similar to that in Proverbs xxx. 15, 18, 21, and to the *τρίς καὶ τετρακίς, the terque quaterque* of the Greek and Roman poets), 'For three transgressions—and for four—I will not turn away the punishment thereof.' Israel is then addressed in the same style, and in chap. iii. (after a brief rebuke of the twelve tribes collectively) its degenerate state is strikingly portrayed, and the denunciations of divine justice are intermingled, like repeated thunder-claps, to the end of chap. vi. The seventh and eighth chapters contain various symbolical visions with a brief historical episode (vii. 10-17). In the ninth chapter the majesty of Jehovah and the terrors of his justice are set forth with a sublimity of diction which rivals and partly copies that of the royal Psalmist (comp. vers. 2, 3, with Ps. cxxxix., and ver. 6 with Ps. civ.) Towards the close the scene brightens, and from the eleventh verse to the end the promises of the divine mercy and returning favour to the chosen race are exhibited in imagery of great beauty taken from rural life.

The allusions in the writings of this prophet are numerous and varied; they refer to natural objects, as in iii. 4, 8; iv. 7, 9; v. 8; vi. 12; ix. 3; to historical events, i. 9, 11, 13; ii. 1; iv. 11; v. 26; to agricultural or pastoral employments and occurrences, i. 3; ii. 13; iii. 5, 12; iv. 2, 9; v. 19; vii. 1; ix. 9, 13, 15; and to national institutions and customs, ii. 8; iii. 15; iv. 4; v. 21; vi. 4-6, 10; viii. 5, 10, 14.

Some peculiar expressions occur; such as 'cleanness of teeth,' a parallelism to 'want of bread,' iv. 6. 'Excellency of Jacob,' vi. 8; viii. 7; also Psalm xlvii. 5; Nah. ii. 3. 'The high places of Isaac,' vii. 9; 'the house of Isaac,' vii. 16. 'He that creteth the wind,' iv. 13. In the orthography there are a few peculiarities, as מִתְעַב מִתְעַב, vi. 8; בְּשִׁסְסֵם בְּשִׁסְסֵם, v. 11; יִשְׁחַךְ for יִצְחַךְ (found also in Ps. cv., and Jerem. xxxiii.)

The evidence afforded by the writings of this prophet that the existing religious institutions both of Judah and Israel (with the exception of the corruptions introduced by Jeroboam) were framed according to the rules prescribed in the Pentateuch, and the argument hence arising for the genuineness of the Mosaic records, are exhibited very lucidly by Dr. Hengstenberg in the second part of his *Beiträge zur Einleitung ins Alte Testament* (Contributions to an Introduction to the Old Testament)—*Die Authentie des Pentateuches* (The Authenticity of the Pentateuch), i. p. 83-125.

The canonicity of the book of Amos is amply supported both by Jewish and Christian authorities. Philo, Josephus, and the Talmud include it among the minor prophets. It is also in the catalogues of Melito, Jerome, and the 60th canon of the Council of Laodicea. Justin Martyr in his *Dialogue with Trypho* (§ 22), quotes a considerable part of the 5th and 6th chapters, which he introduces by saying, *ἀκούσατε πῶς περὶ τούτων λέγει διὰ Ἀμώς ἐνός τῶν δώδεκα*—'Hear how he speaks concerning these by Amos, one of the twelve.' There are two quotations from it in the New Testament: the first (v. 25, 26) by the proto-martyr Stephen, Acts vii. 42; the second (ix. 11) by the apostle James, Acts xv. 16.—J. E. R.

2. AMOS, son of Nahum and father of Mattathias, known only from being named in our Lord's genealogy as given by Luke, iii. 25.

AMOSIS, an Egyptian monarch, the founder of the eighteenth dynasty, who ascended the throne in B.C. 1575. The period of his accession, and the change which then took place in the reigning family, strongly confirm the opinion of his being the 'new king who knew not Joseph' Exod. i. 8). [EGYPT.]

AMOZ (אַמּוֹז, *strong*) the father of the prophet Isaiah. (2 Kings xix. 2, 20; xx. 1; 2 Chron. xxxvi. 22; xxxii. 20, 32; Is. i. 1; ii. 1; xiii. 1; xx. 2.)

AMPHIPOLIS (Ἀμφίπολις), a city of Greece, through which Paul and Silas passed on their way from Philippi to Thessalonica (Acts xvii. 1). It was situated on the left bank of the river Strymon, just below its egress from the lake Kerkine (now Takino), and about three miles above its influx into the sea. This situation upon the banks of a navigable river, a short distance from the sea, with the vicinity of the woods of Kerkine, and the gold-mines of Mount Pangæus, rendered Amphipolis a place of much importance, and an object of contest between the Thracians, Athenians, Lacedæmonians, and Macedonians, to whom it successively belonged. It has long been in ruins; and a village of about one hundred houses, called *Jeni-keni*, or *New Town*, now occupies part of its site. The Romans made it a free city, and the capital of the first of the four districts into which they divided Macedonia.—J. K.

AMRAM, son of Kohath, of the tribe of Levi. He married his father's sister Jochebed, by whom he had Aaron, Miriam, and Moses. He died in Egypt, at the age of 137 years (Exod. vi. 18, 20).

AMRAPHEL, king of Shinar, one of the four kings who invaded Palestine in the time of Abraham (Gen. xiv. 1, 2, sq.) [ABRAHAM; CHEDOR-LOAMER.]

AMULET (probably from the Arabic *حصاة* *a pendant*; Is. iii. 20, לְחֹשֶׁם; Talm. קַמְעוֹת). From the earliest ages the Orientals have believed in the influences of the stars, in spells, witchcraft, and the malign power of the evil eye; and to protect themselves against the maladies and other evils which such influences were supposed to occasion, almost all the ancient nations wore amulets (Plin. *Hist. Nat.* xxx. 15). These amulets consisted, and still consist, chiefly of tickets inscribed with sacred sentences (Shaw, i. 365; Lane's *Mod. Egypt.* ii. 365), and of certain stones (comp. Plin. *Hist. Nat.* xxxvii. 12, 34) or pieces of metal (Richardson, *Dissertation*; D'Arvieux, iii. 208; Chardin, i. 243, sqq.; iii. 205, sqq.; Niebuhr, i. 65; ii. 162). Not only were persons thus protected, but even houses were, as they still are, guarded from supposed malign influences by certain holy inscriptions upon the doors.

The previous existence of these customs is implied in the attempt of Moses to turn them to becoming uses, by directing that certain passages extracted from the law should be employed (Exod. xiii. 9, 16; Deut. vi. 8; xi. 18). The door-schedules being noticed elsewhere [MEZUZOTH], we here limit our attention to personal amulets. By this religious appropriation the then all-pervading tendency to idolatry were in this matter

obviated, although in later times, when the tendency to idolatry had passed away, such written scrolls degenerated into instruments of superstition.

50. 1. Modern Oriental. 2, 3, 4, 5. Ancient Egyptian.

The לְחֹשֶׁם of Is. iii. 20 (Sept. *περιδέξια*; Vulg. *inaures*; Auth. Vers. *earrings*), it is now allowed, denote *amulets*, although they served also the purpose of ornament. They were probably precious stones, or small plates of gold or silver, with sentences of the law or magic formulæ inscribed on them, and worn in the ears, or suspended by a chain round the neck. 'Earrings' is not perhaps a bad

51. Egyptian Ring and Earring Amulets.

translation. It is certain that earrings were sometimes used in this way as instruments of superstition, and that at a very early period, as in Gen. xxxv. 4, where Jacob takes away the earrings of his people along with their false gods. Earrings, with strange figures and characters, are still used as charms in the East (Chardin, in Harmer, iii. 314). Augustin speaks strongly against earrings that was worn as amulets in his time *Epist.* 75.

ad Pos.) Schroeder, however, deduces from the Arabic that these amulets were in the form of serpents, and similar probably to those golden amulets of the same form which the women of the pagan Arabs wore suspended between their breasts, the use of which was interdicted by Mohammed (Schroeder, *De Vestitu Mulierum*, cap. xi. pp. 172, 173; Grotefend, art. *Amulette*, in Ersch and Gruber's *Encyclop.*; Rosenmüller, *ad Isa.* iii. 20; Gesenius, *ad eund.*; and in his *Thesaurus*, art. לְרִשָׁה).

That these *lechashim* were charms inscribed on silver and gold was the opinion of Aben Ezra. The Arabic has *boxes of amulets*, manifestly concluding that they were similar to those ornamental little cases for written charms which are still used by Arab women. This is represented in the first figure of cut I. Amulets of this kind are called *hhegab*, and are specially adapted to protect and preserve those written charms, on which the Moslems, as did the Jews, chiefly rely. The writing is covered with waxed cloth, and enclosed in a case of thin embossed gold or silver, which is attached to a silk string, or a chain, and generally hung on the right side, above the girdle, the string or chain being passed over the left shoulder. In the specimen here figured there are three of these *hhegab* attached to one string. The square one in the middle is almost an inch thick, and contains a folded paper; the others contain scrolls. Amulets of this shape, or of a triangular form, are worn by women and children; and those of the latter shape are often attached to children's head-dress (Lane's *Modern Egyptians*, ii. 365).

The superstitions connected with amulets grew to a great height in the later periods of the Jewish history. 'There was hardly any people in the whole world,' says Lightfoot (*Hor. Hebr. ad Matt.* xxiv. 24), 'that more used or were more fond of amulets, charms, mutterings, exorcisms, and all kinds of enchantments. . . . The amulets were either little roots hung about the neck of sick persons, or, what was more common, bits of paper (and parchment), with words written on them, whereby it was supposed that diseases were either driven away or cured. They wore such amulets all the week, but were forbidden to go abroad with them on the Sabbath, unless they were 'approved amulets,' that is, were prescribed by a person who knew that at least three persons had been cured by the same means. In these amulets mysterious names and characters were occasionally employed, in lieu of extracts from the law. One of the most usual of

these was the cabalistic hexagonal figure known as 'the shield of David' and 'the seal of Solomon' (Bartolocc. *Bibliotheca Rabbinica*, i. 576; Lake-

macher, *Observatt. Philol.* ii. 143, 597). The reputation of the Jews was so well established in this respect, that even in Arabia, before the time of Mohammed, men applied to them when they needed charms of peculiar virtue (*Mischat-ul-Masabih*, ii. 377).—J. K.

AMYRAUT or AMYRALDUS, MOÏSE, a Protestant theologian of great versatility both with tongue and pen, was born at Bourgueil, in Anjou, in September 1596, and died 8th January 1664. Having studied at Saumur, under Cameron, he published, together with Louis Cappel and Josué de la Place, the *Theses Salmurienses*. His writings are chiefly theological and polemical, but some of an exegetical character also proceeded from his ready pen. The most important of these is his *Paraphr. in Psalmos Davidis una cum annot. et argumentis*, Salmur, 1662, 4to, cum præf. Jac. Cremer, Utr. 1769, 4to (best edition). He wrote also Paraphrases on John, the Acts, and most of the Epistles in French. He was a man of genius and much learning, but it is chiefly as a theologian that he commands notice.

ANAB (עֲנַב), one of the cities in the mountains of Judah, from which Joshua expelled the Anakim (Josh. xi. 21; xv. 50). From Main (the Maon of Scripture) Dr. Robinson (*Researches*, ii. 195) observed a place of this name, distinguished by a small tower.—J. K.

ANAH (עֲנָה; Sept. 'Ανά), son of Zibeon the Hivite, and father of Esau's wife Aholibamah (Gen. xxxvi. 24). While feeding asses in the desert he discovered 'warm springs' (*acqua calda*), as the original עֲנַיִם is rendered by Jerome, who states that the word had still this signification in the Punic language. Gesenius and most modern critics think this interpretation correct, supported as it is by the fact that warm springs are still found in the region east of the Dead Sea. The Syriac has simply 'waters,' which Dr. Lee seems to prefer. Most of the Greek translators retain the original as a proper name 'Iaqeliu, probably not venturing to translate. The Samaritan text, followed by the Targums, has 'Emims,' *giants*. Our version of 'mules' is now generally abandoned, but is supported by the Arabic and Veneto-Greek versions.—J. K.

ANAK (עֲנַק, עֲנֹק, Josh. xxi. 11). The son of Arba, and progenitor of a race of Canaanites remarkable for their gigantic stature. [ANAKIM.] Gesenius identifies the word with עֲנַק *to adorn with a collar*, qu. *long-necked*. But these were strong men, and a long neck is not a source of strength. If the word is the same as עֲנַק it is more likely to mean *thick-neck* than *long-neck*. So Fürst: 'is cujus cervix est valida, ampla.'—W. L. A.

ANAKAH (עֲנַקָּה, Sept. $\mu\upsilon\gamma\alpha\lambda\eta$; Vulg, *Mus avaneus*). In the A. V. this is translated *ferret* (Lev. xi. 30) an error into which the translators were betrayed by the Vulgate and the LXX. The word is derived from עֲנַק, to shriek or utter a sharp shrill cry; and is referred by Bochart to a species of lizard (*Elievoz*. Bk. iv. c. 2). 'There is no reason for admitting the verb עֲנַק *anak*, to groan, to cry out, as radical for the name of the ferret, an animal totally unconnected with the preceding and succeeding species in Lev. xi. 29, 30, and originally

found, so far as we know, only in Western Africa, and thence conveyed to Spain, prowling noiselessly, and beaten to death without a groan, though capable of a feeble, short scream when at play, or when suddenly wounded. Taking the interpretation 'to cry out,' so little applicable to ferrets, in conjunction with the whole verse, we find the *gecko*, like all the species of this group of lizards, remarkable for the loud grating noise which it is apt to utter in the roofs and walls of houses all the night through: one, indeed, is sufficient to dispel the sleep of a whole family. The particular species most probably meant is the *lacerta gecko* of Hasselquist, the *gecko lobatus* of Geoffroy, distinguished by having the soles of the feet dilated and striated like oven fans, from whence a poisonous ichor is said to exude, inflaming the human skin, and infecting food that may have been trod upon by the animal. Hence the Arabic name of *abu-burs*, or 'father leprosy,' at Cairo. The species extends northwards in Syria; but it may be doubted whether the *gecko fascicularis*, or *tarentola*, of South-Eastern Europe be not also an inhabitant of Palestine.—C. H. S.

ANAKIM (אֲנָקִים), or BENEI-ANAK (בְּנֵי־אֲנָק) and BENEI-ANAKIM (בְּנֵי־אֲנָקִים), a wandering nation of southern Canaan, descended from Anak, whose name it bore (Josh. xi. 21). It was composed of three tribes, descended from and named after the three sons of Anak—Ahiman, Sesai, and Talmai. When the Israelites invaded Canaan, the Anakim were in possession of Hebron, Debir, Anab, and other towns in the country of the south. Their formidable stature and appearance alarmed the Hebrew spies; but they were eventually overcome and expelled by Caleb, when the remnant of the race took refuge among the Philistines (Num. xiii. 33; Deut. ix. 2; Josh. xi. 21; xiv. 12; Judg. i. 20). This favours the opinion of those who conclude that the Anakim were a tribe of Cushite wanderers from Babel, and of the same race as the Philistines, the Phœnicians, the Philitim, and the Egyptian shepherd-kings.—J. K.

ANAMME'LECH (אֲנַמְמֵ־לֶחַךְ, 2 Kings xvii. 31) is mentioned, together with Adrammelech, as a god of the people of Sepharvaim, who colonized Samaria. He was also worshipped by the sacrifice of children by fire. No satisfactory etymology of the name has been discovered. Hyde (*Rel. Vet. Persar.* p. 128) considers the first part of the word to be the Aramæan אֲנַם or אֲנָם *sheep*, and the latter to be *king* (although, from his rendering the compound *Pecus Rex*, it is not at all clear in what relation he considered the two elements to stand to each other). He takes the whole to refer to the constellation Cepheus, or to that part of it in which are the stars called by the Arabs the shepherd and the sheep (*ar Rê' wal Ganam*), which Ulug Beg terms the stars of the flock (*Kawakib ul Firq*). This theory is erroneously stated both by Gesenius and Winer (by the former in his *Thesaurus*, and by the latter in his *Realwörterbuch*), who make out that the constellation Cepheus itself is called by the Arabs the shepherd and his sheep. Hyde certainly does not say so; and al Qazwîni (in Ideler's *Untersuchungen über die Sternnamen*, p. 42) expressly assigns the name of 'the shepherd' to the star in the left foot of Cepheus; that of 'the sheep' (*al Agnâm*, as he calls it) to those between his feet; and that of 'the flock' to the one on his right shoulder. The most

that can be said of Hyde's theory is, that it is not incompatible with the astrology of the Assyrians. Gesenius, in the etymology he proposes, considers the first part of the name to be the Arabic *ganam* 'image,' with a change of ʔ into ʕ, which is not unusual in Aramaic (see Ewald's *Hebr. Grammar*, §. 106). The latest etymology proposed is that by Benfey (*Monatsnamen einiger alter Völker*, p. 188), who suggests that the first part of the word may be an abbreviation of the name of the Persian goddess *Anahit*, or of that of the Ized *Aniran*. The same obscurity prevails as to the form under which the god was worshipped. The Babylonian Talmud states that his image had the figure of a horse; but Kimchi says that of a pheasant, or quail (Carpov's *Apparatus*, p. 516).—J. N.

ANANIAS (Ἀνανίας; Heb. אֲנָנְיָהּ or אֲנָנְיָהוּ). 1. Son of Nebedæus, was made high-priest in the time of the procurator Tiberius Alexander, about A. D. 47, by Herod, king of Chalcis, who for this purpose removed Joseph, son of Camydus, from the high-priesthood (Joseph. *Antiq.* xx. 5, 2). He held the office also under the procurator Cumanus, who succeeded Tiberius Alexander. Being implicated in the quarrels of the Jews and Samaritans, Ananias was, at the instance of the latter (who, being dissatisfied with the conduct of Cumanus, appealed to Ummidius Quadratus, president of Syria), sent in bonds to Rome, to answer for his conduct before Claudius Cæsar. The emperor decided in favour of the accused party. Ananias appears to have returned with credit, and to have remained in his priesthood until Agrippa gave his office to Ismael, the son of Fabi (*Antiq.* xx. 7, 8), who succeeded a short time before the departure of the procurator Felix, and occupied the station also under his successor Festus. Ananias, after retiring from his high-priesthood, 'increased in glory every day' (*Antiq.* xx. 9, 2), and obtained favour with the citizens, and with Albinus, the Roman procurator, by a lavish use of the great wealth he had hoarded. His prosperity met with a dark and painful termination. The assassins (*sicarii*), who played so fearful a part in the Jewish war, set fire to his house in the commencement of it, and compelled him to seek refuge by concealment; but being discovered in an aqueduct, he was captured and slain (*Antiq.* xx. 9, 2; *Bell. Jud.* ii. 17, 6, 69).

It was this Ananias before whom Paul was brought, in the procuratorship of Felix (Acts xxiii.) The noble declaration of the apostle, 'I have lived in all good conscience before God until this day,' so displeased him, that he commanded the attendant to smite him on the face. Indignant at so unprovoked an insult, the apostle replied, 'God shall smite thee, thou whitened wall: a threat which the previous details serve to prove wants not evidence of having taken effect. Paul, however, immediately restrained his anger, and allowed that he owed respect to the office which Ananias bore. After this hearing Paul was sent to Cæsarea, whither Ananias repaired, in order to lay a formal charge against him before Felix, who postponed the matter, detaining the apostle meanwhile, and placing him under the supervision of a Roman centurion (Acts xxiv.)

2. A Christian belonging to the infant church at Jerusalem, who, conspiring with his wife Sapphira to deceive and defraud the brethren, was overtaken by sudden death, and immediately buried.

The members of the Jerusalem church had agreed to hold their property in common, for the furtherance of the holy work in which they were engaged, and hence if any one of them withheld a part, and offered the remainder as the whole, he committed two offences—he defrauded the church, and was guilty of falsehood. This Ananias did, and as his act related not to secular but to religious affairs, and had an injurious bearing, both as an example and as a positive transgression against the Gospel while it was yet struggling into existence, he lied not unto man, but unto God, and was guilty of a sin of the deepest dye. Had he chosen to keep his property for his own worldly purposes, he was at liberty, as Peter intimates, so to do; but he had in fact alienated it to pious purposes, and it was therefore no longer his own. Yet he wished to deal with it in part as if it were so, shewing at the same time that he was conscious of his misdeed, by presenting the residue to the common treasury as if it had been his entire property. He wished to satisfy his selfish cravings, and at the same time to enjoy the reputation of being purely disinterested, like the rest of the church. He attempted to serve God and Mammon. The original, ἐνοσφίταρο, is much more expressive of the nature of his misdeed than our common version, 'kept back' (part of the price). The Vulgate renders it 'fraudavit'; and both Wiclif and the Rheims version employ a corresponding term, 'defraudid,' 'defrauded.' In the only other text of the New Testament where the word is found (Tit. ii. 10), it is translated 'purloining.' It is, indeed, properly applied to the conduct of persons who appropriate to their own purposes money destined for public uses.*

It is the more important to place the crime of Ananias and his wife in its true light, because unjust reflections have been cast upon the apostle Peter (*Wolfenb. Fragm. Zueck Jesu*, p. 256) for his conduct in the case. Whatever that conduct may have been, the misdeed was of no trivial kind, either in itself or in its possible consequences. If, then, Peter reproves it with warmth, he does no more than nature and duty alike required; nor does there appear in his language on the occasion any undue or uncalled for severity. He sets forth the crime in its naked heinousness, and leaves judgment in the hands of Him to whom judgment belongs.

With strange inconsistency on the part of those who deny miracles altogether, unbelievers have accused Peter of cruelly smiting Ananias and his wife with instant death. The sacred narrative, however, ascribes to Peter nothing more than a spirited exposure of their aggravated offence. Their death, the reader is left to infer, was by the hand of God; nor is any ground afforded in the narrative (Acts v. 1-11) for holding that Peter was in any way employed as an immediate instrument of the miracle.

* [The crime for which Ananias suffered lay in his offering to the apostles as the whole, what was only a part of the price he had received for his lands. He thus lied to the Holy Ghost, inasmuch as he lied to those whom the Holy Ghost had inspired, thereby treating the claims of the apostles to supernatural knowledge as false. It was needful that so daring an impeachment of claims on which the whole church rested should be instantly and condignly punished.]

That the death of these evil-doers was miraculous seems to be implied in the record of the transaction, and has been the general opinion of the church. An attempt, however (Amrhn. *Krit. Journ. d. Theol. Lit.* i. 249), has been made to explain the fact by the supposition of apoplexy, caused by the shame and disgrace with which the guilty pair were suddenly overwhelmed at the detection of their baseness. If such an hypothesis might account for the death of Ananias, it could scarcely suffice to explain that of his wife also; for that two persons should be thus taken off by the same physical cause is, in the circumstances, in the highest degree improbable. A mathematical calculation of the doctrine of chances in the case would furnish the best exposure of this anti-supernatural explanation.

The view now given may serve also to shew how erroneous is the interpretation of those who, like Tertullian, have maintained that the words of Peter were a species of excommunication which the chief of the apostles fulminated against Ananias and his wife.

3. A Christian of Damascus (Acts ix. 10; xxii. 12), held in high repute, to whom the Lord appeared in a vision, and bade him proceed to 'the street which is called Straight, and inquire in the house of Judas for one called Saul of Tarsus: for, behold he prayeth.' Ananias had difficulty in giving credence to the message, remembering how much evil Paul had done to the saints at Jerusalem, and knowing that he had come to Damascus with authority to lay waste the church of Christ there. Receiving, however, an assurance that the persecutor had been converted, and called to the work of preaching the Gospel to the Gentiles, Ananias went to Paul, and, putting his hands on him, bade him receive his sight, when immediately there fell from his eyes as it had been scales; and, recovering the sight which he had lost when the Lord appeared to him on his way to Damascus, Paul, the new convert, arose, and was baptized, and preached Jesus Christ.

Tradition represents Ananias as the first that published the Gospel in Damascus, over which place he was subsequently made bishop; but, having roused, by his zeal, the hatred of the Jews, he was seized by them, scourged, and finally stoned to death in his own church.—J. R. B.

ANAPHA (אָנָפָה); Sept. *χαράδριβς*; Vulg. *caradryon* and *caradrium*; Eng. Vers. heron, Lev. xi. 19, and Deut. xiv. 18), an unclean bird, but the particular bird denoted by the Hebrew word has been much disputed. The kite, woodcock, curlew, peacock, parrot, crane, lapwing, and several others have been suggested. Since the word occurs but twice, and in both instances is isolated, no aid can be derived from a comparison of passages.

Recourse has consequently been had to etymology. The root *anaph* signifies to breathe, to snort, especially from *anger*, and thence, figuratively, *to be angry*. Parkhurst observes that 'as the heron is remarkable for its *angry* disposition, especially when *hurt* or *wounded*, this bird seems to be most probably intended.' But this equally applies to a great number of different species of birds. Bochart supposes it may mean the *mountain falcon*, called *ἀνοραία* by Homer (*Odys.* i. 320), because of the similarity of the Greek word to the Hebrew. But if it meant *any* kind of eagle

or hawk, it would probably have been reckoned with one or other of those species mentioned in the preceding verses. Perhaps, under all the circumstances, the *traditional* meaning is most likely to be correct, which it will now be attempted to trace.

The Septuagint renders the Hebrew word by *χαράδιος*. Jerome, who, though professing to translate from the Hebrew, was no doubt well acquainted with the Septuagint, adhered to the same word in a Latin form, *caradryon* and *caradrium*. The Greek and Roman writers, from the earliest antiquity, refer to a bird which they call charadrius. It is particularly described by Aristotle (*Hist. An.* vii. 7), and by Ælian (*Hist. An.* xv. 26). The latter naturalist derives its name from *χαράδρα*, a hollow or chasm, especially one which contains water, because, he says, the bird frequents such places. It is, moreover, certain, that by the Romans the charadrius was also called icterus, which signifies the jaundice, from a notion that patients affected with that disease were cured by looking at this bird, which was of a yellow colour (Pliny, xxxiv; Cœl. Aurel. iii. 5), and by the Greeks, *χλωρίων*; and in allusion to the same fabulous notion, *ικτερος* (Aristotle, *Hist. An.* ix. 13, 15, and 22; Ælian, *Hist. An.* iv. 47). These writers concur in describing a bird, sometimes of a yellow colour, remarkable for its voracity (from which circumstance arose the phrase *χαράδιος βίος*, applied to a glutton), migratory, inhabiting watery places, and especially mountain torrents and valleys.

Now, it is certain that the name charadrius has been applied by ornithologists to the same species of birds from ancient times down to the present age. Linnæus, under Order iv. (consisting of waders or shore birds), places the genus Charadrius; in which he includes all the numerous species of plovers. The ancient accounts may be advantageously compared with the following description of the genus from Mr. Selby's *British Ornithology*, ii. 230: 'The members of this genus are numerous, and possess a wide geographical distribution: species being found in every quarter of the globe. They visit the east about April. Some of them, during the greater part of the year, are the inhabitants of open districts and wide wastes, frequenting both dry and moist situations, and only retire toward the coasts during the severity of winter. Others are continually resident upon the banks and about the mouths of rivers (particularly where the shore consists of small gravel or shingle). They live on worms, insects, and their larvæ. The flesh of many that live on the coasts is unpalatable.'

The same writer describes one 'species, charadrius pluvialis, called the golden plover from its colour,' and mentions the well-known fact that this species, in the course of moulting, turns completely black. Analogous facts respecting the charadrius have been established by observations in every part of the globe, viz., that they are gregarious and migratory. The habits of the majority are littoral. They obtain their food along the banks of rivers and the shores of lakes; 'like the gulls, they beat the moist soil with their pattering feet, to terrify the incumbent worms, yet are often found in deserts, in green and sedgy meadows, or on upland moors.' Their food consists chiefly of mice, worms, caterpillars, insects, toads, and frogs;

which of course places them among the class of birds ceremonially unclean.

On the whole, the preponderance of evidence derived from an unbroken chain of well-ascertained facts, seems in favour of the conclusion that the Hebrew word *anapha* designates the numerous species of the plover (may not this be the genus of birds alluded to as the fowls of the mountain, Ps. i. 11; Isa. xviii. 6?). Various species of the genus are known in Syria and Palestine, as the *C. pluvialis*

53. Charadrius pluvialis—winter plumage

(golden plover, of which a figure is here given), *C. adicenus* (stone-curlew), and *C. spinosus* (lapping). (Kitto's *Physical Hist. of Palestine*, p. 106.) And, in connection with some of the preceding remarks, it is important to observe that in these species a yellow colour is more or less marked.—J. F. D.

ANATHEMA (*ἀνάθεμα*), literally anything laid up or suspended (from *ἀνατίθημι*, to lay up), and hence anything laid up in a temple, set apart as sacred. In this general sense the form employed is *ἀνάθημα*, a word of not unfrequent occurrence in Greek classic authors, and found once in the N. T., Luke xxi. 5. The form *ἀνάθεμα*, as well as its meaning, appears to be peculiar to the Hellenistic dialect (Valckenaer, *Schol.* tom. i. p. 593). The distinction has probably arisen from the special use made of the word by the Greek Jews. In the Septuagint, *ἀνάθεμα* is the ordinary rendering of the Hebrew word *חרם*, *cherem* (although in some instances it varies between the two forms, as in Lev. xxvii. 28, 29), and in order to ascertain its meaning it will be necessary to inquire into the signification of this word.

We find that the *חרם* was a person or thing consecrated or devoted irrevocably to God, and that it differed from anything merely vowed or sanctified to the Lord in this respect, that the latter could be redeemed (Lev. xxvii. 1-27), whilst the former was irreclaimable (Lev. xxvii. 21, 28): hence, in reference to living creatures, the devoted thing, whether man or beast, must be put to death (Lev. xxvii. 29). The prominent idea, therefore, which the word conveyed was that of a person or thing devoted to destruction, or accursed. Thus the cities of the Canaanites were anathematized (Num. xxi. 2, 3), and after their complete destruction the name of the place was called Hormah (*הרמה*; Sept. *ἀνάθεμα*). Thus, again the city of Jericho was made an anathema to the Lord (Josh. vi. 17), that is, every living thing in it (except Rahab and her family) was devoted to death; that which could be destroyed by fire was burnt, and all that could not be thus consumed (as gold and silver) was for ever alienated

from man and devoted to the use of the sanctuary (Josh. vi. 24). The prominence thus given to the idea of a *thing accursed* led naturally to the use of the word in cases where there was no reference whatever to consecration to the service of God, as in Deut. vii. 26, where an idol is called **הָרֵם**, or *ἀνάθεμα*, and the Israelites are warned against idolatry lest they should be anathema like it. In these instances the term denotes the object of the curse, but it is sometimes used to designate the curse itself (e. g., Deut. xx. 17, Sept.; comp. Acts xxiii. 14), and it is in this latter sense that the English word is generally employed.

In this sense, also, the Jews of later times use the Hebrew term, though with a somewhat different meaning as to the curse intended. The **הָרֵם** of the Rabbins signifies excommunication or exclusion from the Jewish church. The more recent Rabbinical writers reckon three kinds or degrees of excommunication, all of which are occasionally designated by the generic term **הָרֵם** (Elias Levita, in *Sepher Tisbi*). The first of these, **נָרִי**, is merely a temporary separation or suspension from ecclesiastical privileges, involving, however, various civil inconveniences, particularly seclusion from society to the distance of four cubits. The person thus excommunicated was not debarred entering the temple, but instead of going in on the right hand, as was customary, he was obliged to enter on the left, the usual way of departure: if he died whilst in this condition there was no mourning for him, but a stone was thrown on his coffin to indicate that he was separated from the people and had deserved stoning. Buxtorf (*Lex. Chald. Talm. et Rabbin.*, col. 1304) enumerates twenty-four causes of this kind of excommunication: it lasted thirty days and was pronounced without a curse. If the individual did not repent at the expiration of the term (which, however, according to Buxtorf, was extended in such cases to sixty or ninety days), the second kind of excommunication was resorted to. This was called simply and more properly **הָרֵם**. It could only be pronounced by an assembly of at least ten persons, and was always accompanied with curses. The formula employed is given at length by Buxtorf (*Lex.* col. 828). A person thus excommunicated was cut off from all religious and social privileges: it was unlawful either to eat or drink with him (compare I Cor. v. 11). The curse could be dissolved, however, by three common persons, or by one person of dignity. If the excommunicated person still continued impenitent, a yet more severe sentence was, according to the later Rabbins, pronounced against him, which was termed **שִׁמְרָה** (Elias Levita, in *Tisbi*). It is described as a complete excommunication from the church and the giving up of the individual to the judgment of God and to final perdition. There is, however, reason to believe that these three grades are of recent origin. The Talmudists frequently use the terms by which the first and last are designated interchangeably, and some Rabbinical writers (whom Lightfoot has followed in his *Horæ Hebr. et Talm.*, ad I Cor. v. 5) consider the last to be a lower grade than the second; yet it is probable that the classification rests on the fact that the sentence was more or less severe according to the circumstances of the case; and though we cannot expect to find the three grades distinctly marked in the writings of the N. T., we may not improbably consider the phrase *ἀποσυνάγωγον ποιῆν*, John xvi.

2 (comp. ix. 22; xii. 42), as referring to a lighter censure than is intended by one or more of the three terms used in Luke vi. 22, where perhaps different grades are intimated. The phrase *παράδοῦναι τῷ σατανᾷ* (I Cor. v. 5; I Tim. i. 20) has been by many commentators understood to refer to the most severe kind of excommunication. Even admitting the allusion, however, there is a very important difference between the Jewish censure and the formula employed by the apostle. In the Jewish sense it would signify the delivering over of the transgressor to final perdition, whilst the apostle expressly limits his sentence to the destruction of the flesh' (i. e., the depraved nature), and resorts to it in order 'that the spirit may be saved in the day of the Lord Jesus.'

But whatever diversity of opinion there may be as to the degrees of excommunication, it is on all hands admitted that the term **הָרֵם**, with which we are more particularly concerned as the equivalent of the Greek *ἀνάθεμα*, properly denotes, in its Rabbinical use, an excommunication accompanied with the most severe curses and denunciations of evil. We are therefore prepared to find that the *anathema* of the N. T. always implies execration; but it yet remains to be ascertained whether it is ever used to designate a judicial act of excommunication. That there is frequently no such reference is very clear: in some instances the individual denounces the anathema on himself, unless certain conditions are fulfilled. The noun and its corresponding verb are thus used in Acts xxiii. 12, 14, 21, and the verb occurs with a similar meaning in Matt. xxvi. 74; Mark xiv. 71. The phrase 'to call Jesus anathema' (I Cor. xii. 3) refers not to a judicial sentence pronounced by the Jewish authorities, but to the act of any private individual who execrated him and pronounced him accursed. That this was a common practice among the Jews appears from the Rabbinical writings. The term, as it is used in reference to any who should preach another gospel 'Let him be anathema' (Gal. i. 8, 9), has the same meaning as, let him be accounted execrable and accursed. In none of these instances do we find any reason to think that the word was employed to designate specifically and technically excommunication either from the Jewish or the Christian church. There remain only two passages in which the word occurs in the N. T., both presenting considerable difficulty to the interpreter. With regard to the first of these (Rom. ix. 3) Grotius and others understand the phrase *ἀνάθεμα εἶναι ἀπὸ τοῦ Χριστοῦ* to signify excommunication from the Christian church, whilst most of the fathers, together with Tholuck, Rückert, and a great number of modern interpreters, explain the term as referring to the Jewish practice of excommunication. On the other hand, Deyling, Olshausen, De Wette, and many more, adopt the more general meaning of accursed. The great difficulty is to ascertain the extent of the evil which Paul expresses his willingness to undergo; Chrysostom, Calvin, and many others understand it to include final separation, not indeed from the love, but from the presence of Christ; others limit it to a violent death; and others, again, explain it as meaning the same kind of curse as that under which the Jews then were, from which they might be delivered by repentance and the reception of the Gospel (Deyling, *Observat. Sacrae*, P. II. p. 495 and sqq.) It would occupy too much space to

refer to other interpretations of the passage, or to pursue the investigation of it further. There seems, however, little reason to suppose that a judicial act of the Christian church is intended, and we may remark that much of the difficulty which commentators have felt seems to have arisen from their not keeping in mind that the Apostle does not speak of his wish as a possible thing, and their consequently pursuing to all its results what should be regarded simply as an expression of the most intense desire.*

The phrase *ἀνάθεμα μαρὰν ἀθῶ* (1 Cor. xvi. 22) has been considered by many to be equivalent to the *מנתש* of the Rabbins, the most severe form of excommunication. This opinion is derived from the supposed etymological identity of the Syriac phrase *מרת ארת*, 'the Lord cometh,' with the Hebrew word which is considered by these commentators to be derived from *ארת שש*, 'the Name (i. e., Jehovah) cometh.' This explanation, however, can rank no higher than a plausible conjecture, since it is supported by no historical evidence. The Hebrew term is never found thus divided, nor is it ever thus explained by Jewish writers, who, on the contrary, give etymologies different from this (Buxtorf, *Lex.* col. 2466). It is moreover very uncertain whether this third kind of excommunication was in use in the time of Paul; and the phrase which he employs is not found in any Rabbinical writer (Lightfoot, *Horæ Hebr. et Talm.*, on 1 Cor. xvi. 22†). The literal meaning of the words is clear, but it is not easy to understand why the Syriac phrase is here employed, or what is its meaning in connection with anathema. Lightfoot supposes that the Apostle uses it to signify that he pronounced this anathema against the Jews. However this may be, the supposition that the anathema, whatever be its precise object, is intended to designate excommunication from the Christian church, as Grotius and Augustine understand it, appears to rest on very slight grounds: it seems preferable to regard it, with Lightfoot, Olshausen, and most other commentators, as simply an expression of detestation. Though, however, we find little or no evidence of the use of the word anathema in the N. T. as the technical term for excommunication, it is certain that it obtained this meaning in the early ages of the church; for it is thus employed in the apostolic canons, in the canons of various councils, by Chrysostom, Theodoret, and other Greek fathers (Suicer, *Thesaurus Eccl.* sub vocc. *ἀνάθεμα ἀφορισμός*).—F. W. G.

ANATHOTH (*ענתות*; Sept. *Ἀναθῶθ*), one of the towns belonging to the priests in the tribe of Benjamin, and as such a city of refuge (Josh. xxi. 18; Jer. i. 1). It occurs also in 2 Sam. xxiii. 27; Ezra ii. 23; Neh. vii. 27; but is chiefly memorable

* [*ἡνυχομένη*, optabam, verbum imperfecti temporis vim potentialem vel conditionalem, *si Christus annuerit*, involvens,] Bengel. Meyer prefers as the suppressed condition, 'if the content of the wish could accrue to the benefit of the Israelites.' Comp. Alford in loc.]

† Augusti (*Handbuch der Christl. Archäol.* vol. iii. p. 11) has fallen into a strange mistake in appealing to Buxtorf and Lightfoot in support of this interpretation: the former speaks very doubtfully on the subject, and the express object of the latter is to controvert it.

as the birthplace and usual residence of the prophet Jeremiah (Jer. i. 1; xi. 21-23; xxix. 27). Jerome, who refers to it more than once (*De loc. Hebr. s. v.*; in *Hierem. Praefat.*; *Comment. in Hier. i. 1*) places Anathoth three Roman miles north of Jerusalem, which correspond with the twenty stadia assigned by Josephus (*Antiq. x. 7, 3*). Robinson appears to have discovered this place in the present village of *Anata*, at the distance of an hour and a quarter from Jerusalem. It is seated on a broad ridge of hills, and commands an extensive view of the eastern slope of the mountainous tract of Benjamin; including also the valley of the Jordan, and the northern part of the Dead Sea. It seems to have been once a walled town and a place of strength. Portions of the wall still remain, built of large hewn stones, and apparently ancient, as are also the foundations of some of the houses. It is now a small and very poor village. From the vicinity a favourite kind of building-stone is carried to Jerusalem. Troops of donkeys are met with employed in this service, a hewn stone being slung on each side; the larger stones are transported on camels (Robinson, *Researches*, ii. 109; Raumer's *Palästina*, p. 169; Thomson, *Land and Book*, ii. 548).—J. K.

ANCHOR. [SHIP.]

ANDERSON, CHRISTOPHER, a Baptist minister at Edinburgh, was born 19th Feb. 1782 and died 18th Feb. 1852. He wrote *Annals of the English Bible*, 2 vols. 8vo, Lond. 1845, the fullest and most exact account we possess of the authorized version and of those by which it was preceded in this country.—W. L. A.

ANDERSON, ROBERT, a clergyman of the Church of England at Brighton, was born in 1793 and died 22d March 1853. He was the author of *A Practical Exposition of St. Paul's Epistle to the Romans*, 12mo, Lond. 1835, and *Discourses on the Lord's Prayer*. These works are good specimens of homiletical exposition, but they possess no critical or exegetical importance.—W. L. A.

ANDREAS, Bishop of Cæsarea in Cappadocia, author of a work on the Revelation. Of this writer little is known. Only two ancient authors mention him by name, Arethas one of his successors at Cæsarea, and John Patriarch of Antioch; but of the former of these himself the date is uncertain, and the latter cannot be placed higher than the year 1090. As Andreas speaks of 'the times of the Arians' (*τοῖς καιροῖς τῶν Ἀρειανῶν*) as past and matter of history when he wrote, he cannot have written before the middle of the fifth century; and there are several reasons for believing that he did not write later than A. D. 500, of which the most conclusive is, that though he eagerly seeks in the persons and events surrounding him fulfilments of the Apocalyptic predictions, he does not allude to a single person or event later than the end of the fifth century. As the succession of bishops in Cappadocia can be traced down to the year 460; it is between this and 500 that Andreas must be placed. His work on the Revelation is a catena from Gregory and Cyrill, with additions from Papias, Irenæus, Methodius and Hippolytus. His expositions are of an allegorical and mystical cast; but though his work is of no great worth exegetically it is of some importance as bearing on the canonicity of the Apocalypse. It is printed in the edition of

Chrysostom's works by Fronto Ducaeus, Frankf. 1723, vol. ii. p. 574-719; and separately, edited by Sylburgius and with a Latin translation by Theodoros Peltanus, from the Commeline press 1596.—W. L. A.

ANDREW ('Ανδρέας), one of the twelve apostles. His name is of Greek origin, but was in use amongst the Jews, as appears from a passage quoted from the Jerusalem Talmud by Lightfoot (*Harmony*, Luke v. 10). He was a native of the city of Bethsaida in Galilee, and brother of Simon Peter. He was at first a disciple of John the Baptist, and was led to receive Jesus as the Messiah in consequence of John's expressly pointing him out as 'the Lamb of God' (John i. 36). His first care, after he had satisfied himself as to the validity of the claims of Jesus, was to bring to him his brother Simon. Neither of them, however, became at that time a stated attendant on our Lord; for we find that they were still pursuing their occupation of fishermen on the sea of Galilee when Jesus, after John's imprisonment, called them to follow him (Mark i. 14, 18). Very little is related of Andrew by any of the evangelists: the principal incidents in which his name occurs during the life of Christ are, the feeding of the five thousand (John vi. 8); his introducing to our Lord certain Greeks who desired to see him (John xii. 22); and his asking, along with his brother Simon and the two sons of Zebedee, for a further explanation of what our Lord had said in reference to the destruction of the temple (Mark xiii. 3). Of his subsequent history and labours we have no authentic record. Tradition assigns Scythia (Euseb. iii. 1), Greece (Theodoret, i. 1425), and Thrace (Niceph. ii. 39) as the scenes of his ministry: he is said to have suffered crucifixion at Patræ in Achaia, on a cross of the form called *Cross decussata* (X), and commonly known as 'St. Andrew's cross' (Winer's *Bib. Realwörterbuch*, *sub voce*). His relics, it is said, were afterwards removed from Patræ to Constantinople. An apocryphal book, bearing the title of 'The Acts of Andrew,' is mentioned by Eusebius, Epiphanius, and others. It is now completely lost, and seems never to have been received except by some heretical sects, as the Encratites, Origenians, etc. This book, as well as a 'Gospel of St. Andrew,' was declared apocryphal by the decree of Pope Gelasius (Jones, *On the Canon*, vol. i. p. 179 and *sqq.*). [ACTS, SPURIOUS; GOSPELS, SPURIOUS.]—F. W. G.

ANDREW, JAMES, LL.D., was born at Aberdeen in 1773; and was the first head master of the East India College at Addiscombe. He died at Edinburgh in 1833. He wrote a *Hebrew Dictionary and Grammar without points*, 8vo Lond. 1823, and *A Key to Scripture Chronology*, 8vo, Lond. 1822.

ANDRONICUS ('Ανδρονίκος). 1. The regent-governor of Antioch in the absence of Antiochus Epiphanes, who, at the instigation of Menelaus, put to death the deposed high priest Onias; for which deed he was himself ignominiously slain on the return of Antiochus (2 Macc. iv.) B.C. 169. [ONIAS.]

2. The Governor left by Antiochus in Garizim (2 Macc. v. 23).

3. A Jewish Christian, the kinsman and fellow-prisoner of Paul (Rom. xvi. 7).

ANEM (עַנִּים), a city of Issachar (1 Chron. vi. 58 (73)). It is called *En Gannim* Josh. xix. 21; xxi. 29.

ANER (עַנִּי; Sept. *Αινάρι*). 1. A Canaanitish chief in the neighbourhood of Hebron, who, together with Eschol and Mamre, joined his forces with those of Abraham in pursuit of Chedorlaomer and his allies, who had pillaged Sodom and carried Lot away captive (Gen. xiv. 24). These chiefs did not, however, imitate the disinterested conduct of the patriarch, but retained their portion of the spoil. [ABRAHAM.]

2. A city of Manasseh, given to the Levites of Kohat's family (1 Chron. vi. 70).

ANETHON (*ἀνηθον*) occurs in Matt. xxiii. 23, where it is rendered *anise*, 'Woe unto you—for ye pay tithe of mint and *anise* and cummin.' By the Greek and Roman writers it was employed to designate a plant used both medicinally and as an article of diet. The Arabian translators of the Greek medical authors give as its synonyme

شبت *shabit*, the name applied in eastern countries to an umbelliferous plant with flattened fruit commonly called 'seed,' which is surrounded with a dilated margin. In Europe the word has always been used to denote a similar plant, which is familiarly known by the name of Dill. Hence there is no doubt that in the above passage, instead of '*anise*,' *ἀνηθον* should have been translated 'dill'; and it is said to be rendered by a synonymous word in every version except our own.

The common dill, or *anethum graveolens*, is an annual plant, growing wild among the corn in Spain and Portugal; and on the coast of Italy, in Egypt, and about Astracan. It resembles *fennel*, but is smaller, has more glaucous leaves, and a less pleasant smell; the fruit or seeds, which are finely divided by capillary segments, are elliptical, broader, flatter, and surrounded with a membranous disk. They have a warm and aromatic taste, owing to the presence of a pale yellow volatile oil, which itself has a hot taste and a peculiar penetrating odour.

The error in translation here pointed out is not of very great consequence, as both the *anise* and the *dill* are umbelliferous plants, which are found

54. *Anethum graveolens*.

cultivated in the south of Europe. The seeds of both are employed as condiments and carminatives, and have been so from very early times; but the *anethon* is more especially a genus of eastern

cultivation, since either the *dill* or another species is reared in all the countries from Syria to India, and known by the name *shubit*; while the *anise*, though known, appears to be so only by its Greek name *ἀνισον*. Rosenmüller, moreover, says, 'In the tract *Massroth* (of Tithes), cap. iv. § 5, we read, 'The seed, the leaves, and the stem of *dill* (*שבתה* *shaboth*) are, according to Rabbi Eliezer, subject to tithes,' which indicates that the herb was eaten, as is indeed the case with the eastern species in the present day; and, therefore, to those acquainted with the cultivated plants of eastern countries, the dill will appear more appropriate than anise in the above passage.—J. K.

ANGELS (*ἄγγελοι*, used in the Sept. and New Test. for the Hebrew *מַלְאָכִים*; sing. *מַלְאָךְ*), a word signifying both in Hebrew and Greek *messengers*, and therefore used to denote whatever God employs to execute his purposes, or to manifest his presence or his power. In some passages it occurs in the sense of an ordinary messenger (Job. i. 14; 1 Sam. xi. 3; Luke vii. 24; ix. 52): in others it is applied to prophets (Is. xlii. 19; Hag. i. 13; Mal. iii.): to priests (Eccl. v. 6; Mal. ii. 7): to ministers of the New Testament (Rev. i. 20). It is also applied to impersonal agents; as to the pillar of cloud (Exod. xiv. 19): to the pestilence (2 Sam. xxiv. 16, 17; 2 Kings xix. 35): to the winds ('who maketh the winds his angels,' Ps. civ. 4): so likewise, plagues generally, are called 'evil angels' (Ps. lxxviii. 49), and Paul calls his thorn in the flesh an 'angel of Satan' (2 Cor. xii. 7).

But this name is more eminently and distinctively applied to certain spiritual beings or heavenly intelligences, employed by God as the ministers of His will, and usually distinguished as *angels of God* or *angels of Jehovah*. In this case the name has respect to their official capacity as 'messengers,' and not to their nature or condition. The term 'spirit,' on the other hand (in Greek *πνεῦμα*, in Hebrew *רוח*), has reference to the nature of angels, and characterizes them as incorporeal and invisible essences. But neither the Hebrew *רוח* nor the Greek *πνεῦμα* nor even the Latin *spiritus*, corresponds exactly to the English *spirit*, which is opposed to matter, and designates what is immaterial; whereas the other terms are not opposed to matter, but to body, and signify not what is immaterial, but what is incorporeal. The modern idea of spirit was unknown to the ancients. They conceived spirits to be incorporeal and invisible, but not immaterial, and supposed their essence to be a pure air or a subtle fire. The proper meaning of *πνεῦμα* (from *πνέω*, I blow, I breathe) is air in motion, wind, breath. The Hebrew *רוח* is of the same import; as is also the Latin *spiritus*, from *spiro*, I blow, I breathe. When, therefore, the ancient Jews called angels *spirits*, they did not mean to deny that they were endued with bodies. When they affirmed that angels were incorporeal, they used the term in the sense in which it was understood by the ancients;—that is, as free from the impurities of gross matter. The distinction between 'a natural body' and 'a spiritual body' is indicated by St. Paul (1 Cor. xv. 44); and we may, with sufficient safety, assume that angels are spiritual bodies, rather than pure spirits in the modern acceptance of the word.

It is disputed whether the term *Elohim* *אלהים* is ever applied to angels, but the inquiry belongs

to another place. [ELOHIM.] It may suffice here to observe that both in Ps. vii. 5, and xvii. 7, the word is rendered by *angels* in the Sept. and other ancient versions, and both these texts are so cited in Heb. i. 6; ii. 7; and that they are called Beni-Elohim, *בני אלהים*, *Sons of God*. In the Scriptures we have frequent notices of spiritual intelligences, existing in another state of being, and constituting a celestial family, or hierarchy, over which Jehovah presides. The Bible does not, however, treat of this matter professedly and as a doctrine of religion, but merely adverts to it incidentally as a fact, without furnishing any details to gratify curiosity. It speaks of no obligations from us to these spirits, and of no duties to be performed towards them. A belief in the existence of such beings is not, therefore, an essential article of religion, any more than a belief that there are other worlds besides our own: but such a belief serves to enlarge our ideas of the works of God, and to illustrate the greatness of his power and wisdom (Mayer, *Am. Bib. Repos.* xii. 360). The practice of the Jews, of referring to the agency of angels every manifestation of the greatness and power of God, has led some to contend that angels have no real existence, but are mere personifications of unknown powers of nature: and we are reminded that, in like manner, among the Gentiles, whatever was wonderful, or strange, or unaccountable, was referred by them to the agency of some one of their gods. Among the numerous passages in which angels are mentioned, there are, however, a few which cannot, without stronger violence, be reconciled with this hypothesis. It may be admitted that the passages in which angels are described as speaking and delivering messages, might be interpreted of forcible or apparently supernatural suggestions to the mind: but they are sometimes represented as performing acts which are wholly inconsistent with this notion (Gen. xvi. 7-12; Judg. xiii. 1-21; Matt. xxviii. 2-4); and if Matt. xxii. 30, stood alone in its testimony, it ought to settle the question. Christ there says, that 'in the resurrection they neither marry nor are given in marriage, but are as the angels of God.' The force of this passage cannot be eluded by the hypothesis [ACCOMMODATION] that Christ mingled with his instructions the erroneous notions of those to whom they were addressed, seeing that he spoke to Sadducees, who did not believe in the existence of angels (Acts xxiii. 8). So likewise, the passage in which the high dignity of Christ is established, by arguing that he is superior to the angels (Heb. i. 4, *sgg.*), would be without force or meaning if angels had no real existence.

That these superior beings are very numerous is evident from the following expressions, Dan. vii. 10, 'thousands of thousands,' and 'ten thousand times ten thousand'; Matt. xxvi. 53, 'more than twelve legions of angels'; Luke ii. 13, 'multitude of the heavenly host'; Heb. xii. 22, 23, 'myriads of angels.' It is probable, from the nature of the case, that among so great a multitude there may be different grades and classes, and even natures—ascending from man towards God, and forming a chain of being to fill up the vast space between the Creator and man—the lowest of his intellectual creatures. This may be inferred from the analogies which pervade the chain of being on the earth whereon we live, which is as much the divine creation as the world of spirits. Accordingly the Scrip-

ture describes angels as existing in a society composed of members of unequal dignity, power, and excellence, and as having chiefs and rulers. It is admitted that this idea is not clearly expressed in the books composed before the Babylonish captivity; but it is developed in those written during the exile and afterwards, especially in the writings of Daniel and Zechariah. In Zech. i. 11, an angel of the highest order, *one who stands before God*, appears in contrast with angels of an inferior class, whom he employs as his messengers and agents (comp. iii. 7). In Dan. x. 13, the appellation *שר הראשון* and in xii. 1, *שר הנרול* are given to Michael. The Grecian Jews rendered this appellation by the term *ἀρχάγγελος*, *Archangel*, which occurs in the New Testament (Jude 9; 1 Thess. iv. 16), where we are taught that Christ will appear to judge the world *ἐν φωτὶ ἀρχαγγέλου*. This word denotes, as the very analogy of the language teaches, a chief of the angels, one superior to the other angels, like *ἀρχιερεύς*, *ἀρχιστράτηγος*, *ἀρχισυνάγωγος*. The opinion, therefore, that there were various orders of angels, was not peculiar to the Jews; but was held by Christians in the time of the apostles, and is mentioned by the apostles themselves. The distinct divisions of the angels, according to their rank in the heavenly hierarchy, which we find in the writings of the later Jews, were either almost or wholly unknown in the apostolical period. The appellations *ἀρχαί*, *ἐξουσίαι*, *δυνάμεις*, *θρόνοι*, *κυριότητες*, are, indeed, applied in Eph. i. 21, Col. i. 16, and elsewhere, to the angels; not, however, to them exclusively, or with the intention of denoting their particular classes; but to them in common with all beings possessed of might and power, *visible* as well as *invisible*, on *earth* as well as in heaven.

In the Scriptures angels appear with bodies, and in the human form; and no intimation is anywhere given that these bodies are not real, or that they are only assumed for the time and then laid aside. It was manifest indeed to the ancients that the matter of these bodies was not like that of their own, inasmuch as angels could make themselves visible and vanish again from their sight. But this experience would suggest no doubt of the reality of their bodies: it would only intimate that they were not composed of gross matter. After his resurrection, Jesus often appeared to his disciples, and vanished again before them; yet they never doubted that they saw the same body which had been crucified, although they must have perceived that it had undergone an important change. The fact that angels always appeared in the human form, does not, indeed, prove that they really have this form; but that the ancient Jews believed so. That which is not pure spirit must have some form or other: and angels *may* have the human form; but other forms are possible. The question as to the food of angels has been very much discussed. If they do eat, we can know nothing of their actual food; for the manna is manifestly called 'angels' food' (Ps. lxxviii. 25; Wisd. xvi. 20), merely by way of expressing its excellence. The only real question, therefore, is whether they feed at all or not. We sometimes find angels, in their terrene manifestations, eating and drinking (Gen. xviii. 8; xix. 3); but in Judg. xiii. 15, 16, the angel who appeared to Manoah declined, in a very pointed manner, to accept his hospitality. The manner in which the Jews obviated the apparent discrepancy,

and the sense in which they understood such passages, appear from the apocryphal book of Tobit (xii. 19), where the angel is made to say: 'It seems to you, indeed, as though I did eat and drink with you; but I use invisible food which no man can see.' This intimates that they were supposed to simulate when they appeared to partake of man's food; but that yet they had food of their own, proper to their natures. Milton, who was deeply read in the 'angelical' literature, derides these questions:—

'So down they sat
And to their viands fell: nor seemingly
The angel, nor in mist (the common gloss
Of theologians), but with keen dispatch
Of real hunger, and concocive heat
To transubstantiate: what recondites
Transpires through spirits with ease.'

Par. Lost, v. 433-439.

The same angel had previously satisfied the curiosity of Adam on the subject, by stating that

'Whatever was created, needs
To be sustained and fed.'

If this dictum were capable of proof, except from the analogy of *knowing* natures, it would settle the question. But if angels do *not* need it; if their spiritual bodies are inherently *incapable* of waste or death, it seems not likely that they gratuitously perform an act designed, in all its known relations, to promote growth, to repair waste, and to sustain existence.

The passage already referred to in Matt. xxii. 30, teaches by implication that there is no distinction of sex among the angels. The Scripture never makes mention of female angels. The Gentiles had their male and female divinities, who were the parents of other gods. But in the Scriptures the angels are all males: and they appear to be so represented, not to mark any distinction of sex, but because the masculine is the more honourable gender. Angels are never described with marks of age, but sometimes with those of youth (Mark xvi. 5). The constant absence of the features of age indicates the continual vigour and freshness of immortality. The angels never die (Luke xx. 36). But no being besides God himself has essential immortality (1 Tim. vi. 16): every other being therefore is mortal in itself, and can be immortal only by the will of God. Angels, consequently, are not eternal, but had a beginning. As Moses gives no account of the creation of angels in his description of the origin of the world, although the circumstance would have been too important for omission had it then taken place, there is no doubt that they were called into being before, probably very long before the acts of creation which it was the object of Moses to relate.

The preceding considerations apply chiefly to the *existence* and *nature* of angels. Some of their *attributes* may be collected from other passages of Scripture. That they are of superhuman intelligence is implied in Mark xiii. 32: 'But of that day and hour knoweth no man, not *even* the angels in heaven.' That their power is great, may be gathered from such expression as 'mighty angels' (2 Thess. i. 7); 'angels, powerful in strength' (Ps. ciii. 20): 'angels who are greater in power and might' (2 Pet. ii. 11). The moral perfection of angels is shewn by such phrases as 'holy angels' (Luke ix. 26); 'the elect angels' (1 Tim. v. 21). Their felicity is beyond question in itself, but is evinced by the

passage (Luke xx. 36) in which the blessed in the future world are said to be *ἀγγέλοι, καὶ υἱοὶ τοῦ Θεοῦ*, 'like unto the angels, and sons of God.'

The *ministry* of angels, or that they are employed by God as the instruments of His will, is very clearly taught in the Scriptures. The very name, as already explained, shews that God employs their agency in the dispensations of His Providence. And it is further evident from certain actions which are ascribed wholly to them (Matt. xiii. 41, 49; xxiv. 31; Luke xvi. 22); and from the Scriptural narratives of other events, in the accomplishment of which they acted a visible part (Luke i. 11, 26; ii. 9, *sq.*; Acts v. 19, 20; x. 3, 19; xii. 7; xxvii. 23), that their agency is employed principally in the guidance of the destinies of man. In those cases also in which the agency is concealed from our view, we may admit the probability of its existence: because we are told that God sends them forth 'to minister to those who shall be heirs of salvation' (Heb. i. 14; also Ps. xxxiv. 7; xci. 11; Matt. xviii. 10). But the angels, when employed for our welfare, do not act independently, but as the instruments of God, and by His command (Ps. ciii. 20; civ. 4; Heb. i. 13, 14); not unto them, therefore, are our confidence and adoration due, but only unto Him (Rev. xix. 10; xxii. 9) whom the angels themselves reverently worship.

Guardian Angels.—It was a favourite opinion of the Christian fathers that every individual is under the care of a particular angel, who is assigned to him as a guardian. They spoke also of two angels, the one good, the other evil, whom they conceived to be attendant on each individual: the good angel prompting to all good, and averting ill; and the evil angel prompting to all ill, and averting good (*Hermas*, ii. 6). The Jews (excepting the Sadducees) entertained this belief, as do the Moslems. The heathen held it in a modified form—the Greeks having their tutelary *dæmon* [Hesiod *Op. et Dies* 120-125; Plutarch *De Def. Orac.* 10; Comp. Münter *De Rel. Babylon.* p. 13], and the Romans their *genius*. There is, however, nothing to support this notion in the Bible. The passages (Ps. xxxiv. 7; Matt. xviii. 10) usually referred to in support of it, have assuredly no such meaning. The former, divested of its poetical shape, simply denotes that God employs the ministry of angels to deliver his people from affliction and danger; and the celebrated passage in Matthew cannot well mean anything more than that the infant children of believers, or, if preferable, the least among the disciples of Christ, whom the ministers of the church might be disposed to neglect from their apparent insignificance, are in such estimation elsewhere, that the angels do not think it below their dignity to minister to them [SATAN] (Storr and Flatt's *Lehrbuch der Ch. Dogmatik*, § xlvi. E. T. p. 137; Dr. L. Mayer, *Scriptural Idea of Angels*, in *Amer. Bib. Repository*, xii. 356-388; Moses Stuart's *Sketches of Angelology* in Robinson's *Bibliotheca Sacra*, No. I.; Twisten in the *Amer. Bib. Sac.* i. p. 768; Merheim, *Hist. Angelor. Spec.*; Schulthess, *Engelwelt*, etc.)

ANGEL OF JEHOVAH. [JEHOVAH.]

ANGLING. The word אָנְגַל, which the Auth.

Vers. renders 'angle,' in Is. xix. 8; Hab. i. 15, is the same that is rendered 'hook,' in Job xli. 1, 2. In fact, 'angling' is described as 'fishing with a hook.' [FISHING.]

ANGLO-SAXON VERSIONS. No translation of the entire Bible was made into the language of the Anglo-Saxons. At an early period, however, glosses, or interlineary translations of the Vulgate into the vernacular tongue of our ancestors, began to be made by the monks. Some of these are still extant. The oldest is the celebrated Durham Book, preserved among the Cotton MSS. in the British Museum. The Latin text of this MS. was written by Eadfrith, bishop of the Church of Holy Isle, some time before the year 688; it received many decorations from the combined skill of Bishop Ethilwold and Billfrith the anchorite, and it was finally glossed over into English (*of gloesade on English*) by Aldred, who describes himself as 'Presbyter indignus et miserimus,' and ascribes his success to 'Godes fultume & S^cm Cuthberhtes.' The work existed first in four separate volumes, but these were at an early period collected into one. The date of Aldred's gloss is supposed to be before A. D. 900. The next of these versions is the Rushworth Gloss of the Gospels, preserved in the Bodleian library at Oxford; it closely resembles the Durham book in form, arrangement, and style of execution, and is regarded as of almost equal antiquity with it. Its authors were Farnen and Owen, priests at Harewood, and the Latin text was written by one Macregol.* Another Anglo-Saxon translation of the gospels is extant, the author of which is unknown; it is believed to have been executed near the time of the Norman conquest, and bears traces of having been made from one of the ante-hieronymian Latin versions. A translation of the Heptateuch, or first seven books of the Bible, was made by Aelfric, archbishop of Canterbury, who died in 1006; and there is in the Cottonian Collection a MS. of a translation of the book of Job, also ascribed to him. Of the same date is a gloss on the Proverbs by an unknown author, also among the Cotton MSS. Of the Psalter an interlineary translation was made at a very early period (about 706) by Adhelm, bishop of Sherborn, but of this no MS. remains. It is reported that King Alfred was also engaged at the time of his death on a translation of the Psalms. (William of Malmesbury, *De Gest. Reg. Angl.* p. 44, E. T. p. 121, Bohn), and other parts of the Bible are said also to have been translated by him. There are other versions of the Psalms in Anglo-Saxon extant in MS. An edition of the Four Gospels was printed at London in 1571, in 4to, with an English translation; it was edited by Archbishop Parker, with a preface by John Fox, the martyrologist. This edition was reprinted by Dr. Marshall, with improvements from the collation of several MSS. by Fr. Junius jun., at Dort, 1665, and reissued with a new title-page, Amst. 1684. The best edition of the Gospels is that of Mr. Thorpe, Lond. 1842. Aelfric's Heptateuch and Job were published by Thwaites, Oxf. 1699, 8vo. Two editions of the Anglo-Saxon Psalter have been issued; the former by Spelman, Lond. 1640, 4to; the latter by Thorpe, Oxf. 1835, 4to. Mill made use of the Anglo-Saxon versions for critical purposes, in his edition of the Greek Testament. Critics are divided as to their value in this respect. Tischendorf has, however, made use of them

* The occurrence of Celtic names in connection with this document is somewhat remarkable.

in his edition (see his *Prolegomena*, p. 255, ed. 1859).—W. L. A.

ANIM (אַנִים), a town in the mountain range of the tribe of Judah, Josh. xv. 50. Eusebius calls it *avata*, and places it about nine miles south of Hebron. [Prob. *El-Ghovein*; Robinson, ii. 625.]

ANISE. [ANETHON.]

ANKLETS. This word does not occur in Scripture, but the ornament which it denotes is clearly indicated by 'the tinkling (or *jingling*) ornaments about the feet,' mentioned in the curious description of female attire which we find in Is. iii. Even in the absence of special notice, we might very safely conclude that an ornament to which Oriental women have always been so partial was not unknown to the Jewish ladies. In Egypt anklets of gold have been found, which are generally in the shape of simple rings, often however in that of snakes, and sometimes inlaid with enamel or even precious stones. The sculptures shew that they were worn by men as well as women (Wilkinson's *Anc. Egyptians*, iii. 375). Their present use among the women of Arabia and Egypt sufficiently illustrates the Scriptural allusion. The Koran (xxiv. 31) forbids 'women to make a noise with their feet, which, says Mr. Lane (*Mod. Egyptians*, i. 221), 'alludes to the practice of knocking together the anklets, which the Arab women in the time of the prophet used to wear, and which are still worn by many women in Egypt.' Elsewhere (ii. 364) the same writer states, 'Anklets of solid gold and silver, and of the form here sketched (like fig. 3), are worn by some ladies, but are more un-

55.

1, 2, 5, 6, 7. Ancient Oriental. 3, 4, 8. Modern Oriental.

common than they formerly were. They are of course very heavy, and, knocking together as the woman walks, make a ringing noise.' He thinks that in the text referred to (Is. iii. 16) the prophet alludes to this kind of anklet, but admits that the description may apply to another kind, of which he thus speaks further on (ii. 368): 'Anklets of solid silver are worn by the wives of some of the richer peasants, and of the sheykhs of villages. Small ones of iron are worn by many children. It was also a common custom among the Arabs for girls or young women to wear a string of bells on their feet. I have seen many little girls in Cairo with small round bells attached to their anklets. Perhaps it is to the sound of ornaments of this kind, rather than of the more common anklet, that Isaiah alludes' (see also Chardin, tom. i. 133, 148, 194). These belled anklets occur also in India

among the several sorts which the dancing girls employ. It is right to add that the anklets which the present writer has himself seen in use among the Arab women in the country of the Tigris and Euphrates are not usually solid, but hollow, so that, in striking against each other, they emit a much more sharp and sonorous sound than solid ones.—J. K.

ANNA (*Avva*, same name as HANNAH). 1. The wife of Tobit, whose history is contained in the apocryphal book named after him (Tob. i. 9, etc.)

2. An aged widow, daughter of Phanuel, of the tribe of Asher. She had married early, but after seven years her husband died, and during her long widowhood she daily attended the morning and evening services of the Temple. Anna was eighty-four years old when the infant Jesus was brought to the Temple by his mother, and entering as Simeon pronounced his thanksgiving, she also broke forth in praise to God for the fulfilment of his ancient promises (Luke ii. 36-38).—J. K.

ANNUNCIATION. This word, like many others, has obtained a particular signification in theological writings. As a general term, it expresses the communication of important intelligence by chosen messengers of Heaven; but it became, at an early period of Christianity, restricted to the announcement of the blessed Virgin's miraculous conception. The first formal mention that we meet with of its being commemorated among the festivals of the church, is in the decrees of the Council of Trullo, convened at the close of the seventh century.

ANNAS (*Avvas*, *Avavos* of Josephus), Luke iii. 2; John xviii. 13. After having held the office of High Priest for 15 years, he was deposed by Valerius Gratus, the Procurator of Judæa, A. D. 23; and in quick succession his place was filled by Ishmael, by Eleazar the son of Annas, by Simon and by Joseph Caiaphas, son-in-law of Annas, A. D. 26. The reason why Annas and Caiaphas are mentioned together as High Priests, and not Ishmael or Eleazar or Simon is, probably, that Annas for his long service was regarded by the Jews as High Priest, *jure divino*, while Caiaphas was the pontiff recognized by the government. Hence when Jesus was apprehended, John xviii. 3, the Jews led him to Annas first, but as he had no official authority, it was necessary for Caiaphas to bring the case before the Roman court. The intervening High Priests appointed by Rome do not appear to have had any authority with the Jewish rulers or people; hence in a matter related Acts iv. 6, concerning spiritual affairs, Annas is called High Priest by St. Luke, though Caiaphas was still the officer of the Roman government. [CAIAPHAS.]—J. K.

ANOINTING. The practice of anointing with perfumed oils or ointments appears to have been very common among the Hebrews, as it was among the ancient Egyptians. The practice, as to its essential meaning, still remains in the East; but perfumed waters are now far more commonly employed than oils or ointments.

In the Scriptures three kinds of anointing are distinguishable:—1. For consecration and inauguration; 2. For guests and strangers; 3. For health and cleanliness. Of these in order.

1. *Consecration and Inauguration.*—The act of anointing appears to have been viewed as emblematical of a particular sanctification; of a designation to the service of God; or to a holy and sacred use. Hence the anointing of the high-priests (Exod. xxix. 29; Lev. iv. 3), and even of the sacred vessels of the tabernacle (Exod. xxx. 26, etc.); and hence also, probably, the anointing of the king, who, as 'the Lord's anointed,' and, under the Hebrew constitution, the viceroy of Jehovah, was undoubtedly invested with a sacred character. This was the case also among the Egyptians, among whom the king was, *ex officio*, the high-priest, and as such, doubtless, rather than in his secular capacity, was solemnly anointed at his inauguration.

The first instance of anointing which the Scriptures record is that of Aaron, when he was solemnly set apart to the high-priesthood. Being first invested with the rich robes of his high office, the sacred oil was poured in much profusion upon his head. It is from this that the high-priest, as well as the king, is called 'the Anointed' (Lev. iv. 3, 5, 16; vi. 20; Ps. cxxxiii. 2). In fact, anointing being the principal ceremony of regal inauguration among the Jews, as crowning is with us, 'anointed,' as applied to a king, has much the same signification as 'crowned.' It does not, however, appear that this anointing was repeated at every succession, the anointing of the founder of the dynasty being considered efficient for its purpose as long as the regular line of descent was undisturbed: hence we find no instance of unction as a sign of investiture in the royal authority, except in the case of Saul, the first king of the Jews, and of David, the first of his line; and, subsequently, in those of Solomon and Joash, who both ascended the throne under circumstances in which there was danger that their right might be forcibly disputed (1 Sam. x. 1; 2 Sam. ii. 4; v. 1-3; 1 Chron. xi. 1-3; 2 Kings xi. 12; 2 Chron. xxiii. 11). Those who were inducted into the royal office in the kingdom of Israel appear to have been inaugurated with some peculiar ceremonies (2 Kings ix. 13). But it is not clear that they were anointed at all; and the omission (if real) is ascribed by the Jewish writers to the want of the holy anointing oil which could alone be used on such occasions, and which was in the keeping of the priests of the Temple in Jerusalem. The private anointing which was performed by the prophets (2 Kings ix. 3; comp. 1 Sam. x. 1) was not understood to convey any abstract right to the crown; but was merely a symbolical intimation that the person thus anointed should eventually ascend the throne.

As the custom of inaugural anointing first occurs among the Israelites immediately after they left Egypt, and no example of the same kind is met with previously, it is fair to conclude that the practice and the notions connected with it were acquired in that country. 'With the Egyptians, as with the Jews,' the investiture to any sacred office, as that of king or priest, was confirmed by this external sign; and as the Jewish lawgiver mentions the ceremony of pouring oil upon the head of the high-priest *after* he had put on his entire dress, with the mitre and crown, the Egyptians represent the anointing of their priests and kings *after* they were attired in their full robes, with the cap and crown upon their heads (cut 56). Some of the

sculptures introduce a priest pouring oil over the monarch.' (Wilkinson's *Anc. Egyptians*, iv. 280).

56.

2. The anointing of our Saviour's feet by 'the woman who was a sinner' (Luke vii. 38), led to the remark that the host himself had neglected to anoint his head (vii. 46); whence we learn that this was a mark of attention which those who gave entertainments paid to their guests. As this is the only direct mention of the custom, the Jews are supposed by some to have borrowed it from the Romans at a late period, and Wetstein and others have brought a large quantity of Latin erudition to bear on the subject. But the careful reader of the Old Testament knows that the custom was an old one, to which there are various indirect allusions. The circumstances connected with feasts and entertainments are indeed rarely intimated; nor would the present direct reference to this custom have transpired but for the remarks which the act of the woman in anointing the feet of Jesus called forth. Such passages, however, as Ps. xxiii. 5; Prov. xxi. 17; xxvii. 9; Wisd. ii. 7; as well as others in which the *enjoyments* of oil and wine are coupled together, may be regarded as containing a similar allusion. It is, therefore, safer to refer the origin

57.

of this custom among the Hebrews to their nearer and more ancient neighbours the Egyptians, than to the Romans or the Greeks, who themselves had probably derived it from the same people. Among

the Egyptians the antiquity of the custom is evinced by their monuments, which offer in this respect analogies more exact than classical antiquity, or modern usage, can produce. With them 'the custom of anointing was not confined to the appointment of kings and priests to the sacred offices they held. It was the ordinary token of welcome to guests in every party at the house of a friend; and in Egypt, no less than in Judæa, the metaphorical expression 'anointed with the oil of gladness' was fully understood, and applied to the ordinary occurrences of life. It was customary for a servant to attend every guest as he seated himself (cut 57), and to anoint his head' (Wilkinson's *Anc. Egyptians*, iv. 279; ii. 213).

3. It is probable, however, that the Egyptians, as well as the Greeks and Jews, anointed themselves at home, before going abroad, although they expected the observance of this etiquette on the part of their entertainer. That the Jews thus anointed themselves, not only when paying a visit, but on ordinary occasions, is shewn by many passages, especially those which describe the omission of it as a sign of mourning (Deut. xxviii. 40; Ruth iii. 3; 2 Sam. xiv. 2; Dan. x. 3; Amos vi. 6; Mic. vi. 15; Esth. ii. 12; Ps. civ. 15; Is. lxi. 3; Eccles. ix. 8; Cant. i. 3; iv. 10; also Judith x. 3; Sus. 17; Ecclus. xxxix. 26; Wisd. ii. 7). One of these passages (Ps. civ. 15, 'oil that maketh the face to shine') shews very clearly that not only the hair but the skin was anointed. In our northern climates this usage may not strike us as a pleasant one, but as the peculiar customs of most nations are found, on strict examination, to be in accordance with the peculiarities of their climate and condition, we may be assured that this Oriental predilection for external unction must have arisen from a belief that it contributed materially to health and cleanliness. Niebuhr states that 'in Yemen the anointing of the body is believed to strengthen and protect it from the heat of the sun, by which the inhabitants of this province, as they wear but little clothing, are very liable to suffer. Oil by closing up the pores of the skin, is supposed to prevent that too copious transpiration which enfeebles the frame; perhaps, too, these Arabians think a glistening skin a beauty. When the intense heat comes in, they always anoint their bodies with oil.'

4. *Anointing the Sick.*—The Orientals are strongly persuaded of the sanative properties of oil; and it was under this impression that the Jews anointed the sick, and applied oil to wounds (Ps. cix. 18; Is. i. 6; Mark vi. 13; Luke x. 34; James v. 14). Anointing was used in sundry disorders, as well as to promote the general health of the body. It was hence, as a salutary and approved medicament, that the seventy disciples were directed to 'anoint the sick' (Mark vi. 13); and hence also the sick man is directed by St. James to send for the elders of the church, who were 'to pray for him, anointing him with oil in the name of the Lord.' The Talmudical citations of Lightfoot on Matt. vi. 16, shew that the later Jews connected charms and superstitious mutterings with such anointings, and he is therefore probably right in understanding St. James to mean—'It is customary for the unbelieving Jews to use anointing of the sick joined with a magical and enchanting muttering; but how infinitely better is it to join the pious prayers of the elders of the church to the anointing of the sick.'

Niebuhr assures us that at Sana (and doubtless in other parts of Arabia) the Jews, as well as many of the Moslems, have their bodies anointed whenever they feel themselves indisposed.

5. *Anointing the Dead.*—The practice of anointing the bodies of the dead is intimated in Mark xiv. 8, and Luke xxiii. 56. This ceremony was performed after the body was washed, and was designed to check the progress of corruption. Although, from the mode of application, it is called anointing, the substance employed appears to have been a solution of odoriferous drugs. This (together with the laying of the body in spices) was the only kind of embalment in use among the Jews. [BURIAL.]

6. [Anointing is used in Scripture figuratively to denote—1. The communicating of joy and elevation of soul (Ps. xlv. 7; (Heb. i. 9); xcii. 10). 2. The bestowal of the influences of the Holy Spirit on men (2 Cor. i. 21, 22; 1 John ii. 20, 27; Rev. iii. 18). Of these influences oil seems to have been the established physical emblem (Bähr, *Mos. Cultus*, ii. 171); and the actual enjoyment of these came to be appropriately symbolized by the application to the person of oil.]

The composition of the Jewish ointments and perfumes is noticed elsewhere. [PERFUMES.]—J. K.

ANSCHER, ASCHER, a Jewish rabbi of the sixteenth century, born at Posen, and who taught in Cracow and Prague. He was the author of a valuable Hebrew lexicon, entitled *מִרְכָּבַת הַמִּשְׁנָה*, published at Cracow in 1534, 4to; and again in 1552, fol.; and a third time in 1584, 4to. The words are arranged in alphabetical order, the various forms of each word are given as well as the stem-word, and the meanings are given in the Jewish-German dialect. There is also a concordance of passages appended to it.—W. L. A.

ANSELM OF CANTERBURY, so called from his having held that see, was a native of Aosta in Piedmont, where he was born in 1033. He was successively prior and abbot of the monastery of Bec in Normandy, where he had been first a monk; and in 1093 he succeeded Lanfranc as Archbishop of Canterbury. He died April 21, 1109. The first of the schoolmen, his name stands high in philosophy and theology; but his *Glossa Interlinearis* entitles him to a place also among biblical scholars.—W. L. A.

ANT. [NEMALAH.]

ANTEDILUVIANS, the name given collectively to the people who lived before the Deluge. The interval from the Creation to that event is not less, even according to the Hebrew text, than 1657 years, being not more than 691 years shorter than that between the Deluge and the birth of Christ, and only 187 years less than from the birth of Christ to the present time [1844], and equal to about two-sevenths of the whole period from the Creation. By the Samaritan and Septuagint texts (as adjusted by Hales) a much greater duration is assigned to the antediluvian period—namely, 2256 years, which nearly equals the Hebrew interval from the Deluge to the birth of Christ, and much exceeds the interval from the birth of Christ to the present time.

All our authentic information respecting this long and interesting period is contained in 49 verses of

Genesis (iv. 16, to vi. 8), more than half of which are occupied with a list of names, and ages, invaluable for chronology, but conveying no particulars regarding the primeval state of man. The information thus afforded, although so limited in extent, is, however, eminently suggestive, and large treatises might be, and have been, written upon its intimations. Some additional information, though less direct, may be safely deduced from the history of Noah and the first men *after* the Deluge; for it is very evident that society did not begin afresh after that event; but that, through Noah and his sons, the new families of men were in a condition to inherit, and did inherit, such sciences and arts as existed before the Flood. This enables us to understand how settled and civilized communities were established, and large and magnificent works undertaken, within a few centuries after the Deluge.

In the article 'ADAM' it has been shown that the father of men was something more than 'the noble savage,' or rather the grown-up infant, which some have represented him. He was an instructed man; and the immediate descendants of a man so instructed could not be an ignorant or uncultivated people. It is not necessary indeed to suppose that they possessed at first more cultivation than they required; and for a good while they did not stand in need of that which results from or is connected with, the settlement of men in organized communities. They probably had this before the Deluge, and at first were possessed of whatever knowledge or civilization their agricultural and pastoral pursuits required. Such were their pursuits from the first; for it is remarkable that of the strictly savage or hunting condition of life there is not the slightest trace before the Deluge. After that event, Nimrod, although a hunter (Gen. x. 9) was not a savage, and did not belong to hunting tribes of men. In fact, savageism is not discoverable before the Confusion of Tongues, and was in all likelihood a degeneracy from a state of cultivation, eventually produced in particular communities by that great social convulsion. At least that a degree of cultivation was the primitive condition of man, from which savageism in particular quarters was a degeneracy, and that he has not, as too generally has been supposed, worked himself up from an original savage state to his present position, has been powerfully argued by Dr. Philip Lindsley (*Am. Bib. Repos.*, iv. 277-298; vi. 1-27), and is strongly corroborated by the conclusions of modern ethnographical research; from which we learn that, while it is easy for men to degenerate into savages, no example has been found of savages rising into civilization but by an impulse from without, administered by a more civilized people; and that, even with such impulse, the *vis inertiae* of established habits is with difficulty overcome. The aboriginal traditions of all civilized nations describe them as receiving their civilization from without—generally through the instrumentality of foreign colonists; and history affords no example of a case parallel to that which must have occurred if the primitive races of men, being originally savage, *had civilized themselves*.

All that was peculiar in the circumstances of the antediluvian period was eminently favourable to civilization. The respected contributor [J. P. S.], to whose article [ADAM] we have already referred, remarks, in a further communication, that 'The *longevity* of the earlier seventeen or twenty centuries

of human existence is a theme containing many problems. It may be here referred to for the purpose of indicating the advantages which must necessarily have therefrom accrued to the mechanical arts. In pottery, mining, metallurgy, cloth-making, the applications of heat and mixtures, etc., it is universally known that there is a tact of manipulation which no instruction can teach, which the possessor cannot even describe, yet which renders him powerful and unfailling within his narrow range, to a degree almost incredible; and when he has reached his limit of life he is confident that, had he another sixty or seventy years to draw upon, he could carry his art to a perfection hitherto unknown. Something like this must have been acquired by the antediluvians; and the paucity of objects within their grasp would increase the precision and success within the range.'

By reason of their length of life, the antediluvians had also more encouragement in protracted undertakings, and stronger inducements to the erection of superior, more costly, more durable, and more capacious edifices and monuments, public and private, than exist at present. They might reasonably calculate on reaping the benefit of their labour and expenditure. The earth itself was probably more equally fertile, and its climate more uniformly healthful, and more auspicious to longevity, and consequently to every kind of mental and corporeal exertion and enterprise, than has been the case since the great convulsion which took place at the Deluge.

But probably the greatest advantage enjoyed by the antediluvians, and which must have been in the highest degree favourable to their advancement in the arts of life, was the uniformity of language. Nothing could have tended more powerfully to maintain, equalize, and promote whatever advantages were enjoyed, and to prevent any portion of the human race from degenerating into savage life.

Of the actual state of society and of the arts before the Deluge some notice has occurred in a previous article [ADAM], and other particulars will be found in the articles relating to these subjects.

The opinion that the old world was acquainted with *astronomy*, is chiefly founded on the ages of Seth and his descendants being particularly set down (Gen. v. 6, *sqq.*), and the precise year, month, and day being stated in which Noah and his family, etc., entered the ark, and made their egress from it (Gen. vii. 11; viii. 13). The distinctions of day and night, and the lunar month, were of course observed; and the thirteenth rotation of the moon, compared with the sun's return to his primary position in the heavens, and the effects produced on the earth by his return, would point out the year. The variation between the rotations of the moon and sun easily became discoverable from the difference which in a very few years would be exhibited in the seasons; and hence it may be supposed that, although the calculations of time might be by lunar months or revolutions, yet the return of vegetation would dictate the solar year. The longevity of the antediluvian patriarchs, and the simplicity of their employments, favour this conjecture, which receives additional strength from the fact that the Hebrew for *year*, שנה, implies an *iteration*, a return to the same point, a repetition; and it is also remarkable that the Indians, Chinese, Babylonians, Egyptians, Greeks, and other nations,

all deduce their origin from personages said to be versed in astronomy.

The knowledge of *zoology*, which Adam possessed, was doubtless imparted to his children; and we find that Noah was so minutely informed on the subject as to distinguish between clean and unclean beasts, and that his instructions extended to birds of every kind (Gen. vii. 2-4). A knowledge of some essential principles in *botany* is shewn by the fact that Adam knew how to distinguish 'seed-bearing herb,' 'tree in which is a seed-bearing fruit,' and 'every green herb' (Gen. i. 29, 30). The trees of life and of knowledge are the only ones mentioned before the Fall; but in the history of Noah the vine, the olive, and the wood of which the ark was made (Gen. vi. 14; viii. 11; ix. 20), are spoken of in such a manner as clearly to intimate a knowledge of their qualities. With *mineralogy* the antediluvians were at least so far acquainted as to distinguish metals; and in the description of the garden of Eden gold and precious stones are noticed (Gen. ii. 12).

That the antediluvians were acquainted with *music* is certain; for it is expressly said that Jubal (while Adam was still alive) became 'the father of those who handle the כִּנּוּר *kinnur* and the עִנּוּב *'ugab*.' The *kinnur* was evidently a stringed instrument resembling a lyre; and the *'ugab* was without doubt the pandean pipe, composed of reeds of different lengths joined together. This clearly intimates considerable progress in the science; for it is not probable that the art of playing on wind and on stringed instruments was discovered at the same time; we may rather suppose that the principles of harmony, having been discovered in the one, were by analogy transferred to the other; and that Jubal, by repeated efforts, became the first performer on the harp and the pipe. [MUSIC.]

Our materials are too scanty to allow us to affirm that the antediluvians possessed the means of communicating their ideas by writing or by hieroglyphics, although tradition, and a hint or two in the Scriptures, might support the assertion. With respect to *poetry*, the story of Lamech and his wives (Gen. iv. 19-24) is evidently in verse, and is most probably the oldest specimen of Hebrew poetry extant; but whether it was written before or after the Flood is uncertain, although the probability is that it is one of those previously existing documents which Moses transcribed into his writings.

With regard to *architecture*, it is a singular and important fact that Cain, when he was driven from his first abode, built a city in the land to which he went, and called it Enoch, after his son. This shews that the descendants of Adam lived in houses and towns from the first, and consequently affords another confirmation of the argument for the original cultivation of the human family. What this 'city' was is not mentioned, except in the term itself; and as that term is in the early Scriptures applied to almost every collection of human habitations, we need not attach any very exalted ideas to it in this instance. But if we take into view the requisites necessary to enable Noah to erect so stupendous a fabric as the ark must have been [ARK, NOAH'S], it will not be difficult to conceive that the art of building had reached considerable advancement before the Deluge; nor can one reflect on the building of Babel without a conviction

that it must have been through the great patri-archs who lived in the old world that so much knowledge was obtained as to lead to the attempt of erecting a fabric whose summit was intended to reach the clouds. It is not likely that the builders would, by their own intuitive genius, be equal to a task which they certainly were not inspired by Heaven to execute.

The *metallurgy* of the antediluvians has been noticed in 'ADAM;' and to what is there said of *agriculture* we shall only add a reference to the case of Noah, who, immediately after the Flood, became a husbandman, and planted a vineyard. He also knew the method of fermenting the juice of the grape; for it is said he drank of the wine, which produced inebriation (Gen. ix. 20, 21). This knowledge he probably obtained from his progenitors anterior to the destruction of the old world, if he was not the inventor.

Pasturage appears to have been coeval with husbandry. Abel was a keeper of sheep, while his brother was a tiller of the ground (Gen. iv. 2); but there is no necessity for supposing that Cain's husbandry excluded the care of cattle. The class of tent-dwelling pastors—that is, of those who live in tents that they may move with their flocks and herds from one pasture-ground to another—did not originate till comparatively late after the Fall; for Jabal, the seventh from Adam in the line of Cain, is said to have been the 'father' or founder of that mode of life (Gen. iv. 20). It is doubtful whether the manufacture of cloth is involved in the mention of tents, seeing that excellent tent-coverings are even at this day made of skins; and we know that skins were the first articles of clothing used by fallen man (Gen. iii. 21). The same doubt applies to the garment with which the sons of Noah covered their inebriated father (Gen. ix. 23). But, upon the whole, there can be little doubt that, in the course of so long a period, the art of manufacturing cloths of hair and wool, if not of linen or cotton, had been acquired.

It is impossible to speak with any decision respecting the form or forms of government which prevailed before the Deluge. The slight intimations to be found on the subject seem to favour the notion that the particular governments were patriarchal, subject to a general theocratical control—God himself *manifestly* interfering to uphold the good and check the wicked. The right of property was recognized, for Abel and Jabal possessed flocks, and Cain built a city. As ordinances of religion, sacrifices certainly existed (Gen. iv. 4), and some think that the Sabbath was observed; while some interpret the words, 'Then men began to call upon the name of the Lord' (Gen. iv. 26) to signify that public worship then began to be practised. From Noah's familiarity with the distinction of clean and unclean beasts (Gen. vii. 2), it would seem that the Levitical rules on this subject were by no means new when laid down in the code of Moses.

Marriage, and all the relations springing from it, existed from the beginning (Gen. ii. 23-25); and although polygamy was known among the antediluvians (Gen. iv. 19), it was most probably unlawful; for it must have been obvious that, if more than one wife had been necessary for a man, the Lord would not have confined the first man to one woman. The marriage of the sons of Seth with the daughters of Cain appears to have been pro-

hibited, since the consequence of it was that universal depravity in the family of Seth so forcibly expressed in this short passage, 'All flesh had corrupted its way upon the earth' (Gen. vi. 12). This sin, described Orientally as an intermarriage of 'the sons of God' with 'the daughters of men' (Gen. vi. 2), appears to have been in its results one of the grand causes of the Deluge; for if the family of Seth had remained pure and obedient to God, he would doubtless have spared the world for their sake; as he would have spared Sodom and Gomorrah had ten righteous men been found there, and as he would have spared his own people the Jews, had they not corrupted themselves by intermarriages with the heathen.

A contributor [J. P. S.] suggests that even the longevity of the antediluvians may have contributed to this ruinous result:—'There was also, probably, a great waste of time. Vastly more time was upon their hands than was needful for clearing woodlands, draining swamps, and other laborious and tedious processes, in addition to their ordinary agriculture and care of cattle; so that the temptations to idleness were likely to be very strong; and the next step would be to licentious habits and selfish violence. The ample leisure possessed by the children of Adam might have been employed for many excellent purposes of social life and religious obedience, and undoubtedly it was so employed by many; but to the larger part it became a snare and the occasion of temptations, so that 'the wickedness of man became great, the earth was corrupt before God, and was filled with violence.'

It will be seen that many of the topics only slightly touched upon in this article will fall to be considered more largely under other heads (*Critica Biblica*, iv. 14-20; P. Lindsley, D.D., *On the Primitive State of Mankind*, in *Am. Bib. Repos.*, iv. 277-298; vi. 1-27: see also *Ant. Univ. Hist.* i. 142-201).—J. K.

ANTELOPE. Although this word does not occur in our version of the Scriptures, yet there can be no doubt that in the Hebrew text several ruminants to which it is applicable are indicated under different denominations. In scientific nomenclature, the term antelope, at first applied to a single species, has gradually become generic, and is now the designation of a tribe, or even of a family of genera, containing a great many species. According to present usage it embraces some species that are of considerable size, so as to be invariably regarded by the natives as having some affinity to cattle, and others delicate and rather small, that may be compared with young deer, to which, in truth, they bear a general resemblance. The origin of the word is involved in great obscurity. In the *Hexæmeron* of Eustathius, bishop of Antioch, who wrote in the reign of Constantine, we first find the name ἄνθλοψ applied to an animal, which he describes as 'very swift, and hunted with difficulty. It had long horns in the shape of saws, with which it sawed trees of considerable size. When thirsty, it approached the Euphrates, and gambled along its banks among brambles, wherein it was sometimes entangled, and then could be caught and slain.'

It may be doubted whether the word *antholops* was, in the beginning of the fourth century of our era, a local Asiatic Greek paraphrase of the Arabic

غزال *gazal*, purporting a similar allusion to fine

or blooming eyes; although the fact, if established, would prove that the Grecian residents in Asia viewed the greater antilopidæ of our systems as belonging typically to the gazelle family, as we do now. Certain it is, however, that in the Greek and Latin writers of the middle and later ages, we find the same name, but so variously inflected that we are justified in concluding that it was drawn from some other source than the bishop's *Hexæmeron*; for it is written *antalopos*, *analopos*, *aptalos*: in Albertus Magnus, *calopus* and *pantlalops*, which, though evidently Alexandrian Greek, Bochart would make the Coptic name for unicorn. Towards the close of the fourteenth century English heralds introduced the name, and 'tricked out' their antelope as a supporter of the armorial bearings and cognizance of a younger branch of the Plantagenet family; and although the figures are monstrous, they bear clear indications of being derived at first from the saw-horned, and soon after from a real oryx.

In order to explain somewhat more fully the station of antelopes among the families of ruminants, and point out more strictly the species we have to notice, as well as the general characters of the order, it may be desirable to give a short definition of ruminants, and thereby obviate the necessity of again recurring to them when other species of this section come under consideration. Ruminating animals are possessed of the singular faculty of chewing their food a second time, by means of the peculiar structure of their stomachs—a structure which enables them to force it back again into the mouth after a first deglutition. For this purpose, all ruminants have four stomachs, whereof the three first are so disposed that the aliments can enter at will into any one of them, the œsophagus being placed at the point of their communication. The first and largest is the *paunch*, externally appearing as twofold, but internally divided into four slight partitions. In this is received the fodder simply broken by a first mastication, in which state it is transmitted into the second stomach, *bonnet*, or *honeycomb bag*, the walls of which are internally shaped like the cells of a honeycomb. Here the herbage is imbibed, and compressed, by its globular form, into small masses or balls, which are thus prepared to be forced upwards again into the mouth for a second trituration—a process always going on when cattle lie down, and are seen grinding their cheek teeth. After this it descends into the third stomach (*manyplies*), which is the smallest, and is longitudinally furnished with folds, somewhat resembling the leaves of a book: from thence it passes into the fourth (*the red*), next in size to the paunch, and pear-shaped, the *stomach* properly so called, where the process of digestion is accomplished. All ruminants, moreover, are distinguished by cloven feet, by the want of incisor teeth in the upper jaw, and by all the grinders being furrowed like ridges on millstones.

This abstract of the characters of ruminating animals is here given because the faculty of chewing the cud, or rumination, cannot exist without the foregoing apparatus; because that apparatus is found, without exception, to belong to all the species having bisulcate feet and the modified dentition before noticed, and belongs to no other class or genus of mammalia. The numerous species of the order are distributed into three grand divisions,

viz.—1st, those without horns, like the camel* and the musk; 2d, those with deciduous horns, or such as are shed yearly, and replaced by a new growth, like the stag; and 3d, those which have persistent horns, consisting of a bony core, upon which a horny sheath is fixed, which grows by annual additions of the substance at the base, such as antelopes, goats, sheep, and oxen or neat cattle.

The antelopes, considered as a family, may be distinguished from all others by their uniting the light and graceful forms of deer with the permanent horns of goats, excepting that in general their horns are round, annulated, and marked with striæ, slender, and variously inflected, according to the subdivision or group they belong to. They have usually large, soft, and beautiful eyes, tear-pits beneath them, and round tails. They are often provided with tufts of hair, or brushes, to protect the fore-knees from injury; they have inguinal pores; and are distinguished by very great powers of speed. Among the first of the subordinate groups is the subgenus *oryx*, already named, consisting of five or six species. [DISHON; JACHMUR; THEO; TSEBL.] These will be noticed in their proper place, so far as they are mentioned in Scripture.—C. H. S.

ANTHROPOMORPHISM, a term in theology used to denote that figure whereby words derived from *human* objects are employed to express something which relates to the Deity. As a finite being can have no intuitive knowledge of an infinite, so no language of rational creatures can fully express the nature of God and render it comprehensible. All further knowledge of God must be communicated by words used to express ourselves intelligibly concerning human and other terrestrial objects. Such words and phrases have their foundation in a resemblance, which, according to our conceptions, exists between the Deity and mankind. This resemblance, when essential, is such as regards the pure perfections of our minds, that is, such as are unaccompanied with any imperfection, as reason, liberty, power, life, wisdom, and goodness. Those expressions afford an analogical knowledge, from whence arise analogical phrases, which are absolutely necessary whenever we speak of God, and would acquire or communicate some knowledge of his perfections. Such analogical expressions must, however, be understood *properly*, although they give no immediate and intuitive, but only a symbolical knowledge of the Deity. In this sense it is that in Gen. ii. 16; iii. 9; vi. 13; xii. 1; xv.; xvii.; xviii.; Exod. iii. 4, 5—*speech* is *immediately* ascribed to the Deity while addressing Adam, Noah, Abraham, and Moses. The Deity is also in this sense said to speak *mediately* to man, viz. by his messengers. But although the speech here ascribed to the Deity is to be understood in a different manner from the language of men, it is not to be understood in such instances *figuratively*, or in the anthropomorphic sense, but *really* and *properly*. 'Either,' says St. Augustine, 'immutable truth speaks to man ineffably of itself to the minds of rational creatures, or speaks by a mutable creature, either by spiritual images to our minds, or by corporeal voices to the bodily senses.' But God speaks not *properly* but *anthropopathically*,

when his decrees and their execution are described in human methods, or in the form of dialogues and conversations, as in the phrase (Gen. i. 2) 'Let there be light, and there was light.' 'This,' says Maimonides, 'is to be understood of the will, not the speech;' and in like manner, St. Augustine, 'This was performed by the intellectual and eternal, not by the audible and temporal word' (*City of God*, ch. vii.)

Anthropomorphic phrases, generally considered, are such as ascribe to the Deity mixed perfections and human imperfections. These phrases may be divided into three classes, according to which we ascribe to God:—1. Human actions. 2. Human affections, passions, and sufferings (anthropopathy). 3. Human form, human organs, human members (anthropomorphism).

A rational being, who receives impressions through the senses, can form conceptions of the Deity only by a consideration of his own powers and properties. Anthropomorphic modes of thought are therefore unavoidable in the religion of mankind; and although they can furnish no other than corporeal or sensible representations of the Deity, they are nevertheless true and just when we guard against transferring to God qualities pertaining to the human senses. It is, for instance, a *proper* expression to assert that God *knows* all things; it is improper, that is, tropical or anthropomorphic, to say that He *sees* all things. Anthropomorphism is thus a species of *accommodation*, inasmuch as by these representations the Deity as it were lowers himself to the comprehension of men. [ACCOMMODATION.]

'Divine affections,' says Tertullian, 'are ascribed to the Deity by means of figures borrowed from the human form, not as if he were endued with corporeal qualities: when eyes are ascribed to him, it is denoted that he sees [viz. knows] all things; when ears, that he hears all things: the speech denotes the will; nostrils, the perception of prayer; hands, creation; arms, power; feet, immensity; for he has no members, and performs no office for which they are required, but executes all things by the sole act of his will. How can he require eyes, who is light itself? or feet, who is omnipresent? How can he require hands, who is the silent creator of all things? or a tongue, to whom to think is to command. Those members are necessary to men, but not to God, inasmuch as the counsel of men would be inefficacious unless his thoughts put his members in motion;—but not to God, whose operations follow his will without effort.'

In the same manner human affections, as grief, repentance, anger, revenge, jealousy, etc., are ascribed to the Deity. These affections are not, properly speaking, in the mind of God, who is infinitely happy and immutable, but are ascribed to him anthropopathically by way of similitude. For instance, when God forgives the penitent what he had denounced against the wicked who continue in sin, he is said to act as men do in similar cases. Thus St. Augustine observes, 'By repentance is signified a change of events. For as a man when he repents bewails the crime which he had committed, so, when God alters anything unexpectedly, that is, beyond man's expectation, he, figuratively, is said to have repented of the punishment when man repents of the sin' (Ps. cx.) Thus also, when ignorance is ascribed to the Deity (Gen. iv.

* The camel, although it has cloven feet partially united by a common sole, and is armed with several false molars, is still a true ruminant.

9), the same Father remarks, 'He inquires, not as if really ignorant, but as a judge interrogates a prisoner;' and Luther, in reference to the passage (Ps. ii. 4) where laughter is ascribed to the Deity, thus observes, 'Not that God laughed as men do, but to point out the absurdity of men's undertaking impossibilities.' (*Works*, ii. Ep. ps. 37).

Anthropomorphic phrases are found throughout the whole Scriptures of the Old and New Testaments. In the infancy of mankind conceptions derived from the human senses were universal, and the Deity is constantly spoken of in anthropomorphic phrases. We find these ideas more pure after the times of Moses, who forbade the making of any representation of the Deity (see DECALOGUE). The conceptions of men became still less sensuous in the times of the Prophets, who propounded still clearer notions of the sublime perfections of the Deity. But even under the Christian dispensation anthropomorphic modes of expression were unavoidable; for although Christianity imparts purer and more spiritual sentiments than the former revelations, the inspired teachers could not express themselves without the aid of images derived from human objects, if they would make their communications in regard to divine things intelligible to their hearers, who were habituated to the anthropomorphic expressions of the Old Testament. Such a mode of teaching was therefore indispensable in itself, and tended to promote the instruction and enlightenment of mankind; 'the attention was more easily kept up among the sensuous hearers and readers of the sayings and writings of Jesus and his apostles; the truths, figuratively presented, made a deeper impression on the mind; it introduced variety into the discourse; the affections were moved, and religious instruction the more readily communicated' (see Seiler's *Biblical Hermeneutics*, part i. sect. 2, § 54-62, London, 1835, and Glassius, *Philologia Sacra*, Bk. v. Tr. I. c. 7). —W. W.

ANTICHRIST (*Ἀντίχριστος*). This term occurs only in the first and second epistles of John (1 Ep. ii. 18, 22; iv. 3; 2 Ep. 7). In one instance the plural is used, *ἀντίχριστοι* (1 Ep. ii. 18). We have to inquire—

1. *Into the meaning of the term.* The preposition *ἀντί* in composition denotes either *substitution* or *opposition*. Of the former we have instances in such words as *ἀντιβασιλεύς*, a *viceroy*, *ἀνθύπατος*, *proconsul*, etc.; and of the latter in *ἀντιφιλόσοφος*, a *philosopher of an opposite school*, *ἀνταγωνιστής*, a *rival*, etc. *Ἀντίχριστος* may, therefore, mean either one who puts himself in the place of Christ, a pseudo-Christ, or one who opposes Christ; either one 'tentans semet ipsum Christum ostendere' (Irenæus, *Adv. Hæc.* v. 25), or one who is 'adversarius, contrarius Christo' (Augustine in *Ep. Joan. Tr.* 3), *ἐνάντιος* (Theophylact.) The latter is the more common force of the *ἀντί* when so compounded; and most agree in giving it this force in the word before us. Antichrist, then, means one who is opposed to Christ.

2. *Is Antichrist a term of collective import, or is it the designation of an individual?* The ancient Fathers, for the most part, regarded the Antichrist as a man, the instrument of Satan, who should pretend to be the Christ, and some went the length of supposing that he would be Satan himself incarnate; they all agreed in regarding him as a being

who was to appear at some future time, immediately before the second advent of Christ. With these views the language of John seems incompatible, not only because he says there 'are many antichrists,' but because he declares that antichrist had already come. To obviate this, it has been suggested that when he says, 'now there are many antichrists,' he intends to intimate that already were the heralds and forerunners of the antichrist apparent, and that in this he finds an evidence that he himself, in whom their wickedness would culminate, would soon appear, and that it was the last time. Those who take this view, for the most part, identify the antichrist of John with the *ἄθροπος τῆς ἀμαρτίας* of Paul (2 Thess. ii. 3). So De Wette, Lücke, Diisterdieck, etc. The objection to this is, that it is founded on an artificial construction of John's words, in which nothing is found as to the antichrists being the precursors of the Antichrist, or as to the latter being the concentration and essence, as it were, of the former. John's words would rather lead to the conclusion that in his view the Antichrist and the antichrists were one; the former being merely a collective term for the whole to whom this character belonged. This appears in 1 Ep. ii. 18; but it is especially manifest in 2 Ep. 7, where the *πολλοὶ πλάνοι* at the beginning of the verse became *ὁ πλάνος καὶ ὁ ἀντίχριστος* at the close. This has led many to adopt the opinion of Bengel, who says that John, 'sub singulari numero omnes mendaces et veritatis inimicos inuit.' According to this view, the meaning of the apostle is, that the prediction of the coming of Antichrist was already in course of fulfilment, as the many antichrists shewed (Huther, in loc.)

3. It still remains to inquire, *What object or class of characters this term is meant to describe?* Those who suppose that some individual is intended by the term Antichrist, either seek to identify him with some person whom they regard as especially the enemy of Christ, in which sense the Pope of Rome is frequently fixed upon as Antichrist; or they suppose that the evil which is as yet seen only partially and diffusively in the many antichrists will ultimately be condensed in one monster of iniquity, who shall appear immediately before the second coming of Christ. On the other hand, many adopt the opinion of Bengel, who says that 'Antichristus pro antichristianismo sive doctrina et multitudine hominum Christo contraria.' Neither of these views seems correct. The former is without any authority from Scripture, is purely conjectural; the latter affixes to the apostle's language a wider meaning than he himself allows, for he expressly says (1 Ep. ii. 22), 'He is antichrist that denieth the Father and the Son.' This must be accepted as the apostle's own description of the object he designates by this term; so that we must seek for the Antichrist in the mass of those who deny the Father and the Son. These, according to the apostle's preceding statement in verse 22, are they who deny that Jesus is the Christ. Such deny both the Father and the Son, for 'he who denies the identity of Jesus as the Christ, denies the Son, for the Son is none other than Ἰησοῦς ὁ Χριστός (not an Aeon of the name of Christ, who never became man; nor Jesus who is not the Christ, or is not the Logos, according to John i. 14); but he that denies the son denies the Father also, not only because Son and Father are logical correlatives, but

because the Father and the Son are so essentially united that the Father throughout without the Son is not the true God, but a mere empty abstraction. The essence of the Father is love; but the love is only realised in the Son; and he that denies the latter denies the Father, or God in the truth of his essence. What such a ψεύστης calls God is not the living God, but a mere idea, an εἶδωλον' (Huther in Meyer's *Commentar ueb. d. N. T.* in loc.)—W. L. A.

ANTILEGOMENA (ἀντιλεγόμενα, *contradicted or disputed*), an epithet applied by the early Christian writers to denote those books of the New Testament which, although known to all the ecclesiastical writers, and sometimes publicly read in the churches, were not for a considerable time admitted to be genuine, or received into the canon of Scripture. These books are so denominated in contradistinction to the *Homologoumena*, or universally acknowledged writings. The following is a catalogue of the *Antilegomena*:—*The Second Epistle of St. Peter*.—*The Epistle of St. James*.—*The Epistle of St. Jude*.—*The Second and Third Epistles of St. John*.—*The Apocalypse*, or *Revelation of St. John*.—*The Epistle to the Hebrews*.

The earliest notice which we have of this distinction is that contained in the *Ecclesiastical History* of Eusebius, the learned bishop of Cæsarea, who flourished A. D. 270-340. He seems to have formed a triple, or, as it appears to some, a quadruple division of the books of the New Testament, terming them—1, the *homologoumena* (received); 2, the *antilegomena* (controverted); 3, the *notha* (spurious); and, 4, those which he calls the *utterly spurious*, as being not only spurious in the same sense as the former, but also *absurd or impious*. Among the *spurious* he reckons the *Acts of Paul*, the *Shepherd of Hermas*, the *Revelation of Peter*, the *Epistle of Barnabas*, and the *Instructions of the Apostles*. He speaks doubtfully as to the class to which the *Apocalypse* belongs, for he himself includes it among the *spurious*: he then observes that some reject it, while others reckon it among the *acknowledged* writings (*homologoumena*). Among the spurious writings he also enumerates the Gospel according to the Hebrews. He adds, at the same time, that all these may be classed among the *antilegomena*. His account is consequently confused, not to say contradictory. Among the *utterly spurious* he reckons such books as the heretics brought forward under pretence of their being genuine productions of the apostles, such as the so-called *Gospels of Peter, Thomas, and Matthias*, and the *Acts of Andrew, John*, and the other apostles. These he distinguishes from the *antilegomena*, as being works which not one of the ancient ecclesiastical writers thought worthy of being cited. Their style he considers so remote from that of the apostles, and their contents so much at variance with the genuine doctrines of Scripture, as to shew them to have been the inventions of heretics, and not worthy of a place even among the *spurious* writings. These latter he has consequently been supposed to have considered as the compositions of orthodox men, written with good intentions, but calculated by their titles to mislead the ignorant, who might be disposed to account them as apostolical productions, to which honour they had not even a dubious claim. (See Eusebius, *Hist. Eccles.* iii. 5, 25.) [CANON and the articles on the books above enumerated.]—W. W.

ANTI-LIBANUS. [LIBANUS.]

ANTIOCH (Ἀντιόχεια). Two places of this name are mentioned in the New Testament. 1. A city on the banks of the Orontes, 300 miles north of Jerusalem, and about 30 from the Mediterranean. It was situated in the province of Seleucia, called Tetrapolis (Τετραπόλις), from containing the four cities, Antioch, Seleucia, Apamea, and Laodicea: of which the first was named after Antiochus, the father of the founder; the second after himself; the third after his wife Apamea, and the fourth in honour of his mother. The same appellation (Tetrapolis) was given also to Antioch, because it consisted of four townships or quarters, each surrounded by a separate wall, and all four by a common wall. The first was built in the year 300 B. C. by Seleucus Nicator, who peopled it with inhabitants from Antigonía; the second by the settlers belonging to the first quarter; the third by Seleucus

58.

Callinicus; and the fourth by Antiochus Epiphanes (Strabo, xvi. 2; iii. 354). It was the metropolis of Syria (*Antiochiam, Syria caput*. Tac. *Hist.* ii. 79), the residence of the Syrian kings (the Seleucidæ) (1 Macc. iii. 37; vii. 2), and afterwards became the capital of the Roman provinces in Asia. It ranked third, after Rome and Alexandria, among the cities of the empire (Joseph. *De Bell. Jud.* iii. 2, 4), and was little inferior in size and splendour to the latter, or to Seleucia (Strabo, xvi. 2; vol. iii. p. 355, ed. Tauch.) Its suburb Daphne was celebrated for its grove and fountains (Strabo, xvi. 2; vol. iii. p. 356, ed. Tauch.), its asylum (δύλον τόπον, 2 Macc. iv. 33) and temple dedicated to Apollo and Diana. 'The temple and the village were deeply bosomed in a thick grove of laurels and cypresses which reached as far as a circumference of ten miles, and formed in the most sultry summers a cool and impenetrable shade. A thousand streams of the purest water, issuing from every hill, preserved the verdure of the earth and the temperature of the air' (Gibbon, ch. xxiii.) Hence Antioch was called Epidaphnes (Ἀντιόχεια τῇ ἐπὶ Δάφνῃ, Joseph. *Antiq.* xvii. 2, 1; *Epidaphnes cognominata*, Plin. *Hist. Nat.* v. 18). It was very populous; within 150 years after its erection the Jews slew 100,000 persons in it in one day (1 Macc. xi. 47). In the time of Chrysostom the population was computed at 200,000, of whom one-half, or even a greater proportion, were professors of Christianity (τὸ πλεόν τῆς πόλεως χριστιανόν, Chrysos. *Adv. Jud.*

Omt. t. i. p. 588; *Hom. in S. Ignat.* t. ii. p. 597; *In Matt. Hom.* 85, t. vii. p. 810). Chrysostom also states that the church at Antioch maintained 3000 poor, besides occasionally relieving many more (*In Matt. Hom.* t. vii. p. 658). Cicero speaks of the city as distinguished by men of learning and the cultivation of the arts (*Pro Archia*, 3). A multitude of Jews resided in it. Seleucus Nicator granted them the rights of citizenship, and placed them on a perfect equality with the other inhabitants (Joseph. *Antiq.* xii. 3, § 1). These privileges were continued to them by Vespasian and Titus—an instance (Josephus remarks) of the equity and generosity of the Romans, who, in opposition to the wishes of the Alexandrians and Antiocheans, protected the Jews, notwithstanding the provocations they had received from them in their wars. They were also allowed to have an Archon or Ethnarch of their own (Joseph. *De Bell. Jud.* vii. 3. 3). Antioch is called *libera* by Pliny (*Hist. Nat.* v. 18), having obtained from Pompey the privilege of being governed by its own laws. This fact is commemorated on a coin bearing the inscription, ANTIOXEΩN. ΜΗΤΡΟΠΟΛ. ΑΥΤΟΝΟΜΟΤ.

The Christian faith was introduced at an early period into Antioch, and with great success (Acts xi. 19, 21, 24). The name 'Christians' was here first applied to its professors (Acts xi. 26). [CHRISTIAN.] Antioch soon became a central point for the diffusion of Christianity among the Gentiles, and maintained for several centuries a high rank in the Christian world. The attempt of certain Judaizers from Jerusalem to enforce the rite of circumcision on the Gentile converts at Antioch was the occasion of the first apostolic council or convention (Acts xv.) Antioch was the scene of the early labours of the apostle Paul, and the place whence he set forth on his first missionary labours (Acts xi. 26; xiii. 2). Ignatius was the second bishop or overseer of the church, for about forty years, till his martyrdom in A.D. 107. In the third century three councils (the last in A.D. 269) were held at Antioch relative to Paul of Samosata, who was bishop there about A.D. 260 (Neander's *Allgemeine Geschichte*, etc. i. 3, p. 1013; Gieseler's *Lehrbuch*, i. 242; Moshemii *Commentarii*, p. 702). In the course of the fourth century a new theological school was formed at Antioch, which aimed at a middle course in Biblical Hermeneutics, between a rigorously literal and an allegorical method of interpretation. Two of its most distinguished teachers were the presbyters Dorotheus and Lucian, the latter of whom suffered martyrdom in the Dioclesian persecution, A.D. 312 (Neander's *Allgemeine Geschichte*, i. 3, p. 1237, ii. 498 *transl.* (Bohn's ed.); Gieseler's *Lehrbuch*, i. 272; Lardner's *Credibility*, pt. ii. ch. 55, 58). Libanius (born A.D. 314), the rhetorician, the friend and panegyrist of the emperor Julian, was a native of Antioch (Lardner's *Testimonies of Ancient Heathens*, ch. 49; Gibbon's *Decline and Fall*, etc. ch. 24). It had likewise the honour of being the birthplace of his illustrious pupil, John Chrysostom (born A.D. 347; died A.D. 407) (Lardner's *Credibility*, pt. ii. ch. 118; Neander's *Allgemeine Geschichte*, ii. 3, pp. 1440-56).

As the ecclesiastical system became gradually assimilated to the political, the churches in those cities which held the highest civil rank assumed a corresponding superiority in relation to other Christian communities. Such was the case at Rome, Alexandria, and Antioch, and, in the course

of time, at Constantinople and Jerusalem, where the term Exarch was applied to the resident bishop, but shortly exchanged for that of Patriarch (Neander, *Allg. Gesch.* ii. 1, p. 346-51). At the present time there are three prelates in Syria who claim the title of patriarchs of Antioch, namely: (1) the patriarch of the Greek church; (2) of the Syrian Monophysites; (3) of the Maronites (Murdock's *Mosheim*, edited by Reid, pp. 128, 628).

Few cities have undergone and survived greater vicissitudes and disasters than Antioch. In A.D. 260 Sapor, the Persian king, surprised and pillaged it, and multitudes of the inhabitants were slain or sold as slaves. It has been frequently brought to the verge of utter ruin by earthquakes (A.D. 340, 394, 396, 458, 526, 528); by that of A.D. 526 no less than 250,000 persons were destroyed, the population being swelled by an influx of strangers to the festival of the Ascension. The emperor Justinian gave forty-five centenaries of gold (£180,000) to restore the city. Scarcely had it resumed its ancient splendour (A.D. 540) when it was again taken and delivered to the flames of Chosroes. In A.D. 658 it was captured by the Saracens. Its 'safety was ransomed with 300,000 pieces of gold, but the throne of the successors of Alexander, the seat of the Roman government in the East, which had been decorated by Cæsar with the titles of free and holy and inviolate, was degraded under the yoke of the caliphs to the secondary rank of a provincial town' (Gibbon, ch. 51). In A.D. 975 it was retaken by Nicephorus Phocas. In A.D. 1080 the son of the governor Philaretus betrayed it into the hands of Soliman. Seventeen years after the Duke of Normandy entered it at the head of 300,000 Crusaders; but as the citadel still held out, the victors were in their turn besieged by a fresh host under Kerboga and twenty-eight emirs, which at last gave way to their desperate valour (Gibbon, ch. 58). In A.D. 1268 Antioch was occupied and ruined by Boadocbar or Bibars, sultan of Egypt and Syria; this first seat of the Christian name being despoiled by the slaughter of 17,000 persons, and the captivity of 100,000. About the middle of the fifteenth century the three patriarchs of Alexandria, Antioch, and Jerusalem convoked a synod, and renounced all connection within the Latin church.

Antioch at present belongs to the Pashalic of Haleb (Aleppo), and bears the name of *Antakia*. The inhabitants are said to have amounted to twenty thousand before the earthquake of 1822, which destroyed four or five thousand. On the south-west side of the town is a precipitous mountain-ridge, on which a considerable portion of the old Roman wall of Antioch is still standing, from 30 to 50 feet high and 15 feet in thickness. At short intervals 400 high square towers are built up in it, containing a staircase and two or three chambers, probably for the use of the soldiers on duty. At the east end of the western hill are the remains of a fortress, with its turrets, vaults, and cisterns. Toward the mountain south-south-west of the city some fragments of the aqueducts remain. After heavy rains antique marble pavements are visible in many parts of the town; and gems, carnelians, and rings are frequently found. The present town stands on scarcely one-third of the area enclosed by the ancient wall, of which the line may be easily traced; the entrance to the town from Aleppo is by one of the old gates, called

Bab Bablous, or Paul's gate, not far from which the members of the Greek church assemble for their devotions in a cavern dedicated to St. John (Madox's *Excursions*, ii. 74; Monro's *Summer Ramble*, ii. 140-143; Dr. Kitto's *Daily Bible Illustrations*, vol. viii. p. 220; Conybeare and Howson's *Life and Epistles of St. Paul*, vol. i. 149-155, 2d ed. 1858).

2. ANTIOCH in (or near) *Pisidia* (Ἀντιόχεια τῆς Πισιδίας), being a border city, was considered at different times as belonging to different provinces. Ptolemy places it in Pamphylia, and Strabo in Phrygia. It was founded by Seleucus Nicanor, and its first inhabitants were from Magnesia on the Mæander. After the defeat of Antiochus (III.) the Great by the Romans, it came into the possession of Eumenes, king of Pergamos, and was afterwards transferred to Amyntas. On his death the Romans made it the seat of a proconsular government, and invested it with the privileges of a *Colonia Juris Italici*, which included a freedom from taxes and a municipal constitution similar to that of the Italian towns (Ulpianus, lib. 50: *In Pisidia juris Italici est Colonia Antiochensium*). When Paul and Barnabas visited this city (Acts xiii. 14), they found a Jewish synagogue and a considerable number of proselytes (οἱ φοβούμενοι τὸν Θεόν, v. 16; τῶν σεβομένων προσηλύτων, v. 43; τὰς σεβομένας γυναῖκας, v. 50), and met with great success among the Gentiles (v. 48), but, through the violent opposition of the Jews, were obliged to leave the place, which they did in strict accordance with their Lord's injunction (v. 51, compared with Matt. x. 14; Luke ix. 5).

Till within a very recent period Antioch was supposed to have been situated where the town of *Ak-Shehr* now stands; but the researches of the Rev. F. Arundell, British chaplain at Smyrna in 1833, confirmed by the still later investigations of Mr. Hamilton, secretary of the Geographical Society, have determined its site to be adjoining the town of Yalobatch; and consequently that Ak-Shehr is the ancient Philomelion described by Strabo (xii. 8; vol. iii. p. 72, ed. Tauch.) 'In Phrygia Paroreia is a mountainous ridge stretching from east to west; and under this on either side lies a great plain, and cities near it; to the north Philomelion, and on the other side Antioch, called Antioch near Pisidia: the one is situated altogether on the plain; the other on an eminence, and has a colony of Romans.' According to Pliny, Antioch was also called *Cæsarea* (*Insident verticem Pisidæ, quondam Solymi appellati, quorum colonia Cæsarea, eadem Antiochia*, v. 24). Mr. Arundell observed the remains of several temples and churches, besides a theatre and a magnificent aqueduct; of the latter twenty-one arches still remained in a perfect state. Mr. Hamilton copied several inscriptions, all, with one exception, in Latin. Of one the only words not entirely effaced were ANTIOCHEAE CAESARI.

Antioch was noted in early times for the worship of Men Arcæus, or Lunus. Numerous slaves and extensive estates were annexed to the service of the temple; but it was abolished after the death of Amyntas (Strabo, xii. 8; iii. 72). Arundell's *Discoveries in Asia Minor*, Lond. 1834, i. 268-312; Hamilton's *Researches in Asia Minor, Pontus, and Armenia*, Lond. 1842, i. 472-474; ii. 437-439; 'Laborde's work on *Syria and Asia Minor* contains a good view of the aqueduct; Dr. Kitto's *Daily Bible Illustrations*, vol. viii. p. 278; Conybeare

and Howson's *Life and Letters of St. Paul*, vol. i. p. 204-207, 2d ed. 1858.—J. E. R.

ANTIOCHUS. Of the many kings who bore this name, Antiochus, called Epiphanes, has the chief claim on our attention in a Biblical Cyclopædia, since in the Books of Maccabees and in the prophecies of Daniel his person is so prominent. Nevertheless, it will be our business to set forth, not that which readers of the Bible can gather for themselves, but such preliminary and collateral information as will tend to throw light on the position of the Jews towards the Syrian monarchy.

The name Antiochus may be interpreted *he who withstands*, or *lasts out*; and denotes military prowess, as do many other of the Greek names. It was borne by one of the generals of Philip, whose son, Seleucus, by the help of the first Ptolemy, established himself (B.C. 312) as ruler of Babylon. The year 312 is in consequence the era from which, under that monarchy, time was computed, as, for instance, in the Books of Maccabees. For eleven years more the contest in Asia continued, while Antigonus (the 'one-eyed') was grasping at universal supremacy. At length, in 301, he was defeated and slain in the decisive battle of Ipsus, in Phrygia. Ptolemy, son of Lagus, had meanwhile become master of southern Syria; and Seleucus was too much indebted to him to be disposed to eject him by force from this possession. In fact, the three first Ptolemies (B.C. 323-222) looked on their extra-Egyptian possessions as their sole guarantee for the safety of Egypt itself against their formidable neighbour, and succeeded in keeping the mastery, not only of Palestine and Cœle-Syria, and of many towns on that coast, but of Cyrene and other parts of Libya, of Cyprus, and other islands, with numerous maritime posts all round Asia Minor. A permanent fleet was probably kept up at Samos (Polyb. v. 35, 11), so that their arms reached to the Hellespont (v. 34, 7); and for some time they ruled over Thrace (xviii. 34, 5). Thus Syria was divided between two great powers, the *northern* half falling to Seleucus and his successors, the *southern* to the Ptolemies; and this explains the titles 'king of the north' and 'king of the south,' in the 11th chapter of Daniel. The line dividing them was drawn somewhat to the north of Damascus, the capital of Cœle-Syria.

The first Seleucus built a prodigious number of cities with Greek institutions, not, like Alexander, from military or commercial policy, but to gratify ostentation, or his love for Greece. This love, indeed, led him to fix his capital, not at Babylon, where Alexander would have placed it, but in the north of Syria (see ANTIOCH); and in extreme old age his life fell a sacrifice to his romantic passion for revisiting his native Macedonia. To people his new cities was often a difficult matter; and this led to the bestowal of premiums on those who were willing to become citizens. Hence we may account for the extraordinary privileges which the Jews enjoyed in them all, having equal rights with Macedonians. At the same time (whether from the example which Alexander had set or from the force of circumstances) that age displayed remarkable tendencies to religious fusion everywhere; insomuch that—if, with Josephus, we may trust to the letter in the 1st Book of Maccabees (xii. 21)—even the Lacedæmonians put in their claim to be regarded as children of Abraham. But there

was still another cause which recommended the Jews to the Syrian kings. A nation thus diffused through their ill-compacted empire, formed a band most useful to gird its parts together. To win the hearts of the Jews, was to win the allegiance of a brave brotherhood, who would be devoted to their protector, and who could never make common cause with any spirit of local independence. For this reason Antiochus the Great, and doubtless his predecessors also, put peculiar trust in Jewish garrisons. In a letter quoted by Josephus (*Antiq.* xii. 3, 4) he orders the removal of 2000 families of Jews of Mesopotamia and Babylonia, with all their goods, into Lydia and Phrygia, for garrison service: and although the authenticity of the letter may be suspicious, it at any rate proves the traditional belief that the earlier kings of the house of Seleucus had transported troops of Jewish families westward for military purposes.

59. Antiochus the Great.

Again: through the great revolution of Asia, the Hebrews of Palestine were now placed nearly on the frontier of two mighty monarchies; and it would seem that the rival powers *bid* against one another for their good will—so great were the benefits showered upon them by the second Ptolemy. Even when a war broke out for the possession of Coele-Syria, under Antiochus the Great and the fourth Ptolemy (B.C. 218, 217), though the people of Judæa, as part of the battlefield and contested possession, were exposed to severe suffering, it was not the worse for their ultimate prospects. Antiochus at least, when at a later period (B. C. 198) left master of southern Syria, did but take occasion to heap on the Jews and Jerusalem new honours and exemptions (*Joseph. Antiq.* xii. 3, 3). In short, in days in which no nation of those parts could hope for political independence, there was none which seemed so likely as the Hebrew nation to enjoy an honourable social and religious liberty.

The Syrian empire, as left by Antiochus the Great to his son, was greatly weaker than that which the first Seleucus founded. Scarcely, indeed, had the second of the line begun to reign (B. C. 280) when four sovereigns in Asia Minor established their complete independence:—the kings of Pontus, Bithynia, Cappadocia, and Pergamus. In the next reign—that of Antiochus Theos—the revolt of the Parthians under Arsaces (B. C. 250) was followed speedily by that of the distant province of Bactriana. For thirty years together the Parthians continued to grow at the expense of the Syrian monarchy. The great Antiochus passed a life of war (B.C. 223-187). In his youth he had to contend against his revolted satrap of Media, and afterwards against his kinsman Achæus, in Asia Minor. We have already noticed his struggles in

Coele-Syria against the Ptolemies. Besides this, he was seven years engaged in successful campaigns against the Parthians and the king of Bactriana; and, finally, met unexpected and staggering reverses in war with the Romans, so that his last days were inglorious and his resources thoroughly broken. Respecting the reign of his son, Seleucus Philopator (B.C. 187-176), we know little, except that he left his kingdom tributary to the Romans (*Livy*, xlii. 6) [see also SELEUCUS PHILOPATOR]. In Daniel, xi. 20, he is named *a raiser of taxes*, which shews what was the chief direction of policy in his reign. De Wette renders the words rather differently ('der einen entreiber die Krone des Reiches [Judæa] durchziehen lässt'), yet perhaps with the same general meaning. Seleucus having been assassinated by one of his courtiers, his brother Antiochus Epiphanes hastened to occupy the vacant throne, although the natural heir, Demetrius, son of Seleucus, was alive, but a hostage at Rome. In Daniel, xi. 21, it is indicated that he gained the kingdom *by flatteries*; and there can be no doubt that a most lavish bribery was his chief instrument. According to the description in *Livy* (xlii. 20), the magnificence of his largesses had almost the appearance of insanity.

A prince of such a temper and in such a position, whose nominal empire was still extensive, though its real strength and wealth were departing, may naturally have conceived, the first moment that he felt pecuniary need, the design of plundering the Jewish temple. At such a crisis, the advantage of the deed might seem to overbalance the odium incurred; yet, as he would convert every Jew in his empire into a deadly enemy, a second step would become necessary—to crush the power of

60. Antiochus Epiphanes.

the Jews, and destroy their national organization. The design, therefore, of prohibiting circumcision and their whole ceremonial, would naturally ally itself to the plan of spoliation, without supposing any previous enmity against the nation on his part. Just then, however, a candidate for the high-priesthood gave an impetus to this course of events, by setting the example of assuming Greek manners in the hope of gaining the king's favour; as is narrated in the 1st book of Maccabees. We have written enough to shew how surprising to the Jews must have been the sudden and almost incredible change of policy on the part of the rulers of Syria; and how peculiarly aggravated enmity Antiochus Epiphanes must in any case have drawn on himself. Instead of crushing his apparently puny foes, he raised up heroes against himself [MACCABEES], who, helped by the civil wars of his successors, at length achieved the deliverance of their people; so that in the 170th year of the Seleucidæ (B.C. 143) their independence was formally acknowledged, and

they began to date from this period (1 Macc. xiii. 42) as a new birth of their nation. Whether Antiochus Epiphanes committed all the atrocities alleged in the *second* book of Maccabees may be doubted; but having started amiss, with no principle to guide or restrain him, it is certain that he was capable of adding cruelty to iniquity, to whatever amount the necessity of the moment might prompt. The intensity of Tacitus's hatred of the Jews is lamentably displayed in his remarks on this king, *Hist.* v. 8: 'Rex Antiochus, demere superstitionem et mores Græcorum dare adnixus, quominus *tererrimam gentem in melius mutaret*, Parthorum bello prohibitus est.'

The change of policy, from conciliation to cruel persecution, which makes the reign of Epiphanes an era in the relation of the Jews to the Syrian monarchy, has perhaps had great permanent moral results. It is not impossible that perseverance in the conciliating plan might have sapped the energy of Jewish national faith; while it is certain that persecution kindled their zeal and cemented their unity. Jerusalem, by its sufferings, became only the more sacred in the eyes of its absent citizens; who vied in replacing the wealth which the sacrilegious Epiphanes had ravished. According to 1 Macc. vi. 1-16, this king died shortly after an attempt to plunder a temple at Elymais; and Josephus follows that account. Appian (*Syr.* 66) adds that he actually plundered it. Strabo, however (xvi. 1), and Justin (xxxii. 2) tell the story of Antiochus *the Great*, and represent him as losing his life in the attempt. Polybius and Diodorus decide nothing, as the fragments which notice the deed ascribe it merely to 'the king Antiochus.' Nevertheless, Josephus appeals to Polybius as agreeing with him; and the editors of Polybius so understand the matter. On the whole, it would appear that this attempt is rightly assigned to Epiphanes: it is not likely to have been two events, though the stories do not agree as to the name of the deity of the temple. We ought, however, to add, that Winer (*Real-Wörterbuch*) is disposed to believe that father and son both ended their lives with the same act; and this view of the case is also taken in Dr. W. Smith's *Dictionary of Greek and Roman Biography*.

An outline of the deeds of the kings of Syria in war and peace, down to Antiochus Epiphanes, is presented in the 11th chapter of Daniel; in which Epiphanes and his father are the two principal figures. Nothing but ignorance or a heated imagination can account for some modern expositors referring that chapter to the events of the eighteenth century after Christ. The wars and treaties of the kings of Syria and Egypt from B.C. 280 to B.C. 165 are described so minutely and so truly, in vv. 6-36, as to force all reasonable and well-informed men to choose between the alternatives,—either that it is a most signal and luminous prediction, or that it was written after the event.

Besides Antiochus Epiphanes, the book of Maccabees mentions his son, called Antiochus Eupator, and another young Antiochus, son of Alexander Balas, the usurper; both of whom were murdered at a tender age. [ALEXANDER BALAS.] In the two last chapters of the book a fourth Antiochus appears,—called by the Greeks *Sidetes*, from the town of Side, in Pamphylia. This is the last king of that house, whose reputation and power were not unworthy of the great name of Seleucus. In

the year B.C. 134 he besieged Jerusalem, and having taken it next year, after a severe siege, he pulled down the walls, and reduced the nation once more to subjection, after only ten years' independence. His moderation and regard for their religious feelings are contrasted by Josephus with the impiety of Epiphanes (*Antiq.* xiii. 8, 2, 3). It is remarkable that, though the beginning of his quarrel with the Jewish high-priest is narrated in the first book of Maccabees, the story is cut short abruptly.

The most compact and unbroken account of the kings of this dynasty is to be found in Appian's book (*De Rebus Syriacis*), at the end. The dates of the following table are taken from Clinton's *Fasti Hellenici*, vol. iii., Appendix, ch. iii.—

1. Seleucus Nicator, B.C. 312—280.
2. Antiochus Soter, his son, 280—261.
3. Antiochus Theos, his son, 261—247.
4. Seleucus Callinicus, his son, 247—226.
5. (Alexander, or) Seleucus Ceraunus, his son, 226—223.
6. Antiochus the Great, his brother, 223—187.
7. Seleucus Philopator, his son, 187—176.
8. Antiochus Epiphanes, his brother, 176—164.
9. Antiochus Eupator, his son (a minor), 164—162.
10. Demetrius Soter, son of Seleucus Philopator, 162—150.
11. Alexander Balas, a usurper, who pretends to be son of Antiochus Epiphanes, and is acknowledged by the Romans, 152—146.
- [12. Antiochus Theos, or Alexander (a minor), son of the preceding. He is murdered by the usurper Trypho, who contests the kingdom till 140.]
12. Demetrius Nicator, son of Demetrius Soter, reigns 146—141, when he was captured by the Parthians.
13. Antiochus Sidetes, his brother, 141—128.*

F. W. N.

ANTIPAS (*Ἀντίπας*). 1. A person named as 'a faithful witness,' or martyr, in Rev. ii. 13.

2. HEROD-ANTIPAS. [HERODIAN FAMILY.]

ANTIPATER. [HERODIAN FAMILY.]

ANTIPATRIS (*Ἀντιπατρίς*), a city built by Herod the Great, on the site of a former place called Caphar-saba (*Καβαρσαβὰ* or *Καφαρσαβὰ*, Joseph. *Antiq.* xiii. 15, 1). The spot was well watered, and fertile; a stream flowed round the city, and in its neighbourhood were groves of large trees (*Antiq.* xvi. 5, 2). Caphar-saba was 120 stadia from Joppa; and between the two places Alexander Balas drew a trench, with a wall and wooden towers, as a defence against the approach of Antiochus (*Antiq.* xiii. 15, 1; *De Bell. Jud.* i. 4, 7). Antipatris also lay between Cæsarea and Lydia, its distance from the former place being twenty-six Roman miles (*Itin. Hieros.*, p. 600). These circumstances indicate that Antipatris was in the midst of a plain, and not at Arsuf, where the Crusaders supposed they had found it (Will. Tyr. ix. 19; xiv. 16; Vitracus, c. 23; Brocard, c. 10; comp. Reland, *Palæst.*, pp. 569, 570). On the road from Ramlah to Nazareth, north of Ras-el Ain, Prokesch (*Reise ins Heilige Land*, Wien, 1831)

* Kings of the same family reigned in Antioch until Pompey reduced Syria to the form of a Roman province, B.C. 63.

came to a place called Kaffr Saba; and the position which Brighaus assigns to this town in his map is almost in exact agreement with the position assigned to Antipatris in the *Itin. Hieros.* Perceiving this, Professor Raumer (*Palästina*, pp. 144, 462) happily conjectured that this Kaffr Saba was no other than the reproduced name of Caphar-saba, which, as in many other instances, has again supplanted the foreign, arbitrary, and later name of Antipatris. This conjecture has been confirmed by Robinson, who gives Kefr Sâba as the name of the village in question (*Researches*, iii. 46-48). St. Paul was brought from Jerusalem to Antipatris by night, on his route to Cæsarea (Acts. xxiii. 31).—J. K.

ANTIQUITIES. [ARCHÆOLOGY.]

ANTONIA. [JERUSALEM.]

APE. [KOPH.]

APELLES (Ἀπελλῆς), a Christian at Rome, whom Paul salutes in his Epistle to the Church there (Rom. xvi. 10), and calls τὸν δοκιμὸν ἐν Χριστῷ 'approved in Christ,' *i. e.*, an approved Christian. Origen doubts whether he may not have been the same person with Apollos; but this is far from likely [APOLLOS]. According to the old church traditions Apelles was one of the seventy disciples, and bishop either of Smyrna or Heracleia (Epiph. *Cont. Hæres.* p. 20; Fabricii *Lux Evangelii*, pp. 115, 116, etc.) The name itself is notable from Horace's 'Credat Judeus Apella, non ego' (*Sat.* l. 5, 100), by which he less probably means a circumcised Jew in general, as many think, than a particular Jew of that name, well known at Rome.—J. K.

APHARSACHITES or APHARSATHCHITES (אֶפְרַסְחַיִּים or אֶפְרַסְחַיִּים; Sept. Ἀφαρσαθαχαῖοι), the name of the nation to which belonged one portion of the colonists who the Assyrian king planted in Samaria (Ezra iv. 9; v. 6). Schultess (*Parad.* p. 362) identifies the 'Apharsachites' with the Persian, or rather Median 'Paretaceni' of the Greek geographers (Strabo xi. 522; xv. 732; Plin. vi. 26). This conclusion is strengthened by the fact that the A is often prosthetic in Strabo; as in xi. 523, xv. 727, where the names Mardi and Amardi are interchanged.—J. K.

APHEK (אֶפֶק; Sept. Ἀφέκ); the name signifies *strength*; hence a citadel or fortified town. There were at least three places so called, viz.—

1. A city in the tribe of Asher (Josh. xiii. 4; xix. 30), called אֶפֶק in Judg. i. 31, where we also learn that the tribe was unable to gain possession of it. This must be the same place with the אֶפֶק which Eusebius (*Constant.* iii. 55) and Sozomen (pp. 2, 5) place in Lebanon, on the river Adonis, where there was a famous temple of Venus. A village called Afka is still found in Lebanon, situated at the bottom of a valley, and may possibly mark the site of this Apek (Burckhardt, i. 70; Richter, p. 107; Rob. iii. 606).

2. A town near which Benhadad was defeated by the Israelites (1 Kings xx. 26, *sq.*), which seems to correspond to the Apeca of Eusebius (*Onomast.* in Ἀφεκα), situated to the east of the Sea of Galilee, and which is mentioned by Burckhardt, Setzen, and others, under the name of Feik or Fitk.

3. A city in the tribe of Issachar, not far from

Jezreel, where the Philistines twice encamped before battles with the Israelites (1 Sam. iv. 1; xxix. 1; comp xviii. 4). Either this or the first Apek, but most probably this, was the Apek mentioned in Josh. xii. 18, as a royal city of the Canaanites.—J. K.

APHEKAH (אֶפֶקָה), a town in the mountains of Judah (Josh. xv. 53). [Supposed by some to be the same as Apek, mentioned Josh. xii. 18.]

APHEREMA (Ἀφαιρεμα), one of the three toparchies added to Judæa by the kings of Syria (1 Macc. xi. 34). This is perhaps the Ephræm or Ephraim mentioned in 2 Chron. xiii. 19.

APHSES, head of the eighteenth sacerdotal family of the twenty-four into which the priests were divided by David for the service of the temple (1 Chron. xxiv. 15).

APOCALYPSE. [REVELATION, BOOK OF.]

APOCRYPHA (ἀπόκρυφα, sc. βιβλία, *hidden, secreted, mysterious*), a term in theology, applied in various senses to denote certain books claiming a sacred character. The word occurs Mark iv. 22: 'There is nothing hid, which shall not be manifested, neither was anything kept secret (ἀπόκρυφον), but that it should come abroad;' also Luke viii. 17; and Col. ii. 3: 'In whom are hid (ἀπόκρυφοί) all the treasures of wisdom and knowledge.' It is first found, as denoting a certain class of books, in Clemens Alexandrinus, *Stromata*, 3, c. 4, ἐκ τινὸς ἀποκρύφου.

1. *Meaning and use of the term.* In the early ages of the Christian Church this term was frequently used to denote books of an uncertain or anonymous author, or of one who had written under an assumed name. Its application, however, in this sense is far from being distinct, as, strictly speaking, it would include *canonical* books whose authors were unknown or uncertain, or even *pseudepigraphal*. 'Let us omit,' says St. Augustine, 'those fabulous books of Scripture, which are called *apocryphal*, because their secret origin was unknown to the fathers. We do not deny that Enoch, the seventh from Adam, wrote something, as Jude asserts in his canonical Epistle that he did; but it is not without a purpose that they are not found in the Jewish canon preserved in the Temple. The books, therefore, which are published in his name are rightly judged by prudent men not to be his, as more recent works were given out as written by apostles, which, however, have been separated, upon diligent investigation, from the canon of Scripture, under the name of *apocryphal*.' And again: 'From such expressions as 'The Book of the Wars of the Lord' men have taken occasion to forge books called *apocryphal*.' And in his book against Faustus, he says: 'Apocryphal books are not such as are of authority, and are kept secret; but they are books whose original is obscure, and which are destitute of proper testimonials, their authors being unknown, and their characters either heretical or suspected.' Origen, also, on Matt. xxii. had applied the term *apocryphal* in a similar way: 'This passage is to be found in no canonical book' (*regulari*, for we have Origen's work only in the Latin translation by Rufinus), 'but in the *apocryphal* book of Elias' (*secretis Eliaz*). And, 'This is plain, that many examples have been adduced by the apostles and

evangelists, and inserted in the New Testament, which we do not read in the canonical Scriptures which we possess, but which are found in the *Apocrypha*' (Origen, *Pref. in Cantic.*) So also Jerome, referring to the words (Eph. v. 14) 'Awake, thou that sleepest, and arise from the dead,' observes that 'the apostle cited this from *hidden* (reconditis) prophets, and such as seem to be apocryphal, as he has done in several other instances.' Epiphanius thought that this term was applied to such books as were not placed in the Ark of the Covenant, but put away in some other place (see Suicer's *Thesaurus* for the true reading of the passage in this Father). Under the term *apocryphal* have been included books of a religious character, which were in circulation among private Christians, but were not allowed to be read in the public assemblies; such as 3 and 4 Esdras, and 3 and 4 Maccabees.

In regard to the New Testament, the term has been usually applied to books invented by heretics to favour their views, or by Catholics under fictitious signatures. Of this description were many spurious or apocryphal gospels (which see). It is probably in reference to such that Basil, Cyril of Jerusalem, and Jerome, gave cautions against the reading of apocryphal books; although it is possible, from the context, that the last-named Father alludes to the books which were also called *Ecclesiastical*, and afterwards *Deutero-canonical*. The following passage from his Epistle to Læta, on the education of her daughter, will serve to illustrate this part of our subject:—'All *apocryphal* books should be avoided; but if she ever wishes to read them, *not to establish the truth of doctrines, but with a reverential feeling for the truths they signify*, she should be told that they are not the works of the authors by whose names they are distinguished, that they contain much that is faulty, and that it is a task requiring great prudence to find gold in the midst of clay.' And to the same effect Philostratus:—'Among whom are the Manichees, Gnostics [etc.], who, having some *apocryphal* books under the apostles' names (*i. e.*, some separate Acts), are accustomed to despise the canonical Scriptures; but the *secret* Scriptures, that is, *apocryphal*, though they ought to be read by the perfect for their morals, ought not to be read by all, as ignorant heretics have added and taken away what they wished.' He then proceeds to say that the books to which he refers are the *Acts of Andrew*, written by 'the disciples who were his followers,' etc.: *Quos conscripserunt discipuli tunc sequentes apostolum* (*Hæres. 40*).

In the *Bibliothèque Sacrée*, by the Rev. Dominican Fathers Richard and Giraud (Paris, 1822), the term is defined to signify—(1) anonymous or pseudepigraphal books; (2) those which are not publicly read, although they may be read with edification in private; (3) those which do not pass for authentic and of divine authority, although they pass for being composed by a sacred author or an apostle, as the *Epistle of Barnabas*; and (4) dangerous books composed by ancient heretics to favour their opinions. They also apply the name 'to books which, after having been contested, are put into the canon by consent of the churches, as *Tobit*, etc.' And Jahn applies it in its most strict sense, and that which it has borne since the fourth century, to books which, from their inscription, or the author's name, or the subject, might easily

be taken for inspired books, but are not so in reality. It has also been applied, by Jerome, to certain books not found in the Hebrew canon, but yet publicly read from time immemorial in the Christian church for edification, although not considered of authority in controversies of faith. These were also termed *Ecclesiastical* books, and consisted of the books of *Tobit*, *Wisdom*, *Ecclesiasticus*, *Baruch*, the two first books of *Maccabees*, the seven last chapters (according to Cardinal Hugo's division) of the book of *Esther*, and those (so called) parts of the book of *Daniel* which are not found in Hebrew, viz. the *Song of the Children*, the *Speech of Azariah*, the *History of Susannah*, and the *Fable* (as Jerome calls it) of *Bel and the Dragon*. These have been denominated, for distinction's sake, the *deutero-canonical* books, in as much as they were not in the original or Hebrew canon. In this sense they are called by some the *Antilegomena* of the Old Testament. 'The uncanonical books,' says Athanasius, or the author of the *Synopsis*, 'are divided into *antilegomena* and *apocrypha*.'

2. *Apocryphal Books received by some into the Canon, called also Ecclesiastical and Deutero-canonical.*—It is acknowledged by all that these books never had a place in the Jewish canon. The Roman Catholic Professor Alber, of Pesth (who considers them as of equal authority with the received books of the Hebrew canon), observes:—'The Deutero-canonical books are those which the Jews had not in their canon, but are notwithstanding received by the Christian Church, concerning which, on this very account of their not having been in the Jewish canon, there has existed some doubt even in the Church' (*Institut. Hermeneut.* vol. i. ch. viii. ix.) Josephus, a contemporary of the apostles, after describing the Jewish canon (*Contr. Ap.* l. 8), which he says consists of 22 books, remarks: 'but from the reign of Artaxerxes to within our memory there have been several things committed to writing, which, however, have not acquired the same degree of credit and authority as the former books, inasmuch as the tradition and succession of the prophets were less certain.' It has been shewn by Hornemann (*Observat. ad illust. doctr. de Canon. V. T. ex Philone*) that, although Philo was acquainted with the books in question, he has not cited any one of them, at least with the view of establishing any proposition.

Among the early Christian writers, Jerome, in his Prefaces, gives us the most complete information that we possess regarding the authority of these books in his time. After enumerating the 22 books of the Hebrew Canon, consisting of the *Law*, the *Prophets*, and the *Hagiographa*, he adds: 'This prologue I write as a preface to the books to be translated by us from the Hebrew into Latin, that we may know that all the books which are not of this number are *apocryphal*; therefore *Wisdom*, which is commonly ascribed to Solomon as its author, and the book of *Jesus* the son of *Sirach*, *Judith*, *Tobit*, and the *Shepherd*, are not in the canon.' Again, in the preface to his translation of the books of Solomon from the Hebrew, he observes:—'These three books (*Proverbs*, *Ecclesiastes*, and *Canticles*) only are Solomon's. There is also the *Book of Jesus* the son of *Sirach*, and another pseudepigraphal book, called the *Wisdom of Solomon*; the former of which I

have seen in Hebrew, called not Ecclesiasticus, as among the Latins, but the Parables; with which likewise have been joined Ecclesiastes and the Song of Songs, that the collection might the better resemble the books of Solomon both in matter and design. The second is not to be found at all among the Hebrews, and the style plainly evinces its Greek original: some ancient writers say it is a work of Philo the Jew. As, therefore, the church reads Judith and Tobit, and the books of Maccabees, but does not receive them among the Canonical Scriptures; so likewise it may read these two books for the edification of the people, but not as of authority for proving any doctrines of religion (*ad adificationem plebis, non ad auctoritatem ecclesiasticorum dogmatum confirmandam*).^{*} Of Baruch he says, that he does 'not translate it, because it was not in Hebrew, nor received by the Jews.' He never translated Wisdom, Ecclesiasticus, or either of the books of Maccabees, and observes, that 'such books as are not of the twenty-four* letters are to be utterly rejected' (*Pref. to Ezra*). In his *Preface to Judith* he says, in like manner, 'Among the Hebrews this book is read among the *hagiographa* (or, according to some manuscripts, *apocrypha*), whose authority is not judged sufficient to support disputed matters.' He adds, at the same time, that 'the Council of Nice is said to have included it in the catalogue of the Holy Scriptures.' We have, however, no authority for supposing that the Council of Nice ever formed such a catalogue. There is no account of the matter in any of its acts which have reached us.

Jerome's remarks respecting the additions to the book of Daniel will be noticed elsewhere. [*DANIEL, Apocryphal Additions to.*] In reference to these, Jerome's contemporary, Rufinus, once his familiar friend, but now his bitter enemy, violently attacked him in his second invective against him. The invectives of Rufinus, however, have no reference to any other writings than the history of Susanna and the Song of the Three Children. In fact, Rufinus himself made the same distinction in regard to the books of Scripture that Jerome did. After enumerating the books of the Old and New Testament exactly according to the Jewish canon, saying, 'These are the volumes which the Fathers have included in the canon, and out of which they would have us prove the doctrines of our faith;' he adds—'however, it ought to be observed, that there are also other books which are not *canonical*, but have been called by our forefathers *ecclesiastical*; as the Wisdom of Solomon, and another called the Wisdom of the Son of Sirach, which among the Latins is called by the general name of Ecclesiasticus, by which title is denoted not the author of the book, but the quality of the writing. Of the same order is the book of Tobit, Judith, and the books of the Maccabees. In the New Testament is the book of the Shepherd of Hermas, which is called the 'Two Ways, or the Judgment of Peter;' all which they would have to be read in the churches, but not alleged by way of authority for proving articles of faith. Other Scriptures they call *apocryphal*, which they would not have to be read in churches' (*In Symb. Apost.*)

* The variations in the numerical divisions of these books, many of which are extremely fanciful, do not affect the identity of the canon itself.

It is maintained by Professor Alber that, when Jerome and Rufinus said the Ecclesiastical books were read for edification, but not for confirming articles of faith, they only meant that they were not to be employed in controversies with the Jews, who did not acknowledge their authority. These Fathers, however, certainly put them into the same rank with the Shepherd of Hermas.

The first catalogue of the Holy Scriptures, *drawn up by any public body in the Christian church*, which has come down to us, is that of the Council of Laodicea, in Phrygia, supposed to be held about the year 365. In the two last canons of this Council, as we now have them, there is an enumeration of the books of Scripture nearly conformable, in the Old Testament, to the Jewish canon. The canons are in these words,—

'That private Psalms ought not to be said in the church, nor any books not canonical, but only the canonical books of the Old and New Testament. The books of the Old Testament which ought to be read are these:—1. Genesis; 2. Exodus; 3. Leviticus; 4. Numbers; 5. Deuteronomy; 6. Joshua, son of Nun; 7. Judges, with Ruth; 8. Esther; 9. 1 and 2 Kingdoms; 10. 3 and 4 Kingdoms; 11. 1 and 2 Remains; 12. 1 and 2 Esdras; 13. the book of 150 Psalms; 14. Proverbs; 15. Ecclesiastes; 16. Canticles; 17. Job; 18. the Twelve Prophets; 19. Isaiah; 20. Jeremiah and Baruch, the Lamentations and the Epistles; 21. Ezekiel; 22. Daniel.' We have already given the books of the New Testament as enumerated by this Council (see ANTILEGOMENA).

This catalogue is not, however, universally acknowledged to be genuine. 'Possibly learned men,' says Lardner, 'according to the different notions of the party they have been engaged in, have been led to disregard the last canon; some because of its omitting the Apocryphal books of the Old Testament, and others because it has not the book of Revelation.' Basnage, in his *History of the Church*, observes that 'Protestants and Catholics have equally disparaged this synod.' 'It is said,' remarks Lardner, 'that the canons of this Council were received and adopted by some General Councils in after times; nevertheless, perhaps, it would be difficult to shew that those General Councils received the last canon, and exactly approved the catalogue of said books therein contained, without any addition or diminution, as we now have it' (see Mansi *Concilia*, ii. 574).

These books, it will be observed, though avowedly not in the Hebrew canon, were publicly read in the primitive church, and treated with a high degree of respect, although not considered by the Hebrews, from whom they were derived (see the passage above cited from Josephus) as of equal authority with the former. These books seem to have been included in the copies of the Septuagint, which was generally made use of by the sacred writers of the New Testament. It does not appear whether the Apostles gave any cautions against the reading of these books; and it has been even supposed that they have referred to them. Others, however, have maintained that the principal passages to which they have referred (for it is not pretended that they have cited them) are from the canonical books. The following are the passages here alluded to:—

Rom. xi. 24 . . .	compared with	Wisdom ix. 13 . . .	see	Isaiah xl. 13.
Heb. i. 13 . . .	"	" vii. 56 . . .	"	"
" xi. 5 . . .	"	" iv. 10 . . .	see	Gen. v. 24.
Rom. xiii. i . . .	"	" vi. 3 . . .	see	Prov. viii. 15, 16.
" ii. 11	}	"	"	vi. 7 . . . see Deut. x. 17.
Gal. ii. 6				
Eph. vi. 9				
Col. iii. 23	}	"	"	vi. 7 . . . see Deut. x. 17.
i Peter i. 24				
James i. 10				
i Cor. x. 10 . . .	"	Ecclus. xiv. 17 . . .	see	Isaiah xl. 6.
James ii. 23 . . .	"	Judith viii. 25 . . .	(Lat.)	Num. xiv. 15.
Luke x. 41 . . .	"	" v. 22 . . .	"	"
i Thes. iv. 3 . . .	"	Tobit iv. 7 . . .	"	"
Matt. vii. 12 . . .	"	" iv. 17 . . .	"	"
i Cor. x. 20 . . .	"	" iv. 15 . . .	"	"
John x. 22 . . .	"	Baruch, iv. 7 . . .	"	"
Heb. xi. 35 . . .	"	i Macc. iv. 59 . . .	"	"
Matt. ix. 13 . . .	"	2 Macc. vi. 7 . . .	Ecclus. xiv. 15.	"
2 Cor. xiii. 6 . . .	"	Prayer of Manasses . . .	"	"
	"	3 Esdras iii. 12 . . .	"	"

Some of the uncanonical books, however, had not been extant more than a hundred and thirty years at most at the Christian era, and could only have obtained a place in the Greek Scriptures a short time before this period; but the only copies of the Scriptures in existence for the first three hundred years after Christ, either among the Jews or Christians of Greece, Italy, or Africa, contained these books without any mark of distinction that we know of. The Hebrew Bible and language were quite unknown to them during this period, and the most learned were, probably, but ill-informed on the subject, at least before Jerome's translation of the Scriptures from the original Hebrew. The Latin versions before his time were all made from the Septuagint. We do not, indeed, find any catalogue of these writings before the Council of Hippo, but only individual notices of separate books. Thus Clement of Alexandria (*Stromata*, A.D. 211), cites the wisdom of Solomon and Ecclesiasticus, and Origen refers to several of these books, treating them with a high degree of veneration. 'There is,' says Eusebius, 'an epistle of Africanus, addressed to Origen, in which he intimates his doubt on the history of Susanna in Daniel, as if it were a spurious and fictitious composition; to which Origen wrote a very full answer.' These epistles are both extant. Origen, at great length, vindicates these parts of the Greek version—for he acknowledges that they were not in the Hebrew—from the objections of Africanus, asserting that they were true and genuine, and made use of in Greek among all the churches of the Gentiles, and that we should not attend to the fraudulent comments of the Jews, but take that only for true in the holy Scriptures which the Seventy had translated, for that this only was confirmed by Apostolic authority. In the same letter he cites the book of Tobit, and in his second book *De Principiis*, he even speaks of the Shepherd of Hermas as divinely inspired. Origen, however, uses very different language in regard to the book of Enoch, the Testament of the Twelve Patriarchs, and the Assumption of Moses.

The local Council of Hippo, held in the year of Christ 393, at which the celebrated Augustine, afterwards Bishop of Hippo, was present, formed a catalogue of the sacred books of the Old and New Testament, in which the *ecclesiastical books* were all included.

The third Council of Carthage, generally believed to have been held in 397, at which Aurelius, Bishop of Carthage, presided, and at which Augustine was present, consisting in all of forty-four bishops, adopted the same catalogue, which was confirmed at the fourth Council of Carthage, held in the year 419. The reference said to have been made from the *third* Council of Carthage, held in 397, to Pope Boniface, is a manifest anachronism in the copies of the acts of this council (see *L'Abbe's Concilia*), as the pontificate of Boniface did not commence before 417. It has been, therefore conjectured that this reference belongs to the fourth council.

As St. Augustine had great influence at these Councils, it must be of importance to ascertain his private sentiments on this subject. He writes as follows in the year 397:—'The entire Canon of Scripture is comprised in these books. There are 5 of Moses, viz. Genesis, Exodus, Leviticus, Numbers, Deuteronomy; 1 of Joshua, 1 of Judges, 1 small book called Ruth, which seems rather to belong to the beginning of the Kingdoms, the 4 books of the Kingdoms, and 2 of the Remains, not following one another, but parallel to each other. These are historical books which contain a succession of times in the order of events. There are others which do not observe the order of time, and are unconnected together, as Job, Tobit, Esther, and Judith, the 2 books of Maccabees, and the 2 books of Ezra, which last do more observe the order of a regular succession of events, after that contained in the Kingdoms and Remains. Next are the Prophets, among which is 1 book of the Psalms of David, and 3 of Solomon, viz. Proverbs, Canticles, and Ecclesiastes; for these 2 books, Wisdom and Ecclesiasticus, are called Solomon's for no other reason than because they have a resemblance to his writings: for it is a very general opinion that they were written by Jesus the son of Sirach, which books, however, since they are admitted into authority, are to be reckoned among prophetic books. The rest are the books of those who are properly called prophets, as the several books of the 12 Prophets, which being found together, and never separated, are reckoned one book. The names of which prophets are these: Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, Malachi. After these the four Prophets of large

volumes, Isaiah, Jeremiah, Daniel, Ezekiel. In these 44 books is comprised all the authority of the Old Testament' (*De Doctr. Christ.*) [For the New, those he names are the same with those now received.]

It has been, indeed, maintained that Augustine altered his opinion on the subject of the deuterocanonical books in his Retractions (see Henderson *On Inspiration*, p. 495); but the only passage in this work bearing on the subject, which we can discover, is that wherein he confesses his mistake in terming Ecclesiasticus a *prophetical* book.

Augustine has been also supposed to have testified to the inferior authority of these books, from his saying that one of them was read from the *reader's* place. 'The sentiment of the book of Wisdom is not to be rejected, which has deserved to be recited for such a long course of years from the *step of the readers* of the church of Christ, and to be heard with the veneration of divine authority from the bishop to the humblest of the laics, faithful, penitents, and catechumens.' [MACCABEES.]

What the result of the reference from Africa to the 'churches beyond the seas' may have been, we can only judge from the letter which is said to have been written on the subject by Innocent I., bishop of Rome, to St. Exupere, bishop of Toulouse, in the year 405. In this letter, which, although disputed, is most probably genuine, Innocent gives the same catalogue of the books of the Old and New Testaments as those of the councils of Hippo and Carthage, omitting only the book of Esther.

The next catalogue is that of the Roman Council, drawn up by Pope Gelasius and seventy bishops. The genuineness of the acts of this council has been questioned by Pearson, Cave, and the two Basnages, but vindicated by Pagi and Jeremiah Jones. The catalogue is identical with the preceding, except in the order of the books.

Some of the most important manuscripts of the Holy Scriptures which have descended to us were written soon after this period. The very ancient Alexandrian MS. now in the British Museum contains the following books in the order which we here give them, together with the annexed catalogue:—

'Genesis, Exodus, Leviticus, Numbers, Deuteronomy, Joshua, Judges, Ruth; 8 books.—Kings, 4; Remains, 2; 6 books.—16 Prophets, viz., Hosea, 1; Amos, 2; Micah, 3; Joel, 4; Obadiah, 5; Jonah, 6; Nahum, 7; Amos, 8; Zephaniah, 9; Haggai, 10; Zechariah, 11; Malachi, 12; Isaiah, 13; Jeremiah, 14; Ezekiel, 15; Daniel, 16; Esther; Tobit; Judith; Ezra, 2; Maccabees, 4; Psalter and Hymns; Job; Proverbs; Ecclesiastes; Canticles; Wisdom; Wisdom of Jesus Sirach; 4 Gospels; Acts, 1; 7 Catholic Epistles; 14 Epistles of Paul; Revelation; 2 Epistles of Clement; together * * * * books; Psalms of Solomon.' These books are equally incorporated in all the manuscripts of the Latin Vulgate (which was originally translated from the Septuagint). Those which Jerome did not translate from the Hebrew or Greek, as Wisdom and Ecclesiasticus, were adopted from the older Latin version.

Although the Canon of Scripture seemed now to be so far settled by the decrees of these Councils, all did not conceive themselves bound by them; and it is observed by Jahn (*Introd.*) that they were not otherwise to be understood than 'that the ecclesiastical books enumerated in this catalogue

were to be held as useful for the edification of the people, but not to be applied to the confirmation of doctrines of faith.' Such appears at least to have been the sentiment of many eminent divines between this period and the sixteenth century.

Bishop Cosin, in his excellent *Scholastic History of the Canon*, furnishes to this effect a host of quotations from writers of the middle ages, including Ven. Bede, John of Damascus, Alcuin, Peter Mauritius, Hugh de St. Victor, Cardinal Hugo de St. Cher, the author of the ordinary *Gloss*, and Nicholas Lyranus. Of these some call the Deuterocanonical books 'excellent and useful, but not in the canon;' others speak of them as 'apocryphal, that is, doubtful Scriptures,' as not having been 'written in the time of the prophets, but in that of the priests, under Ptolemy,' etc., as not 'equalling the sublime dignity of the other books, yet deserving reception for their laudable instruction,' classing them with the writings of Jerome, Augustine, Ambrose, and Bede, and making a marked distinction not only between the Jewish and Christian Canons, but even between parts of the Deuterocanonical writings. Mr. Archibald Alexander also (*Canon of the Old and New Testaments ascertained*) cites several of the same authorities: he has, however, in one instance, evidently mistaken Peter Lombard for Peter Comestor, the author of the *Scholastic History*. At the dawn of the Reformation, we find James Faber of Etaples and Cardinal Cajetan expressing themselves to the same effect, and the learned Sanctes Pagnini, in his translation of the Bible from the original languages, published at Lyons in 1528 (the first Bible that contained the division into verses with the present figures), dedicated to Pope Clement VII., distinguished the ecclesiastical books, which he says were not in the canon, by the term *Hagiographa*. For a description of this rare work, see *Christian Remembrancer*, vol. iv. p. 419, in a treatise, '*On the division of verses in the Bible*,' by the author of the present article.

We are now arrived at the period of the Reformation, when the question of the Canon of Scripture was warmly discussed. Long before this period (viz., in 1380), Wicliff had published his translation of the Bible, in which he substituted another prologue for Jerome's; wherein, after enumerating the 'twenty-five' books of the Hebrew Canon, he adds—'Whatever book is in the Old Testament, besides these twenty-five, shall be set among the Apocrypha, that is, without authority or belief.' He also, in order to distinguish the Hebrew text from the Greek interpolations, inserted Jerome's notes, *rubricated*, into the body of the text.

Although Martin Luther commenced the publication of his translation of the Bible in 1523, yet, as it was published in parts, he had not yet made any distinction between the two classes of books, when Lonicer published his edition of the Greek Septuagint at Strasburg in 1526, in which he separated the Deuterocanonical, or Apocryphal, books, from those of the Jewish Canon; for which he was severely castigated by Morinus (see Masch's edition of Le Long's *Bibliotheca Biblica*, vol. ii. p. 268). Arias Montanus went still further, and rejected them altogether. In 1534 the complete edition of Luther's Bible appeared, wherein those books which Jerome had placed *inter apocrypha* were separated, and placed by themselves between the Old and New Testament, under the title 'Apocry-

pha; that is, Books which are not to be considered as equal to holy Scripture, and yet are useful and good to read.'

A few years after, the divines of the Council of Trent assembled; and among the earliest subjects of their deliberation was the Canon of Scripture. 'The Canon of Augustine,' says bishop Marsh, 'continued to be the Canon of the ruling party. But as there were not wanting persons, especially among the learned, who from time to time recommended the Canon of Jerome, it was necessary for the Council of Trent to decide between the contending parties' (*Comparative View*, p. 97). The Tridentine Fathers had consequently a nice and difficult question to determine.

On the 8th April 1546, all who were present at the fourth session of the Council of Trent adopted the canon of Augustine, declaring, 'He is also to be anathema who does not receive these entire books, with all their parts, as they have been accustomed to be read in the Catholic Church, and are found in the ancient editions of the Latin Vulgate, as sacred and canonical, and who knowingly and wilfully despises the aforesaid traditions . . .'

We are informed by Jahn (*Introduction*), that this decree did not affect the distinction which the learned had always made between the canonical and deuterocanonical books, in proof of which he refers to the various opinions which still prevail in his church on the subject, Bernard Lamy (*Apparatus Biblicus*, ii. 5) denying, and Du Pin (*Prolegomena*) asserting, that the books of the second Canon are of equal authority with those of the first. Those who desire further information will find it in the two accounts of the controversies which took place at the council on this subject; one from the pen of Cardinal Pallavicini, the other by Father Paul Sarpi, the two eminent historians of the Council. Professor Alber, to whom we have already referred, having denied that any such distinction as that maintained by his brother Professor, Jahn, can lawfully exist among Roman Catholic divines, insists that both canons possess one and the same authority. The words of Bernard Lamy, however, cited by Jahn, are—'The books of the second Canon, although united with the first, are not, however, of the same authority' (*Apparat. Bibl.* ii. 5, p. 333). Alber endeavours to explain this as meaning only that these books had not the same authority before the Canon of the Council of Trent, and cites a passage from Pallavicini to prove that the anathema was 'directed against those Catholics who adopted the views of Cardinal Cajetan' (vol. ii. p. 105). But, however this may be, among other opinions of Luther condemned by the Council was the following:—That no books should be admitted into the Canon of the Old Testament but those received by the Jews; and that from the new should be excluded—the Epistle to the Hebrews, those of James, 2 Peter, 2 and 3 John, Jude and the Apocalypse.'

The whole of the books in debate, with the exception of 3d and 4th Esdras, and the Prayer of Manasses, are considered as canonical by the Council of Trent. But it must be recollected, that the decision of the Council of Trent is one by no means peculiar to this council. The third Council of Carthage had considered the same books canonical. 'The Council of Trent,' says bishop Marsh, 'declared no other books to be sacred and canonical than such as had existed from the earliest ages of

Christianity, not only in the Latin version of the Old Testament, but even in the ancient Greek version, which is known by the name of the Septuagint . . . In the manuscripts of the Septuagint, there is the same intermixture of canonical and apocryphal books, as in the manuscripts of the Latin version' [although there are in different manuscripts variations in the particular arrangement of single books]. The Hebrew was inaccessible to the Latin translators in Europe and Africa during the three first centuries.

The ecclesiastical books were generally written within a period which could not have extended to more than two centuries before the birth of Christ. In the choice of the places which were assigned them by the Greek Jews resident in Alexandria and other parts of Egypt, who probably added these books to the Septuagint version according as they became gradually approved of, they were directed 'partly by the subjects, partly by their relation to other writings, and partly by the periods in which the recorded transactions are supposed to have happened.' Their insertion shews how highly they were esteemed by the Greek Jews of Egypt, but whether even the Egyptian Jews ascribed to them canonical and divine authority, it would not be easy to prove (Marsh's *Comparative View*).

The following were the proceedings of the Anglican Church in reference to this subject:—

In Coverdale's English translation of the Bible, printed in 1535, the deuterocanonical books were divided from the others and printed separately, with the exception of the book of Baruch, which was not separated from the others in this version until the edition of 1550. They had, however, been separated in Matthew's Bible in 1537, prefaced with the words, 'the volume of the book called *Hagiographa*.' This Bible contained Olivetan's preface, in which these books were spoken of in somewhat disparaging terms. In Cranmer's Bible, published in 1539, the same words and preface were continued; but, in the edition of 1549, the word *Hagiographa* was changed into *Apocrypha*, which passed through the succeeding editions into King James' Bible. Olivetan's preface was omitted in the Bishops' Bible in 1568, after the framing of the canon in the Thirty-nine Articles in 1562.

In the Geneva Bible, which was the popular English translation before the present authorized version, and which was published in 1559, these books are printed separately with a preface, in which, although not considered of themselves as sufficient to prove any point of Christian doctrine, they are yet treated with a high degree of veneration. In the parallel passages in the margin of this translation, references are made to the deuterocanonical books.

In the first edition of the Articles of the Church of England, 1552, no catalogue of the 'Holy Scripture' had yet appeared, but in the Articles of 1562, the canon of St. Jerome was finally adopted in the following order: 5 books of Moses, Joshua, Judges, Ruth, 1 and 2 Samuel; 1 and 2 Kings, 1 and 2 Chronicles, 1 and 2 Esdras, Esther, Job, Psalms, Proverbs, Ecclesiastes, Cantica, four Prophets the Greater, twelve Prophets the Less. In the 6th article it is declared that, 'In the name of the Holy Scripture we do understand those canonical books of the Old and New Testament, of whose authority was never any doubt in the Church,' and that 'the other books (as Jerome saith) the

church doth read for example of life and instruction of manners, but yet it doth not apply them to establish any doctrine.' The books which the article then enumerates are 1 and 2 [3 and 4] Esdras, Tobias, Judith, the rest of the book of Esther, Wisdom, Jesus the son of Sirach, Baruch the Prophet, the Song of the Children, the Story of Susanna, Bel and the Dragon, the Prayer of Manasses, and 1 and 2 Maccabees. It is not, however, altogether correct, in point of fact, in including in the number of books thus referred to by Jerome, as read by the church for edification, the third and fourth books of Esdras. These books were equally rejected by the Church of Rome and by Luther, who did not translate them. The Church of England further declares, that 'all the books of the New Testament, as they are commonly received, we do receive and account them canonical.' The Church of England has herein followed the Councils of Hippo and Carthage. The phrase 'of whose authority was never any doubt in the church,' refers therefore more strictly to the books of the Old Testament than the New, for it cannot be denied that doubts *did* exist respecting the Antilegomena of the New Testament. In the first book of Homilies, published in 1547, and the second in 1560, both confirmed by the Thirty-fifth Article of 1562, the deuterocanonical books are cited as 'Scripture,' and treated with the same reverence as the other books in the Bible; and in the preface to the book of Common Prayer, they are alluded to as being 'agreeable to' the Holy Scriptures.

The Helvetic Confession, dated 1st March 1566, has the following expression respecting the apocryphal books:—'We do not deny that certain books of the Old Testament were named by the ancients apocryphal, by others ecclesiastical, as being read in the churches, but not adduced for authority in matters of belief: as Augustine, in the 18th book of the *City of God*, ch. 38, relates, that the names and books of certain prophets were adduced in the books of Kings, but adds that these were not in the canon, and that those we have were sufficient for piety.' The Confession of the Dutch Churches, (dated the same year) is more full. After recounting the canonical books, 'respecting which no controversy existed,' it adds, 'We make a distinction between those and such as are called Apocryphal, which may indeed be read in the church, and proofs adduced from them, so far as they agree with the canonical books; but their authority and force are by no means such that any article of faith may be certainly declared from their testimony alone, still less that they can impugn or detract from the authority of the others.' They add, as their reason for receiving the canonical books, that 'it is not so much because the Church receives them, as that the Holy Spirit testifies to our consciences that they have come from God; and chiefly on this account, because they of themselves bear testimony to their own authority and sanctity, so that even the blind may see the fulfilment of all things predicted in them, as it were with the senses.'

The Westminster Confession proceeded on the same principle, but treated the books of the second Canon with less ceremony. After enumerating the canonical books (ascribing thirteen epistles only to Paul), they proceed to say, that 'the books called Apocrypha, not being of Divine inspiration,

are no part of the Canon of Scripture, and therefore are of no authority in the Church of God; nor to be any otherwise approved, or made use of, than other human writings.' And again, 'The authority of Holy Scripture, for which it ought to be believed and obeyed, depends not on the testimony of any man or church, but wholly upon God, the author thereof; and therefore it is to be received, because it is the word of God. We may be moved and induced by the Church to a high and reverent esteem of the Holy Scriptures; and the heavenliness of the matter, the efficacy of the doctrine, the majesty of the style, etc. etc., are arguments whereby it doth abundantly evidence itself to be the word of God; yet, notwithstanding, our full persuasion and assurance of the infallible truth and Divine authority thereof is from the inward work of the Holy Spirit, bearing witness by and with the word in our hearts.'

The Confession of Augsburg, dated in 1531, contains no article whatever on the Canon of Scripture; nor do the Lutherans appear to have any other canon than Luther's Bible. For the sentiments of the GREEK CHURCH, see ESDRAS; ESTHER; MACCABEES.

3. *Of Spurious Apocryphal Books, as distinct from Antilegomena or Ecclesiastical.*—Among this class are doubtless to be considered the 3d and 4th books of Esdras; and it is no doubt in reference to these that, in his letter to Vigilantius, Jerome speaks of a work of Esdras which he says that he had never even read. Playing upon the name of Vigilantius, he adds, 'You sleep vigilantly (tu vigilans dormis), and write in your sleep; proposing to me an *apocryphal* book, which is read by you and others like you, under the name of *Esdras*, wherein it is written that no one should be prayed for after his death (*See* 4 Esdras, viii. 36-44). . . . Why take in hand what the church does not receive? Read, if you like, all the feigned revelations of all the patriarchs and prophets, and when you have learned them, sing them in the women's weaving-shops, and propose them to be read in your taverns, that you may the more readily by them allure the unlettered rabble to drink.'

Of the same character are also the Book of Enoch, the Testament of the Twelve Patriarchs, the Assumption of Moses, etc.; which, as well as 3 and 4 Esdras, being by many considered as the fictions of Christians of the second and third centuries, it is doubtful whether they ought to be classed in the Apocrypha of the Old or of the New Testament. Origen, however, believed the New Testament to have contained citations from books of this kind written before the times of the apostles; and, in reference to such, observes, in his preface to the *Canticles*, 'This, however, is manifest, that many passages are cited either by the apostles or the evangelists, and inserted in the New Testament, which we do not read in those Scriptures of the Jews which we call canonical, but which are nevertheless found in *apocryphal* books, or are taken from them. But this will give no authority to apocryphal writings, for the bounds which our fathers have fixed are not to be removed; and possibly the apostles and evangelists, full or the Holy Ghost, might know what should be taken out of those Scriptures and what not. But we, who have not such a measure of the Spirit, cannot, without great danger, presume to act in that manner.' Then, in his *Letter to Apianus*, he

observes, that there were many things kept from the knowledge of the public, but which were preserved in the hidden or *apocryphal* books, to which he refers the passage (Heb. xi. 37), 'They were seen asunder.' Origen probably alludes here to that description of books which the Jews called *ספרי קטנים*, a word of the same signification with *apocrypha*, and applied to books laid aside, or not permitted to be publicly read, or considered, even when divinely inspired, not fit for indiscriminate circulation: among the latter were the first chapter of Genesis, the Song of Solomon, and our last eight chapters of the prophet Ezekiel.

The books which we have here enumerated, such as the Book of Enoch, etc., which were all known to the ancient Fathers, have descended to our times; and, although incontestably spurious, are of considerable value from their antiquity, as throwing light upon the religious and theological opinions of the first centuries. The most curious are the 3d and 4th books of Esdras, and the Book of Enoch, which has been but recently discovered, and has acquired peculiar interest from its containing the passage cited by the apostle Jude. [ENOCH.] Nor are the apocryphal books of the New Testament destitute of interest. Although the spurious Acts extant have no longer any defenders of their genuineness, they are not without their value to the Biblical student, and have been applied with success to illustrate the style and language of the genuine books, to which they bear a close analogy. The American translator of Mosheim's *Ecclesiastical History* terms them 'harmless and ingenious fictions, intended either to gratify the fancy or to silence the enemies of Christianity.'

Some of the apocryphal books have not been without their defenders in modern times. The *Apostolical Canons and Constitutions*, and the various *Liturgies* ascribed to St. Peter, St. Mark, etc., and published by Fabricius, in his *Codex Apocryphus Novi Testamenti*, were considered by the learned and eccentric William Whiston, and the no less learned Grabe, to be of equal authority with any of the confessedly genuine apostolic compositions (see Whiston's *Primitive Christianity* and Grabe's *Spicilegium*).

They are, however, regarded by most as originally not of an earlier date than the second century, and as containing interpolations which betray the fourth or fifth: they can, therefore, only be considered as evidence of the practice of the Church at the period when they were written. They have generally been appealed to by the learned as having preserved the traditions of the age immediately succeeding the apostolic; and, from the remarkable coincidence which is observable in the most essential parts of the so-called Apostolic Liturgies, it is by no means improbable that, notwithstanding their interpolations, they contain the leading portions of the most ancient Christian forms of worship.

Most of the apocryphal Gospels and Acts noticed by the fathers, and condemned in the catalogue of Gelasius, which are generally thought to have been the fictions of heretics in the second century, have long since fallen into oblivion. Of those which remain, although some have been considered by learned men as genuine works of the apostolic age, yet the greater part are universally rejected as spurious, and as written in the second and third centuries. A few are, with great appear-

ance of probability, assigned to Leucius Clarinus, supposed to be the same with Leontius and Seleucus, who was notorious for similar forgeries at the end of the third century. The authorship of the *Epistle of Barnabas* is still a matter of dispute; and there appears but too much reason to believe that there existed grounds for the charge made by Celsus against the early Christians, that they had interpolated or forged the ancient Sibylline Oracles.

In the letter of Pope Innocent I. to St. Exupere, bishop of Toulouse, written about the year 405, after giving a catalogue of the books forming the canon of Scripture (which includes five books of Solomon, Tobit, and two books of Maccabees), he observes:—'But the others, which are written under the name of Matthias, or of James the Less, or those which were written by one Leucius under the name of Peter and John, or those under the name of Andrew by Xenocheris and Leonidas the philosopher, or under the name of Thomas; or if there be any others, you must know that they are not only to be rejected, but condemned.' These sentiments were afterwards confirmed by the Roman Council of seventy bishops, held under Pope Gelasius, in 494, in the acts of which there is a long list of apocryphal Gospels and Acts, the greater part of which are supposed to have perished. The acts of this council, however, are not generally considered to be genuine.

The following are the principal spurious apocryphal books of the Old Testament, which have descended to our times. The greater number of them can scarcely be considered as properly belonging to the Apocrypha of the Old Testament, as they have been most probably written since the Christian era, and not before the second century:—Third and fourth Esdras, the Book of Enoch, the apocryphal book of Elias the Prophet, the third, fourth, and fifth books of Maccabees (received by the Greek Church), the Ascension of Isaiah, the Assumption of Moses, with a few others.

The best accounts of the apocryphal books will be found in Fabricii *Codex Pseudepigraphus V. T.* Hamburg and Leipzig, 1713 and 1741, and *Codex Apocryphus N. T.*, Hamburg, 1713-1722; *Auctarium Codicis Apocryphi N. T. Fabriciani*, edidit And. Birch, Copenhagen, 1804. *A New and Full Method of Settling the Canon of the N. T.*, by the Rev. Jeremiah Jones, Oxford, 1726—last edition, Oxford, 1827. Du Pin, *Prolegomena*, Amst. 1701, and *Canon of the Old and New Testaments*, London, 1700; and especially *Codex Apocryphus N. T., e libris ineditis maximè Gallicanis, Germanicis, et Italicis, collectus, recensitus, notisque et prolegomenis illustratus, opera et studio T. C. Thilo*, tom. i. Lips. 1832, 8vo; the remaining two volumes are not yet published. Vol. i. contains: 1. The history of Joseph the Carpenter, Arab. and Lat. 2. The Gospel of the Infancy. 3. The Protevangelion of James, and the Gospel of Thomas the Israelite, Greek and Lat. 4. The Gospel of the Nativity of Mary, and the History of the Nativity of Mary and the Saviour, Lat. 5. The Gospel of Marcion, collected by Dr. Hahn, from ancient Greek MSS. 6. The Gospel of Nicodemus, Gr. and Lat. 7. Apprehension and Death of Pilate, Gr. 8. The mutilated and altered Gospel of St. John, preserved in the archives of the Templars of St. John of Jerusalem in Paris, with Griesbach's text. 9. An Apocryphal Book of the Apostle

John, Lat. See also Wilson, *The Books of the Apocrypha with critical and Historical Observations*, etc., Edinb. 1801; Eichhorn, *Einführung in die Apok. Schriften des A. T.*, Leipz. 1795; H. Ed. APOLLONIA (Ἀπολλωνία), a city of Macedonia, in the province of Mygdonia (Plin. iv. 17), situated between Amphipolis and Thessalonica, thirty Roman miles from the former, and thirty-six from the latter (*Itiner. Anton.*) St. Paul passed through Amphipolis and Apollonia in his way to Thessalonica (Acts xvii. 1).

APOLLONIUS. Five persons of this name occur in the history of the Maccabees.—1. A general whom Antiochus Epiphanes sent into Judæa, and who took Jerusalem, but who was eventually defeated and slain by Judas Maccabæus, B.C. 166 (1 Macc. iii. 10, 11).—2. A governor of Cœle-Syria, and general of Demetrius Nicanor, who was defeated by Jonathan on behalf of Alexander Balas, B.C. 148 (1 Macc. x. 69-83; Joseph. *Antiq.* iii. 4, 3).—3. The son of Gennæus, one of the governors left by Lysias in Judæa, after the treaty between the Jews and Antiochus Eupator (2 Macc. xii. 2).—4. Son of Thræseas, a governor of Cœlo-Syria and Phenice, an enemy of the Jews, who confederated with Simon to urge the king to plunder the temple (2 Macc. iii. 5 ff.; iv. 4.—5. The son of Manestheus, sent by Antiochus Epiphanus to be present at the enthroning of Ptolemy Philometor (2 Macc. iv. 2).

APOLLOS (Ἀπολλῶς), a Jew of Alexandria, is described as a *learned*, or, as some understand it, an *eloquent man* (ἀνὴρ λόγιος), well versed in the Scriptures and the Jewish religion (Acts xviii. 24). About A.D. 56 he came to Ephesus, where, in the synagogues, 'he spake boldly the things of the Lord, knowing only the baptism of John' (ver. 25); by which we are probably to understand that he knew and taught the doctrine of a Messiah, whose coming John had announced, but knew not that Jesus was the Christ. His fervour, however, attracted the notice of Aquila and Priscilla, whom Paul had left at Ephesus; and they instructed him in this higher doctrine, which he thenceforth taught openly, with great zeal and power (ver. 26.) Having heard from his new friends, who were much attached to Paul, of that apostle's proceedings in Achaia, and especially at Corinth, he resolved to go thither, and was encouraged in this design by the brethren at Ephesus, who furnished him with letters of introduction. On his arrival there he was very useful in watering the seed which Paul had sown, and was instrumental in gaining many new converts from Judaism. There was, perhaps, no apostle or apostolical man who so much resembled Paul in attainments and character as Apollos. His immediate disciples became so much attached to him, as well nigh to have produced a schism in the Church, some saying, 'I am of Paul'; others, 'I

am of Apollos'; others, 'I am of Cephas' (1 Cor. iii. 4-7, 22). There must, probably, have been some difference in their mode of teaching to occasion this; and from the First Epistle to the Corinthians, it would appear that Apollos was not prepared to go so far as Paul in abandoning the figments of Judaism, and insisted less on the (to the Jews) obnoxious position that the Gospel was open to the Gentiles. [See Billroth, *Commentary on the Corinthians*, E. T. vol. i. p. 5; Neander, *History of the Planting and Training of the Church*, vol. i. p. 229 ff. E. T. Bohn's ed.] There was nothing, however, to prevent these two eminent men from being perfectly united in the bonds of Christian affection and brotherhood. When Apollos heard that Paul was again at Ephesus, he went thither to see him; and as he was there when the First Epistle to the Corinthians was written (A.D. 59), there can be no doubt that the apostle received from him his information concerning the divisions in that church, which he so forcibly reproves. It strongly illustrates the character of Apollos and Paul, that the former, doubtless in disgust at those divisions with which his name had been associated, declined to return to Corinth; while the latter, with generous confidence, urged him to do so (1 Cor. xvi. 12). Paul again mentions Apollos kindly in Tit. iii. 13, and recommends him and Zenas the lawyer to the attention of Titus, knowing that they designed to visit Crete, where Titus then was. Jerome is of opinion (*Comment.* in loc.) that he remained at Crete until he heard that the divisions at Corinth had been healed by means of St. Paul's letter; and that he then returned to that city, of which he afterwards became bishop. This has an air of probability; and the authority on which it rests is better than any we have for the different statements which make him bishop of Duras, of Colophon, of Iconium (in Phrygia), or of Cæsarea.—J. K.

APOSTLE (Gr. Ἀπόστολος, from ἀποστέλλω, to send forth). In Attic Greek the term is used to denote a *fleet*, or *naval armament*. It occurs only once in the Sept. (1 Kings xiv. 6), and there, as uniformly in the New Testament, it signifies a *person sent by another, a messenger*. It has been asserted that the Jews were accustomed to term the collector of the half-shekel, which every Israelite paid annually to the Temple, an apostle; and we have better authority for asserting that they used the word to denote one who carried about encyclical letters from their rulers. *Cecumenius* states that ἀποστόλους δὲ εἰσέτι καὶ νῦν ἔθος ἐστὶν Ἰουδαίους ὀνομάζειν τοὺς ἐγκύκλια γράμματα παρὰ τῶν ἀρχόντων αὐτῶν ἀνακομιζομένους, 'It is even yet a custom among the Jews to call those who carry about circular letters from their rulers by the name of apostles.' To this use of the term Paul has been supposed to refer (Gal. i. 1) when he asserts that he was 'an apostle, not of men, neither by men'—an apostle, not like those known among the Jews by that name, who derived their authority and received their mission from the chief priests or principal men of their nation. The import of the word is strongly brought out in John xiii. 16, where it occurs along with its correlate, 'The servant is not greater than his Lord, neither he who is sent (ἀπόστολος) greater than he who sent him.'

The term is generally employed in the New Testament as the descriptive appellation of a comparatively small class of men, to whom Jesus Christ

entrusted the organization of his church and the dissemination of his religion among mankind. At an early period of his ministry 'he ordained twelve' of his disciples 'that they should be with him.' 'These he named apostles.' Some time afterwards 'he gave to them power against unclean spirits to cast them out, and to heal all manner of disease,' 'and he sent them to preach the kingdom of God' (Mark iii. 14; Matt. x. 1-5; Mark vi. 7; Luke vi. 13; ix. 1). To them he gave 'the keys of the kingdom of God,' and constituted them princes over the spiritual Israel, that 'people whom God was to take from among the Gentiles, for his name' (Matt. xvi. 19; xviii. 18; xix. 28; Luke xxii. 30). Previously to his death he promised to them the Holy Spirit, to fit them to be the founders and governors of the Christian church (John xiv. 16, 17, 26; xv. 26, 27; xvi. 7-15). After his resurrection he solemnly confirmed their call, saying, *Καθὼς ἀπέσταλκέ με ὁ Πατήρ, κἀγὼ πέμπω ὑμᾶς*—'As the Father hath sent me, so send I you,' and gave them a commission to 'preach the Gospel to every creature' (John xx. 21-23; Matt. xviii. 18-20). After his ascension he, on the day of Pentecost, communicated to them those supernatural gifts which were necessary to the performance of the high functions he had commissioned them to exercise; and in the exercise of these gifts, they, in the Gospel history and in their epistles, with the Apocalypse, gave a complete view of the will of their Master in reference to that new order of things of which he was the author. They 'had the mind of Christ.' They spoke 'the wisdom of God in a mystery.' That mystery 'God revealed to them by his Spirit,' and they spoke it 'not in words which man's wisdom teacheth, but which the Holy Ghost teacheth.' They were 'ambassadors for Christ,' and besought men, 'in Christ's stead, to be reconciled to God.' They authoritatively taught the doctrine and the law of their Lord; they organized churches, and required them to 'keep the traditions,' *i. e.*, 'the doctrines and ordinances delivered to them' (Acts ii.; 1 Cor. ii. 16; ii. 7, 10, 13; 2 Cor. v. 20; 1 Cor. xi. 2). Of the twelve originally ordained to the apostleship, one, Judas Iscariot, 'fell from it by transgression,' and Matthias, 'who had companied' with the other Apostles 'all the time that the Lord Jesus went out and in among them,' was by lot substituted in his place (Acts i. 17-26). Saul of Tarsus, afterwards termed Paul, was also miraculously added to the number of these permanent rulers of the Christian society (Acts ix.; xxii.; xxvi. 15-18; 1 Tim. i. 12; ii. 7; 2 Tim. i. 11).

The characteristic features of this highest office in the Christian church have been very accurately delineated by M'Lean, in his *Apostolic Commission*. 'It was essential to their office—1. That they should have seen the Lord, and been eye and ear witnesses of what they testified to the world (John xv. 27). This is laid down as an essential requisite in the choice of one to succeed Judas (Acts i. 21, 22). Paul is no exception here; for, speaking of those who saw Christ after his resurrection, he adds, 'and last of all he was seen of me' (1 Cor. xv. 8). And this he elsewhere mentions as one of his apostolic qualifications: 'Am I not an apostle? have I not seen the Lord?' (1 Cor. ix. 1). So that his 'seeing that Just One and hearing the word of his mouth' was necessary to his being 'a witness of what he thus saw and heard' (Acts xxii.

14, 15). 2. They must have been immediately called and chosen to that office by Christ himself. This was the case with every one of them (Luke vi. 13; Gal. i. 1), Matthias not excepted; for, as he had been a chosen disciple of Christ before, so the Lord, by determining the lot, declared his choice, and immediately called him to the office of an apostle (Acts i. 24-26). 3. Infallible inspiration was also essentially necessary to that office (John xvi. 13; 1 Cor. ii. 10; Gal. i. 11, 12). They had not only to explain the true sense and spirit of the Old Testament (Luke xxiv. 27; Acts xxvi. 22, 23; xxviii. 23), which were hid from the Jewish doctors, but also to give forth the New Testament revelation to the world, which was to be the unalterable standard of faith and practice in all succeeding generations (1 Pet. i. 25; 1 John iv. 6). It was therefore absolutely necessary that they should be secured against all error and mistake, by the unerring dictates of the Spirit of truth. Accordingly Christ promised and actually bestowed on them the Spirit to 'teach them all things,' to 'bring all things to their remembrance whatsoever he had said to them' (John xiv. 26), to 'guide them into all truth,' and to 'shew them things to come' (John xvi. 13). Their word therefore must be received, 'not as the word of men, but as it is in truth, the word of God' (1 Thes. ii. 13), and as that whereby we are to distinguish 'the spirit of truth from the spirit of error' (1 John iv. 6). 4. Another apostolic qualification was the power of working miracles (Mark xvi. 20; Acts ii. 43), such as speaking with divers tongues, curing the lame, healing the sick, raising the dead, discerning of spirits, conferring these gifts upon others, etc. (1 Cor. xii. 8-11). These were the credentials of their divine mission. 'Truly,' says Paul, 'the signs of an apostle were wrought among you in all patience, in signs and wonders and mighty deeds' (2 Cor. xii. 12). Miracles were necessary to confirm their doctrine at its first publication, and to gain credit to it in the world as a revelation from God, and by these 'God bare them witness' (Heb. ii. 4). 5. To these characteristics may be added the *universality* of their mission. Their charge was not confined to any particular visible church, like that of ordinary pastors, but, being the oracles of God to men, they had 'the care of all the churches' (2 Cor. xi. 28). They had a power to settle their faith and order as a model to future ages, to determine all controversies (Acts xvi. 4), and to exercise the rod of discipline upon all offenders, whether pastors or flock (1 Cor. v. 3-6; 2 Cor. x. 8; xiii. 10).

It must be obvious, from this scriptural account of the apostolical office, that the Apostles had, in the strict sense of the term, no successors. Their qualifications were supernatural, and their work, once performed, remains in the infallible record of the New Testament, for the advantage of the Church and the world in all future ages. They are the only authoritative teachers of Christian doctrine and law. All official men in Christian churches can legitimately claim no higher place than expounders of the doctrines and administrators of the laws found in their writings. Few things have been more injurious to the cause of Christianity than the assumption on the part of ordinary office-bearers in the church of the peculiar prerogatives of 'the holy apostles of our Lord Jesus.' Much that is said of the latter is not at all

applicable to the former; and much that admits of being applied, can be so, in accordance with truth, only in a very secondary and extenuated sense.

It is the opinion of the learned Suicer (*Thesaurus*, s. v. 'Ἀπόστολος) that the appellation 'apostle' is in the New Testament employed as a general name for Christian ministers or pastors, who are 'sent by God,' in a qualified use of that phrase, to preach the word of God. But this opinion does not seem to rest on any solid foundation. It is true indeed that the word is used in this loose sense by the Fathers. Thus we find Archippus, Philemon, Apphia, the seventy disciples (Luke x. 1-17), termed apostles; and even Mary Magdalene is said γενέσθαι τοῖς ἀποστόλοις ἀπόστολος, to become an apostle to the Apostles. No satisfactory evidence, however, can be brought forward of the term being thus used in the New Testament. Andronicus and Junia (Rom. xvi. 7) are indeed said to be ἐπίσημοι ἐν τοῖς ἀποστόλοις, 'of note among the Apostles;' but these words by no means necessarily imply that these persons were by no means necessarily imply that these persons were by no means they were persons well known and much esteemed by the Apostles. The *Συνεργοί*, the fellow-workers of the Apostles, are by Chrysostom denominated *Συναπόστολοι*.

The argument founded on 1 Cor. iv. 9, compared with ver. 6, to prove that Apollos is termed an apostle, cannot bear a close examination. The only instance in which it seems probable that the word, as expressive of an office in the Christian church, is applied to an individual whose call to that office is not made the subject of special narration, is to be found in Acts xiv. 4, 14, where Barnabas, as well as Paul, is termed an apostle. At the same time it is by no means absolutely certain that the term *apostles*, or messengers, does not in this place refer rather to the mission of Paul and Barnabas by the prophets and teachers at Antioch, under the impulse of the Holy Ghost (Acts xiii. 1-4), than to that direct call to the Christian apostleship which we know Paul received. Had Barnabas received the same call, we can scarcely persuade ourselves that no trace of so important an event should have been found in the sacred history, but a passing hint, which admits, to say the least, of being plausibly accounted for in another way. We know that on the occasion referred to, 'the prophets and teachers, when they had fasted and prayed, and laid their hands on Barnabas and Saul (*ἀπέλευσαν*), sent them away;' so that, in the sense in which we shall immediately find the words occurring, they were *ἀπόστολοι*—of the prophets and teachers.

The word 'apostle' occurs once in the New Testament (Heb. iii. 1) as a descriptive designation of Jesus Christ: 'The apostle of our profession,' *i. e.*, the apostle whom we profess or acknowledge. The Jews were in the habit of applying the term *πῦλ*, from *ἔψω*, *to send*, to the person who presided over the synagogue, and directed all its officers and affairs. The Church is represented as 'the house or family of God,' over which he had placed, during the Jewish economy, Moses, as the superintendent,—over which he has placed, under the Christian economy, Christ Jesus. The import of the term *apostle*, is—divinely-commissioned superintendent; and of the whole phrase, 'the apostle of our profession,' the divinely-com-

missioned superintendent, whom WE Christians acknowledge in contradistinction to the divinely-appointed superintendent Moses, whom the Jews acknowledged.

In 2 Cor. viii. 23, we meet with the phrase *ἀπόστολοι ἐκκλησιῶν*, rendered in our version 'the messengers of the churches.' Who these apostles were, and why they received this name, is obvious from the preceding context. The churches of Macedonia had made a liberal contribution for the relief of the impoverished and persecuted saints of Judæa, and had not merely requested the Apostle 'to receive the gift, and take on him the fellowship of ministering to the saints,' but at his suggestion had appointed some individuals to accompany him to Jerusalem with their alms. These 'apostles or messengers of the churches' were those 'who were chosen of the churches to travel with the Apostle with his grace [gift], which was administered by him,' to the glory of their common Lord (2 Cor. viii. 1-4, 19). Theophylact explains the phrase thus: *οἱ ὑπὸ τῶν ἐκκλησιῶν πεμφθέντες καὶ χειροτονηθέντες*, 'those sent and chosen by the churches.'

With much the same meaning and reference Epaphroditus (Phil. ii. 25) is termed *ἀπόστολος*—a messenger of the Philippian Church—having been employed by them to carry pecuniary assistance to the Apostle (Phil. iv. 14-18). Theophylact's exposition is as follows:—'Ἀπόστολον ὑμῶν—τὸν παρ' ὑμῶν ἀποσταλέντα πρὸς με—δι' αὐτοῦ γὰρ ἦσαν στείλαντες αὐτὸν τὰ πρὸς χρεῖαν.

It is scarcely worth while to remark that the Creed, commonly called The Apostles', though very ancient, has no claim to the name, except as it contains apostolical doctrine. A full and satisfactory account of it will be found in Lord King's *History of the Apostles' Creed, with Critical Observations on its several Articles*. The Canons and Constitutions, called apostolical, are generally admitted to be forgeries, probably of the fifth century.

In the early ecclesiastical writers we find the term *ὁ ἀπόστολος*, 'the Apostle,' used as the designation of a portion of the canonical books, consisting chiefly of the Pauline Epistles. 'The Psalter' and 'the Apostle' are often mentioned together. It is also not uncommon with these writers to call Paul 'The Apostle,' *κατ' ἐξοχήν*.—J. B.

APOSTOLIC AGE. The existence of the Christian church is to be dated from the day of Pentecost. Our Lord, during his personal ministry, spoke of the church as an institution about to be formed (*οἰκοδομήσω μου τὴν ἐκκλησίαν*, Matt. xvi. 18), and on one occasion referred to it prospectively in reference to a supposed case of discipline (Matt. xviii. 15-20); but the term *ἐκκλησία*, *Ecclesia*, as applied to an actual organization, occurs first in Acts ii. 47.

The apostolic age may be divided into two periods; the first reaching to the destruction of Jerusalem, A. D. 70, the second terminating with the death of the apostle John about A. D. 100. Schaff makes a tripartite division—(1.) The founding of the church among the *Jews*, in which the labours of St. Peter are conspicuous. (2.) The founding of the *Gentile* church, chiefly by the instrumentality of St. Paul, A. D. 44-64. (3.) The organic union of the Jewish and Gentile churches, the work mainly of St. John.

The Saviour, just before his ascension, charged his apostles to 'preach repentance and remission

of sins in his name among all nations, beginning at Jerusalem' (Luke xxiv. 47), or as it is expressed more fully in the Acts (i. 8), 'Ye shall be my witnesses both in Jerusalem and in all Judea, and in Samaria, and unto the uttermost part of the earth.' The meaning of this commission, however plain and explicit it may appear to us, was only made clear by degrees to the minds of the apostles. The promise of their Lord that the Spirit of Truth should *guide* (ὁδηγήσει, John xvi. 13) them, evidently indicates progressive illumination, rather than a revelation at once complete and final; and with this, the facts of their history agree. The extraordinary effects produced by the effusion of the Holy Ghost on the day of Pentecost, the energy and elevation of character imparted to the apostles, to Peter especially, who then made good his title to the appellation of the Rock, are familiar to every reader of the New Testament. But it required a peculiar succession and combination of events, including the miraculous conversion and call of the great apostle of the Gentiles, and the twofold vision at Cæsarea and Joppa, to imbue the first heralds of the gospel with its free and comprehensive spirit. Instead of going forth to the uttermost part of the earth, the Twelve, for a long time, made Jerusalem their permanent abode. If for some special purpose they visited other places (and those not very distant), they speedily returned (Acts viii. 14, compared with 25; ix. 32, compared with xi. 2). The first Christian church was composed entirely of Jews. On professing faith in Jesus as the Messiah, as 'him of whom Moses in the law and the prophets wrote' (John i. 45), they did not separate themselves from Judaism, but continued strictly to observe the Mosaic ritual. Both before and after the day of Pentecost, the disciples were 'continually in the temple' (Luke xxiv. 53; Acts ii. 46); thither Peter and John resorted at the appointed hour of prayer (Acts iii. 1), and when all the apostles were miraculously released from prison, they had an express divine command to go to the temple, and there proclaim 'all the words of this life' (Acts v. 20). By their unbelieving countrymen they were spoken of as 'the sect (*αἵρεσις*) of the Nazarenes,' which though uttered reproachfully, implied that they were still, in a certain sense, within the pale of the Jewish church (Acts xxiv. 5; xxviii. 22: the same term (*αἵρεσις*) is applied to the Pharisees, xv. 5; xxvi. 5; and to the Sadducees, v. 17). In their associate capacity as fellow-Christians, Luke describes them as 'continuing steadfastly in the apostles' doctrine,' that is, not simply adhering to what they had already been taught, but diligently attending to further instructions; 'and fellowship,' communion, sympathy, and interchange of kind offices; 'and in breaking of bread,' a phrase that includes the ordinary meal or agape [AGAPE]; and the Lord's Supper [SUPPER OF THE LORD]; 'and in prayers.' The spirit of brotherly love and self-sacrifice was also shewn in a community of goods. To what extent this was carried, or how long it lasted, we do not know. It was a spontaneous act, not enforced by apostolic authority, as is shewn by Peter's address to Ananias (Acts v. 4). After a few years it had been abandoned, or was found insufficient, since relief from the more opulent Gentile church at Antioch was requested and promptly granted (Acts xi. 29; Gal. ii. 10). The dissension that arose between the Hellenist and Palestinian Jews

in reference to the distribution of the common fund, led to the appointment of 'the Seven,' who, though not called deacons, have been regarded as the model and type of the later diaconate. The choice was left with the body of the disciples, and ratified on the part of the apostles by prayer and the imposition of hands (Acts vi. 1-6). They were appointed to meet a special emergency (*ἐπὶ τῆς χρείας ταύτης*), yet their spiritual qualifications (*πλήρεις πνεύματος ἁγίου καὶ σοφίας*) fitted them for being more than almoners, and two of their number, Philip (the evangelist) and Stephen, were conspicuous as preachers of the gospel.* They are not mentioned again, except in Acts xxi. 8. The money collected at Antioch was delivered, not to 'the Seven,' but to the presbyters; but probably, the latter were the treasurers, under whose direction the deacons acted. The early admission of Hellenists into the church was highly favourable for the spread of Christianity, for while the Palestinian believers, on being dispersed by the persecution that followed on the death of Stephen, 'preached to none but the Jews only,' the Hellenists (and such, no doubt, were 'the men of Cyprus and Cyrene') 'spoke unto the Grecians' (*Ἕλληνας*, the reading approved by Bengel, Dodridge, Griesbach, De Wette, Neander, Winer, Lachmann, Tischendorf, Lechler, Alford, and Lange; though Wordsworth argues strongly in favour of Ἕλλημιστὰς, in his notes on Acts xi. 20); and the scene of their labours was Antioch, the renowned capital of Syria, which speedily became the parent church of the Gentile world, and the centre of missionary operations. Two other remarkable events, the baptism of Cornelius and the conversion of Paul, powerfully tended to the same issue—to break down the middle wall of partition between Jew and Gentile, and to 'make in Christ of twain one new man, so making peace' (Eph. ii. 15). The term 'Christian,' first used at Antioch, indicates the proportion of Gentiles to have been so great in the church there that they could no longer be regarded as a Jewish sect, but formed a *genus tertium* (Neander, De Wette, Lechler). Though to the apostle Peter was granted the distinction of opening the door of faith to the Gentiles by the baptism of Cornelius, yet his labours till A.D. 50 were for the most part confined to his brethren in Judea (Acts ix. 32). It was reserved for St. Paul to be, in a special sense, the apostle of the Gentiles, to proclaim 'the gospel of the uncircumcision' (*τὸ εὐαγγέλιον τῆς ἀκροβυστίας*, Gal. ii. 7), and from the day when he, with Barnabas, 'being sent forth by the Holy Ghost, departed into Seleucia' (Acts xiii. 4), to the morning when he was consigned to the lower dungeon of the Mamerline prison (if we accept an ancient tradition), the progress of Christianity for twenty of its earliest years is chiefly to be traced in the story of his unparalleled labours. [PAUL.]

Of the erroneous tendencies that appeared in the Apostolic Age, the earliest was that of the Judaizers, an extreme party in the church at Jerusalem, who, though they professed faith in Jesus as the Messiah, differed little in other respects from those who rejected him. They not only adhered, like the rest of their brethren, to the Mosaic ritual, but strove

* 'The office of 'the Seven' was one of much higher importance than that held by the subsequent deacons.'—*Conybeare and Howson*, vol. i. p. 512.

to impose it on the Gentile converts, and asserted above all the indispensable obligation of circumcision. These were the 'false brethren' (*ψευδοδέλφοι*, Gal. ii. 4; 2 Cor. xi. 26), to whom Paul would 'not give place, no, not for an hour' (Stanley, 189-239; Schaff, ii. 358). The decision adopted by the Apostles and church at Jerusalem (Acts xv.) gave them only a temporary check. They followed in the apostle's track, intent on undermining his authority, and counteracting his enlarged views of the Christian economy, in Corinth, among the churches of Galatia, and in Philippi. The erroneous teachers alluded to in the Pastoral Epistles, and in the Epistle to the Colossians, indicate a transition from the Judaizing to the Gnostic tendency, though in a rudimentary state, so that we cannot identify their errors with the complete Gnostic systems of the second century. It might be anticipated that a religion designed to make man 'every whit whole' should be confronted in its progress not by one form of error only, but by many forms scarcely less at variance with one another, than with 'the truth as it is in Jesus.' Accordingly, we meet in the apostolic writings with allusions more or less explicit to the false schemes of philosophy, which were then becoming rife (Col. ii. 8), to ascetic practices (1 Tim. iv. 3; Col. ii. 23); to antinomian sensuality (Gal. vi. 8; 1 Tim. iv. 3); and to a spiritualism which denied the great facts on which the Christian system rests (2 Tim. ii. 18; 2 Peter iii. 4; 1 John iv. 3; Schaff, ii. 352-380).

In the primitive church nothing is so striking as the abundance and variety of spiritual gifts (several of which have ceased with the exigencies that rendered them desirable) [*CHARISMATA*], and the liberty of individual action. A greater contrast can hardly be imagined than the cumbrous ecclesiastical machinery of later ages. 'Every church was governed by a union of elders or overseers chosen from among themselves, and we find among them no individual distinguished above the rest who presided as a *primus inter pares*, though probably in the age immediately succeeding the apostolic, of which we have unfortunately so few authentic memorials, the practice was introduced of applying to such an one the name of *ἐπίσκοπος*, by way of distinction' (Neander).

After narrating the proceedings of the Council at Jerusalem, the writer of the Acts confines himself entirely to the missionary labours of St. Paul and his associates. Of St. Peter we catch a glimpse at Antioch, when the apostle of the Gentiles 'withstood him to the face, because he was to be blamed' (Gal. ii. 11). But from that time to his martyrdom under the Neronian persecution at Rome, nothing is known with certainty (Ewald, p. 616; Schaff, ii. 17, 29). Of the other apostles a few traditional notices remain, which will be found under their respective names. Most of them seem to have laboured in the East, though one of their number, Simon Zelotes, is said to have travelled westward as far as Britain, where he ended his days by crucifixion (Schaff, ii. 45). James, the brother of the Lord, alone remained at Jerusalem, and was regarded as the head of the church there, if not with the official dignity of bishop (though that is claimed for him by Epiphanius and some other writers), yet commanding the universal reverence of his countrymen by the superior sanctity of his character (Lechler, p. 296; Ewald, p. 200; Stanley, 291-335). The martyrdom of St. Paul is placed by

tradition in the same year as that of Peter, and according to some witnesses, on the same day. Not long after this event, those hostilities began which ended in the destruction of Jerusalem and of the Jewish polity. Judaism, as a political and religious power, received its death-blow. The effect on the Palestinian Christians must have been great. It is well known that the members of the church at Jerusalem, shortly before the final catastrophe, took refuge in Pella, where they would come in contact with Gentile Christians, and were no longer under the jurisdiction of the Sanhedrim, which had removed its seat to Jamna, on the shores of the Mediterranean. The ties were broken that connected the Jewish Christians with the ancient theocracy. On the first promulgation of Christianity, the synagogue was a most favourable medium for communicating not only with the native Jews, but through the proselytes who attended its service with the Gentiles; and we find that St. Paul in his missionary labours always availed himself of its aid. But, gradually, the antagonism of the old and the new, of the spiritual and the formal, of the transitory and 'that which remaineth' (2 Cor. iii. 11), became more intense, and towards the close of the first century, the synagogue and the church displayed the bitterest animosity to each other (Ewald, p. 380; Lechler, p. 290).

The materials for the history of the second period of the Apostolic Age are very scanty, as there is almost an entire absence of contemporary documents. Besides the Talmudical writings which may illustrate the state of the Jews and the Jewish Christians, we have only those of St. John (his Epistles and Revelation), the Epistle of Jude, and the second Epistle of Peter, which furnish rather hints than direct historical information. The Epistle of Barnabas and the first Epistle to the Corinthians of Clement, belong in spirit to the post-apostolic period (Lechler, p. 442). The principal person who stands before us with historic clearness is the Apostle John. We know not how early he took up his permanent abode at Ephesus, probably not till after the death of St. Paul, certainly not before that Apostle's Epistle to the Ephesians was written (about A. D. 62). Eusebius, on the authority of tradition, states that he was banished to Patmos in the fourteenth year of Domitian's reign, and returned to Ephesus in the reign of Nerva (Euseb. iii. 23; Clem. Alex. *Quis dives saluus* § 42). The Apocalyptic Epistles, and the fact that the apocalypse, as a whole, was addressed to the seven churches, prove that the apostle's sphere of labour extended over a number of the Asiatic Churches, and the traditional notices of him shew that he was engaged in frequent and severe conflicts with false teachers, those 'grievous wolves' of whom St. Paul warned the Ephesian elders; his language in his first epistle respecting the 'many antichrists' attests the same fact. According to Irenæus, Eusebius, Jerome, and others, John died a natural death at Ephesus at the advanced age of ninety or upwards, in the reign of the Emperor Trajan. With him the apostolic age of the church closes. 'The church was henceforth left to itself without any human guidance but under the invisible protection of the Lord, to form itself to spiritual maturity, and after a full development of opposing influences, to attain the higher and conscious unity which distinguished the spirit of the Apostle John' (Neander).

APPEAL. The right of appeal to superior tribunals has generally been considered an essential concomitant of inferior judicatories. When, from the paucity of the population or any other cause, the subjects of litigation are few, justice is usually administered by the first authority in the state, from whose award no appeal can lie. But when the multiplication of causes precludes the continuance of this practice, and one or more inferior courts take cognizance of the less important matters, the right of appeal to the superior tribunal is allowed, with increasing restrictions as, in the course of time, subjects of litigation multiply, and as the people become weaned from the notion that the administration of justice is the proper function of the chief civil magistrate.

In the patriarchal times, as among the Bedouins, the patriarch or head of the tribe, that is to say, the Sheikh, administered justice; and as there was no superior power, there could be no appeal from his decisions. The only case of procedure against a criminal which occurs during the patriarchal period is that in which Judah commanded the supposed adulterous Tamar to be brought forth and burnt (Gen. xxxviii. 24). But here the woman was his daughter-in-law, and the power which Judah exercised was that which a man possessed over the females of his own immediate family. If the case had been between man and man, Judah could have given no decision, and the matter would, without doubt, have been referred to Jacob.

In the desert Moses at first judged all causes himself; and when, finding his time and strength unequal to this duty, he, at the suggestion of Jethro, established a series of judicatories in a numerically ascending scale (Exod. xvii. 13-26), he arranged that cases of difficulty should be referred from the inferior to the superior tribunals, and in the last instance to himself. Although not distinctly stated, it appears from various circumstances that the clients had a right of appeal, similar to that which the courts had of reference. When the prospective distribution into towns, of the population which had hitherto remained in one compact body, made other arrangements necessary, it was directed that there should be a similar reference of difficult cases to the metropolitan court or chief magistrate ('the judge that shall be in those days') for the time being (Deut. xvi. 18; xvii. 8-12). That there was a concurrent right of

appeal, appears from the use Absalom made of the delay of justice, which arose from the great number of cases that came before the king his father (2 Sam. xv. 2-4). These were doubtless appeal cases, according to the above direction; and M. Salvador (*Institutions de Moïse*, ii. 53) is scarcely warranted in deducing from this instance that the clients had the power of bringing their cases *directly* to the supreme tribunal.

Of the later practice, before and after the time of Christ, we have some clearer knowledge from Josephus and the Talmudists. It seems that a man could carry his case by appeal through all the inferior courts to the Grand Sanhedrim at Jerusalem, whose decision was in the highest degree absolute and final. The Jews themselves trace the origin of these later usages up to the time of Moses: they were at all events based on early principles, and therefore reflect back some light upon the intimations respecting the right of appeal which we find in the sacred books (*Mishna*, *de Synedr.* ch. x.; *Talm. Hieros.* ch. xviii.; *Talm. Bab.* ch. iii. and x.; Maimon. *de Synedr.* ch. x.; Selden, *de Synedr.* b. iii. ch. 10; Lewis, *Origines Hebrææ*, b. i. c. 6; Pastoret, *Législation des Hébreux*, ch. x.; Salvador, *Hist. des Institutions de Moïse*, liv. iv. ch. 2).

The most remarkable case of appeal in the New Testament belongs to another class. It is the celebrated appeal of St. Paul from the tribunal of the Roman procurator Festus to that of the emperor; in consequence of which he was sent as a prisoner to Rome (Acts xxv. 10, 11). Such an appeal having been once lodged, the governor had nothing more to do with the case: he could not even dismiss it, although he might be satisfied that the matter was frivolous, and not worth forwarding to Rome. Accordingly, when Paul was again heard by Festus and king Agrippa (merely to obtain materials for a report to the emperor), it was admitted that the apostle might have been liberated if he had not appealed to Cæsar (Acts xxvi. 32). Paul might therefore seem to have taken a false step in the matter, did we not consider the important consequences which resulted from his visit to Rome.

It may easily be seen that a right of appeal which, like this, involved a long and expensive journey, was by no means frequently resorted to. In lodging his appeal Paul exercised one of the high privileges of Roman citizenship which belonged to him by birth (Acts xxii. 28). How the rights of Roman citizenship might be acquired by a Jewish native of Cilicia will be explained elsewhere [CITIZENSHIP]. The right of appeal connected with that privilege originated in the Valerian, Porcian, and Sempronian laws, by which it was enacted that if any magistrate should order flagellation or death to be inflicted upon a Roman citizen, the accused person might appeal to the *judgment of the people*, and that meanwhile he should suffer nothing at the hands of the magistrate until the people had judged his cause. But what was originally the prerogative of the people had in Paul's time become that of the emperor, and appeal therefore was made to *him*. Hence Pliny (*Ép.* x. 97) mentions that he had sent to Rome some Christians, who were Roman citizens, and had appealed unto Cæsar. This privilege could not be disallowed by any magistrate to any person whom the law entitled to it. Indeed, very heavy penalties were attached to any refusal to grant it, or to

furnish the party with facilities for going to Rome.—J. K.

APPHIA (Ἀπφία), the name of a Christian woman (Philemon 2) who is supposed by Chrysostom and Theodoret to have been the wife of Philemon.

APPII-FORUM (Ἀππιῶν φόρον), a market town in Italy, 43 Roman miles from Rome (*Itiner. Anton.* p. 107), on the great road (*via Appia*) from Rome to Brundisium, constructed by Appius Claudius. The remains of an ancient town, supposed to be Appii-forum, are still observed at a place called Casarillo di Santa Maria, on the border of the Pontine marshes. Its vicinity to the marshes accounts for the badness of the water, as mentioned by Horace (*Sat.* i. 5, 7). When St. Paul was taken to Italy, some of the Christians of Rome, being apprised of his approach, journeyed to meet him as far as 'Appii-Forum and the Three Taverns' (ἄχρως Ἀππιῶν φόρον καὶ Τριῶν Ταβερῶν, Acts xxviii. 15). The 'Three Taverns' were eight or ten miles nearer to Rome than Appii-Forum. The probability is that some of the Christians remained at the 'Three Taverns,' where it was known the advancing party would rest, while some others went on as far as Appii-Forum to meet Paul on the road. The 'Three Taverns' was certainly a place for rest and refreshment (*Cic. ad Attic.* ii. 11, 13), perhaps on account of the bad water at Appii-Forum. It must be understood that Tres Tabernæ was, in fact, the name of a town; for in the time of Constantine, Felix, bishop of Tres Tabernæ, was one of the nineteen bishops who were appointed to decide the controversy between Donatus and Cæcilianus (*Optatus, de Schism. Donat.*, l. i. p. 26). As to the tabernæ themselves from which the place took its name, it is probable that they were *shops* for the sale of all kinds of refreshments, rather than inns or places of entertainment for travellers. The ruins of this place still exist under the same name.—J. K.

APPLE, APPLE-TREE. [TAPPUACH.]

APPLES OF SODOM. [SODOM, APPLES OF.]

AQUILA (Ἀκύλας), a Jew with whom Paul became acquainted on his first visit to Corinth; a native of Pontus, and by occupation a tent-maker. He and his wife Priscilla had been obliged to leave Rome in consequence of an edict issued by the Emperor Claudius, by which all Jews were banished from Rome (*Judaicos, impulsore Chresto, assidue tumultuantes Roma expulsi*; Sueton. *Claud.* c. 25; Neander's *History of the Planting of the Christian Church*, (Bohn) vol. i. p. 198; Lardner's *Testimonies of the Heathen Authors*, ch. viii.) This decree was made not by the senate, but by the emperor, and lasted only during his life, if even so long. Whether Aquila and Priscilla were at that time converts to the Christian faith cannot be positively determined; Luke's language, προσήλθεν αὐτοῖς, καὶ διὰ τὸ ὑμνεῖσθαι εἶναι, ἔμενεν παρ' αὐτοῖς, Acts xviii. 2, rather implies that Paul sought their society, because they had a common trade, than for the purpose of persuading them to embrace Christianity. At all events, they were Christians before Paul left Corinth; for we are informed that they accompanied him to Ephesus, and meeting there with Apollos, who 'knew only the baptism of John,' they 'instructed him in the way of God more perfectly' (Acts xviii. 25, 26). From that time they

appear to have been zealous promoters of the Christian cause. Paul styles them his 'helpers in Christ Jesus,' and intimates that they had exposed themselves to imminent danger on his account ('who have for my life laid down their own necks,' Rom. xvi. 3, 4), though of the time and place of this transaction we have no information. When Paul wrote his epistle to the Romans they were at Rome; but some years after they returned to Ephesus, for Paul sends salutations to them in his Second Epistle to Timothy (2 Tim. iv. 19; Lardner's *Credibility*, part ii. ch. 11). Their occupation as tent-makers probably rendered it necessary for them to keep a number of workmen constantly resident in their family, and to these (to such of them at least as had embraced the Christian faith) may refer the remarkable expression, 'the Church that is in their house,' τὴν κατ' οἶκον αὐτῶν ἐκκλησίαν (see Biscoe, quoted in Lardner's *Credibility*, part ii. ch. 11). Origen's explanation of these words is very similar: 'Magna enim gratia in hospitalitatis officio non solum apud Deum, sed et apud homines invenitur. Quæ tamen res quoniam non solum in voluntate et proposito dominorum, sed et grato ac fidei constitit ministerio famulorum, idcirco omnes qui ministerium istud cum ipsis fideliter adimplebant, domesticam eorum nominavit Ecclesiam' (*In Ep. ad Rom. Comment.* lib. x.; *Opera*, t. vii. p. 431, ed. Berol. 1837).

The Greeks call Aquila bishop and apostle, and honour him on July 12. The festival of Aquila and Priscilla is placed in the Roman Calendar, where he is denoted Bishop of Heraclea, on July 8 (Conybeare and Howson, *Life and Epistles of St. Paul*, vol. i. p. 455-457; Dr. Kitto, *Daily Bible Illustrations*, viii. 374).—J. E. R.

AQUILA (Ἀκύλας, Ἀκύλας), the author of a Greek translation of the O. T. He was a native of Sinope in Pontus, and became a proselyte from heathenism to Judaism. According to some witnesses (Epiphanius. *De Pond. et Mens.* c. 14) he was a Christian before he became a Jew, whilst others make him first a Jew, then a Christian, and then an apostate; but this last is evidently a blunder, and the former is probably unfounded. All agree that he lived in the reign of the emperor Hadrian, and some assert that he was connected with him by marriage, and was appointed by him to preside over his attempted rebuilding of Jerusalem (Epiphanius. *ubi sup.*). In the Jerusalem Talmud mention is made of an Akilas, a proselyte, who 'interpreted the law before Eleazar and R. Jehoshua, and they praised him and said, 'Thou hast become most excellent among the children of men.' What is here and in other Rabbinical writings ascribed to Aquila, is elsewhere in the Talmudical and Rabbinical books ascribed to Onkelos, which has led some to identify Aquila, the Greek translator, with Onkelos, the author of the Chaldee Targum. It is probable that the Akilas of the Talmud is the same as Aquila the translator; but there is no ground for identifying either with Onkelos. Aquila's version is first mentioned by Irenæus (*Adv. Her.* iii. 24), and it is supposed that Justin Martyr had it in his eye when he censures the Jews for giving *veâvus* in Is. vii. 14, instead of *πάρονος*, the rendering of the LXX. (*Dial. c. Trypho.* p. 310, c.) The translation was probably made in the second decennium of the second century (Hody, *De Bibl.*

Text. Orig. p. 573 ff.; Anger, *De Onkelo* . . . *et quid ei rationis intercedat cum Akila*, etc. part i.; *De Akila*, Lips. 1845; Hävernick, *Introduction*, E. T. p. 307, ed. 1852).—W. L. A.

AQUINAS, or D'AQUINO, THOMAS, called 'the Angelic Doctor,' was born sometime between 1224 and 1227. He died 7th March 1274, under fifty years of age, exhausted by constant study and by labour as a lecturer on theology. His works fill, in one edition (Ven. 1529), 18 vols. folio, and in another (Par. 1636-41), 23 vols. folio. A considerable portion of these is occupied in expository treatises on Scripture. These consist chiefly of extracts from the Fathers, especially Augustine, of whom Thomas was a sincere admirer. He carefully arranges their opinions, but mixes them up with much of his own scholasticism. His aurea catena on the four Gospels is the most valuable of his expository works; it has been translated into English, and issued as part of the library of the Fathers. He wrote also an exposition of St. Paul's epistles. It contains less of value than might have been expected from the exercise of so great a mind on such writings.—W. L. A.

AR (עַר; Sept. Ἰρα), the capital city of the Moabites (Num. xxi. 28; Deut. ii. 9, 18, 29), near the river Arnon (Deut. ii. 18, 24; Num. xxi. 13-15). It appears to have been burnt by King Sihon (Num. xxi. 28), and Isaiah, in describing the future calamities of the Moabites, says, 'In the night Ar of Moab is laid waste and brought to silence' (Is. xv. 1). In his comment on this passage, Jerome states that in his youth there was a great earthquake, by which Ar was destroyed in the night-time. This he evidently regards as a fulfilment of the prediction, which, however, had probably some less remote reference. Latterly the name of the city was Græcised into Areopolis.

This city was also called Rabbah or Rabbath, and, to distinguish it from Rabbath of Ammon, Rabbath-Moab. Ptolemy calls it Rabmathon: Steph. Byzantinus, Rabathmoma; and Abulfeda (*Tab. Syr.*, p. 90), Rabbath, and also Mab. The site still bears the name of Rabbah. The spot has been visited and described by Seetzen, Burckhardt, Legh, Macmichael, and Irby and Mangles. It is about 17 miles east of the Dead Sea, 10 miles south of the Arnon (Modjeb), and about the same distance north of Kerek. The ruins of Rabbah are situated on a low hill, which commands the whole plain. They present nothing of interest except two old Roman temples and some tanks. Irby and Mangles (*Letters*, p. 457), remark, with surprise, that the whole circuit of the town does not seem to have exceeded a mile. Burckhardt says, 'half an hour in circuit,' and that no trace of walls could be found; but it is obvious from the descriptions that the city whose ruins they saw was a comparatively modern town.—J. K.

ARAB (אַרָב) a town in the tribe of Judah (Josh. xv. 52).

ARABAH (עֲרָבָה; Sept. Ἀραβα), a Hebrew word, signifying in general a *desert plain*, or *steppe*. In the Authorized Version it is translated 'the plain, but in the original it appears to be supplied with the article on purpose, as the proper name (הָעֲרָבָה ha-Arabah, the Arabah), of the great plain or valley in its whole extent, which is *partly* occu-

ped by the Jordan and its lakes, and is prolonged from the Dead Sea to the Elanitic Gulf. The name has come down to the present day in the same form in Arabic, *el-Arabah* (العَرَبَة); but it is

now restricted to the part between the lake and the gulf. The more extended application of the name by the Hebrews is successfully traced by Professor Robinson from Gesenius: 'In connection with the Red Sea and Elath' (Deut. i. 1; ii. 8). 'As extending to the lake of Tiberias' (Josh. xii. 3; 2 Sam. ii. 29; 2 Kings xxv. 4). 'Sea of the Arabah, the Salt Sea' (Josh. iii. 16; xii. 3; Deut. iv. 49). 'The *arboth* (plains) of Jericho' (Josh. v. 10; 2 Kings xxv. 5). 'Plains (*arboth*) of Moab,' *i. e.*, opposite Jericho, probably pastured by the Moabites, though not within their proper territory (Deut. xxiv. 1, 8; Num. xxii. 1) [ARABIA; PALESTINE.] [The term Arabah, which means, according to Gesenius, an arid tract or sterile region, from עָרַב, to be sterile, and is used in the poetical works of the Bible, along with Midbar, to denote a desert, is employed as a proper name in three distinct applications:—1. It is used with the article to designate the whole of that remarkable depression which reaches from the Sea of Tiberias to the Gulf of Akabah (Josh. xii. 3; Deut. i. 7; iii. 17, etc.) This was called *Αἰθῶν* by the Greeks, and is described by Eusebius (*Onomast.* in loc.) as stretching from Lebanon to the desert of Paran. It is termed by Abulfeda *العُور El-Ghor*, and he says it stretches

from the Lake of Tiberias to Ailah or Akabah. 2. It is used with the article to denote the southern part of this from the Dead Sea to Akabah (Deut. i. 1; ii. 8). To this part the term is still applied by the Arabs, who call it *Wady El-Arabah*; as they call the northern part *El-Ghor*. 3. In the plural it is used to describe more particularly certain parts of the valley, always without the article, and with a limiting and qualifying noun added, as *עֲרָבוֹת יְרֵחוֹ*, the plains of Jericho, Josh. v. 10; 2 Kings xxv. 5; *עֵי מוֹאָב*, the plains of Moab, Num. xxii. 1; xxvi. 3, etc.]

ARABIA, an extensive region occupying the south-western extremity of Asia, between 12° 45' and 34½° N. lat., and 32½° and 60° E. long. from Greenwich; having on the W. the Isthmus of Suez and the Red Sea (called from it the *Arabian Gulf*), which separate it from Africa; on the S. the Indian Ocean; and on the E. the Persian Gulf and the Euphrates. The boundary to the north has never been well defined, for in that direction it spreads out into interminable deserts, which meet those of Palestine and Syria on the west, and those of *Irāk-Arabi* (*i. e.*, Babylonia) and Mesopotamia on the east; and hence some geographers include that entire wilderness in Arabia. The form of the peninsula is that of a trapezoid, whose superficial area is estimated at four times the extent of France. It is one of the few countries of the south where the descendants of the aboriginal inhabitants have neither been extirpated nor expelled by northern invaders. They have not only retained possession of their ancestral homes, but have sent forth colonies to all the adjacent regions, and even to more distant lands, both in Africa and Asia. 'There is no people,' says Ritter (*Erdkunde*, th. ii. p. 172), 'who are less circumscribed to the territory usually assigned to them than the Arabs; their

range outstrips geographical boundaries in all directions.³

6r.

With the history of no country save that of Palestine are there connected so many hallowed and impressive associations as with that of Arabia. Here lived and suffered the holy patriarch Job; here Moses, when 'a stranger and a shepherd,' saw the burning, unconsuming bush; here Elijah found shelter from the rage of persecution; here was the scene of all the marvellous displays of divine power and mercy that followed the deliverance of Israel from the Egyptian yoke, and accompanied their journeyings to the Promised Land; and here Jehovah manifested himself in visible glory to his people. From the influence of these associations, combined with its proximity to Palestine, and the close affinity in blood, manners, and customs between the northern portion of its inhabitants and the Jews, Arabia is a region of peculiar interest to the student of the Bible; and it is chiefly in its relation to subjects of Bible study that we are now to consider it. It was well remarked by Burckhardt (who knew Arab life and character better than any other European traveller that has yet appeared) that 'the sacred historian of the children of Israel will never be thoroughly understood, so long as we are not minutely acquainted with everything relating to the Arab Bedouins and the countries in which they move and pasture.'

In early times the Hebrews included a part of what we call Arabia among the countries they vaguely designated as קדם *Kedem*, 'the East,' the inhabitants being numbered among the בני קדם *Beni-Kedem*, 'Sons of the East,' *i. e.*, Orientals. But there is no evidence to shew (as is asserted by Winer, Rosenmüller, and other Bible-geographers) that these phrases are ever applied to the *whole* of the country known to us as Arabia. They appear to have been commonly used in speaking of those parts which lay due *east* of Palestine, or on the north-east and south-east; though occasionally they

do seem to point to tracts which lay indeed to the south and south-west of that country, but to the east and south-east of Egypt. Hence Joseph Mede (who is followed by Bellermann, *Handbuch d. Bib. Literat.* th. iii. p. 220) is of opinion that the phraseology took its rise at the period when the Israelites were in Egypt, and was retained by them as a mode of speech after they were settled in Canaan. That conjecture would, doubtless, considerably extend the meaning of the term; yet even then it could scarcely embrace the extreme south of Arabia, a queen in which (on the supposition of Yemen being identical with Sheba) is, in the New Testament, styled not 'a queen of the East,' but βασίλισσα Νόβου, 'a queen of the South.' Accordingly we find that whenever the expression *kedem* has obviously a reference to Arabia, it invariably points to its *northern* divisor only. Thus in Gen. xxv. 6, Abraham is said to have sent away the sons of Hagar and Keturah to the *Eretz-Kedem—Kedemah, i. e.*, the East country, eastward; and none of them, so far as we know, were located in peninsular Arabia; for the story which represents Ishmael as settling at Mecca is an unsupported native tradition. The patriarch Job is described (Job i. 3) as 'the greatest of all the men of the east,' and though opinions differ as to the precise locality of the land of Uz, all are agreed that it was in some part of Arabia, but certainly not in Arabia Felix. In the Book of Judges (vi. 3; vii. 12; viii. 10) among the allies of the Midianites and Amalekites (tribes of the north) are mentioned the '*Beni-Kedem*,' which Josephus translates by Ἀραβᾶς, the Arabs. In Is. xi. 14, the parallelism requires that by 'sons of the east' we understand the *Nomades* of Desert Arabia, as corresponding to the Philistines 'on the west;' and with these are conjoined the Edomites, Moabites, and Ammonites, who were all northern Arabians. The command was given (Jer. xlix. 28) to the Babylonians 'to smite the Beni-Kedem,' who are there classed with the Kedarenes, descendants of Ishmael (comp. 1 Kings iv. 30). In more modern times a name of similar import was applied to the Arabs generally; they were called *Saracens* (Sharakiyun, *i. e.*, Orientals) from the word *shark*, 'the east,' whence also is derived the term *sirocco*, the east wind. The name of Saracens came into use in the west in a vague and undefined sense after the Roman conquest of Palestine, but does not seem to have been adopted as a general designation till about the eighth century. It is to be remarked here that though in Scripture *Kedem* most commonly denotes Northern Arabia, it is also used of countries farther east, *e. g.*, of the native country of Abraham (Is. xli. 2; comp. Gen. xxix. 1), of Balaam (Num. xxiii. 7), and even of Cyrus (Is. xlvi. 11); and, therefore, though the Magi who came to Jerusalem (Matt. ii. 1) were ἀπὸ ἀνατολῶν, 'from the east,' it does not thence follow that they were natives of Arabia.

We find the name *Arab* (عرب) *Arab*, first beginning to occur about the time of Solomon. It designated a portion of the country, an inhabitant being called Arabi, an Arabian (Is. xlii. 20), or in later Hebrew, Arbi (Neh. ii. 19), the plural of which was Arbiim (2 Chron. xxi. 16), or Arbiim (*Arabians*) (2 Chron. xvii. 11). In some places these names seem to be given to the Nomadic tribes generally (Is. xlii. 20; Jer. iii. 2), and their country

(Is. xxi. 13). The kings of Arabia from whom Solomon (2 Chron. ix. 14) and Jehoshaphat (2 Chron. xvii. 11) received gifts were, probably, Bedouin chiefs; though in the place parallel to the former text (1 Kings x. 15), instead of *Arab* we find *Ereb*, rendered in Jer. xxv. 20, 24, 'mingled people,' but which Gesenius, following the Chaldee, understands to mean 'foreign allies.' It is to be remarked, however, that in all the passages where the word *Arab* occurs it designates only a small portion of the territory known to us as Arabia. Thus in the account given by Ezekiel (xxvii. 21) of the Arabian tribes that traded with Tyre, mention is specially made of *Arab* (comp. Jer. xxv. 24). In 2 Chron. xxi. 16; xxii. 1; xxvi. 7; Neh. iv. 7, we find the Arabians classed with the Philistines, the Ethiopians (*i. e.*, the Asiatic Cushites, of whom they are said to have been neighbours), the Meunims, the Ammonites, and Ashdodites. At what period this name *Arab* was extended to the whole region it is impossible to ascertain. From it the Greeks formed the word Ἄραβία, which occurs twice in the New Testament; in Gal. i. 17, in reference probably to the tract adjacent to Damascene Syria, and in Gal. iv. 25, in reference to the peninsula of Mount Sinai. Among the strangers assembled at Jerusalem at the Pentecost there were Ἄραβες, Arabs (Acts ii. 11), the singular being Ἄραβ.

As to the etymology of the name *Arab* various opinions have been expressed. Hezel (*Bib. Real Lex.*) and Bellermann (*Handbuch d. Bib. Liter.* th. iii. p. 219) absurdly derive it from a transposition of letters in the name of Eber, the father of Joktan; Pococke follows the native writers in thinking the name was taken from Araba, a district of Yemen, so called from Yárab, Joktan's son; some suppose that as this country was called by the Israelites *Kedem*, 'the east,' so by the Shemetic tribes who dwelt beyond the Euphrates it was termed *Arab* in the sense of 'the west;' while others derive it from the same word in the sense of 'mixed people,' or 'merchants.' But dismissing these conjectures as groundless and unsatisfactory, the most obvious etymology of the name is from עֲרָבָה *Arabah* a steppe, *i. e.*, a desert plain or wilderness. That was, in point of fact, the name given by the ancient Hebrews to the tract of country extending northward from Elath, on the Arabian Gulf, to the Dead Sea (Deut. i. 1; ii. 8), and even as far as the Lake of Tiberias (Josh. xii. 3). It was called *Ha-Arabah*, commonly rendered in our version by 'the plain' (hence the Dead Sea was styled the 'sea of the Arabah,' Josh. iii. 16); and it included the plains (*Arbolls*) of Jericho and Moab (Josh. v. 10; Deut. xxxiv. 1, 8). In the list of the cities of Judah contained in the book of Joshua we find (xv. 61), 'in the wilderness, Beth-Arabah,' in the Hebrew בֵּית הָעֲרָבָה, *i. e.*, 'the house of the plain.' It had been mentioned at v. 6, as on the northern borders; and hence at xviii. 22, it appears also as a city of Benjamin, one of whose boundaries it is said at v. 18, 'passed over against [the] Arabah northward, and went down into [the] Arabah.' Now it is a remarkable circumstance that the southern part of this great valley is still known by the name of *Wady-el-Arabah*, and there is no improbability in the conjecture that this designation, which was applied at so early a period as the days of Moses to one particular district, was gradually extended to the entire region. No designation, indeed, could be more comprehensive or correct;

for looking to Arabia as a whole, it may fitly be described as one vast desert of arid and barren plains, intersected by chains of rocky mountains, where the *oases*, or 'spots of living green' (probably a corruption of the Arabic word *wady*, a valley or watercourse), exist but in a very small proportion to the sterility and desolation which reign around. [ARABAH.]

The modern name, *Jeshirat-el-Arab*, *i. e.*, 'the peninsula of the Arabs,' applies to the southern part of the region only. Another native appellation is *Beled-el-Arab*, *i. e.*, 'the land of the Arabs:' the Persians and Turks call it *Arabistân*. Mr. Lane informs us that in Egypt the term *Arab* is now generally limited to the Bedaweis, or people of the desert; but formerly it was used to designate the townspeople and villagers of Arabian origin, while those of the desert were called Arab or Arabees: the former now call themselves *Ow-lâd-el-Arab*, or sons of the Arabs.

The early Greek geographers, such as Eratosthenes and Strabo, mention only two divisions of this vast region, *Happy* and *Desert* Arabia. But after the city of Petra, in Idumæa, had become celebrated as the metropolis of a commercial people, the Nabathæans, it gave name to a third division, *viz.*, *Arabia Petræa* (improperly translated *Stony* Arabia); and this threefold division, which first occurs in the geographer Ptolemy, who flourished in the second century, has obtained throughout Europe ever since. It is unknown, however, to native or other Eastern geographers, who reckon Arabia Deserta as chiefly belonging to Syria, and to Irak-Arabi, or Babylonia, while they include a great part of what we call Arabia Petræa in Egypt.

I. ARABIA FELIX (in Gr. Ἄραβία ἡ Εὐδαίμων, the *Arabia Eudæmon* of Pliny), *i. e.*, *Happy Arabia*. The name has commonly been supposed to owe its origin to the variety and richness of the natural productions of this portion of the country, compared with those of the other two divisions. Some, however, regard the epithet 'happy' as a translation of its Arabic name يَمَن *Yemen*, which, though primarily denoting the land of the *right hand*, or *south*,* also bears the secondary sense of 'happy, prosperous.' This part of Arabia lies between the Red Sea on the west and the Persian Gulf on the east, the boundary to the north being an imaginary line drawn between their respective northern extremities, Akaba and Basra or Bussora. It thus embraces by far the greater portion of the country known to us as Arabia, which, however, is very much a *terra incognita*; for the accessible districts have been but imperfectly explored, and but little of the interior has been yet visited by any European traveller.

Arabia may be described generally as an elevated table-land, the mountain ranges of which are by some regarded as a continuation of those of Syria, but Ritter (*Erdkunde*, th. i. p. 172) views them as forming a distinct and independent *plateau*, peculiar to the country. In Arabia Felix the ridges, which

* This phraseology may have originated in the worship of the rising sun at the Kaaba, or ancient temple of Mecca, when the worshipper had the east *before* him, the west *behind* him, the south on his *right*, and the north on his *left*; hence Syria is called *Esh-Sham*, the *left*. Yet the Hebrews had the same idiom.

are very high in the interior, slope gently on the east towards the Persian Gulf, and on the north-east towards the vast plains of the desert. On the west the declivities are steeper, and on the north-west the chains are connected with those of Arabia Petraea. Commencing our survey at the north end of the Red Sea, the first province which lies along its shore is the *Hedjaz*, which Niebuhr and others reckon as belonging to Arabia Petraea, but which the editor of Burckhardt's *Travels in Arabia* has shewn to belong properly to Arabia Felix. This was the cradle of Mohammedan superstition, containing both Mecca, where the prophet was born, and Medina, where he was buried; and hence it became the Holy Land of the Moslem, whither they resort in pilgrimage from all parts of the East. It is on the whole a barren tract, consisting chiefly of rugged mountains and sandy plains. Still more unproductive, however, is the long, flat, dreary belt, of varying width, called *Tehâna*, which runs along the coast to the south of Hedjaz, and was at no distant period covered by the sea. But next to this comes *Yemen* (the name of a particular province, as well as of the whole country), the true Arabia Felix of the ancients, 'Araby the Blest' of modern poets, and doubtless the finest portion of the peninsula. Yet if it be distinguished for fertility and beauty, it is chiefly in the way of contrast, for it is far from coming up to the expectations which travellers had formed of it. Here is Sanaa (supposed to be the *Uzal* of Scripture), the seat of an imam; Mareb, which some identify with Sheba; Mocha, the chief mart for coffee; and Aden, a place rapidly increasing in importance since taken possession of by Britain, with a view to secure her navigation of the Red Sea. Turning from the west to the south coast of the peninsula, we next come to the extensive province of *Hhadramaut* (the Hazarmaveth of the Bible), a region not unlike Yemen in its general features, with the exception of the tracts called Mahrah and Sahar, which are dreary deserts. The south-east corner of the peninsula, between Hhadramaut and the Persian Gulf, is occupied by the important district of *Oman*, which has recently become better known to us than most other parts of Arabia Felix by the travels and researches of Lieut. Wellsted (*Travels in Arabia*, London, 1838, 2 vols. 8vo). Oman has been in all ages famous for its trade; and the present imam of Muscat, a politic and enterprising prince, has greatly extended it, and thereby increased and consolidated his own power by forming commercial alliances with Great Britain, the United States, and other foreign nations. Along the Persian Gulf northward stretches the province of *Lahsa*, or rather *El Hassa*, to which belong the Bahrein Islands, famous for their pearls. The districts we have enumerated all lie along the coasts, but beyond them in the south stretches the vast desert of Akhaf, or Roba-el-Khali, *i. e.*, 'the empty abode,' a desolate and dreary unexplored waste of sand. To the north of this extends the great central province of *Nedsched* or *Nejd*. Ritter regards it as forming nearly a half of the entire peninsula. It may be described as having been the great *officina gentium* of the south, as were Scandinavia and Tartary of the north; for it is the region whence there issued at different periods those countless hordes of Arabs which overran a great part of Asia and Africa. Here, too, was the origin and the seat of the Wahabees (so formidable until sub-

dued in 1818 by Mehemet Ali, pasha of Egypt), their chief town being Dereyeh.

The *geological* structure and *mineralogical* productions of this part of Arabia are in a great measure unknown. In the mountains about Mecca and Medina the predominant rocks are of gray and red granite, porphyry, and limestone. This is also the case in the great chain that runs southward towards Maskat; only that in the ridge that rises behind the Tehama there is found schistus and basalt instead of granite. Traces of volcanic action may be perceived around Medina, as also at Aden and in many other parts of the peninsula. Hot-springs are of frequent occurrence on the Hadjee or pilgrim road to Mecca. The ancients believed that Arabia yielded both gold and precious stones, but Niebuhr doubts if this ever was the case. The most valuable ore found now is the lead of Oman: what is called the Mocha stone is a species of agate that comes from India. The native iron is coarse and brittle; at Loheia and elsewhere there are hills of fossil salt. The *botany* of Yemen was investigated by Forskål, one of the fellow-travellers of Niebuhr. Arabia Felix has always been famous for frankincense, myrrh, aloes, balsam, gums, cassia, etc.; but it is doubtful whether the last-mentioned and other articles supposed to be indigenous were not imported from India. Here are found all the fruits of temperate and warm climates, among which the *date*, the fruit of the palm-tree, is the most common, and is, along with the species of grain called *dhourra*, the staple article of food. But the most valuable vegetable production is coffee (Arab. *kahweh*, an old term for wine, the fruit being called *bunn*); for Yemen, if not its native country, is the *habitat* where it has reached the greatest state of perfection. Cultivation here is not confined to the plains, but is carried up the sides of the mountains, which are laid out in terraces, and supplied with water by means of artificial reservoirs. In the *animal* kingdom Arabia possesses, in common with the adjacent regions, the camel (the 'living ship of the desert'), panthers, lynxes, hyænas, jackals, gazelles, asses (wild and tame), monkeys, etc. But the glory of Arabia is its *horse*. As in no other country is that animal so much esteemed, so in no other are its noble qualities of swiftness, endurance, temper, attachment to man, so finely developed. Of the insect tribes, the locust, both from its numbers and its destructiveness, is the most formidable scourge to vegetation. The Arabian seas swarm with fish, sea-fowl, and shells; coral abounds in the Red Sea, and pearls in the Persian Gulf.

2. ARABIA DESERTA, called by the Greeks *Σκηπίτις Ἀραβία*, or *ἡ Ἐρημὸς Ἀραβία*, and by the Arabs *البادية* *El-Badiyah*, *i. e.*, the Desert. This takes in that portion of the country which lies north of Arabia Felix, and is bounded on the north-east by the Euphrates, on the north-west by Syria, and on the west by Palestine and Arabia Petraea. The Arabs divide this 'great wilderness' into three parts, so called from their proximity to the respective countries, *viz.*, *Badiyah esh Sham* (Syria), *Badiyah el Jeshirah* (the peninsula, *i. e.*, Arabia), and *Badiyah el Irak* (Babylonia). From this word Badiyah comes the name of the nomadic tribes by whom it is traversed, *viz.*, *Bedawees* (better known to us by the French corruption of *Bedouins*), who are not, however, confined to this

portion of Arabia, but range throughout the entire region. So far as it has yet been explored, Desert Arabia appears to be one continuous, elevated, interminable *steppe*, occasionally intersected by ranges of hills. Sand and salt are the chief elements of the soil, which in many places is entirely bare, but elsewhere yields stunted and thorny shrubs or thinly-scattered saline plants. That part of the wilderness called *El Hammad* lies on the Syrian frontier, extending from the Hauran to the Euphrates, and is one immense dead and dreary level, very scantily supplied with water, except near the banks of the river, where the fields are irrigated by wheels and other artificial contrivances.

The sky in these deserts is generally cloudless, but the burning heat of the sun is moderated by cooling winds, which, however, raise fearful tempests of sand and dust. Here, too, as in other regions of the East, occasionally prevails the burning, suffocating south-east wind, called by the Arabs *El Hharir* (the Hot), but more commonly *Samūm*, and by the Turks *Sanyeli* (both words meaning 'the Poisonous'), the effects of which, however, have by some travellers been greatly exaggerated. This is probably 'the east wind' and the 'wind from the desert' spoken of in Scripture. Another phenomenon, which is not peculiar, indeed, to Desert Arabia, but is seen there in greatest frequency and perfection, is what the French call the *mirage*, the delusive appearance of an expanse of water, created by the tremulous, undulatory movement of the vapours raised by the excessive heat of a meridian sun. It is called in Arabic *serab*, and is no doubt the Hebrew *sarab* of Is. xxxv. 7, which our translators have rendered 'the parched ground.'

3. ARABIA PETRÆA (Gr. *Περπαλα*) appears to have derived its name from its chief town *Petra* (i. e., a rock), in Heb. *Selah*; although (as is remarked by Burckhardt) the epithet is also appropriate on account of the rocky mountains and stony plains which compose its surface. It embraces all the north-western portion of the country; being bounded on the east by Desert and Happy Arabia (for we have included the Hedjaz in the latter), on the north by Palestine and the Mediterranean, on the west by Egypt, and on the south by the Red Sea. This division of Arabia has been of late years visited by a great many travellers from Europe, and is consequently much better known than the other portions of the country. Confining ourselves at present to a general outline, we refer for details to the articles SINAI, EXODUS, EDMOM, MOAB, etc. Beginning at the northern frontier, there meets us the elevated plain of Belka, to the east of the Dead Sea, the district of Kerak (Kir), the ancient territory of the Moabites, their kinsmen of Ammon having settled to the north of this, in Arabia Deserta. The north border of Moab was the brook Arnon, now the Wady-el-Môjib; to the south of Moab, separated from it by the Wady-el-Ahshy, lay Mount Seir, the dominion of the Edomites, or *Idumæa*, reaching as far as to Elath on the Red Sea. The great valley which runs from the Dead Sea to that point consists, first, of El-Ghor, which is comparatively low, but gradually rises by a succession of limestone cliffs into the more elevated plain of *El-Arabah*, formerly mentioned. 'We were now,' says Professor Robinson (*Biblical Researches*, vol. ii. p. 502), 'upon the plain, or rather the rolling desert, of the *Arabah*; the surface was in general loose gravel and stones,

everywhere furrowed and torn with the beds of torrents. A more frightful desert it had hardly been our lot to behold. The mountains beyond presented a most uninviting and hideous aspect; precipices and naked conical peaks of chalky and gravelly formation rising one above another without a sign of life or vegetation. It was once believed that through this great valley the Jordan anciently flowed, before the catastrophe of the cities of 'the plain (Arabah)'; but from the depressed level of the Dead Sea (recently found by Lieut. Symonds to be no less than 1337 feet below that of the Mediterranean), from the great elevation of the Arabah, the long descent northward, and the run of the watercourses in the same direction, the hypothesis is found to be no longer tenable.* The structure of the mountains of Edom on the east of the Arabah is thus described by Robinson (vol. ii. p. 551): 'At the base low hills of limestone or argillaceous rocks; then the lofty masses of porphyry, constituting the body of the mountain; above these sandstone broken up into irregular ridges and grotesque groups of cliffs; and again, farther back and higher than all, long elevated ridges of limestone without precipices. East of all these stretches off indefinitely the high plateau of the great eastern desert. The character of these mountains is quite different from those on the west of the Arabah. The latter, which seemed to be not more than two-thirds as high, are wholly desert and sterile; while these on the east appear to enjoy a sufficiency of rain, and are covered with tufts of herbs and occasional trees.' This mountainous region is divided into two districts: that to the north is called *Jebâl* (i. e., mountains, the Gebal of Ps. lxxxiii. 7); that to the south *Esh-Sherah*, which has erroneously been supposed to be allied to the Hebrew 'Seir'; whereas the latter (written with a *ʔ*) means 'hairy,' the former denotes 'a tract or region.' To the district of Esh-Sherah belongs Mount Hor, the burial-place of Aaron, towering above the Wady Mousa (valley of Moses), where are the celebrated ruins of Petra (the ancient capital of the Nabathæo-Idumæans), brought to light by Seetzen and Burckhardt, and now familiar to English readers by the illustrations of Irby and Mangles, Laborde, etc. As for the mountainous tract immediately west of the Arabah, Dr. Robinson describes it as a desert limestone region, full of precipitous ridges, through which no travelled road has ever passed.

To the west of Idumæa extends the 'great and terrible wilderness' of *El-Tih*, i. e., 'the Wandering,' so called from being the scene of the wanderings of the children of Israel. It consists of vast interminable plains, a hard gravelly soil, and irregular ridges of limestone hills. The researches of Robinson and Smith furnish new and important information respecting the geography of this part of Arabia and the adjacent peninsula of Sinai. It appears that the middle of this desert is occupied by a long central basin, extending from *Jebel-et-Tih* (i. e., the mountain of the wandering, a chain pretty far south) to the shores of the Mediterranean.

* Yet Mr. Beke, in a paper read to the Geographical Society (May 9, 1842), thinks the progress of the Jordan to the Red Sea was arrested by volcanic eruptions, which, while they formed the chasm now filled by the Dead Sea, upraised the ridge called El Saté.

This basin descends towards the north with a rapid slope, and is drained through all its length by Wady-el-Arish, which enters the sea near the place of the same name, on the borders of Egypt. 'West of this basin other wadys run by themselves down to the sea. On the east of the same central basin is another similar and parallel one between it and the Arabah (the two being separated by the chain El-Ojmeh and its continuation), drained throughout by the Wady-el-Jeráfch, which, having its head in or near the Tih, falls into the Arabah not far from El-Mukráh. North of this last basin the tract between the Arabah and the basin of the Arish is filled up by ranges or clusters of mountains, from which, on the east, short wadys run to the Arabah, and on the west longer ones to Wady-el-Arish, until, farther north, these latter continue by themselves to the sea nearer Gaza.'

This description of the formation of the northern desert will enable us to form a more distinct conception of the general features of the peninsula of Sinai, which lies south of it, being formed by the two arms of the Red Sea, the Gulfs of Akaba and Suez. If the parallel of the north coast of Egypt be extended eastward to the great Wady-el-Arabah, it appears that the desert, south of this parallel, rises gradually towards the south, until on the summit of the ridge Et-Tih, between the two gulfs, it attains, according to Russegger, the elevation of 4322 feet. The waters of all this great tract flow off northward either to the Mediterranean or the Dead Sea. The Tih forms a sort of offset, and along its southern base the surface sinks at once to the height of only about 3000 feet, forming the sandy plain which extends nearly across the peninsula. After this the mountains of the peninsula proper commence, and rise rapidly through the formations of sandstone, grüstein, porphyry, and granite, into the lofty masses of St. Catherine and Um Shaumer, the former of which, according to Russegger, has an elevation of 8168 Paris feet, or nearly double that of the Tih. Here the waters all run eastward or westward to the Gulfs of Akaba and Suez.

The soil of the Sinaitic peninsula is in general very unproductive, yielding only palm-trees, acacias, tamarisks (from which exudes the gum called *manná*), coloquintida, and dwarfish, thorny shrubs. Among the animals may be mentioned the mountain goat (the *bedou* of the Arabs), gazelles, leopards, a kind of marmot called *wober*, the *sheeb*, supposed by Col. Hamilton Smith to be a species of wild wolf-dog, etc. : of birds there are eagles, partridges, pigeons, the *katta*, a species of quail, etc. There are serpents, as in ancient times (Num. xxi. 4, 6), and travellers speak of a large lizard called *dhob*, common in the desert, but of unusually frequent occurrence here. The peninsula is inhabited by Bedouin Arabs, and its entire population was estimated by Burckhardt at not more than 4000 souls.

Though this part of Arabia must ever be memorable as the scene of the journeying of the Israelites from Egypt to the Promised Land, yet very few of the spots mentioned in Scripture can now be identified; nor after the lapse of so many centuries ought that to be occasion of surprise. According to Niebuhr, Robinson, etc., they crossed the Red Sea near Suez, but the tradition of the country fixes the point of transit eight or ten miles south of Suez, opposite the place called Ayoun

Mousa, *i. e.*, the Fountains of Moses, where Robinson recently found seven wells, some of which, however, were mere excavations in the sand. About 15½ hours (33 geographical miles) south-east of that is the Well of Hawárah, the *Marah* of Scripture, whose bitter water is pronounced by the Arabs to be the worst in these regions. Two or three hours south of Hawárah the traveller comes to the Wady Ghüründel, supposed to be the *Elim* of Moses. From the plain of El-Kaa, which Robinson takes to be the desert of Sin (not to be confounded with that of *Zin*, which belonged to the great desert of Kadesh), they would enter the Sinaitic range probably along the upper part of Wady Feiran and through the Wady-esh-Sheikh, one of the principal valleys of the peninsula. The Arabs call this whole cluster of mountains *Jebel-et-Túr*; the Christians generally designate it as '*Sinai*,' and give the name of *Horeb* to a particular mountain, whereas in Scripture the names are used interchangeably. To which of the lofty peaks Moses ascended that he might receive the Law and thence publish it to the people, can only be matter of conjecture. Tradition fixed on the *Jebel Mousa*, *i. e.*, 'the mountain of Moses,' at the foot of which is the convent of Mount Sinai, and opposite to it stands Mount St. Catharine, which is a thousand feet higher, and has on that account by some been taken for the true Sinai. Professor Robinson is inclined to identify the venerated spot with the *Rás Es-Sufsáfch*, the highest peak on the northern brow of Horeb, which 'raises its bold and awful front in frowning majesty' above the extensive plain of Er-Ráhah, where there was ample room for the encampment of the 'many thousands of Israel.' Others have thought of the *Jebel Serbál*, a magnificent mountain, nine or ten hours north-west of the convent, and supposed by Burckhardt to be the highest of all the peaks, but since ascertained by Ruppell to be 1700 feet lower than St. Catharine.

Having now taken a rapid survey of this extensive region in its three divisions, let us advert to the people by whom it was at first settled, and by whose descendants it is still inhabited. There is a prevalent notion that the Arabs, both of the south and north, are descended from Ishmael; and the passage in Gen. xvi. 12, 'he (Ishmael) shall dwell in the presence of all his brethren,' is often cited as if it were a prediction of that national independence which, upon the whole, the Arabs have maintained more than any other people. But this supposition (in so far as the true meaning of the text quoted is concerned) is founded on a misconception of the original Hebrew, which runs literally, 'he shall dwell *before the faces* of all his brethren,' *i. e.*, (according to the idiom above explained, in which 'before the face' denotes *the east*), the habitation of his posterity shall be 'to the east' of the settlements of Abraham's other descendants. This seems also to be the import of Gen. xxv. 18, where, in reference to Ishmael, it is said in our version, 'he died in the presence of all his brethren;' but the true sense is 'the lot of his inheritance fell to him *before the faces* (*i. e.*, to the east) of all his brethren.' These prophecies found their accomplishment in the fact of the sons of Ishmael being located, generally speaking, to the east of the other descendants of Abraham, whether by Sarah or by Keturah.

But the idea of the southern Arabs being of the posterity of Ishmael is entirely without foundation, and seems to have originated in the tradition invented by Arab vanity, that they, as well as the Jews, are of the seed of Abraham—a vanity which, besides disfiguring and falsifying the whole history of the patriarch and his son Ishmael, has transferred the scene of it from Palestine to Mecca. If we go to the most authentic source of ancient ethnography, the book of Genesis, we there find that the vast tracts of country known to us under the name of Arabia gradually became peopled by a variety of tribes of different lineage, though it is now impossible to determine the precise limits within which they fixed their permanent or nomadic abode. We shall here exhibit a tabular view of these races in chronological order, *i. e.*, according to the successive æras of their respective progenitors:—

I. HAMITES, *i. e.*, the posterity of *Cush*, Ham's eldest son, whose descendants appear to have settled in the south of Arabia, and to have sent colonies across the Red Sea to the opposite coast of Africa; and hence *Cush* became a general name for 'the south,' and specially for Arabian and African Ethiopia. The sons of *Cush* (Gen. x. 7) were Seba, Havilah, Sabtah, Raamah or Ragma (his sons, Sheba and Dedan), and Sabthecha.

II. SHEMITES, including the following:—

A. *Joktanites*, *i. e.*, the descendants of *Joktan* (called by the Arabs *Kachtan*), the second son of Eber, Shem's great-grandson (Gen. x. 25, 26). According to Arab tradition *Kachtan* (whom they also regard as a son of Eber), after the confusion of tongues and dispersion at Babel, settled in Yemen, where he reigned as king. Ptolemy speaks of an Arab tribe called *Katanites*, who may have derived their name from him; and the richest Bedouins of the southern plains are the *Kachtan* tribe on the frontiers of Yemen. *Joktan* had thirteen sons, some of whose names may be obscurely traced in the designations of certain districts in Arabia Felix. Their names were Almodad, Shaleph, Hhazarmaveth (preserved in the name of the province of Hhadramaut, the Hebrew and Arabic letters being the same), Jarach, Hadoram, Uzal (believed by the Arabs to have been the founder of Sanaa in Yemen), Dikla, Obal, Abimael, Sheba (father of the Sabæans, whose chief town was Mariaba or Mareb; their queen *Balkis* supposed to be the queen who visited Solomon*), Ophir (who gave name to the district that became so famous for its gold), Havilah, and Jobab.

B. *Abrahamites*, divided into—

(a) *Hagarènes* or *Hagarites*, so called from Hagar the mother; or otherwise termed *Ishmaelites* from her son; and yet in course of time these names appear to have been applied to different tribes, for in Psalm lxxxiii. 6, the Hagarènes are expressly distinguished from the *Ishmaelites* (comp. 1 Chron. v. 10, 19, 20, and the apocryphal books of Bar. iii. 23; Jud. ii. 23). The twelve sons of Ishmael (Gen. xxv. 13–15), who gave names to separate tribes, were Nebaioth (the Nabathæans in Arabia

Petræa), Kedar (the Kedarenes, sometimes also used as a designation of the Bedouins generally, and hence the Jewish rabbins called the Arabic language 'the *Kedarene*'), Adbeel, Mibsam, Mishma, Dumah, Massa, Hadad or Hadar, Thema, Jetur, Naphish (the Ituræans and Naphishæans near the tribe of Gad: 1 Chron. v. 19, 20), and Kedmah. They appear to have been for the most part located near to Palestine on the east and south-east.

(β) *Keturahites*, *i. e.*, the descendants of Abraham and his concubine *Keturah*, by whom he had six sons (Gen. xxv. 2); *Zimram*, *Jokshan* (who, like *Raamah*, son of *Cush*, was also the father of two sons, *Sheba* and *Dedan*), *Medan*, *Midian*, *Jishbak*, and *Shuah*. Among these, the posterity of *Midian* became the best known. Their principal seat appears to have been in the neighbourhood of the *Moabites*, but a branch of them must have settled in the peninsula of Sinai, for *Jethro*, the father-in-law of *Moses*, was a priest of *Midian* (Exod. iii. 1; xviii. 1; Num. x. 29). To the posterity of *Shuah* belonged *Bildad*, one of the friends of *Job*.

(γ) *Edomites*, *i. e.*, the descendants of *Esau*, who possessed *Mount Seir* and the adjacent region, called from them *Idumæa*. They and the *Nabathæans* formed in later times a flourishing commercial state, the capital of which was the remarkable city called *Petra*.

C. *Nahorites*, the descendants of *Nahor*, Abraham's brother, who seem to have peopled the land of *Us*, the country of *Job*, and of *Buz*, the country of his friend *Elihu* the *Buzite*, these being the names of *Nahor's* sons (Gen. xxii. 21).

D. *Lolites*, viz.:

(a) *Moabites*, who occupied the northern portion of Arabia Petræa, as above described; and their kinsmen, the—

(β) *Ammonites*, who lived north of them, in Arabia Deserta.

Besides these, the Bible mentions various other tribes who resided within the bounds of Arabia, but whose descent is unknown, *e. g.*, the *Amalekites*, the *Kenites*, the *Horites*, the inhabitants of *Maon*, *Hazor*, *Vedan*, and *Javan-Meusal* (Ezek. xxvii. 10), where the English version has, 'Dan also and Javan going to and fro.'

In process of time some of these tribes were perhaps wholly extirpated (as seems to have been the case with the *Amalekites*), but the rest were more or less mingled together by intermarriages, by military conquests, political revolutions, and other causes of which history has preserved no record; and thus amalgamated, they became known to the rest of the world as the 'ARABS,' a people whose physical and mental characteristics are very strongly and distinctly marked. In both respects they rank very high among the nations; so much so, that some have regarded them as furnishing the *prototype*—the primitive model form—the standard figure of the human species. This was the opinion of the famous Baron de Larrey, surgeon-general of Napoleon's army in Egypt, who, in speaking of the Arabs on the east side of the Red Sea, says (in a *Memoir for the Use of the Scientific Commission to Algiers*, Paris, 1838), 'They have a physiognomy and character which are quite peculiar, and which distinguish them generally from all those which appear in other regions of the globe.' In his dissections he found 'their physical structure in all respects more perfect than that of Europeans;

* The honour of being the country of the queen of Sheba is also claimed by Abyssinia; but if (as Bruce informs us) there was also a Saba in African Ethiopia, and if these opposite coasts of the Red Sea formed at times but one kingdom, the two opinions are not irreconcilable.

their organs of sense exquisitely acute; their size above the average of men in general; their figure robust and elegant (the colour brown); their intelligence proportionate to that physical perfection, and, without doubt, superior, other things being equal, to that of other nations.'

The inhabitants of Arabia have, from remote antiquity, been divided into two great classes, viz., *townsmen* (including villagers), and the *men of the desert*, such being, as we remarked, the meaning of the word 'Bedawees' or Bedouins, the designation given to the 'dwellers in the wilderness.' From the nature of their country, the latter are necessitated to lead the life of *nomades*, or wandering shepherds; and since the days of the patriarchs (who were themselves of that occupation) the extensive *steppes*, which form so large a portion of Arabia, have been traversed by a pastoral but warlike people, who, in their mode of life, their food, their dress, their dwellings, their manners, customs, and government, have always continued, and still continue, almost unalterably the same. They consist of a great many separate tribes, who are collected into different encampments dispersed through the territory which they claim as their own; and they move from one spot to another (commonly in the neighbourhood of pools or wells) as soon as the stunted pasture is exhausted by their cattle. It is only here and there that the ground is susceptible of cultivation, and the tillage of it is commonly left to peasants, who are often the vassals of the Bedawees, and whom (as well as all 'townsmen') they regard with contempt as an inferior race. Having constantly to shift their residence, they live in movable tents (comp. Is. xiii. 20; Jer. xlix. 29), from which circumstance they received from the Greeks the name of *Σκηνίται*, i. e., dwellers in tents (Strabo, xvi. p. 747; Diod. Sic. p. 254; Ammian. Marcell. xiii. 6). The tents are of an oblong figure, not more than six or eight feet high, twenty to thirty long, and ten broad; they are made of goat's or camel's hair, and are of a brown or black colour (such were the tents of Kedar, Cant. i. 5), differing in this respect from those of the Turcomans, which are white. Each tent is divided by a curtain or carpet into two apartments, one of which is appropriated to the women, who are not, however, subject to so much restraint and seclusion as among other Mohammedans. The tents are arranged in an irregular circle, the space within serving as a fold to the cattle at night. The heads of tribes are called *sheikhs*, a word of various import, but used in this case as a title of honour; the government is hereditary in the family of each sheikh, but elective as to the particular individual appointed. Their allegiance, however, consists more in following his example as a leader than in obeying his commands; and, if dissatisfied with his government, they will depose or abandon him. As the independent lords of their own deserts, the Bedawees have from time immemorial demanded tribute or presents from all travellers or caravans (Is. xxi. 13) passing through their country; the transition from which to robbery is so natural, that they attach to the latter no disgrace, plundering without mercy all who are unable to resist them, or who have not secured the protection of their tribe. Their watching for travellers 'in the ways,' i. e., the frequented routes through the desert, is alluded to Jer. iii. 2; Ezra viii. 31; and the fleetness of

their horses in carrying them into the 'depths of the wilderness,' beyond the reach of their pursuers, seems what is referred to in Is. lxiii. 13, 14. Their warlike incursions into more settled districts are often noticed (e. g., Job i. 15; 2 Chron. xxi. 16; xxvi. 7). The acuteness of their bodily senses is very remarkable, and is exemplified in their astonishing sagacity in tracing and distinguishing the footsteps of men and cattle, a faculty which is known by the name of *athr*. The law of *thar*, or blood-revenge, sows the seeds of perpetual feuds; and what was predicted (Gen. xvi. 12) of the posterity of Ishmael, the 'wild-ass man' (a term most graphically descriptive of a Bedawee), holds true of the whole people. Yet the very dread of the consequences of shedding blood prevents their frequent conflicts from being very sanguinary: they shew bravery in repelling a public enemy, but when they fight for plunder they behave like cowards. Their bodily frame is spare, but athletic and active, inured to fatigue and capable of undergoing great privations: their minds are acute and inquisitive; and though their manners are somewhat grave and formal, they are of a lively and social disposition. Of their moral virtues it is necessary to speak with caution. They were long held up as models of good faith, incorruptible integrity, and the most generous hospitality to strangers; but many recent travellers deny them the possession of these qualities; and it is certain that whatever they may have been once, the Bedawees, like all the unsophisticated 'children of nature,' have been much corrupted by the influx of foreigners, and the national character is in every point of view lowest where they are most exposed to the continual passage of strangers. It is, however, no part of our present design to enter on a more minute account of this singular and interesting people; information regarding many of their peculiarities which throw light on Scripture will be found under other heads. Let every one who wishes to study Arab life in the desert consult the romance of *Antar*, translated by Hamilton, and Burckhardt's *Notes on the Bedouins*; and with respect to the manners and customs of the more settled inhabitants, many curious details will be found in Lane's *Modern Egyptians*, and in the notes to his new Translation of the *Thousand and One Nights*; for since the downfall of the Arab empire of Bagdad, Cairo has been the chief of Arabian cities, and there Arab manners exist in their most refined form. The population of the entire peninsula of Arabia has been estimated at from eleven to twelve millions, but the data are precarious.

The principal source of the wealth of ancient Arabia was its *commerce*. So early as the days of Jacob (Gen. xxxvii. 28) we read of a mixed caravan of Arab merchants (Ishmaelites and Midianites) who were engaged in the conveyance of various foreign articles to Egypt, and made no scruple to add Joseph, 'a slave,' to their other purchases. The Arabs were, doubtless, the first navigators of their own seas, and the great carriers of the produce of India, Abyssinia, and other remote countries to Western Asia and Egypt. Various Indian productions thus obtained were common among the Hebrews at an early period of their history (Exod. xxx. 23, 25). The traffic of the Red Sea was to Solomon a source of great profit; and the extensive commerce of *Sabæa* (Sheba, now Yemen) is mentioned by profane writers as well as alluded to in Scripture (1 Kings

x. 10-15). In the description of the foreign trade of Tyre (Ezek. xxvii. 19-24) various Arab tribes are introduced (comp. Is. lx. 6; Jer. vi. 20; 2 Chron. ix. 14). The Nabathæo-Idumæans became a great trading people, their capital being Petra. The transit-trade from India continued to enrich Arabia until the discovery of the passage to India by the Cape of Good Hope; but the invention of steam-navigation has now restored the ancient route for travellers by the Red Sea.

The settlers in Arabia are by native writers divided into two classes: the old tribes (who belonged to the fabulous period of history, and are long since extinct); and the present inhabitants. The latter are classed either among the 'pure or genuine,' or the *Mostarabi*, the mixed or naturalized Arabs. A 'pure' Arab boasts of being descended from Kachtan (the Joktan of Scripture, Gen. x. 29), and calls himself *al Arab al Araba*, 'an Arab of the Arabs,' a phrase of similar emphasis with St. Paul's 'Hebrew of the Hebrews' (Phil. iii. 5). The mixed Arabs are supposed to be descended from Ishmael by a daughter of Modad, king of Hedjaz, the district where the Ishmaelites chiefly settled. The Kachtanites, on the other hand, occupied the southern part of the peninsula, for Kachtan's great-grandson Saba give name to a kingdom, one of whose queens (called by the Arabians Balkis) visited Solomon (1 Kings x. 1). A son of Saba was Himyar, who gave name to the famous dynasty of the *Himyarites* (improperly written Homerites), that seem to have reigned for many centuries over Sabæa and part of Hhadramaut. In the latter province Lieut. Wellsted recently discovered ruins called Nakab-el-Hajar ('the excavation in the rock'), consisting of a massive wall, thirty to forty feet high, flanked with square towers. Within the entrance on the face of the building he found an inscription in characters eight inches long, which Gesenius supposes to be the ancient Himyaritic writing. Arabia, in ancient times, generally preserved its independence, unaffected by those great events which changed the destiny of the surrounding nations; and in the sixth century of our æra, the decline of the Roman empire and the corruptions and distractions of the Eastern church favoured the impulse given by a wild and warlike fanaticism. Mahomet arose, and succeeded in gathering around his standard the nomadic tribes of central Arabia; and in less than fifty years that standard waved triumphant 'from the straits of Gibraltar to the hitherto unconquered regions beyond the Oxus.' The khalifs transferred the seat of government successively to Damascus, Kufa, and Bagdad; but amid the distractions of their foreign wars, the chiefs of the interior of Arabia gradually shook off their feeble allegiance, and resumed their ancient habits of independence, which, notwithstanding the revolutions that have since occurred, they for the most part retain. At present, indeed, the authority of Mehemet Ali, the Pasha of Egypt, is acknowledged over a great portion of northern Arabia, while in the south the Imam of Maskat exercises dominion over a much greater extent of country than did any of his predecessors.—N. M.

ARABIC LANGUAGE. That important family of languages, of which the Arabic is the most cultivated and most widely-extended branch, has long wanted an appropriate common name. The term *Oriental* languages, which was exclusively applied to it from the time of Jerome down to the end of the last century, and which is even now not entirely abandoned, must always have been an unscientific one, inasmuch as the countries in which these languages prevailed are only the *east* in respect to Europe; and when Sanscrit, Chinese, and other idioms of the remoter East were brought within the reach of our research, it became palpably incorrect. Under a sense of this impropriety, Eichhorn was the first, as he says himself (*Allg. Bibl. Biblioth.* vi. 772), to introduce the name *Semitic* languages, which was soon generally adopted, and which is the most usual one at the present day. Nevertheless, Stange (in his *Theolog. Symmiktta*) justly objected to this name as violating the statements of the very Mosaic account (Gen. x.) on which the propriety of its use professed to be based. For, according to that genealogical table, some nations, which in all probability did not speak a language belonging to this family, are descended from Shem; and others, which did speak such a language, are derived from Ham. Thus 'Elam and Asshur are deduced from Shem (ver. 22); and the descendants of Cush in Arabia and Ethiopia, as well as all the Canaanites, from Ham (ver. 7, seq.). In modern times, however, the very appropriate designation *Syro-Arabian* languages has been proposed by Dr. Prichard, in his *Physical History of Man*. This term, besides being exempt from all the above-mentioned objections on the score either of latitude or inadequacy, has the advantage of forming an exact counterpart to the name by which the only other great family of languages with which we are likely to bring the Syro-Arabian into relations of contrast or accordance, is now universally known—the *Indo-Germanic*. Like it, by taking up only the two extreme members of a whole sisterhood according to their geographical position when in their native seats, it embraces all the intermediate branches under a common band; and, like it, it constitutes a name which is not only at once intelligible, but one which in itself conveys a notion of that affinity between the sister dialects, which it is one of the objects of comparative philology to demonstrate and to apply. [SEMITIC LANGUAGES.

Of this family, then, the Arabic forms, together with the Ethiopic, the southern branch. In it we find the full and adult development of the genius of the Syro-Arabian languages. In the abundance of its roots, in the manifold variety of its formations, in the syntactical delicacies of its construction, it stands pre-eminent as a language among all its

sisters. Every class of composition also : the wild and yet noble lyrics of the son of the desert, who had 'nothing to glory in but his sword, his guest, and his fervid tongue,' the impassioned and often sublime appeals of the Qurân; the sentimental poetry of a Mutanabbi; the artless simplicity of their usual narrative style, and the philosophic disquisition of an Ibn Chaldûn; the subtleties of the grammarian and scholiast; medicine, natural history, and the metaphysical speculations of the Aristotelian school—all have found the Arabic language a fitting exponent of their feeling and thought. And, although confined within the bounds of the Peninsula by circumstances to which we owe the preservation of its pure antique form, yet Islam made it the written and spoken language of the whole of Western Asia, of Eastern and Northern Africa, of Spain, and of some of the islands of the Mediterranean; and the ecclesiastical language of Persia, Turkey, and all other lands which receive the Mohammedan faith; in all which places it has left sensible traces of its former occupancy, and in many of which it is still the living or the learned idiom. Such is the Arabic language; so important its relations to the literary and civil history of a large portion of the human race; the more important also to us as bridging over that wide chasm which intervenes between the extinction of classical literature and the revival of that spirit to which the literature of all modern languages owes its origin. Into these general views of the Arabic language, however, it is not the province of this work to enter: an able article in the *Penny Cyclopædia*, by the late Dr. Rosen, will satisfy those who desire information. Our object here is to shew the mode and the importance of its bearings on Biblical philology. [See also Hävernîck *Gen. Intr.* pp. 106-124.]

The close affinity, and consequently the incalculable philological use, of the Arabic with regard to the Hebrew language and its other sisters, may be considered partly as a question of theory, and partly as one of fact. The former would regard the concurrent records which the Old Testament and their own traditions have preserved of the several links by which the Arabs were connected with different generations of the Hebrew line, and the evidences which Scripture offers of persons speaking Arabic being intelligible to the Hebrews; the latter would observe the demonstrable identity between them in the main features of a language, and the more subtle, but no less convincing traces of resemblance even in the points in which their diversity is most apparent.

The following are the theoretical grounds:—first, the Arabs of Jemen are derived from Qahtân, the Joktan of Gen. x. 25, whom the Arabs make the son of 'Eber (Pococke's *Specimen Hist. Arab.* p. 39, *seq.*) These form the pure Arabs. Then Ishmael intermarried with a descendant of the line of Qahtân, and became the progenitor of the tribes of Hig'âz. These are the *insittious* Arabs. These two roots of the nation correspond with the two great dialects into which the language was once divided; that of Jemen, under the name of the Himjarite, of which all that has come down to us (except what may have been preserved in the Ethiopic) is a few inscriptions; and that of Hig'âz, under that of the dialect of Mudhar, or, descending a few generations in the same line, of Quraish—the dialect of the Qurân and of all their literature.

Then, Abraham sent away his sons by Keturah, and they also became the founders of Arabic tribes. Lastly, the circumstance of Esau's settling in Mount Seir, where the Idumæans descended from his loins, may be considered as a still later medium by which the idioms of Palestine and Arabia preserved their harmony. Secondly, Olaus Celsius (in his *Hist. Ling. et Erudit. Arab.*) cites the fact of the sons of Jacob conversing with the Ishmaelite caravan (Gen. xxxvii. 28), and that of Moses with his father-in-law the Midianite (Exod. iv. 18). To these, however, Schelling (in his *Abhandl. v. d. Gebrauch der Arab. Sprache*, p. 14) objects that they are not conclusive, as the Ishmaelites, being merchants, might have acquired the idiom of the nations they traded with, and as Moses might owe an acquaintance with Arabic to his residence in Egypt. Nevertheless, one of Celsius's inferences derives considerable probability from the only instance of mutual intelligibility which J. D. Michaelis has adduced (in his *Bewurtheilung der Mittel die ausgestorbene Hebr. Sprache zu verstehen*, p. 156), namely, that Gideon and his servant went down by night to the camp of 'Midian, Amalek, and all the Bene Quedem,' to overhear their conversation with each other, and understood what they heard (Judg. vii. 9-14). Lastly, Schultens (*Oratio de Reg. Sabæor.*, in his *Opp. Minora*) labours to shew that the visit of the queen of Sheba to Solomon is a strong proof of the degree of proximity in which the two dialects then stood to each other. These late traces of resemblance, moreover, are rendered more striking by the notice of the early diversity between Hebrew and Aramaic (Gen. xxxi. 47). The instance of the Ethiopian chamberlain in Acts viii. 28, may not be considered an evidence, if Heinrichs, in his note ad loc. in *Nov. Test. edit. Kopp.*, is right in asserting that he was reading the Septuagint version, and that Philip the deacon was a Hellenist.

Thus springing from the same root as the Hebrew, and possessing such traces of affinity to so late a period as the time of Solomon, this dialect was further enabled, by several circumstances in the social state of the nation, to retain its native resemblance of type until the date of the earliest extant written documents. These circumstances were, the almost insular position of the country, which prevented conquest or commerce from debasing the language of its inhabitants; the fact that so large a portion of the nation adhered to a mode of life in which every impression was, as it were, stereotyped, and knew no variation for ages (a cause to which we may also in part ascribe the comparatively unimportant changes which the language has undergone during the 1400 years in which we can follow its history); and the great and just pride which they felt in the purity of their language, which, according to a valuable testimony of Burckhardt, a competent judge of the learned as well as the living idiom, is still a characteristic of the Bedouins (*Notes on the Bedouins*, p. 211). These causes preserved the language from foreign influences at a time when, as the Qurân and a national literature had not yet given it its full stature, such influences would have been most able to destroy its integrity. During this interval, nevertheless, the language received a peculiarly ample development in a certain direction. The limited incidents of a desert life still allowed valour, love, generosity, and satire to occupy the keen

sensibilities of the chivalrous Bedouin. These feelings found their vent in ready verse and eloquent prose; and thus, when Islam first called the Arabs into the more varied activity and more perilous collision with foreign nations, which resulted from the union of their tribes under a common interest to hold the same faith and to propagate it by the sword, the language had already received all the development which it could derive from the pre-eminently creative and refining impulses of poetry and eloquence.

However great may be the amount of resemblance between Arabic and Hebrew which a due estimate of all the theoretical grounds for the affinity, and for the diversity, between them would entitle us to assume, it is certain that a comparison of the actual state of both in their purest form evinces a degree of proximity which exceeds expectation. Not only may two-thirds of the Hebrew roots (to take the assertion of Aurivillius, in his *Dissertationes*, p. 11, ed. J. D. Michaelis) be found in Arabic under the same letters, and either in the same or a very kindred sense, provided we know that the last radical of ל in Hebrew is *Waw* or *Ja* in Arabic; and that those whose first radical is *Jod* in Hebrew is *Waw* in Arabic; and that the letters $\text{ט ז ט ב ז ט$ correspond to $\text{ط ج ذ$, and

that either when the latter have a diacritical point or not; but, if we allow for the changes of ז into ז and ז into ז , and ז into ז and ז into ז , we shall be able to discover nearly nine-

tenths of the Hebrew roots in Arabic. To this great fundamental agreement in the vocabulary (the wonder of which is somewhat diminished by a right estimate of the immense disproportion between the two languages as to the number of roots) are to be added those resemblances which relate to the mode of inflexion and construction. Thus, in the verb, its two wide tenses, the mode by which the persons are denoted at the end in the Perfect, and at the beginning (with the accessory distinctions at the end) in the Imperfect, its capability of expressing the gender in the second and third persons, and the system on which the conjugations are formed; and in the noun, the correspondence in formations, in the use of the two genders, and in all the essential characteristics of construction; the possession of the definite article; the independent and affixed pronouns; and the same system of separable and attached particles—all these form so broad a basis of community and harmony between the two dialects, as could hardly be anticipated, when we consider the many centuries which separate the earliest written extant documents of each.

The diversities between them, which consist almost entirely of fuller developments on the side of the Arabic, may be summed up under the following heads:—A much more extensive system of conjugations in the verb, the dual in both tenses, and four forms of the Imperfect (three of which, however, exist potentially in the ordinary imperfect, the jussive, and the cohortative of the Hebrew: see Ewald's *Hebr. Gramm.* § 290, 293); the full series of infinitives; the use of auxiliary verbs; in the noun, the formations of the plural called *broken* or *internal* plurals, and the flexion by means of termi-

nations analogous to three of our cases; and a perfectly defined system of metre. The most important of these differences consists in that final vowel after the last radical, by which some of the forms of the imperfect and the several cases in the noun are indicated; and it is a matter of some moment to determine whether they are to be ascribed to the genuine natural expansion of the language, or are only an attempt of the grammarians to introduce Greek inflexions into Arabic. The latter opinion has been seriously propounded by Hasse, in a paper in his *Magazin für Biblisch-Orientalische Literatur*, i. 230; and even Gesenius has expressed himself to the same effect (*Gesch. d. Hebr. Spr.* p. 95). Nevertheless, the notion springs from a forgetfulness of the fact that the date of the early poems, the *Hamasa* and the *Mu'allaqât*, is much anterior to the period when any such foreign influence as Hasse alludes to could have had effect; and from an ignorance of the absolute necessity of all those flexional vowels to preserve the *metre* of the poetry. If any productions of Arabic genius are old—if any are national in the highest sense, both as to substance and form, it is those poems. And so essential a part of their form is the metre according to which they were conceived, that it is incontestible that their metrical disposition and their existence are coeval. When Hasse, then, 'candidly admits that these terminations of case were in use as early as the second century of the Hig'ra,' he merely admits his ignorance of the fact that the earliest remains of Arabic literature, those which are older by centuries than the Qurân, are composed in a form which is unintelligible unless read according to the nicest distinctions of this vocalization of the final syllables. This error is, moreover, akin to a not uncommon statement, that Al Chalfî, who lived in the second century of the Hig'ra (Freitag's *Darstellung d. Arab. Verskunst*, p. 18), invented the art of Prosody; which is as true as that Aristotle invented the art of Poetry, merely because he abstracted the laws of composition from the masterpiece of Greek genius.

The Arabic alphabet also presents some remarkable differences. As a representation of sounds, it contains all the Hebrew letters; but in consequence of the greater extent of the nation as a source of dialectal varieties of pronunciation, and also in consequence of the more developed and refined state of the language, the value of some of them is not exactly the same; and the characters that correspond to ט ז ט ב ז ט are used in a double capacity, and represent both halves of those sounds which exist unseparated in the Hebrew. The present order of the letters also is different, although there are evidences in their numerical value, when so used, and in the memorial words given in Ewald's *Grammatica Critica Ling. Arab.* § 67, that the arrangement was once the same in both. In a palæographical point of view, the characters have undergone many changes. The earliest form was that in the Himjarite alphabet. The first specimens of this character (which Arabic writers call *al Musnad*, i. e., *stilted, columnar*) were given by Setzen in the *Fundgruben des Orients*. Since then Professor Rödiger has produced others, and illustrated them in a valuable paper in the *Zeitschrift für die Kunde des Morgenlandes*, i. 332. The letters of this alphabet have a striking resemblance to those of the Ethiopic, which were

derived from them. In Northern Arabia, on the other hand, and not very long before the time of Muhammad, the Syrian character called *Estrangelo* became the model on which the Arabic alphabet called the *Kufic* was formed. This heavy, angular Kufic character was the one in which the early copies of the Qurân were written; and it is also found in the ancient Muhammadan coinage as late as the seventh century of the Hig'ra. From this, at length, was derived the light, neat character called *Nischi*, the one in which the Arabs continue to write at the present day, and which we have endeavoured to represent in our printed books. The introduction of this character is ascribed to Ibn Muqla, who died in the year 327 of the Hig'ra. (See the table given in the article ALPHABET.) Lastly, it is worthy of notice that all the letters of the Arabic alphabet are only consonants; that, in an unpointed text, the *long* vowels are denoted by the use of Alif, Waw, and Ja, as *matres lectionis*; and that the *short* vowels are not denoted at all, but are left to be supplied according to the *sense* in which the reader takes the words; whereas, in a pointed text, *three* points only suffice to represent the whole vocalization; the equivalents to which, according to the way in which they are expressed in this work, are *a, i, u*, pronounced as in Italian.

The manifold uses of the Arabic language in Biblical philology (exclusive of the advantages it affords for comparing the Arabic versions) may in part be gathered from the degree of its affinity to the Hebrew; and, indeed, chiefly to the Hebrew before the exile, after which period the Aramaic is the most fruitful means of illustration (Mahn, *Darstellung der Lexicographie*, p. 391). But there are some peculiarities in the relative position of the two dialects which considerably enhance the value of the aid to be derived from the Arabic. The Hebrew language of the Old Testament has preserved to us but a small fragment of a literature. In the limited number of its roots (some of which even do not occur in the primary sense), in the rarity of some formations, and in the antique rudimentary mode in which some of its constructions are denoted, are contained those difficulties which cannot receive any other illustration than that which the sister dialects, and most especially the Arabic, afford. For this purpose, the resemblances between them are as useful as the diversities. The former enable us to feel certain on points which were liable to doubt: they confirm and establish an intelligent conviction that the larger portion of our knowledge of the meaning of words, and of the force of constructions in Hebrew, is on a sure foundation; because we recognise the same in a kindred form, and in a literature so voluminous as to afford us frequent opportunities of testing our notions by every variety of experience. The diversities, on the other hand (according to a mode of observation very frequent in comparative anatomy), shew us what exists potentially in the rudimentary state, by enabling us to see how a language of the same genius has, in the further progress of its development, felt the necessity of denoting externally those relations of formation and construction which were only dimly perceived in its antique and uncultivated form. Thus, to adduce a single illustration from the Arabic *cases* in the noun:—The precise relation of the words *mouth* and *life*, in the common Hebrew phrases, 'I call

my mouth,' and 'he smote him his life' (Ewald's *Hebr. Gram.* § 482), is easily intelligible to one whom Arabic has familiarized with the perpetual use of the so-called accusative to denote the accessory descriptions of *state*. Another important advantage to be derived from the study of Arabic is the opportunity of seeing the grammar of a Syro-Arabian language explained by native scholars. Hebrew grammar has suffered much injury from the mistaken notions of men, who, understanding the *sense* of the written documents by the aid of the versions, have been exempted from obtaining any independent and inward feeling of the genius of the language, and have therefore not hesitated to accommodate it to the grammar of our Indo-Germanic idioms. In Arabic, however, we have a language, every branch of the philosophical study of which has been successfully cultivated by the Arabs themselves. Their own lexicographers, grammarians, and scholiasts (to whom the Jews also are indebted for teaching them the grammatical treatment of Hebrew) have placed the language before us with such elaborate explanation of its entire character, that Arabic is not only by far the most accessible of the Syro-Arabian dialects, but may challenge comparison, as to the possession of these advantages, with the Greek itself.—J. N.

ARABIC VERSIONS. As Christianity never attained any extensive or permanent influence among the Arabs as a nation, no entire nor publicly sanctioned Arabic version of the Bible has been discovered. But, as political events at length made the Arabic language the common vehicle of instruction in the East, and that to Jews, Samaritans, and Christians, independent versions of single books were often undertaken, according to the zeal of private persons, or the interests of small communities. The following is a classified list of only the most important among them:—

I. Arabic versions formed immediately on the original texts.

A. Rabbi Saadjah Haggaðn, a native of Faijûm, and rector of the academy at Sora, who died A. D. 942, is the author of a version of some portions of the Old Testament. Erpenius and Pocock, indeed, affirm that he translated the whole (Walton's *Prolegomena*, ed. Wrangham, ii. 546); but subsequent inquirers have not hitherto been able, with any certainty, to assign to him more than a version of the Pentateuch, of Isaiah, of Job, and of a portion of Hosea.

That of the Pentateuch first appeared, in Hebrew characters, in the folio Tetraglott Pentateuch of Constantinople, in the year 1546. The exact title of this exceedingly rare book is not given by Wolf, by Masch, nor by De Rossi (it is said to be found

in Adler's *Biblich-kritische Reise*, p. 221); but, according to the title of it which O. G. Tytchen cites from Rabbi Shabtai (in Eichhorn's *Repertorium*, x. 96), Saadjah's name is expressly mentioned there as the author of that Arabic version. Nearly a century later an Arabic version of the Pentateuch was printed in the Polyglott of Paris, from a MS. belonging to F. Savary de Breves; and the text thus obtained was then reprinted in the London Polyglott, with a collection of the various readings of the Constantinopolitan text, and of another MS. in the appendix. For it was admitted that Saadjah was the author of the Constantinopolitan version; and the identity of that text with that of the Paris Polyglott was maintained by Pocock (who nevertheless acknowledged frequent interpolations in the latter), and had been confirmed even by the collation which J. H. Hottinger had instituted to establish their diversity. The identity of all these texts was thus considered a settled point, and long remained so, until J. D. Michaelis published (in his *Orient. Bibl.*, ix. 155, *sq.*) a copy of a Latin note which Jos. Ascari had prefixed to the very MS. of De Breves, from which the Paris Polyglott had derived its Arabic version. That note ascribed the version to 'Saidus Fajumensis, Monachus Coptites; and thus Saadjah's claim to be considered the author of the version in the Polyglotts was again liable to question. At length, however, Schnurrer (in his *Dissertat. de Pentat. Arab. Polygl.* in his *Dissert. Philologico-critica*) printed the *Arabic* preface of that MS., proved that there was no foundation for the 'Monachus Coptites,' and endeavoured to shew that Sa'id was the Arabic equivalent to the Hebrew Sa'adjah, and to re-establish the ancient opinion of the identity of the two texts. The results which he obtained appear (with the exception of a feeble attempt of O. G. Tytchen to ascribe the version to *Abu Sa'id*, in the *Repertorium*) to have convinced most modern critics; and indeed they have received much confirmation by the appearance of the version of Isaiah. This version of the Pentateuch, which is an honourable monument of the Rabbinical Biblical philology of the tenth century, possesses, in the independence of its tone, and in some peculiarities of interpretation, the marks of having been formed on the original text. It leans, of course, to Jewish exegetical authorities generally; but often follows the Sept., and as often appears to express views peculiar to its author. Carpov has given numerous examples of its mode of interpretation in his *Crit. Sacr.* p. 646, *sq.* It is also marked by a certain loose and paraphrastic style of rendering, which makes it more useful in an exegetical than in a critical point of view. It is difficult, however, to determine how much of this diffuseness is due to Saadjah himself. For, not only is the printed text of his version more faulty, in this respect, than a Florentine MS., some of the readings of which Adler has given in Eichhorn's *Einleit. ins A. T.* ii. 245; but it has suffered a systematic interpolation. A comparison of the Constantinopolitan text with that of the Polyglotts shews that where the former retains those terms of the Hebrew in which action or passion is ascribed to God—the so-called ἀνθρωποπάθειαι—the latter has the 'Angel of God,' or some other mode of evading direct expressions. These interpolations are ascribed by Eichhorn to a Samaritan source; for Morinus and Hottinger assert that the custom of omitting or evading the anthropomorphisms of

the Hebrew text is a characteristic of the Samaritan versions.

A version of Isaiah, which in the original MS. is ascribed to Saadjah, with several extrinsic evidences of truth, and without the opposition of a single critic, appeared under the title, *R. Saadie Phajumensis Versio Jesaia Arabica e MS. Bodley. edidit atque Glossar. instruxit*, H. E. G. Paulus, fasc. ii., Gena, 1791, 8vo. The text was copied from a MS. written in Hebrew characters, and the difficulty of always discovering the equivalent Arabic letters into which it was to be transposed, has been one source of the inaccuracies observable in the work. Gesenius (in his *Jesaias*, i. 88, *sq.*) has given a summary view of the characteristics of this version, and has shewn the great general agreement between them and those of the version of the Pentateuch, in a manner altogether confirmatory of the belief in the identity of the authors of both.

His version of Job exists in MS. at Oxford, where Gesenius took a copy of it (*Jesaias*, p. x.) That of Hosea is only known from the citation of ch. vi. 9, by Kimchi. See Pocock's *Theolog. Works*, ii. 280.

B. The version of Joshua which is printed in the Paris and London Polyglotts, the author and date of which are unknown.

C. The version of the whole passage from 1 Kings xii. to 2 Kings xii. 16, inclusive, which is also found in the same Polyglott. Professor Rödigger has collected the critical evidences which prove that this whole interval is translated from the Hebrew; and ascribes the version to an unknown Damascene Jew of the eleventh century. Likewise, the passage in Nehemiah, from i. to ix. 27, inclusive, as it exists in both Polyglotts, which he asserts to be the translation of a Jew (resembling that of Joshua in style), but with subsequent interpolations by a Syrian Christian. (See his work *De Origine Arabicae Libror. V. T. Historic. Interpretationis*, Halle, 4to.)

D. The very close and almost slavish version of the Pentateuch, by some Mauritanian Jew of the thirteenth century, which Erpenius published at Leyden in 1622—the so-called *Arabs Erpenii*.

E. The Samaritan Arabic version of Abu Sa'id. According to the author's preface affixed to the Paris MS. of this version (No. 4), the original of which is given in Eichhorn's *Bibl. Biblioth.* iii. 6, Abu Sa'id was induced to undertake it, partly by seeing the corrupt state to which ignorant copyists had reduced the version then used by the Samaritans, and partly by discovering that the version which they used, under the belief that it was that of Abu'l Hasan of Tyre was in reality none other than that of Saadjah Haggadon. His national prejudice being thus excited against an accursed Jew, and the 'manifest impiety' of some of his interpretations, he applied himself to this translation, and accompanied it with notes in order to justify his renderings, to explain difficulties, and to dispute with the Jews. His version is characterized by extreme fidelity to the Samaritan text (*i. e.*, in other words, to the Hebrew text with the differences which distinguish the Samaritan recension of it), retaining even the order of the words, and often sacrificing the proprieties of the Arabic idiom to the preservation of the very terms of the original. It is certainly not formed on the Samaritan version, although it sometimes agrees with it; and it has such a resemblance to the version of Saadjah as

implies familiarity with it, or a designed use of its assistance; and it exceeds both these in the constant avoidance of all anthropomorphic expressions. Its date is unknown, but it must have been executed between the tenth and thirteenth centuries, because it was necessarily posterior to Saadjah's version, and because the Barberini copy of it was written A.D. 1227. It is to be regretted that this version, although it would be chiefly available in determining the readings of the Samaritan Pentateuch, is still unpublished. It exists in MS. at Oxford (one of the copies there being the one cited by Castell in the Appendix to the London Polyglott), at Paris, Leyden, and at Rome, in the celebrated Barberini Triglott (the best description of which is in De Rossi's *Specimen Var. Lect. et Chald. Estheris Additamenta*, Tübingen, 1783). Portions only have been printed: the earliest by J. H. Hottinger, in his *Promtuarium*, p. 98; and the two longest by De Sacy, with an interesting dissertation, in Eichhorn's *Bibl. Biblioth.* x., and by Van Vloten, in his *Specim. Philolog. continens descrip. cod. MS. Biblioth. Lugd.-Bat. Partemque Vers. Sam. Arab. Pentat.*, Leidæ, 1803.

F. A version of the Gospels, which was first printed at Rome in 1590, then in the Arabic New Testament of Erpenius in 1616, and afterwards in the Paris Polyglott (the text of which last is the one copied in that of London). The first two of these editions are derived from MSS., and the variations which distinguish the text of Paris from that of Rome are also supposed to have been obtained from a MS. The agreement and the diversity of all these texts are equally remarkable. The agreement is so great as to prove that they all represent only one and the same version, and that one based immediately on the Greek. The diversities (exclusive of errors of copyists) consist in the irregular changes which have been made in every one of these MSS., separately, to adapt it indiscriminately to the Peshito or Coptic versions. This surprising amalgamation is thus accounted for by Hug: When the prevalence of the Arabic language had rendered the Syriac and Coptic obsolete, the Syrians and Copts were obliged to use an Arabic version. They therefore took some translation in that language, but first adapted it to the Peshito and Memphitic versions respectively. As the Peshito and Coptic versions still continued to be read first in their churches, and the Arabic translation immediately afterwards, as a kind of Targum, it became usual to write their national versions and this amended Arabic version in parallel columns. This mere juxtaposition led to a further adulteration in each case. Afterwards, two of these MSS. which had thus suffered different adaptations, were brought together by some means, and mutually corrupted each other—by which a third text, the hybrid one of our Arabic version, was produced. The age of the original Arabic text is uncertain; but the circumstance of its adoption by the Syrians and Copts places it near the seventh century (Bertholdt's *Einleit.* i. 692, sq.).

G. The version of the Acts, of the Epistles of Paul, of the Catholic Epistles, and of the Apocalypse, which is found in both the Polyglotts. The author is unknown, but he is supposed to have been a native of Cyrene, and the date to be the eighth or ninth century (Bertholdt, *ibid.*)

II. Arabic versions founded on the LXX.

A. The Polyglott version of the Prophets, which

is expressly said in the inscription in the Paris MS. to have been made from the Greek by an Alexandrian priest. Its date is probably later than the tenth century.

B. That of the Psalms (according to the Syrian recension) which is printed in Justiniani's *Psalt. Octaplum*. Genoa, 1516, and in *Liber Psalmod. a Gabr. Sionita et Vict. Scialac.* Rome, 1614.

C. That version of the Psalms which is in use by the Malkites, or Orthodox Oriental Christians, made by 'Abdallah ben al Fadhil, before the twelfth century. It has been printed at Aleppo in 1706, in London in 1725, and elsewhere.

D. The version of the Psalms (according to the Egyptian recension) which is found in both the Polyglotts.

III. Arabic versions formed on the Peshito.

A. The Polyglott version of Job, of Chronicles, and (according to Rödiger, who ascribes them to Christian translators in the thirteenth and fourteenth centuries) that of Judges, Ruth, Samuel, 1 Kings i. to xi. and 2 Kings xii. 17, to xxv.

B. The version of the Psalms printed at Qashaia, near Mount Lebanon, in 1610. (The *Einleitungen* of Eichhorn, Bertholdt, and De Wette contain ample researches, or references, for the further investigation of this extensive subject.)—J. N.

ARAD, an ancient city on the southernmost borders of Palestine, whose inhabitants drove back the Israelites as they attempted to penetrate from Kadesh into Canaan (Num. xxi. 1, where the Auth. Vers. has 'King Arad,' instead of 'King of Arad') but were eventually subdued by Joshua along with the other southern Canaanites (Josh. xii. 14, comp. x. 41; also Judg. i. 16). Eusebius and Jerome place Arad twenty Roman miles from Hebron, which would be equal to about eight hours with camels. This accords well with the situation of a hill called Tell 'Arad, which Dr. Robinson observed on the road from Petra to Hebron. He describes it as 'a barren-looking eminence rising above the country around.' He did not examine the spot, but the Arabs said there were no ruins upon or near it, but only a cavern. The name alone is, however, too decisive to admit a doubt that the hill marks the site of the ancient Arad.—J. K.

ARADUS. [ARVAD.]

ARAM (אֲרָם), probably from אֲרָם, *high, q. d.* 'the Highlands' was the name given by the Hebrews to the tract of country lying between Phœnicia on the west, Palestine on the south, Arabia Deserta and the river Tigris on the east, and the mountain-range of Taurus on the north. Many parts of this extensive territory have a much lower level than Palestine, but it might receive the designation of 'highlands,' because it does rise to a greater elevation than that country at most points of immediate contact, and especially on the side of Lebanon. Aram, or Aramæa, seems to have corresponded generally to the *Syria* and *Mesopotamia* of the Greeks and Romans (see those articles). We find the following divisions expressly noticed in Scripture:—I. ARAM-DAMMESEK, אֲרָם דַּמֶּשֶׂק, the 'Syria of Damascus' conquered by David, 2 Sam. viii. 5, 6, where it denotes only the territory around Damascus; but elsewhere 'Aram,' in connection with its capital 'Damascus,' appears to be used in a wider sense for Syria Proper (Isa. vii. 1, 8; xvii. 3; Amos. i. 5). At a later period

Damascus gave name to a district, the *Syria Damascena* of Pliny (v. 13). To this part of Aram the 'land of Hadrach' seems to have belonged (Zech. ix. 1). 2. ARAM-MAACHAH, אַרַם מַעֲכָה (1 Chron. xix. 6), or simply *Maachah* (2 Sam. x. 6, 8), which, if formed from מַעַךְ, to 'press together,' would describe a country enclosed and hemmed in by mountains, in contradistinction to the next division, 'Aram-beth-Rechob,' *i. e.*, Syria the wide or broad, בֵּית רַחֲבִים being used in Syriac for a 'district of country.' Aram-Maachah was not far from the northern border of the Israelites on the east of the Jordan (comp. Deut. iii. 14, with Josh. xiii. 11, 13). In 2 Sam. x. 6, the text has 'king Maachah,' but it is to be corrected from the parallel passage in 1 Chron. xix. 7, 'king of Maachah.' 3. ARAM-BETH-RECHOB, אַרַם בֵּית רַחֲבִים, the meaning of which may be that given above, but the precise locality cannot with certainty be determined. Some connect it with the Beth-rehob of Judg. xviii. 28, which Rosenmüller identifies with the Rehob of Num. xiii. 21, situated 'as men come to Hamath,' and supposes the district to be that now known as the *Arh-el-Hhule* at the foot of Anti-Libanus, near the sources of the Jordan. A place called Rehob is also mentioned in Josh. xix. 28, 30; xxi. 31; Judg. i. 31; but it is doubtful if it be the same. Michaelis thinks of the Rechoboth-ha-Nahar (lit. *streets, i. e.*, the village or town on the river Euphrates) of Gen. xxxvi. 37; but still more improbable is the idea of Bellermann and Jahn that Aram-beth-Rechob was beyond the Tigris in Assyria. 4. ARAM-ZOBAB, אַרַם צוֹבָה, or, in the Syriac form, צוֹבָה זוּבָה (2 Sam. x. 6). Jewish tradition has placed Zobah at Aleppo (see the *Itinerary* of Benjamin of Tudela), whereas Syrian tradition identifies it with Nisibis, a city in the north-east of Mesopotamia. Though the latter opinion long obtained currency under the authority of Michaelis (in his *Dissert. de Syria Sobab*, to be found in the *Comment. Soc. Gotting.* 1769), yet the former seems a much nearer approximation to the truth. We may gather from 2 Sam. viii. 3, x. 16, that the eastern boundary of Aram-Zobah was the Euphrates, but Nisibis was far beyond that river; besides that in the title of the sixtieth Psalm (supposing it genuine) Aram-Zobah is clearly distinguished from Aram-Naharaim, or Mesopotamia. It is true, indeed, that in 2 Sam. x. 16, it is said that Hadarezer, king of Zobah, brought against David 'Aramites from beyond the river;' but these were auxiliaries, and not his own subjects. The people of Zobah are uniformly spoken of as near neighbours of the Israelites, the Damascenes, and other Syrians; and in one place (2 Chron. viii. 3) Hamath is called Hamath-Zobah, as pertaining to that district. We therefore conclude that Aram-Zobah extended from the Euphrates westward, perhaps as far north as to Aleppo. It was long the most powerful of the petty kingdoms of Aramæa, its princes commonly bearing the name of Hadadezer or Hadarezer. 5. ARAM-NAHARAIM אַרַם נַהֲרַיִם, *i. e.*, *Aram of the Two Rivers*, called in Syriac 'Beth-Nahrin,' *i. e.*, 'the land of the rivers,' following the analogy by which the Greeks formed the name *Mesopotamia*, 'the country between the rivers.' For that Mesopotamia is here designated is admitted universally, with the exception only of Mr. Tilston Beke, who, in his *Origines Biblicæ*, among many other paradoxical notions, maintains that 'Aram-Naharaim'

is the territory of Damascus. The rivers which enclose Mesopotamia are the Euphrates on the west and the Tigris on the east; but it is doubtful whether the Aram-Naharaim of Scripture embraces the whole of that tract or only the northern portion of it (comp. Gen. xxiv. 10; Deut. xxiii. 4; Judg. iii. 8). A part of this region of Aram is also called *Padan-Aram*, פְּדַן אַרַם, the plain of Aram (Gen. xxv. 20; xxviii. 2, 6, 7; xxxi. 18; xxxiii. 18), and once simply *Padan* (Gen. xlvi. 7), also *Sadeh-Aram*, אֲרָם שְׂדֵה אַרַם, the field of Aram (Hos. xii. 12), whence the 'Campi Mesopotamiae' of Quintus Curtius (iii. 2, 3; iii. 8, 1; iv. 9, 6). But that the whole of Aram-Naharaim did not belong to the flat country of Mesopotamia appears from the circumstance that Balaam, who (Deut. xxiii. 4) is called a native of Aram-Naharaim, says (Num. xxiii. 7) that he was brought 'from Aram, out of the mountains of the east.' The Septuagint, in some of these places, has *Μεσοποταμία Syrius*, and in others *Συρία Πισυαίων*, which the Latins rendered by Syria Interamna.

But though the districts now enumerated be the only ones expressly named in the Bible as belonging to Aram, there is no doubt that many more territories were included in that extensive region, *e. g.*, Geshur, Hul, Arpad, Riblah, Tadmor, Hauran, Abilene, etc., though some of them may have formed part of the divisions already specified. A native of Aram was called אַרַמִּי *Arami*, an Aramæan, used of a Syrian (2 Kings v. 20), and of a Mesopotamian (Gen. xxv. 20). The feminine was *Aramiah*, an Aramitess (1 Chron. vii. 14), and the plural *Aramim* (2 Kings viii. 29). It appears from the ethnographic table in the tenth chapter of Genesis (vers. 22, 23) that Aram was a son of Shem, and that his own sons were Uz, Hul, Gether, and Mash. If these gave names to districts, Uz was in the north of Arabia Deserta, unless his name was derived rather from Huz, son of Nahor, Abraham's brother (Gen. xxii. 21). Hul was probably Cœle-Syria; Mash, the Mons Masius north of Nisibis in Mesopotamian Gether is unknown. Another Aram is mentioned (Gen. xxii. 21) as the grandson of Nahor and son of Kemuel, but he is not to be thought of here. The descent of the Aramæans from a son of Shem is confirmed by their language, which was one of the branches of the Semitic family, and nearly allied to the Hebrew. Many writers, who have copied without acknowledgment the words of Calmet, maintain that the Aramæans came from Kir, appealing to Amos ix. 7; but while that passage is not free from obscurity, it seems evidently to point, not to the aboriginal abode of the people, but to the country whence God would recover them when banished. The prophet had said (Amos i. 5) that the people of Aram should go into captivity to Kir (probably the country on the river Kur or Cyrus), a prediction of which we read the accomplishment in 2 Kings xvi. 9; and the allusion here is to their future restoration. Hartmann thinks Armenia obtained its name from Aram. Traces of the name of the Aramæans are to be found in the *Ἀρμιοί* and *Ἀραμαιοί* of the Greeks (Strabo, xiii. 4, 6; xvi. 4, 27; comp. Homer's *Iliad*, ii. 783). They were so noted for idolatry that, in the language of the later Jews, אַרַמְיִוּתָא was used as synonymous with heathenism (see the *Mishna* of Surenhusius, ii. 401; Onkelos on Levit. xxv. 47). Castell, in his *Lexic. Heptaglott.* col. 229, says the same form of

speech prevails in Syriac and Ethiopic. The Hebrew letters *resh* ר and *daleth* ד are so alike that they were often mistaken by transcribers; and hence in the Old Testament אֲרָם *Aram* is sometimes found instead of אֶדֹם *Edom*, and *vice versa*. Thus in 2 Kings xvi. 6, according to the text, the Arameans are spoken of as possessing Elath on the Red Sea; but the Masoretic marginal reading has 'the Edomites,' which is also found in many manuscripts, in the Septuagint and Vulgate, and it is obviously the correct reading.—N. M.

ARAMA, ISAAC, also called BAAL-AKEDAH, a celebrated Jewish philosopher and commentator, was born in Zamora about 1460, and was one of the 300,000 Jews who were expelled from Spain in 1492: he took shelter in Naples, where he died in 1494. The work which immortalized his name is called *Akedath Isaac* (עֲקֵדַת יִצְחָק), a philosophical commentary on the Pentateuch and the five Megilloth, viz., the Song of Songs, Ruth, Lamentations, Coheleth (Ecclesiastes), and Esther, consisting of 150 sections, and containing some of the severest strictures on the views of Aristotle, as well as some of the most beautiful moral sayings. Referring to the well-known motto of the Jewish sages, כָּל

הַבָּא יִשְׂרָאֵל יֵשׁ לָהֶם חֵלֶק לְעָלֵם הַבָּא, which is quoted and applied by St. Paul in a higher sense, 'all Israel shall be saved' (Rom. xi. 26), Arama remarks, it would be injustice to our fellow-creatures to understand this as if the Israelites alone are to be the heirs of everlasting life, simply because they are Israelites. Israel means the righteous, and every pious man is an Israelite; hence 'a son of Israel' became synonymous with a son of eternal life (*Shaar*, 60). It is from this work that Arama received the name *Baal-Akedah*. Arama also wrote a separate commentary upon the Book of Esther, which was published in Constantinople in 1518, and an exposition of the book of Proverbs, called אֲבִשְׁלוֹם יָד, *the hand of Absalom*.—C. D. G.

ARAMA, MEIR, also called, by way of distinction, הַרְבֵּי מְאִירִי, *the Rabbi Meiri*, son of the celebrated Isaac Arama, was born in Saragossa, accompanied his father to Naples in 1492, after the general expulsion of the Jews from Spain, and after the death of his father (1494) emigrated to Salonica, where he died in 1556. He wrote valuable annotations on *Isaiah*, *Jeremiah*, *Job*, *the Psalms*, *the Song of Songs*, and *the Book of Esther*, which are distinguished for their brevity and for logically evolving the sense of the inspired writers. His style is very laconic, and being a thorough master of the Hebrew language, he generally gives the true sense of the Scriptures in a very few words without taking the student through the process of verbal criticism as Ibn Ezra does. His commentary on *Isaiah* and *Jeremiah*, called אֲרָרִים וְתִמְיִם, *light and perfection*, and his exposition of *The Song of Songs* are printed in Frankfurter's great Rabbinical Bible, 4 vols. fol. Amsterdam 1724-1727; the commentary on *Job*, called מְאִירִי אֵיזֵב, which he wrote in 1506, was published in Venice 1517-1567; the commentary on *the Psalms*, מְאִירִי תְהִלָּתוֹ, composed in 1512, was published in Venice 1590.—C. D. G.

ARAMAIC LANGUAGE (אַרְמִית, 2 Kings xviii. 26; Dan. ii. 4). The Aramaic language—that whole, of which the Chaldee and Syriac dialects form parts—constitutes the northern and least developed branch of the Syro-Arabian family. Its cradle was probably on the banks of the Cyrus, according to the best interpretation of Amos ix. 7; but Mesopotamia, Babylonia, and Syria form what may be considered its home and proper domain. Political events, however, subsequently caused it to supplant Hebrew in Palestine; and then it became the prevailing form of speech from the Tigris to the shore of the Mediterranean, and, in a contrary direction, from Armenia down to the confines of Arabia. After obtaining such a wide dominion, it was forced, from the ninth century onwards, to give way before the encroaching ascendancy of Arabic; and it now only survives, as a living tongue, among the Syrian Christians in the neighbourhood of Mosul.

According to historical records which trace the migrations of the Syro-Arabians from the East to the South-west, and also according to the comparatively ruder form of the Aramaic language itself, we might suppose that it represents, even in the state in which we have it, some image of that aboriginal type which the Hebrews and Arabians, under more favourable social and climatical influences, subsequently developed into fulness of sound and structure. But it is difficult for us now to discern the particular vestiges of this archaic form; for, not only did the Aramaic not work out its own development of the original elements common to the whole Syro-Arabian sisterhood of languages, but it was pre-eminently exposed, both by neighbourhood and by conquest, to harsh collision with languages of an utterly different family. Moreover, it is the only one of the three great Syro-Arabian branches which has no fruits of a purely national literature to boast of. We possess no monument whatever of its own genius; not any work which may be considered the product of the political and religious culture of the nation, and characteristic of it—as is so emphatically the case both with the Hebrews and the Arabs. The first time we see the language, it is used by Jews as the vehicle of Jewish thought; and although when we next meet it, it is employed by native authors, yet they write under the literary impulses of Christianity, and under the Greek influence on thought and language which necessarily accompanied that religion. These two modifications, which constitute and define the so-called Chaldee and Syriac dialects, are the only forms in which the normal and standard Aramaic has been preserved to us.

It is evident, from these circumstances, that, up to a certain period, the Aramaic language has no other history than that of its relations to Hebrew. The earliest notice we have of its separate existence is in Gen. xxxi. 47, where Laban, in giving his own name to the memorial heap, employs words which are genuine Aramaic both in form and use. The next instance is in 2 Kings xviii. 26, where it appears that the educated Jews understood Aramaic, but that the common people did not. A striking illustration of its prevalence is found in the circumstance that it is employed, as the language of official communication, in the edict addressed by the Persian court to its subjects in Palestine (Ezra iv.

17)* The later relations of Aramaic to Hebrew consist entirely of gradual encroachments on the part of the former. The Hebrew language was indeed always exposed, particularly in the north of Palestine, to Aramaic influences; whence the Aramaisms of the book of Judges and of some others are derived. It also had always a closer conjunction, both by origin and by intercourse, with Aramaic than with Arabic. But in later times great political events secured to Aramaic the complete ascendancy; for, on the one hand, after the deportation of the ten tribes, the re-peopling their country with colonists chiefly of Syrian origin generated a mixed Aramaic and Hebrew dialect (the Samaritan) in central Palestine; and on the other, the exile of the remaining two tribes exposed them to a considerable, although generally overrated, Aramaic influence in Babylon, and their restoration, by placing them in contact with the Samaritans, tended still further to dispossess them of their vernacular Hebrew. The subsequent dominion of the Seleucidae, under which the Jews formed a portion of a Syrian kingdom, appears to have completed the series of events by which the Aramaic supplanted the Hebrew language entirely.

The chief characteristics in form and flexion which distinguish the Aramaic from the Hebrew language are the following:—As to the consonants, the great diversity between the forms of the same root as it exists in both languages, arises principally from the Aramaic having a tendency to avoid the sibilants. Thus, where ש , ז , and צ are found in Hebrew, Aramaic often uses ד , ת , and ב ; and even פ for צ . Letters of the same organ are also frequently interchanged, and generally so that the Aramaic, consistently with its characteristic roughness, prefers the harder sounds. The number of vowel-sounds generally is much smaller: the verb is reduced to a monosyllable, as are also the segolate forms of nouns. This deprives the language of some distinct forms which are marked in Hebrew; but the number and variety of nominal formations is also in other respects much more limited. The verb possesses no vestige of the conjugation *Niphal*, but forms all its passives by the prefix א . The third person plural of the perfect has two forms, to mark the difference of gender. The use of the imperfect with *vav consequitivum* is unknown. There is an imperative mood in all the *passives*. Each of the active conjugations, *Paal* and *Aphel*, possesses two participles, one of which has a passive signification. The participle is used with the personal pronoun to form a kind of present tense. The classes of verbs ל and ל , and other weak forms, are almost indistinguishable. In the noun, again, a word is rendered *definite* by appending the vowel א to the *end* (the so-called *status emphaticus*); but thereby the distinction between simple feminine and definite masculines is lost in the singular. The plural masculine ends in *im*. The relation of

genitive is most frequently expressed by the prefix ל , and that of the *object* by the preposition ל .

All these peculiarities are common to the dialects of Aramaic, and may therefore be considered to constitute the fundamental character of the language.—J. N.

[Amira, *Gram. Syriaca sive Chaldaica*, Rom. 1596; Buxtorf, *Gram. Chald. et Syr. Libri iii.*, Basil. 1615, ed. 2. 1650; De Dieu, *Gram. Ling. Orient. Heb. Chald. Syr. inter se collatarum*, Francof. 1683; Erpenius, *Gram. Chal. et Syr.*, Amst. 1628; Hottinger, *Gram. Chald. Syr. et Rabbin.*, Turic. 1652; Walton, *Introd. ad lectionem Lingg. Orient. Heb. Chald. Syr. Samaritan.*, etc., Lond. 1655; Schaaf, *Opus Aramaicum complectens Gram. Chald. Syr.*, etc., Lug. Bat. 1686; Jahn, *Aramaische Sprachlehre*, Wien. 1795, translated into Latin by Oberleitner, *Jahnii Elementa Aramaica Ling.*, Wien. 1820; Fürst, *Lehrgeb. der Aramaische Idiome*, Leipz. 1835; Castell, *Lexicon Heptaglotton Heb. Chald. Syr.*, etc., Lond. 1669.]

In addition to the above general account of the Aramaic language, some more special notice of the different dialects may be given.

I. THE EAST ARAMAIC OF CHALDEE.—This is not to be confounded with 'the language of the Chaldees' (Dan. i. 4), which was probably a Medo-Persic dialect; but is what is denominated Aramaic (אֲרַמַיִת) in Dan. ii. 4. This was properly the language of Babylonia, and was acquired by the Jews during the exile, and carried back with them on their return to their own land.

The existence of this language, as distinct from the Western Aramaic or Syriac, has been denied by many scholars of eminence (Michaelis, *Abhandl. von der Syr. Spr.* § 2; Jahn, *Aramaische Sprachlehre* § 1; Hupfeld, *Theol. Stud. und Krit.* 1830, p. 290 ff.; De Wette, *Einh.* § 32; Fürst, *Lehrgeb. der Aram. Idiome*, p. 5); who think that in what is called the Chaldee we have only the Syriac with an infusion of Hebraisms. The answer to this, however, is that some of the peculiarities of the Chaldee are such as are not Hebraistic, so that it cannot have derived them from this source. Thus, the prefix in the future of the third person fem. pl. in Chaldee is י , whilst in Syriac it is נ , and in Heb. ת ; the pron. *this* in Chaldee is ה and ה , whilst the Syr. has ה and the Heb. ז ; the passives in Chaldee are formed by an internal vowel change different from the Hebrew, whereas in Syriac the passive is formed by the addition of syllables; the Chaldee has the *status emphaticus plur.* in י , whilst the Syr. has a simple י ;—and to these may be added the use of peculiar words, such as לחנה לחיה (Dan. v. 7, 16), כנונה (Ezra iv. 8; v. 9, 11; vi. 13) כענה (Ezra iv. 10, 11, etc.) לחנה (Dan. v. 2, 23); the use of ל for ל in such words as לדון , לדון , etc. There are other differences between the Chaldee and Syriac, such as the absence from the former of otiant consonants and diphthongs, the use of dagesh-forte in the former and not in the latter, the formation of the infin. without the prefixing of ל except in Peal; but as these are common to the Chaldee with the Hebrew, they cannot be used as proofs that the Chaldee was a dialect independent of the Hebrew, and not the Syriac modified by the Hebrew; and the same

* [Havernick contends (*Introd.* p. 87, E. T.) that some tinge of Aramaic pervades the language of Balaam (Num. xxiii. xxiv.); and with this Hirzel (*De Chaldaismi Bibl. orig.*, etc., p. 14) to a certain extent agrees. Assuming that we have a report of Balaam's own words, his language is probably Hebrew, as spoken by an Aramean, who insensibly infused into it some of his own dialectical peculiarities.]

may be said of the difference of pronunciation between the Syriac and Chaldee, such as the prevalence of an *a* sound in the latter where the former has the *o* sound, etc. It may be added, however, to the evidence above adduced, as a general remark, that when we consider the wide range of the Aramaic language from east to west, it is in the highest degree probable that the dialect of the people using it at the one extremity should differ considerably from that of those using it at the other. (See Aurivillius, *Dissert. ad Sac. Literas et Philol. Orient. pertinentes*, p. 107 ff.; Hoffmann, *Gram. Syr., Proleg.*, p. 11; Dietrich *De Serm. Chald. proprietate*, Lips. 1839; Hävernick, *General Introduction*, p. 91 ff.; Bleek, *Einl. in das A. T.*, p. 53; Winer, *Chaldaische Grammatik*, p. 5.) It may be further added that not only are the alphabetical characters of the Chaldee different from those of the Syriac, but there is a much greater prevalence of the *Scriptio plena* in the former than in the latter.

As, however, the Chaldee has come down to us only through the medium of Jewish channels, it is not probable that we have it in the pure form in which it was spoken by the Semitic Babylonians. The rule of the Persians, and subsequently of the Greeks in Babylonia, could not fail also to infuse into the language a foreign element borrowed from both these sources.

The Chaldee, as we have it preserved in the Bible (Ezra iv. 8 and 18; vii. 12-26; Dan. ii. 4-vii. 28; Jer. x. 11) and in the Targums has been, as respects linguistic character, divided into three grades: 1. As it appears in the Targum of Onkelos, where it possesses most of a peculiar and independent character; 2. As it appears in the biblical sections, where it is less free from Hebraisms; and 3. As it appears in the other Targums, in which, with the exception to some extent of that of Jonathan Ben Uzziel on the Prophets, the language is greatly corrupted by foreign infusions (Winer, *De Onkeloso ejusque Paraphr. Chald.*, Lips. 1819; Luzzato, *De Onkelosi Chald. Pent. versione*, Vienn. 1830; Hirt, *De Chaldaismo Biblico*, Jen. 1751). [TARGUM.]

The language which is denominated in the N. T. *Hebrew*, and of which a few specimens are there given, seems, as far as can be judged from the scanty materials preserved, to have been substantially the same as the Chaldee of the Targums (Pfannkuche, *On the Language of the Palestine in the Age of Christ and his Apostles*, translated in the Biblical Cabinet, vol. ii.) In this language some of the Apocryphal books were written (Hieronymi *Praef. in Tobit, Judith, I Macc.*) the work of Josephus on the Jewish war (*De Bello Jud. praef. § 1*), and, as some suppose, the original Gospel by Matthew. It is designated by Jerome the Syro-Chaldaic (*Contr. Pelag. iii. 1*), and by this name it is now commonly known. The Talmudists intend this when they speak of the Syriac or Aramaic (Lightfoot, *Hor. Heb.* on Matt. v. 18; Winer, *Realwörterb.* ii. 587, note).

The Chaldee is written in the square character in which the Hebrew now appears. This seems to have been the proper Chaldee character, and to have superseded the old Hebrew or Samaritan character after the exile. The Palmyrean and the Egypto-Aramaic letters [see table of Alphabets] much more closely resemble the square character than the ancient Hebrew of the coins (Kopp, *Bilder und Schriften*, ii. 164 ff.)

(Cellarius, *Chaldaismus, Sive Gram. Ling. Chald.* Cizae 1684; Opitius, *Chaldaismus Targ. Talm. Rabb. Hebraismo harmonicus*, Kil. 1696; Michaelis, *Gram. Chald.*, Gött. 1771; Winer, *Gram. des Bibl. und Targum. Chaldaismus*, Leipz. 1842, sec. ed.; Rigg, *Manual of the Chaldee Language*, Lond. 1858, sec. ed.)

II. THE WEST ARAMAIC OR SYRIAC.—Of this dialect in its ancient form no specimens remain. As it is known to us, it is the dialect of a Christianized people, and its oldest document is the translation of the N. T., which was probably made in the second century. [SYRIAC VERSIONS.]

As compared with the Arabic, and even with the Hebrew, the Syriac is a poor language; it is also harsher and flatter than the Hebrew. As it is now extant, it abounds in foreign adulterations, having received words successively from the Persian, the Greek, the Latin, the Arabic, and even, in its more recent state, from the Crusaders. Thus, we have not only such words as *ܣܝܠܘܪ* *silver*, *ܥܘܠܘܬܐ* *an idol*, which are pure Persian, and such words as *ܥܘܣܘܐ* *ovosú*, *ܟܘܪܘܘܬܐ* *kavúv*, *ܥܘܪܘܬܐ* *úr*, *ܥܘܪܘܬܐ* *andela*, which are Greek and Latin, but such monstrosities as *ܡܪܩܘܨܐ* *Marquis*, *ܥܘܢܬܐ* *Count*, etc.

The Syriac of the early times is said to have had dialects. This is confirmed by what has come down to us. The Syriac of the sacred books differs from that preserved in the Palmyrene inscriptions, so far as those can be said to convey to us any information on this point, and the later Syriac of the Maronites and of the Nestorians differs considerably from that of an older date. What Adler has called the Hierosolymitan dialect is a rude and harsh dialect, full of foreign words, and more akin to the Chaldee than to the Syriac. The Syriac is written in two different characters, the Estrangelo and the Peshito [table of Alphabets]. Of these the Estrangelo is the more ancient; indeed, it is more ancient apparently than the characters of the Palmyrene and the Egypto-Aramaic inscriptions. Assemani derives the word from the Greek *στρογγύλος*, *round* (*Bibl. Orient.* iii. pt. 2, p. 378); but this does not correspond with the character itself, which is angular rather than round. The most probable derivation is from the Arabic *سطر* *writing*, and *ܐܢܝܝܠ* *gospel*. The Peshito is that commonly in use, and is simply the Estrangelo reduced to a more readable form.

(Dilherr, *Elogæ Sacre quibus præmituntur Rudimenta Gram.* Syr. Hal. Sax. 1646, ed. sec.; Opitius, *Syriasmus facilitati et integritati sua restitutus*, Lips. 1691; Leusden, *Schozæ Syriacæ libri tres*, Ultraj. 1658; Beveridge, *Gram. Syr. tribus libris tradita*, Lond. 1658; Michaelis, C. B., *Syriasmus*, i. e., *Gram. ling. Syr.*, Hal. Magd. 1741; Michaelis, J. D., *Gram. Syr.*, Hal. 1784; Phillips, *Elements of Syr. Grammar*, Lond. 1845, sec. ed.; Hoffmann, *Gram. Syr. Libri iii.*, Hal. 1827; Cooper, *Syr. Gr.*, Lond. 1860; A. Gutbir, *Lexicon Syr. in N. T.* Hamb. 1667, new edition by Henderson, Lond. 1836; Schaaf, *Lex. Syr. in N. T.*, Lugd. Bat. 1708; Castell, *Lex. Syr.* ed. Michaelis, Gött. 1788.)

III. THE SAMARITAN.—This is a mixture of Aramaic and Hebrew. It is marked by frequent permutations of the gutturals. The character used is the most ancient of the Semitic characters, which

the Samaritans retained when the Hebrews adopted the square character. Few remains of this dialect are extant. Besides the translation of the Pentateuch [SAMARITAN VERSIONS], only some liturgical hymns used by Castell, and cited by him as *Liturgia Damascenorum*, and the poems collected and edited by Gesenius (*Carmina Samaritana*) in the first fasciculus of his *Anecdota Orientalia*, remain. (Morinus, *Opuscula Hebræo-Samaritana*, 1657; Cellarius, *Hære Samaritana*, Jenæ 1703; Uhlemann, *Institut. Ling. Samaritana*, Lips. 1837.)

IV. THE SABIAN or NAZOREAN.—This is the language of a sect on the banks of the Euphrates and Tigris who took to themselves (at least in part) the name of Mendaites (Gnostics) or Nazoreans, but were called Sabians by the Arabians. Some of their religious writings are extant in the libraries at Paris and Oxford. Their great book (סדרת רבא), the *Liber Adami*, has been edited with a Latin translation by Matthias Norberg, Prof. at Lund, who died in 1826, under the title *Codex Nasaræus, Liber Adami Appellatus*, 3 parts 4to, Lund, 1815-16; this was followed by a *Lexicon*, 1816, and an *Onomasticon*, 1817, on the book by the same. The language is a jargon between Syriac and Chaldee; it uses great freedom with the gutturals, and indulges in frequent commutations of other letters; and in general is harsh and irregular, with many grammatical improprieties, and a large infusion of Persic words. The MSS. are written in a peculiar character; the letters are formed like those of the Nestorian Syriac; and the vowels are inserted as letters in the text.

V. THE PALMYRENE. On the ruins of the ancient city of Palmyra or Tadmor have been found many inscriptions, of which a great part are bilingual, Greek, and Aramaic. A collection of these was made by Robert Wood, and published by him in a work entitled *The Ruins of Palmyra*, Lond. 1753; they were soon afterwards made the object of learned examination by Barthélemy at Paris and Swinton at Oxford, especially the latter, whose *Explication of the Inscriptions in the Palmyrene Language* will be found in the 48th vol. of the *Philosophical Transactions*, p. 690-756. These inscriptions are of the first, second, and third centuries; they are of little intrinsic importance. The language closely resembles the Syriac, and is written in a character akin to the square character, but a little inclining to a cursive mode of writing.

VI. THE EGYPTO-ARAMAIC.—This is found on some ancient Egyptian monuments, proceeding probably from Jews who had come from Palestine to Babylonia. Among these is the famous Carpentras inscription, so called from its present location in the south of France; this, Gesenius thinks, is the production of a Syrian from the Seleucidian empire residing in Egypt, but this is less probable than that it is the production of a Jew inclining to the Egyptian worship. Some MSS. on papyrus also belong to this head; see Gesenius, *Monumenta Phæn.*, i. 226-245. The language is Aramaic, chiefly resembling the Chaldee, but with a Hebraistic infusion.—W. L. A.

ARAMAIC VERSIONS. [SYRIAC VERSIONS TARGUM.]

AR'AR (עָרָר) and AROER (עָרוֹר). [These words occur Jer. xvii. 6 and xlvi. 6, and in both places the A. V. renders by *heath*. Gesenius doubts whether the name of a plant be intended in

either case; in the former he would translate the word *destitute, forlorn*; in the latter *ruins*. The majority, however, think a plant is intended, though they have differed as to which is to be preferred.] The words have been variously translated *tamarisk*; *tamarin*, which is an Indian tree, the tamarind; and *retem* the broom. The rendering in the French and English version *bruyère, heath*, is perhaps the most incorrect of all, though Hasselquist mentions finding heath near Jericho, in Syria. As far as the context is concerned, some of these plants, as the *broom* and *tamarisk*, would answer very well; but the Arabic name, عَرَعَر *arar*, is applied

to a totally different plant, a species of juniper, as has been clearly shewn by Celsius (*Hierobot.* p. ii. p. 195), who states that Arias Montanus is the only one who has so translated the Hebrew *arar* (Jer. xvii. 6): 'For he shall be like the *heath* (*arar*) in the desert, and shall not see when good cometh, but shall inhabit the parched places in the wilderness, in a salt land, and not inhabited.' The word *arar*, in all the old Arabic authors, signifies a kind of juniper.

Several species of juniper are no doubt found in Syria and Palestine [ERES]. Robinson met with some in proceeding from Hebron to Wady Musa, near the romantic pass of Nemela: 'On the rocks above we found the juniper tree, Arabic *ar'ar*; its berries have the appearance and taste of the common juniper, except that there is more of the aroma of the pine. These trees were ten or fifteen feet in height, and hung upon the rocks even to the summits of the cliffs and needles.' In a note the author says: 'This is doubtless the Hebrew עָרוֹר *aror* (Jer. xlvi. 6); whence both the English version and Luther read incorrectly *heath*. The juniper of the same translations is the *retem*' (*Bibl. Researches*, ii. 506). In proceeding S. E. he states: 'Large trees of the juniper become quite common in the Wadys and on the rocks.' It is mentioned in the same situation by other travellers, and is no doubt common enough, particularly in wild, uncultivated, and often inaccessible situations, and is thus suitable to Jer. xlvi. 6: 'Flee, save your lives, and be like the *heath* (*ar'ar*) in the wilderness.'—J. F. R. [AROD.]

ARARAT (אַרְרָט) occurs nowhere in Scripture as the name of a mountain, but only as the name of a country, upon the 'mountains' of which the ark rested during the subsidence of the flood (Gen. viii. 4). In almost every part of the East, where there is the tradition of a deluge, the inhabitants connect the resting-place of the 'great vessel' with some conspicuous elevation in their own neighbourhood. Thus we are informed by the lamented Sir A. Burnes (*Travels to Bokhara*, vol. i. p. 117), that on the road to Peshawar and Cabul, the Sufied Koh, or 'White Mountain,' rears its crest on one side, and the towering hill of Noorgill, or Kooner, on the other. Here the Afghans believe the ark of Noah to have rested after the Deluge. Another sacred mountain in the East is Adam's Peak, in the island of Ceylon, and it is a curious circumstance, that in Gen. viii. 4, the Samaritan Pentateuch has 'Sarandib,' the Arabic name of Ceylon. In the Sibylline verses it is said that the mountains of Ararat were in Phrygia; but Bochart has ingeniously conjectured that the misconception arose from the city of Apamea there having been called *Kibotos* (the Greek word for *an ark*), because

inclosed in the shape of an ark by three rivers. Shuckford, after Sir Walter Raleigh, would place Ararat far to the east, in part of the range anciently called Caucasus and Imaus, and terminating in the Himmaleh mountains, north of India; and to this opinion Kirby inclines in his *Bridge-water Treatise* (p. 45). Dr. Pyle Smith also, when advocating the local and partial nature of the Deluge, seeks for a less elevated mountain than the Armenian Ararat, and lays hold of this among other hypotheses (*The Relation between Scripture and Geological Science*, p. 302); whereas Kirby embraces it for the very opposite reason, viz., because, holding the universality of the Flood, he thinks that mountain is not high enough to account for the long period that elapsed (Gen. viii. 5) before the other mountains became visible. Now it is evident that these and such-like theories have been framed in forgetfulness of what the Bible has recorded respecting the locality of Ararat. We may be unable to fix with precision where that region lay, but we can without difficulty decide that it was neither in Afghanistan nor Ceylon, neither in Asia Minor nor in Northern India.

The only other passages where 'Ararat' occurs are 2 Kings xix. 37 (Is. xxxvii. 38) and Jer. li. 27. In the former it is spoken of as the country whither the sons of Sennacherib, king of Assyria, fled, after they had murdered their father. The apocryphal book of Tobit (i. 21) says it was *els ra' d'gh 'Apardh*, 'to the mountains of Ararat.' This points to a territory which did not form part of the immediate dominion of Assyria, and yet might not be far off from it. The description is quite applicable to Armenia, and the tradition of that country bears, that Sennacherib's sons were kindly received by king Paroyr, who allotted them portions of land bordering on Assyria, and that in course of time their posterity also established an independent kingdom, called Vaspurakan (Avdall's *Transl. of Chamich's Hist. of Armenia* (vol. i. p. 33, 34). The other Scripture text (Jer. li. 27) mentions Ararat, along with Minni and Ashkenaz, as kingdoms summoned to arm themselves against Babylon. In the parallel place in Is. xliii. 2-4, the invaders of Babylonia are described as 'issuing from the mountains;' and if by *Minni* we understand the *Minyas* in Armenia, mentioned by Nicholas of Damascus (Josephus, *Antiq.* i. 3, 6), and by *Ashkenaz* some country on the *Euxine* Sea, which may have had its original name, *Axenos*, from Ashkenaz, a son of Gomer, the progenitor of the Cimmerians (Gen. x. 2, 3)—then we arrive at the same conclusion. viz., that Ararat was a mountainous region north of Assyria, and in all probability in Armenia. In Ezek. xxxviii. 6, we find Togamah, another part of Armenia, connected with Gomer, and in Ezek. xxvii. 14, with Meshech and Tubal, all tribes of the north. With this agree the traditions of the Jewish and Christian churches, and likewise the accounts of the native Armenian writers, who inform us that Ararat was the name of one of the ancient provinces of their country, supposed to correspond to the modern pashaliks of Kars and Bayazeed, and part of Kurdistan. According to the tradition preserved in Moses of Chorene, the name of Ararat was derived from Arai, the eighth of the native princes, who was killed in a battle with the Babylonians, about B.C. 1750; in memory of which the whole province was called *Aray-iarat*, i.e., the ruin of Arai. [See Morier's *Second Journey*,

p. 312; Porter's *Travels*, i. 178; Smith and Dwight's *Researches in Armenia*, ii. 73, Gesenius adopts the derivation from Sansc. *aryavarta*, *terra sancta*.]

But though it may be concluded with tolerable certainty that the land of Ararat is to be identified with a portion of Armenia, we possess no historical data for fixing on any one mountain in that country as the resting-place of the ark. Indeed it may be fairly questioned whether the phrase in Gen. viii. 4, *ותנח התבה*, 'and the ark rested,' necessarily means that the ark actually *grounded* on the top of a mountain; it may merely imply that after it had been driven and tossed to and fro on the waste of waters, it at length settled, i.e., attained a measure of comparative repose, and became more stationary *over* (על) the mountains of Ararat, when the waters began to subside. That this *may* be the import of the expression will be denied by none who are acquainted with the genius of the Hebrew language, and with the latitude of meaning attachable to the verb *נח*, which (as is observed by Taylor in his *Concordance*) includes whatever comes under the idea of 'remaining quietly in a place without being disturbed.' A vessel enjoys more real rest when becalmed, than when she grounds on the top of a submarine mountain in a troubled sea. What gives plausibility to our conjecture is the fact that whether the 'rest' was obtained on the bosom of the now calmer deep, or by coming into contact with the dry land, it was nearly *three months* after this before 'the tops of the mountains were seen' (Gen. viii. 5); the same mountains being evidently intended as those spoken of in the previous verse, viz. the mountains of Ararat. Now, as the waters were all the while abating (v. 3), it is much easier to reconcile this latter statement with the idea of the ark being still afloat, than with the common belief that it lay on a mountain peak; besides, that by this interpretation we get rid of otherwise inexplicable difficulties. If our supposition be correct, then, for anything that appears to the contrary, the ark did not touch the earth until the waters were abated to a level with the lower valleys or plains, and, consequently, the inmates were not left upon a dreary elevation of 16,000 or 17,000 feet, never till of late deemed accessible to human footsteps, and their safe descent from which, along with all the 'living creatures' committed to their care, would have been a greater miracle than their deliverance from the flood. By this explanation also we obviate the geological objection against the mountain, now called Ararat, having been submerged, which would imply a universal deluge, whereas by the 'mountains of Ararat' may be understood some lower chain in Armenia, whose height would not be incompatible with the notion of a partial flood. Finally, we on this hypothesis solve the question:—If the descendants of Noah settled near the resting-place of the ark in Armenia, how could they be said to approach the plain of Shinar (Gen. xi. 2), or Babylonia, *from the East*? For, as we read the narrative, the precise resting-place of the ark is nowhere mentioned; and though for a time stationary 'over' the mountains of Ararat, it may, before the final subsidence of the waters, have been carried considerably to the east of them.

The ancients, however, attached a peculiar sacredness to the tops of high mountains, and hence the belief was early propagated that the ark must have

rested on some such lofty eminence. The earliest tradition fixed on one of the chain of mountains which separate Armenia on the south from Mesopotamia, and which, as they also inclose Kurdistan, the land of the Kurds, obtained the name of the Kardu, or Carduchian range, corrupted into Gordiæan and Cordyæan. This opinion prevailed among the Chaldæans, if we may rely on the testimony of Berossus as quoted by Josephus (*Antiq.* i. 3, 6): 'It is said there is still some part of the ship in Armenia, at the mountain of the Cordyæans, and that people carry off pieces of the bitumen, which they use as amulets.' The same is reported by Abydenus (in Euseb. *Præp. Evang.* ix. 4), who says they employed the wood of the vessel against diseases. Hence we are prepared to find the tradition adopted by the Chaldee paraphrasts, as well as by the Syriac translators and commentators, and all the Syrian churches. In the three texts where 'Ararat' occurs, the *Targum* of Onkelos has קרדו *Kardu*; and, according to Buxtorf, the term 'Kardyan' was, in Chaldee synonymous with

'Armenian.' At Gen. viii. 4, the Arabic of Erpenius has Jibal-el-Karud (the Mountain of the Kurds), which is likewise found in the 'Book of Adam' of the Zabæans. For other proofs that this was the prevalent opinion among the Eastern churches, the reader may consult Eutychiuss, (*Annals*), and Epiphanius (*Hæres.* 18). It was no doubt from this source that it was borrowed by Mahomet, who in his Koran (xi. 46) says, 'The ark rested on the mountain Al-Judi.' That name was probably a corruption of Giordi, *i. e.* Gordiæan (the designation given to the entire range), but afterwards applied to the special locality where the ark was supposed to have rested. This is on a mountain a little to the east of Jezirah ibn Omar (the ancient Bezabde) on the Tigris. At the foot of the mountain there was a village called *Karya Thaminin*, *i. e.*, the Village of the Eighty—that being the number (and not eight) saved from the flood according to the Mohammedan belief. The historian Elmacin mentions that the emperor Heraclius went up, and visited this as 'the place of the

G2. Ararat.

ark.' Here, or in the neighbourhood, was once a famous Nestorian monastery, 'the Monastery of the Ark,' destroyed by lightning in A. D. 776. The credulous Jew, Benjamin of Tudela, says that a mosque was built at Mount Judi, 'of the remains of the ark,' by the Khalif Omar. Macdonald Kinneir, in describing his journey from Jezirah along the left bank of the Tigris to Nahr Van, says, 'We had a chain of mountains running parallel with the road on the left hand. This range is called the Juda Dag (*i. e.*, mountain) by the Turks, and one of the inhabitants of Nahr Van assured me that he had frequently seen the remains of Noah's ark on a lofty peak behind that village.' (Comp. Rich's *Kurdistan*, vol. ii. p. 124.) A French *savant*, Eugene Boré, who lately visited those parts, says the Mohammedan dervishes still

maintain here a perpetually burning lamp in an oratory. (*Revue Française*, vol. xii. ; or the *Semeur* of October 2, 1839.)

After the disappearance of the Nestorian monastery, the tradition which fixed the site of the ark on Mount Judi appears to have declined in credit, or been chiefly confined to Mohammedans, and gave place (at least among the Christians of the West) to that which now obtains, and according to which the ark rested on a great mountain in the north of Armenia—to which (so strongly did the idea take hold of the popular belief) was, in course of time, given the very name of Ararat, as if no doubt could be entertained that it was the Ararat of Scripture. We have seen, however, that in the Bible Ararat is nowhere the name of a mountain, and by the native Armenians the mountain in

question was never so designated; it is by them called *Mâcis*, and by the Turks *Aghur-dagh*, i. e., 'The Heavy or Great Mountain.' The *Vulgate* and Jerome indeed, render Ararat by 'Armenia,' but they do not particularize any one mountain. Still there is no doubt of the antiquity of the tradition of this being (as it is sometimes termed) the 'Mother of the World.' The Persians call it *Kuhi Nuch*, 'Noah's Mountain.' The Armenian etymology of the name of the city of Nakhchevan (which lies east of it) is said to be 'first place of descent or lodging,' being regarded as the place where Noah resided after descending from the mount. It is mentioned by Josephus under a Greek name of similar import, viz. *Ἀποβατήριον*, and by Ptolemy as *Naxuana*.

The mountain thus known to Europeans as Ararat consists of two immense conical elevations (one peak considerably lower than the other), towering in massive and majestic grandeur from the valley of the Aras, the ancient Araxes. Smith and Dwight give its position N. 57° W. of Nakhchevan, and S. 25° W. of Erivan (*Researches in Armenia*, p. 267); and remark, in describing it before the recent earthquake, that in no part of the world had they seen any mountain whose imposing appearance could plead half so powerfully as this a claim to the honour of having once been the stepping-stone between the old world and the new. 'It appeared,' says Ker Porter, 'as if the hugest mountains of the world had been piled upon each other to form this one sublime immensity of earth and rocks and snow. The icy peaks of its double heads rose majestically into the clear and cloudless heavens; the sun blazed bright upon them, and the reflection sent forth a dazzling radiance equal to other suns. My eye, not able to rest for any length of time upon the blinding glory of its summits, wandered down the apparently interminable sides, till I could no longer trace their vast lines in the mists of the horizon; when an irrepressible impulse immediately carrying my eye upwards, again refixed my gaze upon the awful glare of Ararat.' To the same effect Morier writes:—'Nothing can be more beautiful than its shape, more awful than its height. All the surrounding mountains sink into insignificance when compared to it. It is perfect in all its parts; no hard rugged feature, no unnatural prominences, everything is in harmony, and all combines to render it one of the sublimest objects in nature.'

Several attempts had been made to reach the top of Ararat, but few persons had got beyond the limit of perpetual snow. The French traveller Tournefort, in the year 1700, long persevered in the face of many difficulties, but was foiled in the end. Between thirty and forty years ago the Pasha of Bayazeed undertook the ascent with no better success. The honour was reserved to a German, Dr. Parrot, in the employment of Russia, who, in his *Reise zum Ararat* (Journey to Ararat) gives the following particulars:—'The summit of the Great Ararat is in 39° 42' north lat., and 61° 55' east long. from Ferro. Its perpendicular height is 16,254 Paris feet above the level of the sea, and 13,350 above the plain of the Araxes. The Little Ararat is 12,284 Paris feet above the sea, and 9561 above the plain of the Araxes.' After he and his party had failed in two attempts to ascend, the third was successful, and on the 27th September (o. s.), 1829, they stood on the summit of Mount

Ararat. It was a slightly convex, almost circular platform, about 200 Paris feet in diameter, composed of eternal ice, unbroken by a rock or stone: on account of the immense distances, nothing could be seen distinctly. The mountain was, it is said, afterwards ascended by a Mr. Antonomoff, but the fact both of his and Parrot's having reached the top is stoutly denied by the natives, and especially by the inmates of the neighbouring convent of Echmiadzin, who have a firm persuasion that in order to preserve the ark no one is permitted to approach it. This is based on the tradition that a monk, who once made the attempt, was, when asleep from exhaustion, unconsciously carried down to the point whence he had started; but at last, as the reward of his fruitless exertions, an angel was sent to him with a piece of the ark, which is preserved as the most valuable relic in the cathedral of Echmiadzin.

Since the memorable ascent of Dr. Parrot, Ararat has been the scene of a fearful calamity. An earthquake, which in a few moments changed the entire aspect of the country, commenced on the 20th of June (o. s.), 1840, and continued, at intervals, until the 1st of September. Traces of fissures and landslips have been left on the surface of the earth, which the eye of the scientific observer will recognise after many ages. The destruction of houses and other property in a wide tract of country around was very great; fortunately, the earthquake having happened during the day, the loss of lives did not exceed fifty. The scene of greatest devastation was in the narrow valley of Akorhi, where the masses of rock, ice, and snow, detached from the summit of Ararat and its lateral points, were thrown at one single bound from a height of 6000 feet to the bottom of the valley, where they lay scattered over an extent of several miles. See Major Voskoboinikof's Report, in the *Athenæum* for 1841, p. 157).—N. M.

ARAUNAH (אֲרֹנָה) Sept. Ὀρνά) a Jebusite who had a threshing floor on Mount Moriah, which he sold to David as a site for an altar to Jehovah. This site was indicated to David by God as the spot where the angel of the plague had stayed his destructive progress. At first Araunah refused to accept payment from the king, but on David's insisting on this, he accepted for the site and for his oxen 50 shekels of silver (2 Sam. xxiv. 18-25). In 1 Chron. xxi. 25, the sum is stated at 600 shekels of gold, a discrepancy which there are no means of reconciling. The Chronicler also spells the name of Araunah *Ornan* (אֲרֹנָן), and even in Samuel we have the variation אֲרֹנָה (v. 16). In versè 23 Araunah is called אֲרֹנָן, but this does not appear in any of the ancient versions and is probably an error. Two of Kennicott's codices and one of De Rossi's omit it.—W. L. A.

ARBA (אַרְבַּע) Sept. Ἀρβάκ) the father of Anak, and progenitor of the Anakim. From him the city afterwards called Hebron received the name of Kirjath-arba (Josh. xiv. 15; xv. 13; xxi. 11). Fiust thinks his name means *hero of Baal*, qu. אַרְבַּעֵל.—W. L. A.

ARBEH (אַרְבֵּה) occurs in Exod. x. 4, Sept. ἀκρίδα πολίγη ('a vast flight of locusts,' or perhaps indicating that several species were employed),

Vulg. *locustam*; and, in ver. 12, 13, 14, 19, ἀκρίς and *locusta*, Eng. locusts; Lev. xi. 22, βροῦχος, *bruchus*, locust; Deut. xxviii. 38, ἀκρίς, *locustæ*, locust; Judg. vi. 5; vii. 12, ἀκρίδες, *locustarum*, grasshoppers; 1 Kings viii. 37, βροῦχος, *locusta*, locust; 2 Chron. vi. 28, ἀκρίς, *locusta*, locusts; Job xxxix. 20, ἀκρίδες, *locustas*, grasshoppers; Ps. lxxviii. 46, ἀκρίδι, Symm. ἀκώληκι, *locustæ*, locust; Ps. cv. 34, ἀκρίς, *locusta*, locust; Ps. cix. 23, ἀκρίδες, *locustæ*, locust; Prov. xxx. 27, ἀκρίς, *locusta*, locust; Jer. xlvi. 23, ἀκρίδα, *locusta*, grasshoppers; Joel i. 4; ii. 25, ἀκρίς, *locusta*, locust; Nahum iii. 15, βροῦχος, *bruchus*, locusts; ver. 17, ἀττέλαβος, *locustæ*, locusts. In the foregoing conspectus the word אַרְבֵּה, in Exod. x., as indeed everywhere else, occurs in the singular number only, though it is there associated with verbs both in the singular and plural (ver. 5, 6), as are the corresponding words in Sept. and Vulg. This it might be, as a noun of multitude; but it will be rendered probable that four species were employed in the plague on Egypt, אַרְבֵּה יֵלֶק, חֲסִיל, and חֲנַמֶל (Ps. lxxviii. 46, 47; cv. 34). These may all have been brought into Egypt from Ethiopia (which has ever been the cradle of all kinds of locusts), by what is called in Exodus, 'the east wind,' since Bochart proves that the word which properly signifies 'east' often means 'south' also. The word אַרְבֵּה may be used in Lev. xi. 22, as the collective name for the locust, and be put first there as denoting also the most numerous species; but in Joel i. 4, and Ps. lxxviii. 46, it is distinguished from the other names of locusts, and is mentioned second, as if of a different species; just, perhaps, as we use the word *fly*, sometimes as a collective name, and at others for a particular species of insect, as when speaking of the hop, turnip, meat fly, etc. When the Hebrew word is used in reference to a particular species, it has been supposed, for reasons which will be given, to denote the *gryllus gregarius* or *migratorius*. Moses, therefore, in Exodus, refers Pharaoh to the visitation of the locusts, as well known in Egypt; but the plague would seem to have consisted in bringing them into that country in unexampled numbers, consisting of various species never previously seen there (comp. Exod. x. 4, 6, 15). The Sept. word βροῦχος (Lev. xi. 22) clearly shews that the translator uses it for a winged species of locust, contrary to the Latin fathers (as Jerome, Augustine, Gregory, etc.), who all define the *bruchus* to be the unfledged young or larva of the locust, and who call it *allelabus* when its wings are partially developed, and *locusta* when able to fly; although both Sept. and Vulg. ascribe flight to the *bruchus* here, and in Nah. iii. 17. The Greek fathers, on the other hand, uniformly ascribe to the βροῦχος both wings and flight, and therein agree with the descriptions of the ancient Greek naturalists. Thus Theophrastus, the pupil of Aristotle, who, with his preceptor, was probably contemporary with the Sept. translators of the Pentateuch, plainly speaks of it as a distinct species, and not a mere state: χαλεπαὶ μὲν οὖν αἱ ἀκρίδες, χαλεπότεροι δὲ οἱ ἀττέλαβοι, καὶ τοῦτων μάλιστα οὖς καλοῦσι βροῦκοι.—'The ἀκρίδες (the best ascertained general Greek word for the locust) are injurious, the ἀττέλαβοι still more so, and those most of all which they call βροῦκοι' (*De Anim.*). The Sept. seems to recognise the peculiar destructiveness of the βροῦχος in 1 Kings viii. 37 (but

has merged it in the parallel passage, 2 Chron.), and in Nah. iii. 15, by adopting it for אַרְבֵּה. In these passages the Sept. translators may have understood the *G. migratorius* or *gregarius* (Linn.), which is usually considered to be the most destructive species (from βρώσκω, *I devour*). Yet in Joel i. 4; ii. 25, they have applied it to the יֵלֶק, which, however, appears there as engaged in the work of destruction. Hesychius, in the third century, explains the βροῦκος as ἀκρίδων εἶδος, 'a species of locust,' though, he observes, applied in his time by different nations to different species of locusts, and by some to the ἀττέλαβος. May not his testimony to this effect illustrate the various uses of the word by the Sept. in the minor prophets? Our translators have wrongly adopted the word 'grasshopper' in Judg. and Jer. xlvi. 23, where 'locusts' would certainly have better illustrated the idea of 'innumerable multitudes,' and here, as elsewhere, have departed from their professed rule, 'not to vary from the sense of that which they had translated before, if the word signified the same in both places' (Translators to the reader, *ad finem*). The Hebrew word in question is usually derived from אַרְבֵּה, 'to multiply' or 'be numerous,' because the locust is remarkably prolific; which, as a general name, is certainly not inapplicable; and it is thence also inferred that it denotes the *G. migratorius*, because that species often appears in large numbers. However, the largest flight of locusts upon record, calculated to have extended over 500 miles, and which darkened the air like an eclipse, and was supposed to come from Arabia, did not consist of the *G. migratorius*, but of a red species (Kirby and Spence, *Introductio ad Entomology*, i. 210); and according to Forskal, the species which now chiefly infests Arabia, and which he names *G. gregarius*, is distinct from the *G. migratorius* of Linn. (*Ency. Brit. art. 'Entomology,'* p. 193). Others derive the word from אַרְבֵּה, 'to lie hid' or 'in ambush,' because the newly-hatched locust emerges from the ground, or because the locust besieges vegetables. Rosenmüller justly remarks upon such etymologies, and the inferences made from them, 'Quam infirmum verò sit hujusmodi e solo nominis etymo petitum argumentum, unusquisque intelligit ipse.' He adds, 'Nec alia est ratio reliquarum specierum' (*Schol. in Joel i. 4*). 'How precarious truly the reasoning is, derived in this manner from the mere etymology of the word, everybody may understand for himself. Nor is the principle otherwise in regard to the rest of the species.' He also remarks that the references to the destructiveness of locusts, which are often derived from the roots, simply concur in this, that locusts consume and do mischief. Illustrations of the propriety of his remarks will abound as we proceed. Still it by no means follows from a coincidence of the Hebrew roots, in this or any other meaning, that the learned among the ancient Jews did not recognize different species in the different names of locusts. The English word *fly*, from the Saxon *fleon*, the Heb. עוּף, and its representative 'fowl' in the Eng. Version (Gen. i. 20, etc.), all express both a general and specific idea. Even a modern entomologist might speak of 'the flies' in a room, while aware that from 50 to 100 different species annually visit our apartments. The scriptures use popular language; hence 'the multitude,' 'the devourer,' or 'the darkener,' may have been the familiar appellations for certain species of

locusts. The common Greek words for locusts and grasshoppers, etc., are of themselves equally indefinite; yet they also served for the names of species, as *ἀκρίς*, the locust generally, from the tops of vegetables, on which the locust feeds; but it is also used as the proper name of a particular species, as the grasshopper: *τετραπτερυλλίς*, 'four-winged,' is applied sometimes to the grasshopper; *τρώξαλλίς*, from *τρώγω*, 'to chew,' sometimes to the caterpillar. Yet the Greeks had also distinct names restricted to particular species, as *ὄνος*, *μολούρις*, *κερκώπη*, etc. The Hebrew names may also have served similar purposes.—J. F. D.

ARBELA the name of a place mentioned I Macc. ix. 2, as determining the site of Maisaloth. It is by some identified with Beth Arbel (which see), and by others, with more probability, with the existing Irbil (Rob. ii. 398).

ARCE, OR ARKE, is said by Josephus to have been a name of Petra (*Antiq.* iv. 4, 7). Probably we should read *Ἀρκη* = *الرقيم* for *Ἄρκη*. But see *Amer. Bib. Rep.* for 1833, p. 536 note.—W. L. A.

ARCH. Arches with vaulted chambers and domed temples figure so conspicuously in modern Oriental architecture, that, if the arch did not exist among the ancient Jews, their towns and houses could not possibly have offered even a faint resemblance to those which now exist: and this being the case, a great part of the analogical illustrations of Scripture which modern travellers and Biblical illustrators have obtained from this source must needs fall to the ground. It is therefore of importance to ascertain whether the arch did or did not exist in those remote times to which most of the history of at least the Old Testament belongs. Nothing against its existence is to be inferred from the fact that no word signifying an arch can be found in the Hebrew Scriptures (for the word so rendered in Ezek. xl. 16, has not that meaning). The architectural notices in the Bible are necessarily few and general; and we have at this day histories and other books, larger than the sacred volume, in which no such word as 'arch' occurs. There is certainly no absolute proof that the Israelites employed arches in their buildings; but if it can be shewn that arches existed in Egypt at a very early period, we may safely infer that so useful an invention could not have been unknown in Palestine.

Until within these few years it was common to ascribe a comparatively late origin to the arch; but circumstances have come to light one after another, tending to throw the date more and more backward, until at length it seems to be admitted that in Egypt the arch already existed in the time of Joseph. The observations of Rosellini and of Sir J. G. Wilkinson led them irresistibly to this conclusion, which has also been recently adopted by Mr. Cockerell (*Lect.* iii. in *Athenæum* for Jan. 28, 1843) and other architects.

It is shewn by Sir J. G. Wilkinson that the arch existed in brick in the reign of Amenoph I. as early as B.C. 1540; and in stone in the time of the second Psameticus, B.C. 600. This evidence is derived from the ascertained date of arches now actually existing; but the paintings at Beni-Hasan afford ground for the conclusion that vaulted buildings were constructed in Egypt as early as

the reign of Osirtasen I., who is presumed to have been contemporary with Joseph. Indeed, although the evidence from facts does not ascend beyond this, the evidence from analogy and probability can be carried back to about B.C. 2020 (Wilkinson's

63.

Anc. Egyptians, ii. 116; iii. 316). Sir J. G. Wilkinson suggests the probability that the arch owed its invention to the small quantity of wood in Egypt, and the consequent expense of roofing with timber. The proofs may be thus arranged in chronological order:—

The evidence that arches were known in the time of the first Osirtasen is derived from the drawings at Beni-Hasan (Wilkinson, ii. 117).

In the secluded valley of Dayr el Medeeneh, at Thebes, are several tombs of the early date of Amenoph I. Among the most remarkable of these is one whose crude brick roof and niche, bearing the name of the same Pharaoh, prove the existence of the arch at the remote period of B.C. 1540 (Wilkinson, *Topography of Thebes*, p. 81). Another tomb of similar construction bears the ovals of Thothmes III., who reigned about the time of the Exode (*Anc. Egyptians*, iii. 319). At Thebes there is also a brick arch bearing the name of this king (Hoskins, *Travels in Ethiopia*).

To the same period and dynasty (the 18th) belong the vaulted chambers and arched doorways (see cut fig. 4) which yet remain in the crude brick pyramids at Thebes (Wilkinson, *Anc. Egyptians*, iii. 317).

In ancient Egyptian houses it appears that the roofs were often vaulted, and built, like the rest of the house, of crude brick; and there is reason to believe that some of the chambers in the pavilion of Rameses III. (about B.C. 1245), at Medeente Haboo, were arched with stone, since the devices in the upper part of the walls shew that the fallen roofs had this form (see cut, fig. 3).

The most ancient *actually existing* arches of stone occur at Memphis, near the modern village

of Saqqara. Here there is a tomb with two large vaulted chambers, whose roofs display in every part the name and sculptures of Psamaticus II. (about B.C. 600). The chambers are cut in the limestone rock, and this being of a friable nature, the roof is secured by being, as it were, lined with an arch, like our modern tunnels.

To about the same period—that of the last dynasty before the Persian invasion—belong the remarkable doorways of the enclosures surrounding the tombs in the Assaséef, which are composed of two or more concentric semicircles of brick (fig. 2) (Wilkinson, *Anc. Egyptians*, iii. 319).

Although the oldest stone arch whose age has been positively ascertained does not date earlier than the time of Psamaticus, we cannot suppose that the use of stone was not adopted by the Egyptians for that style of building previous to his reign, even if the arches in the pyramids in Ethiopia should prove not to be anterior to the same era. 'Nor does the absence of the arch in

64.

temples and other large buildings excite our surprise, when we consider the style of Egyptian monuments; and no one who understands the character of their architecture could wish for its introduction. In some of the small temples of the Oasis the Romans attempted this innovation, but the appearance of the chambers so constructed fails to please; and the whimsical caprice of Osirei (about B.C. 1385) also introduced an imitation of the arch in a temple at Abydos. In this building

65.

the roof is formed of single blocks of stone, reaching from one architrave to the other, which, instead of being placed in the usual manner, stand upon their edges, in order to allow room for hollowing out an arch in their thickness; but it has the effect of inconsistency, without the plea of advantage or utility.' Another imitation of the arch occurs in a

building at Thebes, constructed in the style of a tomb. The chambers lie under a friable rock, and are cased with masonry, to prevent the fall of its crumbling stone; but, instead of being roofed on the principle of the arch, they are covered with a number of large blocks, placed horizontally, one projecting beyond that immediately below it, till the uppermost two meet in the centre, the interior angles being afterwards rounded off to form the appearance of a vault (fig. 1). The date of this building is about B.C. 1500, and consequently many years after the Egyptians had been acquainted with the art of vaulting (Wilkinson, *Anc. Egyptians*, ii. 321).

Thus as the temple architecture of the Egyptians did not admit of arches, and as the temples are almost the only buildings that remain, it is not strange that arches have not oftener been found. The evidence offered by the paintings, the tombs, and the pyramids, is conclusive for the existence and antiquity of arches and vaults of brick and stone; and if any remains of houses and palaces had now existed, there is little doubt that the arch would have been of frequent occurrence. We observe that Sir J. G. Wilkinson, in portraying an Egyptian mansion (*Anc. Egyptians*, ii. 131), makes the grand entrance an archway.

After this it seems unreasonable to doubt that the arch was known to the Hebrews also, and was employed in their buildings. Palestine, though better wooded than Egypt, was still deficient of wood suitable for building and for roofs, is shewn by the fact that large importations of timber from the forests of Lebanon were necessary (2 Sam. vii. 2, 7; 1 Kings v. 6; 1 Chron. xxii. 4; 2 Chron. ii. 3; Ezra iii. 7; Cant. i. 17), and that this imported timber, although of no very high quality, was held in great estimation. [BRIDGE.]—J. K. [It may be added that arched gateways are frequently represented on the Assyrian bas-reliefs. (See Layard's *Nineveh*, ii. 260). In his second series of researches the same enterprising traveller discovered several arches belonging to the ancient architecture of Assyria (*Nineveh and Babylon*, p. 163-4).]

ARCHÆOLOGY, BIBLICAL. — Archæology, or, as it has been called by some writers, Archæography, has been defined to be 'an explanation of those ancient monuments in which former nations have left us the traces or records of their religion, history, politics, arts and sciences' (*Miscellanea Antiq. erud.*) It may perhaps be more conveniently described as a systematic knowledge of the public institutions and domestic habits of the ancients (Fabricius, *Bibl. Antiq.* viii. 1). Plato uses *ἀρχαιολογία* for antiquarian lore in general (*Hipp. Maj.* 285 D.) Although the word has been very vaguely applied, it is generally understood to exclude history, and to deal rather with the 'permanent condition' than with the 'progressive development' of the nations concerned (De Wette, *Archæol.* § 1). It is thus used in a sense far more limited than was understood by Diodorus Siculus in the title *Ἱστορία ἀρχαιολογούμενη*, or by Josephus, when he gave to his celebrated History the title of *Ἀρχαιολογία Ἰουδαϊκή*. We should not apply such a term to books like Ewald's *Geschichte des Volkes Israel*, or Dean Milman's *History of the Jews*. Jahn, who very loosely considers Archæology to involve 'the knowledge of whatever in antiquity is worthy of remembrance' (*Archæol. Bibl.* § 1), makes it in-

clude Geography; but this subject must be excluded from the proper meaning of the term, although books like Bochart's *Phaleg* and *Canaan*, and Reland's *Palestina ex Monumentis veterum illustrata*, abound in information most valuable to the biblical student. Biblical Archæology must therefore be considered as the science which collects and systematizes all that can be discovered about the religious, civil, and private life of the people among whom the Bible had its origin; and of those nations by whose history and customs they were mainly influenced. The Archæology of the Bible is both more difficult and more interesting than that of the Greeks and Romans; and its interest is commensurate with its importance. To reproduce in living pictures the bygone life of other ages must always be a worthy task for the thoughtful student, and lessons of the utmost importance will arise from the endeavour to resuscitate an extinct civilization. But when such a study is pursued in order to understand the character and institutions of that peculiar nation to which was entrusted the propagation of a revealed religion, it becomes worthy of the highest intellect. Without it no true conception can be formed of the views and circumstances which lent their chief force and value to many of the profoundest utterances of inspired philosophy during a period of fifteen centuries; and the neglect with which it was long treated gave rise to numerous unnecessary difficulties and unworthy sneers. Had the peculiarities of Jewish civilization been thoroughly understood, half of the innuendoes which delighted the admirers of Bayle and Volney would only have raised a smile.

The sources of Biblical Archæology are few and meagre, and those that are most copious are unfortunately also most questionable. Following Fabricius, Jahn, and other writers, we may state them as follows.—1. The first and chief source is, of course, that collection of sacred books, comprising almost the sole relics of ancient Hebrew literature, which were written in different centuries, in different styles, and under different circumstances, during the entire period of Jewish history, and which are now comprised under the one name 'Bible.' But among these books there is not a single document professedly archæological, and our knowledge of the subject must be pieced from scattered and incidental notices, and illustrated from other sources. 2. Ancient monuments, comprising coins, inscriptions, bas-reliefs, statues, gems, and the ruins of such cities as Baalbec, Palmyra, Persepolis, Nineveh, and Petra. The most valuable books on this branch of the subject, are Reland, *De Spoliis Templi in Arcu Titiano conspicuis*, 1716; F. G. Bayer, *De numis Hebr. Samar.*; J. H. Hottinger, *De Cippis Hebraicis*; Hesse on *Ancient Weights*, etc., 1836; Ackerman's *Numismatics of the N. T.*; Brissonius, *De regno Persarum*; Möver's *Phönizier*, and Layard's *Nineveh*. The translations of cuneiform inscriptions by Sir H. Rawlinson, Dr. Hincks, and others, have lately thrown a flood of light on the Jewish monarchy; some of the information thus acquired may be found in the Rev. G. Rawlinson's *Herodotus*, but the labours of Dr. Hincks are unfortunately scattered through a number of separate publications. 3. The works of Philo and Josephus. 4. Ancient Greek and Latin authors, as Xenophon, Diod. Siculus, Aelian, Strabo, Plutarch, and especially Herodotus. This field has been so well worked that probably little more can be gleaned from it. A book has recently been

published on the illustrations of Scripture to be found in Herodotus. 5. The Apocrypha, and the later Jewish writings, as the Jerusalem and Babylonian Talmuds, consisting of the Mishna (or text), and Gemaras (or commentaries on it). This 'rich but turbid source' (as Hagenbach calls it, quoted in Herzog's *Encyclop.*) has been amply consulted, and the results may be largely found in Buxtorf's *Lex. Talmudicum*, Otho's *Lex. Rabbincum*, Meuschen *N. T. ex Talm. illustratum*, Lightfoot's *Hor. Hebraica*, and Schoettgen's *Hor. Hebraica*, as also in Wettstein's *Annot. in N. T.* 6. Oriental writers, as Avicenna, Abulfeda, El Edrisi, the Zend Avesta, and especially the Koran. Something, too, can be gleaned from writers who, like Jerome and Ephrem Syrus, lived in Syria. As much as an English reader is likely to want on the subject, may be found in Hottinger's *Historia Orientalis*, D'Herbelot's *Bibl. Orient.*, and Weil's *Legends*. 7. Books of Travel. These have added very largely to our knowledge of Biblical Archæology, because of the stationary character of all oriental forms of civilization. A list of them may be found in Winer's *Handbuch der Theologischen Literatur*. We may mention the Travels of Pococke, Maundrell, Bruce, Clarke, and De Saulcy; Niebuhr's *Description de l'Arabie*, Burckhardt's *Travels in Syria*, Shaw's *Travels in Barbary and the Levant*, Chardin's *Travels in Persia*, Harmer's *Observations*, Lieutenant Wellsted's *Travels in Arabia*, Professor Robinson's *Biblical Researches*, Bonar's *Desert of Sinai*, Thomson's *The Land and the Book*, and especially Professor Stanley's *Sinai and Palestine*. On Jerusalem alone, several most valuable works have recently appeared, as the Rev. G. Williams' *Holy City*, Thrupp's *Ancient Jerusalem*, and Ferguson's *Essay on the Ancient Topography of Jerusalem*. Much may also be learnt from the *Description de l'Égypte*, Wilkinson's *Ancient Egyptians*, and Lane's *Modern Egyptians*.

If in the term Biblical Archæology we also include Ecclesiastical or Christian Archæology, we shall have to add to the sources of information already mentioned, the writings of the fathers, and the innumerable commentaries upon them, as well as such works as Baumgarten, *Archæol. Compend.*, 1766; Baronius, *Annales Ecclesiast.*, 1558; Bingham's *Origines Ecclesiast.*; Augusti, *Handbuch d. Christl. Archæologie*; Cave's *Primitive Christianity*; and many others.

Numerous complete manuals of Hebrew antiquities have been compiled, and a thorough knowledge of them, so far as it is attainable, may now be easily acquired. Of these treatises, we may mention Goodwin's *Moses and Aaron*, 1614, on which have been founded the treatises of Witsius and Hottinger, Dr. Jennings's *Jewish Antiquities*, and the *Apparatus Criticus* of Carpzov. The latter will be found an unusually rich storehouse of learning and research. In Latin we have Iken's *Antiq. Hebr.*, 1730; Waehner's *Antiq. Hebr.*, 1743 (a somewhat meagre treatise); Reland's *Antiq. Hebr.* (short, but most valuable); and Pareau, *Antiq. Heb.*: in German, De Wette's *Lehrbuch der Hebr. Archæol.*, 3d edition; Scholz, *Handbuch d. Bibl. Archæol.*; Rosenmüller's *Alterthumskunde*; Zeller's *Biblish. Wörterbuch*; and Winer's invaluable *Real-wörterbuch*. This last is an almost perfect encyclopædia of biblical knowledge, which those can best value who have used it most. In Eng.

lish, till quite recently, we have (with the exception of Goodwin) little of any value. We may, however, mention Taylor's *Calmet* (a heterogeneous book, containing much that is useful, mixed up with more that is fantastic or doubtful), and Upham's abridged translation of Jahn's very painstaking Archæologie. The chief fault in Dr. Jahn's book is the absence of reference to other works, and the inferences from Scripture passages, which often rest on very slender grounds. England has, however, contributed to this great subject such noble works as Selden's *Syntagma De Dis Syriis*, and Spencer's *De legibus Hebr. ritualibus*. An exhaustive treatment of almost every interesting question connected with the Bible will be found in the monographs contained in the *Critici Sacri* (of which the substance is given in Poole's *Synopsis*), and in the thirty-four folio volumes of Ugolini's *Thesaurus*.

Special parts of the subject are handled in books of such vast learning, that we must subjoin a few of the principal ones, without attempting anything more than a reference to the countless monographs which are yearly produced by German* industry. Such are on the Natural History of the Bible, Bochart's *Hierozoicon*, a book of stupendous research; Rosenmüller on the Botany and Mineralogy of the Bible (Clark's Theol. Library); Celsius's *Hierobotanicon*; and Scheuchzer's *Physica Sacra*. On the Private Life of the Hebrews, Scacchius's *Myrothecium*; Selden's *Uxor Hebraica*; and Schröder, *De Vestitu Mulier. Hebr.* On the Sacred Rites, Buxtorf, *De Synagoga*; Vitringa, *De Synag. Vett.*; and Braunius, *De Vestitu Sacerdotis*. And on their Arts and Sciences, Budæus's *Philosophia Ebraeorum*; Lowth and Michaelis, *De Sacra Poesi*; Glassius' *Philologia Sacra*; Ewald *Poet. Bücher d. A. T.*; Bartholinus, *De Morbis Bibliis*; Michaelis, *Histor. Vitri ap. Hebr.*; Horst, *Zauber. Bibliothek*; and De Saucy, *Hist. de l'Art Ju'daique*.

Our knowledge of all subjects connected with Biblical Archæology has for some time been increasing in consequence of the great interest which the study excites, and of the additional information which recent discoveries have thrown open to us. A good and accurate manual in English, founded on the best authorities, would be very useful to thousands who have not the leisure or opportunity for extended inquiries.—F. W. F.

ARCHELAUS, son of Herod the Great, and his successor in Idumæa, Judæa, and Samaria (Matt. ii. 22). [HERODIAN FAMILY.]

ARCHERY. [ARMS.]

ARCHEVITES (אַרְכֵי־וֵיטַי) the Chaldean name of a people, Ezra iv. 9; the chief town of which, according to Gesenius, was Erech (Gen. x. 10). The Targum, Jerome, and Ephraem Syrus, identify it with Edessa. [EREC.]

ARCHIPPUS (Ἀρχιππος), a Christian minister, whom St. Paul calls his 'fellow-soldier,' in Philem. 2, and whom he exhorts to renewed activity in Col. iv. 17. From the latter reference it would seem that Archippus resided at Colosse, and there discharged the office of presiding presbyter or bishop.

ARCHISYNAGOGUS (Gr. ἀρχισυναγωγος, called also ἀρχων τῆς συναγωγῆς (Luke viii. 41), and simply ἀρχων (Matt. ix. 18); Heb. עֲרֵן הַסִּנְגוּדָה, chief or ruler of the synagogue). In large synagogues there appears to have been a college or council of elders (בְּרִיָּה) = πρεσβύτεροι, Luke vii. 3), to whom the care of the synagogue and the discipline of the congregation were committed, and to all of whom this title was applied (Mark v. 22; Acts xiii. 15; xviii. 8, compared with v. 17). Their duties were to preside in the public services, to direct the reading of the Scriptures and the addresses to the congregation (Vitringa, *De Synagoga Veler.* lib. 3, part i. c. 7, comp. Acts xiii. 15), to superintend the distribution of alms (Vitr. c. 13), and to punish transgressors either by scourging (Vitr. c. 11, comp. Matt. x. 17; xxiii. 34; Acts xxii. 19), or by excommunication (Vitr. c. 9). In a more restricted sense the title is sometimes applied to the president of this council, whose office, according to Grotius (*Annotations in Matt.* ix. 18; *Luc.* xiii. 14), and many other writers, was different from and superior to that of the elders in general. Vitringa (p. 586), on the other hand, maintains that there was no such distinction of office, and that the title thus applied merely designates the presiding elder, who acted on behalf of and in the name of the whole.—F. W. G.

ARCHITECTURE. It was formerly common to claim for the Hebrews the invention of scientific architecture; and to allege that classical antiquity was indebted to the Temple of Solomon for the principles and many of the details of the art. A statement so strange, and even preposterous, would scarcely seem to demand attention at the present day; but as it is still occasionally reproduced, and as some respectable old authorities can be cited in its favour, it cannot be passed altogether in silence. The question belongs properly, however, to another head. [TEMPLE.] It may here suffice to remark that temples previously existed in Egypt, Babylon, Syria, and Phœnicia, from which the classical ancients were far more likely to borrow the ideas which they embodied in new and beautiful combinations of their own.

There has never in fact been any people for whom a peculiar style of architecture could with less probability be claimed than for the Israelites. On leaving Egypt they could only be acquainted with Egyptian art. On entering Canaan they necessarily occupied the buildings of which they had dispossessed the previous inhabitants; and the succeeding generations would naturally erect such buildings as the country previously contained. The architecture of Palestine, and as such, eventually that of the Jews, had doubtless its own characteristics, by which it was suited to the climate and condition of the country; and in the course of time many improvements would no doubt arise from the causes which usually operate in producing change in any practical art. From the want of historical data and from the total absence of architectural remains, the degree in which these causes operated in imparting a peculiar character to the Jewish architecture cannot now be determined; for the oldest ruins in the country do not ascend beyond the period of the Roman domination. It does, however, seem probable that among the Hebrews architecture was always kept within the limits of a mechanical craft, and never rose to the rank of a

* Most of these will be found referred to under their different heads in Winer's *Real-wörterbuch*; but they are of very unequal merit, and in numerous instances are not to be procured.

fine art. Their usual dwelling-houses differed little from those of other Eastern nations, and we nowhere find anything indicative of exterior embellishment. Splendid edifices, such as the palace of David and the Temple of Solomon, were completed by the assistance of Phœnician artists (2 Sam. v. 11; 1 Kings v. 6, 18; 1 Chron. xiv. 1). After the Babylonish exile, the assistance of such foreigners was likewise resorted to for the restoration of the Temple (Ezra iii. 7). From the time of the Maccabæan dynasty, the Greek taste began to gain ground, especially under the Herodian princes (who seem to have been possessed with a sort of mania for building), and was shewn in the structure and embellishment of many towns, baths, colonnades, theatres and castles (Joseph. *Antiq.* xv. 8, 1; xv. 19, 4; xv. 10, 3; *De Bell. Jud.* i. 13, 8). The Phœnician style, which seems to have had some affinity with the Egyptian, was not, however, superseded by the Grecian; and even as late as the Mishna (*Bava Bathra*, iii. 6), we read of Tyrian windows, Tyrian porches, etc. [HOUSE.]

With regard to the instruments used by builders—besides the more common, such as the axe, saw, etc., we find incidental mention of the מִנְחָה or compass, the מִנְה or plumb-line (Amos vii. 7), the מִן or measuring-line (see the several words), Winer's *Biblisches Real-wörterbuch*, art. 'Baukunst'; Stieglitz's *Geschichte der Baukunst der Alten*, 1792; Hirt's *Gesch. des Bauk. bei der Alten*; Schmidt's *Bibl. Mathematicus*; Bellermann's *Handbuch*, etc., Ewald, *Gesch. Israel's*, iii. 1. p. 27.—J. K.

ARCHITRICLINUS (Ἀρχιτρικλίνος, *master of the triclinium*, or dinner-bed—ACCUBATION), very properly rendered in John ii. 8, 9, 'governor of the feast,' equivalent to the Roman *Magister Conviviæ*. The Greeks also denoted the same social officer by the title of *Symposiarch* (συμποσιαρχος). He was not the giver of the feast, but one of the guests specially chosen to direct the entertainment, and promote harmony and good fellowship among the company. In the apocryphal *Ecclesiasticus* (xxxii. 1, 2) the duties of this officer among the Jews are indicated. He is there, however, called ἡγούμενος:—'If thou be made the master [of a feast], lift not thyself up, but be among them as one of the rest; take diligent care for them, and so sit down; and when thou hast done all thy office, take thy place, that thou mayest be merry with them, and receive a crown for thy well ordering of the feast.'—J. K.

ARD (אַרְדִּי Sept. Ἀράδ, Ἀδάρ). 1. Son of Benjamin (Gen. xlv. 21). 2. Son of Bela and grandson of Benjamin (Num. xxvi. 40). From him the Ardites took their descent and name (Num. xxvi. 40).

ARELI (אַרְלִי, Ἀρηίλ), Son of God, ancestor of the Arelites (Gen. xlv. 16; Num. xxvi. 17).

AREOPAGUS, an Anglicized form of the original words (ὁ Ἄρειος πάγος), signifying in reference to place, Mars Hill, but in reference to persons, the Council which was held on the hill. The Council was also termed ἡ ἐν Ἀρείῳ πάγῳ βουλὴ (or ἡ βουλὴ ἡ ἐν Ἀρείῳ πάγῳ), the Council on Mars Hill; sometimes ἡ ἄνω βουλὴ, the Upper Council, from the elevated position where it was held; and sometimes simply, but emphatically,

ἡ βουλὴ, the Council; but it retained till a late period, the original designation of Mars Hill, being called by the Latins Scopulus Martis, Curia Martis (Juvenal, *Sat.* ix. 101), and still more literally, Areum Judicium (Tacit. *Annal.* ii. 55). The place and the Council are topics of interest to the Biblical student, chiefly from their being the scene of the interesting narrative and sublime discourse found in Acts xvii., where it appears that the apostle Paul, feeling himself moved, by the evidences of idolatry with which the city of Athens was crowded, to preach Jesus and the resurrection, both in the Jewish synagogues and in the marketplace, was set upon by certain Epicurean and Stoic philosophers, and led to the Areopagus, in order that they might learn from him the meaning and design of his new doctrine. Whether or not the Apostle was criminally arraigned, as a setter forth of strange gods, before the tribunal which held its sittings on the hill, may be considered as undetermined, though the balance of evidence seems to incline to the affirmative. Whichever view on this point is adopted, the dignified, temperate, and high-minded bearing of Paul under the peculiar circumstances in which he was placed is worthy of high admiration, and will appear the more striking the more the associations are known and weighed which covered and surrounded the spot where he stood. Nor does his eloquent discourse appear to have been without good effect; for though some mocked, and some procrastinated, yet others believed, among whom was a member of the Council, 'Dionysius, the Areopagite,' who has been represented as the first bishop of Athens, and is said to have written books on the 'Celestial Hierarchy;' but their authenticity is questioned.

The accompanying plan will enable the reader to form an idea of the locality in which the Apostle stood, and to conceive in some measure the impressive and venerable objects with which he was environed. Nothing, however, but a minute description of the city in the days of its pride, comprising some details of the several temples, porticoes, and schools of learning which crowded on his sight, and which, whilst they taught him that the city was 'wholly given to idolatry,' impressed him also with the feeling that he was standing in the midst of the highest civilization, both of his own age and of the ages that had elapsed, can give an adequate conception of the position in which Paul was placed, or of the lofty and prudent manner in which he acted. The history in the Acts of the Apostles (xvii. 22) states that the speaker stood in the midst of Mars Hill. Having come up from the level parts of the city, where the markets (there were two, the old and the new) were, he would probably stand with his face towards the north, and would then have immediately behind him the long walls which ran down to the sea, affording protection against a foreign enemy. Near the sea, on one side, was the harbour of Peiræus, on the other that designated Phalerum, with their crowded arsenals, their busy workmen, and their gallant ships. Not far off in the ocean lay the island of Salamis, ennobled for ever in history as the spot near which Athenian valour chastised Asiatic pride, and achieved the liberty of Greece. The apostle had only to turn towards his right hand to catch a view of a small but celebrated hill rising within the city near that on which he stood, called the Pnyx, where, standing on a block of bare stone, Demosthenes and other

distinguished orators had addressed the assembled people of Athens, swaying that arrogant and fickle democracy, and thereby making Philip of Macedon tremble, or working good or ill for the entire civilized world. Immediately before him lay the crowded city, studded in every part with memorials

sacred to religion or patriotism, and exhibiting the highest achievements of art. On his left, somewhat beyond the walls, was beheld the Academy, with its groves of plane and olive-trees, its retired walks and cooling fountains, its altar to the Muses, its statues of the Graces, its temple of Minerva, and its altars to Prometheus, to Love, and to Hercules, near which Plato had his country-seat, and in the midst of which he had taught, as well as his followers after him. But the most impressive spectacle lay on his right hand, for there, on the small and precipitous hill named the Acropolis, were clustered together monuments of the highest art, and memorials of the national religion, such as no other equal spot of ground has ever borne. The Apostle's eyes, in turning to the right, would fall on the north-west side of the eminence, which was here (and all round) covered and protected by a wall, parts of which were so ancient as to be of Cyclopean origin. The western side, which alone gave access to what, from its original destination, may be termed the fort, was, during the administration of Pericles, adorned with a splendid flight of steps, and the beautiful Propylæa, with its five entrances and two flanking temples, constructed by Mnesicles of Pentelican marble, at a cost of 2012 talents. In the times of the Roman emperors there stood before the Propylæa equestrian statues of Augustus and Agrippa. On the southern wing of the Propylæa was a temple of

Wingless Victory; on the northern, a Pinacotheca, or picture gallery. On the highest part of the platform of the Acropolis, not more than 300 feet from the entrance-buildings just described, stood (and yet stands, though shattered and mutilated) the Parthenon, justly celebrated throughout the world, erected of white Pelitican marble, under the direction of Callicrates, Ictinus, and Carpion, and adorned with the finest sculptures from the hand of Phidias. Northward from the Parthenon was the Erechtheum, a compound building, which contained the temple of Minerva Polias, the proper Erechtheum (called also the Cecropium), and the Pandroseum. This sanctuary contained the holy

67.

olive-tree sacred to Minerva, the holy salt-spring, the ancient wooden image of Pallas, etc., and was the scene of the oldest and most venerated ceremonies and recollections of the Athenians. Between the propylæa and the Erechtheum was placed the colossal bronze statue of Pallas Promachos, the work of Phidias, which towered so high above the other buildings, that the plume of her helmet and the point of her spear were visible on the sea between Sunium and Athens. Moreover, the Acropolis was occupied by so great a crowd of statues and monuments, that the account, as found in Pausanias, excites the reader's wonder, and makes it difficult for him to understand how so much could have been crowded into a space which extended from the south-east corner to the south-west only 1150 feet, whilst its greatest breadth did not exceed 500 feet. On the hill itself where Paul had his station, was, at the eastern end, the temple of the Furies, and other national and commemorative edifices. The court-house of the council, which was also here, was, according to the simplicity of ancient customs, built of clay. There was an altar consecrated by Orestes to Athene Areia. In the same place were seen two silver stones, on one of which stood the accuser, on the other, the accused. Near them stood two altars erected by Epimenes, one to Insult (*Ἵβρις*, Cic. *Contumelia*), the other to Shamelessness (*Ἄναιδέλας*, Cic. *Impudentia*).

The court of Areopagus was one of the oldest and most honoured, not only in Athens, but in the whole of Greece, and, indeed, in the ancient world. Through a long succession of centuries, it preserved its existence amid changes corresponding with those which the state underwent, till at least the age of the Cæsars (Tacitus, *Ann.* ii. 55). The ancients are full of eulogies on its value, equity, and beneficial influence; in consequence of which qualities it was held in so much respect that even foreign states sought its verdict in difficult cases.

Like everything human, however, it was liable to decline, and, after Greece had submitted to the yoke of Rome, retained probably little of its ancient character beyond a certain dignity, which was itself cold and barren; and however successful it may in earlier times have been in conciliating for its determinations the approval of public opinion, the historian Tacitus (*ut supra*) mentions a case in which it was charged with an erroneous, if not a corrupt, decision.

The origin of the court ascends back into the darkest mythical period. From the first its constitution was essentially aristocratic; a character which to some extent it retained even after the democratic reforms which Solon introduced into the Athenian constitution. By his appointment the nine archons became for the remainder of their lives Areopagites, provided they had well discharged the duties of their archonship, were blameless in their personal conduct, and had undergone a satisfactory examination. Its power and jurisdiction were still further abridged by Pericles, through his instrument Ephialtes. Following the political tendencies of the state, the Areopagus became in process of time less and less aristocratical, and parted piecemeal with most of its important functions. First its political power was taken away, then its jurisdiction in cases of murder, and even its moral influence gradually departed. During the sway of the Thirty Tyrants its power, or rather its political existence, was destroyed. On their overthrow it recovered some consideration, and the oversight of the execution of the laws was restored to it by an express decree. Isocrates endeavoured by his *Ἀρεοπαγίτικὸς λόγος* to revive its ancient influence. The precise time when it ceased to exist cannot be determined; but evidence is not wanting to shew that in later periods its members ceased to be uniformly characterized by blameless morals.

It is not easy to give a correct summary of its several functions, as the classic writers are not agreed in their statements, and the jurisdiction of the court varied, as has been seen, with times and circumstances. They have, however, been divided into six general classes (*Real-Encyclopädie* von Pauly, *in voc.*): I. Its judicial function; II. Its political; III. Its police function; IV. Its religious; V. Its educational; and VI. (only partially) Its financial. In relation to these functions, such details only can be given here as bear more or less immediately on its moral and religious influence, and may serve to assist the student of the Holy Scriptures in forming an opinion as to the relation in which the subject stands to the Gospel, and its distinguished missionary, the apostle Paul.

Passing by certain functions, such as acting as a court of appeal, and of general supervision, which under special circumstances, and when empowered by the people, the Areopagus from time to time discharged, we will say a few words in explanation of the points already named, giving a less restricted space to those which concern its moral and religious influence. Its judicial function embraced trials for murder and manslaughter (*φόνου δίκαι, τὰ φονικά*), and was the oldest and most peculiar sphere of its activity. The indictment was brought by the second or king-archon (*ἄρχων βασιλεύς*), whose duties were for the most part of a religious nature. Then followed the oath of both parties; accompanied by solemn appeals to the gods. After this the accuser and the accused had the option of

making a speech (the notion of the proceedings of the Areopagus being carried on in the darkness of night rests on no sufficient foundation), which, however, they were obliged to keep free from all extraneous matter (*ἔξω τοῦ πράγματος*), as well as from mere rhetorical ornaments. After the first speech, the accused was permitted to go into voluntary banishment, if he had no reason to expect a favourable issue. Theft, poisoning, wounding, incendiarism, and treason, belonged also to this department of jurisdiction in the court of the Areopagus.

Its political function consisted in the constant watch which it kept over the legal condition of the state, acting as overseer and guardian of the laws (*ἐπισκοπος καὶ φύλαξ τῶν νόμων*).

Its police function also made it a protector and upholder of the institutions and laws. In this character the Areopagus had jurisdiction over novelties in religion, in worship, in customs, in everything that departed from the traditional and established usages and modes of thought (*πατριῶς, νομίμως*), which a regard to their ancestors endeared to the nation. This was an ancient and well-supported sphere of activity. The members of the court had a right to take oversight of festive meetings in private houses. In ancient times they fixed the number of the guests, and determined the style of the entertainment. If a person had no obvious means of subsisting, or was known to live in idleness, he was liable to an action before the Areopagus; if condemned three times, he was punished with *ἀτιμία*, the loss of his civil rights. In later times the court possessed the right of giving permission to teachers (philosophers and rhetoricians) to establish themselves and pursue their profession in the city.

Its strictly religious jurisdiction extended itself over the public creed, worship, and sacrifices, embracing generally everything which could come under the denomination of *τὰ ἱερά*—sacred things. It was its special duty to see that the religion of the state was kept pure from all foreign elements. The accusation of impiety (*γραφὴ ἀσεβείας*)—the vagueness of which admitted almost any charge connected with religious innovations—belonged in a special manner to this tribunal, though the charge was in some cases heard before the court of the Heliastæ. The freethinking poet Euripides stood in fear of, and was restrained by, the Areopagus (Euseb. *Præf. Evang.* vi. 14; Bayle *s. v. Eurip.*) Its proceeding in such cases was sometimes rather of an admonitory than punitive character.

Not less influential was its moral and educational power. Isocrates speaks of the care which it took of good manners and good order (*τῆς εὐκοσμίας, εὐταξίας*). Quintilian relates that the Areopagus condemned a boy for plucking out the eyes of a quail—a proceeding which has been both misunderstood and misrepresented (*Penny Cyclop.* in *voc.*), but which its original narrator approved, assigning no insufficient reason, namely, that the act was a sign of a cruel disposition, likely in advanced life to lead to baneful actions; ‘*Id signum esse perniciosissimæ mentis multisque malo futuræ si adolevisset*’ (Quint. v. 9). The court exercised a salutary influence in general over the Athenian youth, their educators and their education.

Its financial position is not well understood; most probably it varied more than any other part of its administration with the changes which the constitution of the city underwent. It may suffice to

mention, on the authority of Plutarch (*Themis*. c. 10), that in the Persian war the Areopagus had the merit of completing the number of men required for the fleet, by paying eight drachmæ to each.

In the following works corroboration of the facts stated in this article, and further details, with discussions on doubtful points, may be found:—Meursius, *Areopagus, sive de Senatu Areopagitico*, in *Theor. Gron.* t. v. p. 207; Sigonius, *De Rep. Ath.* iii. 2. p. 1568; De Canaye, *Recherches sur l'Aréopage*, pp. 273-316; *Mém. de l'Acad. des Inscr.* t. x.; Schede, *De Areop.* and Schwab *Num quod Areop. in plebiscita aut confirmanda aut rejicienda jus exercuerit legitimum*, Stutt. 1818; Mier, *Von der Blutgerichtsbarkeit des Areopag.*; Matthiä, *De Jud. Ath.* in *Misc. Philol.* Krebs, *de Ephetis*. Notices on the subject may also be found in the works of Tittmann, Heffter, Hudtwalcker, Wachsmuth, Pauly, and Winer.—J. R. B.

AREOPOLIS. [AR; AROER.]

AREPOL, SAMUEL, a Jewish rabbi of the sixteenth century belonging to Safet. He wrote *הַמִּנְחָה אֲמֵרָה* *Homilies and Commentary on the Pentateuch*. *לֵב הַקֶּסֶם* *Commentary on Ecclesiastes*, Const. 1591; *מִזְמֹר לְתוֹרָה* *On the alphabetic Psalms and on the Psalms of Degrees*, Ven. 1576; *עֵזֶר לְשׁוֹן* *On the Song of Songs*, Safet. 1579.—W. ARETAS (Ἀρέτας; Arab. حارث. v. Pococke, *Spec. Hist. Arab.* p. 58, or, in another form, حارث = حارث, Pococke, i. c. 70, 76, 77, 89), the common name of several Arabian kings. 1. The first of whom we have any notice was a contemporary of the Jewish high-priest Jason and of Antiochus Epiphanes about B.C. 170 (2 Macc. v. 8). 'In the end, therefore, he (Jason) had an unhappy return, being accused before Aretas, the king of the Arabians.' 2. Josephus (*Antiq.* xiii. 13. 3) mentions an Aretas, king of the Arabians (called Obedas, Ὀβέδας, xiii. 13. 5), contemporary with Alexander Jannæus (died B.C. 79) and his sons. After defeating Antiochus Dionysus, he reigned over Coele-Syria, 'being called to the government by those that held Damascus by reason of the hatred they bore to Ptolemy the son of Mennæus' (*Antiq.* xiii. 15. 2). He took part with Hyrcanus in his contest for the sovereignty with his brother Aristobulus, and laid siege to Jerusalem, but, on the approach of the Roman general Scaurus, he retreated to Philadelphia (*De Bell. Jud.* i. 6. 3). Hyrcanus and Aretas were pursued and defeated by Aristobulus at a place called Papyron, and

68.

lost above 6000 men. Three or four years after, Scaurus, to whom Pompey had committed the government of Coele-Syria, invaded Petra, but finding it difficult to obtain provisions for his army, he consented to withdraw on the offer of 300 talents from Aretas (*Joseph. Antiq.* xiv. 5. 1). Haver-

camp has given an engraving of a denarius intended to commemorate this event, on which Aretas appears in a supplicating posture, and taking hold of a camel's bridle with his left hand, and with his right hand presenting a branch of the frankincense-tree, with this inscription, M. SCAVRVS. EX. S. C., and beneath, REX ARETAS (*Joseph. D. Bell. Jud.* i. 8. 1).

3. Aretas, whose name was originally Æneas, succeeded Obodas (Ὀβόδας). He was the father-in-law of Herod Antipas. The latter made proposals of marriage to the wife of his half-brother Herod-Philip, Herodias, the daughter of Aristobulus their brother, and the sister of Agrippa the Great. (On the apparent discrepancy between the Evangelists and Josephus, in reference to the name of the husband of Herodias; see Lardner's *Credibility*, etc. pt. i. b. ii. ch. 5; *Works*, ed. 1835, i. 408-416). In consequence of this, the daughter of Aretas returned to her father, and a war (which had been fomented by previous disputes about the limits of their respective countries) ensued between Aretas and Herod. The army of the latter was totally destroyed; and on his sending an account of his disaster to Rome, the emperor immediately ordered Vitellius to bring Aretas prisoner alive, or, if slain, to send his head (*Joseph. Antiq.* xviii. 5. 1). Vitellius immediately marched with an army against Petra, but halted during the passover at Jerusalem. Here he received, four days after his arrival, the news of the death of Tiberius (March 16, A.D. 37); upon which, after administering the oath of allegiance to his troops, he dismissed them to winter quarters, and returned to Antioch (*Joseph. Antiq.* xviii. 5, § 3). An importance is attached to these occurrences from their connection with Paul's flight from Damascus, which we are informed (2 Cor. xi. 32) was when that city was kept by the governor under king Aretas. If we knew the exact date of this event, that of Paul's conversion might be determined, for it preceded his journey to Jerusalem, which immediately followed his flight by three years (*Gal.* i. 18). Wieseler (who is followed by Conybeare and Howson and Dean Alford) conjectures that Caligula (who was no friend to Herod Antipas, but banished him to Lyons after giving his kingdom to Herod Agrippa) restored Damascus, which had been held by preceding Arabian kings, to Aretas, at the time when he made several other territorial grants soon after his accession. It is worthy of notice that no Damascene coins of Caligula or Claudius are known, though such coins were struck under Augustus and Tiberius, and again under Nero and his successors. If, then, Paul's flight took place in A.D. 39, his conversion must have occurred in A.D. 36.

Dr. Neander is inclined to suppose a temporary forcible occupation of Damascus by Aretas at the time of the Apostle's escape (*Hist. of Planting*, etc., vol. i. p. 92), a view which is also favoured by Dr. Kitto (*D. Bible Illust.* vol. viii. 152-156). (See the article *Aretas*, by Wieseler, in Herzog's *Encyclopædie*, vol. i. 488; Conyb. and Howson, *Life of St. Paul*, vol. i. 100, 132, 2d ed.; Alford's *Greek Testament*, vol. ii. 94 (Acts ix. 23).—J. E. R.

ARETHAS, bishop of Caesarea in Cappadocia. He seems to have been the immediate successor of Andreas [ANDREAS] in that see, and to have lived, therefore, towards the close of the fifth century (*Rettig uob. Andreas und Aretas, Stud. u. Krit.*

1831, p. 748). He wrote a commentary on the Revelation, in Greek, which was printed, along with the collections of Oecumenius, at Verona in 1532. The work is avowedly a συλλογή, or catena from different authors. It is esteemed more valuable than the work of his predecessor Andreas.—W. L. A.

AREUS. In the A. V. this is the name given of the Lacedæmonian king who addressed a letter to Onias, and who is called in the Greek text Ονώδης (1 Macc. xii. 20). In verse 7 the same person is called Δαρείος. Josephus gives the name Ἀρείος, and the Vulg. Arius. As there was an Areus, a Lacedæmonian king, contemporary with Onias the high-priest, who held office B. C. 323-300, it is probable that this is the person referred to. [ONIAS.]—W. L. A.

ARGAZ (ארגז; Sept. ἄρμα), the receptacle, called in the Authorized Version, a 'coffer' (1 Sam. vi. 8, 11, 15), which the Philistines placed beside the ark when they sent it home, and in which they deposited the golden mice and emerods that formed their trespass-offering. Gesenius and Lee agree in regarding it as the same, or nearly the same thing, as the Arabian جازة, *rijaza*, which Jauhari describes as 'a kind of wallet, into which stones are put: it is hung to one of the two sides of the haudaj [a litter borne by a camel or mule] when it inclines towards the other.' Dr. Lee, however, thinks that the Hebrew word denotes the wallet itself; whereas Gesenius is of opinion that it means a *coffer* or small box [as also Fürst, who suggests ארג as the root of this word, the appended *a* answering to the *a* in the Latin *arc-a*, which is its synonyme].

ARGOB (ארגוב; Sept. Ἀργόβ), a district in Bashan, east of the Lake of Gennesareth, which was given to the half tribe of Manasseh (Deut. iii. 4, 13; 1 Kings iv. 13). The name Argob may be traced in *Ragab* or *Ragaba*, a city of the district (Joseph. *Antiq.* xiii. 15. 5; *Mishna*, tit. *Menachoth* viii. 3), which Eusebius places 15 Roman miles west of Gerasa. Burckhardt supposed that he had found the ruins of this city in those of El Hossn, a remarkable but abandoned position on the east side of the lake (*Syria*, p. 279); but Mr. Bankes conceives this to have been the site of Gamala (*Quart. Rev.* xxvi. 389). [TRACHONITIS.]

ARI. [LION.]

ARIARATHUS, one of the kings to whom letters were sent from Rome in favour of the Jews (1 Macc. xv. 22). He was the king of Cappadocia B. C. 163-130.

ARIAS MONTANO, BENITO, or ARIAS MONTANUS, BENEDICTUS, a learned Spaniard, was born at Frenxenal in 1527, and died at Seville in 1598. After pursuing his linguistic studies in various parts of Europe, he settled down to his literary labours in the mountains of Andalusia. He edited the Antwerp Polyglot Bible, in 8 vols., 1572; and gave an interlinear translation of the Hebrew, as also of the Greek of the N. T., which Walton introduced into his Polyglot, and which has often been reprinted. Besides this, many other works intended to facilitate the study of the Holy Scriptures proceeded from his pen. The most important are *Commentaria in 12 Prophetas*, Antw. 1571; *Elucidationes in 4 Evangelia*, Antw.

1573; *Comm. in Librum Josua*, Antw. 1583; *Elucidationes in Act. App., in App. Scripta et in Apocalypsin*, Antw. 1588; *Comment. in Lib. Judicum*, Antw. 1592; *Comment. in Esaiæ Sermones*, Antw. 1599; *Comment. in 30 priores Psalmos*, Antw. 1605; *Antiquitates Judaicae*, Antw. 1593, which have been incorporated in the *Critici Sacri*; *Benj. Tueddensis Itinerarium*, Ben. Ari Montano interprete, Antw. 1575. Simon speaks in depreciating terms of his translations of the Scriptures, and even goes the length of calling him "ineptissimus interpres" (*Hist. Crit. du V. T.* Bk. ii. ch. 20). The judgment of Campbell is equally severe (*Prel. Diss. to Four Gospels*, Diss. x. 2), and it must be confessed with reason, his translations being so slavishly literal as to be not only barbarous but often ridiculous. His commentaries are not characterized by much exegetical ability, but they display the author's learning and candour. They have had the distinction of a place in the *Index Expurgatorius*.—W. L. A.

ARIEL (אריאל; Sept. Ἀριήλ, 'lion of God,' and correctly enough rendered by 'lion-like,' 2 Sam. xxiii. 20; 1 Chron. xi. 22), 1. applied as an epithet of distinction to bold and warlike persons, as among the Arabians, who surnamed Ali 'The Lion of God.' [It is used simply as a proper name of a man, Ez. viii. 16.]

2. It is used as a local proper name in Is. xxix. 1, 2, applied to Jerusalem—'as victorious under God'—says Dr. Lee; and in Ezek. xliii. 15, 16, to the altar of burnt-offerings. Here Gesenius and others, unsatisfied with the Hebrew, resort to the Arabic, and find the *Ari* in آية *fire-hearth*, which, with אלה *God*, supplies what they consider a more satisfactory signification. It is thus applied, in the first place, to the altar, and then to Jerusalem as containing the altar.—J. K.

ARIMATHEA, the birth-place of the wealthy Joseph, in whose sepulchre our Lord was laid (Matt. xxvii. 57; John xix. 38). Luke (xxiii. 51) calls it a 'city of the Jews,' which may be

69.

explained by 1 Macc. xi. 34, where King Demetrius thus writes—'We have ratified unto them [the Jews] the borders of Judæa, with the three governments of Aphereum, Lydda, and Ramathaim, that are added unto Judæa from the country of Samaria.' Eusebius (*Onomast.* s. v.) and Jerome (*Epit. Paulæ*) regard the Arimathea of Joseph as the same place as the Ramathaim of Samuel, and place it near Lydda or Diospolis. Hence it has

by some been identified with the existing Ramleh, because of the similarity of the name to that of Ramah (of which Ramathaim is the dual); and because it is near Lydda or Diospolis. Professor Robinson, however, disputes this conclusion on the following grounds — 1. That Abulfeda alleges Ramleh to have been built after the time of Mohammed, or about A.D. 716, by Suleiman Abd-al Malik; 2. That Ramah and Ramleh have not the same signification; 3. That Ramleh is in a plain, while Ramah implies a town on a hill. To this it may be answered, that Abulfeda's statement may mean no more than that Suleiman *rebuilt* the town, which had previously been in ruins, just as Rehoboam and others are said to have *built* many towns which had existed long before their time; and that the Moslems seldom built towns but on old sites and out of old materials; so that there is not a town in all Palestine which is with certainty known to have been founded by them. In such cases they retain the old names, or others resembling them in sound, if not in signification, which may account for the difference between Ramah and Ramleh. Neither can we assume that a place called Ramah could not be in a plain, unless we are ready to prove that Hebrew proper names were *always* significant and appropriate. This they probably were not. They were so in early times, when towns were few; but not eventually, when towns were numerous, and took their names arbitrarily from one another without regard to local circumstances. Further, if Arimathea, by being identified with Ramah, was necessarily in the mountains, it could not have been 'near Lydda,' from which the mountains are seven miles distant. This matter, however, belongs more properly to another place [RAMAH; RAMATHAIM-ZOPHIM]; and it is alluded to here merely to shew that Dr. Robinson's objections have not entirely destroyed the grounds for following the usual course of describing Ramleh as representing the ancient Arimathea. [Some of the most recent investigators favour the opinion that we are to seek the representative of the ancient Arimathea in the village of Renthieh or Remthiah, which lies on the road between Antipatris and Lydda or Diospolis. 'As Dr. Robinson remarks,' says Mr. Thomson, 'it is sufficiently like Arimathea to be assumed as the site of that place; and from what Jerome says, it seems to me quite probable that this was really the city of that honourable counsellor 'who also waited for the kingdom of God, who went in boldly unto Pilate and craved the body of Jesus'' (*Land and Book*, ii. 290). An opinion to the same effect is given by the very competent author of Murray's Handbook to Syria and Palestine, p. 277, cf. 647. Dr. Robinson objects to this opinion partly on the same grounds on which he sets aside Ramleh, partly on the very authority on which Mr. Thomson relies, that of Jerome, and partly on the testimony of Josephus (*Later Bibl. Researches*, p. 141). As respects the testimony of Jerome, it really does not tell either for the one side or the other; all he says is, that Paula visited the village of Arimathea, which is near Lydda. Dr. Robinson, indeed, assumes that the order in which Jerome mentions the places visited by Paula is the order in which they were visited by her; and as he names Lydda after Antipatris, and Arimathea after Lydda, it is inferred that the latter could not be between Antipatris and Lydda, as Renthieh undoubtedly is.

But the assumption he has made is by no means a safe one, nor one that can be carried through the treatise in which the information in question is contained. Apart from it, however, there is nothing in what Jerome says to fix the locality of Arimathea, further than that it was not far from Lydda. Paula may have visited it on her way to Lydda, or by an excursion from that city, or on her way from Joppa to Nicopolis, for anything that Jerome says.

The testimony of Josephus furnishes a more serious objection to the identification of Renthieh with Arimathea. The latter town was in the toparchy of Thamna (Meijdel Yaba), and by no straining can this be stretched so far west as to include Renthieh. To this objection we have seen no reply, nor can we see how it is to be got over. We feel constrained, therefore, to fall in with the conclusion of Dr. Robinson that the site of the ancient Arimathea has yet to be identified. We may add also, that we are disposed to attach more weight to the objections he has urged against Ramleh being identified with that town, than the writer of the article to which these remarks are supplementary. The statement of Abulfeda is too precise and detailed to be explained away in the manner proposed; and the objection that Ramah and Ramleh cannot be identified because the names have not the same signification—the one denoting 'hilly,' and the other 'sandy'—cannot be fairly set aside by the supposition that the Moslems substituted Ramleh for Rama from some resemblance of sound. Unless we suppose names given absolutely at random without any local, personal, or circumstantial reason, it seems incredible that a people, hearing a place called a 'hill,' should call it 'sandy,' simply because the word 'sandy,' in their language, sounded something like the word 'hill.' In fine, from the use of the word Ramah, it does not necessarily follow that the town in question was in the mountains. A place may be called Hilltown without being on a mountain. But if a town were called Hilltown from being on an elevation, no people would naturally change the name to Rilltown simply because 'rill' and 'hill' sound very much alike.]

Ramleh is in N. lat. 31° 59', and E. long. 35° 28', 8 miles S. E. from Joppa, and 24 miles N. W. by W. from Jerusalem. It lies in the fine undulating plain of Sharon, upon the eastern side of a broad low swell rising from a fertile though sandy plain. Like Gaza and Jaffa, this town is surrounded by olive-groves and gardens of vegetables and delicious fruits. Occasional palm-trees are also seen, as well as the kharob and the sycamore. The streets are few; the houses are of stone, and many of them large and well built. There are five mosques, two or more of which are said to have once been Christian churches; and there is here one of the largest Latin convents in Palestine. The place is supposed to contain about 3000 inhabitants, of whom two-thirds are Moslems, and the rest Christians, chiefly of the Greek church, with a few Armenians. The inhabitants carry on some trade in cotton and soap. The great caravan-road between Egypt and Damascus, Smyrna, and Constantinople passes, through Ramleh, as well as the most frequented road for European pilgrims and travellers between Joppa and Jerusalem (Robinson, iii. 27; Raumer, p. 215). The tower, of which a figure is here given, is the most conspicu-

ous object in or about the city. It stands a little to the west of the town, on the highest part of the swell of land; and is in the midst of a large quadrangular enclosure, which has much the appearance of having once been a splendid khan. The tower is wholly isolated, whatever may have been its original destination. It is about 120 feet in height, of Saracenic architecture, square and built with well hewn stone. The windows are of various forms, but all have pointed arches. The corners of the tower are supported by tall, slender buttresses; while the sides taper upwards by several stories to the top. It is of solid masonry, except a narrow staircase within, winding up to an external gallery, which is also of stone, and is carried

70.

quite round the tower a few feet below the top (Robinson, iii. 32). In the absence of any historical evidence that the enclosure was a khan, Dr. Robinson resorts to the Moslem account of its having belonged to a ruined mosque. The tower

itself bears the date 718 A.H. (A.D. 1310), and an Arabian author (Mejr-ed-Din) reports the completion at Ramlah, in that year of a minaret unique for its loftiness and grandeur, by the sultan of Egypt, Nazir Mohammed ibn Kelawan (Robinson, iii. 38; also Volney, ii. 281). Among the plantations which surround the town occur, at every step, dry wells, cisterns fallen in, and vast vaulted reservoirs, which shew that the city must in former times have been upwards of a league and a half in extent (Volney, ii. 280).

The town is first mentioned under its present name by the monk Bernard, about A.D. 870. About A.D. 1150 the Arabian geographer Edrisi (ed. Jaubert, p. 339) mentions Ramlah and Jerusalem as the two principal cities of Palestine. The first Crusaders on their approach found Ramlah deserted by its inhabitants; and with it and Lydda they endowed the first Latin bishopric in Palestine, which took its denomination from the latter city. From the situation of Ramlah between that city and the coast, it was a post of much importance to the Crusaders, and they held possession of it generally while Jerusalem was in their hands, and long afterwards. In A.D. 1266 it was finally taken from the Christians by the Sultan Bibars. Subsequently it is often mentioned in the accounts of travellers and pilgrims, most of whom rested there on their way to Jerusalem. It seems to have declined very fast from the time that it came into the possession of the Crusaders. Benjamin of Tudela (*Itin.* p. 70, ed. Asher), who was there in A.D. 1173, speaks of it as having been formerly a considerable city. Belon (*Observat.* p. 311), in 1547, mentions it as almost deserted, scarcely twelve houses being inhabited, and the fields mostly untilled. This desertion must have occurred after 1487; for, Le Grand, *Voyage de Hierusalem*, fol. xiv., in 1547, speaks of it as a peopled town (though partly ruined), and of the 'seigneur de Rama' as an important personage. By 1674 it had somewhat revived, but it was still rather a large unwall'd village than a city, without any good houses, the governor himself being miserably lodged (Nau, *Voyage Nouveau*, liv. i. ch. 6). Its present state must, therefore, indicate a degree of comparative prosperity of recent growth.—J. K.

ARIOCH (אֲרִיּוֹחַ, ἀρωχῆς, the Arian, Fürst, Sansc. *Aryaka* venerandus, v. Bohlen), the name of—1. a king of Ellasar (Gen. xiv. 1, 9); 2. a captain of the king's guard at Babylon (Dan. ii. 14, 15); 3. a plain in Elam (Jud. i. 6, εἰρωχ).—W. L. A.

ARISTARCHUS (Ἀριστάρχος, Acts xix. 29; xx. 4; xxvii. 2; Col. iv. 10; Philem. 24), a native of Thessalonica, who became the companion of St. Paul, and accompanied him to Ephesus, where he was seized and nearly killed in the tumult raised by the silversmiths. He left that city with the Apostle, and accompanied him in his subsequent journeys, even when taken as a prisoner to Rome: indeed, Aristarchus was himself sent thither as a prisoner, or became such while there, for Paul calls him his 'fellow-prisoner' (Col. iv. 10). The traditions of the Greek church represent Aristarchus as bishop of Apamea in Phrygia, and allege that he continued to accompany Paul after their liberation, and was at length beheaded along with him at Rome in the time of Nero. The Roman martyrologies make him bishop of Thessalonica. But little reliance is

to be placed on accounts which make a bishop of almost every one who happens to be named in the Acts and Epistles; and, in the case of Aristarchus, it is little likely that one who constantly travelled about with St. Paul exercised any stationary office.—J. K.

ARISTEAS, a Jew at the court of Ptolemy Philadelphus, to whom is ascribed a history, written in Greek, of the Septuagint translation of the Hebrew Scriptures. This book was first printed in the sixteenth century, and immediately attracted much attention among the learned. Five translations of it into Latin were issued; two into German; three into Italian; two into Hebrew; one into French; and three into English. It is printed in Hody's great work, *De Bibliorum textibus originalibus*; and this learned scholar has subjected it to a criticism which has completely destroyed its claims to genuineness. Isaac Vossius ventured to defend it; but the unanimous opinion of all competent judges goes with the verdict of Hody. It is believed to be the production of some Alexandrian Jew, who wished to magnify the version used by his countrymen in Egypt. [GREEK VERSIONS.]—W. L. A.

ARISTOBULUS (*Ἀριστόβουλος*), a person named by Paul in Rom. xvi. 10, where he sends salutations to his household. He is not himself saluted; hence he may not have been a believer, or he may have been absent or dead. Tradition represents him as brother of Barnabas, and one of the seventy disciples; alleges that he was ordained a bishop by Barnabas, or by Paul, whom he followed in his travels; and that he was eventually sent into Britain, where he laboured with much success, and where he at length died.

Aristobulus is a Greek name, adopted by the Romans, and also by the Jews, and was borne by several persons in the Maccabæan and Herodian families, viz.—1. ARISTOBULUS, son and successor of John Hyrcanus. 2. ARISTOBULUS, second son of Alexander Jannæus, and younger brother of Hyrcanus, with whom he disputed the succession by arms. 3. ARISTOBULUS, grandson of the preceding, and the last of the Maccabæan family, who was murdered by the contrivance of Herod the Great, B.C. 34. 4. ARISTOBULUS, son of Herod the Great by Mariamne. [HERODIAN FAMILY.]

[This was the name also of a Jewish priest resident at the court of Ptolemy Philometor (2 Macc. i. 10), and who is supposed to be the person of whose work on the Pentateuch fragments have been preserved by Eusebius (*Præp. Ev.* vii. 14; viii. 10; xiii. 12), and Clement of Alexandria (*Strom.* pp. 411, 705, 755, etc., ed. Potter). Comp. Valcknaer, *Diatr. de Aristobulo Judæo*, Lugd. 1806.]

ARITHMETIC, or, as the word, derived from the Greek *ἀριθμός*, signifies, the science of numbers or reckoning, was unquestionably practised as an art in the dawn of civilization; since to put things, or their symbols, together (addition), and to take one thing from another (subtraction), must have been coeval with the earliest efforts of the human mind; and what are termed multiplication and division are only abbreviated forms of addition and subtraction. The origin, however, of the earliest and most necessary of the arts and sciences is lost in the shades of antiquity, since it arose long before the period when men began to take specific notice and make some kind of record of their discoveries and pursuits. In the absence of positive informa-

tion we seem authorized in referring the first knowledge of Arithmetic to the East. From India, Chaldaea, Phœnicia, and Egypt, the science passed to the Greeks, who extended its laws, improved its processes, and widened its sphere. To what extent the Orientals carried their acquaintance with arithmetic cannot be determined. The greatest discovery in this department of the mathematics, namely, the establishment of our system of ciphers, or of figures considered as distinct from the letters of the alphabet, belongs undoubtedly not to Arabia, as is generally supposed, but to the remote East, probably India. It is to be regretted that the name of the discoverer is unknown, for the invention must be reckoned among the greatest of human achievements. Our numerals were made known to these western parts by the Arabians, who, though they were nothing more than the medium of transmission, have enjoyed the honour of giving them their name. These numerals were unknown to the Greeks, who made use of the letters of the alphabet for arithmetical purposes.

The Hebrews were not a scientific, but a religious and practical nation. What they borrowed from others of the arts of life they used without surrounding it with theory or expanding and framing it into a system. So with arithmetic, by them called *מנח*, from a word signifying to determine, limit, and thence to number. Of their knowledge of this science little is known more than may be fairly inferred from the pursuits and trades which they carried on, for the successful prosecution of which some skill at least in its simpler processes must have been absolutely necessary; and the large amounts which appear here and there in the sacred books serve to shew that their acquaintance with the art of reckoning was considerable. Even in fractions they were not inexperienced (Gesenius, *Lehrgeb.* p. 704). For figures, the Jews, after the Babylonish exile, made use of the letters of the alphabet, as appears from the inscriptions on the so-called Samaritan coins (Eckhel, *Doctr. Num.* i. iii. 468); and it is not unlikely that the ancient Hebrews did the same, as well as the Greeks, who borrowed their alphabet from the Phœnicians, neighbours of the Israelites, and employed it instead of numerals.—J. R. B.

ARK, NOAH'S (*תֵּבָה*; Sept. *κιβωτός*; Vulg. *arca*).

The Hebrew word used to designate Noah's Ark appears to be foreign, since it has no native etymology. (Comp. Gesen. *Theor.* s. v.) Probably it is Hebraicized from the Egyptian TAB or TBA, a 'chest or sarcophagus' (Bunsen, *Egypt's Place*, i. 482), preserved in the Coptic *Ἄβιβο, Ἰβιβο arca, arca sepulcralis*; for in the LXX., where the Hebrew text has it of the ark in which Moses was exposed, it is represented by *θηβη* (var. *θηβη*) (Exod. ii. 3, 5), which does not seem to be a Greek word, and is explained by the Greek lexicographers and scholiasts (ap. Schleuser, *Lex. in LXX.* s. v.) in a manner that makes it almost certain that they considered it Egyptian, or at least not Greek. The primary meaning seems to be a chest; for not only has the Egyptian word that signification, but also the terms used by the LXX., and in the case of Noah's Ark, by Josephus, who employs *λάραξ*, a 'coffer' or 'chest,' do not justify the idea of a ship. The Ark of the Covenant is, however, called by a different name, *אֲרוֹן*, which is elsewhere used in a general sense for a chest and

the like, so that **הַתְּבֵרָה**, since it is applied only to Noah's Ark, and that in which Moses was exposed, seems to be restricted in Hebrew to receptacles which floated. Berosus, however, uses for the Ark of Xisuthrus the words *σκάφος, ναῦς, and πλοῖον* (*Cory's Ancient Fragments*, 2 ed. pp. 26-29).

The exact form and dimensions of Noah's ark cannot be determined, but it is not difficult to arrive at general conclusions which must be near the truth. From the narrative in Genesis we learn that it was made of 'gopher' wood, was pitched within and without, and was three hundred cubits in length, fifty cubits in breadth, and thirty cubits in height. It was lighted, though not necessarily from the roof, for rain would have been thus admitted: it had a door at the side: and consisted of three storeys, divided into cells. The most difficult matter in the description is what refers to the manner in which the Ark was lighted. The words **לְהַאֲרִיךְ אֶת־הַתְּבֵרָה** may be most probably rendered, 'Light shalt thou make for the Ark, and by a cubit shalt thou make [or 'finish'] it from above' (Gen. vi. 16). It has been supposed that one window only was made to the Ark; but when, in a later passage, 'the window' is mentioned, a definite term (**חַלּוֹן**) is employed (viii. 6), whence it would seem probable that the word 'light' is used for several windows. But, on the other hand, the manner in which the window is mentioned in the latter place, 'Noah opened the window of the ark which he had made,' and the circumstance that at a later time he 'removed the covering of the ark, and looked,' seem to imply but one window. The second passage may, however, only mean that he pushed aside a piece of matting or a shutter. The difficulty of there being but a single window led the Rabbins to imagine that the Ark was lighted by a miraculous stone, but it may have been so constructed as to admit light between the planks or beams of its sides. The second clause of the passage as to the lighting of the Ark can scarcely be held to refer to the window or windows, for this would require a strained construction, but probably relates to the general dimensions of the Ark itself, meaning that the prescribed number of cubits was not to be deviated from, or that there were to be no fractions, or that it was to have the angles of its roof cut off by a sloping piece of a cubit's breadth. Although we know nothing as to the precise form of the Ark, it is most probable that it was similar to that of the rafts still used on the Euphrates and Tigris, which are rectangular, and have in the midst a flat-roofed cabin resembling a house. If so, the measures would probably be those of the square structure and not of the raft. If, as we shall next shew, there is reason to suppose that the Deluge was partial, and in consequence especially overspread the tract through which flow the Euphrates and Tigris, we may look for the form of the Ark in that of the rafts which have been used in their navigation for many centuries before the present age.

The purpose of the Ark was to preserve Noah and his family, altogether eight souls (vii. 7, 13; 1 Pet. iii. 20), with certain animals, from perishing in the Flood sent on account of the sins of mankind. The animals were spared to replenish the desolated

lands, as well as for the after-sustenance of Noah and his household. The beasts were taken, of the clean kinds, by seven pairs each, and of the unclean, by single pairs; the birds, by seven pairs each, and the creeping things, apparently by single pairs. Thus of the more useful creatures there were larger numbers, shewing that the advantage of man was a primary object in their preservation. When it was held that the Deluge was universal, great pains were taken to shew how all the species of animals could have been contained in the Ark. The discovery of new species has, however, long since rendered any more such computations needless, unless, perhaps, their authors would be willing to accept to the fullest extent some theory of development, and to carry back the Deluge to an unreasonably remote age. The progress of geology has tended to shew that there is not distinct physical evidence of one great deluge, universal as to the earth, and the advance of Hebrew criticism has led to a very general admission among scholars that the Biblical narrative does not require us to hold such an event to have occurred. The destruction of the children of Adam, and the animals of the tract they inhabited, is plainly declared in the narrative, but beyond this we cannot draw any positive conclusions from it. The word rendered 'earth' in the authorized version may as well mean 'land,' and the want of universal terms in Hebrew must make us cautious in laying much stress upon what would seem to imply the universal character of the Flood. We have indeed reason to infer its partial nature from the statement that the waters rose fifteen cubits and covered the mountains (Gen. vii. 20), which appears to mean either that the whole height of the flood was fifteen cubits, or that when the waters had covered the high hills (ver. 19), they rose still fifteen cubits further, until the mountains also were covered: mountains, it must be remembered, in Semitic phraseology, often being no more than small eminences (See *The Genesis of the Earth and of Man*, 2d ed. pp. 91 *seqq.*) We must, however, be careful not to underrate the importance of this great catastrophe, the character of which is shewn by the strong recollection of it that the descendants of Noah have preserved in all parts of the world.

The traditions respecting the Ark may be ranged under two classes, those which agree in relating that it rested where the Bible states that it did so, or not far from thence, and those which place both Deluge and Ark in distant countries. At the head of the first class stands the narrative of Berosus the Babylonian historian, which may be thus epitomized. In the time of Xisuthrus, the tenth king of the Chaldeans, there occurred a great deluge. He was warned by Cronus of the approaching destruction of mankind, and ordered to construct a vessel, and take with him into it his relations and friends, and to put in it food and drink, and birds and quadrupeds. He accordingly built a vessel, five (Syncellus) or fifteen (Eusebius) stadia long, and two stadia broad, and put everything into it, and made his wife and children and friends to enter. When the flood had abated, Xisuthrus sent forth birds, which twice returned, but did not so on the third occasion: then, having broken or divided a part of the ship's covering, he found that it had rested on a certain mountain. He then came forth, and with some who had been in the vessel disappeared. Of his ship a portion remained, or was said to remain, on a mountain of the

Cordixians in Armenia, in the time of Berous, and some scraped off bitumen from it to serve for charms (*Ejus navigii, quod demum substitit in Armenia, fragmentum aliquod in Cordixeorum Armeniaco monte nostra adhuc ætate reliquum esse aiunt. Quin et erasum bitumen quidam inde referunt remediū amuletique causa ad infausta quæque averruncanda, Euseb. Arm.* Τοῦ δὲ πλοίου δὲ τούτου κατακλιθέντος ἐν τῇ Ἀρμενίᾳ ἔτι μέρος τι ἐν τοῖς Κορκυραίων ὄρεσι τῆς Ἀρμενίας διαμένειν, καὶ τινὰς ἀπὸ τοῦ πλοίου κομίζου ἀποξύνοντας ἀσφαλτον, χρᾶσθαι δὲ αὐτὴν πρὸς τοὺς ἀποτροπισασμοὺς. *Synceel.* See the whole narrative in Bunsen's *Egypt's Place*, i. pp. 713-715, Cory's *Ancient Fragments*, 2d ed. pp. 26-29). The remarkable agreement of most of these particulars with the account in the Bible makes the concluding statement worthy of attention. Armenia is the same as Ararat, but the locality of the resting-place is more nearly defined by the mention of a mountain of the Cordixians (for the reading in Syncellus is obviously corrupt), a people whom we recognize in the modern Kurds, the inhabitants of the ancient Cordyene or Gordyene. If Berous mention the remaining in his time of part of the Ark on only hearsay evidence, as Eusebius puts it, we can scarcely insist on the inaccessibility of the summit of Ararat to the ancients, nor is it necessary that the former should speak of a summit unless he were describing a true remnant of the Ark. The same tradition is still extant, as Sir Henry Rawlinson stated in some important observations made at a meeting of the Royal Geographical Society on Nov. 8, 1858, when an account of the ascent of Mount Demawend by Mr. R. S. Thomson and Lord Schomberg Kerr had been read. Professor Kinkel has kindly placed at our disposal his notes made at the time, from which we take the following extract:—'The Ararat, now called so, in Armenia, is not the Biblical Ararat. The Biblical Ararat is a mountain north of Mosul [El-Mósil], and lies in the country of Ararat, to which the sons of Senacherib fled. It is now called Jebel Joodee, and pilgrims still go to the place, returning with bits of wood, taken, as they say, from the Ark. I have seen such bits myself in the hands of returned pilgrims. This is all I can say; of course, I do not mean to say that these are real fragments of the ark. I believe the Ararat of Armenia bears this name only for about five hundred years.' Here we have a consistent tradition, which has been unchanged for more than twenty-one centuries, although, curiously enough, both Berous (if we follow the better text) and Sir Henry Rawlinson give it only upon hearsay evidence.

The remarkable tradition of Apamea in Phrygia can scarcely be regarded as one of those that remove the place of the resting of the Ark, for those who hold a partial Deluge can hardly limit it to the plains of the Euphrates and Tigris. We have it on numismatic evidence alone. Certain of the coins of that place, struck in the second century of the Christian era, bear representations of the Ark, accompanied by the name of Noah. The reverses of two specimens in the French Collection are here engraved, from casts in the British Museum.

The coins may be described as follows: 1. Copper coin of Severus. Obverse: ATT. K. A. CEIIIT. CEOTHPOS II. TI. Bust of Severus, laureate and wearing paludamentum and cuirass, to the right. Reverse: EIII AΓΩΝΘΕΤΟΤ ΑΡΤΕΜΑ. Γ. ΑΠΑ-

ΜΕΩΝ. Woman and man, to the left, in an attitude of adoration? behind them, a chest, within which, man and woman, to the left; upon the side of the chest, ΝΩΕ, the third letter indistinct: above, dove? flying to the right, bearing branch: upon the chest, a sunilar bird. 2. Copper coin of Philip the Younger. Obv. ATT. K. ΙΟΥΑ. ΦΙΛΙΠΠΙΟΣ ΑΤΤ. Bust of Philip, laureate and wearing paludamentum and cuirass, to the right. Rev. EII. M. ΑΤΡ. ΑΛΕΞΑΝΔΡΟΤ Β. ΑΡΧΙ. ΑΠΙΑΜΕΩΝ. The same type: the letters on the chest are illegible. Of the genu-

71.

ness of these coins we are assured, on the excellent authority of Mr. Waddington, and his opinion, as well as an examination of the casts from which the engraving was made, convince us that the idea we formerly entertained, that the letters ΝΩΕ may be a modern addition, or can be explained otherwise than as the name of the patriarch, must be abandoned (*Enc. Brit. Numismatics*, p. 378). The latter is a point of great importance, for upon it depends the nature of the reference to the Noachian Flood, which must therefore be held to be direct, and not an indirect reference through the story of Deucalion. It must be remembered that the traditions and myths of this part of Asia are not of a strictly Greek character. The tradition of Annacus or Nannacus at Iconium, not unreasonably supposed to refer to Enoch, of the line of Seth, is especially to be noted. The supposition that a Jewish or Christian community could have struck these coins is wholly untenable, and therefore we can only consider that there was at Apamea a tradition of the Deluge. The second name, Cibotus, by which it was distinguished, Ἀπάμεια Κιβωτός, or Ἀπάμεια ἡ Κιβωτός, from other cities called Apamea, is an important point, since that very word is used by the LXX. for Noah's Ark, and the latter is represented in the form of a chest on the Apamean coins. It is probable that Cibotus was the name of an earlier city on the same site as Apamea, which was called

after Apame, the wife of Seleucus I. The extraordinary agreement with the Biblical account of all the particulars in the subject upon the Apamean coins is not less striking than the main agreement, of the narrative of Berossus. Whence, it may be asked, was this knowledge of the Apameans derived? If it be supposed to have been borrowed from the Jews or the Christians, or their Scriptures, we must imagine the same of the account given by Berossus. It is more reasonable to hold that both were very ancient traditions, independent of the narrative of the sacred historian.

The traditions of the Noachian Deluge which make the place where the Ark rested, or that of the new settlement of mankind, distant from what is indicated by the Biblical narrative, form too wide a subject to be here discussed. [DELUGE.] There are, however, some matters of great importance which must not be passed by. As we have before remarked, the extraordinary extent of these traditions, both as to races and as to territory, proves the magnitude of the catastrophe, a point which the increasing conviction that the Flood was partial as to the earth has tended to throw into the background. The Ark, or a raft, or boat, is found in many of these traditions, and when such is the case they may be regarded as more probably referring solely to Noah's Flood, than as records of local inundations to which some particulars of the great Cataclysm had been attached by the natural confusion of tradition. The absence of any mention of the Deluge in the history and mythology of Egypt is a remarkable exception, on which, however, the advocates of more than one origin of the human race cannot lay stress, since the Egyptians were unmistakably connected with the Semitic race in their language and physical characteristics. The probable reason is to be found in the absence of tradition in the Egyptian annals, which pass from the darkness of mythology to the light of history, as though the Noachian colonists had suppressed in Egypt their recollections of Shinar to assume the character of autochthons.

With the traditions of the Flood and the Ark, we do not connect those architectural works which have been fancifully assigned to such an origin, such as the Celtic kist-vaens (cut 72), which have

72.

no more resemblance to an ark than to a rude chest or house. The idea of connecting the Ark with the Pagan religions of antiquity is now also exploded by the advance of criticism. Those who wrote in favour of these and like theories expended labour and learning in pursuits which could only lead them astray.—R. S. P.

ARK OF THE COVENANT (אָרֹן, and, distinctively, אָרֹן הַעֲדוּת, 'the Ark of the Law,' here 'the Decalogue' (Exod. xxv. 22; xxvi. 33); אָרֹן יְהוָה, 'the Ark of the Covenant of the LORD' (Deut. x. 8; xxxi. 9, 25); אָרֹן הַבְּרִית, 'the Ark of

the Covenant' (Josh. iii. 6; iv. 9); אָרֹן יְהוָה, 'the Ark of the LORD' (1 Sam. v. 34; vi. 8, seq.); אָרֹן אֱלֹהִים, 'the Ark of God' (1 Sam. iii. 3); LXX. and N. T. *κιβωτός*; Vulg. *arca*).

The Hebrew word אָרֹן, used for the Ark of the Covenant, has no connection with that which designates Noah's Ark. (ARK, NOAH'S.) It comes from the root אָרָה, 'he or it collected or gathered,' and is used for chests, as a money-chest (2 Kings xii. 10, 11), and a coffin, in the case of Joseph's (Gen. l. 26). It has, however, no connection with the Egyptian term for a coffin, *KARS* or *KRAS*.

The ark was made of shittim wood, which cannot be doubted to be the wood of one or more species of acacia, still growing in the peninsula of Sinai. (See art. SHITTAH, SHITTIM.) It was two cubits and a half in length, and a cubit and a half both in breadth and height, so that its form was probably oblong, although we cannot go so far as to conclude that it was rectangular. Within and without, it was overlaid with pure gold. Upon it was a crown of gold, which may have been a border or rim (comp. Exod. xxv. 25), running round the upper part of the sides. There were four rings of gold, two on either side, one at each of the 'feet,' probably corners (comp. ver. 26), in which rested, not to be taken away, staves of shittim wood, overlaid with gold, by which the ark was to be borne.

The lid or cover of the Ark (כַּפֹּרֶת, *λαστήριον*, *λαστήριον ἐπιθεμα*), commonly called the Mercy-seat, after the rendering of the LXX., also used in the N. T., was of the same length and breadth, and of pure gold. [MERCY-SEAT.] There were two golden cherubim of beaten work upon it, one at either end, facing one another, and looking towards the Mercy-seat, which was covered by their outstretched wings. Bezaleel made the Ark according to the Divine directions. (Exod. xxv. 10-22·xxxvii. 1-9; Deut. x. 1-5; Heb. ix. 4, 5).

Within the Ark were deposited the Tables of the Law, especially commanded to be there placed, a golden pot with manna, and Aaron's rod that budded. Some suppose that a copy of the book of the Law was also placed there, but it is said to have been put 'by the side' of the Ark, which can scarcely be inferred to mean inside (Exod. xxv. 16, 21; xl. 20; Deut. x. 1-5; 1 Kings viii. 9; Exod. xvi. 32-34; Num. xvii. 10; Deut. xxxi. 24-27; Heb. ix. 4). We read that when Solomon brought the Ark into the Temple '[there was] nothing in the ark save the two tables of stone, which Moses put there at Horeb' (1 Kings viii. 9), where the tables only may be mentioned as larger than the other objects, or because the rod may have perished, and the pot of manna and book of the Law, if ever within it, been removed. It may be remarked that the Jewish shekels and half-shekels usually, and, we believe, rightly, assigned to Simon the Maccabee, have on the one side, a pot or vase, and on the other, a branch bearing three blossoms, usually supposed to represent Aaron's rod and the pot of manna.*

We cannot attempt to define the object of the Ark. It was the depository of the Tables, and thus

* Cavedoni has objected to this explanation, but his arguments do not seem to us conclusive (*Numismatica Biblica*, pp. 28, seqq.)

of the great document of the Covenant. It seems also to have been a protest against idolatry and materialism. The Mercy-seat was the place where God promised His presence, and He was therefore addressed as dwelling between the cherubim. On this account the Ark was of the utmost sanctity, and was placed in the Holy of Holies, both of the Tabernacle and of the Temple. When the Israelites were moving from one encampment to another, the Ark was to be covered by Aaron and his sons with three coverings, and carried by the sons of Kohath (Num. iv. 4-6, 16). It was borne in advance of the people, and the journey was thus providentially directed, as we read: 'And they departed from the mount of the LORD three days' journey; and the ark of the covenant of the LORD went before them in the three days' journey, to search out a resting-place for them. And the cloud of the LORD [was] upon them by day, when they went out of the camp. And it came to pass, when the ark set forward, that Moses said, Arise, O LORD, and let thine enemies be scattered; and let them that hate thee flee before thee. And when it rested, he said, Return, O LORD, unto the ten thousand thousands of Israel' (Num. x. 33-36). It was in this manner that the Ark passed in advance through Jordan, and remained in the bed until the people had gone over, when it was brought out and the waters returned (Josh. iii. iv.) So too was the Ark carried around Jericho when it was compassed (vi. 1-20). Joshua placed the Tabernacle at Shiloh, and the Ark does not seem to have been removed thence until the judgeship of Eli, when the people sent for it to the army, that they might gain success in the war with the Philistines. Yet the Israelites were routed and the Ark was taken (1 Sam. iv. 3-11). After seven months, during which the majesty of God was shewn by the plagues of the inhabitants of each town to which it was brought, and the breaking of the image of Dagon, the Philistines hastened, on the advice of their priests and diviners, to restore the Ark to the Israelites. These incidents and those of the coming of the Ark to Beth-shemesh, where the people were smitten for looking into it, shew its extremely sacred character, no less than does the death of Uzzah, when he attempted to steady it, on the journey to Jerusalem, an event which caused David to delay bringing it in. It is noticeable that it was carried in a cart both when sent from Ekron, and, at first, when David brought it to Jerusalem, though after the delay on the latter occasion it was borne by the Levites in the ordained manner (1 Chron. xv. 11-15, 2 Sam. vi. 13). It was then placed on Mount Zion, until Solomon removed it to the Temple. From the statement that Josiah commanded the Levites to place the Ark in the Temple, and to bear it no longer on their shoulders (2 Chron. xxxv. 3), it seems probable that Amon had taken it out of the sanctuary, or else that the Levites had withdrawn it from the Temple then or in Manasseh's time, and the finding of the book of the Law under Josiah favours this idea (2 Kings xxii. 8; 2 Chron. xxxiv. 14). A copy of the Law was deposited with, or, as some suppose, in the Ark, as already noticed, and it seems that this was the copy from which the king was required to write his own (Deut. xvii. 18-20). But perhaps the Ark was only removed while the Temple was repaired. It is generally believed that it was destroyed when the Temple was burnt by the Babylonians,

and it is certain that it was not contained in the Second Temple. Some imagine that a second ark was made, but the direct statement of Josephus that the Holy of Holies of the Second Temple was empty (B. J. v. cap. v. § 5), and the negative evidence afforded by the silence of the books of Ezra, Nehemiah, and the Maccabees, as to an ark, when the sacred vessels after the Captivity are mentioned, make this a very doubtful conjecture. See, however, Prideaux, i. p. 207, and Calmet, *Dissertation sur l'Arche de l'Alliance*.

As we have already indicated, the exact form of the Ark has not been discovered from the statements of Scripture. Certain similarities between arks of the ancient Egyptians, and the description of the Ark, have led to a curious inquiry, which we shall state in the words of Dr. Kitto, from the earlier editions of this work. The mere form, however, is not the only matter involved; the inquiry opens the question whether Moses adopted, or was commanded to adopt, anything from the Egyptians. If this question be answered affirmatively we must remember that the Egyptian religion preserved traces of a primæval revelation (*Enc. Brit. Egypt*), and also that many rites or observances of Egypt may have been of human origin and yet harmless. It is very important to remark that we have no evidence, as far as the writer is aware, of the use of arks in Egypt before the date of the Exodus, according to Hales's reckoning; and therefore, as the Egyptians adopted divinities from their heathen neighbours, there is no reason why they should not have taken the use of arks from the Israelites, when they had heard of the events of the conquest of Canaan.

'We now come to consider the design and form of the Ark, on which it appears to us that clear and unexpected light has been thrown by the discoveries which have of late years been made in Egypt, and which have unfolded to us the rites and mysteries of the old Egyptians. The subject may be opened in the following words, from the two volumes on the *Religion and Agriculture of the Ancient Egyptians*, which have been published by Sir J. G. Wilkinson since we first had occasion to notice this subject (see *Pictorial Hist. of Palestine*, pp. 247-250):—'One of the most important ceremonies was the 'procession of shrines,' which is mentioned in the Rosetta stone, and is frequently represented on the walls of the temples. The shrines were of two kinds: the one a sort of canopy; the other an ark or sacred boat, which may be termed the great shrine. This was carried with grand pomp by the priests, a certain number being selected for that duty, who supported it on their shoulders by means of long staves passing through metal rings at the side of the sledge on which it stood, and brought it into the temple, where it was deposited upon a stand or table, in order that the prescribed ceremonies might be performed before it. The stand was also carried in procession by another set of priests, following the shrine, by means of similar staves; a method usually adopted for carrying large statues and sacred emblems, too heavy or too important to be borne by one person. The same is stated to have been the custom of the Jews in some of their religious processions (comp. 1 Chron. xv. 2, 15; 2 Sam. xv. 24; and Josh. iii. 12), as in carrying the Ark 'unto his place, into the oracle of the house, to the most holy [place],' when the Temple was built by Solomon (1 Kings viii. 6).'

... 'Some of the sacred boats, or arks, contained the emblems of Life and Stability, which, when the veil was drawn aside, were partially seen; and others presented the sacred beetle of the sun, overshadowed by the wings of two figures of the goddess Thmei, or Truth, which call to mind the cherubim of the Jews' (*Anc. Egyptians*, 3d ed. v. pp. 271, 272, 275, and woodcut No. 469, p. 276).

In reading this passage, more points of resemblance than occurred to Sir J. G. Wilkinson will strike the Biblical student, and will attract his close attention to the subject. In the above description three objects are distinguished:—1. The 'stand;' 2. The boat or 'ark;' 3. The 'canopy.' This last is not, as the extract would suggest, an alternative for the second; but is most generally seen with and in the boat. This is shewn in the first cut, which exhibits all the parts together, and at rest.

73.

74.

The points of resemblance to the Jewish Ark in the second cut are many and conspicuous; as in the 'stand,' which, in some of its forms, and leaving out the figures represented on the sides, bears so close a resemblance to the written description of the Hebrew Ark, that it may safely be taken

as an authentic illustration of its form. Then the cherubim of the Hebrew ark find manifest representatives in the figures facing each other, with wings spread inwards and meeting each other, which we find within a canopy or shrine which sometimes rests immediately upon this 'stand,' but more generally in the boat, which itself rests thereon. These are shewn in the annexed cut (75), in which

75.

the winged figures are, in their position, if not in their form, remarkably analogous. We direct attention also to the hovering wings above, which are very conspicuous in all such representations. This part of the subject is interesting; but, as it will obtain separate attention [CHERUBIM], we omit particular notice of it here. Other analogies occur in the persons who bear the shrine—the priests; and in the mode of carrying it, by means of poles inserted in rings; and it is observable that, as in the Hebrew Ark, these poles were not withdrawn, but remained in their place when the shrine was at rest in the temple. Such are the principal resemblances. The chief difference is, the entire absence, in the Jewish Ark, of the boat, in which most of the idolatrous objects were assembled. There are, indeed, circumstances which might suggest the idea that the 'mercy-seat' was not, as commonly supposed, the lid of the Ark, but such a covering or canopy as we see in the Egyptian shrines. The ground relied upon as shewing that it was the lid, namely, that its dimensions were the same as those of the Ark, applies equally to the canopy, the bottom of which is usually of the same dimensions as the top of the stand or chest which answers to the Jewish Ark. The fact, however, that the cherubim stood upon the mercy-seat, seems to shew that it was the lid, and not the canopy; and the absence of this must

76.

therefore be taken as another difference. To shew the effect of these conclusions, we take the stand, as already represented (in cut 74), and we

place thereon, without alteration (but without the canopy), the winged figures as they appear in an Egyptian shrine (the same as in cut 75); and we need not point out that the representation, thus formed without any alteration of the parts, affords a most striking resemblance to one of the two forms of the Ark with the cherubim above, which scholars and artists, wholly unacquainted with Egyptian antiquities, have drawn from the descriptions of the Jewish Ark which we find in Exodus, as represented in the annexed cut (77). Again, we take the same

stiff-necked and rebellious people were incapable (as a nation) of adhering to that simple form of

77.

ark, and place thereon the figures of another shrine (78); and we compare this with another of

78.

the common forms of the Jewish Ark as drawn from descriptions (79). These resemblances and differences appear to us to cast a strong light, not only on the form, but on the purpose of the Jewish Ark. The discoveries of this sort which have lately been made in Egypt, have added an overwhelming weight of proof to the evidence which previously existed, that the 'tabernacle made with hands,' with its utensils and ministers, bore a designed external resemblance to the Egyptian models; but purged of the details and peculiarities which were the most open to abuse and misconstruction. [?] That the Israelites during the latter part of their sojourn in Egypt followed the rites and religion of the country, and were (at least many of them) gross idolaters, is distinctly affirmed in Scripture (Josh. xxiv. 14; Ezek. xxiii. 3, 8, 19); and is shewn by their ready lapse into the worship of the 'golden calf;' and by the striking fact that they actually carried about with them one of these Egyptian shrines or tabernacles in the wilderness (Amos. v. 26). From their conduct and the whole tone of their sentiments and character, it appears that this

79.

worship and service which is most pleasing to God.*

The parts of the Egyptian shrine which are omitted in the Ark are the *boat* and the *canopy*: the boat, probably because it was not only intimately connected by its very form with the Arkite worship, to which the previous article alludes, † but [also] because it was the part which was absolutely crowded with idolatrous images and associations; and the canopy, probably because it often shrouded the image of a god, whereas its absence made it manifest that only the symbolic cherubim rested on the Ark. The parts retained were the stand or chest, which was not an object of idolatrous regard

80.

even among the Egyptians, and the winged figures, which were purely symbolical, and not idolatrous representations.' [?]-R. S. P.

* The corrupt Israelites probably rather followed an idolatry of the Shepherd strangers than that of the Egyptians, but had they adopted the idolatry of Egypt, we should suppose that all likeness to its usages would have been especially avoided in the Law. We believe that it was avoided, for the reason that nothing would have been allowed to be borrowed from heathen worship of any kind.—R. S. P.

† The idea of what is called 'Arkite worship' must be abandoned.—R. S. P.

ARKITE, THE (הַרְקִיטִי; Sept. Ἀρκαίος), one of the tribes mentioned in Gen. x. 17; 1 Chron. i. 15, as descended from the Phœnician or Sidonian branch of the great family of Canaan. This, in fact, as well as the other small northern states of Phœnicia, was a colony from the great parent state of Sidon. Arka, or Arca, their chief town, lay between Tripolis and Antaradus, at the western base of Lebanon (Joseph. *Antiq.* i. 6, 2; Jerome, *Quæst. in Gen.* x. 15). Josephus (*Antiq.* viii. 2, 3) makes Baanah—who in 1 Kings iv. 16, is said to have been superintendent of the tribe of Asher—governor of Arka by the sea; and if, as commonly supposed, the capital of the Arkites is intended, their small state must, in the time of Solomon, have been under the Hebrew yoke. Subsequently Arka shared the lot of the other small Phœnician states in that quarter; but in later times it formed part of Herod Agrippa's kingdom. The name and site seem never to have been unknown, although for a time it bore the name of Cæsarea Lebani from having been the birth-place of Alexander Severus (Mannert, p. 391). It is repeatedly mentioned by the Arabian writers (Michaelis, *Spicil.* pt. ii. p. 23; Schultens, *Vita Saladini*; Abulfeda, *Tab. Syriae*, p. 11). It lay 32 R. miles from Antaradus, 18 miles from Tripoli, and, according to Abulfeda, a parasang from the sea. In a position corresponding to these intimations, Shaw (*Observat.* p. 270), Burckhardt (*Syria*, p. 162), and others noticed the site and ruins. Burckhardt, in travelling from the north-east of Lebanon to Tripoli, at the distance of about four miles south of the Nahr-el-kebir (Eleutherus), came to a hill called Tel-Arka, which, from its regularly flattened conical form and smooth sides, appeared to be artificial. He was told that on its top were some ruins of habitations and walls. Upon an elevation on its east and south sides, which commands a beautiful view over the plain, the sea, and the Anzeyry mountains, are large and extensive heaps of rubbish, traces of ancient dwellings, blocks of hewn stone, remains of walls, and fragments of granite columns. These are no doubt the remains of Arka; and the hill was probably the acropolis or citadel, or the site of a temple. [Robinson, *Later Res.* p. 579.]

ARM. This word is frequently used in Scripture in a metaphorical sense to denote power. Hence, to 'break the arm' is to diminish or destroy the power (Ps. x. 15; Ezek. xxx. 21; Jer. xlviii. 25). It is also employed to denote the infinite power of God (Ps. lxxxix. 13; xlviii. 2; Is. liii. 1; John xii. 38). In a few places the metaphor is, with great force, extended to the action of the arm, as —'I will redeem you with a stretched out arm' (Exod. vi. 5), that is, with a power fully exerted. The figure is here taken from the attitude of ancient warriors baring and outstretching the arm for fight. Comp. Is. lii. 10; Ez. iv. 7; Sil. Ital. xii. 715, etc. (See Weyss's *Clavis Symbolica*, pp. 23, 24.)

ARMAGEDDON (Ἀρμαγεδών, probably *Mount Megiddo* = הַר־מְגִידוֹ), the place where the kings of the east are represented as gathered, Rev. xvi. 16. As the force of the statement here evidently rests on the significancy of this word, it is important to fix that. Some prefer an etymological explanation, and others an historical. Passing over a host of merely conjectural derivations (of which a collection may be found in the *Critici Sacri* and Poole's

Synopsis), the following may be noticed:—1. It is from הַרמָגָד, *excidium*, and גִּדְוֹן, *exercitus eorum* (Drusius, *Ad vocc. Heb. N. T. Comment.* p. 16); 2. it is from הַר and מְגִידוֹן, and means *Mount of the Congregation*, the Mons Janiculus (Grotius, *in loc.*); 3. it is from הַר and נֹר, and signifies *Mount of pressure*, or of the compressed multitude, i. e., Rome (Ewald *in loc.*) But, as the diversity of these etymologies shews the uncertainty of this method of interpretation, and as a word which needed to be thus interpreted could not convey much instruction to John's first readers, it seems better to resort to the historical interpretation. Megiddo was famous in the sacred history as the place where the Canaanitish kings were overthrown by Israel, 'and hence by the plain where the antichristian kings shall congregate against Christ and his church being thus named, it is intimated that it shall be with those kings as it was with the Canaanitish kings at Megiddo' (Düsterdieck *in loc.*) Comp. Zech. xii. 11.—W. L. A.

ARMENIA, a country of Western Asia, is not mentioned in Scripture under that name, but is supposed to be alluded to in the three following Hebrew designations, which seem to refer either to the country as a whole, or to particular districts. I. *Ararat* אַרְרָט, the land upon (or over) the mountains of which the ark rested at the Deluge (Gen. viii. 4); whither the sons of Sennacherib fled after murdering their father (2 Kings xix. 37; Is. xxxvii. 38); and one of the 'kingdoms' summoned, along with Minni and Ashkenaz, to arm against Babylon (Jer. li. 27). That there was a province of Ararat in ancient Armenia, we have the testimony of the native historian, Moses of Chorene. It lay in the centre of the kingdom, was divided into twenty circles, and, being the principal province, was commonly the residence of the kings or governors. For other particulars respecting it, and the celebrated mountain which in modern times bears its name, see the article ARARAT. II. *Minni* מִנִּי is mentioned in Jer. li. 27, along with Ararat and Ashkenaz, as a kingdom called to arm itself against Babylon. The name is by some taken for a contraction of 'Armenia,' and the Chald. in the text in Jeremiah has הַרמִינִי. There appears a trace of the name Minni in a passage quoted by Josephus (*Antiq.* i. 3, 6) from Nicholas of Damascus, where it is said that 'there is a great mountain in Armenia, ὑπὲρ ἣν Μιννάδα, called Baris, upon which it is reported that many who fled at the time of the Deluge were saved, and that one who was carried in an ark came on shore upon the top of it; and that the remains of the timber were a great while preserved. This might be the man about whom Moses, the legislator of the Jews, wrote.' Saint-Martin, in his erudite work entitled *Mémoires sur l'Arménie* (vol. i. p. 249), has the not very probable conjecture that the word 'Minni' may refer to the Manavazians, a distinguished Armenian tribe, descended from Manavaz, a son of Haik, the capital of whose country was Manavazagerd, now Melazgerd. In Ps. xlv. 8, where it is said 'out of the ivory palaces whereby they made thee glad,' the Hebrew word rendered 'whereby' is *minni*, and hence some take it for the proper name, and would translate 'palaces of Armenia,' but the interpretation is forced and incongruous. III. *Thogamah* תְּוֹגַמָּה, in some MSS. *Thorgamah*, and found with great variety of orthography in the Septuagint

and Josephus. In the ethnographic table in the tenth chapter of Genesis (ver. 3; comp. 1 Chron. i. 6) Thogarmah is introduced as the youngest son of Gomer (son of Japhet), who is supposed to have given name to the Cimmerians on the north coast of the Euxine Sea, his other sons being Ashkenaz and Riphath, both progenitors of northern tribes, among whom also it is natural to seek for the posterity of Thogarmah. The prophet Ezekiel (xxxviii. 6) also classes along with Gomer 'the house of Thogarmah and the sides of the north' (in the Eng. Vers. 'of the north quarters'), where, as also at Ezek. xxvii. 14, it is placed beside Meshech and Tubal, probably the tribes of the Moschi and Tibareni in the Caucasus. Now, though Josephus and Jerome find Thogarmah in Phrygia, Bochart in Cappadocia, the Chaldee and the Jewish rabbins in Germany, etc.; yet a comparison of the above passages leads to the conclusion that it is rather to be sought for in Armenia, and this is the opinion of Eusebius, Theodoret, and others of the fathers. It is strikingly confirmed by the traditions of that and the neighbouring countries. According to Moses of Chōrene (Whiston's edition, i. 8, p. 24), and also King Wachtang's *History of Georgia* (in Klaproth's *Travels in the Caucasus*, vol. ii. p. 64), the Armenians, Georgians, Lesghians, Mingrelians, and Caucasians are all descended from one common progenitor, called Thargamos, a son of Awanan, son of Japhet, son of Noah (comp. Eusebius, *Chron.* ii. 12). After the dispersion at Babel, he settled near Ararat, but his posterity spread abroad between the Caspian and Euxine seas. A similar account is found in a Georgian chronicle, quoted by another German traveller, Guldenstedt, which states that Targamos was the father of eight sons, the eldest of whom was Aos, the ancestor of the Armenians. They still call themselves 'the house of Thogorm,' the very phrase used by Ezekiel, *בית תוגרמה*, the corresponding Syriac word for 'house' denoting 'land or district.' From the house or province of Thogarmah the market of Tyre was supplied with horses and mules (Ezek. xxvii. 14); and Armenia, we know, was famed of old for its breed of horses. The Satrap of Armenia sent yearly to the Persian court 20,000 foals for the feast of Mithras (Strabo, xi. 13, 9; Xenoph. *Anab.* iv. 5, 24; Herod. vii. 40).

The *Ἀρμενία* of the Greeks (sometimes aspirated *Ἀρμενία*) is the *Arminiya* or *Irminiya* of the Arabs, the *Ermenistan* of the Persians. Moses of Chōrene derives the name from Armenagh, the second of the native princes; Hartmann draws it from Aram (see that article), a son of Shem, who also gave name to Aramæa or Syria; but the most probable etymology is that of Bochart, *viz.*, that it was originally *הר מני*, Har-Minni or Mount Minni, *i.e.*, the High-land of Minyas, or, according to Wahl (in his work on Asia, p. 807), the Heavenly Mountain (*i.e.*, Ararat), for *mino* in Zend, and *myno*, *myny*, in Parsee, signify 'heaven, heavenly.' In the country itself the name Armenia is unknown; the people are called Haik, and the country Hayotz-zor, the Valley of the Haiks—from Haik, the fifth descendant of Noah by Japhet, in the traditional genealogy of the country (comp. Ritter's *Erdkunde*, th. ii. p. 714).

The boundaries of Armenia may be described generally as the southern range of the Caucasus on the north, and a branch of the Taurus on

the south; but in all directions, and especially to the east and west, the limits have been very fluctuating. It forms an elevated table-land, whence rise mountains which (with the exception of the gigantic Ararat) are of moderate height, the plateau gradually sinking towards the plains of Irān on the east, and those of Asia Minor on the west. The climate is generally cold, but salubrious. The country abounds in romantic forest and mountain scenery, and rich pasture-land, especially in the districts which border upon Persia. Ancient writers notice the wealth of Armenia in metals and precious stones. The great rivers Euphrates and Tigris both take their rise in this region, as also the Araxes, and the Kur or Cyrus. Armenia is commonly divided into *Greater* and *Lesser*, the line of separation being the Euphrates; but the former constitutes by far the larger portion, and indeed the other is often regarded as pertaining rather to Asia Minor. There was anciently a kingdom of Armenia, with its metropolis Artaxata: it was sometimes an independent state, but most commonly tributary to some more powerful neighbour. Indeed at no period was the whole of this region ever comprised under one government, but Assyria, Media, Syria, and Cappadocia shared the dominion or allegiance of some portion of it, just as it is now divided among the Persians, Russians, Turks, and Kurds; for there is no doubt that that part of Kurdistan which includes the elevated basins of the lakes of Van and Oormiah anciently belonged to Armenia. The unfortunate German traveller Schulz (who was murdered by a Kurdish chief) discovered in 1827, near the former lake, the ruins of a very ancient town, which he supposed to be that which is called by Armenian historians *Shamiramakeri* (*i.e.*, the town of Semiramis), because believed to have been built by the famous Assyrian queen. The ruins are covered with inscriptions in the arrow-headed character; in one of them Saint-Martin thought he deciphered the words *Kishbarsha* son of *Darvioush* (Xerxes son of Darius). In later times Armenia was the border country where the Romans and Parthians fruitlessly strove for the mastery, and since then it has been the frequent battle-field of the neighbouring states. Towards the end of the last war between Russia and Turkey, large bodies of native Armenians emigrated into the Russian dominions, so that their number in what is termed Turkish Armenia is now considerably reduced. By the treaty of Turkomanshee (21st Feb. 1828) Persia ceded to Russia the Khanats of Erivan and Nakhshivan. The boundary-line (drawn from the Turkish dominions) passes over the Little Ararat; the line of separation between Persian and Turkish Armenia also begins at Ararat; so that this famous mountain is now the central boundary-stone of these three empires.

Christianity was first established in Armenia in the fourth century; the Armenian church has a close affinity to the Greek church in its forms and polity; it is described by the American missionaries who are settled in the country as in a state of great corruption and debasement. The total number of the Armenian nation throughout the world is supposed not to exceed 2,000,000. Their favourite pursuit is commerce, and their merchants are found in all parts of the East. For the *history* of the country, see Moses of Chōrene, Father Chamich, and the *Hist. of Vartan*, translated by Neumann. For the *topography*, Morier, Ker Porter, Smith

and Dwight, Southgate, etc., and especially the vols. of the *Journal of the Geographical Society*, containing the researches of Monteith, Ainsworth, and others.—N. M.

ARMENIAN LANGUAGE. The Armenian or Haikan language, notwithstanding the great antiquity of the nation to which it belongs, possesses no literary documents prior to the fifth century of the Christian era. The translation of the Bible, begun by Miesrob in the year 410, is the earliest monument of the language that has come down to us. The dialect in which this version is written and in which it is still publicly read in their churches, is called the old Armenian. The dialect now in use—the modern Armenian—in which they preach and carry on the intercourse of daily life, not only departs from the elder form by dialectal changes in the native elements of the language itself, but also by the great intermixture of Persian and Turkish words which has resulted from the conquest and subjection of the country. It is perhaps, this diversity of the ancient and modern idioms which has given rise to the many conflicting opinions that exist as to the relation in which the Armenian stands to other languages. Thus Cirbied and Vater both assert that it is an original language, that is, one so distinct from all others in its fundamental character as not to be classed with any of the great families of languages. Eichhorn, on the other hand (*Sprachenkunde*, p. 349), affirms that the learned idiom of the Armenian undoubtedly belongs to the Medo-Persian family. Whereas Pott (*Untersuchungen*, p. xxxii.) says that, notwithstanding its many points of relation to that family, it cannot strictly be considered to belong to it; and Gatterer actually classed it as a living sister of the Basque, Finnish, and Welsh languages.

As to form, it is said to be rough and full of consonants; to possess *ten* cases in the noun—a number which is only exceeded by the Finnish; to have no dual; to have no mode of denoting gender in the noun by change of form, but to be obliged to append the words *man* and *woman* as the marks of sex—thus to say *prophet-woman* for *prophetess* (nevertheless, modern writers use the syllable *ouhi* to distinguish the feminine; Wahl, *Geschichte d. Morgenl. Sprachen*, p. 100); to bear a remarkable resemblance to Greek in the use of the participle, and, in the wholesyntactical structure; and to have adopted the Arabian system of metre.

The history of its alphabetical character is briefly this: until the third century of our era, the Armenians used either the Persian or Greek alphabet (the latter in Syrian characters, mentioned by Diodor. xix. 23, is not considered an evidence that they wrote *Armenian* in Syrian characters, as that letter was probably Persian). In the fifth century, however, the translation of the Bible created the necessity for characters which would more adequately represent the peculiar sounds of the language. Accordingly, after a fruitless attempt of a certain Daniel, and after several efforts on his own part, Miesrob saw a hand in a dream write the very characters which now constitute the Armenian alphabet. The 38 letters thus obtained are chiefly founded on the Greek, but have partly made out their number by deriving some forms from the Zend alphabet. The order of writing is from left to right. Miesrob employed these letters in his translation of the Bible, and thus ensured their universal

and permanent adoption by the nation (Gesenius; article *Palæographie*, in Ersch and Gruber).—J. N.

ARMENIAN VERSION. The Armenian version of the Bible was undertaken in the year 410 by Miesrob, with the aid of his pupils Joannes Ecelensis and Josephus Palnensis. It appears that the patriarch Isaac first attempted, in consequence of the Persians having destroyed all the copies of the Greek version, to make a translation from the Peshito; that Miesrob became his coadjutor in this work; and that they actually completed their translation from the Syriac. But when the above-named pupils, who had been sent to the ecclesiastical council at Ephesus, returned, they brought with them an accurate copy of the Greek Bible. Upon this, Miesrob laid aside his translation from the Peshito, and prepared to commence anew from a more authentic text. Imperfect knowledge of the Greek language, however, induced him to send his pupils to Alexandria, to acquire accurate Greek scholarship; and, on their return, the translation was accomplished. Moses of Chorene, the historian of Armenia, who was also employed, as a disciple of Miesrob, on this version, fixes its *completion* in the year 410; but he is contradicted by the date of the Council of Ephesus, which necessarily makes it subsequent to the year 431.

In the Old Testament this version adheres exceedingly closely to the LXX. (but, in the book of Daniel, has followed the version of Theodotion). Its most striking characteristic is, that it does not follow any known recension of the LXX. Although it more often agrees with the Alexandrine text, in readings which are peculiar to the latter, than it does with the Aldine or Complutensian text; yet, on the other hand, it also has followed readings which are only found in the two last. Berthold; accounts for this mixed text by assuming that the copy of the Greek Bible sent from Ephesus contained the Lucian recension, and that the pupils brought back copies according to the Hesychian recension from Alexandria, and that the translators made the latter their standard, but corrected their version by aid of the former (*Einleit.* ii. 560). The version of the New Testament is equally close to the Greek original, and also represents a text made up of Alexandrine and Occidental readings.

This version was afterwards revised and adapted to the Peshito, in the sixth century, on the occasion of an ecclesiastical union between the Syrians and Armenians. Again, in the thirteenth century, an Armenian king Hethom or Haitho, who was so zealous a Catholic that he turned Franciscan monk, adapted the Armenian version to the Vulgate, by way of smoothing the way for a union of the Roman and Armenian churches. Lastly, the bishop Uscau, who printed the first edition of this version at Amsterdam, in the year 1666, is also accused of having interpolated the text as it came down to his time, by adding all that he found the Vulgate contained *more* than the Armenian version. The existence of the verse 1 John v. 7, in this version, is ascribed to this supplementary labour of Uscau. It is clear from what has been said, that the critical uses of this version are limited to determining the readings of the LXX. and of the Greek text of the New Testament which it represents, and that it has suffered many alterations which diminish its usefulness in that respect.—J. N.

ARMELET. Although this word has the same

meaning as *bracelet*, yet the latter is practically so exclusively used to denote the ornament of the wrist, that it seems proper to distinguish by *armlet* the similar ornament which is worn on the upper arm. There is also this difference between them, that in the East bracelets are generally worn by women, and armlets only by men. The armlet, however, is in use among men only as one of the insignia of sovereign power. There are three different words which the Auth. Vers. renders by bracelet. These are—1. **אֲזַעְרָה** *azadah*, which occurs in Num. xxxi. 50; 2 Sam. i. 10; and which being used with reference to men only, we take to be the *armlet*. 2. **צַמִּיד** *tzamid*, which is found in Gen. xxiv. 22; Num. xxxi. 50; Ezek. xvi. 11. Where these two words occur together (as in Num. xxxi. 50), the first is rendered by 'chain,' and the second by 'bracelet.' 3. **שְׂרוֹת** *sheroth*, which occurs only in Is. iii. 19. The first we take to mean armlets worn by men; the second, bracelets worn by women and sometimes by men;

81.

and the third, a peculiar bracelet of chain-work worn only by women. It is observable that the two first occur in Num. xxxi. 50, which we suppose to mean that the men offered their own armlets and the bracelets of their wives. In the only other passage in which the first word occurs it denotes the royal ornament which the Amalekite took from the *arm* of the dead Saul, and brought with the other regalia to David. There is little question that this was such a distinguishing band of jewelled metal as we still find worn as a mark of royalty from the Tigris to the Ganges. The Egyptian kings are represented with armlets, which were also worn by the Egyptian women. These, however, are not jewelled, but of plain or enamelled metal, as was in all likelihood the case among the Hebrews. In modern times the most celebrated armlets are those which form part of the regalia of the Persian kings, and which formerly belonged to the Mogul emperors of India. These ornaments are of dazzling splendour, and the jewels in them are of such large size and immense value that the pair are reckoned to be worth a million of our money. The principal stone of the right armlet is famous in the East by the name of the *Devîâ-e-nur*, or *Sea of light*. It weighs 186 carats, and is considered the diamond of finest lustre in the world. The principal jewel of the left armlet, although of somewhat inferior size (146 carats) and value, is renowned as the *Tâg-e-mah*, 'Crown of the moon.' The imperial armlets, generally set with jewels, may also be observed in most of the portraits of the Indian emperors. [BRACELET.]—J. K.

ARMON (עֲרֻמוֹן; Chaldee, **רְלָב**, Syriac, **רְסַבְלָ**; Arabic, **رلب**; Sept. **πλάτανος**; Vulg. *latanus*; Luth. *ahorn*; A. V. 'chestnut-tree'), a

tree, which is named thrice in the Scriptures. It occurs among the 'speckled rods' which Jacob placed in the watering-troughs before the sheep (Gen. xxx. 37): its grandeur is indicated in Ezek. xxxi. 8, as well as in Eccclus. xxiv. 19: it is noted for its magnificence, shooting its high boughs aloft.

82. *Platanus Orientalis*—Plane-tree.

This description agrees well with the plane-tree (*Platanus Orientalis*), which is adopted by all the ancient translators, to which the balance of critical opinion inclines, and which actually grows in Palestine. The beech, the maple, and the chestnut have been adopted, in different modern versions, as representing the Hebrew Armon; but scarcely any one now doubts that it means the plane-tree. It may be remarked that this tree is in Genesis associated with others—the willow and the poplar—whose habits agree with it; they are all trees of the low grounds, and love to grow where the soil is rich and humid. This is strikingly illustrated by the fact that Russell (*N. H. of Aleppo*, i. 47) expressly names the plane, the willow, and the poplar (along with the ash), as trees which grow in the same situations near Aleppo.

But this congruity would be lost if the chestnut were understood, as that tree prefers dry and hilly situations. There is a latent beauty also in the passage in Ezekiel, where, in describing the greatness and glory of Assyria, the prophet says, 'The Armon-trees were not like his boughs, nor any tree in the garden of God like unto him for beauty.' This not only expresses the grandeur of the tree, but is singularly appropriate from the fact that the plane-trees (*chenars*, as they are called) in the plains of Assyria are of extraordinary size and beauty, in both respects exceeding even those of Palestine. It consists with our own experience that one may travel far in Western Asia without meeting such trees, and so many together, as occur in the *chenar*-groves of Assyria and Media.

The Oriental plane-tree ranks in the Linnæan class and order *Monaxia Polyandria*, and in the natural order among the *Platanacea*. Westernmost Asia is its native country, although, according to Professor Royle, it extends as far eastward as Cashmere. The stem is tall, erect, and covered

with a smooth bark which annually falls off. The flowers are small and scarcely distinguishable: they come out a little before the leaves. The wood of the plane-tree is fine-grained, hard, and rather brittle than tough; when old, it is said to acquire dark veins, and to take the appearance of walnut-wood.

In those situations which are favourable to its growth, huge branches spread out in all directions from the massive trunk, invested with broad, deeply-divided, and glossy green leaves. This body of rich foliage, joined to the smoothness of the stem, and the symmetry of the general growth, renders the plane-tree one of the noblest objects in the vegetable kingdom. It has now, and had also of old (Plin. *Nat. Hist.* xii. 1), the reputation of being the tree which most effectually excludes the sun's beams in summer, and most readily admits them in winter—thus affording the best shelter from the extremes of both seasons.

For this reason it was planted near public buildings and palaces, a practice which the Greeks and Romans adopted; and the former delighted to adorn with it their academic walks and places of public exercise. In the East, the plane seems to have been considered sacred, as the oak was formerly in Britain. This distinction is in most countries awarded to the most magnificent species of tree which it produces. In Palestine, for instance, where the plane does not appear to have been very common, the terebinth seems to have possessed pre-eminence. [ELAH.] No one is ignorant of the celebrated story of Xerxes arresting the march of his grand army before a noble plane-tree in Lydia, that he might render honour to it, and adorn its boughs with golden chains, bracelets, and other rich ornaments—an action misunderstood, and egregiously misrepresented by Ælian (*Var. Hist.* ii. 14).

The Oriental plane endures our own climate well, and grows to a fine tree; but not the enormous size which it sometimes attains in the East. Several grand old plane-trees have been mentioned. Pausanias (l. viii. c. 23) notices a noble plane in Arcadia, the planting of which was ascribed, by tradition, to Menelaus; so that if this tradition were entitled to credit (and it claims little), it must, when he wrote, although in a sound state, have been above 1300 years old. Pliny, in his curious chapter on this tree (*Nat. Hist.* xii. 1), mentions one in Lycia, in the trunk of which had been gradually formed an immense cavern, eighty feet in circumference. L. Mutianus, thrice consul, and governor of the province, with eighteen other persons, often dined and supped commodiously within it. If nothing more were known of this L. Mutianus, we should like him for the pleasure, not unmingled with regret, with which he records the satisfaction which he occasionally derived from hearing the rain patter upon the leaves overhead, while he and his company sat dry and safe within: it was the music of their feast. Caligula also had a tree of this sort at his villa near Velitræ, the hollow of which accommodated fifteen persons at dinner with a proper suite of attendants. The emperor called it 'his nest;' and it is highly probable that his friend Herod Agrippa may occasionally have been one of the fifteen birds who nested there along with him. Modern travellers also notice similar trees. Belon (*Obs. Sing.* l. ii. p. 105), La Roque (*Voy. de Syrie*, pp. 197-199), and

others, mention the groves of noble planes which adorn the plain of Antioch; and the last-named traveller records a night's rest which he enjoyed under planes of great beauty in a valley of Lebanon (p. 76). That they are among the principal trees in the plantations near Aleppo has already been observed, on the authority of Russell. Buckingham names them among the trees which line the

83. Branch of *Platanus Orientalis*.

Jabbok (*Travels in Palestine*, ii. 108). Evelyn (in his *Sylva*) seems to ascribe the introduction of the plane-tree into England to the great Lord Bacon, who planted some which were still flourishing at Verulam in 1706. This was, perhaps, the first plantation of any note; but it appears from Turner's *Herbal* (published in 1551), that the tree was known and cultivated in this country before the chancellor was born. (Besides the authorities quoted, see Hiller, *Hierophyiticon*, cap. 43; Celsius, *Hierobotanicon*, 512-516; and Winer's *Realwörterbuch*, in 'Ahorn').—J. K.

ARMS, ARMOUR. In order to give a clear view of this subject, we shall endeavour to shew succinctly, and from the best authorities now available, what were the weapons, both offensive and defensive, used by the ancient Asiatics; leaving to be found under other heads the composition and tactical condition of their armies; their systems of fortification; and, finally, their method of conducting sieges and battles; and their usages of war as regards spoil, captives, etc.

The instruments at first employed in the chase, or to repel wild beasts, but converted by the wicked to the destruction of their fellow-men, or used by the peaceable to oppose aggression, were naturally the most simple. Among these were the club and the throwing-bat. The first consisted originally or a heavy piece of wood, variously shaped, made to strike with, and, according to its form, denominated a mace, a bar, a hammer, or a maul. This weapon was in use among the Hebrews; for, in the time of the kings, wood, had already been superseded by metal; and the *שֵׁבֶט בַּרְזֶל shevet barzel*, rod of iron (Ps. ii. 9), is supposed to mean a mace, or gavellock, or crowbar. It is an instrument of great power when used by a strong arm; as when Van Amburgh, with one in his hand, compels a tiger's ferocity to submit to his will. (See Wilkinson's *Manners and Customs of the Ancient Egyptians*,

vol. i. p. 327, fig. 3, 4; and mace, fig. 1, 2. The throwstick or lissan occurs p. 329.) The other was also known, if, as is probable, מַפְיֵזֵז *maphiyez* (Prov. xxv. 18) be a maul, a martel, or a war-

hammer. It is likely metal was only in general use at a later period, and that a heavy crooked billet continued long to serve both as a missile and a sword. The throwstick, made of thorn-wood, is the same instrument which we see figured on Egyptian monuments. By the native Arabs it is still called *lissan*, and was anciently known among us by the name of crooked billet. These instruments, supplied with a sharp edge, would naturally constitute a battle-axe, and a kind of sword; and such in the rudest ages we find them, made with flints set into a groove, or with sharks' teeth firmly secured to the staff with twisted sinews. On the earliest monuments of Egypt, for these ruder instruments is already seen substituted a piece of metal with a steel or bronze blade fastened into a globe, thus forming a falchion-axe; and also a lunate-blade, rivetted in three places to the handle, forming a true battle-axe (Wilkinson, vol. i. p. 325, 326); and there were, besides, true bills or axes in form like our own.

Next came the dirk or poniard, which, in the Hebrew word *חֶרֶב* *cherew*, may possibly retain some allusion to the original instrument made of the antelope's horn, merely sharpened, which is still

used in every part of the East where the material can be procured. From existing figures, the dirk appears to have been early made of metal in Egypt, and worn stuck in a girdle (Wilkinson, i. 319); but from several texts (1 Sam. xvii. 39; 2 Sam. xx. 8; and 1 Kings xx. 11), it is evident that the real sword was slung in a belt, and that 'girding' and 'loosing the sword' were synonymous terms for commencing and ending a war. The blades were, it seems, always short (one is mentioned of a cubit's

- 1. Horn Dagger.
- 2, 3. Swords.
- 4, 5. Tulwar Swords.
- 6. Quarter-pike.

length); and the dirk-sword, at least, was always double-edged. The sheath was ornamented and polished. In Egypt there were larger and heavier swords, more nearly like modern tulwars, and of the form of an English round-pointed table-knife. But while metal was scarce, there were also swords which might be called quarter-pikes, being composed of a very short wooden handle, surmounted by a spear-head. Hence the Latin *telum* and *ferrum* continued in later ages to be used for *gladius*. In Nubia, swords of heavy wood are still in use.

- 1, 2. Spear-heads.
- 3, 4. Darts.
- 5. Oryx horn Spear-head.

The spear, *רֹמַח* *romach*, was another offensive weapon common to all the nations of antiquity, and was of various size, weight, and length. Probably the shepherd Hebrews, like nations similarly situated in northern Africa, anciently made use of the horn of an oryx, or a leucoryx, above three feet long,

straightened in water, and sheathed upon a thorn-wood staff. When sharpened, this instrument would penetrate the hide of a bull, and, according to Strabo, even of an elephant; it was light, very difficult to break, resisted the blow of a battle-axe, and the animals which furnished it were abundant in Arabia and in the desert east of Palestine. At a later period, the head was of brass, and afterwards of iron. Very ponderous weapons of this kind were often used in Egypt by the heavy infantry; and, from various circumstances, it may be inferred that among the Hebrews and their immediate neighbours, commanders in particular were distinguished by heavy spears. Among these were generally ranked the most valiant in fight and the largest in stature; such as Goliath, 'whose spear was like a weaver's beam' (1 Sam. xvii. 7), and whose spear's head weighed six hundred shekels of iron; which by some is asserted to be equal to twenty-five pounds weight. The spear had a point of metal at the but-end to fix it in the ground, perhaps with the same massy globe above it, which is still in use, intended to counterbalance the point. It was with this ferrel that Abner slew Asahel (2 Sam. ii. 22, 23). The form of the head and length of the shaft differed at different times, both in Egypt and Syria, and were influenced by the fashions set by various conquering nations.

The javelins, named חנית *chanith*, and כידון *kidon*, may have had distinct forms: from the context, where chanith first occurs, it appears to have been a species of dart carried by light troops (1 Sam. xiii. 22; Ps. xxxv. 3); while the kidon, which was heavier, was most likely a kind of pilum. In most nations of antiquity the infantry, not bearing a spear, carried two darts, those lightly armed using both for long casts, and the heavy armed only one for that purpose; the second, more ponderous than the other, being reserved for throwing when close to the enemy, or for handling in the manner of a spear. This explanation may throw light on the fact of the chanith being named in connection with the צננה *tsinnah*, or larger buckler (1 Chron. xii. 34), and may reconcile what is said of the kidon (Job xxxix. 23; xli. 29, and Josh. viii. 18). While on the subject of the javelin, it may be remarked that, by the act of casting one at David (1 Sam. xix. 9, 10), Saul virtually absolved him from his allegiance; for by the customs of ancient Asia, preserved in the usages of the Teutonic and other nations, the *Sachsen recht*, the custom of the East Franks, etc., to throw a dart at a freedman, who escaped from it by flight, was the demonstrative token of manumission given by his lord or master; he was thereby sent out of hand, manumissus, well expressed in the old English phrase 'scot-free.' But for this act of Saul, David might have been viewed as a rebel.

But the chief offensive weapon in Egypt, and, from the nature of the country, it may be inferred, in Palestine also, was the war-bow קשת *kesheth*, and קשתות *keshtoth*, the arrows being denominated חיצים *hitzim*, חיצ *hitz*. From the simple implements used by the first hunters, consisting merely of an elastic reed, a branch of a tree, or rib of palm, the bow became in the course of time very strong and tall, was made of brass, of wood backed with horn, or of horn entirely, and even of ivory; some being shaped like the common English bow, and others, particularly those used by riding nations, like the buffalo horn. There were various modes

of bending this instrument, by pressure of the knee, or by the foot, ררך, treading the bow, or by setting one end against the foot drawing the middle with the hand of the same side towards the hip, and pushing the upper point forward with the second hand, till the thumb passed the loop of the string beyond the nock. The horned bows of the

37.

1, 2, 3, 4. Bows. 5, 6. Quivers. 7, 8. Arrows.

cavalry, shaped like those of the Chinese, occur on monuments of antiquity. They cannot be bent from their form of a Roman C to that of what is termed a Cupid's bow , but by placing one end under the thigh; and as they are short, this operation is performed by Tahtar riders while in the saddle. This was the Parthian bow, as is proved by several Persian bas-reliefs, and may have been in use in the time of the Elamites, who were a mounted people. These bows were carried in cases to protect the string, which was composed of deer sinews, from injury, and were slung on the right hip of the rider, except when on the point of engaging. Then the string was often cast over the head, and the bow hung upon the breast, with the two nocks above each shoulder, like a pair of horns. The *hitzim*, or arrows, were likewise enclosed in a case or quiver, חלי *heli*, hung sometimes on the shoulder, and at other times on the left side; and six or eight flight-arrows were commonly stuck in the edge of the cap, ready to be pulled out and put to the string. The infantry always carried the arrows in a quiver on the right shoulder, and the bow was kept unbent until the moment of action. On a march it was carried on the shield arm, where there was frequently also a horn bracer secured below the elbow to receive the shock from the string when an arrow was discharged. The flight or long-range arrows were commonly of reed, not always feathered, and mostly tipped with flint points; but the shot or aimed arrows, used for nearer purposes, were of wood tipped with metal, about 30 inches long, and winged with three lines of feathers, like those in modern use; they varied in length at different periods, and according to the substance of the bows.

The last missile instrument to be mentioned is the sling, קלע *kela* (Job xli. 28), an improvement upon the simple act of throwing stones. It was

the favourite weapon of the Benjamites, a small tribe, not making a great mass in an order of battle, but well composed for light troops. They could also boast of using the sling equally well with the left hand as with the right. The sling was made of plaited thongs, somewhat broad in the middle, to lodge the stone or leaden missile, and was twirled two or three times round before the stone was allowed to take flight. Stones could not be cast

88. Egyptian Slingers and Sling.

above 400 feet, but leaden bullets could be thrown as far as 600 feet. The force as well as precision of aim which might be attained in the use of this instrument was remarkably shewn in the case of David; and several nations of antiquity boasted of great skill in the practice of the sling.

All these hand-weapons were in use at different periods, not only among the Hebrews and Egyptians, but likewise in Assyria, Persia, Greece, and Macedonia; in which last country the sarissa carried by the heavy infantry of the phalanx differed from the others only in the great length of the shaft. The Roman pilum was a kind of dart, distinguished from those of other nations chiefly by its weight, and the great proportional length of the metal or iron part, which constituted one half of the whole, or from two and a half to three feet. Much of this length was hollow, and received nearly twenty inches of the shaft within it: the point was never hooked like that of common darts, because the weapon being nearly indestructible, the soldiers always reckoned upon advancing in battle and recovering it without trouble when thrown; whereas, if it had been hooked or hamate, they could not have wrenched it out of hostile shields or breast-plates without trouble and delay.

DEFENSIVE ARMS.—The most ancient defensive piece was the shield, buckler, roundel, or target, composed of a great variety of materials, very different in form and size, and therefore in all nations bearing a variety of names. The Hebrews used the word צִנְהָה *tsinnah*, for a great shield; defence, protection (Gen. xv. 1; Ps. xlvii. 9; Prov. xxx. 5), which is commonly found in connection with spear, and was the shelter of heavily-armed infantry; מגן *magen*, a buckler, or smaller shield, which, from a similar juxtaposition with sword, bow, and arrows, appears to have been the defence of the other-armed infantry and of chiefs; and סוּחַרָה *suhairah*, *parma*, a roundel, which may have been appropriated to archers and slingers; and there was the שֵׁלֶט *shelet*, a kind of shield, [respecting the peculiarity of which there is much

uncertainty]. In the more advanced eras of civilization shields were made of light wood not liable to split, covered with bull-hide of two or more

89.

thicknesses and bordered with metal: the lighter kinds were made of wicker-work or osier, similarly, but less solidly covered; or of double ox-hide cut into a round form. There were others of a single hide, extremely thick from having been boiled; their surface presented an appearance of many folds, like round waves up and down, which might yield, but could rarely be penetrated.

We may infer that at first the Hebrews borrowed the forms in use in Egypt, and that their common shields were a kind of parallelogram, broadest and arched at the top and cut square beneath, bordered with metal, the surface being covered with raw hide with the hair on. The lighter shields may have been soaked in oil and dried in the shade to make them hard; no doubt, hippopotamus, rhinoceros, and elephant skin shields were brought from Ethiopia and purchased in the Phœnician markets; but small round hand-bucklers of whale-skin, still used by Arabian swordsmen, came from the Erythraean sea. During the Assyrian and Persian supremacy the Hebrews may have used the square, oblong, and round shields of these nations, and may have subsequently copied those of Greece and Rome. The princes of Israel had shields of precious metals: all were managed by a wooden or leathern handle, and often slung by a thong over the neck. With the larger kinds a *testudo* could be formed by pressing the ranks close together; and while the outside men kept their shields before and on the flanks, those within raised theirs above the head, and thus produced a kind of surface, sometimes as close and fitted together as a pantile roof, and capable of resisting the pressure even of a body of men marching upon it.

The tsinnah was most likely what in the feudal ages would have been called a *parise*, for such occurs on the Egyptian monuments. This weapon was about five feet high, with a pointed arch above, and square below, resembling the feudal knight's shield, only that the point was reversed. This kind of large-sized shield, however, was best fitted for men without any other armour, when combating

in open countries, or carrying on sieges; for it may be remarked in general, that the military buckler of antiquity was large in proportion as other defensive armour was wanting. Shields were hung upon the battlements of walls, and, as still occurs, chiefly above gates of cities by the watch and ward. In time of peace they were covered to preserve them from the sun, and in war uncovered; this sign was poetically used to denote coming hostilities, as in Is. xxii. 6, etc. In Europe, where the Crusaders could imitate the Saracens, but not introduce their climate, shields were carved in stone upon towers and gates, as at York, etc. The Eastern origin of this practice seems to be attested by the word *Zuine*, which, in German, still denotes a battlement, something pointed, a summit, and conveys the idea of a pavise with the point uppermost, a shape such as Arabian battlements often assume.

The *Helmet* was next in consideration, and in the earliest ages was made of osier, or rushes, in the form of a beehive, or of a skull-cap. The skins of the heads of animals—of lions, bears, wild boars, bulls, and horses—were likewise adopted, and were adorned with rows of teeth, manes, and bristles. Wood, linen cloth in many folds, and a kind of felt, were also in early use, and helmets of these materials may be observed worn by the nations of Asia at war with the conqueror kings of Egypt, even before the departure of Israel. At that time also these kings had helmets of metal, of rounded or pointed forms, adorned with a figure of the serpent *Kneph*; and an allied nation, perhaps the Carian, reported to have first worn a military crest, bears on the skull-cap of their brazen helmets a pair of horns with a globe in the middle—the solar arkite symbol. The nations of farther Asia,

but archers and slingers had round skull-caps of skins, felts, or quilted stuffs, such as are still in use among the Arabs. The form of Greek and Roman helmets, both of leather and of brass, is well known; they were most likely adopted also by the Hebrews and Egyptians during their subjection to those nations, but require no further notice here.

Body Armour.—The most ancient Persian idols are clad in shagged skins, such as the *Ægis* of Jupiter and Minerva may have been, the type being taken from a Cyrenæan or African legend, and the pretended red goat-skin may be supposed to have been that of a species of gnu (*Catoblepas Gorgon*, Ham. Smith), an animal fabled to have killed men by its sight, and therefore answering to the condition both of a kind of goat and of producing death by the sight alone. In Egypt cuirasses were manufactured of leather, of brass, and of a succession of iron hoops, chiefly covering the abdomen and the shoulders; but a more ancient national form was a kind of thorax, tippet, שריון *shiryon*, or square, with an opening in it for the head, the four points covering the breast, back, and both upper arms. This kind in particular was affected by the royal band of relatives who surrounded the Pharaoh, were his subordinate commanders, messengers, and body-guards, bearing his standards, ensign-fans, and sun-screens, his portable throne, his bow and arrows. Beneath this square was another piece, protecting the trunk of the body, and both were in general covered with a red-coloured cloth or stuff. On the oldest fictile vases a shoulder-piece likewise occurs, worn by Greek and Etruscan warriors. It covers the upper edge of the body armour, is perforated in the middle to allow the head to pass, but hangs equal on the breast and back, square on the shoulders, and is evidently of leather. (See the figure of Menelaus discovering Helen in the sack of Troy. Millin, *Mon. inédits*.) This piece of armour occurs also on the shoulders of Varangi (northmen, who were the body-guards of the Greek emperors); but they are studded with roundels or bosses, as they appear figured in mosaic or fresco on the walls of the cathedral of Ravenna, dating from the times of Justinian. The late Roman legionaries, as published by Du Choul, again wear the tippet armour, like

however, used the woollen or braided caps, still retained, and now called kaouk and fez, around which the turban is usually wound. These were almost invariably supplied with long lappets to cover the ears and the back of the head, and princes usually wore a radiated crown on the summit. This was the form of the Syrian, and probably of the Assyrian helmets, excepting that the last mentioned were of brass, though they still retained the low cylindrical shape. The כובע *koba*, some helmet of this kind, was worn by the trained infantry, who were spearmen among the Hebrews;

that of the Egyptians, and one or other of the above forms may be found on figures of Danes in illuminated manuscripts of the eleventh century.

1. Egyptian tigliated. 2. Sleeve of ring-mail, Ionian.

By their use of metal for defensive armour, the Carians appear to have created astonishment among the Egyptians, and therefore may be presumed to have been the first nation so protected in western Asia; nevertheless, in the tombs of the kings near Thebes, a tigliated hauberk is represented, composed of small three-coloured pieces of metal; one golden, the others reddish and green. It is this suit which Denon represents as composed of rings set on edge; but they are all parallelograms, with the lower edge forming the segment of a circle, and each piece, beside the fastening, has a button and a verticle slit above it, giving flexibility by means of the button of each square working in the aperture of the piece beneath it. This kind of

93. Parthian Horseman.

armour may be meant by the word תַּחַרָּה *tachara*, the closest interpretation of which appears to be *decussatio*, *tigliatio*, a tiling. The expression in 2 Chron. xviii. 33, may be that Ahab was struck in one of the grooves or slits in the squares of his *techera*, or between two of them where they do not overlap; or perhaps, with more probability, between the metal hoops of the trunk of the *shereyon* before mentioned, where the thorax over-

laps the abdomen. The term קַשְׂשִׁים *kaskasim*, 'scales,' in the case of Goliath's armour, denotes the squamous kind, most likely that in which the pieces were sewed upon a cloth, and not hinged to each other, as in the *tachera*. It was the defensive armour of Northern and Eastern nations, the Persian *Cataphracti*, Parthians, and Sarmatians. But of true annular or ringed mail, Denon's figure being incorrect, we doubt if there is any positive evidence, excepting where rings were sewn separately upon cloth, anterior to the sculpture at Takt-i-Boostan, or the close of the Parthian era. The existence of mail is often incorrectly inferred from our translators using the word wherever flexible armour is to be mentioned. The *techera* could not well be worn without an under-garment of some density to resist the friction of metal; and this may have been a kind of *sagum*, the *shereyon* of the Hebrews, under another form—the dress Saul put upon David before he assumed the breast-plate and girdle. The Roman *sagum* offers a parallel instance. Under that name it was worn at first à *loricâ*, then beneath it, and at last again without, but the stuff itself made into a kind of felt.

The *Cuirass* and *Corselet*, strictly speaking, were of prepared leather (*corium*), but often also composed of quilted cloths: the former in ancient

1, 2. Early Greek. 3. Greek. 4, 5. Roman. 6. Barbarian.

times generally denoted a suit with leathern appendages at the bottom and at the shoulder, as used by the Romans; the latter, one in which the barrel did not come down below the hips, and usually destitute of leathern *vittæ*, which was nationally Greek. In later ages it always designates a breast and back piece of steel. It is, however, requisite to observe, that in estimating the meaning of Hebrew names for armour of all kinds, they are liable to the same laxity of use which all other languages have manifested; for in military matters, more perhaps than in any other, a name once

adopted remains the same, though the object may be changed by successive modifications, till there remains but little resemblance to that to which the designation was originally applied. The objects above denominated appendages and vittæ (in the feudal ages, lambrequins), were straps of leather secured to the lower rim of the barrel of a suit of armour, and to the openings for arm-holes: the first were about three and a half inches in width; the second, two and a half. They were ornamented with embroidery, covered with rich stuffs and goldsmiths' work, and made heavy at the lower extremity, to cause them always to hang down in proper order; but those on the arm-holes had a slight connection, so as to keep them equal when the arm was lifted. These vittæ were rarely in a single row, but in general formed two or three rows, alternately covering the opening between those underneath, and then protecting the thighs nearly to the knee, and half the upper arm. In the Roman service, under the suit of armour, was the sagum, made of red serge or baize, coming down to the cap of the knee and folding of the arm, so that the vittæ hung entirely upon it. Other nations had always an equivalent to this, but not equally long; and in the opinion of some, the Hebrew *shiryon* served the same purpose.

The Roman and Greek suits were, with slight difference, similarly laced together on the left, or shield side; and on the shoulders were bands and clasps, comparatively narrow in those of the Romans, which covered the joinings of the breast and back pieces on the shoulders, came from behind, and were fastened to a button on each breast. At the throat the suit of armour had always a double edging, often a band of brass or silver; in the Roman, and often in the Greek, adorned with a lion's or a Gorgon's head. It was here that, in the time of Augustus, and probably much earlier, the warriors distinguished for particular acts of valour wore insignia; a practice only revived by the moderns under the names of crosses and decorations. The Romans, it appears, had *phiala* and *phaleræ* of honour, terms which have been supposed to signify bracelets and medals; but all opinion on the subject was only conjectural previously to the discovery, on the borders of the Rhine, of a monumental bas-relief, raised by the

length, in a full suit of armour, with a laurel crown on the head, a Gallic twisted torque round the neck; and from the lion-head shoulder-clasps or the cuirass hang two embossed bracelets, having beneath them a label with three points, from which are suspended five medals of honour; one large, on the pit of the stomach, representing a face of Medusa; and two on each side, one beneath the other; and all as far as can be seen charged with lions' faces and lions' heads in profile. The monument is now in the museum of the university at Bonn.

The girdle, or more properly the baldric or belt (*cingula* or *balteus*), was used by the Hebrews under the name of אָזֹר *azor*: it was of leather, studded with metal plates or bullæ; when the armour was slight, broad, and capable of being girt upon the hips; otherwise it supported the sword scarf-wise from the shoulder.

Greaves were likewise known, even so early as the time of David, for Goliath wore them. They consisted of a pair of shin-covers of brass or strong leather, bound by thongs round the calves and above the ankles. They reached only to the knees, excepting among the Greeks, whose greaves, elastic behind, caught nearly the whole leg, and were raised in front above the knees. The Hebrew word אָזֹר *azor*, in Is. ix. 5, is supposed to mean a half-greave, though the passage is altogether obscure. Perhaps the war-boot may be explained by the war-shoe of Egypt with a metal point; and then the words might be rendered, 'For every greave of the armed foot is with confused noise and garments rolled in blood,' etc., instead of 'Every battle of the warrior,' etc. But, after all, this is not quite satisfactory.—C. H. S.

ARMY, HEBREW. The Hebrews, although mainly an agricultural people, were involved in frequent wars in the course of their national history. The beginning of their history as a nation was signalized by an offensive war, from which they were obliged soon to pass to a defensive, which lasted during the whole period of the Judges. Afterwards, they had combats with their neighbours, the Syrians and Philistines; and at a still later period their country, owing to its central situation, became a battle-field of the great monarchies of the earth. Hence, the Bible contains many references to the subject of this article.

According to the law of Moses (Num. i. 3; xxvi. 2: comp. 2 Chron. xxv. 5), every male Israelite from twenty years old and upward (according to Josephus, *Antiq.* iii. 12. 4, 'from twenty to fifty years of age') was liable to be called on to serve in war. The Levites were exempt (Num. ii. 33), and immunity was granted in certain other cases mentioned (Deut. xx. 5-8; comp. 1 Macc. iii. 56). The army thus constituted, was divided into companies of 1000, 100, and 50, each of which had its own captain, שָׂרָא (Num. xxxi. 14; 1 Sam. viii. 12; 2 Kings i. 9; 2 Chron. xxv. 5), in accordance with the patriarchal constitution (2 Chron. xxvi. 12). In 1 Macc. iii. 55, we have 'captains over tens' also.

The people were summoned to the field by means of messengers, or sound of trumpet, or other signals (Judg. iii. 27; vi. 34, 35; 1 Sam. xi. 7; Jer. iv. 5, 6, 21; vi. 1; li. 27; Is. v. 26; xiii. 2; Ezek. vii. 14; Joel ii. 1; Amos iii. 6). But only such a number was selected as was deemed suffi-

95.

freedman of Marcus Cælius Lembo, tribune of the (xix) 18th legion, who fell in the disastrous overthrow of Varus. The effigy is of three-quarter

cient for the occasion (Num. xxxi. 1-8; Josh. vii. 3). The number, however, was sometimes very great (1 Sam. xi. 8; xv. 4; 2 Sam. xvii. 11). The Hebrew national militia is designated 'the people of the land,' עם הארץ (2 Kings. xxv. 19), and, whilst Palestine was densely peopled, would of course supply a very numerous army (comp. Num. i. 46; xxvi. 51; 2 Sam. xxiv. 9; 1 Chron. xxi. 5; 2 Chron. xiii. 3; xiv. 8; xvii. 14-19). In some of these passages the text may have suffered corruption, as there are some discrepancies. Josephus tells us (*Bell. Jud.* ii. 20. 6) that he got an army out of Galilee of more than a hundred thousand young men.

According to the fundamental principle of the theocracy, Jehovah was himself 'Captain of the Lord's host' (Josh. v. 14; comp. Num. x. 35, 36; 1 Sam. iv. 3, 4), and the judges, kings, or other leaders of the army, were regarded as acting under him, and in obedience to his commands.

In early times, the heads of the state led forth in person their armies to battle, but in the time of Saul and David the office of 'captain of the host,'

שר הצבא, שר החיל, was distinct from that of king, and second only to it in dignity and power (1 Sam. xiv. 50; 2 Sam. ii. 8; xxiv. 2). An armour-bearer attended the captain of the host, as well as the king (1 Sam. xxxi. 4, 5; 2 Sam. xxiii. 37). The king, or captain of the host, with his principal officers, formed a sort of military council (1 Chron. xiii. 1). The whole army appears to be designated as 'princes,' or captains 'and servants,' שרים ועבדים (1 Sam. xix. 6).

The population capable of bearing arms was numbered by an officer, called סופר, *sopher, scribe*; comp. 2 Kings xxv. 19, הסופר שר הצבא, 'the scribe of the captain of the host' which mustered the people of the land.*

With the סופר was associated a subordinate officer, שוטר, *shoter*, translated *officer, ruler*, whose duty appears to have been to enrol the names in the register. Both these officers are named in 2 Chron. xxvi. 11; and the latter in a passage already referred to (Deut. xx. 5).

In the earliest period, the Hebrew army consisted exclusively of infantry, רגלי (Num. xi. 21; 1 Sam. iv. 10; xv. 4). That this was not owing entirely to the mountainous character of the country, rendering it unsuitable for cavalry, appears from the fact, that the Canaanites, whom the Israelites dispossessed, had 'chariots of iron' which they used in war (Josh. xi. 4; Judg. i. 19). The Syrians also, with whom David fought, had a great number of chariots and horsemen (2 Sam. vii. 4; x. 18). Notwithstanding the divine prohibition (Deut. xvii. 16), David reserved 100 chariots (2 Sam. viii. 4), and Solomon, having introduced the use of chariots and horsemen in war (1 Kings x. 26-29; 2 Chron. i. 14), was imitated by succeeding kings of Judah and Israel (1 Kings xvi. 9; 2 Kings viii. 21; xiii. 7). Before the establishment of a standing army, and for a considerable period afterwards, there was no military service among the Hebrews, except of natives who not only received

no pay, but had to provide their own arms and food (1 Sam. xvii. 17). Sometimes an arrangement was made for supplying victuals (Judg. xx. 10). Under Solomon and Hezekiah there were cities and houses of store (1 Kings ix. 19; 2 Chron. xxxii. 28). Arms were provided by Uzziah (2 Chron. xxvi. 14). In one instance we read of the payment of mercenaries, but, on the admonition of a prophet, they were dismissed (2 Chron. xxv. 6).

A standing army originated with the kings. It was foretold by Samuel (1 Sam. viii. 11, 12). Saul had a body of 3000 chosen men, which he sought to recruit (1 Sam. xiii. 2; xiv. 52). It is supposed by Thenius, on 1 Sam. xxii. 14, that he had a body-guard, of which David was captain; but this view requires an alteration of the text.

David also had chosen men (2 Sam. xv. 18). The 600 men here referred to are supposed to have been 'the mighty men,' הגבורים, 2 Sam. xx. 7, who had been David's companions in arms before he became king (1 Sam. xxiii. 13; xxv. 13). If this be correct, 'the mighty men' must be taken in a narrower sense in 2 Sam. xxiii. 8. The mean-

ing of the word שלישי, *shalish*, which occurs in 2 Sam. xxiii. 8, has been much disputed. Primarily it seems to have denoted one of the three fighting men in a war-chariot (Exod. xiv. 7; xv. 4, LXX. ἀναβάται τριστάται), but it seems to have come latterly to denote just a distinguished class of warriors (1 Chron. xii. 18; 2 Chron. viii. 9), the highest division, as it were, of 'the mighty men,' or, as Ewald suggests, the thirty officers of 'the mighty men' (2 Sam. xxiii. 8, 18). They appear afterwards as adjutants of the king (2 Kings ix. 25; xv. 25).

With respect to the Cherethites and Pelethites, 2 Sam. xv. 18, הכרתי והפלתי, we are inclined to agree with Gesenius, who translates the expression, *carnicifera et cursores*. They appear to have been David's body-guard, to whom it appertained to execute the sentence of death (Dan. ii. 14). Josephus calls them *σωματοφύλακες* (*Antiq.* vii. 5. 4). We read of a guard רצנים afterwards (1 Kings xv. 28; 2 Kings xi. 4). David had a division of the national army in service each month (1 Chron. xxvii.), and we read of another division according to the different arms (2 Chron. xv. 8). From the case of Uriah and of Ittai (2 Sam. xi. 3; xv. 19), we learn that foreigners were not debarred from the army.

In the time of the Maccabees, the army was at first organized by Judas, after the ancient model (1 Macc. iii. 55, 56). Simon first paid a standing army, spending much of his own substance for that purpose (1 Macc. xiv. 32); and John Hyrcanus was the first of the Jews who maintained foreign troops, which, according to Josephus, he did with the treasures he found in the sepulchre of David (*Antiq.* xiii. 8. 4). The factions and discontent prevailing among the Jews made it necessary for Alexander Jannæus and the queen Alexandra to hire foreign soldiers (Jos. *Antiq.* xiii. 13. 5; xiii. 16. 2). Herod the Great had in his army foreigners of various nations (*Antiq.* xvii. 8. 3). Nothing certain is known respecting the discipline of these troops, except that they appear to have been organized according to the manner of the Romans. And Josephus tells us, that he himself armed and disciplined his troops after the Roman manner (*Bell. Jud.* ii. 20. 7). It was natural that the Jews should

* Not, as in our English version, 'the principal scribe of the host.' The 'captain of the host' appears to have had the direction of the numbering of the people (2 Sam. xxiv. 2; comp. 1 Macc. v. 42).

endeavour to learn and practise the organization and discipline by which the Romans had subdued them, as well as other nations. The Roman army was divided into legions, each legion into ten cohorts; each cohort into three maniples; each maniple into two centuries, so that there were 30 maniples and 60 centuries (consisting each of 100 men) in a legion. During the period that the Romans exercised a direct supremacy over Judæa, Roman troops were kept there to maintain tranquillity. They were stationed regularly at Cæsarea, the seat of the Roman procurator (Acts x. 1), but at the great festivals were partly transferred to Jerusalem (Acts xxi. 31). [BATTLE, SYSTEM OF; CENTURION; LEGION.]

(See Winer, *Real-Wörterbuch*, and Herzog's *Real-Encyclopædie*, article *Kriegsheer*; De Wette, *Archæologie* (third edition); Pareau, *Antiquitas Hebræica*; Jahn, *Biblical Antiquities*; *Exegetisches Handbuch zum A. ARNALD, RICHARD, a clergyman of the Church of England, was born in London about the year 1696. He was rector of Thurcaston in Leicestershire, and prebendary of Lincoln. He is best known as the author of a Commentary on the Apocrypha, which is usually printed along with the Commentaries of Patrick, Lowth and Whitby as part of the same series. This commentary appeared first in separate parts: the first, which was confined to the Wisdom of Solomon, in 1744; the second, on Ecclesiasticus, in 1748; and the last, comprising the remaining books, in 1752. The remarks of the author are sensible, and throw considerable light on the general meaning of the books; but they leave much to be desiderated both of a philological and a general kind. The author died September 4, 1756.—W. L. A.

ARNOLD, NICOLAS, was born at Lesna, in Poland, December 17, 1618. Having settled in Holland, he became minister at Beetgum in 1645; and in 1654 he succeeded Cocceius as professor of theology at Franeker, where he died on the 13th October 1680. He wrote *Lux in Tenebris seu brevis et succincta Vindicatio simul et Conciliatio iocorum Vet. et Nov. Testamenti quibus omnium sectarum adversarii ad stabililandos errores suos abutuntur*, of which the third edition appeared at Franeker in 1680. Mr. Orme calls 'this one of the most pugnacious books ever written on Scripture.' The author contends for the doctrines of the Reformation as taught by Calvinists, and maintains a close fight against all antagonists, Pontifici, Arminiani, Sociniani, Philosophi, Anabaptistæ, and Freethinkers, from Genesis to Revelation. In such a work there must be much that had better have been omitted; but the work is a valuable one on the whole. Among other things, the author anticipates and suggests the proper reply to many of the cavils against Scripture which have been recently adduced. He wrote also *Exercitationes Theologicæ ad Epist. ad Hebræos*, Franeker, 1679, besides several theological and polemical works.—W. L. A.

ARNON (אֲרֹנוֹן) [from אָרַן, *stridere, strepere, sonare*]; (Sept. Ἀρνῶν), a river or torrent (נָהָר) forming the southern boundary of trans-Jordanic

Palestine, and separating it from the land of Moab (Num. xxi. 13, 26; Deut. ii. 24; iii. 8, 16; Josh. xii. 1; Is. xvi. 2; Jer. xlvi. 20). Burckhardt was the first to give a satisfactory account of this river, under the name of Wady Modjeb, which it now bears. It rises in the mountains of Gilead, near Katrane, whence it pursues a circuitous course of about eighty miles to the Dead Sea. It flows in a rocky bed, and, at the part visited by Burckhardt, in a channel so deep and precipitous as to appear inaccessible; yet along this, winding among huge fragments of rock, lies the most frequented road, and, not being far from Dibon, probably that taken by the Israelites. The descent into the valley from the south took Irby and Mangles (*Letters*, p. 461), one hour and a half; and the descent from the north took Burckhardt (*Syria*, p. 372) thirty-five minutes. The last-named traveller declares that he had never felt such suffocating heat as he experienced in this valley from the concentrated rays of the sun and their reflection from the rocks. The stream is almost dried up in summer; but huge masses of rock, torn from the banks, and deposited high above the usual channel, evince its fullness and impetuosity in the rainy season. Irby and Mangles suppose that it is this which renders the valley of the Arnon less shrubby than that of most other streams in the country. 'There are, however, a few tamarisks, and here and there are oleanders growing about it.' Near this place the old Roman road comes down upon the stream; and here there remains a single high arch of a bridge, all the others having disappeared (Rob. ii. p. 204).—J. K.

AROB (עֲרֹב) occurs Exod. viii. 21, 22, 24, 29, 31; Ps. lxxvii. 45, and cv. 21; all which passages relate to the plague of flies inflicted upon Pharaoh and his people. In the Sept. it is uniformly rendered *κυνόμυια*, or the dog-fly. In Exodus Jerome renders it by the following phrases and words, omne genus muscarum, muscæ diversi generis, muscæ hujusmodi, musca gravissima, and musca. In the Psalms he renders it cnyomyia. It seems most probable that a *single species only* is intended, whatever it may be, from the way in which it is introduced, 'I will send אַתְּהָעֲרֹב the *arob*,' compared with verses, 29, 31, 'there remained not אֶתֶר one,' that is, one *arob*, οὐδεμίαν, nec una quidem. The words, the *arob*, may be substituted for 'swarms of flies,' throughout the narrative, with only an apparent exception in the 24th verse; but there, the words עֲרֹב כָּכָךְ, etc., may be rendered, the *arob* came numerously or grievously (Sept. *παρεγένετο ἡ κυνόμυια πληθῶς*, 'the dog-fly arrived, a multitude'); since instances of a similar use of the word כָּכָךְ occur Gen. i. 9; Exod. ix. 3; x. 14, etc., where it appears to be used like the word *gravis* by the Romans. It has, however, been much debated what particular species is meant. Nothing can be gathered from the references to it in the Hebrew, farther than that it was 'upon Pharaoh, and upon the Egyptians,' that it filled their houses, covered the ground, corrupted or destroyed the land (Query, the inhabitants, Gen. vi. 12), and devoured their persons. (See also Wis. xvi. 9). The rendering of the Septuagint, *κυνόμυια*, is entitled to much consideration. It is evidently compounded of *κύων*, a dog, and *μύια*, a fly; and because both the one and the other of these creatures come uninvited, on some occasions, and though driven away, as often return,

so the word formed of the union of the two, is used by ancient authors to indicate *consummate impudence*. Thus Homer represents Mars as applying the epithet to Minerva, for instigating the gods to quarrel (*Il.* xxi. 394). It is also referred to, as an insect, by Ælian, who, in describing the myops, tabanus, or horse-fly, says, it is similar to what is called the *κρυβωσα* (*Hist. Anim.* iv. 51). Philo, in his *Life of Moses* (i. 23, p. 401, ed. Mangey), expressly describes it as a biting insidious creature, which comes like a dart, with great noise, and rushing with great impetuosity on the skin, sticks to it most tenaciously. It seems likely that Jerome, in translating Exodus, derived the word from ערב, 'to mingle,' and understood by it a mixture of noxious creatures, as did Josephus, Aquila, and all the ancient translators. The diversity of Jerome's renderings in Exodus, however, betokens his uncertainty, and in the Psalms he has adopted that of the Septuagint. More modern writers, reasoning on other senses of the Hebrew word, and which are very numerous, have proposed several different insects. Thus, one of the meanings of ערב is 'to darken,' and Mouffet observes that the name cynomyia agrees with no kind of flies better than with those *black*, large, compressed flies, which boldly beset cattle, and not only obtain ichor, as other flies, but also suck out blood from beneath, and occasion great pain. He observes that they have no proboscis, but, instead of it, have double sets of teeth, like wasps, which they infix deeply in the skin; and adds that they greatly infest the ears of dogs (*Theat. Insect.* cxi.) Pliny describes an insect of this kind (*Hist. Nat.* xi. 40). So also Columella (vii. 13). See Pliny by Grandsagne and Cuvier, Parisii, 1828, vol. ii. p. 461, note. Others have proposed the blatta Orientalis or Ægyptia of Linnaeus, as answering considerably to the characteristics of voracity, intrusion into houses, etc. etc. (Forsk. *Descrip. Animal.*, Præf. p. 22). The miracle involved in the plague of flies consisted, partly at least, in the creature being brought against the Egyptians in so great an abundance during winter. The particular species is, however, at present undetermined.—J. F. D.

AROD (אָרוֹד = אָרוֹד, *wild ass*, Ges.; *affliction*, Fürst), one of the sons of Gad, and ancestor of the Arodites (Num. xxvi. 17). He is called Arodi (Gen. xlv. 17).—W. L. A.

AROD (עָרוֹד). This word occurs Job xxxix. 5; and in Dan. v. 21, the plural is found in the Chaldee emphatic state, *Aradiya* (עָרָדִיָּא). The rendering of the A. V. is, in the former case, 'wild ass,' in the latter 'wild asses.' In the latter passage Theodoret gives *ὄνάγρυσσον*, and the onager, *ὄνος ἄγριος*, is probably the animal intended by the word. In the former passage it is paralleled with the *Perè* (rendered also 'wild ass' in the A. V.), which was probably the designation of the wild mule [PERÈ]. Bochart (Bk. iii. c. 16) regards the name עָרוֹד as onomatopoeic, having reference to the braying of the onager. The Arod is described by Job as having 'its house in the wilderness,' and 'its dwellings in the barren lands' (ver. 6), and this agrees remarkably with the habits of the onager, the favourite resort of which is elevated, rocky, and barren places. It is described as delighting 'to stand on the brink of

precipices, whence, with protruded ears, it surveys the scene below, blowing and at length braying in extreme excitement' (Col. C. H. Smith). It was this animal which the soldiers chased on the banks of the Euphrates, as described by Xenophon (*Anab.* Bk. I, c. v.) He says its flesh is akin to that of the stag, but tenderer. Some have proposed to read עָרוֹד for עָרֵר and עָרוֹר, in Jer. xvii. 6, and xlviii. 6, on the plea that the *heath* is not found in Asia; and in the latter place the LXX. actually give the rendering *ὄνος ἄγριος*. But though the heath is not found, the *juniper* is, which the Arabs call *عسعر* *Arar*, and it is this probably which is referred to by the prophet [ARAR].—W. L. A.

AROER (עָרוֹר; Sept. Ἀροήρ). 1. A town on the north side of the river Arnon, and therefore on the southern border of the territory conquered from the Amorites, which was assigned to the tribes of Reuben and Gad (Deut. ii. 36; Josh. xii. 2; xiii. 9). The Amorites had previously dispossessed the Ammonites of this territory; and although, in the texts cited, the town seems to be given to Reuben, it is mentioned as a Moabitish city by Jeremiah (xlviii. 19). Burckhardt found the ruins of this town under the name of Ara'yr, on the edge of a precipice overlooking the river (*Travels in Syria*, 372), [a description which agrees with that of the Onomasticon, 'in vertice montis super ripam torrentis Arnon.'] They are merely alluded to by him, and have not been noticed by other travellers. Aroer is always named in conjunction with 'the city that is in the midst of the river;' [but of this no adequate explanation has been suggested. The most probable is, that it was a town situated at the junction of the Modjeb with the Lejm, where Burckhardt found some ruins (p. 374).]

2. One of the towns 'built,' or probably rebuilt, by the tribe of Gad (Num. xxxii. 34). It is said in Josh. xiii. 25, to be 'before Rabbah' [of Ammon]; but, as Raumer well remarks (*Palästina*, p. 249), this could not possibly have been in the topographical sense of the words (in which *before* means *east of*), seeing that Aroer, as a town on the eastern border of Gad, must have been west of Rabbah. But to a person in Palestine Proper, or coming from the Jordan, Aroer would be *before* Rabbah in the ordinary sense; and it appears to have been thus understood by Burckhardt (*Syria*, 355), who, in journeying from Szalt towards Rabbath Ammon, notices a ruined site, called Ayra, as 'one of the towns built by the tribe of Gad.' This Ayra, about seven miles south-west from Szalt, is probably the same with the *Aray-el-Emir*, visited by Legh (p. 246), on his way from Heshbon to Szalt, and which in Berghaus's celebrated map of Palestine is placed two German (nine English) miles W. N. W. of Rabbah. Aroer of Gad is also mentioned in Judg. xi. 33, and 2 Sam. xxiv. 5.

3. A city in the south of Judah, to which David sent presents after recovering the spoil of Ziklag (1 Sam. xxx. 26, 28). At the distance of twenty geographical miles S. by W. from Hebron, Dr. Robinson came to a broad Wady where there are many pits for water, which are called 'Ararah, and which gave name to the valley. In the valley and on the western hill are evident traces of an ancient village or town, consisting only of foundations of unhewn stones, now much scattered, but yet sufficiently distinct to mark them as foundations. Small

fragments of pottery are also everywhere visible. The identity of name satisfies the traveller that he has here found the Aroer of Judah.—J. K.

Addendum.—In Is. xvii. 2, mention is made of 'the cities of Aroer' (עָרֵי אֲרֹעַר). This has led some to suppose that there was a fourth Aroer further to the north than any of the others, near to Damascus; but this is without any supporting evidence. The LXX. rendering is *εις των αιωνων*, which leads to the supposition that they must have read עָרֵי עֶר; and this is followed by Lowth, who further argues, that as Aroer was itself a city, the phrase 'cities of Aroer' makes no good sense. But this remark is sufficiently met by the occurrence of such a phrase as 'Heshbon and all her cities,' Josh. xiii. 17; and though the words 'the cities are deserted for ever' make a perfectly good sense, the statement is so vague that it can hardly be accepted as befitting the position in which it stands. The other ancient versions all differ from the Hebrew text, the Chaldee rendering 'the deserted cities shall be laid waste,' and the Syriac having 'Ad'ir instead of Aroer. The Hebrew codices, however, present no various readings here. Knobel regards the construction as an instance of the genitive supplying the place of a noun in apposition (comp. Jer. xiv. 17), and renders 'the cities Aroer;' by which he supposes are meant both the towns of that name, and that these are put for the 'east Jordanic towns generally, because the name is assonant with עָרֵי, and signifies *naked, stript* = for the towns of the district east of the Jordan shall be forsaken of their inhabitants.' Rosenmüller understands by it the Aroer of Gad, with the towns in its vicinity which are said to be deserted, because emptied of their inhabitants by Tiglath Pileser (2 Kings xv. 29); and in this he is followed by Gesenius, Henderson, Alexander, etc.—W. L. A.

ARPHAD, or ARPAD (אַרְפָּד; Sept. Ἀρπάδ), a Syrian city, having its own king, and in Scripture always associated with Hamath, the Epiphania of the Greeks (2 Kings xviii. 34; xix. 34; Is. x. 9; xxxvi. 19). It has very commonly been confounded with the Phœnician Arvad or Aradus. [ARVAD.] Michaelis and others seek Arphad in Raphanæ or Raphanæ of the Greek geographers (Ptolem. v. 15; Steph. Byzant. in Ἐπιφάνεια; Joseph. *De Bell. Jud.* vii. 1. 3; vii. 5. 1), which was a day's journey west of Hamath (Mannert, vi. p. 431). Some, however, are content to find this Arphad in the Arpha which Josephus (*De Bell. Jud.* iii. 3. 6) mentions as situated on the north-eastern frontier of the northernmost province of Herod Agrippa's tetrarchy. But all these explanations are purely conjectural, and Arphad must still be numbered among unascertained Scriptural sites.—J. K.

ARPHAXAD (אַרְפַּכְשָׁד; Sept. Ἀρφαξάδ), 1. The third son of Shem, and ancestor of Eber; born two years after the deluge, and died at the age of 438 years (Gen. x. 22; xi. 12, ff.) Josephus says that from him the Chaldeans were named Arphaxadeans (Ἀρφαξαδαίους, *Antiq.* i. 6. 4), and in the name אַרְפַּכְשָׁד we have already the designation commonly borne by this people כְּשִׁימִי. Bochart suggests that the name is preserved in Ἀρραπαχίτις, a province in northern Assyria, near Armenia (Ptol. vi. 1), the primitive country of the Chaldeans; and this Gesenius thinks not impro-

vable. Knobel conjectures that originally the name was אַרְמֹכְשָׁד, the *Chaldean highland*; and Ewald traces the first part of the name to the Arab *araph*, to bind, and translates *stronghold of the Chaldeans*; but these seem unlikely designations of a man, which undoubtedly was the first use of the word. The same objection applies to the etymology proposed by Michaelis, from *chesed* and *araraph*, a limit, qu. *the region of the chas-dim* (Fürst, *hesed-gebiet*), which, otherwise, is preferable.

2. A king of the Medes, who reigned at Ecbatane, and was defeated by Nabuchadonosor, king of the Assyrians, who put him to death (Judith, i. 1, ff.) He has been identified with Deioces, the founder of Ecbatane, by some, and with his son Phraortes by others; but the former of these died in peace, and the latter fell while besieging Nineveh (Herod. i. 102); neither of which accords with the account in Judith. More probable is the conjecture that he was the same as Astyages or Ahasuerus, whom Herodotus makes the last king of the Medes.—W. L. A.

ARROW. This word is frequently used as the symbol of calamity or disease inflicted by God (Job vi. 4; xxxiv. 6; Ps. xxxviii. 2; Deut. xxxii. 23; comp. Ezek. v. 16; Zech. ix. 14). The metaphor thus applied was also in use among the heathen: thus, Ovid [makes Paris say that he had been doomed to be transfixed 'à celeste sagitta' (*Epist.* xvi. 277)]. An instance more to the point is *Il.* i. 44-53]. It derived its propriety and force from the popular belief that all diseases were immediate and special inflictions from Heaven.

Lightnings are, by a very fine figure, described as the arrows of God (Ps. xviii. 14; cxliv. 6; Habak. iii. 11; comp. Wisd. v. 21; 2 Sam. xxii. 15).

'Arrow' is occasionally used to denote some sudden or inevitable danger; as in Ps. xci. 5:—'The arrow that flieth by day.' It is also figurative of anything injurious, as a deceitful tongue (Ps. cxx. 4; Jer. ix. 8); a bitter word (Ps. lxiv. 3); a false testimony (Prov. xxv. 18). As symbolical of oral wrong, the figure may perhaps have been derived from the darting 'arrowy tongue' of serpents. The arrow, however, is not always symbolical of evil (see Ps. cxxvii. 4, 5); it is also used in a good sense to denote the energy of the word of God in the hands of the Messiah (Ps. xlv. 5; Is. xlix. 2, and Lowth's note thereon).—(Wemyss's *Clavis Symbolica*, etc. A. Clarke on Job vi. 4).—J. K.

ARROWS. [ARMS; DIVINATION.]

ARSACES, a king of Parthia and Media, who took prisoner Demetrius II., the Syrian king (1 Macc. xiv. 2). This event took place 139 B.C. (Josephus *Antiq.* xiii. 5. 11, and 8. 4). Thus Arsaces was the sixth prince of the dynasty of the Arsacidæ. His proper name was Mithridates I. He was a man of distinguished bravery, and at the same time just and temperate (Justin. xxxvi. 1; xxxviii. 9; Diod. Sic., *Exc.* p. 112). Strabo says that Arsaces was the common name of the Parthian kings (xv. p. 702). The same name appears still in the Pers. *shah*. Is *Arsaces* = *Ari-shah*, 'prince of the noble?'—W. L. A.

ARTAXERXES, ARTACHSHAST (אַרְתַּחְשָׁשְׁתָּא) as it is most frequently written) is the title under which more than one Persian king is mentioned

in the Old Testament. The Hebrew form is a slight corruption of אֲרַחְשַׁשְׁתָּא, which letters De Sacy has deciphered in the inscriptions of Nakshi Rüstam, and which he vocalizes *Artahshetr* (*Antiq. d. l. Perse*, p. 100). Gesenius pronounces them *Artachshatr*; and, by assuming the easy change of *r* into *s*, and the transposition of the *s*, makes Artachshast very closely represent its prototype. The word is a compound, the first element of which, *arta*—found in several Persian names—is generally admitted to mean *great*; the latter part De Sacy conceived to be the Zend *Kshshetro*, *King*, to which Gesenius and Pott assent. Thus the sense of *great warrior*, which Herodotus (vi. 98) assigned to the Greek form Artaxerxes, accords with that which etymology discovers in the original Persian title (particularly when we consider that, as the king could only be chosen from the soldier-caste—from the *Kshatriyas*—warrior and king are so far cognate terms); although Pott, according to his etymology of *Xerxes*, takes Artaxerxes to be more than equivalent to Artachshatr—to be ‘magnus regum rex’ (*Etym. Forsch.* i. p. lxvii.)

The first ARTACHSHAST (אֲרַחְשַׁשְׁתָּא) and once pointed *Artachshashta*; Sept. Ἀρθασασθά) is mentioned in Ezra iv. 7-24 as the Persian king who, at the instigation of the adversaries of the Jews, obstructed the rebuilding of the Temple, from his time to that of Darius, king of Persia. According to the arguments adduced in the art. AHASUERUS, this king is the immediate predecessor of Darius Hystaspis, and can be no other than the Magian impostor, Smerdis, who seized on the throne B.C. 521, and was murdered after a usurpation of less than eight months (Herod. iii. 61-78). Profane historians, indeed, have not mentioned him under the title of Artaxerxes; but neither do Herodotus and Justin (the latter of whom calls him *Oropasta*, i. 9) agree in his name; so that this fact is not, of itself, enough to invalidate any deductions which are in other respects sound.

As to the second ARTACHSHAST (אֲרַחְשַׁשְׁתָּא; Sept. Ἀρθασασθά), in the seventh year of whose reign Ezra led a second colony of the Jewish exiles back to Jerusalem (Ezra vii. 1, *sq.*), the opinions are divided between Xerxes and his son Artaxerxes Longimanus. The arguments brought forward by the advocates for Xerxes, among whom are J. D. Michaelis, Jahn, and De Wette, are briefly as follows: That, as the preceding portion of the book of Ezra relates to Darius Hystaspis, it is most natural to expect that the next following section should refer to his successor, Xerxes; that, on the supposition that Artaxerxes is here meant, we not only have to explain how the reign of Xerxes, who had been so favourable to the Jews, is entirely omitted here, but also how the narrative can make such a tremendous leap as from the sixth year of Darius to the seventh of Artaxerxes, a period of fifty-eight years; that, on that supposition, the interval between the seventh year of his reign, when Ezra set out, allows too short a space for the affairs of the colony to have reached that state of disorder in which Nehemiah found them on his arrival at Jerusalem, in the twentieth year of his reign; and, lastly, that Josephus calls the king in question Xerxes (Joseph. *Antiq.* xi. 5. 1, *sq.*)

The supporters of the other alternative—that the

king here meant is Artaxerxes Longimanus—among whom are J. H. Michaelis, Eichhorn, and Bertholdt, rest on the following reasons, as stated chiefly by Bertholdt: That the coherence between the several portions of the book of Ezra is by no means so strict as to make the first argument conclusive; as, even assuming that *Xerxes* is the person referred to, there is still a gap of thirty-six years between the end of ch. vi. and the beginning of ch. vii.; that the objection, that the interval between the arrivals of Ezra and Nehemiah in Jerusalem is too short (on the supposition that the former left Babylon in the reign of Artaxerxes) to account for the confusion in which the latter found the colony, loses its force, if we consider that the progress of the infant state was necessarily slow in its difficult position, and if we also conceive Ezra's efforts to have been more directed to reform the religious than the civil state of the Jews; that the appeal to Josephus is of no avail, as he calls the king in whose reign Nehemiah returned Xerxes also, which is decidedly incorrect, since Nehemiah went back to Persia in the thirty-second year of the king (xiii. 6), and Xerxes only reigned twenty-one years; that the Apocryphal Esdras, in its version of this history, calls the king Artaxerxes; that, in taking our Artachshast to be Artaxerxes Longimanus, we have the support of a considerable resemblance in the two names; and lastly, that (if Xerxes is the Achashverosh of the books of Esther and Ezra) we not only avoid the evil attending the other alternative—the evil of being obliged to recognise him under two widely different names in almost contemporaneous books—but also find Artaxerxes under one and the same name in the books of Ezra and Nehemiah. This last argument proceeds on the assumption that the Artachshast of whom Ezra and Nehemiah speak is the same person; and, as Ezra and Nehemiah were decidedly contemporaries (Neh. viii. 9), the reasons here adduced may derive some additional force from the arguments brought forward below.

The third ARTACHSHAST (the forms in the Hebrew and Sept. are the same as in the last case) is the Persian king who, in the twentieth year of his reign, considerably allowed Nehemiah to go to Jerusalem for the furtherance of purely national objects, invested him with the government of his own people, and allowed him to remain there for twelve years (Neh. ii. 1, *sq.*; v. 14). It is almost unanimously agreed that the king here intended is Artaxerxes Longimanus, who reigned from the year 464 to 425 B.C. The date of Nehemiah's departure is, therefore, the year 444 B.C. Some few have indeed maintained (and it seems principally for the purpose of reconciling Neh. xiii. 28, with Joseph. *Antiq.* xi. 8. 3, 4) that the king here referred to is Artaxerxes Mnemon, who reigned from the year B.C. 404 to 359; and J. D. Michaelis (*Anmerk. f. Ungel.*) admits that he should not know how to refute any one who advocated that opinion. Bertholdt, however (*Einleit.* iii. 1014), endeavours to find a conclusive argument in the fact that Eliashib, who was the high-priest when Nehemiah arrived at Jerusalem (iii. 1), was the grandson of the high-priest Jeshua, who accompanied the first colony under Zerubbabel (xii. 1, 10). He argues, namely, that the three generations which elapsed between the accession of Cyrus and the arrival of Nehemiah, and which in the ordinary computation amount to ninety-nine years, tally so exactly with the ninety-two years which

intervene between the first year of Cyrus and the twentieth year of Artaxerxes Longimanus, as to render it far more probable that the latter is the Artachshast of the book of Nehemiah; whereas, on the supposition that Artaxerxes Mnemon is the person meant, Eliashib and his father and grandfather must have enjoyed the high-priesthood between them for the incredible period of 154 years.—J. N.

ARTEMAS (Ἄρτεμᾶς), a contraction for Artemidorus (Tit. iii. 12), the name of an esteemed disciple whom St. Paul designed to send into Crete to supply the place of Titus, whom he invited to visit him at Nicopolis.

ARTEMIS (Ἄρτεμις, Acts xix. 24), the Diana of the Romans, is a goddess known under various modifications, and with almost incompatible attributes. As the tutelary divinity of Ephesus, in which character alone she concerns us here, she was undoubtedly a representative of the same power presiding over conception and birth which was adored in Palestine under the name of ASHTORETH. She is therefore related to all the cognate deities of that Asiatic Juno-Venus, and partakes, at least, of their connection with the moon. Creuzer has combined a number of testimonies in order to shew how her worship was introduced into Ephesus from the coasts of the Black Sea; and endeavours to point out the several Medo-Persian, Egyptian, Libyan, Scythian, and Cretan elements of which she is compounded (*Symbolik*, ii. 115, sq.)

Her earliest image, which was said to have fallen from heaven, was probably very rude, and, to judge from its representation on ancient coins, little more than a head with a shapeless trunk, supported by a staff on each side. There is some dispute as to the material of which her image was made. Most authorities say it was of ebony, the black colour being as Creuzer thinks, symbolical. Pliny relates that Mucianus, who had seen it, affirms that it was of the wood of the vine, and that it was so old that it had survived seven restorations of the temple (*Hist. Nat.* xvi. 79). According to Xenophon, it was of gold (*Anab.* v. 3). The latter image with the full

them, two garlands, one of flowers and the other of acorns; the numerous breasts; the lions, stags, and cows in various parts; the bees and flowers on the sides; and others described in Millin's *Galeriæ Mythol.* i. 26. Her priests were called Megabyzi, and were eunuchs.

97.

The Arabic version of the Acts renders Artemis, in the chapter cited, by *Az Zuharat*, which is the Arabic name for the planet Venus.—J. N.

ARTICLES. In the later development of languages, logical fulness and accuracy are attained at the expense of conciseness and delicacy; and if not before, at least in this stage the small words called *articles* are uniformly produced. If we confined our view to the languages which are derived from Latin, we might easily believe that the presence of these parts of speech is a symptom and proof that the later and logical stage is already reached: for in French, Italian, Spanish, and Portuguese, derivatives from the Latin *ille* and *unus* fulfil the part of the English *the* and *a*. Nor is the lesson taught by the Greek language apparently very different: for in its earliest extant specimens (the poems of Homer) the word δ , η , $\tau\delta$, is far oftener used as a demonstrative or relative pronoun, than as the definite article. We seem to be able to trace its growth and establishment in this later function; and we are tempted to infer from its appearing so much earlier in Greek than in Latin, that this is owing to the earlier development of logical acuteness in the Greek mind. Finally, in modern Greek, the old numeral *eis*, *évos*, one, has given birth to a new indefinite article *évas*, perfectly analogous to the Italian *uno*, French *un*, and English *a*.

We are here perhaps in danger of building up a theory too rapidly. It is true that in languages generally, the early and poetical style is defective in articles, while the late prosaic, and logical style is even redundant with them. Nevertheless, we cannot safely infer a high logical cultivation, much

96.

development of attributes, of which we give a representation below, is, as Creuzer says, a Pantheon of Asiatic and Egyptian deities. Even in it, however, we see how little influence Greek art had in modifying its antique rudeness. It is still more like a mummy than a Greek statue. Some of the most significant attributes in this figure are—The turreted head like that of Cybele; the nimbus behind it representing the moon; the Zodiacal signs of the bull, the twins, and the crab on her bosom; below

less the attainment of the secondary stage of development, from the presence of articles in a language. Hebrew has possessed a definite article as long as it can be traced back; but it would be too much to impute it to an unusually strong and premature argumentative acuteness in the nations of Canaan, whose speech the family of Isaac adopted. That there is a germ of truth in this matter we believe; but until the relation of the Syro-Arabian to the older languages which they supplanted is better understood, it is hazardous to engage in any of these speculations.

So much can be stated as fact. If a language has as yet no definite article, it will gradually form one out of its demonstrative pronoun, provided that it be not tied down to a fixed state by imitating classical models. Under the same circumstances, there is a tendency to generate an indefinite article out of the numeral *one*. Closely akin to the last is the use of the word that properly means *single*, in the sense of the indefinite article—a change which can be traced in the Bagdad dialect of Arabic.

In the Hebrew language the definite article, as printed in our books, appears under the form ה (ha), accompanied by a redoubling of the following consonant, if it be such a consonant as Hebrew euphony allows to be doubled. It is not to be questioned that the real word, when isolated, was

הל (hal), corresponding to the Arabic ال (al or el),

especially as the final *l* in the Arabic article also is, in numerous cases, assimilated to the consonant which follows. The Hebrews have one demonstrative form הלה (elle) *these*, which approaches remarkably near to the Arabic; and there is some reason for regarding הל as a composite, or at least an elongated form, of which הוה (hu) *he*, is the root. To this attach themselves two different consonants to denote the ideas of *THAT* and *THIS*, L and DH, which latter becomes Z or D in different dialects. The DH is found in pure Arabic (as, indeed in English, strange to think !); but in Hebrew it is Z, in Chaldee D, in German D, in Greek T; though, in these European tongues the idea of *THAT* predominates over *THIS*. The L is found in Latin (*ille*, *that*); and the old Latin words *olli*, *oltra*, are thought to indicate that *yon*, *yonder*, is its primitive sense.

Just so, הלאה (hāl'ā) for *ultra*, *beyond*. As regards the form of the Hebrew article, it thus appears that the root *ho* or *hu* first took to itself the terminating *l*, and then in pronunciation gradually rubbed it off again.

The radical element of the Greek article vacillates between *ho* and *to*; and a general survey of all the kindred languages makes it probable that these are mere varieties of the same root. In Latin and in Zend the *h* maintains its place throughout; in Sanscrit the Greek *ho* and *to* exist as *sa* and *ta*, this relation of *h* to *s* being notoriously common. In Lithuanian only *ta* is found; and the *seo*, *dha*, of the Anglo-Saxon, sufficiently establish the connection of *sa* with *ta*; for the sound *th*, by mere lisping, naturally degenerates into either *s* or *z*, and *dh* into *z* or *d*. We are thus nearly brought to a conviction that the two elements *hu* and *dha* of the Syro-Arabian languages were, at a much earlier stage, variations of but one root. Nor is this opinion absurd; so many are the proofs of the extreme antiquity of the *material* which is so differently

worked up in extant languages. In fact, the root *hu* (this) shews itself likewise in the Welsh tongue.

The Chaldee branch of the Syro-Arabian has a peculiarity of its own, in compensation for the definite article. This consists in the annexation of the vowel *ā* at the end of nouns, to produce what is called the emphatic state; which is practically, it seems, equivalent in sense to the English *the*. Whether this termination has any etymological relation to the Hebrew article is uncertain. In Arabic, especially in its modern Syrian dialect, a very similar elongation of nouns is common, with a view of giving specification or

individuality to that which was collective: as طين

(tīn), fig or figs; طينه (tīna), A fig; سمن (samm),

butter; سمنة (senna), A piece of butter. This, however, agrees more nearly to the indefinite than to the definite article; nor does its *construct* form indicate relationship to the Chaldee termination.

It belongs to grammars of the special languages to discuss the uses of the article, and only a few general remarks can find place here. The chief peculiarity in Hebrew occurs with words joined in what is technically called 'regimen' or 'construction,' in which case a *single* article between the two nouns serves to define both of them. Thus,

בן המלך (ben ham-melek) means, *the son of the king*.

If the Hebrews wish to join two nouns in this relation, so as to define the latter and leave the former undefined, they are forced to abandon the construct form, and to employ the preposition

ל, which in this case is to be rendered *of*, not *for*.

Thus, 'A Psalm of David' מזמור לדוד (mizmōr le David). This remark, we believe, was made first by Ewald.

A rule which some have sought to establish is, that when a noun is followed by another noun in the genitive, the latter must take the article, if the former has it. But this is not universally true; for instance, Heb. ix. 13, *el garb to aima taurosw kal trāgwsw*, 'for if the blood of bulls and goats,' etc.

It seems to be a general result of the history of the article, that in elevated style there is a tendency to drop it, because such style generally savours of the antique and the poetical. Thus, οὐρανὸς καὶ γῆ παρελεύθερα, 'Heaven and earth shall pass away,' is more elevated than 'The heaven and the earth,' etc. But beside and in contrast to this, every language possesses numerous familiar formulas or special words, from which the article is dropped; and to become acquainted with these is always very difficult. In daily life they abound, not only after prepositions, but as nominative cases: thus, to sit *at table*; to travel *by ship*; 'No fear least dinner cool.' A dim perception of this fact seems to have led to the rule (as some have wished to make it), that the article may always be omitted after a preposition.

In the above, we have naturally said little of the *indefinite* article, because it occurs but a few times in the New Testament (*uta*, *one*, put for *A*), and never in the Hebrew of the Old Testament. Though of less importance to language, its use appears to be governed by the same general laws which regulate that of the definite article.—F. W. N.

Addendum.—A *u* induction from the widest field

leads to the conclusion that it is a law of Greek construction, that when the article is prefixed only to the first of several words joined by conjunctions, they are together descriptive either of a single subject, or of several subjects forming parts of one whole, concomitants in one series, co-agents in one work, coefficients to one result. Thus expressed, the canon will be found to enunciate a law exemplified by all writers of Greek who use the article. A few apparent exceptions may be adduced; but, as reasons can be assigned for them, they cease to be really exceptions. As illustrative of the rule, the following instances may be given:—Eph. i. 3, *εὐλογημένος ὁ θεὸς καὶ πατήρ*, where *θεὸς* and *πατήρ* refer to the same subject; Heb. ix. 19, *τὸ ἴμα τῶν μόσχων καὶ τράγων*, where the goats and bulls form parts of one whole; Thuc. i. 1, *τὸν πόλεμον τῶν Πελοποννησίων καὶ Ἀθηναίων*, where the Peloponnesians and the Athenians were actors in one series of transactions; Matt. xi. 1, *τοῦ διδάσκει καὶ κηρύσσειν*, where the teaching and preaching are co-efficients to one result, or two parts of one official act, etc. On the other hand, we have, Acts xxvi. 30, *ὁ βασιλεὺς καὶ ὁ ἡγεμὼν*, because different subjects are mentioned; Heb. xi. 20, *τὸν Ἰακώβ καὶ τὸν Ἐσαῦ*, where we have different subjects receiving different kinds of blessing; Acts xiii. 50, *τὰς σεβόμενας γυναῖκας καὶ τοὺς πρώτους τῆς πόλεως*, not only different persons, but different genders; Arist. Pol. i. 1, *διώρισται τὸ θῆλυ καὶ τὸ δοῦλον*, etc. This canon becomes important in connection with such passages as the following:—Eph. v. 5; 2 Thess. i. 12; 1 Tim. v. 21; Tit. ii. 13; 2 Pet. i. 1; where it may be disputed whether there is only one subject or more. Now it would be incompetent, in the case of the majority of these passages, to apply this canon so as to make them directly attest the *essential* unity of Christ and God; for it may be that they only intimate a unity of *action* between them. But indirectly they sustain the doctrine of our Lord's deity; for how could a mere creature be thus put on a par with God? and where is it taught in Scripture that we are to expect a simultaneous *appearing* of God and of Christ as distinct beings? In the case of 2 Pet. i. 1, it seems hardly possible to give the passage any other rendering than such as shall express the personal unity of God and Christ: *ἐν δικαιοσύνῃ τοῦ θεοῦ ἡμῶν καὶ σωτήρος* I. X. can hardly be translated otherwise than 'in [the] righteousness of our God and Saviour Jesus Christ.' (Middleton, *Doctr. of the Gr. Art.*; Green, *Gram. of the N. T.*, p. 205 ff.; Winer, *Gram. of the N. T. Diction.*, by Masson, p. 139.)—W. L. A.

ARUBOTH (אַרֻבוֹת, Sept. Ἀραβῶθ), properly *Arubboth*, the seat of one of the twelve officers appointed by Solomon to provide for his household. It was probably in Judah.—W. L. A.

ARUMAH (אַרְוִמָּה, Sept. Ἀρρημά) a town near Shechem, the residence of Abimelech (Judg. ix. 41). Jerome identifies it with Ruma, and says it was called in his day Remphis, and was not far from Diospolis, *i. e.*, Lydda. This, however, does not accord with the position assigned to it in Judges. Van de Velde thinks he has found it in the ruins *d'Ormah*, south-west of Nablus.—W. L. A.

ARVAD (אַרְוָד; Ἀραδος, 1 Macc. xv. 23), a place in Phœnicia of which the present name is

Ruad, a small island and city on the coast of Syria, called by the Greeks Aradus, by which name it is mentioned in 1 Macc. xv. 23. It is a small rocky island, opposite the mouth of the river Eleutherus, to the north of Tripolis, about one mile in circumference and two miles from the shore. Strabo (xvi. p. 753) describes it as a rock rising in the midst of the waves (*πέτρα περικλυστος*); and modern travellers state that it is steep on every side. Strabo also describes the houses as exceedingly lofty, and they were doubtless so built on account of the scantiness of the site; hence, for its size, it was exceedingly populous (Pomp. Mela, l. ii. c. 7.) Arvad is *not* the same as Arpad or Arphad (Michaelis, *Spicil.* ii. 45).—J. K.

ARVADITES (אַרְוָדִים; Sept. Ἀραδιοί, Gen. x. 18; 1 Chron. i. 16), the inhabitants of the island Aradus [ARVAD], and doubtless also of the neighbouring coast. The Arvadites were descended from Arvad, one of the sons of Canaan (Gen. x. 18). Strabo (xvi. p. 731) describes the Arvadites as a colony from Sidon. They were noted mariners (Ezek. xxvii. 8, 11; Strabo, xvi. p. 754), and formed a distinct state, with a king of their own (Arrian, *Exped. Alex.* ii. p. 90); yet they appear to have been in some dependence upon Tyre, for the prophet represents them as furnishing their contingent of mariners to that city (Ezek. xxvii. 8, 11). They early entered into alliance with the Romans, and Aradus is named among the states to which the consul Lucius formally made known the league which had been contracted with Simon Maccabæus (1 Macc. xv. 23).—J. K.

ASA (אַסָּא, *healing* or *physician*; Sept. Ἀσά), son of Abijah, grandson of Rehoboam, and third king of Judah. He began to reign two years before the death of Jeroboam, in Israel, and he reigned forty-one years, from B.C. 955 to 914. The young king, on assuming the reins of government, zealously rooted out the idolatrous practices which had grown up during his minority and under the preceding reigns; and only the altars in the 'high places' were suffered to remain (1 Kings xv. 11-13; 2 Chron. xiv. 2-5). He laboured to improve the military resources of his kingdom, and was eventually in a condition to count on the services of 580,000 men (2 Chron. xiv. 6-8). In the eleventh year of his reign, relying upon the Divine aid, Asa attacked and defeated the numerous host of the Cushite king Zerah, who had penetrated through Arabia Petræa into the vale of Zephathah, with an immense host, reckoned at a million of men (which Josephus divides into 900,000 infantry and 100,000 cavalry, *Antiq.* viii. 12. 1), and 300 chariots (2 Chron. xiv. 9-15). As the triumphant Judahites were returning, laden with spoil, to Jerusalem, they were met by the prophet Azariah, who declared this splendid victory to be a consequence of Asa's confidence in Jehovah, and exhorted him to perseverance. Thus encouraged, the king exerted himself to extirpate the remains of idolatry, and caused the people to renew their covenant with Jehovah (2 Chron. xv. 1-15). It was this clear knowledge of his dependent political position, as the viceroy of Jehovah, which won for Asa the highest praise that could be given to a Jewish king—that he walked in the steps of his ancestor David (1 Kings xv. 11).

Nevertheless, towards the end of his reign the

king failed to maintain the character he had thus acquired. When Baasha, king of Israel, had renewed the war between the two kingdoms, and had taken Ramah, which he was proceeding to fortify as a frontier barrier, Asa, the conqueror of Zerah, was so far wanting to his kingdom and his God as to employ the wealth of the Temple and of the royal treasures to induce the king of Syria (Damascus) to make a diversion in his favour by invading the dominions of Baasha. By this means he recovered Ramah, indeed; but his treasures were squandered, and he incurred the rebuke of the prophet Hanani, whom he cast into prison, being, as it seems, both alarmed and enraged at the effect his address was calculated to produce upon the people (1 Kings xv. 16-22; 2 Chron. xvi. 1-10). In the three last years of his life Asa was afflicted with a grievous 'disease in his feet,' and trusted for a cure too much in his physicians. At his death he was honoured with a funeral of unusual cost and magnificence (2 Chron. xvi. 11-14). He was succeeded by Jehoshaphat.—J. K.

ASAHIEL (עֲשָׂיָהּ, *God's creature*; Sept.

'Ασαήλ), son of David's sister Zeruiah, and brother of Joab and Abishai. He was noted for his swiftness of foot; and after the battle at Gibeon he pursued and overtook Abner, who, with great reluctance, in order to preserve his own life, slew him by a backthrust of his spear, B. C. 1055. There were two others of this name (2 Chron. xvii. 8; xxxi. 13. [ABNER.] (2 Sam. ii. 18-23).—J. K.

ASAIHAH (עֲשִׂיָּהּ, 2 Chron. xxxiv. 20; 2 Kings xxii. 12, where he is called Asahiah in the A. V.), an officer of Josiah, one of those who were sent to consult the oracle about the book of the law. Another of this name is mentioned among David's choristers (1 Chron. vi. 30).

ASAPH (אֲסָפָה, *assembler*; Sept. 'Ασάφ), a Levite, son of Barachias (1 Chron. vi. 39; xv. 17), eminent as a musician, and appointed by David to preside over the sacred choral services which he organized. The 'sons of Asaph' are afterwards mentioned as choristers of the temple (1 Chron. xxv. 1, 2; 2 Chron. xx. 14; xxix. 13; Ezra ii. 41; iii. 10; Neh. vii. 44; xi. 22); and this office appears to have been made hereditary in his family (1 Chron. xxv. 1, 2). Asaph was celebrated in after times as a prophet and poet (2 Chron. xxx. 30; Neh. xii. 16), and the titles of eleven of the Psalms (lxxiii. to lxxxiii.) bear his name. The merits of this appropriation are elsewhere examined. [PSALMS.] There were three other persons named Asaph: one who occupied the distinguished post of mazkir (מְזַכֵּיר) or 'recorder' to king Hezekiah (2 Kings xviii. 18; Isa. xxxvi. 3); another who was keeper of the royal forests under Artaxerxes (Neh. ii. 8).—J. K.

ASCALON. [ASKELON.]

ASCENSION. [JESUS CHRIST.]

ASENATH (אֲסַנַּת; Sept. 'Asevéth), the daughter of Potipherah, priest of On, whom the king of Egypt bestowed in marriage upon Joseph. [JOSEPH.] No better etymology of Asenath has been proposed than that by Jablonski, who (*Panth. Egypt.* v. i. p. 56, and *Opuscul.* ii. 208) regards the forms Asenath and 'Asevéth as representative of

a Coptic compound *Assheneit*. The latter part of this word he takes to be the name of Neith, the titular goddess of Sais, the Athene of the Greeks; and considers the whole to mean *worshipper of Neith*. Gesenius, in his *Thesaurus*, suggests that the original Coptic form was *Asneith*, which means *who belongs to Neith*—quæ Neithæ est. That the name refers to this goddess is the generally received opinion (in modern times, Von Böhlen alone has, in his *Genesis*, proposed an unsatisfactory Semitic etymology); it is favoured by the fact that the Egyptians, as Jablonski has shewn, were accustomed to choose names expressive of some relation to their gods; and it appears liable to no stronger objection than the doubt, whether the worship of Neith existed at so early a period as that of the composition of the book of Genesis.—J. K.

ASER. [ASHER.]

ASH (אֲשֵׁר) occurs in Job iv. 19; xiii. 28;

xxvii. 18; Is. l. 9; li. 8; Hosea v. 12: in all which places the LXX. read *shés*, and the Vulg. *tinea*; A. V. *moth*. In Ps. xxxix. 11, אֲשֵׁר, Sept. ἀράχνη, Vulg. *aranea*. The same Hebrew word occurs in the phrase 'moth-eaten,' Job xiii. 28; Sept. σηρόβρωτον, *comeditur a tineis*; James v. 2, σηρόβρωτα, *a tineis comesta*. The word *shés* is used also in Eccus. xix. 3; xlii. 13; Matt. vi. 19, 20; Luke xii. 33. There is no biblical insect whose identity is better ascertained. The following is the chain of evidence through which it is traced. The word *shés*, adopted by the Sept., unquestionably means 'moth' in the writings of Aristotle (who was contemporary with the translators of the earliest and best rendered portions of the Sept.); for when treating of the generation of insects he says: *Γίνεται δὲ καὶ ἄλλα ζῳόδάρια, τὰ μὲν ἐν ἐρίοις, καὶ ὅσα ἐξ ἐρίων ἔστιν, οἷον οἱ σήτες, οἱ ἐμφύοντα μᾶλλον ὄταν κομπορῶδη ἢ τὰ ἔρια.* 'Other small creatures are generated, some in wool, and in such substances as are formed from wool, as for instance, moths, or moth worms, which are principally produced in dusty woollen substances:' and, again, speaking of the same insect, *γίνεται δὲ ἐν χιτῶνι ὁ σκώληξ οὗτος,* 'this worm or insect is produced in garments.' To the same effect, Aristotle's pupil, Theophrastus, speaking of the herb, *πολίον*, says, *τοῦτο δὲ καὶ πρὸς τοὺς σήτας τοὺς ἐν τοῖς λιατίοις ἀγαθόν*—'this is good against the moths in clothes' (*Hist. Plant.* i. 16). Menander, educated under Theophrastus, speaking of things which consume, says, *τὸ δ' ὑμᾶτων οἱ σήτες*, 'moths consume clothes.' Then with regard to the word *tinea*, adopted by the Vulg., Pliny uses it in translating our first quotation from Aristotle ('pulvis in lanis et veste *tineas* creat,' *Hist. Nat.* xi. 41, edit. Harduin), and elsewhere, for the moth, though he also applies the word to other insects, etc.; and from the time of Pliny to Aldrovandus, this, and almost all the other names in natural history, remained the same, and were retained as much as possible by Willughby and Linnæus. The latter, under the order Lepidoptera, genus Phalæna, gives the species of moths, *Tinea tapetzella*, *T. pallionella*, and *T. recurvaria sarcitella*, as peculiarly destructive to woollen clothes, furs, etc. The following allusions to the moth occur in Scripture;—to its being produced in clothes: 'for from garments cometh a moth' (Eccus. xlii. 13); to its well-known fragility: 'mortal men are crushed before the moth' (Job iv. 19), literally 'before the face

of the moth,' but which words really mean 'like as the moth is crushed.' The Hebrew word לפני, here translated 'before,' occurs in the sense of as or like in 1 Sam. i. 16: 'count not thine hand-

maid (לפני בת-בלעי) as a daughter of Belial? literally, 'before,' or 'as the face of:' and so the Sept. understood our passage, στήρις τρήπων. The Latin phrase *ad faciem* occurs in the same sense in Plautus (*Cistell.* i. l. 73): 'ad istam faciem est morbus qui me macerat.' Others take this allusion to the moth in an active sense, thus—'as a garment is consumed by the moth;' so the Vulg., *a tineæ*. The allusion to 'the house of the moth' (Job. xxvii. 18) seems to refer plainly to the silky spindle-shaped case, covered with detached hairs and particles of wool, made and inhabited by the larva of the *Tinea sarcitella*; or to the felted case or tunnel formed by the larva of the *Tinea pellionella*; or to the arched gallery formed by eating through wool by the larva of the *Tinea tapetzella*. References occur to the destructiveness of the clothes-moth: 'as a garment that is moth-eaten' (Job xiii. 28); 'the moth shall eat them up' (Is. l. 9); 'the moth shall eat them up like a garment' (li. 8); 'I will be to Ephraim as a moth,' *i. e.*, will secretly consume him (Hos. v. 12); comp. Matt. vi. 19, 20; Luke xii. 33; James v. 2, metaphorically; and Ecclus. xix. 3—'Moths and worms shall have him that cleaveth to harlots,' but the better reading is σήπη, 'rottenness.' Since the 'treasures' of the Orientals, in ancient times, consisted partly of 'garments, both new and old' (Matt. xiii. 52; and comp. Josh. vii. 21; Judges xiv. 12), the ravages of the clothes-moth afforded them a lively emblem of destruction. Their treasures also consisted partly of corn laid up in barns, etc. (Luke xii. 18, 24); and it has been supposed that the βρώσις, translated 'rust,' joined with the σήσις in Matt. vi. 19, 20, refers also to some species of moth, etc., probably in the larva state, which destroys corn. Kuinoel says the 'curculio, or kornwurm,' the larva of the *Tinea granella*, is injurious to corn. Compare the common Roman phrase *blatta et tineæ*. Aquila gives βρώσις for פש in Jer. l. 9; and those words, 'Gods which cannot save themselves from moths,' βρωμάτων, Ep. of Jer. xii., may be another instance. Comp. Mal. iii. 11, Sept. and MS. B. in margin, and Symmachus in Is. v. 9. The word פש occurs, as well as the word פש, in Is. li. 8: 'the פש shall eat them up like a garment, and the פש shall eat them like wool,' Sept. ὡς ἔρια βρωθήσεται ὑπὸ στήρις (comp. the first quotation from Aristotle), where the similarity between the Hebrew and Greek word is striking. If two species of moth be here alluded to, may not the פש be the distinctive name for the *Tinea tapetzella*, which is peculiarly destructive to 'wool?' [S.A.S.] The Sept. also gives σήσις for רקב, Prov. xiv. 30, and for חרף, Micah vii. 4. Moths, like fleas, etc., amid other more immediate purposes of their existence, incidentally serve as a stimulus to human industry and cleanliness; for, by a remarkable discrimination in her instinct, the parent moth never deposits her eggs in garments frequently overlooked or kept clean. Indeed, the most remarkable of all proofs of animal intelligence, is to be found in the larvæ of the water-moth, which gets into straws, and adjust the weight of their case so that it can always float: when too heavy they add a piece of straw or wood,

and when too light a bit of gravel (*Transactions of the Royal Society of Edinburgh*, vol. i. p. 42). —J. F. D.

ASH (TREE). [OREN.]

ASHAN (עֲשָׁן) Josh. xv. 42; xix. 7), called Chor-ashan in 1 Sam. xxx. 30, a Levite town in the tribe of Simeon. According to Eusebius it was 16 miles from Jerusalem, but 15 according to Jerome, who calls it Bethasa. It has not yet been identified.

ASHDOD (אֲשְׁדוֹד; Sept. Ἀζωτος), the AZOTUS of the Greeks and Romans, and so called in 1 Macc. iv. 15; Acts viii. 40 (see also Plin. *Hist. Nat.* v. 14; Ptolem. v. 16); a city on the summit of a grassy hill, near the Mediterranean coast, nearly midway between Gaza and Joppa, being 18 geog. miles N. by E. from the former, and 21 S. from the latter; and more exactly mid-way between Askelon and Ekron, being 10 geog. miles N. by E. from the former, and S. by W. from the latter. Ashdod was a city of the Philistines, and the chief town of one of their five states (Josh. xiii. 3; 1 Sam. vi. 17). It was the seat of the worship of Dagon (1 Sam. v. 5; 1 Macc. xi. 4), before whose shrine in this city it was that the captured ark was deposited and triumphed over the idol (1 Sam. v. 1-9). Ashdod was assigned to Judah; but many centuries passed before it and the other Philistine towns were subdued [PHILISTINES]; and it appears never to have been permanently in possession of the Judahites, although it was dismantled by Uziah, who built towns in the territory of Ashdod (2 Chron. xxvi. 6). It is mentioned to the reproach of the Jews after their return from captivity, that they married wives of Ashdod; the result of which was that the children of these marriages spoke a mongrel dialect, compounded of Hebrew and the speech of Ashdod (Neh. xiii. 23, 24). These facts indicate the ancient importance of Ashdod. It was indeed a place of great strength; and being on the usual military route between Syria and Egypt, the possession of it became an object of importance in the wars between Egypt and the great northern powers. Hence it was secured by the Assyrians before invading Egypt (Isa. xx. 1, *sg.*); and at a later date it was taken by Psammetichus, after a siege of twenty-nine years, the longest on record (Herodot. ii. 157). The destruction of Ashdod was foretold by the prophets (Jer. xxv. 20; Amos i. 8; iii. 9; Zeph. ii. 4; Zech. ix. 6); and was accomplished by the Maccabees (1 Macc. v. 68; x. 77-84; xi. 4). It is enumerated among the towns which Pompey joined to the province of Syria (Joseph. *Antiq.* xiv. 4. 4, *De Bell. Jud.* i. 7. 7), and among the cities ruined in the wars, which Gabinius ordered to be rebuilt (*Antiq.* xiv. 5. 3). It was included in Herod's dominion, and was one of the three towns bequeathed by him to his sister Salome (*Antiq.* xvii. 8. 1). The evangelist Philip was found at Ashdod after he had baptized the Ethiopian eunuch on his professing his belief in Christ (Acts viii. 40). Azotus early became the seat of a bishopric; and we find a bishop of this city present at the councils of Nice, Chalcedon, A.D. 359, Selucia, and Jerusalem, A.D. 536 (Reland, *Palestina*, p. 609).

Ashdod subsisted as a small unwallied town in the time of Jerome. It was in ruins when Benjamin of Tudela visited Palestine (*Itin.* ed. Asher, i. 79); but we learn from William of

Tyre and Vitriacus that the bishopric was revived by the Latin Christians, at least titularly, and made suffragan of Treves. Sandys (*Travailes*, p. 151) describes it as 'a place of no reckoning;' and Zuallart (*Voyage*, iv. p. 132) speaks of it as an Arab village. And this seems to be its present condition, for Irby and Mangles (p. 180) describe it as inhabited. The site is marked by ancient ruins, such as broken arches, and partly buried fragments of marble columns, there is also what appeared to these travellers to be a very ancient khan, the principal chamber of which had obviously, at some former period, been used as a Christian chapel. The place is still called *أسدود* *Esdud*.—J. K.

ASHDOTH PISGAH (אֲשָׁדוֹת הַפִּסְגָּה, Sept. Ἀσθηδὼθ φασγά). The word AshdOTH by itself occurs twice as a local designation in the O. T. (Josh. x. 40; xii. 8), and in both instances is translated 'springs' in the A. V. In Num. xxi. 15, we have the word in the singular masculine (אֲשָׁד) used with נְהָלִים, torrents, where it denotes either the bed of the torrent or the ravine down which it flows. AshdOTH Pisgah may thus designate a place where the streams from Mount Pisgah were collected at the base of the hill. The root of the word is an obsolete verb signifying to pour forth; and as in the Arabic the term designating the foot of a mountain is derived from a verb signifying to pour forth, it is concluded that AshdOTH may be the designation of a ravine at the foot of a hill in which the waters from the higher grounds are collected to pour forth as streams. AshdOTH Pisgah would thus designate the ravine at the base of Mount Pisgah, or the base of the hill itself. [PISGAH.]—W. L. A.

ASHER (אֲשֵׁר, *happiness*; Sept. Ἀσῆρ), one of the sons of Jacob by Zilpah, the handmaid of Leah (Gen. xxx. 13; xxxv. 26), and founder of one of the twelve tribes (Num. xxvi. 44-47). Asher had four sons and one daughter (Gen. xlvi. 17). On quitting Egypt the number of adult males in the tribe of Asher was 41,500, which made it the ninth of the tribes (excluding Levi) in numbers—Ephraim, Manasseh, and Benjamin only being below it. But before entering Canaan an increase of 11,900—an increase exceeded only by Manasseh—raised the number to 53,400, and made it the fifth of the tribes in population (comp. Num. i. 40, 41; xxvi. 47). The inheritance of this tribe lay in a very fruitful country, on the sea-coast, with Lebanon north, Carmel and the tribe of Issachar south, and Zebulun and Naphtali east. It is usually stated that the whole of the Phœnician territories, including Sidon, were assigned to this tribe. But there are various considerations which militate against this conclusion (see the arguments on both sides in *Pictorial Bible*, Num. xxvi. 44; Josh. xix. 24; Judg. i. 31), and tend to shew that the assigned frontier-line was drawn out to the sea south of Sidon. The strongest text for the inclusion of Sidon (Tyre was not then founded) is that in which it is mentioned to the reproach of the Asherites, that they did not drive out the Sidonians (Judg. i. 31). This Michaelis is disposed to reject as an interpolation; but Dr. Kitto (*Pict. Bib.* in loc.) conceives it to denote that the Asherites were

unable to expel the Sidonians, who by that time had encroached southward into parts of the coast actually assigned to the Asherites; and he strengthens this by referring to the subsequent foundation of Tyre, as evincing the disposition of the Sidonians to colonize the coast south of their own proper territories. The Asherites were for a long time unable to gain possession of the territories actually assigned them, and 'dwelt among the Canaanites, the inhabitants of the land' (Judg. i. 32); and, 'as it is not usual to say of a larger number that it dwells among the smaller, the inference is, that they expelled but comparatively few of the Canaanites, leaving them, in fact, a majority of the population' (Bush, note on Judg. i. 32).—J. K.

ASHERAH. [ASHTAROTH.]

ASHES, in the symbolical language of Scripture, denote human frailty (Gen. xviii. 27), deep humiliation (Esth. iv. 1; Jonah iii. 6; Matt. xi. 21; Luke x. 13; Job xlii. 6; Dan. ix. 3). To sit in ashes was a token of grief and mourning (Job ii. 8; Lam. iii. 16; Ezek. xxvii. 30), as was also strewing them upon the head (2 Sam. xiii. 19; Isa. lxi. 3). [MOURNING.] 'Feeding on ashes,' in Ps. cii. 9, appears to express grief, as of one with whose food the ashes with which he is covered mingle. But in Isa. xlv. 20, 'feeding on ashes,' which afford no nourishment, is judged to denote ineffectual means, labour to no purpose. Compare Hos. xii. 1.—J. K.

ASHIMA (אֲשִׁמָּה, 2 Kings xvii. 30; Sept. Ἀσιμάθ) is only once mentioned in the Old Testament as the god of the people of Hamath. The Babylonian Talmud, in the treatise 'Sanhedrin' (cited in Carpov's *Apparatus*, p. 516), and the majority of Jewish writers, assert that Ashima was worshipped under the form of a goat without wool; and the Talmud of Jerusalem says, under that of a lamb. Elias Levita gives the word the sense of *ape*; in which he was, in all probability, deceived by the resemblance in sound to the Latin *simia*, and other fanciful conjectures have been proposed. The opinion, however, that this idol had the form of a goat appears to be the one best supported by arguments as well as by authorities. Thus Pfeiffer (in his *Dubia Vexata*, ad loc.) suggests that ashima may be brought into relation with the word אֲשַׁמָּה, which the Samaritan version uses in the sense of some species of goat, as a translation of the original אֲשָׁמָה in Deut. xiv. 5. On this ground we might conjecture that the word ashima actually means a goat without wool, by deriving it from אֲשָׁמָה, which, though it usually signifies to be guilty, yet occurs in the sense of to be laid waste, to be bare, as a cognate of אֲשָׁמָה and אֲשָׁמָה: so that ashima would mean bare, bald. Besides, as a goat, the Egyptian god Mendes would afford an excellent parallel to Ashima; as likewise the Greek Pan (cf. Lev. xvii. 7).*

It is worthy of mention that the name of this idol furnished Aben Ezra with an opportunity of displaying the inveterate hatred of the Jews against the Samaritans. In his preface to the book of Esther, he asserts that the Samaritan text of Gen.

* [The majority of recent scholars seem to prefer identifying Ashima with Esmun, the Phœnician Æsculapius (Thenius in loc.) Gesenius compares the word with the Pers. *asumân*, heaven; and Fürst with the Pers. *eshmani Teufel*.]

i. 1, begins with the words, 'In the beginning Ashima created.' It need hardly be said that there is no trace of this reading either in the Samaritan text or version. Aben Ezra's own words are cited at length in Hottinger's *Exercit. Antimorin.*, p. 40.—J. N.

ASHKENAZ (אַשְׁכְּנַז; Sept. Ἀσχανάζ; Gen. x. 3) and ASHCHEAZ (Jer. li. 27), the proper name of a son of Gomer, son of Japhet, and of a tribe of his descendants. In Jeremiah it is placed with Ararat and Minni, provinces of Armenia; whence it is probable that Ashkenaz was a province of Armenia; or at least that it lay not far from it, near the Caucasus, or towards the Black Sea. Nothing more satisfactory is now attainable. The various fanciful attempts to trace the name may be seen in Winer (*Bib. Realwört.*, s. v. 'Askenas'). The modern Jews fancy the name denotes the Germans.—J. K.

ASHKENAZI, Els. A Jewish rabbi, first at Cremona, afterwards at Constantinople, then at Naxos, then at Posen, and ultimately at Cracow, where he died in 1586. He wrote יִסְכָּה לְקַה, a Commentary on the Book of Esther, Crem. 1576. (This has been repeatedly reprinted, and is much esteemed; an edition appeared at Warsaw in 1838, 4to.); מַעֲשֵׂה, an Illustration of the Historical Contents of the Pentateuch, in four parts, Ven. 1583, fol. This work has also been frequently reprinted; the last edition appeared at Zolkien in 1802, 8vo.—W. L. A.

ASHPENAZ, chief of the eunuchs of king Nebuchadnezzar, to whose care Daniel and his companions were consigned, and who changed their names (Dan. i. 3, 7).—J. K.

ASHTAROTH (עֲשֵׁתְרוֹת; Sept. Ἀσθαρὸθ), and ASHTAROTH-CARNAIM (עֲשֵׁתְרוֹת קַרְנַיִם; Sept. Ἀσθαρὸθ καὶ Καρναῖν), a town of Bashan (Deut. i. 4; Josh. ix. 10), which was included in the territory of the half-tribe of Manasseh (Josh. xiii. 31), and was assigned to the Levites (1 Chron. vi. 71). It is placed by Eusebius six miles from Edrei, the other principal town of Bashan, and twenty-five miles from Bostra. The town existed in the time of Abraham (Gen. xiv. 5); and as its name of Ashtaroth appears to be derived from the worship of the moon under that name [see the following article], there is little need to look further than the crescent of that luminary and its symbolical image for an explanation of the addition CARNAIM, or rather KARNAIM, 'horned.' In 2 Macc. xii. 26, mention is made of the temple of Atergatis (Ashtaroth) in Carnion, which is described as a strongly fortified town of difficult access, but which was taken by Judas Maccabæus, who slew 25,000 of the people therein (2 Macc. xii. 21, 26). Astaroth-Carnaim is now usually identified with Mezareib, the situation of which corresponds accurately enough with the distances given by Eusebius. Here is the first castle on the great pilgrim road from Damascus to Mecca. It was built about 340 years ago by the Sultan Selim, and is a square structure, about 100 feet on each side, with square towers at the angles and in the centre of each face, the walls being 40 feet high. There are no other ruins. (Burckhardt, p. 242; Buckingham's *Arab Tribes*, p. 162.) [The

identity of Ashtaroth and Ashtaroth Karnaim has been questioned by some. The strongest arguments against it are, that Eusebius and Jerome regarded the two places as distinct, and that the Samaritan and Arabic versions assign different names to the two. But the statements of both Jerome and Eusebius bearing on this point are far from clearly intimating their distinctness,—and to us Jerome appears rather to incline to their being the same, as he places both in the same region, and refers from the later article to the earlier ('diximus et supra de Ash. Carnaim'—*De Loc. Heb.*) As to the versions, the Arabic is too late to be of much authority, and the name given by the Samaritan to Ashtaroth Car., viz. *Haphinith*, is confessedly unknown.]

ASHTORETH (עֲשֵׁתְרוֹת, 1 Kings xi. 5; Sept. Ἀστάρτη) is the name of a goddess of the Sidonians (1 Kings xi. 5, 33), and also of the Philistines (1 Sam. xxxi. 10), whose worship was introduced among the Israelites during the period of the judges (Judg. ii. 13; 1 Sam. vii. 4), was celebrated by Solomon himself (1 Kings xi. 5), and was finally put down by Josiah (2 Kings xxiii. 13). She is frequently mentioned in connection with Baal, as the corresponding female divinity (Judg. ii. 13); and, from the addition of the words, 'and all the host of heaven,' in 2 Kings xxiii. 4 (although Ashêrah occurs there, and not 'Ashtoreth, which will be accounted for below), it is probable that she represented one of the celestial bodies. There is also reason to believe that she is meant by the 'queen of heaven,' in Jer. vii. 18; xlv. 17; whose worship is there said to have been solemnised by burning incense, pouring libations, and offering cakes. Further, by comparing the two passages, 2 Kings xxiii. 4, and Jer. viii. 2, which last speaks of the 'sun and moon and all the host of heaven, whom they served,' we may conclude that the moon was worshipped under the names of queen of heaven and of 'Ashtoreth, provided the connection between these titles is established.

According to the testimonies of profane writers, the worship of this goddess, under different names, existed in all countries and colonies of the Syro-Arabian nations. She was especially the chief female divinity of the Phœnicians and Syrians—

the Baaltis (*i. e.*, בעלתי *domina mea*, equivalent to the Greek address, Δέσπονα!) to Baal; Ἀστάρτη ἡ μελίσση, as Sauchoniaton calls her (ed. Orelli, p. 34). She was known to the Babylonians as

Mylitta (*i. e.*, possibly מולדתה, the emphatic state of the feminine participle active of Aphel, *genetrix*), Herod. i. 131; to the Arabians as Alitta, or Alilat, Herod. iii. 8 (*i. e.*, according to Pocock's etymology—*Specim.* p. 110—al Ilahat, *the goddess* [which may, however, also mean the *crescent moon*—see Freytag's *Lex. Ar.*]; or al Hilâl, *the moon*; or, according to Kleuker's suggestion, al Walid, *genetrix*. See Bergmann, *De Relig. Arab. Antislamica*. Argentor, 1834, p. 7). The supposed

Punic name Tholath, תלת, which Münter, Hamaker, and others considered to mean *genetrix*, and to belong to this goddess, cannot be adduced here, as Gesenius has recently shewn that the name has arisen from a false reading of the inscriptions (see his *Monum. Ling. Phœnic.* p. 114). But it is not at all open to doubt that this goddess was worshipped.

at ancient Carthage, and probably under her Phœnician name.

The classical writers, who usually endeavoured to identify the gods of other nations with their own, rather than to discriminate between them, have recognised several of their own divinities in Ashtoreth. Thus she was considered to be *Juno* (Βῆλθις ἢ Ἦρα ἢ Ἀφροδίτη, Hesychius; 'Juno sine dubitatione a Pœnis Astarte vocatur,' Augustin. *Quæst. in Jud.* xvi.); or *Venus*, especially *Venus Urania* (Cicer. *Nat. Deor.* iii. 23; Ἀστάρτη δὲ ἐστὺν ἡ παρ' Ἑλλήσων Ἀφροδίτη προσαγορευομένη, Theodoret. *in Libr.* iii. *Reg. Quæst.* I; and the numerous inscriptions of Bona Dea Cœlestis, Venus Cœlestis, etc., cited in Münter's *Religion der Karthager*, p. 75); or *Luna* (Ὀὐρανίαν Φώνικες Ἀστροφῶχρον ὀνομάζουσι σελήνην εἶναι θέλοντες, Herodian, v. 13; Lucian *De Dea Syria*, iv.)

The fact that there is a connection among all these divinities cannot escape any student of ancient religions; but it is not easy to discover the precise link of that connection. Winer ingeniously suggests (*Bibl. Realwört.*) that Ashtoreth was confounded with Juno, because she is the female counterpart to Baal, the chief god of the Syrians—their Jupiter, as it were; and with Venus, because the same lascivious rites were common to her worship, and to that of Ashtoreth and her cognate Mylitta (Creuzer's *Symbolik*, ii. 23). But so great is the intermixture and confusion between the gods of pagan religions, 'pro diversitate nominis, non pro numinis varietate,' as Ambrose says, that Münter further identifies Ashtoreth—due allowance being made for difference of time and place—with the female Kabîr, Axiokersa, with the Egyptian Isis, with the Paphian Venus, with the Taurian and Ephesian Diana, with the Bellona of Comana, with the Armenian Anâhîd, and with the Samian, Maltesian, and Lacinian Juno. She has also been considered to be the same as the Syrian *fish-deities*. [ATERGATIS.]

As for the power of nature, which was worshipped under the name of Ashtoreth, Creuzer and Münter assert that it was the principle of conception and parturition—that subordinate power which is fecundated by a superior influence, but which is the agent of all births throughout the universe. As such, Münter maintains, in his *Religion der Babylonier*, p. 21, in opposition to the remarks of Gesenius in his *Jesajas*, iii. 337—that the *original* form under which Ashtoreth was worshipped was the *moon*; and that the transition from that to the *planet Venus* (which we will immediately notice) was unquestionably an innovation of a later date. It is evident that the moon alone can be properly called the queen of heaven; as also that the dependent relation of the moon to the sun makes it a more appropriate symbol of that sex, whose functions as female and mother, throughout the whole extent of animated nature, were embodied in Ashtoreth. [BAAL.]

The rites of her worship, if we may assume their resembling those which profane authors describe as paid to the cognate goddesses, in part agree with the few indications in the Old Test., in part complete the brief notices there into an accordant picture. The *cakes* mentioned in Jer. vii. 18, which are called in Hebrew כֻּבֵּיִם *Kavanim*, were also known to the Greeks by the name *χαβῶνες*, and were by them made in the shape of a sickle, in reference to the new moon. Among animals the

dove, the crab, and, in later times, the lion, were sacred to her; and among fruits, the pomegranate. No blood was shed on her altar; but male animals, and chiefly *kids*, were sacrificed to her (Tacit. *Hist.* ii. 3). Hence some suppose that the reason why Judah promised the harlot a kid, was that she might sacrifice it to Ashtoreth (see Tuch's note to Gen. xxxviii. 17). The most prominent part of her worship, however, consisted of those libidinous orgies, which Augustine, who was an eye-witness of their horrors in Carthage, describes with such indignation (*De Civit. Dei*, ii. 3). Her priests were eunuchs in women's attire (the peculiar name of whom is קְרִשִׁים *qrisim*, *sacri*, *i. e.*, cinædi, Galli—1 Kings xiv. 24), and women (קְרִשֹׁתַי *qrisotai*, *sacrae*, *i. e.*, meretrices—Hos. iv. 14, which term ought to be distinguished from ordinary harlots, וְזוֹנוֹת, who, like the Bayaderes of India, prostituted themselves to enrich the temple of this goddess. The prohibition in Deut. xxiii. 18 appears to allude to the dedication of such funds to such a purpose.

As for the places consecrated to her worship, although the numerous passages in which the authorized version has erroneously rendered אֲשֶׁרֶה by *grove*, are to be deducted (as is explained below), there are yet several occasions on which *gardens* and *shady trees* are mentioned as peculiar seats of (probably, *her*) lascivious rites (Is. i. 29; lxx. 3; 1 Kings xiv. 23; Hos. iv. 13; Jer. ii. 20; iii. 13). She also had celebrated temples (1 Sam. xxxi. 10).

As to the form and attributes with which Ashtoreth was represented, the oldest known image, that in Paphos, was a white conical stone, often seen on Phœnician remains in the figure which Tacitus describes, *l. c.* as 'Simulacrum non effigie humana; continuus orbis latiore initio tenuem in ambitum, metæ modo, exurgens, et ratio in obscuro.' Münter is unwilling to consider this a Lingam symbol; nevertheless, there appears to be some room for disputing his opinion. In Canaan she was probably represented as a *cow*. It is said in the book of Tobit i. 5, that the tribes which revolted sacrificed τῇ Βάαλ τῇ δαμάλει, where the feminine article with Βάαλ is to be remarked. In Phœnicia she had the head of a cow or bull, as she is seen on coins. Sanchoniathon states that 'Astarte adopted the head of a bull as a symbol of her sovereignty;' he also accounts for the *star* which is her most usual emblem, by saying that 'when she passed through the earth, she found a fallen star, which she consecrated in Tyre' (*l. c.* p. 34). At length, she was figured with the

98.

human form, as Lucian expressly testifies of the Syrian goddess—which is substantially the same as Ashtoreth; and she is so found on coins of Severus, with her head surrounded with rays, sit-

ting on a lion, and holding a thunderbolt and a sceptre in either hand. What Kimchi says of her being worshipped under the figure of a *sheep* is a mere figment of the Rabbins, founded on a misapprehension of Deut. vii. 13. As the words עֲשֵׂתְרוֹתָּהּ there occurring may be legitimately taken as the *loves* of the flock (*Veneres pecoris*), *i. e.*, either the *ewes* or the *lambs*, the whole foundation of that opinion, as well as of the notion that the word *means* sheep, is unsound.

The word Ashtoreth cannot be plausibly derived from any root, or combination of roots, in the Syro-Arabian languages. The best etymology, that approved by Gesenius, Fürst, and others, identify it with the Persian *sitrah*, *star*, with a prosthetic guttural. The latest etymology is that suggested by Sir W. Betham, in his *Etruria Celtica*, ii. 22, who resolves *Astarte* into the Irish elements: *As, out of; tar, beyond; te, deity*—the goddess of *long voyages!* Ashtoreth is feminine as to form; its plural Ashtaroth also occurs (and is sometimes erroneously taken to be the proper name of the goddess); but it is understood to denote a plurality of *images* (like the Greek Ἐσθρα, or to belong to that usage of the plural which is found in words denoting *lord* (Ewald's *Hebr. Gram.* § 361; Movers, *Phönizier*; Kreuzer, *Symbolik*).

To come now to ASHERAH (אֲשֵׁרָה, Judg. vi. 25): Selden was the first who endeavoured to shew that this word—which in the LXX. and Vulgate is generally rendered *grove*, in which our authorized version has followed them—must in some places, for the sake of the sense, be taken to mean a *wooden image* of Ashtoreth (*De Diis Syris*, ii. 2). Not long after, Spencer made the same assertion (*De Leg. Hebraeor.* L. ii. 16). Vitringa then followed out the same argument, in his note to Is. xvii. 8. Gesenius, at length, has treated the whole question so elaborately in his *Thesaurus*, as to leave little to be desired, and has evinced that *Asherah* is a *name*, and also denotes an image of this goddess. [GROVES.]

Some of the arguments which support this partial, or, in Gesenius's case, total rejection of the signification *grove*, for אֲשֵׁרָה, are briefly as follows:—It is argued that *Asherah* almost always occurs with words which denote *idols* and *statues of idols*; that the verbs which are employed to express the making an *Asherah*, are incompatible with the idea of a grove, as they are such as *to build, to shape, to erect* (except in one passage, where, however, Gesenius still maintains that the verb there used means *to erect*); that the words used to denote the destruction of an *Asherah* are those of *breaking to pieces, subverting*; that the *image* of *Asherah* is placed in the Temple (2 Kings xxi. 7); and that *Asherah* is coupled with *Baal* in precisely the same way as *Ashtoreth* is: comp. Judg. ii. 13; x. 6; 1 Kings xviii. 19; 2 Kings xxiii. 4; and particularly Judg. iii. 7, and ii. 13, where the plural form of both words is explained as of itself denoting *images* of this goddess. Besides, Selden objects that the signification *grove* is even incongruous in 2 Kings xvii. 10, where we read of *setting up groves under every green tree.* Moreover, the LXX. has rendered *Asherah* by *Astarte*, in 2 Chron. xv. 16 (and the Vulgate has done the same in Judges iii. 7), and, conversely, has rendered *Ashtaroth* by *groves*, in 1 Sam. vii. 3.

On the strength of these arguments most modern

scholars assume that *Asherah* is a *name* for *Ashtoreth*, and that it denotes more especially the relation of that goddess to the planet *Venus*, as the lesser star of good fortune. It appears, namely, to be an indisputable fact that both *Baal* and *Ashtoreth*, although their primary relation was to the sun and moon, came in process of time to be connected, in the religious conceptions of the Syro-Arabians, with the planets *Jupiter* and *Venus*, as the two stars of good fortune. [MENI.] Although the mode of transition from the one to the other is obscure, yet many kindred circumstances illustrate it. For instance, the connection between *Artemis* and *Selene*; that between *Juno* and the planet *Venus*, mentioned in *Creuzer* ii. 566; and the fact that, in the *Zendavesta*, *Anâhid* is the name of the genius of the same planet; and that אֲשֵׁרָה *asrah* (which word is only an Aramaic form of the same *sitarah* which, as was remarked above, furnishes the best derivation for *Ashtoreth*) is also the name of the same planet in the religious books of the *Tsalians* (*Norberg's Onomast. Cod. Nasaræi*, p. 20). It is in reference to this connection, too, that a *star* is so often found among the emblems with which *Ashtoreth* is represented on ancient coins. Lastly, whereas the word *Asherah* cannot, in the sense of *grove*, be legitimately deduced from the primitive or secondary signification of any Syro-Arabian root אֲשֵׁר, as a name of the goddess of good fortune, it admits of a derivation as natural in a philological point of view, as it is appropriate in signification. The verb אֲשֵׁר means *to prosper*; and *Asherah* is the feminine of an adjective signifying *fortunate, happy*.—J. N.

ASHURITES (אֲשֻׁרִי), a people named among those over whom *Abner* made *Ishbosheth* king (2 Sam. ii. 9). For אֲשֻׁרִי some codices read אֲשֵׁרִי *Asherites*, and with this the *Targum* of *Jonathan* agrees, in which we have בית אֲשֵׁר, *the house of Asher*. If this reading be adopted, the people mentioned were probably those lying between *Gilead* and *Jezeel*, on the west of the *Jordan*. The *Vulg.*, however, has *Gessuri*, and with this the *Syr.* and *Arab.* versions agree. *Ewald* and *Thenius* adopt this, and think that the people intended are the inhabitants of the district of *Geshur*. To this it has been objected, that *Geshur* had already a king, *Talmal*, whose daughter *David* married (1 Chron. iii. 2; 2 Sam. xiii. 37); which renders it incredible that *Geshur* should form part of the territory of *Ishbosheth*. But the *Geshur* of *Talmal* is specifically described as '*Geshur of Syria*' (2 Sam. xv. 8); so that it was distinguishable from the district to the north of *Jordan*, usually so called. In this region the other parts of *Ishbosheth's* dominions lay; so that it may be the district intended.—W. L. A.

ASIA. This term does not occur in the O. T. In the books of *Maccabees* it is found—1. As the designation of the territory of *Antiochus* the Great (1 Macc. viii. 6), in which case it is nearly identical with what was subsequently called *Asia Minor*; 2. As the designation of the territory of the king of *Pergamos* (1 Macc. viii. 6); in which case it comprehends *Mysia*, *Lydia*, and *Phrygia*; and 3. As the designation of the territory claimed by the kings of *Antioch*, who called themselves kings of *Asia*, though only *Cilicia* really belonged to them (1 Macc. xii. 39; xiii. 32; 2 Macc. iii. 3).

By Attalus III. the kingdom of Pergamos was (B.C. 133) bequeathed to the Romans, and thenceforward became the Roman province of Asia, and was governed by a prætor till the time of Augustus, who made it a senatorial province, and placed over it a proconsul (ἀνθύπατος, Acts xix. 38). This is the territory which Ptolemy describes as ἡ ἰδία καλουμένη Ἀσία (Geogr. v. 2); it comprehended Phrygia, Mysia, Lydia, and Caria; its chief town was Ephesus. As used in the N. T., it is only the portion of this territory exclusive of Phrygia, which the term Asia commonly denotes (Acts ii. 9 (where it is expressly distinguished from Phrygia); xvi. 6; xix. 10, 22, 26, 27; xx. 4, 16, 18; xxi. 27; xxvii. 2; Rom. xvi. 5 (where the reading of the best authorities is Ἀσίας in place of Ἀχαιίας); 1 Cor. xvi. 19; 2 Cor. i. 8; 2 Tim. i. 15). In some of these passages the wider meaning is given to the term by some interpreters, but without sufficient reason. In Acts vi. 9, 1 Pet. i. 1, and Rev. i. 4, 11, however, this must be admitted. In these passages Asia must be taken to include Phrygia as well as Mysia, Lydia, and Caria, so as to correspond nearly with what was afterwards called Proconsular Asia. The word Asia is traced by Bochart to the Phœnician אַסִּיָּה middle, qu. אַסִּיָּה, 'id est pars illa quæ media est inter Africam et Europam' (Geogr. Sac. iv. 33, p. 298, ed. 1682). With greater probability, Pott derives it from αὐώς, ἡώς, αὔω, ἐώς (Sansc. *ushas* aurora), 'so that it denotes Orient, Levant, Anatolia, as opposed to Hesperia' (*Etymol. Forsch.* ii. 190).—W. L. A.

ASIARCHÆ (Ἀσιάρχαι, Acts xix. 31; Vulg. *Asiæ principes*; Tertull. *præsides sacerdotales*; Auth. Vers. 'certain of the chief of Asia'). These asiarchæ, who derived their appellation from the name of the province over which they presided (as Syriarch, 2 Macc. xii. 2, Lyciarch, Cariarch, etc.), were in the province of Asia the chief presidents of the religious rites, whose office it was to exhibit solemn games in the theatre every year, in honour of the gods and of the Roman emperor. This they did at their own expense (like the Roman ædiles), whence none but the most opulent persons could bear the office, although only of one year's continuance. The appointment was much as follows: at the beginning of every year (i. e., about the autumnal equinox), each of the cities of Asia held a public assembly, in order to nominate one of their citizens as asiarch. A person was then sent to the general council of the province, at some one of the principal cities, as Ephesus, Smyrna, Sardis, etc., to announce the name of the individual who had been selected. Of the persons thus nominated by the cities the council designated ten. Some suppose that the whole ten presided as a college over the sacred rites (comp. Strabo, xiv. p. 649); but as in Eusebius (*Hist. Eccles.* iv. 15) Polycarp is said to have suffered martyrdom when 'Philip was *asiarch* and Statius Quadratus proconsul of Asia,' it has been inferred by others that, as in the case of the Irenarch, the names of the ten nominated by the general council were submitted to the proconsul, who chose one of the number to be asiarch; whilst others again think that one chosen by the proconsul was pre-eminently the asiarch, but that the other nine acted as his assessors and also bore that title. Winer contends that the solitary testimony of Eusebius amounts to no more than that one asiarch, Philip, then and

there presided at the public games, but not that the arrangements of all the games were made and provided by that one asiarch. (See Kuinoel, Hammond, Bloomfield, etc., on Acts xix. 31; and Winer's *Biblisches Realwörterbuch*, s. v. 'Asiarchæ,' with the authorities there cited).—J. K.

ASKELON (אַשְׁקֶלֶן; Sept. Ἀσκέλων), a city of the Philistines, and the seat of one of their five states (Judg. xiv. 19; 1 Sam. vi. 17; 2 Sam. i. 20). It was situated on the Mediterranean coast, between Gaza and Ashdod, twelve geog. miles north of the former, and ten S. by W. from the latter, and fifty-five W.S.W. from Jerusalem. It was the only one of the five great Philistine towns that was a maritime port, and stood out close to the shore. Askelon was assigned to the tribe of Judah (Josh. xiii. 13; comp. Judg. i. 18); but it was never for any length of time in possession of the Israelites. The part of the country in which it stood abounded in aromatic plants, onions, and vines (Plin. xix. 32; Strabo, xvi. p. 759; Dioscor. i. 124; Colum. xii. 10; Alex. Trall. viii. 3). It was well fortified (Joseph. *De Bell. Jud.* iii. 2. 1; comp. Mela, i. 11), and early became the seat of the worship of Derceto (Diod. Sic. ii. 4). After the time of Alexander it shared the lot of Phœnicia and Judea, being tributary sometimes to Egypt, and at other times to Syria (1 Macc. x. 86; xi. 60; xii. 33; Joseph. *Antiq.* xii. 4. 5). The magnificent Herod was born at Askelon, and although the city did not belong to his dominion, he adorned it with fountains, baths, and colonnades (*De Bell. Jud.* i. 21. 11); and after his death Salome, his sister, resided in a palace at Askelon, which Cæsar bestowed upon her (*Antiq.* xvii. 11. 5). It suffered much in the Jewish war with the Romans (*De Bell. Jud.* ii. 18. 5; iii. 2. 1-3); for its inhabitants were noted for their dislike of the Jews, of whom they slew 2500 who dwelt there (ii. 18. 5; iii. 2. 1). After this Askelon again revived, and in the middle ages was noted not only as a stronghold, but as a wealthy and important town (Will. Tyr. xvii. 21). As a sea-port merely it never could have enjoyed much advantage, the coast being sandy and difficult of access. The town bears a prominent part in the history of the Crusades. After being several times dismantled and re-fortified in the times of Saladin and Richard, its fortifications were at length totally destroyed by the Sultan Bibars A.D. 1270, and the port filled up with stones, for fear of future attempts on the part of the Crusaders (Wilkin, *Gesch. der Kreuz.* vii. 586). This, no doubt, sealed the ruin of the place. Sandys (*Travels*, p. 151, A.D. 1610) describes it as 'now a place of no note, more than that the Turke doth keep there a garrison.' Fifty years after (A.D. 1660), Von Troilo found it still partially inhabited. But its desolation has long been complete, and little now remains of it but the walls, with numerous fragments of granite pillars. The situation is described as strong; the thick walls, flanked with towers, were built on the top of a ridge of rock that encircles the town, and terminates at each end in the sea. The ground within sinks in the manner of an amphitheatre (Richardson ii. 202-204; Eli Smith, in *Missionary Herald* for 1827, p. 341).

The place still bears the name of Askulan عسقلان.—J. K.

ASMODEUS (Ἀσμοδαῖος), a demon or evil spirit, mentioned in the Apocryphal book of Tobit as having beset Sarah, the daughter of Raguel, and killed the seven husbands whom she had married before Tobit (Tob. iii. 8; vi. 14; viii. 2, 3). The Rabbins have a number of absurd traditions respecting Asmodeus, which may be seen in the original edition of Calmet and in Lightfoot (*Hor. Hebr. ad Luc. xi. 15*). They call him, as well as Beelzebub, 'the prince of devils,' whence the two names have been supposed to refer to the same demon. But this title they also give to 'the angel of death,' as the destroyer of all mankind: hence some derive the name Asmodeus = אַשְׁמֹדַי, from the Hebrew שָׂמַד *shamad*, to exterminate, and would identify it with Abaddon (see the word), the same as Apollyon, the angel of death. On this assumption the story in Tobit means no more than that the seven husbands died successively on their marriage with Sarah. [The sole ground for identifying Asmodeus with Abaddon is this etymological one. But this is most precarious. It is doubtful if Asmodeus be a Shemitic name, or from a Shemitic root. Reland, after Castell, traces it to a Persic source *ازمودن* *to tempt*].

ASMONIANS. [MACCABEES.]

ASNAPPER (אֲסַנְפָּר; Sept. Ἀσσεναφάρ), the name of the king, or possibly Assyrian satrap, who sent the Cuthean colonies into Palestine (Ezra iv. 10). Taking him for king of Assyria, he is with most probability identified with Esar-haddon, although some believe the name to denote Salma-nezer. The title רַבָּא וִיקָרָא (Auth. Vers. 'great and noble') which is given to him belonged to the satraps.

ASP. [PETHEN.]

ASPALATHUS (ἀσπάλαθος), a word which occurs only in Ecclus. xxiv. 15, where it is enumerated with other spices and perfumes to which wisdom is compared. Though this drug is not mentioned in the canonical Scriptures, it is probable that it may have been one of the substances comprehended under the general name of spices. It was no doubt one of the substances employed by the ancients as a perfume and incense, as it is described by Dioscorides (i. c. 19), as well as enumerated by Theophrastus (ix. c. 7), and by both among aromatic substances. It forms one of the ingredients of the cyphi, or compound incense made use of by the Egyptian priests, as related both by Plutarch and Dioscorides. The substance which was called aspalathus has not been very clearly ascertained, though several plants have been indicated as yielding it. *Lignum Rhodium* is sometimes considered to be one of the kinds of aspalathus described by Dioscorides, but this is a produce of the Canary Islands and of the plant called *Convolvulus scoparius*. From it the perfumers of Paris obtain *l'Huile de bois de Rhodes*. By others aspalathus, which has been supposed to be the same thing as Syrian aloe, or that of Rhodes and of Candia, is thought to have been yielded by species of the genus which has been called *Aspalathus*, and especially by the species *A. creticus*, which is now called *Anthyllis Hermannia*; but there does not seem to be sufficient proof of this. Others again have held that aspalathus was a kind of

agallochum [AHALIM], and Dr. Harris (sub. Lign. —aloe) seems to have thought that he got rid of a difficulty by suggesting that *ahalim*, which we have shewn to be agallochum, should be rendered ASPALATHA. Arab authors, as Avicenna and Serapion, give *Dar-shi-shan* as the Arabic synonyme of aspalathus. They quote some of their own countrymen as authorities respecting it, in addition to Galen and Dioscorides. Hence it would appear to have been a product of the East rather than of the West, as for such they usually give only the Greek name or its translation, and quote only Greek authorities. Avicenna, in addition to his description, says that some think it may be the root of Indian nard. Hence it may justly be inferred that *Dar-shi-shan*, which the Arabians thought to be aspalathus, must have come to them from India, or they would not have hazarded this supposition. In India the name *Dar-shi-shan* is applied to the bark of a tree which is called *kaephul* or *kyphul*. This tree is a native of the Himalayan mountains from Nepal to the Sutlej, and has been figured and described by Dr. Wallich, in his *Tentamen Flore Nepalensis*, p. 59, t. 45, by the name *Myrica sapida*, in consequence of its fruit, which is something like that of the arbutus, being edible. The leaves, on being rubbed, have a pleasantly aromatic though faint smell. The bark forms an article of commerce from the hills to the plains, being esteemed in the latter as a valuable stimulant medicine. It may be seen mentioned by the name *ka-i-phul* in Gladwin's translation of the Persian *Ulfaz-i-Udavih*, No. 884, as a synonyme of *Dar-sheeshan*, which is described as an aromatic bark, while at No. 157 *Dar-sheeshan* is considered to be a synonyme of *اشتلا بوس* *ishtelayoos*, which seems

to be a corruption of aspalathus from the errors of transcribers in the diacritical points. *Kaephul* has, moreover, been long celebrated by Sanscrit authors, and it may therefore have easily formed one of the early articles of commerce from the East to the West, together with the Nard, the Costus, and the Lycium of these mountains.—J. F. R.

ASPHALTUM. [CHEMAR.]

ASPHAR (Ἀσφάρ). A 'pool' or 'spring' (λάκκος, by which the LXX. often render בַּיִת, בּוֹר) in the wilderness of Thecoe, near to which the Jews, under Jonathan and Simon, encamped (1 Macc. ix. 33; Jos. *Antiq.* xiii. 1. 2), to await the attack of Bacchides. It was somewhere near the region of the Nabathites (see ver. 35), and consequently in the direction of Arabia. 'Errant qui de Asphaltite hic cogitant.' Grot. in loc.—W. L. A.

ASS, *Equus Asinus* of Linnaeus; by some formed into a subgenus, containing that group of the Equidae which are not striped like Zebras, and have forms and characters distinguishable from true horses, such as a peculiar shape of body and limbs, long ears, an upright mane, a tail only tufted at the end, a streak along the spine, often crossed with another on the shoulders, a braying voice, etc. [AROD; AYARIM; ATHON; CHAMOR; PERE.]

ASSEMBLY'S ANNOTATIONS. By this name is commonly designated a work bearing the title of *Annotations upon all the Books of the Old and New Testaments, by the Assembly of Divines*, 2 vols. fol. Lond. 1651, 3d and best edition 1657. It was the conjoint work of several eminent minis-

ters, but was in no respect the product of the Westminster Assembly, except as it is executed in the spirit of their publications, and by persons some of whom had been members of it. The notes on the Pentateuch and on the four gospels are by Ley, sub-dean of Chester; those on Kings, Chronicles, Ezra, Nehemiah, and Esther, by Dr. Grouge; those on the Psalms by Meric Casaubon; on Proverbs by Francis Taylor; on Ecclesiastes by Dr. Reynolds; and on Solomon's Song by Smallwood. The larger prophets fell to the lot of the learned Gataker, the smaller in the first edition, to Pemberton, in the second to Bishop Richardson. The eccentric Dr. Featley undertook the Pauline Epistles, but did not complete his work; and Dornmann and Reading were both employed on the work, though what they did has not been specified. The work is more than respectable; some parts, especially those entrusted to Gataker, are done with superior learning and ability; and the whole, though of various merit, does credit to the piety, scholarship, and judgment of the authors.—W. L. A.

ASSHUR, a son of Shem, who gave his name to Assyria (Gen. x. 11-22). [ASSYRIA.]

ASSIDÆANS (חַסִּידִים *chasidim*, 1 Macc. ii. 42; vii. 13; 2 Macc. xiv. 6, Ἀσσιδαῖοι, the *pious*, or *righteous*); a name derived from the root חָסַד, a word used to denote a very good or a very bad action, but more frequently the former. As a description of a particular body of men it does not occur in the canonical Scriptures, nor in Josephus; but in the First and Second Book of Maccabees, as above, it is applied to the body of zealous and devoted men who rose at the signal for armed resistance given by Mattathias, the father of the Maccabees, and who, under him and his successors, upheld with the sword the great doctrine of the unity of God, and stemmed the advancing tide of Grecian manners and idolatries.

The Jews at a later period gave the name of Chasidim to those pious persons who devoted themselves to a life of austerities and religious exercises, in the hope of hastening the coming of the Messiah, and of making an atonement for their own sins and for the sins of others. The name of Chasidim has also been assumed by a Jewish sect which originated in Poland about a hundred years since, and which still subsists (*Penny Cyclopaedia*, art. 'Assidians'). The ideas connected with this later appropriation of the term have, by an obvious association, been carried back to and connected with the Chasidim or Assidæans who joined Mattathias, and who have generally been regarded as a sect subsisting at that time. No such sect, however, is mentioned by Josephus in treating of the affairs of that period; and the texts which refer to them (1 Macc. ii. 42; vii. 13; 2 Macc. xiv. 6) afford no sufficient evidence that the Assidæans formed a sect distinct from other pious and faithful Jews. The analogous Hebrew term Chasidim occurs in various passages of Scripture appellatively for good and pious men (Ps. cxlv. 10; cxlix. 1; Is. lvii. 1; Mic. vii. 2), but is never applied to any sect or body of men. Upon the whole, in the entire absence of collateral information, it seems the safest course to conclude that the Assidæans were a body of eminently zealous men, devoted to the Law, who joined Mattathias very early, and remained the constant adherents of him and his son Judas—not, like the mass of their

supporters, rising occasionally and then relapsing into the ordinary pursuits of life. It is possible that, as Jennings conjectures (*Antiq.* p. 298), the name Ἀσσιδαῖοι, or 'saints,' came to be applied to them by their enemies as a term of reproach, like 'Puritans' formerly in this country, and 'saints' very often in the present day.—J. K.

ASSOS (Ἄσσοι), a town of Lesser Mysia, on the northern shore of the Gulf of Adramyttium, opposite the island of Lesbos, or Mitylene. Paul came hither by land from Troas, to meet with his friends who came by sea, in order to take shipping for Mitylene (Acts xx. 13, 14). It is now a miserable village, called Beiram, built high upon the rocks on the side towards the land (Richter, p. 465, *sq.*)

ASSYRIA. According to Gesenius, the Hebrew term אַשּׁוּרִי is used in three different applications.

1. It expresses the country known to Ptolemy* and the Greeks by the name Assyria. In this case the word is feminine in Hebrew, owing to the ellipse of אֶרֶץ, the *land of*. 2. It is used to express† the

Empire of Assyria, which comprehended Babylonia and Mesopotamia, and of which the centre was Nineveh. 3. After the subdivision of the Assyrian empire, it was used with reference to those lands in which that empire had formerly flourished, *e.g.*, 1. of Babylonia (2 Kings xxiii. 29; Jer. ii. 18; Lam. v. 6; Judith i. 7; ii. 1; etc.), where Nebuchadnezzar is called king of Assyria; 2. of Persia (Ezra vi. 22), where Darius is called king of Assyria.

History.—Formerly the history of the Assyrian empire was one of the most obscure chapters in the world's annals. Much light has been thrown upon it of late years in the progress of cuneiform discovery, though it must be confessed there are still many points open to elucidation, as well as several whose greater certainty would be desirable.

Nearly all that we know of the history of Assyria from classical authorities is derived from Ctesias, Berossus and Herodotus. The first of these writers attributes to the earlier Assyrian dynasty a duration of 1306 years.‡ Although Mr. Layard, in his earlier work on Nineveh, is inclined to credit this statement, it has of late been satisfactorily proved erroneous; and from the inscriptions which have been deciphered, we have learnt that the accounts of Berossus and Herodotus are far more worthy of reliance. By them a duration of 526 and 520 years respectively, has, with much greater probability, and in singular accordance with the native monuments, been assigned. The available records of

* The Assyria of Ptolemy had eight districts, that of Strabo nine. In Ptolemy vi. 1, the word is Ἀσσυρία; in Strabo xvi. 736, Ἀσσυρία; in Dio. Cass. lxxviii. 26, Ἀσσυρία is given as a barbaric form. In Persian cunei-

form the word is written אַשּׁוּרִי אַשּׁוּרִי אַשּׁוּרִי or Athurá; while the Babylonian equivalent is

† In a general way, Assyria may be said to have been bounded on the north by Niphates and Armenia; on the south by Susiana and Babylonia; on the west by the Tigris and Mesopotamia; and on the east by Media and the Zagros chain. It is nearly represented by the modern Kurdistan.

‡ Another reading gives the number as 1360.

the Assyrian empire preserved in cuneiform inscriptions on bricks, slabs, and sculptures, furnish us with the traces of two distinct dynasties. We have the names of an earlier and a later line of kings unconnected with each other. It is, with one or two exceptions, the second of these dynasties which comes in contact with the history of the Hebrew nation; as it is also to this later dynasty that the vast palaces and temples which have recently been discovered by the excavations in Assyria are for the most part to be referred.

The earliest mention of Assyria is in Gen. x. 11. There, however, it is disputed whether or not we should refer the building of Nineveh to Asshur instead of Nimrod, as in fact is done in the Auth. Vers.: 'Out of that land went forth Asshur, and built Nineveh;' or, 'out of that land (of Shinar or Babylonia) he went forth (i.e., Nimrod) to Assyria, and built Nineveh.' The \aleph to denote motion to a place is not absolutely indispensable in Hebrew, so that we are released from the necessity of regarding \aleph as a nominative subject; and it certainly seems more in harmony with the context to suppose that the historian is still speaking of the family of Ham, than to think that he would mix up with it an account of the doings of an individual in the family of Shem, to which Asshur belonged, more especially as he proceeds afterwards, in the same chapter, at the 21st verse, to record the history of this family. Cf. also Micah v. 6, where it would seem that the land of Assyria and the land of Nimrod are identical. If the passage above is read in the way proposed, it would appear that Asshur, in the generation above Nimrod, who was the descendant of Ham, had obtained sufficient footing in the country to cause it to be named after himself, and consequently the mighty hunter must have ejected the original occupiers of the territory when he built the cities ascribed to him, or at least established a dominion over them. Of course, the sequence of events in times so remote is lost in uncertainty.

From the records of Tiglath Pileser I., we learn that a temple had been founded at Asshur, or Kalah Sherghát, as early as the nineteenth century B. C., by Shamas-iva, a son of Ismi-dagon, who was one of the early kings in the series answering to the great Chaldean dynasty of Berosus, and from this circumstance may be inferred to have ruled over Assyria. In fact, as long as this dynasty lasted, Assyria probably occupied the position of an unimportant dependency of Babylonia, not being mentioned in one single legend, and not furnishing the Chaldean monarchs with one of their royal titles. At what period Assyria was enabled to achieve her independence, or under what circumstances she achieved it, we have no means of knowing, but the date at which, for several reasons, we may suppose it to have been accomplished is approximately 1273 B.C. Probably an Arabian conquest of Babylonia, which caused the overthrow of this Chaldean dynasty in the sixteenth century, furnished the Assyrians with an opportunity of shaking off the Babylonian yoke, but it was not till three centuries later that they appear to have gained a position of importance. During the period of Assyrian subjection to Chaldæa, and for long after she became an independent empire, the vice-regal, or the royal city, was probably Asshur, on the west bank of the Tigris, sixty miles south of Nineveh, the name of which is still preserved in

the designation given by the Arabs to the neighbouring district, viz., أشور . It may perhaps be as

well to observe that the four kings in Gen. xiv., according to Josephus, were only commanders in the army of the Assyrian king, who had then, he says, dominion over Asia. In allusion to which statement, the words of Isaiah, x. 8, have been quoted—'Are not my princes altogether kings.' But this is very improbable, and is really contradicted by recent discoveries, which shew, at least negatively, that Assyria was not then an independent power. Sir H. Rawlinson thinks that he has found the name* of a king stamped upon bricks in Babylonia which corresponds to that of Chedorlaomer, and supposes that this king was the Elamite founder of the great Chaldean empire of Berosus. Mr. Stuart Poole thinks it not improbable that the expedition of Chedorlaomer was directed against the power of the Egyptian kings of the fifteenth dynasty and their Phœnician allies or subjects. Josephus also calls Chushan Rishathaim—who, in Judg. iii., is said to have been king of Mesopotamia—king of the Assyrians, but this again demands an earlier rise of the Assyrian power than the monuments warrant us in assuming. The first known king of Assyria is Bel-lush† or Belukh, who, with three others in succession, viz., Pudil, Ivalush, Shalmabar or Shalmarish, is reputed to have reigned shortly after its dependence on Babylon had been shaken off. The period from 1273 to 1200 may be assigned to the reign of these kings. They have left no other record but their names upon bricks, etc., which are found only at Kalah Sherghát; and the character in which these are inscribed is so ancient and so mixed with Babylonian forms, that it is for this reason that they are assigned to this period, though the same effects might possibly have been produced at a later period of Babylonian ascendancy. After these names, we are enabled to trace a continuous line of six hereditary monarchs, who, with the exception of the last, are enumerated on the oldest historic relic yet discovered in Assyria. This is the octagonal prism of Kalah Sherghát, on which Tiglath-Pileser I. records the events of the first five years of his reign, and traces back his pedigree to the fourth generation. He calls himself the son of Asshur-rish-ili; the grandson of Mutaggil Nebu; the great grandson of Asshur-dapal-il, whose father was Nin-pala-kura, the supposed successor of Shalmabar or Shalmarish. Of his great grandfather, he relates that, sixty years previously, he had taken down the temple of Anu and Iva before alluded to, which had stood for 641 years, but was then in a ruined condition. His father seems to have been a great conqueror, and perhaps was the first to raise the character of the Assyrian arms, and to gain a foreign reputation. But whatever fame he

* Kudur-Mapula or Kudur-Mabuk. 'Mabuk in Hamitic is found to be the exact equivalent of Laomer in Semitic. This is a very recent discovery.'—Rawlinson's *Bampton Lectures*, p. 359.

† It is to be remarked, that the orthography of these names is greatly the result of conjecture, and therefore open to modification. In the words of Sir H. Rawlinson, 'their definite phonetic rendering or pronunciation is a matter of exceeding difficulty.'

acquired in this way was eclipsed by that of his son, who says that he won victories in Cappadocia, Syria, and in the Median and Armenian mountains. Particularly a people called Nairi, who probably dwelt at the north-west of Assyria proper, are conspicuous among his conquests. Now, it so happens, that the date of this king can be fixed in a remarkable way, by a rock inscription of Sennacherib at Bavián, which states that a Tiglath-Pileser occupied the throne of Assyria 418 years before the tenth year of his own reign, and as Sennacherib was reigning towards the end of the eighth, or the beginning of the seventh century, this would throw back the time of Tiglath-Pileser's reign to the latter part of the twelfth century B.C.* We also learn from this same rock inscription, that Tiglath-Pileser was himself defeated by Merodach-adan-akhi, the king of Babylon, who carried away with him images of certain Assyrian gods, shewing that Babylon at this period was independent of Assyria, and a formidable rival to her power. Of Asshur-banipal I., the son and successor of Tiglath-Pileser, nothing is known. Only one record of him has been hitherto discovered, and this was found at Koyunjik.† This name was softened or corrupted by the Greeks into Sardanapalus. After this king a break occurs in the line of succession which cannot be supplied. It is thought, however, not to have been long, as Asshur-adan-akhi is supposed to have begun to reign about 1050, and therefore to have been contemporary with David. This monarch, and the three kings who succeeded him, are obscure and unimportant, not being known for anything else than repairing and adding to the palaces at Kalah Sherghát. Their names are Asshur-danin-il, Iva-lush II., and Tiglathi-Nin.

With the last of these, however, Asshur ceased to be the royal residence. The seat of government was transferred by his son Asshur-dani-pal to Calah, now supposed to be represented by Nimrúd, forty miles to the north, near the confluence of the upper Záb and the Tigris, and on the east bank of the latter river. The reason of this change is not known, but it is thought that it was connected with the extension of the empire in the direction of Armenia, which would therefore demand greater vigilance in that quarter. This king, Sardanapalus II., pushed his conquests to the shores of the Mediterranean, levied tribute of the kings of Tyre and Sidon, and therefore perhaps of Ethbaal the father of Jezebel. He was also the founder of the north-west palace at Nimrúd, which is second only to that of Sennacherib, at Koyunjik, in magnificence and extent. The next monarch who sat on the Assyrian throne was Shalmanu-bar the son of Sardanapalus. He reigned thirty-one years, spread his conquests farther than any of his predecessors, and recorded them on the black

obelisk now in the British Museum. In his reign the power of the first Assyrian empire seems to have culminated. He carried his victorious army over all the neighbouring countries, imposing tribute upon all Babylonia, Mesopotamia, Syria, Media, Armenia, and the Scriptural kingdoms of Hamath and Damascus; the latter under Benhadad and Hazael are alike conspicuous among his vanquished enemies. But what is of paramount interest in the records of this king is the identification in the second epigraph in the above-named obelisk of the name of Jehu the king of Israel, who there appears as Yahua the son of Khumri, and who is said to have given the Assyrian monarch tribute of gold and silver. This name was discovered independently, but almost on the self-same day, both by Dr. Hincks and Colonel Rawlinson, the latter being at Baghdad and the former in the north of Ireland. It is supposed that Jehu is called the son of Khumri or Omri, either as being king of Samaria, the city which Omri built, or as claiming descent from the founder of that city to strengthen his right to the throne, and possibly even as being descended from him on the mother's side.

Shalmanu-bar was the founder of the central palace at Nimrúd, and probably reigned from about 900 to 850 or 860. He was succeeded by his second son Shamas-iva, his eldest having made a revolt during the lifetime of his father, which probably lost him the succession, and was with difficulty quelled by his younger brother. The annals of Shamas-iva extend only over a period of four years. At this time the history is enveloped in much obscurity, but it is probable that the reign of Shamas-iva lasted much longer, as it is with his son and successor Iva-lush III., that the first Assyrian dynasty comes to a close, and the reigns of these two princes are all we have to fill up the interval from 850 to 747, which is about the time it is supposed to have ended. Iva-lush is perhaps the Pul of Scripture. Among those from whom he received tribute are mentioned the people of Khumri, *i. e.*, Samaria, and Menahem gave Pul 1000 talents of silver to confirm the kingdom in his hand. There is a statue of the god Nebo in the British Museum which is dedicated by the artist 'to his Lord Iva-lush and his lady Sammuramit.' This personage is in all probability the Semiramis of the Greeks, and her age remarkably agrees with that which Herodotus assigns her, viz., five generations prior to Nitocris, who seems with him to represent Nebuchadnezzar. He also speaks of her as a Babylonian princess, and since Iva-lush asserts that Asshur had 'granted him the kingdom of Babylon' he may very likely have acquired it in right of his wife or reigned conjointly with her. But we cannot here replace conjecture by certainty. As we are altogether ignorant of the causes which terminated the first Assyrian dynasty or established the second, the interval between both may have been considerable, and may account for the difficulty above mentioned with respect to the period from the death of Shalmanubar and the end of the first empire. Tiglath-Pileser II., who founded the second empire, appears before us 'without father, without mother.' Unlike the kings before him he makes no parade of his ancestry in his inscriptions, from which circumstance we may fairly assume that he was a usurper. Much uncertainty has arisen about the date of his accession, because he states that he took

* In all probability these two kings are identical, though Mr. Oppert supposes them not to be.

† It may be convenient to remember, that Koyunjik, Khorsabád, Kilah-Sherghát, and Nimrúd, are respectively equivalent to Nineveh, Dur-Sargina, Asshur, and Calah. Also, that the founder of the north-west palace at Nimrúd was Asshur-dani-pal; of the central palace at that place, Shalmanu-bar; of the palace at Khorsabád, Sargon; of the great Koyunjik palace, Sennacherib; and of the south-west palace at Nimrúd and the palace at Nebbi-yunus, Esarhaddon.

tribute from Menahem in his eighth year, which would make it B. C. 767 or 768 (received chronology), whereas it is more likely that it was connected in some way with the change of events in Babylon that gave rise to the era of Nabonassar, or 747. However, as LXX. give the reign of Manasseh thirty-five years instead of fifty-five, this diminution of twenty years would exactly rectify the discrepancy, or else it is possible that in the said inscription Menahem may be by mistake for Pekah, since he is joined with Rezin, whom Scripture always couples with Pekah. The annals of Tiglath-Pileser II. extend over a period of seventeen years, and record his wars against Mesopotamia, Armenia, and Media; he also invaded Babylon, took the city of Sepharvaim or Sippara, and slew Rezin the king of Syria. It was this king whom Ahaz met at Damascus when he saw the altar of which he sent the pattern to Urijah, the priest at Jerusalem. Of Shalmaneser, his probable successor, little is known but what has come down to us in the sacred narrative. His name has not been found on the monuments. Shalmaneser twice invaded Israel; upon the first occasion it seems that Hoshea the king bought him off by tribute, but subsequently revolted upon having made an alliance with Sabaco or So, king of Egypt. Upon this, Shalmaneser again invaded Israel, and besieged Samaria for the space of three years. He is supposed to have died or to have been deposed before the city surrendered, and to have left the final subjugation of it to his successor. This was Sargon or Sargina who came to the throne in B. C. 721, was the founder of a dynasty, and is therefore suspected of being a usurper; he reigned nineteen years after the captives of Samaria had been brought to Assyria; he made war against Babylon, and perhaps placed Merodach-Baladan upon the throne. After this he marched in the direction of Southern Syria and Egypt. At this time the latter country was under the dominion of the twenty-fifth or Ethiopian dynasty, and had recently gained possession of the five Philistine cities, according to the prediction of Is. xix. 18,* 'In that day shall five cities in the land of Egypt speak the language of Canaan.' It is remarkable that Sargon speaks of Gaza as belonging to Egypt, and its king is said to have been defeated at Raphia by the Assyrian monarch. Upon this the Egyptian 'Pharaoh' paid Sargon tribute of gold, horses, camels, etc. Afterwards he made war in Hamath, Cappadocia, and Armenia, turning his arms also against Mount Zagros and the Medes, whose cities he colonised with his Israelitish captives. Later, he made a second expedition into Syria, and took Ashdod by his Tartan, or general (Is. xx. 1),† the king of this place flying to Egypt, which is said to be under the dominion of *Mirukha* or *Meroe*. At this time, also, Tyre fell under his power. Subsequently, he made a second war upon Babylonia, and drove Merodach-Baladan, who seems to have offended him, into banishment. Finally, the Greeks of Cyprus, who are called 'the *Yaha Nagé* tribes of *Yunanu*' or Ionia, are named among those who paid him tribute. He appears

to have removed the seat of government from Calah to Khorsabad, called from him Dur-Sargina. At this time the influence of Egyptian taste is manifest in Assyrian works of art. Sargon was succeeded in the year B. C. 702 by his son Sennacherib. He fixed his government at Nineveh, which, being now greatly decayed, he completely restored, and where he built the magnificent structures discovered and excavated by Layard. In the repairs of the great palace alone he is said to have employed not less than 360,000 men among his captives from Chaldea, Armenia, and elsewhere. Sennacherib immediately after his accession proceeded to Babylon, where Merodach-Baladan had contrived to place himself again upon the throne with the aid of the Susianians. He fought a bloody battle with him, in which the Babylonian was entirely defeated, and then appointed Belibus, or Elibus, viceroy of Babylon. In his second year he marched on the north and east of Assyria, and penetrated to certain Median tribes whom he asserts to have been quite unknown to his predecessors. The Philistines also were subdued by him, and the kings of Egypt who fought with him near Lachish were worsted. Lachish and Libnah fell before his arms, and Hezekiah, at Jerusalem, had to purchase peace by a tribute of 300 talents of silver and 30 talents of gold (2 Kings xviii. 13, 14). This, however, is not recorded in his annals, which extend only to his eighth year, and therefore may have occurred subsequently to the period at which they close. In the year 699 he again marched against Babylon, defeated the party of Merodach-Baladan, deposed the viceroy, Belibus, whom he had himself appointed three years before, and placed his own eldest son, Asshur-nadin, upon the throne. We know that Sennacherib reigned twenty-two years, because we have his twenty-second year stamped on a clay tablet, but it is uncertain when his second expedition to Syria was undertaken: some, however, consider his two Syrian expeditions to have been identical. The object of it was to recover the cities of Lachish and Libnah, which had again fallen under the power of Egypt. While he was warring against Lachish he heard of the convention that Hezekiah had entered into with the king of Egypt, and sent a detachment of his host against Jerusalem, under Rab-Saris and Rab-Shakeh. For some reason which we are not told, these generals found it expedient to retire from Jerusalem and join their master, who had raised the siege of Lachish, at Libnah. Meanwhile, Tirhakah, the Ethiopian, perhaps not yet king of Egypt, advanced from the south to meet Sennacherib and reinforce the Egyptian party against whom he was contending, but before the decisive battle could be fought, the Angel of the Lord had smitten in the camp of the Assyrians 185,000 men. Sennacherib, with the rest of his army, fled in dismay, and the Egyptians perhaps commemorated his disaster in the manner related (Herod. ii. 141). It is not a matter of surprise that this event is unnoticed on the Assyrian monuments. In all probability the murder of Sennacherib by his sons did not immediately follow his defeat at Libnah, but this also we have no means of knowing from the Assyrian records. He was succeeded by one of his younger sons, not his eldest, who had been regent in Babylon, and was probably dead, Esarhaddon, or Asshur-akh-iddina. He was celebrated for his victories and his magnificent buildings. He carried on his father's war with Egypt, which

* This interpretation of the prophecy is perhaps open to question on account of the words that follow—'one shall be called the city of destruction.'

† 'Tartan was the common title of the commander of the Assyrian armies.'—Layard, *Nineveh and Babylon*, p. 148, n.

country, as well as Ethiopia, he seems to have subdued. He is also thought to have reigned in his own person at Babylon, and perhaps to have held his court indifferently, either at Nineveh or Babylon, which would account for Manasseh being carried by the captains of the king of Assyria to Babylon (2 Chron. xxxiii. 11); but in B.C. 667, thirteen years after his accession, he was succeeded on the throne of Babylon by Saoduchinus, who was either a rebel or a viceroy appointed by Esarhaddon. About the year 660 his son, Assurbanipal or Sardanapalus III., succeeded to the throne of Assyria, and with him began the fall of the empire. He may have reigned till 640, but he feebly imitated the conquests of his predecessors, and appears to have contented himself with hunting. He was succeeded by his son Asshur-emit-ili, the last king of whom any records have been discovered. Under him, Assyria was hastening to its downfall, and Cyaxares, with his victorious Medes, was preparing for the final attack. If he was not the last king he was the last but one, and the Saracus of Berosus, perhaps his brother, may have succeeded him, or else we must consider Saracus to be identical with Asshur-emit-ili, who corresponded in fate with the war-like Sardanapalus of the Greeks.

The notice of the capture of Nineveh will fall more appropriately under that article. [NINEVEH.]

The Country of Assyria.—Of the general character of the country of Assyria, Scripture of course furnishes us with no materials to form an estimate. In its main geographical and geological features it must necessarily have remained unchanged, and for these we must turn to the pages of modern travellers. In Mr. Layard's two works, and in Colonel Chesney's survey of the Euphrates, there are sundry descriptive touches which are subjoined.

The general features of the country are plain, not to say monotonous, diversified only by occasional ranges, such as the Sinjâr, Makloub, etc. Mr. Layard speaks of the 'Assyrian plains uninterrupted by a single eminence and rarely shadowed by a passing cloud.'

'The detached limestone ridges running parallel to the great range of Kurdistan, such as the Makloub, Sinjar, Karachek, and Hamim, are a peculiar feature in the geological structure of the country, lying between the ancient province of Siberia and the Persian Gulf. Hog-backed in form, they have an even and smooth outline when viewed from a distance, but are really rocky and rugged. Their sides are broken into innumerable ravines, producing a variety of purple shadows, ever changing and contrasting with the rich golden tint of the limestone, and rendering these solitary hills, when seen from the plain, objects of great interest and beauty. They are for the most part but scantily wooded with a dwarf oak, and that only on the eastern slope; their rocky sides are generally, even in spring, naked and bare of all vegetation. Few springs of fresh water being found in them, they are but thinly inhabited. In the spring months, when the rain has supplied natural reservoirs in the ravines, a few wandering Kurdish tribes pitch their tents in the most sheltered spots' (*Nineveh and Babylon*, p. 222).

Again he speaks of 'pitching tents in a green lawn enamelled with flowers that furnished a carpet for our tents unequalled in softness of texture or in richness of colour by the looms of Cashmere' (p. 244).

'During our stay at Arban the colour of the great plains was undergoing a continual change; after being for some days of a golden yellow a new family of flowers would spring up, and it would turn almost in a night to a bright scarlet, which would as suddenly give way to the deepest blue. Then the meadows would be mottled with various hues or would put on the emerald green of the most luxuriant of pastures. The glowing descriptions I had so frequently received from the Bedouins of the beauty and fertility of the banks of the Khabour were more than realised. The Arabs boast that its meadows bear three distinct crops of grass during the year, and the wandering tribes look upon its wooded banks and constant greensward as a paradise during the summer months, where man can enjoy a cool shade, and beast can find fresh and tender herbs, whilst all is yellow, parched, and sapless' (p. 273).

'The plain, like all the country watered by the Khabour, was one vast meadow teeming with flowers' (p. 298).

Speaking of the district of the Zibari Kurds to the east of Mosul, Mr. Layard says: 'The country beyond or to the east of the Zab is broken into a number of parallel ranges of wooded hills, divided by narrow ravines. Small villages are scattered here and there on the mountain sides, in the midst of terraces cultivated with wheat and planted with fruit trees. The scenery occasionally assumes a character of beauty and grandeur as the deep green valleys open beneath the traveller's feet, and the lofty snow-capped peaks of Rahwanduz rise majestically in the clear blue sky' (p. 373).

Of the appearance of the lake of Wan, he thus speaks: 'A range of low hills now separated us from the plain and lake of Wan. We soon reached their crest, and a landscape of surpassing beauty was before us. At our feet, intensely blue and sparkling in the rays of the sun, was the inland sea with the sublime peak of the Subhan Dagh mirrored in its transparent waters. The city with its castle-crowned rock and its embattled walls and towers lay embosomed in orchards and gardens. To our right a rugged snow-capped mountain opened midway into an amphitheatre, in which amidst lofty trees stood the Armenian convent of Yedi Klissia (the Seven Churches). To the west of the lake was the Nimroud Dagh and the highlands nourishing the sources of the great rivers of Mesopotamia. The hills forming the foreground of our picture were carpeted with the brightest flowers, over which wandered the flocks, whilst the gaily dressed shepherds gathered around us as we halted to contemplate the enchanting scene' (p. 387).

'We gather from the records of the campaigns of the Assyrian kings that the country both in Mesopotamia and to the coast of the Euphrates, now included in the general term of 'the Desert,' was at that remote period teeming with a dense population both sedentary and nomade; that cities, towns, and villages, rose on all sides; and that consequently the soil brought forth produce for the support of this great congregation of human beings. There are still traces in these now desolate regions of their ancient wealth and prosperity. Mounds of earth covering the ruins of buildings, or the sites of fenced stations and forts, are scattered far and wide over the plains. When the winter rains furrow the face of the land, inscribed stones, graven pottery, and masses of brickwork, the certain signs

of former habitations, are everywhere found by the wandering Arab. All these settlements depended almost exclusively upon artificial irrigation. Hence the dry beds of enormous canals and countless watercourses which are spread like a network over the face of the country. Even the traveller accustomed to the triumphs of modern science and civilization, gazes with wonder and awe upon their gigantic works, and reflects with admiration upon the industry, the skill, and the power of those who made them' (p. 636).

Physical Geography and Productions.—'We may infer' (says Captain Felix Jones, in the Journal of the Royal Asiatic Society, vol. xv. p. 298) 'that, in its local features, the region cannot have materially changed since the era in which Nimrod, Asshur, or Ninus, migrated from the plains of Babylonia to found a dynasty or a kingdom beyond the Zab. The great mountain ranges of the Taurus to the north, and Zagros to the north-east and east, in this region sink almost imperceptibly into plains,* traversed at certain intervals only by slight ridges, which, having a direction parallel to the sides of the greater chains, just rise in lines above the soil, or crop forth only in undulations of varying height from W.N.W. to E.S.E. Eastward of the modern Mosul these ridges are most depressed and broken, offering outlets to the pent-up mountain streams which unite to form the upper Zab, as well as to give passage to other tributaries, principally winter torrents or minor rivulets, that issue from the Gebel Maklûb, of which the Khôsr-sû or Khorsabad stream is the chief. During winter rains this becomes an impassable barrier, while at other periods it is fordable in most places. It falls into the Tigris in lat. 36° 21' N., just opposite the modern Mosul; and the Zab debouches in the same way in the par. of 35° 59' N., enclosing between its broad shingly bed and Khôsr stream a highly arable plain, diversified here and there only by gentle undulations and slopes. This plain, a somewhat irregular parallelogram in shape, and in extent twenty-five miles by fifteen, contains most of the Assyrian sites we are yet acquainted with.' Colonel Chesney says (*Survey of Euphrates and Tigris*, vol. i. p. 105):—Mesopotamia, generally, 'is a plain country, abounding with wormwood; but between Baghdad and the Euphrates, a part of the surface is occupied by salt lakes and marshes; and near the two rivers there are several khors, or fresh lakes, the most remarkable being those which inundate the neighbourhood of Akar Kûf, of the Birs Nimrûd, and Lamlûm. The soil of Mesopotamia is generally a sandy clay, the surface of which, in the absence of water, is a positive desert; but wherever it is watered by the numerous inlets and irrigating canals branching from the different rivers, it is rich and productive in the extreme.' The northern parts produce cotton, sugar, indigo, and dates, which are said to excel those of Táfilah. About the Khâbûr, however, the date-tree almost ceases to bear; but oranges, grapes, pears, apples, with other fruits and grain, arrive at perfection. The products of the northern part are tobacco, Indian corn, wheat, barley, cotton, and gall-nuts. Melons, apricots, figs, cherries, pomegranates, and quinces also, are abundant, wherever the least care is taken to cultivate them. The climate is subject to the extremities of

cold and heat, according to the season. Snow falls occasionally, even in the south. In the summer the average temperature is 104° in the house. In the northern parts the thermometer frequently falls below zero in winter, and the snow continues for some weeks during the coldest part of that season. 'In the summer, and during the greater part of autumn, there is scarcely any rain in Upper Mesopotamia; but during the remainder of the latter season, and till the snow is melted in the lower part of the neighbouring range of the Taurus, it falls abundantly' (p. 107).

'The prevailing trees are the sycamore, the silver poplar, with the tamarisk and liquorice plants, both of which are everywhere very abundant. Below the Khabur,* wormwood covers the plain. Bustards abound; and even wild asses are occasionally seen. Jackals are found in large troops; lions and hyenas are not so numerous; but hares, black and stone-coloured partridges, francolins, Bramin, and common wild geese, ducks, teal, pelicans, cranes, etc., are abundant. The rivers are full of fish, chiefly barbel and carp, which latter grows to an enormous size in the Euphrates. Truffles and wild capers, peas, spinach, and the carob (*ceratonia siliqua*), are also found in Mesopotamia.'—Chesney, p. 108.

'The country produces great quantities of barley and wheat in their wild as well as cultivated state; but oats do not seem to be sown anywhere by the sedentary Arabs. Onions, spinach, and beans, are the usual vegetables; and these are largely cultivated along the sides of the rivers, where, just after the water recedes, the progress of vegetation is surprising. Some idea may be formed of the productive qualities of the soil, from the fact of eight crops of clover having been cut in the neighbourhood of Basrah during the year. The domestic animals of Mesopotamia are camels, horses, buffaloes, sheep, and goats, all of a superior kind; but the cows and oxen are of an inferior breed. The more northern and hilly portion of this territory produces, in addition to copper, lead, and other minerals, honey, wax, etc.; whilst the southern contains salt, lime, bitumen, and naphtha; but the principal wealth of the people is derived from their vast flocks.'—Chesney, p. 108.

'The most remarkable production in ancient Assyria is the celebrated vegetable known here by the name of manna, which in Turkish is most expressively called Kudret-hal-vassiz, or the Divine sweetmeat. It is found on the leaves of the dwarf oak, and also, though less plentifully and scarcely so good, on those of the tamarisk and several other plants. It is occasionally deposited on the sand and also on rocks and stones. The latter is of a pure white colour, and appears to be more esteemed than the tree manna. It is collected chiefly at two periods of the year, first in the early part of spring, and again towards the end of autumn, in either case the quality depends upon the rain that may have fallen, or at least on the abundance of the dews, for in the seasons which happen to be quite dry it is understood that little or none is obtained. In order to collect the manna the people go out before sunrise, and having placed cloths under the oak, larch, tamarisk, and several other kinds of shrubs, the manna is shaken down in such quan-

* Strabo speaks of τὸ πεδίον τῆς Ἀτροπίας in xvi. 737.

* The wormwood is said by Mr. Rich, *Residence in Kurdistan*, to send forth a refreshing agreeable odour, i. 41.

titles from the branches as to give a supply for the market after providing for the wants of the different members of the family. The Kurds not only eat manna in its natural state, as they do bread or dates, but their women make it into a kind of paste; being in this state like honey, it is added to other ingredients used in preparing sweetmeats, which, in some shape or other are found in every house throughout the East. The manna when partially cleaned is carried to the market at Mosul in goatskins, and there sold in lumps at the rate of $4\frac{3}{4}$ lbs. for about 2½d. But for family consumption or to send to a distance out of the country, it is first thoroughly cleansed from the fragments of leaves and other foreign matter by boiling. In the natural state it is described as being of a delicate white colour. It is also still, as in the time of the Israelites, like coriander seed, and of a moderate but agreeable sweetness.—Chesney, 123.

Empire and Government.—The Assyrian dominions, as far as we can yet learn from the inscriptions, did not extend much further than the central provinces of Asia Minor and Armenia to the north, not reaching to the Black Sea, though probably to the Caspian. In the east they included the western provinces of Persia; to the south Susiana, Babylonia, and the northern part of Arabia. In the west the Assyrians may have penetrated into Lycia and perhaps Lydia; and Syria was considered within the territories of the great king; Egypt and Meroë (Ethiopia) were the farthest limits reached by the Assyrian armies (*Nineveh and Babylon*, p. 633).

The empire appears to have been at all times a kind of confederation formed by many tributary states, whose kings were so far independent that they were only bound to furnish troops to the superior lord in time of war, and to pay him yearly a certain tribute. Hence we find successive Assyrian kings fighting with exactly the same nations and tribes, some of which were scarcely four or five days' march from the gates of Nineveh. On the occasion of every change these tributary states seem to have striven to throw off the Assyrian yoke, and to have begun by refusing to pay their customary tribute. A new campaign was consequently necessary to bring them to obedience. We learn from the inscriptions that when a city or kingdom was thus subdued, however near it might have been to Nineveh, when not actually forming part of the imperial district, a new ruler was appointed to it, with the title of 'king' written in the same cuneiform characters on the monuments as when applied to the head of the empire.*

Mr. Layard further remarks that the political constitution of the Jewish kingdom was similar to that of the Assyrian empire, which illustrates the words of the sacred historian who says of Solomon that he *reigned over all the kings* on this side the river, 1 Kings iv. 21, 24.

The ancient Eastern monarchies 'were in all cases composed of a number of separate *kingdoms*, each under its own native king; and the sole link uniting them together and constituting them an empire, was the subjection of their petty monarchs

to a single suzerain. The Babylonian, Assyrian, Median, and Lydian, were all empires of this type—monarchies wherein a sovereign prince at the head of a powerful kingdom was acknowledged as suzerain by a number of inferior princes, each in his own right sole ruler of his own country. And the subjection of the inferior princes consisted chiefly, if not solely, in two points; they were bound to render homage to their suzerain, and to pay him annually a certain stated tribute.—Rawlinson's *Bampton Lectures*, p. 104.

Religion.—The religion of the Assyrians, like that of most of the nations of antiquity, was a polytheism of considerable variety and extent. The Pantheon consisted of thirteen gods, of whom the chief divinity was the glorified father of the nation—Asshur. Some have supposed this deity to be identical with the Nisroch of Scripture, but this hypothesis is destroyed by the fact that Asshur had no temple at Nineveh in which Sennacherib could have been worshipping when he was slain by his sons Adrammelech and Sharezer. The only temple raised to the honour of Asshur was that in the city to which he gave his name, and which is now called Kalah Sherghât. The symbol of this divinity may perhaps be recognized in the winged globe which is seen in the sculptures hovering over the head of the Assyrian monarch, from which a figure with a horned helmet, the emblem of divinity, is represented as discharging his arrows at the foe. This symbol is called the Ferouer.

Next to Asshur is the triad answering to the classical Jupiter, Neptune, and Pluto, with whom is often associated a supreme female deity. The remaining individuals of the Pantheon were the sky, sun, moon, and planetary bodies.

Illustrations of Scripture.—Scattered up and down in Mr. Layard's two works are various illustrations of Scripture language and customs, of which these are some of the most striking:—In certain sculptures the king is represented as treading on his captives. Cf. Josh. x. 24; Ps. lx. 12, etc. etc.

In a bas-relief from Khorsabad, captives are led before the king by a rope fastened to rings passed through the lip and nose. This sculpture illustrates 2 Kings xix. 28, and Isa. xxxvii. 29.

The wheel within a wheel, mentioned in connection with the emblematical figures in Ezek. i., may refer to the winged circle or wheel, representing, at Nimrúd, the supreme deity.

The 'woe unto them that draw iniquity with cords of vanity, and sin as it were with a cart-ropes,' also, of Isa. v. 18, is supposed to refer to the idol worship of those who are represented on sculptures as thus moving their colossal images from the quarry to the temple or palace. The article in *הקטן*, at this place, appears to give the noun this concrete sense: 'the iniquity,' *i.e.*, the idol.

On sculptures at Koyunjik, there are supposed to be interesting allusions to the sufferings undergone by the Jewish exiles, to Halah, Habor, etc., *v. Nineveh and Babylon*, p. 440.

The ancient mode of keeping records in Assyria and Babylonia was on prepared bricks, tiles, or cylinders of clay, baked after the inscription was impressed. The characters appear to have been formed by an instrument, or may sometimes have been stamped. The Chaldean priests informed Callisthenes that they kept their astronomical observations on bricks baked in the furnace; and we

* This fact illustrates the passage in Isaiah (x. 8, 9), 'For he saith *are not my princes altogether kings?* Is not Calno as Carchemish? Is not Hamath as Arpad? Is not Samaria as Damascus?' (p. 634).

have the testimony of Epigenes to the same effect. Ezekiel, who prophesied near the river Chebar, in Assyria, was commanded to *take a tile* and portray upon it the city of Jerusalem, iv. 1.—Layard ii. 185.

The writer in the Journal of the Royal Asiatic Society above quoted, observes, that the words of Nahum ii. 8: 'But Nineveh is of old like a pool of water,' in reality would seem to convey the *primitive* aspect of the site at a certain season of the year. As the broad and rapid currents of the Tigris and Zab flowed past it on the west, south, and south-east, and the Khos rivulet on the north and north-west, these, at periods of inundation, would be sufficient to submerge the whole. [NINEVEH.]

The accompanying table gives, at one view, the succession of Assyrian kings:—

	<i>First Empire.</i>
	Bel-lush. <i>Circiter</i> , B.C. 1273.
	Pudil.
	Iva-lush.
	Shalma-bar.
	Nin-pala-kura.
Hereditary.	{ Asshur-dapal-il.
	{ Mutaggil-nebu.

ASTAROTH. [ASHTORETH.]

ASTARTE. [ASHTORETH.]

ASTROLOGY. [IDOLATRY.]

ASTRONOMY. In considering the passages in the Bible relating to astronomy, it is important to discriminate between the statements made and the terms employed. The former, in the opinion of many scholars, with whom we fully agree, are consistent with the truths of science, whereas the latter are merely part of the common language of the Hebrews, and, therefore, in accordance with their common opinions. The meanings of these terms thus shew us the degree of scientific knowledge to which the Hebrews attained, but do not, we hold, enable us to form any judgment respecting the relation of revelation and science.

Hebrew astronomy appears to consist of two elements, the earlier of which would be the popular knowledge of the science unconnected with chronology, the later, the special knowledge of the priests necessitated by the ordinances of the Law. The latter may be of Egyptian origin, since 'Moses was learned in all the wisdom of the Egyptians.' We must therefore speak of Shemite astronomy generally, and of Egyptian astronomy, before examining the statements in the Bible bearing upon the main subject. The Shemites rarely have made any advance in mathematical science, not so much from an inaptitude for its pursuit as on account of their national love of an unsettled life. The dwellers in cities among the Shemites are seldom of pure race: on the coasts of Arabia and Africa the great Shemite cities have, from remote ages, held a mixed population. The Arab, like his camel, is miserable, excepting he enjoy the free life of the desert or the plain. So the Israelites, though in times of insecurity they dwelt in the fenced cities of Canaan that they did not build, in their prosperity returned to the tent-life of their forefathers (1 Kings viii. 66). Among them, therefore, we may suppose that no astronomical knowledge would have flourished but that simplest kind which the clear skies of their land would have taught the shepherds who watched their flocks by night. This was the case with the Arabs, who attained a high degree of excellence in this primitive astronomy, without ever making great progress in the theoretical part of the science. The learned men of the court of Baghdád were often strangers, and the Moorish doctors were not in general pure Arabs. This simplest astronomy served with the Arabs, as with the earlier Greeks, to aid in regulating the calendar, the risings or settings of important stars marking the divisions of the year, and the due times for the operations of husbandry. The astronomy of Egypt, though doubtless in its origin the same as that of the Shemites, acquired the wonderful exactness that marked all the sciences of that ancient home of knowledge. The cloudless sky of Egypt, and its warm climate, not only maintained the system of observation, but carried it to the highest point attainable without the aid of modern instruments. The settled life of the inhabitants, and their love of mathematical science, enabled them to found upon these observations a theoretical astronomy, which some hold even to have contained certain of the great truths of Greek and modern science which were lost in the middle ages. By the observation of the solstices and equinoxes, they were enabled to determine the seasons of a solar year, if, as we believe, they used such a period; and to form a cycle of great exactness, adjusting their common or 'vague' year to this tropical one, or at least to the seasons. By the observation of the rising of the dog-star, they

similarly adjusted the sidereal phenomena with the vague year, and formed another great cycle, that of Sothis, containing 1461 vague years and 1460 commencing with the so-called heliacal rising of that star. A series of star-risings marked the decads into which the Sothis-year was divided. These principles are at least as old as the age of the Pyramids of El-Geezeh, which we assign to the twenty-third and twenty-fourth centuries B.C. Moses must have been well versed in this knowledge, and we may therefore suppose that he used it, perhaps by Divine command, in the Law, to such an extent as would be of service for the Hebrew calendar, and yet not too scientific for the priesthood in later ages. At the same time, from its connection with idolatry and astrology, it is probable that the Egyptian astronomy would have been followed rather in principles than in details. We may here allude to the Babylonian astronomy, as to which the interpretation of the inscriptions has not yet so fully enlightened us as in the previous case. Judging from the statements of ancient writers, it must have greatly resembled that of Egypt; but it is not of special importance to our present inquiry, since there is not much reason to suppose that it exercised great influence upon the Hebrews before the age of the rabbinical literature.

The principal references to astronomy in the Bible, in accordance with what has been already stated, either are traceable in chronology, or allude to the primitive observations of the Hebrews. On the first subject our knowledge is extremely slight, depending upon the necessities of the case, and a comparison with the usage of the people in later times, and is thus mainly inferential. There can be no doubt that the beginnings of the months were determined by the observation of the new moon, which long custom must have brought, as among the Arabs, to remarkable exactness. The year was essentially solar, since the most important of the feasts were to be kept at particular periods of the agricultural year. There can be no reasonable doubt that the mode of adjustment in use in the rabbinical times, the addition of an intercalary month when the lunar year had fallen back so far in the seasons, was the ancient institution, for in no other manner could the solar and lunar reckonings be used without deviation from the laws relating to the times when the great feasts should be kept.

The passages illustrating the primitive observations of the Hebrews are mostly of a general character, as the relation of Joseph's dream that the sun and the moon and the eleven stars made obeisance to him (Gen. xxxvii. 9), where we have no certain indication of the heavenly bodies or asterisms intended under the last term; or, as a remarkable place in the Song of Deborah: 'They fought from heaven; the stars in their courses fought against Sisera. The river of Kishon swept them away, that ancient river, the river Kishon' (Judg. v. 20, 21), where the connection of the stars with the rainy season, as at least indicating it at the times of their rising or setting, is alluded to, but no stars are specified. So again, throughout the Psalms, although mention is made of the grandeur and beauty of the heavens, and, a matter specially to be noted in these days, of the laws by which the Almighty Creator has fixed their order, yet there is no notice of stars by their names. In the book of Job, which, notwithstanding

its allusions to Egypt, evidently mainly relates to the life of the desert (circumstances which favour the idea that Moses wrote it while in Midian), we have passages of a special character connected with astronomy. Thus, Job says of God: 'Which maketh 'Ash, Keseel, and Keemah, and the chambers of the south' (ix. 9). And the LORD, speaking of his mighty works, asks Job, 'Canst thou bind the sweet influences of Keemah, or loose the bands of Keseel? Canst thou bring forth Mazzaroth in his season? or 'Aeesh with her sons, canst thou guide them' (xxxviii. 31, 32)? The prophet Amos has a similar passage: he, be it remarked, was a herdman, and not an educated priest, for we read that he 'was among the shepherds of Tekoa' (i. 1), and that when Amaziah the priest of Bethel called him a seer, and told him to go to Judah, there to eat bread and prophesy, he replied: 'I [was] no prophet, neither [was] I a prophet's son; but I [was] a herdman, and a gatherer of sycamore fruit: And the LORD took me as I followed the flock, and the LORD said unto me, Go, prophesy unto my people Israel' (vii. 14, 15). Here, again, we have an exceptional case, and astronomical knowledge is also distinctly connected with the pastoral life, as in Chaldea of old. The prophet speaks of God as '[Him] that maketh Keemah and Keseel, and turneth the shadow of death into the morning, and maketh the day dark with night' (v. 8). We will now notice these terms, commencing with Mazzaroth, the explanation of which will be useful in guiding us as to the rest.

1. Besides the mention of Mazzaroth, מַזְרָוֹת, in Job, Mazzaloth, מַזְלוֹת, are spoken of in the Second Book of Kings (xxiii. 5), as objects of idolatrous worship, where we read that Josiah put down them 'that burned incense unto Baal, to the sun, and to the moon, and to Mazzaloth, and to all the host of heaven.' Here the LXX. has μαζουρωθ, and whether or not that be the true reading, there can be no doubt that the same objects as the Mazzaroth of the older book are intended. Gesenius (*Theo. s. v.*) supposes, following most of the ancient interpreters, that this term means the signs of the zodiac, mentioning the

Arabic word مَنَازِل, a station, and the term

فَلَکُ الْبُرُوجِ, 'the sphere or hemisphere of towers,' applied to the zodiac, which, as Dr. Lee observes (*Translat. of Job in loc.*), he incorrectly renders 'the circle of palaces.' He holds, however, that the word means 'forewarners, presagers;' but Dr. Lee, comparing the former Arabic word, is of opinion that it signifies 'mansions,' and there can be no doubt that such is the case, the words being radically identical, and the Arabs using the plural for

the مَنَازِلِ الْقَمَرِ, or 'mansions of the moon.'

Are we then to understand the twelve signs of the zodiac or the twenty-eight mansions of the moon? The rabbins say the former, but we cannot prove the antiquity of the zodiac, which, in Egypt at least, seems to be no older than the time of the Greek kings. The rabbins had lost much of the ancient knowledge of their people; the Arabs, on the other hand, seem to have preserved unchanged the

rude science of their forefathers. We prefer, therefore, to suppose that the mansions of the moon are intended; and it may be noticed that, if so, their place in the passage of the Second Book of Kings may not be without significance. The worship of the mansions, which would be stars or asterisms, presents no difficulty. The mansions of the moon with the Arabs were mostly asterisms, but some of them single stars. The pagan Arabs attributed rain and drought, etc., to them, and often prayed to them for rain. The Egyptian decans were stars or asterisms, and certainly connected with idolatry.

2. Keemah **בִּימָה**, and Keseel **בְּסִיל**, of the latter of which the plural occurs in Isaiah, perhaps, as the Auth. Vers. renders it, for constellations generally (xiii. 10), 'the heap' or 'cluster,' and the 'confident?' or 'foolish?' are usually held to be the Pleiades and Orion. The latter, is, however, an unsatisfactory supposition, since the two are not mentioned as if near, but rather as if in opposition both in Job and Amos—the prophet apparently connecting Keemah with morning, and Keseel with evening. The writer's brother, Mr. E. S. Poole, renders Keseel scorpio or cor scorpionis with Aben Ezra, well remarking on the passage in Job, that famines generally prevail in the lands of the Bible 'when the sweet influences of the Pleiades are bound, and the bands of Scorpio cannot be loosed,' adding, 'when the best and most fertilizing of the rains, which fall when the Pleiades set at dawn (not exactly heliacally) at the end of autumn, fail; rain scarcely ever falling at the opposite season, when Scorpio sets at dawn' (Smith's *Dictionary of the Bible*, Art. FAMINE).

3. 'Ash **עֵשׂ**, or 'Aesh **עֵשׂ**, for we cannot reasonably doubt that these are but two forms of one name, has been supposed to be equivalent to **נַעֲשׂ**, 'a bier,' the Arabic of which, **نَعش**, is the name of the

Great Bear or *Wain*, the three stars in the tail being called 'the daughters of the bier,' like the 'sons' mentioned in the Bible. Of the correctness of this identification, there can, we think, be no reasonable doubt.

4. 'The chambers of the south' may possibly mean a constellation, but nothing probable can be said on this subject.

So far the names are probably of constellations, asterisms, or stars: of the planets, one seems to be mentioned in the magnificent passage of Isaiah where the king of Babylon is likened to the star of the morning: 'How art thou fallen from heaven, O Lucifer (**הִילֵל**), son of the morning!'" (xiv. 12). Here the planet Venus appears to be intended, the name **הִילֵל** well corresponding to the Chald.

נָהָה, and the Arab. **نَهْرَة**. The wandering

stars, *ἀστέρης πλανῆται*, spoken of by St. Jude (13), are not necessarily planets; shooting stars would more probably be the objects taken for the figure. We have not included in this enumeration the 'fleeing serpent,' **נָחַשׁ בָּרוּחַ**, mentioned in Job (xxvi. 13), since it is by no means certain that the

reference is not to a marine or river monster, if we compare the two verses preceding (11, 12), in the latter of which there may be a notice of the Exodus.

There are several important places in the Bible relating to astronomy, which are noticed under other articles, which treat of the Cosmogony [CREATION]; the great miracle wrought for Joshua [SUN]; the Sun-dial of Ahaz [DIAL]; and the Star of the Wise Men [STAR IN THE EAST].

The subject of Astrology will be discussed under the head of IDOLATRY.—R. S. P.

ASTRUC, JEAN, a celebrated French physician, was the son of a Protestant minister, and was born at Sauves, in Lower Languedoc, 19th March 1684. He taught medicine first at Montpellier, and afterwards in the college of France at Paris. He died 5th May 1766, at the age of 82. The fame which he enjoyed during his lifetime rested chiefly on his abilities as a teacher, and on his medical writings, which were very numerous. These are now forgotten or neglected, whilst a work which he published anonymously, and of which he seemed half ashamed, in the department of biblical literature, has secured for him a permanent reputation. This work appeared under the title of *Conjectures sur les Memoires Originaux dont il est permis de croire que Moïse s'est servi pour composer le Livre de la Genèse, avec des Remarques qui appuient ou éclaircissent ces Conjectures*, Bruxelles (Paris), 1753, 12mo. In this work Astruc first fully broached the idea that in the composition of Genesis Moses made use of documents (*memoires*) the product of an earlier age. These he supposed to consist of two principal works, distinguished chiefly by the use of the names Elohim and Jehovah, as designations of the divine being, of which portions are distributed through the whole of Genesis; but with these are mixed up fragments of ten other documents. He thus regarded Genesis as a composition from twelve original sources, put together by Moses; and he conjectured that these were originally placed in twelve columns, but through faults of the transcribers came to be afterwards thrown confusedly and oftentimes erroneously together. This theory created an era in biblical inquiry. A crude hint to the same effect had, indeed, been thrown out by the older Vitringa (*Observ. Sac.*, bk. i. ch. 4, § 2), but to Astruc belongs the credit of having first clearly enunciated it as a theory, and applied it to the Mosaic writings. Whether true or false, this theory has been in substance extensively embraced, and has been productive of numerous results. [GENESIS; PENTATEUCH].—W. L. A.

ASTYAGES (*Ἀστύαγης*), the last king of the Medes, according to Herodotus, who was conquered by Cyrus. It is mentioned in the first verse of the Apocryphal book, *Bel and the Dragon*.

ASYLUM, a temple or other sacred place, guarded by rights of consecration, and allowed to extend a protection over human life; so that those who sought its shelter could not be torn from it without the deepest impiety. The word is derived from *ἀ* and *συλάω*, and implies an inviolable refuge. It does not occur in the English Bible, but its Hebrew equivalent is **מִקְלָט**, 'refuge' (from **קָלַט**, receipt), rendered by the LXX. *φυγαδευτήριον, καταφυγή*.

The earliest asylum is said to have been founded by the Heraclidæ at Athens, in a temple of Pity,

* This line is a fine, but, of course, accidental, instance of the English hexameter, so rarely successful in our language.

or by Cadmus at Thebes. The temples of Apollo at Delphi and Delos (Liv. xxxv. 51) were regarded as asylums, and the sanctity with which they were invested made them valuable repositories of treasures. Romulus founded a promiscuous asylum in a grove at Rome (Liv. i. 8, Virg. *Æn.* viii. 342), in order to increase the number of his citizens. One of the most famous ancient asylums was the temple of Diana at Ephesus, and its inviolability extended to the distance of an arrow-shot all round the building. We read in the book of Maccabees that the high-priest, Onias III., took refuge in an asylum at Daphne (2 Macc. iv. 34), but he was enticed from its shelter, and put to death. Although the open violation of an asylum excited (as we see in the case of the Megaclidæ) the deepest horror, it seems to have been considered perfectly admissible to use either fraud or force to get the criminal beyond the reach of the privilege (Schol. Eurip. *Androm.* 256; 2 Macc. iv. 34); and if all other means failed, it was thought no unpardonable crime to starve the criminal to death, provided that the pollution (*δῶρος*) of a violated sanctuary were avoided, by dragging him from the sacred limits at the very moment when he was about to expire (Thuc. i. 134).

Although asylums were intended for the preservation of the innocent, not for the convenience of the guilty (Ps. Demosth. *Ep.* 3), it is obvious that they were liable to gross abuse. Ephesus, in consequence of the rights attached to the temple of Artemis, became a nest of robbers (Strabo, xiv. 641); and in Asia Minor generally it was found that the ends of justice were so seriously thwarted by the multitude of sacred places of refuge, that the emperor Tiberius wisely curtailed immunities, which were only advantageous to fraudulent debtors and guilty slaves (Plut. *de Superstit.* p. 166; *De Vit. usur.* p. 828; Tac. *Ann.* iii. 60-63; Suet. *Tib.* 37).

The privilege of sanctuary descended to the middle ages from pagan custom rather than from the Mosaic law. By a law of Justinian, the jus asyli, which had been conferred on temples, was extended to churches (*Instit.* i. tit. 8. s. 2, quoted in Smith's *Dict. Ant.* s. v.), and the right was defended by stringent laws of Gratian, Valentinian, and Theodosius. It still exists in Italy, and its abuses exceed its advantages at the present day, although in troubled and lawless times the existence of such refuges was an invaluable protection against political persecutions.

We now proceed to state the nature of the asyla permitted by Moses, and we shall see that his laws respecting them were framed with a wisdom which rendered these places of refuge a shield of innocent misfortune, while it prevented them from becoming an incentive to reckless crime. The cities of refuge

(ערי המקלט), six in number, were appointed to save the accidental homicide from the goel or avenger of blood (Num. xxxv. 6, 12, 25; Josh xx. 1; xxi. 13, 21, 27, 32, 36; 1 Chron. vi. 67, seq.) They were so set apart as to be easy of access, and were ranged almost in a quincuncial shape on either side of Jordan. So admirably were they selected, that the persecuted manslayer could *never be more than six miles* from the nearest city of refuge (Kalisch on Ex. xxi. 14). In supposed accordance with Deut. xix. 3, the magistrates, on the 15th of Adar, every year, inspected the roads

leading to them, to see that they were free from all impediment, that the streams were bridged, and

that signposts, with the words *מקלט מקלט*, were placed at each cross-road (Maimon. *Rotsch.* c. 8. s. 5). To prevent all carelessness in matters of blood, even the innocent homicide was compelled to remain at the refuge city, apparently in a low position, *until the death of the high-priest*, just as at Athens he was condemned by the Areopagus to *ἀπειραντισμός*. This apparent severity had the double purpose of diminishing the fury of the goel, while it inculcated on the manslayer the awful sacredness of human life. In order to prevent the refugees from praying for the high-priest's death, the mothers of the high-priests are said to have supported them with clothes and food. Two youths were provided as an escort to the fugitive on his way, and the sanctuary extended 2000 cubits beyond the city walls (Num. xxxv. 4, 5). According to Maimonides, from whom several of the above particulars are taken, all the forty-eight Levitical cities possessed in a lesser degree the right of affording a refuge. Both in the Hebrew and in the Gentile asylums an inquiry was, of course, instituted as to the right of the criminal to avail himself of the divine protection (Grot. *de Fure Bell.* ii. 21), but it is not very clear from Scripture (Deut. xix. 11; Josh. xx. 4-6) when and where the trial was held. For farther particulars, see Goodwin's *Moses and Aaron*, ii. 5; Otho *Lex. Rab.* s. v. *Asylum*; Carpov. *App. Crit.* p. 336, seq. [CITIES OF REFUGE.]

The privilege of *ἀσυλία* was also extended by Moses to the 'horns of the altar' (Ex. xxi. 14), where a man might remain unharmed until he could be conducted to a city of refuge, if he could prove his innocence. There seems to be no ground for confining this privilege to priests (Maimon. *Hal. Rotsch.* c. 5, in Otho *Lex. Rab.* s. v. *Altare*). Even in Christian times, the holy table was considered to possess a similar privilege (Greg. Naz. *Or.* xx), and from the earliest ages pagan altars have been regarded as affording a sanctuary (Herod. ii. 113; Eur. *Hec.* 149; Virg. *Æn.* xii. 201, etc.) The 'horns of the altar' were projections at each angle (Joseph. *de Bell. Jud.* vi. 5), covered with the same brazen framework as the altar itself, and they had an obviously symbolic meaning (Exod. xxvii. 2; xxx. 2), as well as being necessary to the routine of sacrifice (Ps. cxviii. 27). For similar reasons horned altars were frequent among the ancients (Ov. *Her.* xx. 99; Callim. *Hymn Apoll.* 60). Twice in the history of Judah notorious criminals sought for impunity by 'catching hold of the horns of the altar.' In one of these instances the offender, Adonijah, was freely pardoned (1 Kings i. 50); but Joab, who had followed his example, having been vainly summoned to leave his place of refuge, was killed as he clung there by Benaiah. Since the law (Exod. xxi. 14) expressly exempted such wilful and treacherous murderers as Joab from the right of asylum at the altar, the guilt of the sacrifice rests with him rather than with his executioner (1 Kings ii. 28). Our Lord connects a yet darker murder with the vicinity of the altar, and doubtless means that the sacredness of the place made the guilty deed more heinous (Matt. xxiii. 35). See, on the whole subject of the horns of the altar, Spencer *De Legg. Hebr.* vol. ii. pp. 676-682.

The case of Shimei (1 Kings ii. 36) gives us no right to infer that Jerusalem itself was regarded as an asylum; but we find that in later times such a privilege was granted to the temple and its 'liberties,' 1 Macc. x. 43.—F. W. F.

ATAD (אָטָד) occurs in Judg. ix. 14, 15; Ps. lvi. 9. In the first passage the *atad*, or bramble, is called to reign over the trees. From Ps. lvi. 9, it is evident that the *atad* was employed for fuel: 'Before your pots can feel the thorns.' *Atad* is so similar to the Arabic عوسج *ausuj*, that it has

generally been considered to mean the same plant, namely, a species of buckthorn. This is confirmed by *atadmi* being one of the synonyms of *rhamnus*, as given in the supplements to Dioscorides. A species of *rhamnus* is described both by Belon and by Rauwolf as being common in Palestine, and by the latter as found especially in the neighbourhood of Jerusalem. It has been described by Prosp. Alpinus as having an abundance of long branches, on which are found many long and very sharp thorns. So Rauwolf: 'It puts forth long, slender, crooked switches, on which there are a great many

99. *Zizyphus Spina Christi*.

long, strong, and acute thorns.' This has been supposed by some to be the true Christ's thorn, *Rhamnus*, now *Zizyphus Spina Christi*. The term used by the evangelist (John xix. 5) is *akavtha* (ἀκανθα), which also occurs in Matt. vii. 16; xiii. 7, 22; xxvii. 29; and also in the parallel passages of Mark and Luke. This word is used in as general a sense as 'thorn' is with us, and therefore it would be incorrect to confine it to any one species of plant in all the above passages, though no doubt some particular thorny plant indigenous in the neighbourhood of Jerusalem would be selected for plaiting the crown of thorns. Hasselquist says of the *Zizyphus Spina Christi*, the *Nabeu*

Paliurus Athenæi of Alpinus, 'In all probability this is the tree which afforded the crown of thorns put upon the head of Christ. It is very common in the East. This plant is very fit for the purpose, for it has many small and sharp spines, which are well adapted to give pain: the crown might easily be made of these soft, round, and pliant branches; and what in my opinion seems to be the greater proof is, that the leaves very much resemble those of ivy, as they are of a very deep glossy green. Perhaps the enemies of Christ would have a plant somewhat resembling that with which emperors and generals were crowned, that there might be a calumny even in the punishment.' Some have fixed upon *Paliurus aculeatus*, and others upon *Lycium horridum*.—J. F. R.

ATAD. In Gen. l. 11, we read of 'the floor of Atad' as the place 'beyond Jordan,' where the sons of Jacob made their great mourning for him. Some take Atad here as the name of a man, but this is a mistake. The orig. אָטָד means 'the thorn,' and 'the floor of the thorn' must be held to be the designation of a place. Jerome places it on the east side of the Jordan, and yet he identifies it with Bethagla, which lies on the west side [BETH-HOGLAH]. It was called by the Canaanites, 'the inhabitants of the land,' ABEL MIZRAIM.—W. L. A.

ATALLEPH (אֶטְלֵפִי). This word occurs Lev. xi. 19; Deut. xiv. 18; Is. ii. 20 [in all which places the LXX. give *wkrepis*; also in Baruch vi. 22]. In Hebrew the word implies flying in the dark; which, taken in connection with the sentence, 'Moreover the atalleph and every creeping thing that flieth is unclean unto you; they shall not be eaten,' is so clear, that there cannot be a mistake respecting the order of animals meant; though to modern zoology neither the species, the genus, nor even the family is thereby manifested; the injunction merely prohibits eating bats, and may likewise include some tribes of insects. At first sight, animals so diminutive, lean, and repugnant to the senses, must appear scarcely to have required the legislator's attention, but the fact evidently shews that there were at the time men or tribes who ate animals classed with bats, a practice still in vogue in the great Australasian islands, where the frugivorous Pteropi of the harpy or goblin family, by our seamen denominated flying-dogs, and erroneously vampyres, are caught and eaten; but where the insectivorous true bats, such as the genera common in Europe, are rejected. Some of the species of harpies are of the bulk of a rat, with from three to four feet of expanse between the tips of the wings; they have a fierce dog-like head, and are nearly all marked with a space of rufous hair from the forehead over the neck and along part of the back.

They reside in the most dense foliage of large trees, whence they fly out at night and do considerable damage to the plantations of fruit-trees. Among them the *Pteropus edulis*, kalong, or edible goblin bat, is conspicuous, and not unfrequently found in our museums of natural history. The first tribe of them, distinguished by being without tails, is not at present known in Egypt or Northern Arabia; but of the second, having tails, a large species was discovered by M. Geoffroy in the pyramids, and a very large one is figured on the oldest monuments. Species of this or of both are

likewise common in Madagascar; and thence it may be inferred that they still exist in Southern Arabia. It was to one or more species of this section of Chiroptera that we think the Mosaic prohibition was chiefly directed; and it is likewise to them that may be referred the foundation of the ancient legends concerning harpies, which, however much they may be distorted, have a basis of truth. Indeed, when we consider their voice, the faculty they have of feeding with their thumbs, their formidable teeth, their habit of flying in the day during dark weather, and their willingness, though they are frugivorous, to devour not only insects, but also the blood and flesh of small animals, we may admit that originally they were more daring in the presence of man; that their true characters are but moderately amplified by poetical fancy; and that the Mosaic injunction was strikingly appropriate.

In the texts of Scripture, where allusion is made to caverns and dark places, true Vespertilionidae, or insect-eating bats, similar to the European, are clearly designated.—C. H. S.

ATARGATEION. This word occurs 2 Macc. xii. 26, and is rendered in the A. V., 'temple of Atergatis.' This is probably correct. [ATERGATIS.]

ATARGATIS. [ATERGATIS.]

ATAROTH (עֶטְרוֹת). Several instances of this name (which means *crowns*) occur in the Scriptures. 1. *Ataroth-beth-Joab*, in the tribe of Judah (1 Chron. ii. 54). 2. *Ataroth*, on the borders of Ephraim (Josh. xvi. 2, 7), which some identify with, and others distinguish from, the *Ataroth-Addar* of the same tribe mentioned in Josh. xvi. 5; xviii. 13. 3. *Ataroth*, in the tribe of Gad, beyond the Jordan (Num. xxxii. 3, 34). 4. *Ataroth-Shophan*, in the same tribe (Num. xxxii. 35), which some identify with the preceding; but it appears more likely that the addition was used to distinguish the one from the other. [ATROTH.] Eusebius and Jerome (*Onomasticon*, s. v. *Ataroth*, Ἀταρόθ) mention two places in the tribe of Benjamin called Ataroth; but they do not occur in Scripture. The site of one of these appears to have been discovered by Professor Robinson (*Bib. Researches*, ii. 314) under the name of *Atara*. Another place of the same name (*Atara*) he found about six miles N. by W. of Bethel, which appears to represent the Ataroth of Ephraim (Josh. xvi. 2, 7). It is now a large village on the summit of a high hill (Robinson, iii. 8).

ATBACH (אַטְבַּח) is not a real word, but a fictitious cabalistic term, denoting by its very letters the mode of changing one word into another by a peculiar commutation of letters. The system on which it is founded is this: as all the letters have a numerical value, they are divided into three classes, in the first of which every pair makes the number *ten*; in the second, a *hundred*; and in the third, a *thousand*.

Thus: בּח, גז, דו , אט, every pair making ten.
 כפ, לע, מם , יצ, ,, a hundred.
 קץ, רף, שז, תם , קץ, ,, a thousand.

Three letters only cannot enter into any of these numerical combinations, ה, ו, ז , and ך . The first two are nevertheless coupled together; and the last is suffered to stand without commutation.

The commutation then takes place between the two letters of every pair; and the term *Atbach* thus expresses that א is taken for ט, and ב for פ, and conversely. To illustrate its application, the obscure word מִנֹּן in Prov. xxix. 21, may be turned by Atbach into סְהוּרָה, *testimony*. Buxtorf, *De Abbreviaturis*, s. v.

ATHBASH (אַתְבַּשׁ) is a similar term for a somewhat different principle of commutation. In this, namely, the letters are also mutually interchanged by pairs; but every pair consists of a letter from each end of the alphabet, in regular succession. Thus, as the technical term Athbash shews, א and ת, and ב and שׁ, are interchangeable; and so on throughout the whole series. By writing the Hebrew alphabet twice in two parallel lines, but the second time in an inverse order, the two letters which form every pair will come to stand in a perpendicular line. This system is also remarkable on account of Jerome having so confidently applied it to the word *Sheshak*, in Jer. xxv. 26. His words are, 'Quomodo Babel intelligatur Sesach, non magnopere laborabit qui Hebrææ linguæ parvam saltem habuerit scientiam.' He then propounds the same system of commutation as that called Athbash (without giving it that name however, and without adducing any higher authority for assuming this mode of commutation, than the fact that it was customary to learn the Greek alphabet first straight through, and then, by way of ensuring accurate retention, to repeat it by taking a letter from each end, alternately), and makes ששׁ to be the same as בבל. (See Rosenmüller's *Scholæ*, ad loc.) Hottinger possessed an entire Pentateuch explained on the principle of Athbash (*Thesaur. Philol.* p. 450).

There is also another system of less note, called **ALBAM (אַלְבָּם)**, which is only a modification of the preceding. For in it the alphabet is divided into halves, and one portion placed over the other in the natural order, and the pairs are formed out of those letters which would then stand in a row together.

All these methods belong to that branch of the Cabbala which is called תְּמוּרָה, *commutation*.—J. N.

ATERGATIS (Ἀτεργάτης, or Ἀταργάτις) is the name of a Syrian goddess, whose temple (Ἀτεργατείον) is mentioned in 2 Macc. xii. 26. That temple appears, by comparing 1 Macc. v. 43, to have been situated at Ashteroth-Karnaim. Her worship also flourished at Mabûg (*i. e.*, Bambyce, afterwards called Hierapolis) according to Pliny (*Hist. Nat.* v. 19).

There is little doubt that Atergatis is the same divinity as Derketo. Besides internal evidences of identity, Strabo incidentally cites Ctesias to that effect (xvi. p. 1132); and Pliny uses the terms 'Prodigiosa Atergatis, Græcis autem Derceto dicta' (l. c.) We read that Derketo was worshipped in Phœnicia and at Ascalon under the form of a woman with a fish's tail, or with a woman's face only and the entire body of a fish; that fishes were sacred to her, and that the inhabitants abstained from eating them in honour of her. These facts are found in Lucian (*De Dea Syria*, xiv.), and together with a mythological account of their origin, in Diodorus (ii. 4). Further, by combining the passage in Diodorus with Herodotus

(i. 105), we may legitimately conclude that the Derketo of the former is the Venus Urania of the latter. Atergatis is thus a name under which they worshipped some modification of the same power which was adored under that of Ashtoreth. That the *'Ατεργατίου*, of 2 Macc. xii. 26 was at Ashteroth-Karnaim, shews also an immediate connection with Ashtoreth. Whether, like the latter, she bore any particular relation to the moon, or to the planet Venus, is not evident. Macrobius makes Adargatis to be the *earth* (which as a symbol is analogous to the *moon*), and says that her image was distinguished from that of the sun by rays 'sursum versum inclinatis, monstrando radiorum vi superne missorum enasci quæcunque terra progenerat' (*Saturnal.* i. 23). Creuzer maintains that those representations of this goddess which contain parts of a fish are the most ancient; and endeavours to reconcile Strabo's statement that the Syrian goddess of Hierapolis was Atergatis, with Lucian's express notice that the former was represented under the form of an entire woman, by distinguishing between the forms of different periods (*Symbolik*, ii. 68). This fish-form shews that Atergatis bears some relation, perhaps that of a female counterpart, to DAGON.

100.

No satisfactory etymology of the word has been discovered. That which assumes that Atergatis is *דג אדיר* *addir dag*, i. e., magnificent fish, which has often been adopted from the time of Selden down to the present day, cannot be taken exactly in that sense. The syntax of the language requires, as Michaelis has already objected to this etymology (*Orient. Biblioth.* vi. 97), that an adjective placed before its subject in this manner must be the *predicate* of a proposition. The words therefore would mean 'the fish is magnificent' (Ewald's *Hebr. Gram.* § 554). Michaelis himself, as he found that the Syriac name of some idol of Haran was *תרעתא*, which might mean *aperture*, asserts that that is the Syriac form of Derketo, and brings it into connection with the great *fissure* in the earth, mentioned in Lucian (l. c. xiii.), which swallowed up the waters of the flood (see his edition of Castell's *Lex. Syr.* p. 975). On the other hand, Gesenius (*Thesaur.* sub voce *דגן*) prefers considering Derketo to be the Syriac *דנתא*, for *דנתא fish*; and it is certain that such an intrusion of the Resh is not uncommon in Aramaic.—J. N.

ATHACH (עֲתָךְ). A town in Judah (1 Sam. xxx. 30), conjectured by Bonfrière (*Hieron. Onomast.* p. 28, note 6) to be the same as Ether (Josh. xix. 7). His only ground for this, however, is its being placed beside Ashan.—W. L. A.

ATHALIAH (עֲתַלְיָהוּ or עֲתַלְיָהוּ, whom *Jehovah* remembered; Sept. Γοθολια), daughter of Ahab, king of Israel, doubtless by his idolatrous wife Jezebel. She is also called the daughter of Omri (2 Chron. xxii. 2), who was the father of Ahab; but by a comparison of texts it would appear that

she is so called only as being his grand-daughter. Athaliah became the wife of Jehoram, the son of Jehoshaphat, king of Judah. This marriage may fairly be considered the act of the parents; and it is one of the few stains upon the character of the good Jehoshaphat that he was so ready, if not anxious, to connect himself with the idolatrous house of Ahab. Had he not married the heir of his crown to Athaliah, many evils and much bloodshed might have been spared to the royal family and to the kingdom. When Jehoram came to the crown, he, as might be expected, 'walked in the ways of the house of Ahab,' which the sacred writer obviously attributes to this marriage, by adding, 'for he had the daughter of Ahab to wife' (2 Chron. xxi. 6). This king died B.C. 885, and was succeeded by his youngest son Ahaziah, who reigned but one year, and whose death arose from his being, by blood and by circumstances, involved in the doom of Ahab's house. [AHAZIAH.] Before this Athaliah had acquired much influence in public affairs, and had used that influence for evil; and when the tidings of her son's untimely death reached Jerusalem, she resolved to seat herself upon the throne of David, at whatever cost. To this end she caused all the male branches of the royal family to be massacred (2 Kings xi. 1); and by thus shedding the blood of her own grandchildren, she undesignedly became the instrument of giving completion to the doom on her father's house, which Jehu had partially accomplished, B.C. 884. One infant son of Ahaziah, however, was saved by his aunt Jehosheba, wife of the high-priest Jehoiada, and was concealed, within the walls of the temple, and there brought up so secretly that his existence was unsuspected by Athaliah. But in the seventh year (B.C. 878) of her blood-stained and evil reign, the sounds of unwonted commotion and exulting shouts within the Temple courts drew her thither, where she beheld the young Joash standing as a crowned king by the pillar of inauguration, and acknowledged as sovereign by the acclamations of the assembled multitude. Her cries of 'Treason!' failed to excite any movement in her favour, and Jehoiada, the high-priest, who had organized this bold and successful attempt, without allowing time for pause, ordered the Levitical guards to remove her from the sacred precincts to instant death (2 Kings xi. ; 2 Chron. xxi. 6; xxii. 10-12; xxiii.)—J. K.

ATHANASIUS, surnamed the Great, was born at Alexandria about the year 296, and died in 373, after having exercised the office of bishop in his native city for 46 years. He was one of the greatest of the Fathers; but it was chiefly in the department of dogmatic and polemical theology that he exercised his great abilities. Among his writings, however, are one or two of an exegetical character, such as his *Liber ad Maxillimum de interpretatione Psalmorum*, and his *Synopsis totius Scripturæ*; and in his great controversial works the classical passages relating to the doctrines of the Trinity, the Incarnation and the Deity of Christ, are carefully expounded by him. He avoids, for the most part, the prevailing vice of his age in the matter of interpretation, that of allegorising, and seeks to elicit the actual and direct sense of the passage. Like all polemics, however, he is apt to suffer a doctrinal bias to sway his exegesis. His

collected works have appeared in several editions; that of Montfaucon (the Benedictine), 3 vols. fol., Paris, 1698, is the best.—W. L. A.

ATHARIM (אַתָּרִים, Ἀθαρείμ). In the A. V. this is taken as an appellation, and rendered 'the way of the spies' (Num. xxi. 1). The LXX. and the Arab., however, take it as a proper name. All the other versions agree with the A. V. Gesenius follows the LXX. (*Theo.* s. v.)—W. L. A.

ATHENS (Ἀθήναι). This celebrated city is mentioned in the N. T. in connection with a visit paid to it by St. Paul (Acts xvii. 15-34). It would be irrelevant to the design of this work to occupy space in detailing the history of Athens; it may suffice for the illustration of the sacred narrative to

glance at its claims as the seat of literature and philosophy.

From the earliest times the Ionians loved the lyre and the song, and the hymns of poets formed the staple of Athenian education. The constitution of Solon admitted and demanded in the people a great knowledge of law, with a large share in its daily administration. Thus the acuteness of the lawyer was grafted on the imagination of the poet. These are the two intellectual elements out of which Athenian wisdom was developed; but it was stimulated and enriched by extended political action and political experience. History and Philosophy, as the words are understood in modern Europe, had their birth in Athens about the time of the Peloponnesian war. There first, also the Oratory of the bar and of the popular assembly was systematically culti-

101. Athens.

vated, and the elements of mathematical science were admitted into the education of an accomplished man. This was the period of Plato, whose philosophy was destined to leave so deep an impress on the Jewish and Christian schools of Alexandria. Its great effort was to unite the contemplative mysticism of Eastern sages with the accurate science of Greece; to combine, in short, the two qualities—intellectual and moral, argumentative and spiritual—into a single harmonious whole; and whatever opinion may be formed of the success which attended the experiment, it is not wonderful that so magnificent an aim attracted the desires and riveted the attention of thoughtful and contemplative minds for ages afterwards.

In the imitative arts of Sculpture and Painting, as well as in Architecture, it need hardly be said that Athens carried off the palm in Greece; yet, in all these, the Asiatic colonies vied with her. Miletus took the start of her in literary composition; and, under slight conceivable changes, might have become the Athens of the world.

With the loss of civil liberty, Athens lost her

genius, her manly mind, and whatever remained of her virtue: she long continued to produce talents, which were too often made tools of iniquity, panders to power, and petty artificers of false philosophy.—(F. W. N. in former ed.)

St. Paul, on the occasion of his visiting Athens, preached the Gospel there for some time, disputing with the Jews in their synagogues, and with the multitude and the philosophers in the Agora. This led to his being carried to the Areopagus, (see the woodcut p. 206) where he delivered his memorable discourse to the 'men of Athens.' The character which he gives of them in this discourse as inquisitive and superstitious is fully corroborated by the ancient authorities (cf. *Demos. Phil.* i. 5; *Pausan.* i. 24, 3).

The result of Paul's labours in Athens was the founding of a Christian church there. Of this, however, we learn nothing more from the N. T. and very little from other sources. Tradition confers on Dionysius the Areopagite, who was converted by Paul's preaching, the title of first bishop of that church (*Euseb. Hist. Eccl.* iii. 4).

Quadratus, one of the earliest Christian Apologists was also one of its bishops (*Ibid.* iv. 23).

[ALTAR AT ATHENS; AREOPAGUS; DIONYSIUS THE AREOPAGITE.]

ATHIAS, JOSEPH, a Jewish printer and rabbi, who died at Amsterdam, the place of his residence, in 1700. He is chiefly celebrated for his edition of the Hebrew Bible issued under the editorial superintendence of Leusden in 1661, and in an improved edition in 1667. In preparing this work he was encouraged by all the scholars and leading persons in Amsterdam, and on its completion was rewarded not only by applause from the most competent judges, but with a gold chain and medal from the States-General of Holland, to whom he had dedicated it. Leusden boasts that this Bible is one 'quibus accuratorem et correctiorem numquam Sol aspexit.' This is probably true, but nevertheless the edition is not immaculate. Some of its defects were pointed out by Clodius in his edition, and still more fully by Jablonski in his (see Jablonski's *Bib. Heb.* Berol. 1669 Præfat.) The latter, however, admits that the edition of Athias 'omnibus, quæ eam præcesserunt, palmam præripere, merito censeri debeat.' Athias printed also a carefully revised edition of the *Biblia Hispanica*, corrected by Sam. De Cazeres, 8vo, Amst. 1661. He was succeeded in his business and in his zeal for Hebrew typography by his son Emmanuel, who issued a very beautiful edition of the Hebrew scriptures with Rashi's commentary in 4 vols. 18mo, Amst. 1700-1703.—W. L. A.

ATHIAS, SOLOMON, the son of Shem Tob, a native of Jerusalem, flourished in the early part of the sixteenth century. He wrote פרוש תהלים, a commentary on the Psalter, collected chiefly from Rashi, Kimchi, etc. It was printed with the text at Venice in 1549, fol.—W. L. A.

ATHON (אתון). This word is rendered she-ass in the A. V., but unsatisfactorily, unless we suppose it to refer to a breed of greater beauty and importance than the common, namely, the silver gray of Africa; which being large and indocile, the females were anciently selected in preference for riding, and on that account formed a valuable kind of property. From early ages a white breed of this race was reared at Zobeir, the ancient Basora, and capital of the Orcheni, from which place civil dignitaries still obtain their white asses and white mules. It is now the fashion, as it was during the Parthian empire, and probably in the time of the Judges, to dapple this breed with spots of orange or crimson or of both colours together; and we agree with the Editor of the *Pictorial Bible* (note on Judg. v. 10) that this is the meaning of the word צהר *Tzacher* (chequered?); an interpretation which is confirmed by the Babylonian Sanhedrim, who, in answer to King Sapor's offer of a horse to convey the Jewish Messiah, say: 'non est tibi equus centimaculus, qualis est ejus (Messiæ) asinus.' Horses and asses thus painted occur frequently in Oriental illuminated MSS., and although the taste may be puerile, we conceive that it is the record of remote conquest achieved by a nation of Central Asia mounted on spotted or clouded horses, and revived by the Parthians, who were similarly equipped. See *Introduction to Hist. of*

Horse and the Tangum Horse, Naturalist's Library, vol. xii. No other primeval invasion from the east by horsemen on Tzacher animals than that of the so-called Centaurs is recorded: their era coincides nearly with that of the Judges.—C. H. S.

ATONEMENT. This word appears in the A. V. of the Old Testament as the rendering of the Heb. כַּפּוּר, used only in the plural כַּפּוּרִים, and to 'make atonement,' as the rendering of כַּפֵּר, the *Piel* of the cognate verb כָּפַר. The primary meaning of this verb is to *cover*; and, as sin was covered or hid from the search of avenging justice when an expiation was made, the verb came to be used in this sense, and from it as so used came the noun. The verb is used also not only for the act of expiation (Exod. xxxii. 30; Lev. vi. 7, etc.), but also for the effect of that act, viz., the removal of guilt from the transgressor, and his consequent exemption from punishment, and also the placating or appeasing of the offended party. Thus it is enacted, Lev. i. 2-4, that when an offering is brought unto the Lord, the offerer shall 'put his hand upon the head of the burnt-offering, and it shall be accepted for him to make atonement for him,' where the idea of a transference of guilt from the offerer to his offering, and the removal of it from the former by the latter is clearly set forth, comp. Lev. iv. 20; v. 18; xvi. 6; Num. vi. 11, etc. (The prepositions used after the verb in these passages are not always the same; sometimes עַל, sometimes בְּעַד, but this does not affect the meaning.) When Jacob sent a present before him to his brother Esau, he said 'I will appease him (אֲכַפְּרֵהוּ פָּנָיו), lit. *I will cover his face*, so that he shall forgive my offence, *I will make atonement before him, I will placate him*, etc., Gen. xxxii. 21 (20). So in Prov. xvi. 14 we read, 'The wrath of a king is as messengers of death; but a wise man will pacify it.' (יִכְפְּרֵנָה.) In the New Testament the word atonement occurs only once, Rom. v. 11, as the rendering of καταλλαγή, which is elsewhere translated *reconciling* and *reconciliation*, and so it is given in the margin of the above passage. 'Atonement' is in this instance used in its primary etymological sense, equivalent to *at-one-ment*, a sense in which it occurs in Shakespeare, e.g.—'He seeks to make atonement between the Duke of Glo'ster and your brothers,' and in Spenser (*Faery Queen*, b. ii. cant. 2, 297) we have, 'So been they both atone,' etc. In a theological sense the word means the compensation rendered to the divine government by the death of Christ, as a sacrifice for men's sins. See Grotius, *De Satisfactione Christi*; Magee, *Discourses on Atonement and Sacrifices*, 3 vols.; Smith's *Four Discourses on Sacrifice*, etc.; Symington on the Atonement; Wardlaw, *Discourses on the Nature and Extent of the Atonement of Christ*; Candlish on the Atonement, Edin. 1860; Thomson, *Bampton Lecture* for 1853.—W. L. A.

ATONEMENT, DAY OF (יוֹם הַכַּפּוּרִים), LXX. ἡμέρα ἐξίλασμοῦ, Talm. יוֹמָא, THE DAY), a great religious festival of the Jews, of which the rule and order are given, Lev. xvi. 1-34; xxxiii. 26-32; Num. xxix. 7-11. It was observed on the tenth day of the seventh month (Tisri), and was held as a day of entire rest from all labour (שַׁבַּת שַׁבְּתוֹן, a sabbath of sabbaths), a day of holy convocation

מקרא קדש), the only day in the year when the entire congregation of Israel fasted (ענה נפש). The fast commenced at sunset on the previous evening, and lasted for twenty-four hours, and was imperative on every member of the community, under pain of being cut off from his people in case of neglect.

The service of the day was conducted by the high-priest. Having provided a young bullock for a sin-offering, and a ram for a burnt-offering, he had first to bathe himself, for the purpose of purification, and then to clothe himself in white linen, without any of his usual splendour of attire, that his appearance might be expressive at once of purity and humiliation. Having taken of the congregation two goats as a sin-offering and a ram as a burnt-offering, and having presented the goats before the Lord at the door of the Tabernacle, he cast lots upon them, one for Jehovah, the other for Azazel. Great difference of opinion exists as to the signification of this word. The more important views may be presented thus:—A. *That Azazel denotes a Person*—1. The devil (Origen, Spencer, Hengstenberg, etc.); 2. An evil demon (Gesenius, Ewald, Rosenmüller, De Wette, Knobel, and many of the Rabbins). B. *That Azazel denotes a Place*—1. A certain place in the wilderness (Vatablus, Deyling, Kimchi, Abenesra, etc.); 2. Any lonely, desolate place (Bochart, Carpzov); 3. A mountain ('Mount Azaz,' Arab. Vers.; some Rabbins, Le Clerc). C. *That Azazel is the goat itself*—LXX. ἀποπομπῆς, Lev. xvi. 8, 9 (but see Bochart, *Hier.* c. 54, and Suicer, *Theo. s. v.* on this word); Symm. πρῶτος ἀπερχόμενος, Aq. πρ. ἀπολύόμενος, Theodotion πρ. ἀφιέμενος, Vulg. caper emissarius, Eng. *V. scapegoat*, Luther *der ledige bock*, etc.) D. *That Azazel is an abstract term*, denoting—1. A free going away (Michaelis, Jahn); or 2. An entire and utter removal (Tholuck, Winer, Bähr, etc.) The LXX. seem to have some such meaning in view when they rendered the word by ἀποπομπή, Lev. xvi. 10, and ἀφesis, ver. 26. Of these meanings, the last seems the preferable. The first class is exposed to the objection that it supposes Satan, or an evil demon, set over against Jehovah, and equally entitled with him to receive an offering for sin; a notion utterly repugnant to all Jewish belief and thinking. The rendering 'wilderness' is excluded by the statement in Lev. xvi. 10, that the goat was to be sent to Azazel in the wilderness, which shews that Azazel is not the wilderness itself; and the supposition that some definite place is intended labours under the objection that no such place as Azazel is elsewhere mentioned, and had it been a mountain the addition of הר would not have been omitted. The third class is inconsistent with the express statement of Moses, that the goat was to be sent to Azazel. The only objection that has been offered to the opinion last mentioned is, that it destroys the exact antithesis between Jehovah and Azazel, by making the latter a thing and not a person, like the former. But this assumes that it was the design of Moses, in expressing himself thus, to preserve an exact antithesis, which is by no means evident. If we render 'the one for Jehovah and the other for an utter removal,' a meaning sufficiently clear and good is obtained. It only remains to add, that עֲזָאזֵל is regarded by those who take this view as the Pealpal form of the verb עָזַל, *removit*, with the

omission of the ל of the penult, and the supplying of its place by an immutable vowel, as in הַזְעִיר for הַזְעִיר. This form is intensive. (See Spencer, *De Legibus Hebr. Ritual*, iii. 8; Gesenius, *Theo. s. v.*; Bähr, *Mos. Cultus*, ii. 665; Hengstenberg, *Die Bücher Moses und Egyptus* [GOAT, SCAPE]; Tholuck, *Das A. T. im N. T.* p. 79; Thomson, *Bampton Lect.* p. 72.)

These preliminaries having been settled, the high-priest proceeded to offer the victims. First of all, he took a censer full of coals from off the altar, and entered with it into the most holy place, where he put the incense on the coals, and placed it so that the smoke might envelope the capporeth or mercy seat. He then proceeded to offer the bullock of the sin-offering for himself and his house, and, taking of its blood, he entered therewith again into the most holy place, and sprinkled the blood with his finger once upon and seven times before the capporeth. He then went out and slew the goat on which the lot for Jehovah had fallen, and carried off its blood also into the most holy place, and did with it as with the blood of the bullock. Thus atonement was made for himself, his house, and all the congregation of Israel. This done, he took of the blood of the bullock and of the goat and put it on the horns of the altar, and sprinkled of the blood upon it seven times to cleanse and sanctify it, so as that none of the uncleanness arising from the sins of the worshippers might adhere to it. The live goat was then brought forth, and the high-priest having confessed over its head the sins and iniquities of Israel, thereby putting them on the head of the goat, the animal was sent away by the hand of a trustworthy person into the wilderness. The high-priest then took off the dress in which he had performed these rites and left it in the tabernacle of the congregation; bathed himself in the holy place; put on his usual attire; and offered the rams of the burnt-offering for himself and the people. Neither the bullock nor the goat was eaten, but after the fat had been burnt on the altar the remainder was carried beyond the camp and consumed by fire. The man who conveyed the goat into the wilderness and the man who burnt the carcasses of the bullock and the goat, had to wash their clothes and bathe themselves before they could return to the camp. This finished the services of the day.

It has been asked, How often did the high-priest go into the most holy place during the performance of this service? Jewish tradition replies four times; and this is probably correct. The text of Moses expressly states that he went in twice (comp. ver. 14 and 15); and as he could not well carry the censer, and the incense, and the blood within the veil at once, it is probable that he first took in the censer and then came out for the blood. This makes three entrances; and as it is probable that he went in after he had sprinkled the blood upon the altar for the purpose of removing the censer, this would make up the number of four. The statement of the Apostle, Heb. ix. 7, may be easily reconciled with this by understanding the ἅπασι there of the one entrance in the year not of only one in the day; just as the many acts of the day might be spoken of as one service.

'The name of this festival,' says Bähr 'יוֹם הַכִּפּוּרִים' intimates its general significance; the entire festival

had singly and alone expiation for its design, and that in the most extended sense, *universal, all-embracing expiation.*' Along with this it was a day of perfect rest—a sabbath of sabbaths; so that the two ideas of full expiation and perfect rest were thus combined. It was, moreover, a day of *fasting*, not as a sign of grief, but simply as expressive of humiliation before God as the proper state of those who appeared before him to confess their sins and offer atonement for them. With this, the general idea of the day, all the acts of the priest concurred; his slaying of the victims as emblematical of the death penalty which sin entails; his entering the holiest of all with blood, and his sprinkling of it upon and before the caphoreth, as betokening the need of a mediator to go for the sinful people into the presence of God, and the need of that mediator's coming with sacrificial blood to his being accepted on behalf of sinners; and his sending away the live goat, after atonement had been made for sin, with the sins that had been expiated on its head, into utter and perpetual banishment, as intimating that sin atoned for was sin utterly taken away, so that when sought for it could not be found. In all these there were presented, in lively symbol, the great truths of a redemptory system by means of propitiation. There was here also a typical foreshadowing of the great truth of Christianity—redemption through the expiatory sufferings and vicarious intercession of the Lord Jesus Christ, who hath taken away sins by the sacrifice of Himself, who hath entered into the heavenly temple with atoning blood, and who appeareth in the presence of God for us. (See, besides the works already referred to, Lightfoot, *Temple Service*, ch. 15; Magee, *Discourses and Dissertations on Atonement and Sacrifices*, 3 vols.; J. Pye Smith, *Four Discourses on the Sacrifice and Priesthood of Christ*, etc., 2d. ed. 1842; Chevallier, *Hulsean Lecture for 1826*, pt. iii.; Litton, *Bampton Lecture for 1856*, lects. 3 and 4; Russell, *On the Old and New Covenants*, ch. iii.; Alexander, *Congregational Lecture for 1840*, lect. viii.; Kurz, *Das Mos. Opfer*; Fairbairn, *Scripture Typology*, vol. ii. For the Rabbinical account of the service as performed in the second Temple, see the treatise entitled *Yoma* in the Mishna, and for the ceremonies observed by the later Jews, etc., B. Picard, *Ceremonies et Coutumes Religieuses*, etc., i. c. 6, p. 18, and Buxtorf, *Synagoga Judaica*, c. xx.)—W. L. A.

ATROTH (עֲטֹרֶת), a city built by the children of Gad (Num. xxxii. 35). This name is omitted

by the LXX. ; and doubtless it is to be regarded as only part of the name, of which Shophan, which follows, is the other part, the city being called Atroth-Shophan, to distinguish it from the Atroth mentioned in the preceding verse. The Vulgate gives the two as distinct names, *Etroth et Sophan*, in which it is followed by Luther and the Eng. A. V. ; but the Targum of Onkelos, the Samar. and Syr. of the Polyglot, unite the two. So Diodati, Dutch Vers., Zuz, and most recent translators and exegetes.—W. L. A.

ATTALIA (Ἀττάλεια), a maritime city of Pamphylia, in Asia Minor, near the mouth of the river Catarrhaetes. It derived its name from its founder, Attalus Philadelphus, king of Pergamos (Strabo, xiv. p. 667). It was visited by Paul and Barnabas, A.D. 45 (Acts xiv. 25). It still exists under the name of Adalia, the ruins of which attest its former consequence (Leake's *Asia Minor*, p. 193; Forbes and Spratt's *Lycia*).—J. K.

ATTALUS (1 Macc. xv. 22), a king of Pergamos, about B.C. 139. It is not certain whether this was Attalus II., who, according to Strabo (xiii. 624), enjoyed the title of *Amicus Pop. Rom.*; or Attalus III., his nephew and successor.

ATTERSOL, WILLIAM. A clergyman of the Church of England, who was ejected, in 1662, from the living of East Hoodley, in Sussex. He laboured as a non-conformist minister afterwards at Isfield, in the same county. He was the author of a *Commentary on Philemon*, Lond. 1612, and a *Commentary on Numbers*, Lond. 1618. These commentaries are of a practical character, and are homiletical rather than exegetical. He published also a work on the sacraments, entitled *The New Covenant*, Lond. 1614, and *three Treatises on Luke* xiii. 1; xii. 1; *Jonah* iii. 4.—W. L. A.

ATTITUDES. The usages of the Hebrews in respect to attitudes were very nearly, if not altogether, the same as those which are still practised in the East, and which the paintings and sculptures of Egypt shew to have been of old employed in that country. These sources supply ample materials for illustration, which it may be well to arrange under those heads into which such acts naturally divide themselves.

ADORATION AND HOMAGE.—The Moslems in their prayers throw themselves successively, and according to an established routine, into the various postures (nine in number) which they deem the

102.

most appropriate to the several parts of the service. For the sake of reference and comparison, we have introduced them all above; as we have no doubt that the Hebrews employed on one occasion or another nearly all the various postures which the

Moslems exhibit on one occasion. This is the chief difference. In public and common worship the Hebrews prayed *standing* (1 Kings viii. 54; Ezra ix. 5; Dan. vi. 10; 2 Chron. vi. 13; but in their separate and private acts of worship they

assumed the position which, according to their modes of doing homage or shewing respect, seemed to them the most suitable to their present feelings or objects. It would appear, however, that some form of kneeling was most usual in private devotions.

STANDING in public prayer is still the practice of the Jews. This posture was adopted from the synagogue by the primitive Christians; and is still maintained by the Oriental churches. This appears, from their monuments, to have been the custom also among the ancient Persians and Egyptians, although the latter certainly sometimes kneeled before their gods. In the Moslem worship, four of the nine positions (1, 2, 4, 8) are standing ones; and that posture which is repeated in three out of these four (2, 4, 8), may be pointed out as the proper Oriental posture of reverential standing, with folded hands. It is the posture in which people stand before kings and great men.

While in this attitude of worship, the hands were sometimes stretched forth towards heaven in supplication or invocation (1 Kings viii. 22; 2 Chron. vi. 12, 29; Is. i. 15). This was perhaps not so much the conventional posture (1) in the Moslem series, as the more natural posture of standing adoration with outspread hands, which we observe on the Egyptian monuments. The uplifting of

103.

one hand (the right) only in taking an oath was so common, that to say, 'I have lifted up my hand,' was equivalent to 'I have sworn' (Gen. xiv. 22; comp. xii. 44; Deut. xxxii. 40). This posture

104.

was also common among other ancient nations; and we find examples of it in the sculptures of Persia (fig. 1) and Rome (fig. 2).

KNEELING is very often described as a posture of worship (1 Kings viii. 54; Ezra ix. 5; Dan. vi. 10; 2 Chron. vi. 13; comp. 1 Kings xix. 18; Luke xxii. 41; Acts vii. 60). This is still an Oriental custom, and three forms of it occur (5, 6, 9) in the Moslem devotions. It was also in use, although not very frequent, among the ancient Egyptians; who likewise, as well as the Hebrews (Exod. xxxiv. 8; 2 Chron. xxix. 29; Is. i. 15), sometimes prostrated themselves upon the ground. The usual mode of prostration among the Hebrews

by which they expressed the most intense humiliation, was by bringing not only the body but the head to the ground. The ordinary mode of pro-

105.

stration at the present time, and probably anciently, is that shewn in one of the postures of Moslem worship (5), in which the body is not thrown flat upon the ground, but rests upon the knees, arms, and head. In order to express devotion, sorrow,

106.

compunction or humiliation, the Israelites threw dust upon their heads (Josh. vii. 6; Job. ii. 12; Lam. ii. 10; Ezek. xxiv. 7; Rev. xviii. 19), as was done also by the ancient Egyptians, and is still done by the modern Orientals. Under similar circumstances it was usual to smite the breast (Luke xviii. 13). This was also a practice among the Egyptians (Herod. ii. 85), and the monuments at

107.

Thebes exhibit persons engaged in this act while they kneel upon one knee.

In 1 Chron. xvii. 16 we are told that 'David the king came and sat before the Lord,' and in that posture gave utterance to eloquent prayer, or rather thanksgiving, which the sequel of the chapter contains. Those unacquainted with Eastern

108.

manners are surprised at this. But there is a mode of sitting in the East which is highly respectful and

even reverential. It is that which occurs in the Moslem forms of worship (9). The person first kneels, and then sits back upon his heels. Attention is also paid to the position of the hands, which they cross, fold, or hide in the opposite sleeves. The variety of this formal sitting which the foregoing figure represents is highly respectful. The prophet Elijah must have been in this or some other similar posture when he inclined himself so much forward in prayer that his head almost touched his knees (1 Kings xviii. 42).

SUPPLICATION, when addressed externally to man, cannot possibly be exhibited in any other forms than those which are used in supplication to God. Uplifted hands, kneeling, prostration, are common to both. On the Egyptian monuments,

109.

suppliant captives, of different nations, are represented as kneeling or standing with outspread hands. This also occurs in the sculptures of ancient Persia (Persepolis). The first of the Egyptian figures is of peculiar interest, as representing an inhabitant of Lebanon. *Prostration, or falling at the feet* of a person, is often mentioned in Scripture as an act of supplication or of reverence, or of both (1 Sam. xxv. 24; 2 Kings iv. 37; Esth. viii. 3; Matt. xviii. 29; xxviii. 9; Mark v. 22; Luke viii. 41; John xi. 32; Acts x. 25). In the instance last referred to, where Cornelius threw himself at the feet of Peter, it may be asked why the apostle forbade an act which was not unusual among his own people, alleging as the reason—"I myself also am a man." The answer is, that among the Romans, prostration was *exclusively* an act of adoration, rendered only to the gods, and therefore it had in him a significance which it would not have had in an Oriental (Kuinoel, *ad Act.* x. 26). This custom is still very general among the Orientals; but, as an act of reverence merely, it is seldom shewn except to kings: as expressive of alarm or supplication, it is more frequent.

Sometimes in this posture, or with the knees bent, as before indicated, the Orientals bring their forehead to the ground, and before resuming an

110.

erect position either kiss the earth, or the feet, or border of the garment of the king or prince before whom they are allowed to appear. There is no

doubt that a similar practice existed among the Jews; especially when we refer to the original words which describe the acts and attitudes of salutation, as *נפל ארצה* to bend down to the earth, *השתחוה ארצה* to fall prostrate on the earth, and *כרע אפים ארצה* to fall with the face to the earth, and connect them with allusions to the act of kissing the feet, or the hem of the garment (Matt. ix. 20; Luke vii. 38, 45). *Kissing the hand* of another as a mark of affectionate respect, we do not remember as distinctly mentioned in Scripture.

111.

But as the Jews had the other forms of Oriental salutation, we may conclude that they had this also, although it does not happen to have been specially noticed. It is observed by servants or pupils to masters, by the wife to her husband, and by children to their father, and sometimes their mother. It is also an act of homage paid to the aged by the young, or to learned and religious men by the less instructed or less devout. Kissing one's own hand is mentioned as early as the time of Job (xxx. 27), as an act of homage to the heavenly bodies. It was properly a salutation, and as such an act of adoration to them. The Romans in like manner kissed their hands as they passed the temples or statues of their gods. [On the ground that *adoration* is derived from *ad* and *os*, it has been maintained that the kissing of the hand to the Deity was not only the primary but the only genuine species of adoration. But this etymology of the word is at best very dubious (Döderlein, *Lat. Syn.* ii. 188), and it is certain that this was only one mode amongst several of expressing by outward gesture reverence to the object of worship. We read in Scripture, besides, of *kneeling*, of *bending the body*, of *prostration on the ground*, as acts of adoration and worship (comp. Gen. xvii. 17; xxv. 26; Ex. xxxiv. 8; 2 Kings xviii. 42; 2 Chron. vi. 13; Job i. 20; Ps. xcvi. 6; Matt. xxvi. 39; xvii. 14, etc.). The last of these (*השתחויה*, *προσκύνησις*) was used especially when any favour was implored, but it was not confined to this, nor was it used exclusively as an act of homage to the Divine Being. It was sometimes accompanied with a kiss (Ex. xviii. 7), and in cases of earnest entreaty by laying hold of the knees of the party addressed (Matt. xxviii. 9; comp. Hom. *Il.* i. 427). The most remarkable form of adoration, however, was that performed by the kissing of the hand. That this was in use from very ancient times is evident from Job xxxi. 26, 27; and that it prevailed as a common custom with the heathen is attested by Minucius Felix (*Ut vulgus superstitiosus solet manum ori admovens, osculum labiis pressit: Octav.* c. 2, ap. fin.), and by Pliny (*In adorando dexteram ad osculum referimus: N. H.* xxviii. 2, ed. Lugd. 1563). This act is best de-

scribed as a holding of the hand before or upon the mouth, the design of which is said originally to have been to prevent the breath from reaching the superior, but which came ultimately to indicate simply the highest degree of reverence or submission (comp. Judg. xviii. 19; Job xxi. 5; xxix. 9; xl. 4; Is. lii. 15). Comp. Brissonius, ii. *De formul.* p. 840.] The same is exhibited on the monuments of Persia and of Egypt. In one of the sculptures at Persepolis a king is seated on his throne, and before him a person standing in a bent posture, with his hand laid upon his mouth as he

112.

addresses the sovereign (fig. 1). Exactly the same attitude is observed in the sculptures at Thebes, where one person, among several (in various postures of respect) who appear before the scribes to be registered, has his hand placed thus submissively upon his mouth (fig. 2).

It appears from I Sam. x. 1, I Kings xix. 18, Ps. ii. 12, that there was a peculiar kiss of homage, the character of which is not indicated. It was probably that kiss upon the forehead expressive of high respect which was formerly, if not now, in use among the Bedouins (*Antar.* ii. 119).

BOWING.—In the Scriptures there are different words descriptive of various postures of respectful bowing; as קרר to incline or bow down the head, כרע to bend down the body very low, בך to bend the knee, also to bless. These terms indicate a conformity with the existing usages of the East, in which the modes of bowing are equally diversified, and, in all likelihood, the same. These are—
2. placing the right hand upon the breast, with or without an inclination of the head or of the body;

113.

1. touching the lips (is this the kissing of the hand noticed above?) and the forehead with the right hand, with or without an inclination of the head or of the body, and with or without previously touching the ground; 3. bending the body very low, with folded arms; 4. bending the body and resting the hands on the knees: this is one of the postures of prayer, and is indicative of the highest respect in the presence of kings and princes. In the Egyptian paintings we see persons drop their arms towards the ground while bowing to a superior, or standing respectfully with the right hand resting on the left shoulder.

It is observable that, as before noticed, the word בך, *barak*, means to bless and to bend the knee, which suggests the idea that it was usual for a person to receive a blessing in a kneeling posture.

114.

We know also that the person who gave the blessing laid his hands upon the head of the person blessed (Gen. xlviii. 14). This is exactly the case at the present day in the East, and a picture of the existing custom would furnish a perfect illustration of the patriarchal form of blessing. This may be perceived from the annexed engraving, which, with some of the other attitudes given in

115.

this article, is from Lane's *Translation of the Arabian Nights Entertainments*—a work which, in its notes and pictorial illustrations, affords a more complete picture of the persons, manners, and habits of the people of south-western Asia and of Egypt, than all the books of travels put together.—J. K.

ATTUDIM (עתודים, from sing. עתוד), used only in the plural, as a designation of animals of the goat species. In the A. V. it is translated sometimes 'rams' (Gen. xxxi. 10, 12), sometimes 'he goats' (Num. vii. 17; Ps. l. 9), and sometimes simply 'goats' (Ps. l. 13; Prov. xxvii. 26). The singular occurs frequently in Arabic عتد, and is defined in the *Camoos* as a young goat of a year old (Bochart, *Hieroz.* bk. ii. ch. 53, p. 646, where other authorities are adduced). The name is derived from עתר, to set, place, prepare; and hence Bochart infers it describes the animal as fully grown, and so prepared for all its functions and uses; while others think no more is implied by the name than that this animal was strong and vigorous. The attudim were used in sacrifice (Ps. lxxvi. 15), and formed an article of commerce (Ezek. xxvii. 21; Prov. xxvii. 26). In Jer. l. 8, the word is employed for the leaders of a flock; and in Is. xiv. 9, and Zech. x. 3, it is used metaphorically for princes or chiefs.—W. L. A.

AUGUSTI, GEO. CHRIST. WIL., D.D., was born at Eschenberga, in the duchy of Gotha, 27th Oct. 1771, and died at Coblenz 28th April 1841. He was successively professor of philosophy, of

Oriental languages, and of theology at Jena; of theology at Breslau, and of the same at Bonn. His works are numerous, and belong to all departments of sacred science. In that of Biblical literature, he wrote *Grundriss einer Histor. Krit. Einleitung ins A. T.*, Leipz. 1806, 1827; *Versuch einer histor. dogmat. Einleit. in die Heilige Schrift*, Leipz. 1832; *Die Kathol. Briefe neu übersetzt und erklärt*, 2 vols., Lemgo 1803-8; besides many articles in journals. He was the colleague of De Wette in the first edition of the German translation of the Bible, which in later editions bears De Wette's name alone; and of Höpfner, in the first three numbers of the *Exeget. Handbuch*, ed. A. T., Leipz. 1797-1800. He also edited the *Libri Apocryphi, V. T.*, with various lectures, Lips. 1804. His writings are distinguished by learning, clearness of discrimination, and sound sense. In the beginning of his career he was a neologist, but as he advanced in life he became much more evangelical both in his sentiments and in the tone of his writings. The difference between his *Grundriss* and his *Versuch* in this respect is very marked. Among his other works, his *Denkwürdigkeiten aus d. Christl. Archäologie*, 12 vols., Leipz. 1817-31, issued in an abridged form in 3 vols. Leipz. 1836, is the most remarkable.—W. L. A.

AUGUSTINUS, AURELIUS, a native of Tagaste, a town of Numidia, was born 15th Nov. 354, and died at Hippo, of which he was bishop, on the 28th of August 430. The writings of this great thinker are very numerous; they are chiefly devoted to theological and philosophical investigations; but he wrote also largely in exposition of Scripture. There are extant from his pen, besides three treatises on Genesis and some minor expositions, the following works, which are more or less exegetical in their character—*Questiones in Pentateuchum; Quæst. Evangelica; De Consensu Evangeliorum; Expositio inchoata in Ep. ad Romanos; Expos. quarundem propositionum in Ep. ad Rom.; Expos. Ep. ad Galatas; Annotationes in Jobum; In Evangel. Joannis Tractatus; In Ep. I. Joan. Tractatus; Enarrationes in Psalmos*. Many of his *Sermons* are also of an expository character. Augustine was more successful in laying down hermeneutical principles than in applying them. The rules he has given in his tract, *De Doctrina Christiana*, for the exposition of Scripture, are marked by all the sagacity and comprehensiveness of his mind (see Clausen, *Hermeneutik*, pp. 162-5; Davidson, *Hermeneutics*, p. 133); but in the specimens of his expositions which are extant, he has widely departed from his own canons. He indulges to a large extent in allegorical interpretations, especially in his treatment of the Old Testament; the reason of which may be that assigned by Sixtus Senensis—'Cum Hebraici sermonis ignarus esset et in Græcis literis parum instructus, necesse illi fuit a propriæ literæ sensu ad extortas allegorias discedere' (*Bibl.*, bk. iv. p. 212). Notwithstanding many deficiencies, however, his expositions will ever possess an interest and a value to the student of Scripture, for they are everywhere imbued with the deep thoughtfulness and rich experimental earnestness of the author, whilst in many cases one is constrained to feel that the close sympathy between the mind of the expositor and the mind that was breathed into the sacred words, has enabled him to bring out

more truly and fully the truths taught than any process of mere philological investigation could have done (see Clausen, *Aurel. Augustinus Hippo. Sac. Script. Interpres*, Havniæ, 1827). Of his collected works, the best editions are that of the Benedictines, Paris, 1679-1700, 8 vols. fol.; and that issued at Antwerp in 1700-1703, in 12 vols. fol.—W. L. A.

AUGUSTUS (*Venerable*), the title assumed by C. Octavius, who, after his adoption by Julius Cæsar, took the name of C. Julius Cæsar Octavianus, and was the first peaceably acknowledged emperor of Rome. He was emperor at the birth and during half the lifetime of our Lord; but his name has no connection with Scriptural events [except as it was he who confirmed Herod in his power], and occurs only once (Luke ii. 1) in the New Testament. The successors of the first Augustus took the same name or title, but it is seldom applied to them by the Latin writers. In the eastern part of the empire the Greek *Σεβαστός* (which is equivalent) seems to have been more common, and hence is used of Nero (Acts xxv. 21).—J. K.

AUGUSTUS' BAND (Acts xxvii. 1), probably one of the cohorts stationed at Cæsarea which formed a body-guard to the emperor, and was employed, as in this instance, on service especially relating to him (see Meyer *in loc.*)—W. L. A.

AURANITIS. [HAURAN.]

AURIVILLIUS, KARL, professor of oriental languages at Upsala, was born at Stockholm in 1717, and died 19th Jan. 1786. He published several dissertations on subjects connected with biblical and Oriental literature, of which thirty were collected by J. D. Michaelis, and issued under the title, *Car. Aurivillii Dissertationes ad sacras literas et philologiam orientalem pertinentes*, Gött. et Lips., 1790. These dissertations are of standard value; they bear marks of profound scholarship and most judicious thinking on every page. Aurivillius was employed by Gustavus III. to translate the Scriptures into the Swedish; but he had only proceeded a little way in this work when he was cut off.—W. L. A.

AUTENRIETH, IN. HEN. FRED. VON, M.D., was born at Stuttgart, 20th Oct. 1772, and died 2d May 1835, at Tübingen, where he was professor of Medicine. He was the author of a treatise, *Ueber das Buch Hiob.*, Tüb. 1823, and of an essay, *Ueber den Ursprung der Beschnidung bei wilden und halbwildern Völkern mit beziehung auf die Besch. d. Israeliten*, Tüb. 1829.—W. L. A.

AVA (אָוָא; Sept. 'Αἶά, 2 Kings xvii. 24), also IVAH (יְהוָה; Sept. 'Αβὰ, 2 Kings xviii. 34; xix. 13; Is. xxxvii. 13), the capital of a small monarchical state conquered by the Assyrians, and from which king Salmanser sent colonies into Samaria. Some take it for the river, or rather the town which gave name to the river Avaha of Ezra viii. 21 (Bellerman, *Handbuch*, iii. 374). Iken (*Dissert. Philol. Theolog.* p. 152) would identify it with the Phœnician town Avatha, mentioned in the *Notitia Vet. Dignitatum Imper. Rom.* (but the reading here is rather doubtful: Reland, *Palaest.* p. 232, sqq.); or with the town of Abeje, between Beirut and Sidon, which Paul Lucas mentioned as

the seat of a Druse prince. But these are mere conjectures. Michaelis derives the name from

حوي or حوي, latrare, and supposes it to be the land of the Avites between Tripoli and Beirut, because they are described as worshippers of נבחז *Nibhas* (2 Kings xvii. 31), an idol which he compares with the great stone dog that formerly stood in that quarter, on which account the Lycus obtained its name of Nahr-el-Kelb, Dog-river (comp. Mannert, vi. i. 380). It is most probable, however, that Ava was a Syrian or Mesopotamian town, of which no trace can now be found either in the ancient writers or in the Oriental topographers.—J. K.

AVEN (אָוֶן; Sept. ὠν). This word occurs Amos i. 5 as the name of a plain (בִּקְעָה) near Damascus. It is probably that lying between the ridges of Lebanon and Anti-Lebanon, called (Josh. xi. 17) 'the valley of Lebanon,' and which still bears the name of El-Bukā'a. Here was Baalbek, the Syrian Heliopolis [BAALGAD], and this may have led to the application to this district of the term *Aven*, which means 'nothingness, emptiness,' and is used of idols (Is. lxvi. 3). The LXX. *Oz* refers it directly to Heliopolis, that being the designation of the Egyptian city of this name. In Ez. xxx. 17 they give Ἡλιόπολις. In these passages there is a play on the word for the purpose of expressing contempt for the idolatry which, in the estimation of the heathen, gave that city its fame. [BETHAVEN].—W. L. A.

AVIM, AVITES (עֵיִם; Sept. Εὐαῖοι). [This word has three distinct applications in the O. T. It is—1. a Gentile name, from אַוִּים, and designates the inhabitants of that city, 2 Kings xvii. 31 [AVA]; 2. the name of a town in Benjamin (Ruins-town), Josh. xviii. 23; the designation of] a people who originally occupied the southernmost portion of that territory in Palestine along the Mediterranean coast, which the Caphtorim or Philistines afterwards possessed (Deut. ii. 23). As the territory of the Avim is mentioned in Josh. xiii. 3, in addition to the five Philistine states, it would appear that it was not included in theirs, and that the expulsion of the Avim was by a Philistine invasion prior to that by which the five principalities were founded. The territory began at Gaza, and extended southward to 'the river of Egypt' (Deut. ii. 23), forming what was the sole Philistine kingdom of Gerar in the time of Abraham. The original country of the Avim is called Hazerim in Deut. ii. 23. [GERAR; PHILISTINES.] [These Avim have been identified with the Hivites; but, 1. the words עֵיִם and חוּי are radically distinct; 2. the district belonging to the Hivites is different from that of the Avites. [HIVITES.] From the etymology of the word, the Avim are supposed to have been dwellers in ruins. 'To what an antiquity,' exclaims Mr. Stanley, 'does this carry us back!—ruins before the days of those who preceded the Philistines?' *Sin. and Palest.* p. 119.]

AVITH (עֵוִית, Sept. Γεσθαμι), a town of Idumea, the seat of Hadad, the son of Bedad (Gen. xxxvi. 35; 1 Chron. i. 46). In the latter passage the textual reading is עֵוִיתָ, but this evident mistake is corrected in the K'ri, which is followed by the

A. V. Knobel (Genesis *in loc.*) suggests that the name Avith survives in *Ghoweythe*, a range of hills on the east side of the Moabites (Burckhardt's *Syr.* p. 375).—W. L. A.

AWL (מַרְצֵעַ; Sept. ἀπήριον). The Hebrew word, which denotes an awl or other instrument for boring a small hole, occurs in Exod. xxi. 6; Deut. xv. 17. Considering that the Israelites had at that time recently withdrawn from their long sojourn in Egypt, there can be no doubt that the instruments were the same as those of that country, the forms of which, from actual specimens in the British Museum, are shewn in the annexed cut. They are such as were used by the sandal-makers and other workers in leather.—J. K.

116.

AXE. Several instruments of this description are so discriminated in Scripture as to shew that the Hebrews had them of different forms and for various uses. 1. גַּרְזֵן *garzen*, which occurs in Deut. xix. 5; xx. 19; 1 Kings vi. 7; Is. x. 15. From

117.

these passages it appears that this kind was employed in felling trees, and in hewing large timber for building. The conjecture of Gesenius that, in 1 Kings vi. 7, it denotes the axe of a stonemason is by no means conclusive. The first text supposes a case of the head slipping from the helve in felling a tree. This would suggest that it was shaped like fig. 3, which is just the same instrument as our common hatchet, and appears to have been applied by the ancient Egyptians to the same general use as with us. The reader will observe the contrivance in all the others (wanting in this) of fastening the head to the haft by thongs. 2. מַעְצָר *maatzar*,

which occurs only in Is. xliv. 12; and Jer. x. 3. From these passages it appears to have been a lighter implement than the former, or a kind of adze, used for fashioning or carving wood into shape; it was, probably, therefore, like figs. 4 to 7, which the Egyptians employed for this purpose. Some texts of Scripture represent axes as being employed in carving images—the use to which the prophets refer. The differences of form and size, as indicated in the figures, appear to have been determined with reference to light or heavy work: fig. 5 is a finer carving-tool. 3. קרדם *quardom*; this is the commonest name for an axe or hatchet. It is this of which we read in Judg. ix. 48; Ps. lxxiv. 5; 1 Sam. xiii. 20, 21; Jer. xlvi. 22. It appears to have been more exclusively employed than the *garzen* for felling trees, and had therefore probably a heavier head. In one of the Egyptian sculptures the inhabitants of Lebanon are represented as felling pine-trees with axes like fig. 1. As the one used by the Egyptians for the same purpose was also of this shape, there is little doubt that it was also in use among the Hebrews. [4.

ברזל *barzel*, literally 'iron' 2 Kings vi. 5], but as an axe is certainly intended, the passage is valuable as shewing that some axe-heads among the Hebrews were of iron. Those which have been found in Egypt are of bronze, which was very anciently and generally used for the purpose.—J. K.

AYARIM (עֵירִים). This word is rendered *foals*, Gen. xxxii. 15; *ass-colts*, Judg. x. 4; xii. 14; and *young asses*, Is. xxx. 6, 24. The singular (עֵיר) also is used, Gen. xlix. 11, and Job xi. 12; in the former of which it is rendered *foal*, in the latter *wild ass's colt*. Gesenius gives the meaning *young ass, ass's colt*, and with this agrees the general opinion. But on what does this rest? Not certainly on the usage of the word; for in none of the above passages are the animals denoted *necessarily* young, whilst in several of them it can only be an adult animal that is meant. The animals that bare the sons of Jair, and the sons and nephews of Abdon, the animals that shared with camels the burdens they carried, and that were employed to ear the ground, could not have been mere colts. It may be added that had it been the *foal* of the ass that was intended in Gen. xxxii. 16 (15), we should probably have had after אַתְּנוֹת simply וּבְנֵיהֶם, as in the beginning of the verse after גְּבֻלֵים. The root of the word is עֵיר *fervere, aestuare*, which is supposed to have given a name to the ass from its lascivious tendencies. This also is unfavourable to the supposition that the *colt* is intended by it. The term seems rather to denote the animal in its full vigour and maturity.—W. L. A.

AZAL, AZEL (אֶזֶל). 1. The name of a man (LXX. Ἐσῆλ), 1 Chron. viii. 37, 38; ix. 44. 2. The designation given to the termination of the cleft of Olivet represented in vision to the prophet (LXX. Ἰαρόδ, V. R. Ἰσαήλ) Zech. xiv. 5. Jerome takes this as an appellative, and renders *usque ad proximum*. Others regard it as a proper name, and that of the gate of Jerusalem up to which the cleft should reach (Hitzig, *Kl. Pr.* in loc. Henderson, *Min. Pr.* in loc.)—W. L. A.

AZARIAH (עֲזַרְיָה), whom *Jehovah aids*, answering to the German name *Gotthelf*; Sept. Ἀζαρίας,

a very common name among the Hebrews, and hence borne by a considerable number of persons mentioned in Scripture.

1. A high-priest (1 Chron. vi. 9) [the son of Ahimaz, and grandson of Zadok, whom he seems to have immediately succeeded, 1 Kings iv. 2].

2. Son of Johanan, a high-priest (1 Chron. vi. 10). [The statement that 'he it is that executed the priest's office in the temple that Solomon built,' should probably be transferred to his grandfather, ver. 9.]

3. The high-priest who opposed king Uzziah in offering incense to Jehovah (2 Chron. xxvi. 17).

4. A high-priest in the time of Hezekiah (2 Chron. xxxi. 10).

5. The father of Seraiah, who was the last high-priest before the Captivity (1 Chron. vi. 14).

6. [One of 'the priests, the men of the plain,' who repaired part of the wall of Jerusalem by his own house (Neh. iii. 23)].

7. Captain of king Solomon's guards (1 Kings iv. 5).

8. Otherwise called Uzziah, king of Judah. [UZZIAH.]

9. A prophet who met king Asa on his return from a great victory over the Cushite king Zerah (2 Chron. [xv. 1; in v. 8 perhaps the words 'Oded the prophet' are to be omitted.]

10. 11. Son of Jeroboam, and A. son of Obed, two persons to whom the high-priest Jehoiada made known the secret of the existence of the young prince Joash, and who assisted in placing him on the throne (2 Chron. xxxiii. 1).

12. Two of the seven sons of king Jehoshaphat (2 Chron. xxi. 2).

13. One of the 'proud men' who rebuked Jeremiah for advising the people that remained in Palestine, after the expatriation to Babylon, not to retire into Egypt; and who took the prophet himself and Baruch along with them to that country (Jer. xliii. 2-7).

14. The Hebrew name of Abed-nego, one of Daniel's three friends who were cast into the fiery furnace (Dan. i. 7; iii. 9).

AZARIAH, MIN HA-ADOMIM [ROSSI DE.]

AZAZEL [ATONEMENT, DAY OF.]

AZEKAH (עֲזַקָּה, Ἀζακά), a town in the plain of Judah with dependent villages ('Daughters'); see Josh. x. 10, 11; xv. 35; 1 Sam. xvii. 1; 2 Chron. xi. 9; Neh. xi. 30; Jer. xxxiv. 7. It has not been yet identified, though Tell Zakariya has been suggested as its existing representative.—W. L. A.

AZEM (עֶזֶם), the Pausal-form of *Ezem*, a town of Judah (Josh. xv. 29; xix. 3).

AZMAVETH (אֶזְמוֹת; Sept. Ἀζμαθ). This word occurs both as the name of a place and as a man's name. It was evidently a Benjaminite name, as of those who are named as bearing it most were, and all may have been, of that tribe; and the place seems to have been in Benjamin, for it is named along with Anathoth, Kirjath-jearim, and other Benjaminite towns. Probably it was the place that gave name to the men, for we read of the Benei-Azmaveth, two of whom were among those that came to help David (1 Chron. xii. 3), and forty-two of whom returned from the Captivity with

Zerubbabel (Ezra ii. 24). Of the men named simply Azmaveth there are three—1. Azmaveth the Barhumite, or Baharumite (*i. e.*, of Bahurim), one of the mighty men of David (2 Sam. xxiii. 31; 1 Chron. xi. 33); 2. A descendant of Saul and Jonathan (1 Chron. viii. 36; ix. 42; in the former of these passages his father is called Jehoadah, in the latter Jarah); 3. The son of Adiel and overseer of David's treasures (1 Chron. xxvii. 25).—W. L. A.

AZMON (עֲצֻמוֹן), a place on the southern boundary of Palestine, near to Hazar-addar, and between which and the river of Egypt, the boundary-line 'fetched a compass' (נִסְכַּב נְבוּלִי, Num. xxxiv. 5; Josh. xv. 4). In the former of these passages the LXX. give Ἀσεμωνιά, in the latter Σελμωνιά. It has been identified with Aseimeh, a place lying to the west of Kudeis (Kadesh). (Williams, *Holy City*, i. 467.)—W. L. A.

AZNOTH-TABOR (אֲזוֹת־תְּבוֹר); Sept. Ἀζανὸθ Θαβώρ), a land-mark on the western boundary of Naphthali. Eusebius places it in the plain on the confines of Dio-Cæsarea.

AZZAH (עֵזָה), the proper mode of spelling the Hebrew name which is elsewhere rendered Gaza. The name occurs in this form in Deut. ii. 23; Jer. xxv. 20; which last clearly shews that Gaza is intended.

B

BA'AL. The word בַּעַל *ba'al*, as it signifies *lord, master*, is a generic term for *god* in many of the Syro-Arabian languages. As the idolatrous nations of that race had several gods, this word, by means of some accessory distinction, became applicable as a name to many different deities. There is no evidence, however, that the Israelites ever called Jehovah by the *name* of Baal; for the passage in Hos. ii. 16, which has been cited as such, only contains the word *baal* as the sterner, less affectionate representative of *husband*.

I. BAAL (הַבַּעַל, with the definite article, Judg. ii. 13; Sept. ὁ Βάαλ, but also ἡ Βάαλ, Jer. xix. 5; xxxix. 35; Rom. xi. 4) is appropriated to the chief male divinity of the Phœnicians, the principal seat of whose worship was at Tyre. The idolatrous Israelites adopted the worship of this god (almost always in conjunction with that of Ashtoreth) in the period of the Judges (Judg. ii. 13); they continued it in the reigns of Ahaz and Manasseh, kings of Judah (2 Chron. xxviii. 2; 2 Kings xxi. 3); and among the kings of Israel, especially in the reign of Ahab, who, partly through the influence of his wife, the daughter of the Sidonian king Ethbaal, appears to have made a systematic attempt to suppress the worship of God altogether, and to substitute that of Baal in its stead (1 Kings xvi. 31); and in that of Hoshea (2 Kings xvii. 16), although Jehu and Jehoiaada once severally destroyed the temples and priesthood of the idol (2 Kings x. 18, *sq.*; xi. 18).

We read of altars, images, and temples erected to Baal (1 Kings xvi. 32; 2 Kings iii. 2). The altars were generally on heights, as the summits of hills or the roofs of houses (Jer. xix. 5; xxxii. 29).

His priesthood, the proper term for which seems to be כַּמָּרִים, were a very numerous body (1 Kings xviii. 19), and were divided into the two classes of prophets and of priests (unless the term 'servants,' which comes between those words, may denote a third order—a kind of Levites; 2 Kings x. 19). As to the rites by which he was worshipped, there is most frequent mention of incense being offered to him (2 Kings xxiii. 5), but also of bullocks being sacrificed (1 Kings xviii. 26), and even of children, as to Moloch (Jer. xix. 5). According to the description in 1 Kings xviii., the priests, during the sacrifice, danced (or, in the sarcastic expression of the original, *limped*) about the altar, and, when their prayers were not answered, cut themselves with knives until the blood flowed, like the priests of Bellona (Lucan. *Pharsal*. i. 565; Tertull. *Apologet.* ix.; Lactant. *Div. Instit.* i. 21). We also read of homage paid to him by bowing the knee, and by kissing his image (1 Kings xix. 18; comp. Cicero, *In Verrem*, iv. 43), and that his worshippers used to swear by his name (Jer. xii. 16).

As to the power of nature which was adored under the form of the Tyrian Baal, many of the passages above cited shew evidently that it was one of the heavenly bodies; or, if we admit that resemblance between the Babylonian and Persian religions which Münter assumes, not one of the heavenly bodies really, but the *astral spirit* residing in one of them; and the same line of induction as that which is pursued in the case of Ashtoreth, his female counterpart, leads to the conclusion that it was the *sun*. Nevertheless, the same difference of opinion between Gesenius and Münter as that on the subject of Ashtoreth meets us here in the case of Baal, and of the Babylonian Bel, which we shall, in what follows, regard as being essentially the same god. The former—who has stated his arguments in his *Thesaurus*, in his *Jesaias*, and at some length in the *Allgemeine Encyclopædie*, vols. viii. and xvi.—maintains that the idolatry of Babylon was astrological, and that, from the connection between Aramæan and Phœnician religious ideas, Baal and Bel were representatives of the *planet Jupiter*, as the greater star of good fortune. He builds much on the facts, that the Arabian idolaters worshipped this planet under the name of Mushterî, and sacrificed a sucking-child to him on a Thursday (*dies Jovis*), and that his temple was pyramidal (see Norberg's *Onomast. Cod. Nas.* p. 28); that Bel is also the name of this planet in the Tsbian books; and that the Romans called the Babylonian Bel by the name of Jupiter. He asserts that the words 'to Baal, to the sun,' in 2 Kings xxiii. 5, so far from proving the identity of Baal and the sun, rather directly oppose it; and, as it is impossible to deny that the sun was worshipped by the Phœnicians, he evades the force of the passage from Sanchoniathon, cited below, by arguing that, even allowing that the sun was the chief Tyrian god according to the entire religious system, it does not follow that he was necessarily the *Baal κατ' ἐξοχήν*, the most worshipped god of Tyre or Babylon; just as, in the middle ages, the excessive worship of patron saints and of the Virgin Mary was compatible with a theoretical acknowledgment of the Supreme Being.

Münter, on the other hand, in his *Religion der Babylonier*, does not deny the astrological character of the Babylonian religion, but maintains that, together with and besides that, there existed in very

early times a cosmogonical idea of the *primitive power of nature*, as seen in the two functions of *generation* and of *conception* or parturition; that this idea is most evident in the Kabiric religion, but that it exists all over the East; and that the sun and moon were the fittest representatives of these two powers. He does not admit that the T Arabian books, or Ephraem Syrus, are any authority for the religious notions of the Babylonians at a period so remote from their own time, and especially when they are opposed by better and older testimonies. Among these, he relies much on the statement of Sanchoniathon (p. 14, ed. Orelli), that the Phoenicians considered the sun to be 'μύνος οὐρανοῦ κύριος,' calling him 'Bealsamen, which is the Zeus of the Greeks.' Balsamen (*i. e.*, בעל שמיין *lord of the heavens*) also occurs in Plautus (*Panul.* act. v. s. 2. 67), where Bellermann, Lindemann, and Gesenius recognize it to be the same name. Isidorus Hispalensis has the words, 'Apud Assyrios Bel vocatur, quodam sacrorum suorum ratione, et Saturnus et Sol' (*Orig.* viii. 11). We moreover find בעל חמון (*i. e.*, *deus solaris*, from חמה, the sun, Job xxx. 28, with the adjective ending *ân*; see Ewald's *Hebr. Gram.* § 341) in several Carthaginian inscriptions (in Gesen. *Mon. Ling. Phan.* p. 164), which is an evidence that the Carthaginians worshipped the sun.

As to Gesenius's assertion that 2 Kings xxiii. 5 is opposed to the identity of Baal and the sun, a consideration of the whole passage would seem to shew he has judged hastily. The words are, 'which burnt incense to Baal, to the sun, and to the moon, and to the zodiacal signs, and to all the host of the heavens.' Now the omission of the *and* before the sun appears decidedly to favour the notion that the sun is an apposition to Baal, and not a distinct member of the same co-ordinate series. This view might, perhaps, recommend itself to those who appreciate the peculiar use of *and* in the Hebrew syntax. Besides *solar images* (as he himself interprets החמנים) are mentioned in 2 Chron. xxxiv. 4, as being placed on the altars of the Baals; which is not well reconcilable with any other theory than that of the identity of Baal and the sun.

In a certain sense, every argument which goes to shew that Ashtoreth was the moon is also, on account of the close conjunction between her and Baal, as valid a reason for Baal being the sun; for the two gods are such exact correlates, that the discovery of the true meaning of the one would lead, by the force of analogy, to that of the other. Nevertheless, as has been already observed in the article ASHTORETH, it must be admitted that the astrological view did subsequently prevail, and that the planets Jupiter and Venus became mysteriously connected with some modifications of the same powers which were primarily worshipped under the cosmogonical ideas of Bel and Mylitta, sun and moon. This relation between Baal and the planet Jupiter is noticed in the article GAD. For the relation between Baal and Moloch, and that between Baal and Melkarth, the Tyrian Hercules, see MOLOCH and HERCULES. [BAL.]

2. BAAL BERITH (בעל ברית, *covenant lord*; Sept. Vat. Βααλβερίθ; Alexand. Βάαλ διαθήκης; Judg. ix. 4) is the name of a god worshipped by the people of Shechem (Judg. viii. 33; ix. 4, 46), who, on account of the signification of the name,

has been compared to the Zeus Ὀρκίος of the Greeks, and the Latin *Deus Fidius*. Bochart and Creuzer think that this name means 'God of Berytus;' but as the name of that town is probably to be recognized in בריתא of Ezek. xlvii. 16, there is hardly any ground for their opinion.

3. BAAL PEOR (בעל פעור, or sometimes only פעור, respectively represented in the Sept. by Βεελφεγώρ, and Φεγώρ) appears to have been properly the idol of the Moabites (Num. xxv. 1-9; Deut. iv. 3; Jos. xxii. 17; Ps. cvi. 28; Hos. ix. 10); but also of the Midianites (Num. xxxi. 15, 16).

It is the common opinion that this god was worshipped by obscene rites; and, from the time of Jerome downwards, it has been usual to compare him to Priapus. Selden and J. Owen (*De Diis Syris*, i. 5; *Theologoumena*, v. 4) seem to be the only persons who have disputed whether any of the passages in which this god is named really warrant such a conclusion. The utmost that those passages express is the fact that the Israelites received this idolatry from the women of Moab, and were led away to eat of their sacrifices (cf. Ps. cvi. 28); but it is very possible for that sex to have been the means of seducing them into the adoption of their worship, without the idolatry itself being of an obscene kind. It is also remarkable that so few authors are agreed even as to the general character of these rites. Most Jewish authorities (except the Targum of Jonathan on Num. xxv.) represent his worship to have consisted of rites which are filthy in the extreme, but not lascivious (see Braunius, *De Vestit. Sacerd.* i. p. 7, for one of the fullest collections of Jewish testimonies on this subject). If, however, it could be shewn that this god was worshipped by libidinous rites, it would be one more confirmation of the relation between Baal and the sun; as, then, Baal Peor would be a masculine phasis of the same worship as that of which Mylitta is, both in name and rites, the female representative. The sense assigned by the Rabbins to the verb פער is now generally considered untenable. Peor (*hiatus*) is supposed to have been the original name of the mountain, and Baal Peor to be the designation of the god worshipped there. The verb נצמר, *to be bound, coupled*, which is only used in the Old Testament to denote being joined to Baal Peor, has been supposed to express either some obscene rite, or some mere symbol of initiation in the worship of this god. The Sept. renders it by ἐτελέσθησαν; and J. D. Michaelis first tried to reconcile the primitive sense of *binding* with the notion of initiation, by taking it to mean binding on fillets. Gesenius, however, points to the same verb in Ethiopic, in the sense of *to serve, to worship*; and maintains that that is its force here. Nevertheless Hitzig, in his note to Hos. ix. 10, still tries to shew that the verb may mean *to wear a band*, as symbol of initiation; and argues that ינורי, there used, as contrasted with the appropriate word יצמדו, implies the correspondence between the נור and צמיד (cf. 2 Sam. i. 10). Some identify this god with CHEMOSH.

4. BAALZEBUB (בעל זבוב, *Fly-lord*; Sept. τῶ Βάαλ μύϊαν θέβν, always; where more than one emendation appears necessary) occurs in 2 Kings i. 2-16, as the god of the Philistines at Ekron, whose oracle Ahaziah sent to consult. There is much

diversity of opinion as to the signification of this name, according as authors consider the title to be one of honour, as used by his worshippers, or one of contempt. The former class find a parallel to him in the Zeus Ἀπόμυιος of Elis, and suppose that he was regarded as the god who delivered his worshippers from the annoyance of flies. We are unable, however, to discern the appositeness of this parallel. The name *Fly-lord* appears rather to mean the god of flies than the averter and destroyer of flies. As this name is the one used by Ahaziah himself, it is difficult to suppose that it was not the proper and reverential title of the god; and the more so, as Beelzebub, in Matt. x. 25, seems to be the contemptuous corruption of it. Any explanation, therefore, of the symbolical sense in which flies may have been regarded in ancient religions, and by which we could conceive how his worshippers could honour him as the *god of flies*, would appear to us much more compatible with his name than the only sense which can be derived from the Greek parallel. This receives some confirmation, perhaps, from the words of Josephus (*Antiq.* ix. 2. 1), who says, 'Ahaziah sent to the god *Fly*, for that is the name of the god' (τῆ θεῶ).

The analogy of classical idolatry would lead us to conclude that all these Baals are only the same god under various modifications of attributes and emblems; but the scanty notices to which we owe all our knowledge of Syro-Arabian idolatry do not furnish data for any decided opinion on this subject.—J. N.

BAAL is often found as the first element of compound names of places. In this case, Gesenius thinks that it seldom, if ever, has any reference to the god of that name; but that it denotes the place which *possesses*, which is the *abode* of the thing signified by the latter half of the compound—as if it was a synonyme of בַּיִת. The best support of this opinion is the fact that *baal* and *beth* are used interchangeably of the same place; as Baalshalisha and Baaltamar are called by Eusebius Bethshalisha and Beththamar. [BAAL-PERAZIM.]—J. N.

1. BAALAH, BAAL-E-JUDAH, KIRJATH-BAAL. [KIRJATH JEARIM.]

2. BAALAH (בַּעֲלָה, Josh. xv. 29), BALAH (בָּלָה, Josh. xix. 3), BILHAH (בִּלְהָה, 1 Chron. iv. 29), a town in the tribe of Simeon, usually confounded with Baalath; but, as the latter was in Dan and this in Simeon, they would appear to have been distinct.

3. BAALATH (בַּעֲלָת; Sept. Γεβελαν), a town in the tribe of Dan (Josh. xix. 44), apparently the same that was afterwards rebuilt by Solomon (1 Kings ix. 18). Many have conjectured this Baalath to be the same as Baalbek; but in that case it must have lain in northernmost Dan, whereas the possession of it is ascribed to that tribe when its territory was wholly in the south of Judah, and many years before the migration (recorded in Judg. xviii.) which gave Dan a northern territory. Correspondingly, Josephus places the Baalath of Solomon (which he calls *Balath*) in the southern part of Palestine, near to Gazara (*Antiq.* viii. 6. 1), within the territory which would have belonged to Dan, had it acquired possession of the lands originally assigned to it. The Talmud affirms that Baalath

lay so near the line of separation between Dan and Judah, that the fields only were in the former tribe, the buildings being in the latter.

4. BAALATH-BEER (בַּעֲלָת בְּיָר; Sept. Βαλέκα), probably the same as the Baal of 1 Chron. iv. 33—a city of Simeon; called also Ramath-Negeb, or Southern Ramath (Josh. xix. 8; comp. 1 Sam. xxx. 27).

5. BAAL-GAD (בַּעֲלֵ גַד; Sept. Βαλαγάδ), a city 'in the baal of Lebanon under Mount Hermon' (Josh. xi. 17; xii. 7). We are also informed that among those parts of Palestine which were unsubdued by the Hebrews at the death of Joshua, was 'all Lebanon towards the sun-rising, from Baal-gad, under Mount Hermon, unto the entering into Hamath' (Josh. xiii. 5). This position of Baal-gad is not unfavourable to the conclusion which some have reached, that it is no other than the place which, from a temple consecrated to the sun, that stood there, was called by the Greeks *Heliopolis*, *i. e.*, city of the sun; and which the natives called and still call Baalbek.

Baalbek, in the Syrian language, signifies *the city of Baal*, or of the sun; and, as the Syrians never borrowed names from the Greeks, or translated Greek names, it is certain that when the Greeks came into Syria they found the place bearing this name or some other signifying 'city of the sun,' since they termed it Heliopolis, which is doubtless a translation of the native designation. We entertain no doubt that it was then called Baalbek by the natives. Now the question is, whether this word has the same meaning as Baal-gad, and if not, whether any circumstances can be pointed out as likely to occasion the change of name. If we take Baal for the name of the idol, then, as in the case of Baalbek, the last member of the word must be taken as a modifying appellation, not as in itself a proper name; and as Gad means a *troop*, a *multitude*, or a *press of people*, Baal-gad will mean *Baal's crowd*, whether applied to the inhabitants, or to the place as a resort of pilgrims. The syllable *bek* has precisely the same meaning in the Arabic.

If this should not seem satisfactory, we may conclude that *Baal* was so common an element in the composition of proper names, that it is not sufficiently distinctive to bear the stress of such an interpretation; and may rather take it to signify (as Gesenius says it always does in geographical combinations) the place where a thing is found. According to this view Baal-gad would mean *the place of Gad*. Now Gad was an idol (Is. lxx. 11), supposed to have been the god or goddess of good fortune (comp. Sept. Τύχη; Vulg. *Fortuna*), and identified by the Jewish commentators with the planet *Jupiter*. [GAD.] But it is well known that Baal was identified with Jupiter as well as with the sun; and it is not difficult to connect Baalbek with the worship of Jupiter. John of Antioch affirms that the great temple at Baalbek was dedicated to Jupiter; and in the celebrated passage of Macrobius (*Saturnal.* i. 23), in which he reports that the worship of the sun was brought by Egyptian priests to Heliopolis in Syria, he expressly states that they introduced it under the name of Jupiter (sub nomine *Jovis*). This implies that the worship of Jupiter was already established and popular at the place, and that heliolatry previously was not; and therefore we should rather expect the town to have

borne some name referring to Jupiter than to the sun; and may be sure that a name indicative of heliolatry must have been posterior to the introduction of that worship by the Egyptians; and, as we have no ground for supposing that this took place before or till long after the age of Joshua, it

could not then be called by any name corresponding to Heliopolis.*

Baalbek is pleasantly situated on the lowest declivity of Anti-Libanus, at the opening of a small valley into the plain El-Bekaa. Through this valley runs a small stream, divided into number-

118 Baalbek.

less rills for irrigation. The place is in N. lat. $34^{\circ} 1' 30''$, and E. long. $36^{\circ} 11'$, distant 109 geog. miles from Palmyra, and $38\frac{3}{4}$ from Tripoli.

6. BAAL-HAMON (בעל המון; Sept. Βελαμών), a place where Solomon is said to have had a vineyard (Cant. viii. 11). Rosenmüller conceives that if this Baal-Hamon was the name of a place that actually existed, it may be reasonably supposed identical with Baal-Gad or Heliopolis; for Hamon may have been a corruption of Amon, the Hebrew way of pronouncing the Ammon of the Egyptians (see Nah. iii. 8), whom the Greeks identified with Jupiter (*Bib. Geog.* ii. p. 253). We are not inclined to lay much stress on this conjecture. There was a place called Hamon, in the tribe of Asher (Josh. xix. 28), which Ewald thinks was the same as Baal-Hamon. The book of Judith (viii. 3) places a Balamon (Βαλαμών) or Belamon (Βελαμών) in central Palestine, which suggests another alternative.

7. BAAL-HAZOR (בעל הצור; Sept. Βελαζώρ), the place where Absalom kept his flocks, and held his sheep-shearing feast (2 Sam. xiii. 23). The Targum makes it 'the plain of Hazor.' It is said to have been 'beside Ephraim,' not in the tribe of that name, but near the city called Ephraim, which was in the tribe of Judah, and is mentioned in 2 Chron. xiii. 19; John xi. 54. This Ephraim is placed by Eusebius eight miles from Jerusalem on the road to Jericho; and is supposed by Reland to

have been between Bethel and Jericho (*Palästina*, i. 377).

8. BAAL-HERMON (בעל הרמון). The Septuagint makes two names of this in 1 Chron. v. 23, Βαάλ' Ερμών; and in Judg. iii. 3, where the original has 'Mount Baal-Hermon,' it has *δρους του Αερμών*, Mount Hermon. It seems to have been a place in or near Mount Hermon, and not far from Baal-Gad, if it was not, as some suppose, the same place.

9. BAAL-MEON (בעל מעון; Sept. Βεελμεών; Num. xxxii. 38; 1 Chron. v. 8; otherwise BETH-MEON, Jer. xlviii. 23; and BETH-BAAL-MEON, Josh. xiii. 17), a town in the tribe of Reuben beyond the Jordan, but which was in the possession of the Moabites in the time of Ezekiel (xxv. 9). At the distance of two miles south-east of Heshbon, Burckhardt found the ruins of a place called *Myoun*, or (as Dr. Robinson corrects it) *Mâ' n*, which is doubtless the same, although Eusebius makes the distance greater.

10. BAAL-PERAZIM (בעל פרצים; Sept. Βαάλ Φαρασίν). This name, meaning 'place of breaches,'

* [Gesenius rejects this opinion as unfounded (*Theo.* in voc.), and so does Räumler (*Paläst.* p. 215, 3d ed). Robinson identifies Baal-Gad with the modern Banias (*Lat. Res.* p. 409), in which he is probably right.]

which David imposed upon a place in or near the valley of Rephaim, where he defeated the Philistines (2 Sam. v. 20; comp. 1 Chron. xiv. 11; Is. xxviii. 21), is important as being the only one with the prefix Baal of which we know the circumstances under which it was imposed; and we are thus enabled to determine that the word was sometimes at least used appellatively without any reference to the name of the idol Baal or to his worship.

11. BAAL-SHALISHA (בעל שלִישָׁה); Βαυβαρισά, Cod. Alex. Βαθσαρισά, 2 Kings. iv. 42), a place in the district of Shalisha (1 Sam. ix. 4). Eusebius and Jerome describe it as a city fifteen Roman miles north from Diospolis, near Mount Ephraim.

12. BAAL-TAMAR (בעל תָּמָר); Sept. Βαδλ Θαμάρα, a place near Gibeah, in the tribe of Benjamin, where the other tribes fought with the Benjamites (Judg. xx. 33). Eusebius calls it *Bethamar*, thus affording an instance of that interchange of *Beth* and *Baal* which is also exemplified in the preceding article and in Baal-Meon.

13. BAAL-ZEPHON (בעל צִפּוֹן); Sept. Βεελ-σεφών), a town belonging to Egypt, on the border of the Red Sea (Exod. xiv. 2; Num. xxxiii. 7). Forster (*Epist. ad J. D. Michaellem*, p. 28) believes it to have been the same place as Heroopolis (Ἡρωπόλις) on the western gulf of the Red Sea (Plin. *Hist. Nat.* v. 12; Strabo, xvii. p. 836; Ptolem. iv. 5), where Typhon (which Forster makes in Coptic ΔΥΦΩΝ; but, *contra*, see Rosenmüller, *Alterthum.* iii. 261) was worshipped. But according to Manetho (Joseph. *Contra Apion.* i. 26), the name of Typhon's city was Avaris (Ἀβάρης). In fact, nothing is known of the situation of Baal-zephon; and whatever conjectures may be formed respecting it must be connected with a consideration of the route taken by the Israelites in leaving Egypt, for it was 'over against Baal-zephon' that they were encamped before they passed the Red Sea. [EXODUS.]—J. K.

BAAL also appears as forming part of a personal proper name in BAAL-HANAN. Two persons bearing this name are mentioned in Scripture: 1. One of the early kings of Idumea (Gen. xxxvi. 38, 39; 1 Chron. i. 49, 50); 2. One of David's officers who was set over the olive trees and the sycamore trees that were in the Shephelah (1 Chron. xxvii. 28). He is described as a Gederite, by which is probably intended a native of Gederah, a town situated in that district. Baal-hanan (בעל חָנָן) may be interpreted *Baal is gracious*, but it may also mean *possessor of grace*; and this is the more probable meaning of it as borne by an Israelite.—W. L. A.

BAALIS (בַּעְלִים); Sept. Βαλεισά), a king of the Ammonites, at whose instigation Gedaliah was slain by Ishmael, the son of Nethaniah (Jer. xl. 14).

BAANA (בַּעְנָה); Sept. Βανά, Βαανά). The name of—1. one of Solomon's officers who had the charge of providing for the king's household (1 Kings iv. 12); 2. the father of Zadok, one of those who laboured in the rebuilding of Jerusalem (Neh. iii. 4). This name seems to be the same as BAANAH (בַּעְנָה), which, indeed, occurs once in the A. V. for it by mistake (1 Kings iv. 16).

Baanah is the name of—1. a captain of Saul's army, who, with his brother Rechab, murdered Ishbosheth, and brought his head to David. For this David caused them to be executed (2 Sam. iv. 2-12); 2. the father of Heleb or Heled, one of David's mighty men, a Netophathite (2 Sam. xxiii. 29); 3. one of those who returned from captivity with Zerubbabel (Ezra ii. 1, 2; Neh. vii. 7).

BAASHA (בַּעֲשָׂא); Sept. Βασά), the son of Ahijah, and third king of Israel. The name, according to Gesenius, is derived from בעש, an obsolete word, signifying *to be bad*; whilst others derive it from עשה, *to work*, or from עש, *a moth*, or from עשעש, *to oppress*; all alike uncertain. He instigated a conspiracy against Nadab, the son of Jeroboam, and having slain him, took possession of his throne. His reign was that of a restless, warlike, and ungodly prince. Constantly at war with the king of Judah, he at one time advanced almost to Jerusalem, and reduced its king to such extremities, that he had to call to his aid Benhadad, king of Syria, who by attacking the territory of Baasha compelled him to retire from Judah. The town of Ramah, which he had begun to build in order to blockade the king of Judah, was demolished by the latter after his retreat, and the materials used to build the towns of Mizpeh and Geba. Baasha reigned twenty-four years (from 953 to 930, B.C., according to Ussher; 955 to 932, according to Thenius; 961 to 937, according to Ewald). He lived at Tirzah, where also he was buried (1 Kings xv. 16; xvi. 6; 2 Chron. xvi. 1-6).—W. L. A.

BABEL. [BABYLON.]

BABEL, TOWER OF. In Gen. xi. 1-9 we have an account of the commencement of the building of a city and a tower by the early occupants of the plain in the land of Shin'ar. This tower was to be of brick, cemented by bitumen, and the top of it was to reach unto heaven, an expression which probably means no more than that it was to be very high (comp. Deut. i. 28; ix. 1, and the use of *ὄψαναμιήνης* in the classics, e.g., *Od.* v. 239; Herod. ii. 138; *Æsch. Ag.* 92). The building of this tower was arrested in the course of its progress by the divine interposition; but whether it was left ultimately in its originally unfinished state, or was completed on a humbler scale, and turned to some other use, no record remains to tell. Tradition asserts that it was utterly cast down, and that Babylon was built out of its ruins (Abydenus in Eusebius, *Præp. Evangel.*, bk. ix. ch. 15; Sybilla in Joseph. *Antiq.*, bk. i. ch. 4, § 3). Benjamin of Tudela says it was struck with fire from heaven, which rent it to the foundations, a tradition which still subsists among the Arabs, and to which the calcined and vitrified masses which surround the base of the Birs Nemroud seem to give some countenance (Bochart, *Phaleg*, bk. i. ch. 9; Asher's *Translation of Benjamin of Tudela's Itinerary*; Rich, *Memoirs on the Ruins of Babylon*).

Various hypotheses have been advanced as to the design of the original builders in the erection of this tower. That they actually dreamt of reaching heaven by such an erection is not to be supposed, though this hypothesis has found supporters (Euseb. and Joseph. *loc. cit.*); nor is it likely that they fell upon this device in order to preserve themselves from a second deluge, as Josephus sug-

gests, for from this risk they must have felt themselves exempt, having God's promise that such a disaster should not recur. The reason assigned in the Bible is simply that they might make to themselves a name, lest they should be scattered abroad upon the face of the whole earth. These words, however, have been variously interpreted. The word rendered *name* (בָּשׁ) has been taken by some in the sense of *sign*, or *monument*; and it has been supposed that the purpose of the tower was to serve as a guide to the nomadic inhabitants of that district, by which they might find their way to the central residence of the community (Perizonius, *Orig. Babyl.*, pp. 193, 194). The objections to this are, that בָּשׁ nowhere has this meaning; that the phrase בָּשׁ הָשָׁא has a fixed signification in Scripture, that, namely of acquiring fame or celebrity (see 2 Sam. viii. 13; Is. lxxiii. 12, 14; Jer. xxxii. 20; Dan. ix. 15); and that for the mere purpose of a signal tower there was no need in that level district of an erection so immense as this seems to have been. The LXX. have rendered the latter clause of the verse by *πρὸ τοῦ διασπαρῆναι ἡμᾶς*, and this Philo, the Vulgate, and several of the ancient fathers have followed; but for this there is no authority, as πρὸ never signifies *before*; and besides, it seems very improbable that such an idea, as that which this rendering imputes to the builders of Babel, would enter into their minds. Cocceius (in loc.) and Heidegger (*Hist. Patriarch.*, t. i., exerc. 21, § 11) think that בָּשׁ denotes here a senate or body of persons who might preserve the true tradition of the Noachic faith, and thereby maintain a permanent bond throughout the race; and Kurz (*Hist. of the Old Covenant*, i. 110) thinks that the *Shem* they sought to set up had reference to the *Shem* God had chosen, and that in their Hamite pride they resolved to combine their energies, and provide for themselves a salvation independent of that which God had provided. All this seems fanciful and farfetched. The explanation of Rosenmüller is, that the passage represents these builders as resolving to erect in their city a lofty tower, in order that, by adorning and dignifying their society, they might attract all, both then and in time to come, to it, and so prevent the bond of community from being dissolved (*Scholia*, in loc.) In such a design, however, there is nothing impious, and it is plain that impiety prominently marked the scheme in question. The suggestion of the Targumists, Jonathan Ben Uzziel, and the Hierosolymitan, that the building was intended for idolatrous worship, and as the centre of a great warlike confederacy, is probably not far from the truth (*Bib. Polyglott. Londin.* vol. iv.)

Bochart repudiates the tradition that the building was destroyed, and adopts the opinion that it survived the dispersion, and became the temple of Belus, described by Herodotus. In this he follows Jewish tradition, and has been followed by the majority of more recent scholars. Of late, however, the claims of the ruined mound known as Birs Nemroud to be regarded as the site of the tower of Babel have been urged by several writers. Neither opinion seems to rest on satisfactory evidence. The temple of Belus, described by Herodotus, was a much later erection, and there is nothing to connect it with the tower mentioned by Moses but Jewish tradition resting on conjecture. The erection at Birs Nemroud was also of much

later date, and besides, was not like the tower of Babel, within the city, but several miles from it; at least, if it be as Rawlinson and others conclude, on the site of the ancient Borsippa. The utmost that can be said is, that in the plan of these erections, and in the materials of which they are composed, we may find something to guide us in determining what sort of building the tower of Babel was.

Herodotus says of the temple of Belus:—'It had gates of brass, and was two stadia every way, being quadrangular; in the middle of the temple a solid tower was built, a stadium in height and breadth; and on this tower was placed another, and another still on this, to the number of eight towers in all; the ascent was on the outside, and was made by a winding passage round all the towers; and about half way up the ascent there is a landing, and seats for rest, where those ascending may repose; and in the highest tower there is a large temple, and in the temple a large bed well furnished, and beside it a golden table, but there is no statue erected in it and by night no one lodges in it, except a single woman of the country, whom the god has selected from the rest, as say the Chaldæans, who are the priests of this God' (bk. i. ch. 181).

The Birs Nemroud (palace of Nimrod) is a huge mass of ruins, composed of brick, slag, and broken pottery. It rises to the height of 198 feet, and has on its summit a compact mass of brickwork, 37 feet in height by 28 in breadth; so that the whole is 235 feet in height.

119. Birs Nemroud.

When entire, it is supposed to have consisted of a series of seven platforms, rising one above the other, but extending farther from the centre in front than behind, so as to present the appearance of a much more perpendicular ascent in back than in front. These steps are supposed to have been ornamented with different colours, and to have been surmounted by a temple, such as that described by Herodotus as crowning the temple of Belus, or a dwelling for the priests. The grand entrance was by the back, approached by a vestibule, the ruins of which constitute the mound on the right of the larger mass in the cut. The front faced the north-east; the back looked to the south-west. This restoration is to a considerable extent conjectural,

but as it is made after careful study of similar mounds in other places, it is probably not far from

120. Restored elevation of the Birs Nemroud.

the truth (Layard, *Nineveh and Babylon*, p. 497; Rich, *Memoirs on the Ruins of Babylon*; Fergusson, *Handbook of Architecture*, i. 183; Rawlinson, *Translation of Herodotus*, ii. p. 582-3; and in Smith's *Dict. of the Bible*).—W. L. A.

BABINGTON, GERVASE, an Anglican bishop, was born in Nottingham towards the middle of the sixteenth century. He was educated at Cambridge, and became a fellow of Trinity College. He was successively bishop of Llandaff, of Exeter, and of Worcester. He died in 1610. His works have been collected in one vol. fol., Lond. 1622. They are chiefly composed of notes on the books of the Pentateuch, designated by the author 'Comfortable Notes,' and belonging to the class of homiletical rather than that of exegetical commentaries. They are the product, however, of a man of sound and extensive learning, and have the richness of the olden style of thought in them. He wrote also on the Ten Commandments, and on the Lord's Prayer.—W. L. A.

BABYLON, BABYLONIA.* The word בבל is used in the Hebrew Scriptures to express the city known by that name, and also the country of Babylonia, as, *e.g.*, in Ps. cxxvii., 'By the rivers of Babylon we sat down and wept;' 2 Kings xxiv. 1, etc., etc. Cyrus also is termed king of בבל, or Babylonia, in Ezra, v. 13, and Artaxerxes in Neh. xiii. 6, after the Babylonian rule, properly so called, had given place to that of the Persians. There seems to be no good reason for giving up the etymology of the word indicated in Gen. xi. 9, from בבל, to mix, confound; 'because the Lord did there confound the speech of all the earth.' Gesenius gives instances of words similarly formed, *v.* his Thesaurus, *s. v.* Some, indeed, have suggested that the origin of the name is to be sought in the Arabic باب *the gate or court of Bel*; or, supposing ב to be used for בית (*v.* examples given by Gesenius), *the house or temple of Bel*. Others say that it means *the gate of the god Il*, or *the gate of God*, the term gate being here used in a sense analogous to that in which we speak now-a-

days of the sublime *Porte*. But it appears to us that, though the foundation of the Babel kingdom by Nimrod is related in Gen. x. 10, and the building of the tower of Babel is not mentioned till the following chapter, yet that this was really the earlier event in point of time, and that most probably Nimrod took what he found of the unfinished city in the plains of Shinar, and made that 'the beginning of his kingdom,' consequently he would adopt the name which he already found in vogue, and of which the origin is what it is said to have been at Gen. xi. 9. To make the narrative consistent with itself, it seems necessary to understand it thus.

Description.—The description of Babylon given by Herodotus, who appears to have known it from having been there, is not easy to be reconciled with the statements of other ancient writers who visited it, or with the character and position of those remains which are now supposed to represent this famous city. The description of Herodotus is to this effect: The city stood on a broad plain, and was exactly square, being 120 furlongs in length each way, so that the circumference of it was 480 furlongs. It was surrounded by a broad and deep moat, which was kept full of water, and beyond this there was a high wall, no less than 50 royal cubits in width, and 200 in height. It must be borne in mind that there are other statements somewhat different from these. Ctesias gives the circumference as 360 stadia, and others make it 365, 368, and 385. Also with respect to the walls, Ctesias makes them to be 200 common cubits in height, there being the difference of three fingers' breadth between the royal and common cubit. This measurement in Pliny becomes 200 feet, and in Strabo 75. Jeremiah makes allusion to the height and breadth of the walls of Babylon. Col. Rawlinson has recorded it as his opinion that they did not exceed 60 or 70 English feet.

It seems perfectly incredible to suppose that a city so large as Babylon could have been surrounded with walls which would have been higher than St. Paul's Cathedral, and yet that no vestige of these walls can be discovered. M. Oppert, however, believes that he has found traces of them, or at least of the gates and towers of them, in some of the tells or mounds which are common on both sides of the Euphrates. Herodotus affirms also that of the soil which was taken out of the moat surrounding the city, bricks were made of which the walls were built, and that, instead of cement, they used hot bitumen, brought from the Is, a small stream which flows into the Euphrates at the point where the city of the same name stands, eight days' journey from Babylon. This place is probably the same with that which is now called Hit, and Col. Rawlinson supposes it to be identical with the Ahava of Ezra viii. 15, 21. Upon the top of the walls, and along the edges of them, they constructed buildings of a single chamber, facing one another, leaving room between them for a four-horse chariot to turn.

There were 100 brazen gates, with lintels and side posts of brass. The city was divided into two portions by the river, which ran through the midst of it. The city wall was brought down on both sides to the edge of the stream, and thence from the corner of the wall a fence of burnt brick was carried along each bank of the river. The houses were mostly three and four storeys high. The

* In Persian cuneiform, bábirush—

Babylonian cuneiform writes it in many ways.

streets all ran in straight lines parallel to the river, and at right angles to it. At the river end of these latter streets were low gates of brass in the fence that skirted the bank opening on the water. Besides the outer wall there was another within of less thickness, but very little inferior to it in strength. There was also a fortress in the centre of each division of the town. In the one was the king's palace, surrounded by a wall of great strength and size, in the other was the temple of Bel, a square inclosure two furlongs each way, with gates of solid brass. Now, the first point in this statement which requires to be explained is the extraordinary magnitude ascribed to the city. Even supposing the more moderate dimensions of other historians are preferred, yet even these would make the size of Babylon to have been four or five times that of London. It is of course not to be imagined that the population was condensed and concentrated within this space, after the manner of our modern cities. On the contrary, it probably contained a tract of arable and pasture land very nearly, if not quite sufficient to supply the wants of the citizens, besides a large territory laid out in parks and orchards, paradises and gardens, for their recreation and amusement. It is, however, a fact that no traces of the wall which may have enclosed this space are visible in our time. Strange and unaccountable as it may appear, it is nevertheless certain that the besom of destruction has swept them all away. The modern traveller wanders over the supposed site of ancient Babylon and searches in vain for the ruins of her walls. We might almost say the ruins of the city, for it must be confessed that all that remains of it is scarcely enough to warrant us in saying that a great city ever existed there. The modern remains of Babylon consist of a few mounds on the left bank of the Euphrates, a little above, and on the opposite side to Hillah. They occupy a space of about three miles long and two miles broad, and are almost entirely enclosed by two ramparts, which form a triangle having the river for its base. They lie chiefly in three groups, of which the most northerly is to this day called by the Arabs Bâbil. This was designated by Rich, Mujellibe, which name is said now to be given to the second mound, the truth apparently being that the term is or was applied indifferently to several mounds in that locality. The word represents a vicious pronunciation, and ought by rights to be written 'Mukallabeh,' which would mean 'overturned.' In the south of this mound, and about a mile from it, commences the second, which is known by the name of 'Kasr,' or Palace. Further still to the south we have the third and last of these ruins, known as the tomb of Amrâm, said to have been the son of one of the caliphs who was killed in the battle of 'Hillah.' The general position of these ruins will be better understood by reference to the accompanying plan. In this plan A represents Bâbil, B the Kasr, C the mound of Amrâm. These are the main points of the ruin, but in addition to these there are others. For instance, F F is the irregular rampart mentioned above. G is a similar rampart bounding the Kasr on the north. E E two long lines of rampart about 100 yards apart, probably represent the great reservoir of Babylon, connected with the river by G, the Shebil. This reservoir was called Yapur-Shapu, and was enlarged by Nebuchadnezzar, though perhaps built by one of the early kings.

D D are embankments on either side the Euphrates. H H appear to represent the embankments of a water-course, running southward till impeded by a mass of rubbish at K.

121.

One great difficulty that occurs in the attempt to identify the present ruins of Babylon with the ancient city, is the fact that they are nearly all, without exception, to be found on the eastern side of the river; whereas it is stated plainly by Herodotus, Diodorus, Pliny, etc., that the Euphrates flowed through the city, and Herodotus says that it divided the temple of Belus from the palace of the king; or, in other words, the mound of Babel from what is now called the 'kasr.' Mr. Layard supposes this to be accounted for by the tendency of the river to flow westward, which has therefore obliterated the ruins originally standing on the right bank; but Mr. Rawlinson rejects this opinion, and thinks that Herodotus probably mistook for the river the canal called Shebil, which, as stated above, would flow in the required direction, and divide the temple of Belus from the palace of the king.

In a line with the mound Amrâm, on both sides of the Euphrates, there are apparently the ruins of another palace, of which some of the bricks are found stamped with the name of Nerglissar, perhaps the Nergal-sharezer of Holy Writ. It seems better to describe the present appearance of the site by the help of recent travellers than to attempt a description which must, after all, be made up of their materials. 'The ruins at present existing,' says Mr. Layard, 'stand upon the eastern bank of the Euphrates, and are enclosed within an irregular triangle formed by two lines of rampart and the river, the area being about eight miles. This space contains three great masses of building, the high pile of unbaked brick work, called by Rich Mujellibe, but which is known to the Arabs as Babil, the building denominated the Kasr or palace, and also the mound upon which stands the modern

comb of Amrám-ibn-ali.' The distance of these ruins from Baghdad is about fifty miles, according to Loftus, and the road lies across a barren desert tract. 'Near the village of Mohawill,' says Mr. Layard, 'it crosses a wide and deep canal, still carrying water to distant gardens. On the southern bank of this artificial stream is a line of earthen ramparts, which are generally believed to be the most northern remains of the ancient city of Babylon. From their summit the traveller scans a boundless plain, through which winds the Euphrates, with its dark belt of evergreen palms. Rising in the distance, high above all surrounding objects, is the one square mound in form and size more like a natural hill than the work of men's hands. This is the first great ruin to the east of the river. Beyond it long lines of palms hem in the Euphrates, which now winds through the midst of the ancient city. To the vast mound of Bâbil ascend long undulating heaps of earth, bricks, and pottery; a solitary mass of brick-work rising from the summit of the largest mound, marks the remains known to the Arabs as the Mujellibe, or the 'over-turned.' Other shapeless heaps of rubbish cover, for many an acre, the face of the land. The lofty banks of ancient canals fret the country like natural ridges of hills. Some have long been choked with sand; others still carry the waters of the river to distant villages and palm groves. On all sides fragments of glass, marble, pottery, and inscribed brick, are mingled with that peculiar nitrous and blanched soil which, bred from the remains of ancient habitations, checks or destroys vegetation, and renders the site of Babylon a naked and hideous waste. Owls start from the scanty thickets, and the foul jackal skulks through the furrows. Surely 'the glory of kingdoms and the beauty of the Chaldees' excellency is as when God overthrew Sodom and Gomorrah. Wild beasts of the desert lie there, and their houses are full of doleful creatures; and owls dwell there, and satyrs dance there; and the wild beasts of the islands cry in their desolate houses, and dragons in her pleasant palaces,' for her day has come.

'The traveller, before reaching Bâbil, when about four miles distant, follows a beaten track, winding amidst low mounds, and crossing the embankments of canals long since dry, or avoiding the heaps of drifted earth which cover the walls and foundations of buildings. The mounds seem to be scattered without order, and to be gradually lost in the vast plains to the eastward. But southward of Bâbil, for the distance of nearly three miles, there is almost an uninterrupted line of mounds, the ruins of vast edifices collected together as in the heart of a great city. They are inclosed by earthen ramparts, the remains of a line of walls which, leaving the foot of Bâbil, stretched inland about two and a half miles from the present bed of the Euphrates, and then, turning nearly at right angles, completed the defences on the southern side of the principal buildings that mark the site of Babylon on the eastern bank of the river. Between its most southern point and Hillah, as between Mohawill and Bâbil, can only be traced low heaps and embankments scattered irregularly over the plain. It is evident, as he observes, that the space inclosed within this continuous rampart could not have contained the whole of that mighty city, whose magnificence and extent were the wonder of

the ancient world. From Amrám, the last of the great mounds, a broad and well-trodden track winds through thick groves of palms. About an hour's ride beneath pleasant shade brings the traveller to the falling gateway of the town of Hillah. A mean bazaar, crowded with Arabs, camels, and asses, leads to a bridge of boats across the Euphrates.' The following description of this place, the modern representative of Babylon, by Mr. Layard, will also be read with interest:— 'Hillah may contain 8000 or 9000 inhabitants; a few half-ruined mosques and public baths are its principal buildings; the bazaar supplies the desert Arabs with articles of clothing, arms, dates, coffee, and corn, and contains a few common Manchester goods, and English cutlery and hardware. The Euphrates flows through the town, and is about 200 yards wide and 15 feet deep; a noble stream, with a gentle current, admirably fitted for steam navigation. The houses, chiefly built of bricks taken from the ruins of ancient Babylon, are small and mean. Around the town, and above and below it for some miles, are groves of palm trees, forming a broad belt on both sides of the river. In the plain beyond them, a few canals bear water to plots cultivated with wheat, barley, and rice.'

The complete absence of remains is to be explained by the nature of the material used in the erection of even the most costly edifices. In the immediate vicinity of Babylon there were no quarries of alabaster or of limestone such as existed near Nineveh. The city was built in the midst of an alluvial country far removed from the hills. The comparatively recent deposits of the mighty rivers which have gradually formed the Mesopotamian plains consist of a rich and very thick clay. Consequently, stone for building purposes could only be obtained from a distance. The black basalt, a favourite material amongst the Babylonians for carving detached figures, and for architectural ornaments, as appears from numerous fragments found amongst the ruins, came from the Kurdish mountains, or from the north of Mesopotamia. It was probably floated down the Euphrates and Tigris on rafts from these districts. Limestone of an inferior quality might have been quarried nearer to the city, but it seems to have been little used for building purposes. The Assyrian alabaster could have been brought from Nineveh, and the water communication by the rivers and canals offered great facilities for transport; yet enormous labour and expense would have been required to supply such materials in sufficient quantities to construct an entire edifice, or even to panel the walls of its chambers. The Babylonians were, therefore, content to avail themselves of the building materials which they found on the spot. With the tenacious mud of their alluvial plains, mixed with chopped straw, they made brick, whilst bitumen and other substances collected from the immediate neighbourhood furnished them with an excellent cement. A knowledge of the art of manufacturing glaze and of compounding colours enabled them to cover their bricks with a rich enamel, thereby rendering them equally ornamental for the exterior and interior of their edifices. The walls of their palaces and temples were also coated, as we learn from several passages of the Bible, with mortar and plaster, which, judging from their cement, must have been of fine quality. The fingers of the man's hand wrote the words of condemnation of the Babylonian

empire 'upon the plaster of the wall of the king's palace.' Upon those walls were painted historical and religious subjects, and various ornaments, and, according to Diodorus Siculus, the bricks were enamelled with the figures of men and animals.

Images of stone were no doubt introduced into the buildings. We learn from the Bible that figures of the gods in this material, as well as in metal, were kept in the Babylonian temples. But such sculptures were not common, otherwise more re-

122. Babylon.

mains of them must have been discovered in the ruins.

The bricks of Babylon are said by Sir R. Ker Porter to be of two kinds, sun-dried and fire-burnt. The former is generally the largest, as it is of a coarser fabric than the latter, but its solidity appears to be equal to the hardest stone. It is composed of clay mixed with chopped straw or broken reeds to compact it, and then dried in the sun. He observes also that, considering so many centuries have passed since Babylon became a deserted habitation, and its position in the neighbourhood of populous nations, our surprise ought to be not that we find so little of its remains, but that we see so much. From her fallen towers have arisen not only all the present cities in her vicinity, but others which, like herself, are long ago gone down into the dust. Since the days of Alexander we find four capitals at least built out of her remains. Seleucia by the Greeks, Ctesiphon by the Parthians, Almaidan by the Persians, Kufa by the Caliphs, with towns, villages, and caravansaries without number. Scarce a day passed while he was there without his seeing people digging in the mounds of Babylon for bricks, which they carried to the river and then conveyed in boats to wherever they were wanted.

Early History.—It is not easy to give a general or popular sketch of the early history of Babylonia, seeing that the discoveries which have lately been made in it are the results of some of the most profound of Col. Rawlinson's researches, which involve a familiarity with names and writers not ordinarily met with in the range of biblical or classical reading. Indeed, the names which have been disinterred and brought to light by the excavations in Babylonia and Chaldea were entirely lost to the world till within a very recent period. In the case

of a very few it is perhaps possible to establish an identification with certain proper names with which we are familiar in the Scriptures, but in the great majority of instances we are introduced to persons of whom till now we have never before heard. It has been, nevertheless, clearly ascertained that these excavations have presented us with names of a line of kings who must have flourished during a period of upwards of 600 years, and can be traced backward to an epoch of very remote antiquity. Bricks have been found, for instance, which bear stamped upon them the name of Uruk, who seems to have been the founder of several of the great Chaldæan capitals, and whose reign may be placed as far back as B.C. 2234. These bricks exist in abundance at Mugheir, Warka, Senkereh, and Niffer, and being generally found in the base of the various buildings, while the bricks of other monarchs appear in the upper storeys of them, this circumstance would seem to point to the conclusion that he was the original founder of these cities. He styles himself king of Hur and Kinzi Accad. The former of these names being Ur of the Chaldees, of which the modern representation is Mugheir, while the latter is an ethnic designation of the Hamite race, and answers to the Accad of Genesis. The son of this king was Ilgi: he has left fewer relics than his father, but from other inscriptions is known to have completed some of the buildings at Mugheir which had been left unfinished by him.

We are enabled to fix approximately the date of another early king of Babylonia by a remarkable series of ascertained dates. For instance, an inscription of Sennacherib on the rocks at Bavián relates his recovery of certain gods which had been carried to Babylon by Merodach-adan-akhi, 418 years before, upon the defeat of Tiglath-pileser by the latter monarch. This recovery took place in the

tenth year of Sennacherib's reign, and we may reasonably assign the same date, viz., B. C. 692, to this inscription. Moreover, the cylinders at Kalah Sherghat relate that the same Tiglath-pileser rebuilt in the city of Asshur, 60 years after it had been pulled down on account of its unsoundness, a temple which had stood for a period of 641 years from its first foundation. The original builder of this temple was Shamas-Iva, or Shamas-Phul, the son of Ismi-dagon. Now, adding together these various dates, viz., 692 B. C., the date of the Bavián inscription, the 418 previous years intervening from the defeat of Tiglath-pileser, the 60 and 641 years already specified, and allowing 50 years for the reigns of Shamas-Iva and Ismi-dagon, together with the interval that probably elapsed between the defeat and the rebuilding of the temple, we obtain a total of 1861 years, which will represent approximately the date of Ismi-dagon's accession.

The commencement of the Babylonian empire was probably about 2234 B. C., for which date there is very considerable evidence. For example, the chronological scheme of Berosus makes the first Chaldean empire to extend from the middle of the twenty-third century before Christ, to the end of the sixteenth, and as we find a list of more than twenty kings before and after the given date 1861, it is of course evident that the period assigned by Berosus is at once brought within the limits of probability. We know, moreover, from the same historian, that the first Chaldean dynasty consisted of eleven kings, while from Berosus, Ptolemy, and others, we learn that the various dynasties reigning in Chaldæa extended over a space of 1662 years. Berosus, however, gives the entire chronological scheme of the Babylonians as 36,000 years, of which a period of 34,080 years is assigned to mythical dynasties, consequently to make up this sum the number 258 is required, which is missing in the MS., but which singularly enough is a very reasonable period, to have comprised the reigns of eleven kings, leaving an average of about 23½ years for the duration of each reign. The first ruling dynasty of Berosus is a Median one of eight kings, reigning 224 years. As this dynasty probably was not of the same ethnic variety as the subsequent dynasties which were Hamite or Semitic, we may disregard it, and then, reckoning backwards from the capture of Babylon by Cyrus, obtain a fixed date 2234 B. C. for the foundation of the first great Chaldean empire. Now it is very remarkable that we are enabled to obtain almost precisely the same date from other independent calculations. For instance, Callisthenes visited Babylon in the year 331, when he found that stellar observations had been recorded for 1903 years. Now we may infer that they were kept from the commencement of the empire, wherefore, adding these numbers together, we obtain once more the required 2234.

There is one king who may be considered almost as ancient as Uruk and Ilgi, who is also described by a title which Sir H. Rawlinson reads Apda Martu, and translates Ravager of the West. His name is Kudur Mapula or Mabuk. He has been supposed to represent the Chedorlaomer of Scripture, and to confirm this supposition it has lately been discovered that Mabuk is in the Hamite dialect what Laomer or El-ahmar, 'Rufus,' is in the Semitic. Few points in connection with the cuneiform discoveries can offer more interest than this, which leads us at once up to Abraham, and, as it were, makes us spectators

of the battle which he fought for the deliverance of Lot. The father of Kudur, whom he seems to have succeeded, was Sinti-shil-khak, the last element in whose name appears again in that of the Ethiopian king Tir-khak, or Tir-hakah. After Kudur Mapula, but with a considerable interval, we must place the Ismi-dagon before mentioned, whose date can be obtained approximately from the Assyrian inscriptions. In the title of this king Babylon is not yet noticed, but mention is made of Niffer, from which circumstance we may infer that in his age the cities of Babylonia proper had risen to metropolitan importance, while, before his time, the southern portion of the province was exclusively possessed of that dignity. The son of Ismi-dagon was the builder of the great cemeteries, the remains of which are still to be seen in the mounds at Mughair. He is called the governor of Hur. It may readily be supposed that his name is difficult to read with certainty; Rawlinson gives it as Ibil-anuduma. Nothing is known of this king's son and successor, and the name which is read as Gurguna is extremely doubtful. It is equally uninteresting and unprofitable to record the uncertain names of the rest of this line of kings,—nothing is known of their achievements. The only feature to be noticed is the frequent occurrence of the word for the moon-god as an element in their own names. This fact shews us very plainly the estimation in which the worship of the heavenly bodies was held at that early time, though it is not easy to assign a reason for the prevalence of the word in the particular instances where it occurs. It appears that about 2234 the inhabitants of southern Babylonia, who were of Cushite origin, and therefore of the same ethnic stock with the first colonists of Arabia and Ethiopia, acquired some sort of supremacy over the other tribes who were settled in the districts of Babylonia. Very good reasons have been advanced by Rawlinson for connecting in one common origin the inhabitants of southern Babylonia with those of Arabia and Ethiopia. This common origin indeed is indicated in the account of Gen. x. 6, which tells us that Cush and Mizraim were brothers, while Nimrod, the great father of the Chaldean race, was descended from Cush.

A glance at the scheme given by Berosus shews us that the earliest occupants of Babylonia, leaving out the mythical Chaldean dynasty, were Medes, who in the twenty-third century B. C. were displaced by a primitive Hamite dynasty, probably represented in the Bible by Nimrod, and embracing perhaps the two monumental kings Uruk and Ilgi. It was by these kings that the cities named in Genesis as forming the kingdom of Nimrod are supposed to have been founded. The period assigned by Berosus to this dynasty, from 2234 to 1976, is in accordance with the dates obtained from the monuments. A break may be supposed to have occurred at the termination of this period, when a change of dynasty took place, and the Hamite kings were displaced by Chaldeans, who appear to have emigrated from Susiana to the Euphrates. This was the commencement of the great Chaldean dynasty of Berosus, which lasted for 458 years, till B. C. 1578. The leader of these Chaldeans from Susiana was perhaps the Chedorlaomer of Scripture, though a difficulty occurs in his identification, inasmuch as in Genesis he is called king of Elam, the Elamites being a people of Semitic origin, while the inscriptions of Susa appear to be Hamitic. Col. Rawlin-

son, however, suggests that in the earliest times there may not have been so very marked a difference between the Hamite and Semitic tongues. It is to the line of kings thus supposed to commence with Chedorlaomer that the names referred to above as those of his successors are to be assigned. Next to nothing is known of the history of these kings. Their names very doubtfully read, together with certain territorial titles, are all that remain to assure us that they ever existed. This second Chaldean dynasty of Berossus was succeeded, according to him, in 1518, by what he calls an Arab dynasty, of which, however, no traces have been discovered on the monuments. Mention indeed is often made in the Assyrian inscriptions of several Arab tribes who attained distinction and importance, and in the time of Sargon some had even passed into Media and became known as the Arabs of the East, but there is no evidence of an Arabian line of kings ruling over Babylonia, and at present the testimony of Berossus on this subject is unconfirmed. Of the Assyrian dynasty which, according to this historian, succeeded the Arabian, notice is made under the article Assyria. As therefore during the ascendancy of the Assyrian power, Babylonian history was merged in that of Assyria, we must pass on to the period at which Babylon again became dominant, which dates from the so-called era of Nabonassar, or 747 B. C. The origin of the change of events at Babylon, resulting in the accession of Nabonassar to the throne, is not ascertained; neither is it definitely known who Nabonassar was or how he raised himself to the throne.

Later History.—It seems that in some way the establishment of the lower Assyrian dynasty under Tiglath-pileser was connected with the successful movement of Nabonassar at Babylon, but we must wait for subsequent discoveries to enlarge our information on this point. It is equally a matter of uncertainty whether or not Nabonassar secured the throne to his posterity. Four insignificant names follow his in the list of Ptolemy, but the fifth king is more worthy of consideration. This is Mardocepalus, the Merodach-Baladan of Isaiah. Of him we know from the inscriptions that he was attacked by Sargon in his twelfth year, who conquered and expelled him from his kingdom, when he either assumed the crown himself, or gave it to Arceanus, one of his sons. Scripture informs us that at an earlier period Merodach-Baladan had been moved by curiosity concerning the astronomical wonder that had happened to Hezekiah, and consequently had sent ambassadors to him for the professed purpose of making inquiries about it, and congratulating him on his recovery. Probably, however, he meant more than this by such an embassy, and perhaps a design was entertained of forming a league with those powers to whom Assyria was likely to be obnoxious or dangerous; and it may have been in consequence of his acting on such a design that Sargon was induced to chastise him in the way he did. It was, however, only for a time that Mardocepalus was deposed; he contrived to seat himself again on the throne, though but for half a year, for Sargon's more powerful son and successor, Sennacherib, attacked and defeated him, together with his allies, the Susianians, and he was obliged once more to flee for his life. After plundering the city Sennacherib placed on the throne Belibus or Elibus, who ruled at Babylon from 702 to 699. The party of Mar-

docepalus, however, appears to have regained strength once more, which was the cause of Babylonia being again invaded by Sennacherib, who removed Belibus, and put in his place his own son Asshur-Nadin. The period of the next few years is one of obscurity, as it does not appear whether Asshur-Nadin and his successors ruled in their own right, or were viceroys of Sennacherib; but about the year 680 we arrive at a time of more certainty, for it was at this period that Esarhaddon, the king of Assyria, resolved on reigning at Babylon as well as Nineveh, instead of placing a viceroy in the former city, as his predecessors had done. He may have held his court alternately at both places between 680 and 607, for many tokens of his rule have been found at Babylon, but that which is of special interest is the light this fact throws on the narrative of 2 Chron. xxxiii. 11-13, which states that the king of Assyria took Manasseh, the king of Judah, and carried him to Babylon. It is thus by the aid of cuneiform discoveries that we are enabled to explain how it was that a king of Assyria should take a captive prince to Babylon. Moreover, the accuracy of the sacred historian is confirmed, as Esarhaddon was the only Assyrian monarch who reigned both at Nineveh and at Babylon. The sons of Merodach-Baladan, who had the support of the Susianians, and still continued to annoy Esarhaddon in his residence at Babylon, were eventually removed, and thirteen years after his accession Esarhaddon felt himself sufficiently strong to appoint a viceroy in that city, which he intrusted to one Saosduchinus, who held the office for about twenty-eight years, and was succeeded by Ciniladanus, the last of the viceroys, and perhaps his brother. This man is said to have reigned for twenty-two years, but nothing is known of Babylonian history during that period. The next time that light breaks in upon it is when Babylon is about to rise to the proudest position she ever attained, and to enjoy that degree of prosperity and supremacy she had so long envied Nineveh. According to Abydenus, Nabopolassar was a general in the service of Saracus, the Assyrian monarch, and commissioned by him to oppose Cyaxares and his Medes in their advances on Nineveh. Proving treacherous, however, he went over to the army of the Median, who readily accepted his services, and consolidated his adherence by giving his daughter Amyitis to Nebuchadnezzar, the son of Nabopolassar. Cyaxares and Nabopolassar appear to have shared the conquered dominions between them, the former taking the northern and eastern portions of the Assyrian empire, while the valley of the Euphrates and Syria, Phœnicia, and Palestine fell to the lot of Nabopolassar. Josiah was at this time king of Judah; he was unaffected by the change of sovereigns 'beyond the river,' and therefore it is passed over without direct notice in Scripture, though we see that the Assyrian power was succeeded by the Babylonian in holding the sovereignty over Judæa. Nabopolassar very probably removed the mass of the inhabitants of Nineveh to Babylon, and employed them in the various works in which he and his son engaged. The chief events of his reign are the wars he made with Alyattes, king of Lydia, and with Neco, the son of Psammeticus, king of Egypt. In the former case he assisted Cyaxares the Mede, in the latter he was helped by Josiah, king of Judah who met his death at Megiddo

through devotion to his cause. After this battle Neco seems to have gained all the territories from the river of Egypt to the Euphrates, and on his return in triumph to Egypt to have deposed Jehoahaz and made Jehoiakim king in his stead. At this time Nabopolassar was unable, from sickness or old age, to endure the fatigues of a campaign, but in the fourth year of Jehoiakim he sent his son, Nabu-kuduri-uzur, with a large army, against Neco, who met him at Carchemish, but was completely routed. This is the battle spoken of in Jer. xli. 2, *seq.* The result of it was that all the territory as far as the river of Egypt was recovered, and that the king of Egypt came not any more out of his land. 2 Kings xxiv. 7.

Nebuchadnezzar was on the borders of Egypt when he heard of his father's death, after reigning twenty-one years. He returned with all speed to secure his succession to the throne, and immediately began to employ the host of captives he had accumulated, in those gigantic works which were the marvels of his own and succeeding times. These works consisted of enormous fortifications, in the form of an outer and an inner wall, the former of which enclosed a space of more than 130 square miles; an entirely new palace, which he completed in fifteen days, and of which the ruins are seen in the modern Kasr. The great canal, 400 miles long, running from Hit to the Persian Gulf, large enough for ships, and serving also for the purposes of irrigation and defence against the Arabs, besides the reconstruction of various cities of Babylonia, Borsippa, Sippara, Cutha, etc., on whose bricks his name is almost exclusively found. He also built the famous hanging garden, which was probably an artificial hill planted with trees, said to have been made in honour of his wife, the Median princess, to remind her of the mountainous and wooded scenery of her native country, together with various temples, remains of which still exist in the mound of Babil and the Birs-Nimrud.

But the attention of the king was not absorbed in such undertakings. Soon after his accession to the throne, Judæa and Phœnicia rebelled, and Nebuchadnezzar, with the aid of Cyaxares and the Medes, marched against the rebels, invested Tyre with a portion of his army, and with the rest besieged Jerusalem.

Jehoiakim, who had depended on the Egyptians, finding no help from them, surrendered, but was put to death by Nebuchadnezzar, who placed in his stead his son Jeconiah. He, however, probably shewing signs of disloyalty, was, after three months, deposed and carried captive to Babylon, while Zedekiah, his uncle, was placed on the throne. Tyre continued to resist all the king of Babylon's efforts to reduce it, and, in fact, was not taken till thirteen years after it had been first invested. Three years before its fall, Jerusalem had finally rebelled. The accession of Uaphris or Apries, or Pharaoh-Hophra, had inspired the Jews with further hopes of regaining their independence, and Zedekiah sent ambassadors to Egypt to solicit aid against the king of Babylon; but before his request was responded to, Nebuchadnezzar had besieged the city. It is true that, on the report of the Egyptian's approaching, he raised the siege to meet them, Jer. xxxvii. 5; but it was only to return again to capture the city, put out the eyes of Zedekiah, and carry him captive to Babylon. This was in the nineteenth year of Nebuchadnezzar,

the capture of Tyre was in the following year. The whole extent of his reign was forty-two years, but for a period of seven years, probably some time subsequent to the captivity, he was the subject of that dreadful affliction recorded by Daniel. As yet no allusion to this event has been found in the monuments. He appears to have reigned some time after his recovery from what is said, Dan. iv. 36, and the year of his death was B.C. 561. He was succeeded by his son Evil-Merodach, who 'spoke kindly to Jehoiachin, and did lift up his head out of prison.' His reign, however, lasted but two years, when he is said to have been murdered by Neriglissar or Nergal-shar-azzar, the husband of his sister. Of this monarch little is known. It is possible, but not certain, that he was the Nergalsharezar of the taking of Jerusalem; if so, it must have been nearly thirty years before. He reigned but three years and a half, and was succeeded by his son Laborosoarchod or Labosso-racus. This king, who was but a child, reigned only for nine months. Some of his courtiers made a conspiracy, and murdered him, and then elected one of their own number to the throne. This was Nabonidus, Nabonadius or Labynetus, who began to reign, B.C. 555, shortly before the war between Cyrus and Croesus. He was persuaded to join a league with Egypt and Lydia against the rising power of Persia, and upon the fall of Croesus would probably have come to his assistance if the movements of Cyrus had not been too rapid for him. As it was, the principal effect that this event had upon him was to increase his diligence in the fortification of his own city. The works attributed by Herodotus to Nitocris are most probably to be assigned to him; and, as Babylon was not besieged till fifteen years after the fall of Croesus, he had abundance of time to prepare for any enemy, both in the way of fortification, and also in that of laying up abundance of provision against a siege. His name is found stamped upon the bricks of the river walls ascribed by Herodotus to Nitocris. When Cyrus appeared before the city, he had only to fight one battle, and the Babylonians retreated to their strongholds, trusting, perhaps, too exclusively to those very fortifications and defences which Nabonadius had made so fatally strong. We know not how long the siege lasted, but, after waiting for a religious festival, Cyrus put in action the stratagem of turning the river, and thus, contrary to all human foresight, brought about the fulfilment of the predictions in Jer. li.—contrary to all human foresight, for there were many possibilities of defeat in the scheme of Cyrus, and any one of them would have proved fatal. A flood-gate might have broken, or a dyke burst, and swamped a large portion of his army, or the sinking of the water might have been observed, and then the water-gates of the city would have been closed, and his design frustrated. In the capture of Babylon was fulfilled the prophecy of Isaiah, ch. xxi., spoken 170 years before, while in the present condition of the site we observe the truth of the yet more magnificent chapters xiii. and xiv. It is but natural to suppose that the city was taken at the extremities, before the inhabitants of the centre were aware of or suspected it. In the words of Jeremiah, 'One post ran to meet another, and one messenger to meet another, to shew the king of Babylon that his city was taken at one end.' Nabonadius, indeed, is supposed to

have been at Borsippa when Babylon was taken, having fled thither on the defeat of his army by Cyrus before the walls. It seems, however, that he left in Babylon his son Bil-shar-uzar, whom he had a few years before admitted to a share in the government, and thus the accounts of Berosus and Daniel, hitherto at variance, may be reconciled. It was Belshazzar who spent the time which ought to have been devoted to vigilance, in feasting and revelry, and who was in Babylon when the Medes took it. It was Nabonadius who was really the king, but at this time was shut up in Borsippa with his army. Upon hearing of the calamity that had befallen his empire and his son, Nabonadius surrendered himself on the approach of Cyrus, who, having orders to destroy the fortifications of the captured city, had marched upon Borsippa. Cyrus treated him well, and, according to Berosus, he died there. After this, Babylon twice sustained a siege in the reign of Darius Hystaspis, and once in that of Xerxes. It may well be supposed to have suffered in all these attacks, but it still continued to be the second city of the Persian empire till the time of Alexander. Had his life not been cut short, he intended to have restored it to its ancient splendour, and made it the capital of his vast dominions; but henceforth Babylon gradually decayed. In the time of Strabo and Diodorus it was in ruins, but Jerome, in the fourth century, was told that it had been converted into a paradise for the Persian kings, and that the walls had been repaired in order to preserve the game. What is its present condition and aspect has been shewn above. Such is the end of this devoted city, 'the glory of kingdoms, the beauty of the Chaldees' excellency,' which has become 'as when God overthrew Sodom and Gomorrah.'

The writer is under great obligations to the various essays on the subject in vol. i. and ii. of Rawlinson's *Herodotus*; but see also Ker Porter's *Travels*; Rich's *Memoir on Babylon*; Winer's *Wörterbuch*; Layard's works; Rawlinson's *Notes on the Early History of Babylonia*; Loftus' *Chaldea*; Oppert's *Rapport*; M. Niebuhr's *Geschichte Asshur's*; etc. etc.—S. L.

BACA, VALLEY OF (בַּכָּה עֵמֶק; Sept. κοιλὰς τοῦ κλανθμῶνος). In Ps. lxxxiv. 6, the writer speaks of the blessedness of those who passing 'through the valley of Baca make it a well.' It is probable that there was some place actually bearing this name, to which reference is here made; though the LXX. seem to have regarded Baca as only an appellative from בָּכָה *tears*, and with this agree the Vulg., *in valle lacrymarum*, and all the ancient versions. A common opinion is that בַּכָּה is the mulberry tree, and that the valley was so called from its being filled with trees of this sort. As this tree probably got its name from the falling of drops, like tears, from its wounded leaf, the meaning would even, on this interpretation, come to much the same as the former. It is probable, however, that there is really no reference to the Baca-tree here. Without relinquishing the opinion that there was a place actually bearing the name of the Valley of Weeping (Burckhardt mentions a Wady Baka, or Valley of Weeping, which has its name from the fact that a Bedouin, fleeing before an enemy, lost his dromedary here, and, as he could not keep up with his companions, sat down and wept), we may regard this name as intro-

duced by the Psalmist with a special reference to a period of sorrow and gloom through which those he refers to pass, and which he places in contrast with the joy of Zion; comp. Ps. cxxvi. 5, 6, and the use of the phrase 'valley of the shadow of death,' Ps. xxiii. 4. A valley was symbolical of depression, and a valley of tears would readily symbolize a season in which grief and misery were added to depression. (See Hengstenberg, *in loc.*)—W. L. A.

BACCHIDES (βακχίδης), an officer of the king of Syria, who had occupied the position of the king's friend to Antiochus Epiphanes, and was sent by Demetrius, his successor, to enforce the appointment of Alcimus as high-priest at Jerusalem, and to take vengeance on the Jews, who were under the leadership of Judas Maccabæus. Before this he held rule, ἐν τῷ πέραν τοῦ ποταμοῦ, that is, on the further side of the Euphrates, Mesopotamia. Coming into Judæa with a large body of troops, he endeavoured, first by deceit, and afterwards by open force, to subdue Judas, but without success. He then returned to the king, and Alcimus, whom he left to maintain his pretensions to the high-priest's office, soon followed him. On the defeat, by the Jews, of a force sent against them, under Nicanor, Bacchides and Alcimus were again despatched into Judæa with an army of picked men (τὸ δεξιὸν κέρας), through fear of whom the Jews, in large numbers, deserted from Judas, so that he was worsted and slain. Jonathan Maccabæus, who succeeded his brother, maintained his ground against the Syrian power so successfully, that Bacchides retired, on the death of Alcimus, and left the land in peace for two years. At the close of this period he returned, at the solicitation of the antipatriotic faction among the Jews; but being again successfully opposed by Jonathan, he made peace with him, and finally left the country, with Jonathan as its governor, under the Syrian king (1 Macc vii. 8-25; ix. 1-73; Joseph. *Antiq.* xii. 10, 11; xiii. 1). These events occurred B. C. 161-158.—W. L. A.

BACCHUS. This name appears in the A. V. as the equivalent of the Greek Διώνυσος, 2 Macc. vi. 7; xiv. 33. The latter occurs also in (the so-called) 3 Macc. ii. 29. In all these instances this mythic deity is named in connection with circumstances which would indicate that he was an object of special abhorrence to the Jews; for, in the first, it is stated that the Jews were compelled to go in procession to Bacchus; in the second, the erection of a temple to him is threatened in order to compel the priests to deliver up Judas to Nicanor; and in the third, the branding with the ivy leaf, sacred to him, is reported as inflicted on them by way of punishment. This falls in with what Tacitus says, that it was a mistake to imagine that, because the priests of the Jews accompanied their singing with flute and cymbals, and had garlands of ivy, and a golden vine was found in the temple, they worshipped Bacchus, for that this was not at all in accordance with their institutes (*nequaquam congruentibus institutis*, *Hist.* v. 5). As Bacchus was the god of wine, and in general of earthly festivity and jollity, and as his rites sanctioned the most frantic excesses of revelry and tumultuous excitement, he would necessarily be an object of abhorrence to all who believed in and worshipped Jehovah. Probably, also, the very fact that some things connected with

the Jewish worship had, as mentioned by Tacitus, and still more fully by Plutarch (*Symposiac.* iv. qu. 6), led to the supposition that they revered Bacchus may have produced in their minds a more determined recoil from and hatred of all pertaining to his name. (For the mythological history and attributes of Bacchus, see Smith's *Dict. of Biog. and Mythol.* s. v. Dionysus; Creuzer, *Symbolik und Mythologie*, pt. iii. bk. 3 ch. 2 of Moser's Abridgment; Moritz, *Mythol. of the Greeks and Romans*, E. T., p. 103.)—W. L. A.

BACHUR. [LEVITA.]

BAD. [BYSSUS.]

BADGER. [TACHASH.]

BAG, a purse or pouch (Deut. xxv. 13; Job xiv. 17; 1 Sam. xvii. 40; Luke xii. 33). The money deposited in the treasuries of Eastern princes, or intended for large payments, or to be sent to a government as taxes or tribute, is collected in long, narrow bags or purses, each containing a certain amount of money, and sealed with the official seal. As the money is counted for this purpose, and sealed with great care by officers properly appointed, the bag, or purse, passes current, as long as the seal remains unbroken, for the amount marked thereon. In the receipt and payment of large sums, this is a great and important convenience in countries where the management of large transactions by paper is unknown, or where a currency is chiefly or wholly of silver: it saves the great trouble of counting or weighing loose money. This usage is so well established, that, at this day, in the Levant, 'a purse' is the very name for a certain amount of money (now five pounds sterling), and all large payments are stated in 'purses.' The antiquity of this custom is attested by the monuments of Egypt, in which the ambassadors of

123.

distant nations are represented as bringing their tributes in sealed bags of money to Thothmes III.; and we see the same bags deposited intact in the royal treasury. When coined money was not used, the seal must have been considered a voucher not only for the amount, but for the purity of the metal. The money collected in the Temple, in the time of Joash, seems to have been made up into bags of equal value after this fashion; which were probably delivered, sealed, to those who paid the workmen (2 Kings xii. 10; comp. also 2 Kings v. 23; Tobit ix. 5; xi. 16).—J. K.

BAGOAS (Βαγώας), an eunuch, the servant of Holofernes (Judith xii. 11, etc.) The name was a common one for an eunuch (Comp. Ovid. *Am.* ii. 2, 1; Plut. *De fort. Alex.* ii. p. 337). It is said to mean eunuch in Persian (Plin. *H. N.* xiii. 9; Burmann on Ovid, *l. c.*); but this is a mistake (see Pott, *Etymol. Forsch.* I. xxxvii.)—W. L. A.

BAHAT (בַּהַת), a species of stone used in ornamental pavement (Esth. i. 6). The Sept. render it by *σμαραγδίνης*, and the Syr. *ܒܗܬܐ*. It was probably some species of marble, but of what kind we have no means of determining. Gesenius, from reference to the root בַּהַת, to *feign*, or *be white*, suggests that it was either white marble, or a composition that imitated marble.—W. L. A.

BAHURIM, a place not far from Jerusalem, beyond the Mount of Olives, on the road to the Jordan, where Shimei cursed and threw stones at David (2 Sam. xvi. 5; Joseph. *Antiq.* vii. 9. 4). [Here also was the house in the court of which was the well where Jonathan and Ahimaz were concealed from the servants of Absalom (2 Sam. xvii. 18); and here Phaltiel took leave of his wife Michal when she was claimed from him by David (iii. 16). All the notices we have of the place are thus connected with the history of David. It is also contained in the word Barhumite (2 Sam. xxiii. 31). [AZMAVETH.]

BAJITH (בַּיִת). This word occurs Is. xv. 2.

It does not appear that there was any place of this name. The Targum and Syriac V. connect this with the following word, omitting the copula, and read Beth-Dibon, and this is approved by Lowth and others; but for such an alteration of the text there is no authority. The Vulg. treats the word as an appellative, and translates *domus*; and this is followed by Vatablus, Pagnini, and others of the older interpreters, and by Gesenius, Zunz, Henderson, Knobel, etc., among the more recent. In this case it means the temple of some Moabitish idol, probably Chemosh, their great deity. In favour of this is the use of the definite article before בַּיִת, and the mention of בְּמוֹת in the parallelism, as well as the reference to the 'high place,' whither Moab had gone, in ch. xvi. 12. Ewald, however, takes the word as a proper name, and so does Vitringa and several of the older interpreters. On the ground of the conjunction of Dibon and Nebo with Beth-Diblatthaim, in Jer. xlviii. 22, some have fixed on this as the Beth here mentioned; but this is purely conjectural, and very precarious.—W. L. A.

BAKER, BAKING. [BREAD.]

BALAAM (בְּלַעַם; Sept. and Philo, Βαλαάμ; Josephus, Βδλαμωσ). The name is derived by Vitringa from בעל and עם, *lord of the people*; but by Simónis from בלע and עם, *destruction of the people*—an allusion to his supposed supernatural powers. His father's name בעור comes likewise from a root which means to *consume* or *devour*. It

is deserving of notice that בלע, the first king of the Edomites, was also the son of a בעור *Beor* (Gen. xxxvi. 32). In 2 Peter ii. 15, Balaam is called the Son of *Bosor*, which Gesenius attributes to an early corruption of the text, but Dr. Lightfoot considers it to be a Chaldaism, and infers from the apostle's use of it, that he was then at Babylon. (Works, vol. vii. p. 80: *Sermon on the way of Balaam*.) In Rev. ii. 14, 15, 'those that hold the doctrine of Balaam' are evidently distinguished from the Nico-

laitans. [NICOLAITANS.] The first mention of this remarkable person is in Numbers xxii. 5, where we are informed that Balak 'sent messengers unto Balaam the son of Beor to Pethor, which is by the river of the land of the children of his people.' Twelve Hebrew MSS. examined by Dr. Kennicott, two of De Rossi's, the Samaritan text, with the Syriac and Vulgate versions, instead of בני עמון 'children of his people,' read בני עמון 'children of Ammon.' This is approved by Houbigant and Kennicott, but is inconsistent with Deut. xxiii. 4, which informs us that Pethor was in Mesopotamia; for the Ammonites, as Rosenmüller observes, never extended so far as the Euphrates, which must be the river alluded to. If the received reading be correct, it intimates that Pethor was situated in Balaam's native country, and that he was not a mere sojourner in Mesopotamia, as the Jewish patriarchs were in Canaan. In Joshua xiii. 22, Balaam is termed 'the Soothsayer' כוֹסֵם, a word which, with its cognates, is used almost without exception in an unfavourable sense. Josephus calls him μάγιστρος ἀριστος, an eminent diviner (*Antiq.* iv. 6. sec. 2); and what is to be understood by this appellation may be perhaps best learned from the following description by Philo:— 'There was a man at that time celebrated for divination, who lived in Mesopotamia, and was an adept in all the forms of the divining art; but in no branch was he more admired than in augury; to many persons and on many occasions he gave great and astounding proofs of his skill. For to some he foretold storms in the height of summer; to others drought and heat in the depth of winter; to some scarcity succeeding a fruitful year, and then again abundance after scarcity; to others the overflowing and the drying up of rivers; and the remedies of pestilential diseases, and a vast multitude of other things, each of which he acquired great fame for predicting' (*Vita Moysis*, sec. 48). Origen speaks of Balaam as famous for his skill in magic, and the use of noxious incantations, but denies that he had any power to bless, for which he gives the following reason:— '*Ars enim magica nescit benedicere quia nec demones sciunt benefacere.*' (*In Num. Hom.* xiii.) Balak's language, 'I wot he whom thou blestest is blessed' (Numb. xxii. 6), he considers as only designed to flatter Balaam, and render him compliant with his wishes.

Of the numerous paradoxes which we find in 'this strange mixture of a man,' as Bishop Newton terms him, not the least striking is that with the practice of an art expressly forbidden to the Israelites ('there shall not be found among you one that useth divination קָסָם קְסָמִים, Deut. xviii. 10), for all that do these things are an abomination to the Lord'—ver. 12), he united the knowledge and worship of Jehovah, and was in the habit of receiving intimations of his will: 'I will bring you word again as the Lord (Jehovah) shall speak unto me' (Numb. xxii. 8). The inquiry naturally arises, by what means did he become acquainted with the true religion? Dr. Hengstenberg suggests that he was led to renounce idolatry by the reports that reached him of the miracles attending the Exodus; and that having experienced the deceptive nature of the soothsaying art, he hoped by becoming a worshipper of the God of the Hebrews, to acquire fresh power over nature, and a clearer insight into futurity. In the absence of more copious and precise information, we may reasonably conjecture that

Jacob's residence for twenty years in Mesopotamia contributed to maintain some just ideas of religion, though mingled with much superstition. To this source and the existing remains of Patriarchal religion, Balaam was probably indebted for that truth which he unhappily 'held in unrighteousness' (Rom. i. 18).

On the narrative contained in Numbers xxii. 22-35 a difference of opinion has long existed, even among those who fully admit its authenticity. The advocates for a literal interpretation urge, that in a historical work and a narrative bearing the same character, it would be unnatural to regard any of the occurrences as taking place in vision, unless expressly so stated;—that it would be difficult to determine where the vision begins, and where it ends;—that Jehovah's 'opening the mouth of the ass' (Numb. xxii. 28) must have been an external act; and, finally, that Peter's language is decidedly in favour of the literal sense: 'The dumb ass, speaking with man's voice, forbad the madness of the Prophet' (2 Pet. ii. 16). Those who conceive that the speaking of the ass and the appearance of the Angel occurred in vision to Balaam (among whom are Maimonides, Leibnitz, and Hengstenberg) insist upon the fact that dreams and visions were the ordinary methods by which God made himself known to the Prophets (Numb. xii. 6); they remark that Balaam, in the introduction to his third and fourth prophecies (xxiv. 3, 4, 15), speaks of himself as 'the man who had his eyes shut' (שָׁתַם = שָׁתַם and סָתַם, v. Lam. iii. 8), and who, on falling down in prophetic ecstasy, had his eyes opened; that he expressed no surprise on hearing the ass speak; and that neither his servants nor the Moabitish princes who accompanied him appear to have been cognizant of any supernatural appearance. Dr. Jortin supposes that the Angel of the Lord suffered himself to be seen by the beast, but not by the Prophet; that the beast was terrified, and Balaam smote her, and then fell into a trance, and in that state conversed first with the beast and then with the Angel. The Angel presented these objects to his imagination as strongly as if they had been before his eyes, so that this was still a miraculous or preternatural operation. In dreaming, many singular incongruities occur without exciting our astonishment; it is therefore not wonderful if the Prophet conversed with his beast in vision, without being startled at such a phenomenon (v. Jortin's 'Dissertation on Balaam,' pp. 190-194).

Balaam's prophecies, as Herder remarks (*Geist der Ebräischen Poesie*, ii. 221), 'are distinguished for dignity, compression, vividness, and fullness of imagery; there is scarcely anything equal to them in the later Prophets, and' (he adds, what few readers, probably, of Deut. xxxii., xxxiii., will be disposed to admit) 'nothing in the discourses of Moses.' Dr. Hengstenberg has ably discussed the doubts raised by Dr. de Wette and other German critics respecting the antiquity and genuineness of this portion of the Pentateuch. (Dr. Jortin's *Six Dissertations*, Lond. 1755, pp. 171-194; Bishop Butler's *Sermons at the Rolls Chapel*, Sermon vii. Bishop Newton *On the Prophecies*, vol. i. ch. 5. *Discours Historiques*, etc., par. M. Saurin, Amst. 1720, tome ii. *Disc.* 64; *Die Geschichte Bileams und seine Weissagungen erläutert*, von E. W. Hengstenberg, 1842, translated by J. E. Ryland, Edin. 1848; Blunt's *Undesigned Coincidences in the Writings both of the Old and New Testament*,

Lond. 1859, pp. 82-87; *Origenis Opera*, Berl. 1840, tom. x. pp. 168-258.]—J. E. R.

BALADAN. [MERODACH-BALADAN.]

BALAK (בַּלַּק, *empty*; Sept. Βαλάκ), son of Zippor, and king of the Moabites (Num. xxii. 2, 4), who was so terrified at the approach of the victorious army of the Israelites, who in their passage through the desert had encamped near the confines of his territory, that he applied to Balaam, who was then reputed to possess great influence with the higher spirits to curse them. The result of this application is related under another head. [BALAAM.] From Judg. xi. 25, it is clear that Balak was so certain of the fulfilment of Balaam's blessing, 'blessed is he that blest thee, and cursed is he that curseth thee' (Num. xxiv. 9), that he never afterwards made the least military attempt to oppose the Israelites (comp. Mic. vi. 5; Rev. ii. 14).—E. M.

BALANCE. The Hebrew word usually rendered 'balance' in the A. V. is מֹאזַנִים (moznaim, and Chald. מֹאזַנִין Dan. v. 27, LXX. σταθμός, σταθμῶν, *Vulg.* 'balances'), a word derived from נָסַף 'be weighed.' The dual form shews that the ordinary balance with scales is intended. Another word translated 'balance' is פֶּלֶס, LXX. ζύγρον, *Vulg.* statera (Ps. lxxii. 9), by which many suppose that an instrument like our *steelyard* is intended. That the *steelyard* was an invention known to the ancients is certain, for specimens of them, elaborately adorned, have been found at Pompeii and Herculaneum (*Mus. Borbon.* i. 55). Still it was probably not known until the Roman era, and indeed is said to have been called *Trutina Campana*, from its invention in Campania (*Dict. of Ant.*, s. v. *Trutina*). No traces of its use have been found either in the tombs or temples of Egypt or Assyria, and this is a sufficient proof that the instrument was unknown in those countries. The only reason for supposing that the Jews were acquainted with it is the contrast between פֶּלֶס and מֹאזַנִים in Is. xl. 12; Prov. xvi. 11. It is clear that our translators supposed the words to be synonymous, for they have rendered 'scales' by 'scales,' which would certainly have been the more appropriate rendering of 'moznaim.' The meaning of the verse is not that a 'steelyard' was used for the great mountains, while the lesser hills were all thrown together into 'scales,' but merely that God meted the elevations of the world with exactest reference to the good of its inhabitants. It is therefore better with Kimchi (on Is. xxvi. 7), to understand by פֶּלֶס, not a *steelyard*, but the *iron beam* of the balance. The variation of the term, although the same thing is meant, occurs constantly in Hebrew poetry. A third word, קֶנֶה 'reed,' is once rendered 'balance' (Is. xlvi. 6), and here undoubtedly the word means 'the beam,' which is used by synecdoche for the balance itself. Balances are only once mentioned in the New Testament (Rev. vi. 5, ζύγρον).

Before the introduction of coins balances were of the utmost importance for the weighing of gold and silver in every commercial transaction (Gen. xxiii. 16; xliiii. 21; Is. xlvii. 6; Jer. xxxii. 9), so that a balance was required to be of exquisite

delicacy. Allusions to this are found in Is. xl. 15, Ecclus. xxviii. 25, 'small dust of the balance,' 'a little grain of the balance;' and all dishonesty in the treatment of the scales is sternly forbidden and denounced (Lev. xix. 35; Hos. xii. 7; Am. viii. 5; Mic. vi. 11; Prov. xi. 1; xvi. 11). Hence arose the Rabbinic rule that the scales should be made of marble which could not wear away. In Dan. v. 27 some have seen an allusion to the curious Oriental custom of *weighing* a king against quantities of gold and silver, a custom mentioned in Sir T. Roe's *Voyage to India* (Taylor's *Calmat, Frag.* 186), but in all probability the expression is quite general. The phrase 'weights of the bag' (Prov. xvi. 11), alludes to the Jewish custom of carrying balances and weights at the girdle in a sort of pouch (Chardin's *Voyages*, iii. 422). The weights used were stones (מִנִּים), hence the marginal reading, 'a perfect stone,' in Prov. xi. 1. Fraudulent dealers carried *two sets* of stones, of which one was of lighter weight. This dishonesty is exposed in Deut. xxv. 13. 'Thou shalt not carry in thy bag (אֶבֶן וְאֶבֶן) a stone and a stone,' i. e., divers weights, as in A. V. For the earliest known weight קֶשֶׁטָה (Kesitah, Gen. xxxiii. 19; Job xlii. 11, 'piece' A. V., 'lamb' *marg.*), and all other particulars respecting weights as mentioned in the Bible, see WEIGHTS. The Jews do not seem to have had any officers whose especial duty it was to superintend weighing transactions like the *Quebbaneh* or public weighers of Egypt, the Greek ζυγόσταται (Artemid. ii. 37), or Latin *libripentes* (Plin. xxxiii. 3), but care was always taken that the money used should be of full weight' (Gen. xliii. 21).

The Jews must evidently from the earliest ages have been acquainted with balances of ingenious construction, for they were known to the Egyptians earlier than to other nations, although even among the Greeks, the invention of a particular kind of balance (where the equalization of opposite lots is ascertained by a plummet), is ascribed by Pliny to the mythical age of Daedalus. A balance of this kind was in use among the Egyptians as early as the time of Osirtasen, the cotemporary of Joseph.

In Sir G. Wilkinson's *Anc. Egypt* will be found a description of several balances of great antiquity. In the common balance 'the beam passed through a ring suspended from a horizontal rod immediately above and parallel to it, and when equally balanced, the ring, which allowed the beam to play freely, shewed when the scales were equally poised, and prevented the beam from tilting when goods were taken out of one scale and yet suffered to remain in the other. To the lower part of the ring a small plummet was fixed, and this being touched and found to hang freely, shewed, without looking at the beam, that the weight was just' (*Anc. Egypt*, iii. 239, and Plate 234). A figure of Thoth, under the shape of a baboon, was often placed at the top of the balance as an emblematical ornament; and the instrument occasionally appears in death scenes as a type of judgment (*Ibid.* and ii. 10).

It is probable that the Jews knew the constellation *Libra* as one of the signs of the Zodiac. (2 Kings xxiii. 5; Job xxxviii. 32.) [ASTRONOMY.]—F. W. F.

BALDNESS (קָרְחָה; Sept. φαλάκρωσις, φαλάκρωμα) may be artificial or natural. Artificial baldness, caused by cutting or shaving off the hair of

the head, a custom among all the ancient and Eastern nations, in token of mourning for the death of a near relative (Jer. xvi. 6; Amos viii. 10; Micah i. 16), Moses forbade to the Israelites (Deut. xiv. 1), probably for the very reason of its being a heathen custom; for a leading object of his policy was to remove the Jews as far as possible from the ways and customs of the surrounding nations. Natural baldness, though Moses did not consider it as a symptom of leprosy, and declared the man afflicted with it to be clean and sound (Lev. xiii. 40, *sq.*), yet was always treated among the Israelites with contempt (*ibid.*), and a bald man was not unfrequently exposed to the ridicule of the mob (2 Kings ii. 23; Is. iii. 24; comp. Suet. *Cæs.* 45; *Domit.* 18); perhaps from the suspicion of being under some leprous taint, as the Hebrew word קרוח originally implied an *ulcer*, or an *ulcered person*. The public prejudice thus entertained against a bald-headed man was perhaps the main reason why he was declared unfit for the priestly office (Lev. xxi. 20; *Mishn. tit. Bechoroth*, vii. 2). [HAIR].—E. M.

BALM. [TSORI.]

BAMAH (במיה), a *height* or *high place*. This word occurs as a proper name, Ez. xx. 29. It is more probably, however, merely an appellative. The passage is to the last degree obscure; but there seems no reason to suppose that any place called Bamah is referred to. The 'high place' of the latter clause is parallel to the 'high place' of the former.—W. L. A.

BAMOTH (במות, pl. of the preceding), called more fully BAMOTH HAGGAY, or B. of the valley (Num. xxi. 19, 20), a place in Moab which formed one of the stations of the Israelites in their journey through the wilderness. It is commonly regarded as the same place which is elsewhere called Bamoth Baal (Josh. xiii. 17; comp. Num. xxii. 41), in the territory of Reuben. It has been conjecturally identified with the place now called Wâleh, on the Wadi Wâleh (Kruse ap. Seetzen. *Reise*, iv. 225).—W. L. A.

BANI (בני, *built*; Sept. *Bavi*, *Bovi*, *Barovi*), the name of one of David's mighty men (2 Sam. xxiii. 36), and of several other persons mentioned in Scripture (1 Chron. vi. 46; ix. 4; Neh. iii. 17; ix. 4, 5; x. 14; xi. 22; Ezra ii. 10 (called Binnui, Neh. vii. 15); x. 29, 34, 38; Neh. viii. 7; x. 15). Whether these are different persons, or repetitions of the same, cannot always be satisfactorily determined.

BANNER. [STANDARDS.]

BANOLAS, LEON DE. [RALBAG.]

BANQUETS. The entertainments spoken of in Scripture, on however large a scale, and of however sumptuous a character, were all provided at the expense of one individual; and the *επαυος* of the Greeks, to which every guest present contributed his proportion, being apparently unknown to the Jews, or at least practised only by the humbler classes, as some suppose that an instance of it occurs in the feast given to our Lord, shortly before his Passion, by his friends in Bethany (Matt. xxvi. 2; Mark xiv. 1; comp. with John xii. 2). Festive meetings of this kind were held only towards

the close of the day, as it was not till business was over that the Jews freely indulged in the pleasures of the table; and although in the days of Christ these meals were, after the Roman fashion, called *suppers*, they corresponded exactly to the dinners of modern times, the hour fixed for them varying from five to six o'clock P.M., or sometimes later.

On occasions of ceremony the company were invited a considerable time previous to the celebration of the feast; and on the day and at the hour appointed, an express by one or more servants, according to the number and distance of the expected guests, was despatched to announce that the preparations were completed, and that their presence was looked for immediately (Matt. xxii. 8, Luke xiv. 17). (Grotius, *in loc.*; also Morier's *Journey*, p. 73.) This custom obtains in the East at the present day; and the second invitation, which is always verbal, is delivered by the messenger in his master's name, and frequently in the very language of Scripture: 'Behold I have prepared my dinner; my oxen and fatlings are killed, and all things are ready' (Matt. xxii. 4). It is observable, however, that this after-summions is sent to none but such as have been already invited, and have declared their acceptance; and, as in these circumstances, people are bound by every feeling of honour and propriety to postpone all other engagements to the duty of waiting upon their entertainer, it is manifest that the vehement resentment of the grandee in the parable of the great supper, where each of the guests is described as offering to the bearer of the express some frivolous apologies for absence, was, so far from being harsh and unreasonable, as infidels have characterized it, fully warranted and most natural according to the manners of the age and country. By accepting his invitation they had given a pledge of their presence, the violation of which on such trivial grounds, and especially after the liberal preparations made for their entertainment, could be viewed in no other light than as a gross and deliberate insult.

At the small entrance door a servant was stationed to receive the tablets or cards of those who were expected; and as curiosity usually collected a crowd of troublesome spectators, anxious to press forward into the scene of gaiety, the gate was opened only so far as was necessary for the admission of a single person at a time, who, on presenting his invitation ticket, was conducted through a long and narrow passage into the receiving-room; and then, after the whole company were assembled, the master of the house shut the door with his own hands—a signal to the servant to allow himself to be prevailed on neither by noise nor by importunities, however loud and long continued, to admit the bystanders. To this custom there is a manifest reference in Luke xiii. 24, and Matt. xxv. 10 (Morier's *Journey*, p. 142).

One of the first marks of courtesy shewn to the guests, after saluting the host, was the refreshment of water and fragrant oil or perfumes; and hence we find our Lord complaining of Simon's omission of these customary civilities (Luke vii. 44; see also Mark vii. 4). [ANONTING.] But a far higher, though necessarily less frequent attention paid to their friends by the great, was the custom of furnishing each of the company with a magnificent habit of a light and showy colour, and richly embroidered, to be worn during the festivity (Eccles. ix. 8; Rev. iii. 4, 5). The loose and flowing style

of this gorgeous mantle made it equally suitable for all; and it is almost incredible what a variety of such sumptuous garments the wardrobes of some great men could supply to equip a numerous party. In a large company, even of respectable persons, some might appear in a plainer and humbler garb than accorded with the taste of the voluptuous gentry of our Lord's time; and where this arose from necessity or limited means, it would have been harsh and unreasonable in the extreme to attach blame, or to command his instant and ignominious expulsion from the banquet-room. But where a well-appointed and sumptuous wardrobe was opened for the use of every guest,—to refuse the gay and splendid costume which the munificence of the host provided, and to persist in appearing in one's own habiliments, implied a contempt both for the master of the house and his entertainment, which could not fail to provoke resentment—and our Lord therefore spoke in accordance with a well-known custom of his country, when, in the parable of the marriage of the king's son, he describes the stern displeasure of the king on discovering one of the guests without a wedding garment, and his instant command to thrust him out (Matt. xxii. 11). At private banquets the master of the house of course presided, and did the honours of the occasion; but in large and mixed companies it was anciently customary to elect a governor of the feast (John ii. 8; see also Ecclus. xxxii. 1), who should not merely perform the office of chairman, ἀρχιτρικλινος, in preserving order and decorum, but take upon himself the general management of the festivities. As this office was considered a post of great responsibility and delicacy, as well as honour, the choice which among the Greeks and Romans was left to the decision of dice, was more wisely made by the Jews to fall upon him who was known to be possessed of the requisite qualities—a ready wit and convivial turn, and at the same time firmness of character and habits of temperance [ARCHITRICLINUS]. The guests were scrupulously arranged according to their respective ranks. This was done either by the host or governor, who, in the case of a family, placed them according to seniority (Gen. xliii. 33), and in the case of others, assigned the most honourable a place near his own person; or it was done by the party themselves, on their successive arrivals, and after surveying the company, taking up the position which it appeared fittest for each according to their respective claims to occupy. It might be expected that among the Orientals, by whom the laws of etiquette in these matters are strictly observed, many absurd and ludicrous contests for precedence must take place, from the arrogance of some and the determined perseverance of others to wedge themselves into the seat they deem themselves entitled to. See Morier, *Second Journey*; Clarke, *Travels*; Malcolm, *Sketches of Persia*, i. ch. 9; Joseph. *Antiq.* xv. 2. The knowledge of these peculiarities serves to illustrate several passages of Scripture (Prov. xxv. 6, 7; Matt. xxiii. 6; and especially Luke xiv. 7, where we find Jesus making the unseemly ambition of the Pharisees the subject of severe and merited animadversion).

It would be difficult within a short compass to describe the form and arrangements of the table, as the entertainments spoken of in Scripture were not all conducted in a uniform style. In ancient Egypt, as in Persia, the tables were ranged along

the sides of the room, and the guests were placed with their faces towards the walls. Persons of high official station were honoured with a table apart for themselves at the head of the room; and in these particulars every reader of the Bible will trace an exact correspondence to the arrangements of Joseph's entertainment to his brethren. According to Lightfoot (*Exercit. on John* xiii. 23), the tables of the Jews were either wholly uncovered, or two-thirds were spread with a cloth, while the remaining third was left bare for the dishes and vegetables. In the days of our Lord the prevailing form was the triclinium, the mode of reclining at which is described elsewhere [ACCUBATION]. This effeminate practice was not introduced until near the close of the Old Testament history, for amongst all its writers prior to the age of Amos 𐤇𐤓, *to sit*, is the word invariably used to describe the posture at table (1 Sam. xvi. margin, and Ps. cxxviii. 3, implying that the ancient Israelites sat round a low table, cross-legged, like the Orientals of the present day), whereas ἀνακλινῶν, signifying a recumbent posture, is the word employed in the Gospel.

The convenience of spoons, knives, and forks being unknown in the East, or, where known, being a modern innovation, the hand is the only instrument used in conveying food to the mouth, and the common practice, their food being chiefly prepared in a liquid form, is to dip their thin wafer-like bread in the dish, and folding it between their thumb and two fingers, enclose a portion of the contents. It is not uncommon to see several hands plunged into one dish at the same time. But where the party is numerous, the two persons near or opposite are commonly joined in one dish; and accordingly, at the last Passover, Judas, being close to his master, was pointed out as the traitor by being designated as the person 'dipping his hand with Jesus in the dish.' The Apostle John, whose advantageous situation enabled him to hear the minutest parts of the conversation, has recorded the fact of our Lord, in reply to the question, 'Who is it?' answering it by 'giving a sop to Judas when he had dipped' (John xiii. 26); and this leads us to mention it as not the least among the peculiarities of Oriental manners, that a host often dips his hand into a dish, and lifting a handful of what he considers a dainty, offers the ψωμῖον or sop to one of his friends. However the fastidious delicacy of a European appetite might revolt at such an act of hospitality, it is one of the greatest courtesies that an Oriental can shew, and to decline it would be a violation of propriety and good manners (see Jowett's *Christian Researches*). In earlier ages, a double or a more liberal portion, or a choice piece of cookery, was the form in which a host shewed his respect for the individual he delighted to honour (Gen. xliii. 34; 1 Sam. i. 5; ix. 23; Prov. xxxi. 15; see Voller's *Grec. Antiq.* ii. 387; Forbes, *Orient. Mem.* iii. 187).

While the guests reclined in the manner described above, their feet, of course, being stretched out behind, were the most accessible parts of their person, and accordingly the woman with the alabaster-box of ointment could pay her grateful and reverential attentions to Jesus without disturbing him in the business of the table. Nor can the presence of this woman, uninvited and unknown even as she was to the master of the house, appear at all an incredible or strange circumstance, wher

we consider that entertainments are often given in gardens, or in the outer courts, where strangers are freely admitted, and that Simon's table was in all likelihood as accessible to the same promiscuous visitors as are found hovering about at the banquets and entering into the houses of the most respectable Orientals of the present day (Forbes, *Orient. Mem.*) In the course of the entertainment servants are frequently employed in sprinkling the head and person of the guests with odoriferous perfumes, which, probably to counteract the effects of too copious perspiration, they use in great profusion, and the fragrance of which, though generally too strong for Europeans, is deemed an agreeable refreshment (see Ps. xlv. 8; xxiii. 5; cxxxiii. 2).

The various articles of which an Oriental entertainment consists, bread, flesh, fish, fowls, melted butter, honey, and fruits, are in many places set on the table at once, in defiance of all taste. They are brought in upon trays—one, containing several dishes, being assigned to a group of two, or at most three, persons, and the number and quality of the dishes being regulated according to the rank and consideration of the party seated before it. In ordinary cases four or five dishes constitute the portion allotted to a guest; but if he be a person of consequence, or one to whom the host is desirous of shewing more than ordinary marks of attention, other viands are successively brought in, until, if every vacant corner of the tray is occupied, the bowls are piled one above another. The object of this rude but liberal hospitality is, not that the individual thus honoured is expected to surfeit himself by an excess of indulgence in order to testify his sense of the entertainer's kindness, but that he may enjoy the means of gratifying his palate with greater variety; and hence we read of Joseph's displaying his partiality for Benjamin by making his 'mess five times so much as any of theirs' (Gen. xliii. 34). The shoulder of a lamb, roasted, and plentifully besmeared with butter and milk, is regarded as a great delicacy still (Buckingham's *Travels*, ii. 136), as it was also in the days of Samuel. But according to the favourite cookery of the Orientals, their animal food is for the most part cut into small pieces, stewed, or prepared in a liquid state, such as seems to have been the 'broth' presented by Gideon to the angel (Judg. vi. 19). The made-up dishes are 'savoury meat,' being highly seasoned, and bring to remembrance the marrow and fatness which were esteemed as the most choice morsels in ancient times. As to drink, when particular attention was intended to be shewn to a guest, his cup was filled with wine till it ran over (Ps. xxiii. 5), and it is said that the ancient Persians began their feasts with wine, whence it was called 'a banquet of wine' (Esther v. 6).

The hands, for occasionally both were required, besmeared with grease during the process of eating, were anciently cleaned by rubbing them with the soft part of the bread, the crumbs of which, being allowed to fall, became the portion of dogs (Matt. xv. 27; Luke xvi. 21). But the most common way now at the conclusion of a feast is for a servant to go round to each guest with water to wash, a service which is performed by the menial pouring a stream over their hands, which is received into a strainer at the bottom of the basin. This humble office Elisha performed to his master (2 Kings iii. 11).

People of rank and opulence in the East frequently give public entertainments to the poor. The rich man, in the parable, whose guests disappointed him, despatched his servants on the instant to invite those that might be found sitting by the hedges and the highways—a measure which, in the circumstances, was absolutely necessary, as the heat of the climate would spoil the meats long before they could be consumed by the members of his own household. But many of the great, from benevolence or ostentation, are in the habit of proclaiming set days for giving feasts to the poor; and then, at the time appointed, may be seen crowds of the blind, the halt, and the maimed, bending their steps to the scene of entertainment. This species of charity claims a venerable antiquity. Our Lord recommended his wealthy hearers to practise it rather than spend their fortunes, as they did, on luxurious living (Luke xiv. 12); and as such invitations to the poor are of necessity given by public proclamation, and female messengers are employed to publish them (Hasselquist saw ten or twelve thus perambulating a town in Egypt), it is probably to the same venerable practice that Solomon alludes in Prov. ix. 3.—R. J.

BAPTISM (*βάπτισμα, βάπτισμος*), the act of baptizing (*βαπτίζω*), or the being baptized (*βαπτίζεσθαι*), is the designation of a rite instituted by our Lord Jesus Christ as the initiatory rite of his religion. It is administered by the application to the person of water, 'for (*eis*) the name of the Father, and of the Son, and of the Holy Ghost' (Matt. xxviii. 19). Respecting the meaning and intent of this ordinance, the proper mode of administering it, and the persons to whom it is to be administered, great differences of opinion have been entertained, which have led to keen and protracted controversies among the followers of Christ. It forms no part of the design of this article to attempt a decision of these controversies; but in a work such as this, a statement of the facts belonging to the subject, and of the opinions of different parties on the points controverted, seems imperatively required. In attempting to present this, we shall consider—

I. THE USAGE OF *βαπτίζω* BY THE CLASSICAL WRITERS.—No instance occurs in these writers of the use of *βάπτισμα*, and only one in a very late author (Antyllus) of the use of its equivalent *βάπτισμός*; but the verb occurs frequently, especially in the later writers. It is used to designate:—1. *The dipping of an object into water, or any other fluid, or quasi-fluid, for any purpose whatever:* as *βάπτισσον σεαυτὸν εἰς θάλασσαν*, dip yourself into the sea (for the purpose of bathing or washing), Plut. *Mor.*, p. 166 A.; *βαπτίζω τὸν Διόνυσον πρὸς τὴν θάλατταν*, *Ibid.*, p. 914. 2. *The immersing or sinking of an object:* as *οὐδὲ γὰρ τοῖς ἀκούξιμοις βαπτίζεσθαι συμβαίνει ἕξλων τρόπον ἐπιπολάζουσι*, where *βαπτίζεσθαι*, in the sense of 'immersed,' is contrasted with *ἐπιπολάζουσι*, in the sense of 'float;' *ἐν ὕδασι γενέσθαι τὴν πορείαν συνέβη, μέχρι ὀμφαλοῦ βαπτίζομενον*, being immersed up to the navel, Strabo, *Geogr.* xiv. p. 667; *μῦλις ἕως τῶν μαστῶν ὁ πεζὸς βαπτίζομενος διέβαινον*, *Polyb.* iii. 72. So Pindar says (*Pyth.* ii. 146), *ἀβάπτιστός εἰμι, φελλὸς ὧς*, where the cork of the fisherman is styled unbaptized, in contrast to the net which sinks into the water. In the same sense is the word used by the Anacreontic poet of Cupid, *ἐβάπτισ' εἰς τὸν οἶνον*, I immersed him in the wine,

Julian Ægypt. 5 (59) *Anacreont*, iv. 4, p. 52, ed. Lips. 1819. 3. *The covering over of any object by the flowing or pouring of a fluid on it; and metaphorically (in the passive), the being overwhelmed or oppressed:* thus, the Pseudo-Aristotle speaks of places full of bulrushes and sea weeds, which, when the tide is at the ebb, are not baptized (*i. e.*, covered by the water), but at full tide are flooded over (*Mirabil. Auscult.*, sec. 137, p. 50, in Westernman's edit. of the *Script. Rer. Mir. Gr.*); Diodorus Siculus (bk. i.) speaks of land animals being destroyed by the river overtaking them, and baptizing them (*διαφθέρεται βαπτίζουσα*); Plato and Athenæus describe men in a state of ebriety as baptized (*Sympos.*, p. 176 B.; and *Deipnos*, v.), and the former says the same of a youth overwhelmed with sophistry (*Euthyd.* 277 D.); Plutarch denounces the forcing of knowledge on children beyond what they can receive as a process by which the soul is baptized (*De Lib. educ.*), and he speaks of men as baptized by debts (*Galba*, c. 21); Diodorus Sic. speaks of baptizing people with tears (bk. i. c. 73), and Libanius says, 'He who hardly bears what he now bears, would be baptized by a little addition' (*Epist.* 310), and 'I am one of those baptized by that great wave' (*Ep.* 25). 4. *The washing or wetting of an object, whether by aspersion or immersion;* as Ἰσκόδς βαπτίζῃ, δύνα δὲ τοι οὐ θέμεις ἔσθι, 'As a bladder thou art washed (*i. e.*, by the waves breaking over thee), but thou canst not go down' (*Orac. Sibyll. de Athenis*, ap. Plutarch. *Thesai*, 24).

From this it appears, that in classical usage βαπτίζω is not fixed to any special mode of applying the baptizing element to the object baptized; all that is implied by the term is, that the former is closely in contact with the latter, or that the latter is wholly in the former.

II. THE USE OF ΒΑΠΤΙΖΩ BY THE LXX.—Here the word occurs only four times, viz., 2 Kings v. 14, 'And Naaman went down and baptized himself (*ἐβαπτίσατο*) seven times in the river Jordan,' where the original Hebrew is טָבַל, from טָבַל to *dip, plunge, immerse*; Is. xxi. 4, 'Iniquity baptizes me (*ἡ ἀνομία με βαπτίζει*), where the word is plainly used in the sense of *overwhelm*, answering to the Heb. בָּעַל *to come upon suddenly, to terrify*; Judith xii. 7, 'She went out by night . . . and baptized herself (*ἐβαπτίσετο*) at the fountain;' and Ecclus. xxxi. [xxxiv.] 30, 'He who is baptized from a corpse' (*βαπτίζόμενος ἀπὸ νεκροῦ*), etc. In these last two instances the word merely denotes *washed*, without indicating any special mode by which this was done, though in the former the circumstances of the case make it improbable that the act described was that of *bathing* (comp. Num. xix. 19).

In the Greek, then, of the LXX., βαπτίζω signifies *to plunge, to bathe, or to overwhelm*. It is never used to describe the act of one who dips another object in a fluid, or the case of one who is dipped by another.

III. USAGE OF ΒΑΠΤΙΖΩ AND ITS DERIVATIVES IN THE N. T.—Confining our notice here simply to the philology of the subject, the instances of this usage may be classified thus:—

1. *The verb or noun alone, or with the object baptized merely:* as βαπτισθῆναι, Matt. iii. 13, 14; βαπτισθεῖς, Mark xvi. 16; βαπτίζων, Mark i. 4; βαπτισσονται, vii. 4; βαπτίζεις, John i. 25; ἐβαπτίσαι, 1 Cor. i. 14, etc.; βάπτισμα αὐτοῦ, Matt. iii. 7;

ἐν βάπτισμα, Eph. iv. 5; βάπτισμα, Col. ii. 12; 1 Pet. iii. 21, etc.; βαπτισμῶς ποτηρίων, Mark vii. 4, 8; βαπτισμῶν διδαχῆς, Heb. vi. 2; διαφόροις βαπτισμῶς, ix. 10.

2. *With addition of the element of baptism:* as ἐν ὕδατι, Mark i. 8, etc.; ἐν πνεύματι ἁγίῳ καὶ ὑδροῦ, Matt. iii. 11, etc.; ὕδατι, Luke iii. 16, etc. The force of ἐν in such formulæ, has by some been pressed, as if it indicated that the object of baptism was *in* the element of baptism; but by most the ἐν is regarded as merely the nota dativi, so that ἐν ὕδατι means no more than the simple ὕδατι, as the ἐν πλοίῳ of Matt. xiv. 13 means no more than the πλοίῳ of Mark vi. 32. See Matthiæ, sec. 401, obs. 2; Kühner, sec. 585, Anm. 2. The use of ἐν after βαπτίζω in relation to the element of baptism, is a departure from classical usage, according to which εἰς, or πρὸς, with the accusative, or the simple dative (though rarely) is used.* Only in one instance does the classical usage appear in the N. T., Mark i. 9, where we have εἰς τὸν Ἰορδάνην, and this can hardly be regarded as a real exception to the ordinary usage of the N. T., because εἰς here is local rather than instrumental. On this difference of usage stress has been laid as indicative of a difference of signification between βαπτίζω as used in the N. T., and as used by the classical writers. In connection with this may be noticed the phrases καταβαίνειν εἰς τὸ ὕδωρ, and ἀποβαίνειν ἐκ or ἀπὸ τοῦ ὕδατος. According to some, these decisively prove that the party baptized, as well as the baptizer, went down *into* the water, and came up *out* of it. But, on the other hand, it is contended that the phrases do not necessarily imply more than that they went to (*i. e.*, to the margin of) the water and returned thence.

3. *With specification of the end or purpose for which the baptism is effected:* This is usually indicated by εἰς: as βαπτίζοντες εἰς τὸ ὄνομα, Matt. xxviii. 19, and frequently; ἐβαπτίσθημεν εἰς χριστὸν . . . εἰς τὸν θάνατον αὐτοῦ, Rom. vi. 3, al.; εἰς τὸν Μωϋσῆν ἐβαπτίσθησαν, 1 Cor. x. 3; εἰς ἐν σώμα ἐβαπτισθήμεν, xii. 13; βαπτισθῆτω ἕκαστος . . . εἰς ἄφεσιν ἁμαρτιῶν, Acts ii. 38, etc. In these cases εἰς retains its proper significance, as indicating the *terminus ad quem*, and tropically, that for which, or with a view to which the thing is done; modified according as this is a person or a thing. Thus, to be baptized for Moses, means to be baptized with a view to following or being subject to the rule of Moses; to be baptized for Christ, means to be baptized with a view to becoming a true follower of Christ; to be baptized for his death, means to be baptized with a view to the enjoyment of the benefits of his death; to be baptized for the remission of sins, means to be baptized with a view to receiving this; to be baptized for the name of any one, means to be baptized with a view to the realization of all that the meaning of this name implies, etc. In one passage Paul uses ὑπὲρ to express the end or design of baptism, βαπτίζόμενοι ὑπὲρ τῶν νεκρῶν, 1 Cor. xv. 29; but here the involved idea of *substitution* justifies the use of the preposition. Instead of a preposition, the genitive of object is sometimes used, as βάπτισμα μετανοίας, Luke iii. 3, al.

* Meyer (on Matt. iii. 11) has adduced Polyb. v. 47. 2, and Odys. ix. 392, as instances of ἐν used by the classical writers after βαπτίζω. But in the former instance the verb used before ἐν is καταδύνω, and in the latter it is βάπτω.

= βάπτισμα εἰς μεταβολήν, the baptism which has μεταβολή as its end and purpose.

4. *With specification of the ground or basis on which the baptism rests.*—This is expressed by the use of ἐν in the phrases ἐν ὄνοματι τίνος, and once by the use of ἐπὶ with the dative, Acts ii. 38: 'to be baptized on the name of Christ, i. e., so that the baptism is grounded on the confession of his name' (Winer, p. 469). Some regard these formulæ as identical in meaning with those in which εἰς is used with ὄνομα, but the more exact scholars view them as distinct.

These two last-mentioned usages are peculiar to the N. T., and arise directly from the new significance which its writers attached to baptism as a rite.

Hitherto we have kept within the field of pure philology; we must now advance to the consideration of baptism as an act. And here it may be of advantage to consider the instances in the N. T. in which baptism is used in a non-ritual sense before we proceed to notice it as a rite.

IV. NON-RITUAL BAPTISMS MENTIONED IN THE N. T.—These are:—

1. The baptism of *utensils and articles of furniture*; Mark vii. 4, 8.

2. The baptism of *persons*; Mark vii. 3, 4; Luke xi. 38, etc.

These are the only instances in which the verb or noun is used in a strictly *literal* sense in the N. T., and there may be some doubt as to whether the last instance should not be remanded to the head of ritual baptisms. These instances are chiefly valuable as bearing on the question of the *mode* of baptism; they shew that no special mode is indicated by the mere use of the word baptize, for the washing of cups, of couches, and of persons, is accomplished in a different manner in each case: in the first by dipping, or immersing, or rinsing, or pouring, or simply wiping with a wet cloth; in the second by aspersion and wiping; and in the third by plunging or stepping into the bath.

3. *Baptism of affliction*: Mark x. 38, 39; Luke xii. 50. In both these passages our Lord refers to his impending sufferings as a baptism which he had to undergo. Chrysostom, and some others of the fathers, understand this objectively, as referring to the purgation which his sufferings were to effect (see the passages in Suicer, *Thes. s. v. βάπτισμα*, i. 7); but this does not seem to be the idea of the speaker. Our Lord rather means that his sufferings were to come on him as a mighty overwhelming torrent (see Kuinoel on Matt. xx. 22, 23; Blomfield, *ibid.*). Some interpreters suppose there is an allusion in this language to submersion as essential to baptism (see Olshausen *in loc.*; Meyer on Mark x. 38); but nothing more seems to be implied than simply the being overwhelmed in a figurative sense, according to what we have seen to be a common use of the word by the classical writers.

4. *Baptism with the Spirit*: Matt. iii. 11; Mark i. 8; Luke iii. 16; John i. 33; Acts i. 5; xi. 16; I Cor. xii. 13. In the first of these passages, it is said of our Lord that he shall baptize with the Holy Spirit and with fire. Whether this be taken as a hendiadys = the Spirit as fire, or as pointing out two distinct baptisms, the one by the Spirit the other by fire; and whether on the latter assumption the baptism by fire means the destruction by Christ of his enemies, or the miraculous endowment

of his apostles, it does not concern us at present to inquire. Regarding the intent of baptism by the Spirit, there can be little room for doubt or difference of opinion; it is obviously a figurative mode of describing the agency of the Divine Spirit given through and by Christ, both in conferring miraculous endowments and in purifying and sanctifying the heart of man. By this Spirit the disciples were baptized on the day of Pentecost, when 'there appeared unto them cloven tongues of fire, and it sat upon each of them; and they were all filled with the Holy Ghost, and they began to speak with tongues as the Spirit gave them utterance' (Acts ii. 3, 4); by this Spirit men are saved when they are 'born again of water and of the Spirit' (John iii. 5); when they receive 'the washing of regeneration and renewing of the Holy Ghost' (Tit. iii. 5); and when there is the putting away from them of the filth of the flesh, and they have the answer of a good conscience towards God (1 Pet. iii. 21); and by this Spirit believers are baptized for one body, when through his gracious agency they receive that Spirit, and those impulses by which they are led to realize their unity in Christ Jesus (1 Cor. xii. 13).* Some refer to the Spirit's baptism also, the apostle's expression, ἐν βάπτισματι, Eph. iv. 5; but the common and more probable opinion is, that the reference here is to ritual baptism as the outward sign of that inner unity which the εἰς Κύριον and the μία πλῆσις secure and produce (see Alford, Ellicott, Meyer, Matthies, etc., etc., *in loc.*). In this figurative use of the term 'baptism,' the *tertium comparationis* is found by some in the Spirit's being viewed as the element *in* which the believer is made to live, and in which he receives the transforming influence; whilst others find it in the biblical representation of the Spirit as coming upon men, as poured upon them (Is. xxxii. 15; Zech. xii. 10; Joel ii. 28; Acts ii. 17), and as sprinkled on them like clean water (Ezek. xxxvi. 25).

5. *Baptism for Moses*.—In 1 Cor. x. 2, the apostle says of the Israelites: 'And they all received baptism ('the middle voice is selected to express a *receptive* sense,' Meyer) for Moses (εἰς τὸν Μωϋσῆν ἐβαπτίσθητε) in (or by, ἐν) the cloud, and in (or by) the sea.' In the Syr. V. εἰς τ. M. is translated ܡܘܫܐ ܘܡܝܐ, *per manum Moysis*; and this is followed by Beza and others. Others render *una cum Mose*; others *auspiciis Moysis*; others *in Mose*, i. e., 'sub ministerio et ductu Moysis' (Calvin), etc. But all these interpretations are precluded by the proper meaning of εἰς, and the fixed significance of the phr. βαπτίσειν εἰς in the N. T. The only rendering that can be admitted, is 'for Moses,' i. e., with a view to him, in reference to him, in respect of him. 'They were baptized for Moses, i. e., they became bound to fidelity and obedience, and were accepted into the covenant which God then made with the people through Moses' (Rückert *in loc.*; see also Meyer and Alford on the passage).

V. RITUAL BAPTISM.—In writing to the Hebrews the apostle makes mention of 'divers baptisms' (διαφόροις βαπτισμῶν) as amongst the carnal ordinances of the ancient dispensation.

* 'Dieses βαπτισθῆναι ἐν ἐνὶ πνεύματι ist εἰς ἐν σῶμα geschehen d. h. (εἰς telich), es hatte die Bestimmung dass wir Alle Einem Leib ausmachen sollten.'—Meyer, *in loc.*

That there were ritual baptisms practised by the Jews there can be no doubt, and the connection in which the apostle introduces the expression strongly favours the conclusion, that he refers under it to the sprinkling of the blood upon the altar, and the sprinkling of the unclean with the water of separation (Halley *on the Sacraments*, i. 383). Beyond the use of the word, however, it does not appear that any connection subsists between these baptisms and the ritual baptism of the N. T.

The earliest mention of baptism as a rite is in the account which the evangelists give of the working of John the Baptist. Whether there existed amongst the Jews previous to this an ordinance of baptism in the case of proselytes from heathenism, is a point which has been keenly discussed, but which it does not seem necessary to consider here. [PROSELYTE.] It may suffice to remark, that as John's baptizing appears to have excited no surprise among the Jews, but to have been regarded by them as the proper and accredited mode by which a new teacher might designate those who professed themselves his disciples, the presumption is, that the rite was one with which they were familiar from their own practice in regard to converts from heathenism.

1. *John's Baptism.*—John, the forerunner of Jesus, appeared preaching and baptizing; and great multitudes submitted to his baptism (Matt. iii. 1-6; Mark i. 4, 5; Luke iii. 3).

The baptism of John was a baptism with water unto repentance. He came announcing the near approach of the kingdom of heaven, and of the new state of things which would then be introduced; he rebuked the prevailing sins of his day with stern severity, and called upon all to repent; and he made disciples of those who came to him by baptizing them. He thus, as Paul says, 'baptized with the baptism of repentance, saying unto the people, that they should believe on Him who should come after him, that is, on Christ Jesus' (Acts xix. 4). It has not been supposed by any that John's baptism effected repentance in those on whom it was administered; on the contrary, this is strenuously denied even by those who are most disposed to attach to Christian baptism regenerating power (see Pusey, *Tracts for the Times*, No. 67).

The only difference of opinion as to the significance of John's baptism lies between those who maintain that it was a token of the sincerity of the parties who submitted to it—a sign that they had really repented and embraced John's doctrine; and those who find in it merely a badge of discipleship, a designation of those who enrolled themselves among John's followers, an outward expression of their willingness to be taught by him, with a view to that repentance and remission of sins which he preached. This latter view seems the more correct, because

—1. It preserves the just sense of the phrase βαπτίζω εἰς, used to describe the design of John's baptism (Mark i. 4); 2. It best accords with Paul's description of the intention of John's baptism, as announced by himself, viz., that they should believe on Him who was coming; and 3. It is supported by the historical facts, that the multitudes who received John's baptism were such, that it was impossible to ascertain by any just test the sincerity of each one's profession, whilst of not a few John himself knew that they were not real converts, but were in many cases very ignorant, and in some cases bad men (Matt. iii. 7-12; Luke iii. 7-17).

We cannot for a moment suppose that John would have administered what he regarded as a sign or token of actual conversion to persons whom he knew to be unconverted, or even to persons of whose conversion he possessed no credible evidence.

Among those who submitted to the baptism of John was our Lord himself. With the cavils and criticisms which this part of the evangelical narrative has provoked, we have here no concern [see JESUS CHRIST]; all that legitimately comes before us at present is involved in the question, Why did He who had no sins to confess, and no repentance to make, insist upon submitting to a baptism which was of repentance, with a view to the remission of sins? The proper answer to this question has been furnished by our Lord himself. In reply to the remonstrance of John, who humbly shrank from seeming to assume any semblance of superiority over Him whose advent he had come to announce, Jesus said, ἄφες ἄρτι· οὕτως γὰρ πρέπειον ἔσθιν ἡμῖν πληρῶσαι πᾶσαν δικαιοσύνην. The ἄρτι here has reference to the *existing* relations between John and Jesus, relations which were to be reversed when the latter should come forth as the Teacher of Israel, but which were still in force so long as the 'burning and shining light' of John's ministry was in the ascendant, whilst that of Jesus was still beneath the horizon. And this may suggest to us the true reason why our Lord sought John's baptism, as expressed by his own words. Our Lord appeared as a Jew, subject to all the divine ordinances; in the mission and working of John He recognized a divine ordinance, part of that δικαιοσύνη which every Jew was bound to observe; through it was the divinely appointed transit to the Messianic dispensation; and through it consequently He who had come to inaugurate and announce that dispensation must needs pass, that as God's servant He might fulfil all the Father's will. In this sense our Lord's baptism by John had the same significance that the baptism of others by John had; it was a confession of submission to John's teaching, and a profession of readiness for the coming dispensation. Jesus, who had begun his earthly career as a disciple of Moses, became a disciple of John when he appeared as the herald of the economy which was to supersede that of Moses; and so passed on to his own high place as the author and administrator of the new economy by the path which God had seen meet to appoint. Had the baptism of John been a sign or seal of repentance, it could not have been submitted to by Him who knew no sin; but as a mere outward designation of submission to John's teaching, and acceptance of his announcement that the kingdom of the Messiah was coming, and of a consequent change from Judaism towards (εἰς) Christianity, it could be properly received by Him; and he saw meet to receive it, that he in receiving it, and John in administering it, might fulfil all that God had appointed.

It has been a point much debated whether John's baptism was the same as that administered by the disciples and apostles of Christ, or different from it. What has lent some keenness to the discussion of this question is, that, on the one hand, it enters into the controversy between the Catholics and the Reformers, the Anglicans and Evangelicals, respecting the efficacy of the sacraments, and, on the other, touches the question whether we, as Christ's

followers, are baptized with the same baptism as that to which our Lord submitted. By most, the identity of the two baptisms is denied; by the Sacramentarians, because, as John's baptism confessedly did not effect a spiritual change, if it is to be viewed as identical with Christian baptism, it would follow that neither does the latter effect a spiritual change; and by others for various reasons. The decision of the question depends mainly upon three considerations. 1. When John says, 'I baptize with water unto repentance, but He that cometh after me is mightier than I. . . . He shall baptize you with the Holy Ghost and with fire (Matt. iii. 11); does he intend by the concluding clause to describe the baptism by water, which the disciples administered in obedience to Christ's command, or that inner spiritual baptism which Christ reserves to himself? If the former, then John undoubtedly asserts a radical difference between his baptism and Christian baptism, but he does so by ascribing direct saving agency to the act of baptism as administered by the followers of Christ; so that those who accept this argument for the difference of the two must accept it as necessarily involving the doctrine of baptismal salvation. On the other hand, if the latter of the alternative interpretations be taken, the passage must be held as proving nothing to the point, its decision attaching to a matter not in dispute, viz., the inferiority of ritual to spiritual baptism. 2. As John baptized for a Christ who was to come, and the apostles baptized for a Christ who had come, it has to be determined whether these two ends were not so different as to constitute a difference in the baptisms. Those who would assimilate the two contend that both were baptisms for the same Christ, and that the fact of the one being prospective and the other retrospective is a mere accident that cannot affect the essential identity of the two; but to this it is replied, that as John still stood on Old Testament ground, and baptized for the expectation of a coming visible theocracy (see Neander, *Leben Jesu*, p. 57, E. T. p. 56), his conception of the Christ as the Theocratic King must have been so different from that entertained by the apostles, who preached Christ as the propitiatory and glorified Saviour, that we cannot regard his baptism, and that of the apostles, as really baptisms for the same Christ, the one being a baptism for a temporal Christ, the other being a baptism for a spiritual Christ. 3. In Acts xix. 5, we read that certain who had received John's baptism were rebaptized by Paul 'for the name of the Lord Jesus.' This fact has, from the earliest times, been urged as decisive of the question. There is, however, the counterfact to be dealt with, that the immediate disciples of our Lord seem to have received no other baptism than that of John, and we must consequently either conclude that they were not baptized at all, or admit the validity of John's baptism as equivalent to Christian baptism. Various attempts have been made to weaken the conclusiveness of the argument from the rebaptism of John's disciples. Among others, it has been ingeniously suggested that the disciples of John, who were rebaptized by Paul, had been baptized with John's baptism *subsequently* to Christ's death, when John's dispensation had passed away, and when, consequently, his baptism had become invalid; and that in this, and not in any intrinsic difference between John's baptism and that of Christ, lay the reason of their rebaptism (Halley,

Cong. Lect. on the Sacraments, vol. i. p. 198). But besides the want of any conclusive evidence in support of the supposition that these disciples of John had been baptized *after* the death of Christ, it may be argued, that even granting this supposition, the case would prove the very opposite of what it is adduced to prove, for it would prove that John's baptism was valid only so long as his dispensation lasted, but ceased to be so after it had passed; so that there was the same reason for rebaptizing one who had received John's baptism as there was for rebaptizing one who had been baptized as a proselyte under the Mosaic dispensation. The whole question is encompassed with difficulty; but the evidence, on the whole, seems in favour of the ancient opinion, that John's baptism was not Christian baptism, but one peculiar to and which terminated with his intermediate dispensation. (For a view of both sides of the question, see, on the one side, Hall's *Terms of Communion*, Works, vol. ii. p. 20, ff; and on the other, Halley's *Cong. Lect. on the Sacraments*, Lect. 4).

2. *Christian Baptism*.—During his personal ministry on earth, our Lord did not baptize with water; as it was his prerogative to give the higher and real baptism, that of the Spirit, it was probably not fit that He should administer the lower and merely ritual. His disciples, however, baptized, and doubtless in his name and into the faith of Him as the Messiah (John iv. 1, 2; comp. iii. 25, 26), though this can hardly be called Christian baptism. Properly speaking, 'Christian baptism was instituted when our Lord, after his resurrection, gave the commission to his apostles to 'go into all the world and preach the gospel to every creature.' He then authorized and enjoined upon them to 'teach (make disciples of, *μαθητεύσατε*) all nations, baptizing them for the name of the Father, the Son, and the Holy Spirit, teaching (*διδάσκοντες*) them to observe all things whatsoever He had commanded them' (Matt. xxviii. 19, 20; comp. Mark xvi. 15). In this commission the primary duty laid on the apostles was that of preaching the gospel; as a result of this was the disciplising of nations; and as consequent again upon this was the baptizing of them for the name of the Father, and the Son, and the Holy Ghost, and the teaching of them to observe all that Christ, as the Head of the new dispensation, had enjoined. All this lies so obviously on the mere surface of the passage, that no doubt or dispute can arise on any of these points. When, however, we come to ask, What is implied in discipleship? in what relation does baptism stand to the disciplising of nations? and what is intended by men being baptized for the name of the Father, the Son, and the Holy Ghost? differences of opinion make themselves apparent.

By a 'disciple' some contend is meant a man truly converted to God through faith in Jesus Christ; and they who hold this view regard baptism as a sign and oblation of such conversion in the case of those baptized. In opposition to this, others maintain that the state of discipleship into which nations are to be brought is simply that of learners in the school of Christianity; and they who take this view hold baptism to be, in relation to such, merely the designation of them as disciples, and an outward significant expression, on their part, of their willingness to submit to Christian teaching, so that it may be appropriately ad-

ministered to all who are brought under such teaching.

The baptismal formula, *els τὸ ὄνομα τοῦ Π. καὶ τοῦ Ῥ. καὶ τοῦ Ἄ. Π.*, has sometimes been interpreted as meaning no more than that baptism is administered by the authority of the Triune God; but this is now generally repudiated by interpreters as philologically inadequate. It has also been interpreted as denoting simply 'in cœtum Christianorum recipi' (Kuinoel on Matt. xxviii. 19); but this is at once set aside by the consideration that reception into the church is not an explanation of the baptismal formula, but a practical result consequent, among other things, on the rite itself. The opinion now most generally received is, that the name of the Father, Son, and Holy Ghost means the revealed fact, lying at the basis of Christianity, of the Three-One-God, and that to be baptized, *els, into, for, with respect to, or with a view to* this, means that by submitting to this rite men acknowledge this revealed fact, receive God thus revealed as their God, and profess willingness to be taught all that He has enjoined. The formula does not necessarily imply that all who receive baptism are true believers in the doctrines of Christianity; it implies no more than a willingness, and an obligation on their part, to submit to the teaching of these doctrines with a view to being ultimately saved by them. In connection with the preaching of the gospel, men become *μαθηταί*, and by baptism the *μαθητεύειν* is carried forward; for thereby they become bound to aim at the full apprehension of the revealed truth concerning God the Father, Son, and Holy Ghost, as the consummation of their faith and their salvation (See Meyer and Alford on Matt. xxviii. 16).

In fulfilment of this commission, the apostles went forth preaching, and baptizing, and teaching. With them preaching ever took the higher place; they regarded themselves as sent not to baptize, but to preach the gospel (1 Cor. i. 17); it was by the proclamation of the glad tidings of salvation, and not by any mere ritual observance, that men were to be saved. But when men were so far moved by their preaching as to become willing to submit to their teaching, and to Christ as the author of their religion, they baptized men, and thenceforward treated them as disciples or learners in Christ's school.

The baptisms recorded in the N. T. are those of the multitude on the day of Pentecost (Acts ii. 41); of the multitude in Samaria, among whom was Simon Magus (Acts viii. 12, 13); of the Ethiopian Eunuch by Philip (Acts viii. 36, 38); of Saul by Ananias (Acts ix. 18, 22, 16); of Cornelius and his company by Peter (Acts x. 47, 48); of Lydia and her household, and the Philippian jailor and his household, by Paul (Acts xvi. 14, 15; 33, 34); of the twelve disciples of John by Paul (Acts xix. 5); and of Crispus and Gaius, and the household of Stephanas, by Paul (1 Cor. i. 14, 16). These baptisms were generally performed 'for the name of Jesus Christ,' or simply 'for Christ,' because, in accepting Christ as their Lord and Teacher, men professed submission to all that constitutes Christianity.

As administered by the apostles, baptism had a clear and well understood significance, and their authority determined at once how and to whom it was to be administered. Since their day, however, much obscurity has gathered around these points,

and much difference of opinion and keen discussion has, in consequence, arisen in the Church.

Christians have entertained different views as to the design of Baptism. The principal are the following:—

1. *That it is a direct instrument of grace:* the application of water to the person by a properly qualified functionary being regarded as the appointed vehicle by which God bestows regenerating grace upon men. This general view assumes different modifications when the question what is implied in this regenerating grace comes to be determined. With one school it means the actual infusion into the soul of moral goodness (see *Council. Trident. Decreta*, Sess. iv. c. 2; *Catechs. Rom.* ii. 2, 50; Bellarmin, *De Baptismo*, c. 12; Pusey, *On Baptism; Tracts for the Times*, No. 67); with another it means a capacity conferred, which, if rightly used, will lead to salvation (*Wilberforce, Doctrine of Holy Baptism*); with a third it means an actual goodness hypothetically imparted to all baptized persons, but really received only by those predestinated to salvation (Faber, *Primitive Doctrine of Regeneration*; Mozley, *Prim. Doct. of Baptismal Regeneration*); and with a fourth it means simply a change of federal condition (*Waterland, Works*, vol. vi. p. 343-362; Bethell, *General View of the Doctrine of Regeneration in Baptism*, ch. 2).

2. *That though not an instrument it is a seal of grace;* divine blessings being thereby confirmed and obligated to the individual. This is the doctrine of the Confessions of the majority of the Reformed Churches.

3. *That it is neither an instrument nor a seal of grace, but simply a ceremony of initiation into Church membership.* This is the Socinian view of the ordinance. See *Racovian Catechism*, Qu. 345.

4. *That it is a token of regeneration;* to be received only by those who give evidence of being really regenerated. This is the view adopted by the Baptists.

5. *That it is a symbol of purification;* the use of which simply announces that the religion of Christ is a purifying religion, and intimates that the party receiving the rite assumes the profession, and is to be instructed in the principles of that religion. This opinion is extensively entertained by the Congregationalists of England. (See Halley's *Lectures on the Sacraments*; Godwin, *On Baptism*.)

Which of these views is to be preferred, we do not here attempt to decide. No distinct enunciation is given in the New Testament on the subject, and from apostolic practice little can be inferred, inasmuch as, from the peculiar circumstances in which the apostles stood, several of the above-named ends were usually combined together in each act of baptism. It was almost always in those days a form of profession, a sign of regeneration, and a symbolic announcement of the purifying character of the Christian religion.

Differences of opinion have also been introduced respecting the proper mode of baptism. Some contend that it should be by *immersion* alone; others, that it should be only by *affusion* or *sprinkling*; and others, that it matters not in which way it be done, the only thing required being the ritual application of water to the person. The first class appeal to the use of *βαπτίζω* by the classical authors, with whom they affirm it is always used in the sense of *dipping* or *immersing*; to the use

of the prepositions *ἐν* and *εἰς* in the N. T. in construction with this verb; and to such expressions as 'being buried with Christ in baptism,' etc., where they understand an allusion to a typical burial, by submersion in water. The second class rely upon the usage of βαπτίζω by the sacred writers, who, they allege, employ it frequently where immersion is not to be supposed as when they speak of 'baptism with fire,' and 'baptism with the spirit;' upon the alleged impossibility of immersing such multitudes as, we learn, were baptized at once in Jerusalem on the day of Pentecost; upon the supposed improbability of an Eastern female, like Lydia, allowing herself to be publicly immersed by a man whom she had never seen before; upon the language used by Paul at Philippi, when he commanded water to be brought into the room, that he might baptize the jailor and his family, language which, it is said, cannot be understood of such a quantity of water as would be required to immerse in succession a whole household; and upon the use of the term baptism, to designate what is elsewhere spoken of as the outpouring of the Spirit. The third class maintain, that, according to universal usage, βαπτίζω signifies simply *to wet*, and that the following preposition determines whether it is to be taken in the sense of wetting by immersion or not; they contend that βαπτίζω ἐν signifies 'I wet with,' whilst βαπτίζω εἰς means properly 'I wet by putting into;' they urge especially that the word as used in the N. T. possesses so much of a technical character, that it is not possible from it to deduce any correct inference as to the mode of baptizing; and they adduce historical evidence to shew that baptism was performed indifferently by immersion or affusion as convenience dictated. (Wall, *History of Infant Baptism with Reply to Gale*; Ewing, *Essay on Baptism*, 2d ed.; Carson, *Baptism in its Mode and its Subjects*; Halley, *On the Sacraments*; Moses Stuart, *On Βαπτίζω*; Beecher, *On ditto*; Godwin, *On Baptism*.)

In fine, differences of opinion have arisen respecting the proper subjects of baptism.

1. There are who maintain that baptism is to be administered only to those who believe and give evidence of being regenerated. This opinion is grounded chiefly upon the positions that, Repentance and Faith are distinctly prescribed in the N. T. as conditions of baptism, and the alleged fact that the apostles did not baptize any, until satisfied that they sincerely believed. It is urged also by the advocates of this opinion, against the practice of infant baptism, that not only are infants excluded from baptism by their inability to comply with the required terms, but that they are virtually excluded by their baptism not being expressly enjoined in the N. T. It is also alleged that infant baptism was unknown to the Early Church, and was a corrupt invention of the patristic age. (Cox, *On Baptism*; Carson, *On ditto*; Gale's *Reply to Wall*; Booth, *Pedobaptism Examined*.)

2. There are who contend that baptism is to be administered not only to believers who have not been before baptized but to the infant offspring of believers. This opinion is chiefly based on the covenant established by God with Abraham. This covenant it is maintained was the everlasting covenant, the covenant of grace; under it a connection of a spiritual kind was recognised as existing between parents and their children; in virtue of this

the latter received the sign of the covenanted blessings; no evidence can be adduced that this divinely-appointed connection has been abrogated, though the sign of the covenant has been changed; on the contrary, there is abundant evidence to shew that the apostles administered to the children of converts to Christianity the same rite, that of baptism, which they administered to the converts themselves. It is also affirmed by this party that the requiring of faith and repentance as a condition of baptism in the case of adults cannot be fairly held as including children, inasmuch as by the same reasoning children dying in infancy would be excluded from salvation. It is denied that the absence of any express injunction to baptize children virtually prohibits their baptism; and the assertion that infant baptism was unknown in the primitive age is rebutted by historical evidence (Baxter, *Plain Scripture Proof of Infants' Church Membership and Baptism*; Wardlaw, *On Infant Baptism*, 3d edit.; Williams' *Reply to Booth*; Monro, *On God's Covenant and Church*.)

3. There are who assert that baptism is to be administered to all who either will place themselves under Christian instruction, such as adults who have grown up as heathens, Jews, or infidels; or who may be thus placed by their parents or guardians, such as infants. In support of this view, stress is laid upon our Lord's words when he commanded his apostles to go and teach and baptize all nations; the 'baptizing being regarded as associated with the 'teaching' and commensurate with it, whilst what is said about 'believing' is regarded as relating to something which may or may not follow the teaching and baptizing, but which is declared to be essential to salvation. It is argued that the apostolic practice was altogether in accordance with this view of our Lord's commission, inasmuch as the multitudes frequently baptized by the apostles were such, that to obtain satisfactory evidence of the knowledge and piety of each individual was impossible in the time which elapsed between the apostles' preaching and the baptizing to which it led; whilst such cases as those of Simon Magus and the Philippian Jailor shew that even very ignorant men, and men who could not possibly give what any person would receive as credible evidence of piety, were at once baptized. The practice of the apostles also in baptizing whole households, including children and servants, without asking any questions as to their knowledge and belief, is urged in favour of this opinion, as well as the practice of the church (Halley, *On the Sacraments; Reply to Wardlaw*; Godwin, *On Baptism*.)

V. BAPTISM FOR THE DEAD.—In I Cor. xv. 29, Paul asks, 'What shall they do who are baptized for the dead (οἱ βαπτίζομενοι ὑπὲρ τῶν νεκρῶν)? If the dead rise not at all, why are they at all (καὶ) baptized for the dead.' On this difficult passage much has been written, and various explanations of the phrase, 'baptized for the dead,' have been offered. 'Tanta,' says Bengel (*Gnom. in loc*), 'est interpretationum varietas, ut is qui, non dicam varietates ipsas, sed varietatum catalogos colligere vult, dissertationem scripturus sit.' Of these interpretations, a collection may be seen in Poole's *Synopsis*; Wolf, *Curæ Philol. in. N. T.*; Heydenreich, *Comment. in Ep. I., Pauli ad Cor.*; Meyer, *Krit. Exeget. Handbuch*; Alford, *Gr. Test.*; and Brown's *Resurrection of Life*, Edin. 1852. In the former edition of this work, a conspectus of these

was given by Professor Jacobi of Halle, which is here retained.

They chiefly turn upon the question, whether the baptism here mentioned is the *general* church-baptism, or some *particular* one independent of the former. We shall examine, first—

‘A. *Those interpretations which take it to be some particular application of baptism.*

‘From the wording of the sentence, the most simple impression certainly is, that Paul speaks of a baptism which a living man receives in the place of a dead one. This interpretation is particularly adopted by those expounders with whom grammatical construction is paramount.

‘Foremost among the older critics is Ambrose (Hilar): ‘In tantum natum et stabilem vult ostendere resurrectionem mortuorum, ut exemplum de eorum, qui tam securi erant de futura resurrectione, ut etiam pro mortuis baptizarentur, si quem forte mors prævenisset, timentes, ne aut male aut non resurgeret, qui baptizatus non fuerat; vivus nomine mortui tingebatur.’ Among the moderns are Erasmus, Scaliger, Grotius, Calixtus; and of the more recent the most considerable are Augusti (*Archæol.* iv.), Meyer (who understands *ὄντιν* = *to the advantage, in favour*, which may indeed well be the case), Billroth and Rückert, who supposes that the Corinthians, convinced of the necessity and benefit of baptism, but erroneously considering it not as a symbol, but as a real means of purifying the heart itself, had taken it into their heads to give the benefit thereof also to the dead, by administering baptism to them by a substitute, a living person, and thus imagined that a *baptism by proxy* was practicable. De Wette considers this the only possible meaning of the words.

‘With regard to this interpretation, some doubt arises as to the actual existence at that time of such a custom, since the only information respecting it would be this passage, though Rückert thinks this is sufficient evidence. It is true, that they refer to the Shepherd of Hermas (*Simil.* ix. 16); but all that can be inferred from it is, that they had at that time already begun to evince an overdue and extravagant respect for outward baptism. Tertullian (*Contr. Marcion*, v. 10) seems in a more direct way to speak of the existence of the custom: ‘Noli apostolum novum statim auctorem aut confirmatorem ejus (institutionis) denotare, ut tanto magis sisteret carnis resurrectionem, quanto illi qui vanè pro mortuis baptizarentur, fide resurrectionis hoc facerent. Habemus illum alicubi unius baptismi definitorem. Igitur et pro mortuis tingui pro corporibus est tingui; mortuum enim corpus ostendimus’ (comp. *De Resurrect. Carnu.* 48). Tertullian in these words distinguishes a false application of baptism by substitution, from the general one adhered to by the apostle; he thinks that the apostle confirms baptism *pro mortuis*, not in that erroneous but in a proper sense, compatible with his other and general views of baptism. Of that erroneous practice, however, Tertullian, in this as in the other place, evidently knows no more than what is indicated by Paul in the above passage; neither does he mention that such a custom had prevailed in his time among the Marcionites or any others (comp. Neander, *Hist. of the Church*, ii. 194, Clark’s ed.) More certain information is given by Chrysostom, who relates of the Marcionites (*Homil.* 40, ad I Cor.) that when a catechumen died among them, a liv-

ing person used to lay himself under the bed of the deceased, and answer in his stead the customary questions, after which the deceased was baptized. He says that they referred to the approval of St. Paul in the above passage. It is true that this absurd custom is certainly met with among the uncultured and superstitious Marcionites of later times, yet is it highly improbable, as Neander justly observes, that such a custom should ever have emanated from Marcion himself, who had entered so deeply into the spirit of the Pauline ‘Faith.’

‘A similar account is given by Epiphanius (*Hæres.* xxviii. 7) of the Gnostic sect of Cerinthus, who were much opposed to the Marcionites: ‘In this country,—I mean, Asia,—and even in Galatia, their school flourished eminently; and a traditional fact concerning them has reached us, that when any of them had died without baptism, they used to baptize others in their name, lest in the resurrection they should suffer punishment as unbaptized.’ We are not justified in denying credence to this statement, though there is just suspicion against Epiphanius from his total want of critical judgment, and his erroneous supposition that Paul was particularly combating the opinions of Cerinthus, a supposition which he applies also to the passage before us. In the *Concil. Carthagin.*, A.D. 397, can. 6, and *Codex Eccles. Afric.*, can. 18, it is forbidden to administer baptism and the holy communion to the dead: but here baptism *by proxy* is not alluded to, and we have therefore no reason to assume that this custom then existed in those parts. Augusti (l. i. vii., p. 42) refers to the proselyte baptism of the Jews, where, he thinks, parents underwent the rite for their children. But all the authorities quoted in its favour by Lightfoot (ad Math. iii. 6) prove nothing as to *substitution*; and even if they did so, it would still be highly improbable that the Gentile churches would have adopted it from them (comp. Schneckenburger, *De Bapt. Proselyt.*, p. 79).

‘All therefore we can infer from the above statements is, that baptism by substitution had taken place among the Marcionites, and perhaps also among the Cerinthians and other smaller sects towards the end of the fourth century; but that it existed between that period and the time when Paul wrote the above passage is wholly unsubstantiated. Is it possible to suppose that in the various quarters of the church of which we have any information, no notice whatever should have been taken either by a synodical decree, or by a contemporary writer within that period, of a custom, which, the earlier it existed, must have appeared only so much the more offensive? Is it not therefore evident that if it is found 300 years afterwards, it was not a continuation of the primitive custom, but had arisen independently of the latter, either in imitation of it, or from a mistaken interpretation of this passage?

‘The idea, then, that such a superstitious custom existed in the Corinthian community is devoid of all historical evidence; and we must confess that the clearer the sense of the words becomes the more obscure becomes the thing itself.

‘The difficulties will still more increase, if we were to admit, with Olshausen, Rückert, and De Wette, that the apostle approved of the absurd practice in question, since he would thus be brought into contradiction with his own principles on the importance of faith and external works, which he

develops in his Epistle to the Galatians. Even Ambrose (l. c.) had already correctly judged, when he said, 'Exemplo hoc non factum illorum probat, sed fidem fixam in resurrectione ostendit.' In the words of Paul we discover no opinion of his own concerning the justice or injustice of the rite; it is merely referred to as an *argumentum ex concessio* in favour of the object which he pursues through the whole chapter (comp. I Cor. ii. 5). However much may be objected against this interpretation, it is by far more reasonable than the explanations given by other critics. The Corinthian community was certainly of a mixed character, consisting of individuals of various views, ways of thinking, and different stages of education; so that there might still have existed a small number among them capable of such absurdities. We are not sufficiently acquainted with all the particulars of the case to maintain the contrary, while the simple grammatical sense of the passage is decidedly in favour of the proposed interpretation.

2. Origen (*Dial. contr. Marcion.*), Luther, Chemnitz, and Joh. Gerhard, interpret the words as relating to baptism over the graves of the members of the community, a favourite *rendezvous* of the early Christians. Luther says that, in order to strengthen their faith in the resurrection, the Christians baptized over the tombs of the dead. In that case *ὑπὲρ* with *genit.* must be taken in its local sense, quite an isolated instance in the New Testament (comp. Winer, *Grammat.* p. 263). The custom alluded to, moreover, dates from a much later period.

3. The above-quoted passage of Epiphanius mentions also a view, according to which *νεκροί* is not to be translated by *dead*, but *mortally ill* persons, whose baptism was expedited by sprinkling water upon them on their death-bed, instead of immersing them in the usual way; the rite is known under the name of *baptismus clinicus, lectualis*. But few of the modern theologians (among whom, however, are Calvin and Estius) advocate this view, which transgresses not less against the words of the text than against all historical knowledge of the subject.

B. *The interpretations which suppose that the text speaks of general church baptism.* To these belongs the oldest opinion we know of, given in Tertullian (l. c. comp. *De Resurrect. Carn.* 48): 'Quid et ipsos baptizari ait, si non quæ baptizantur corpora resurgunt?' According to this view *ὑπὲρ* is here taken in the sense of *on account of*, and *νεκρῶν* in that of *dead bodies, they themselves*, the baptized, as dead persons. The notion which lies at the bottom of this version is, that the body possesses a guarantee for resurrection in the act of baptism, in which it also shares. The sinking *under* and rising *up* is with them a symbol of burying and resurrection. Some of the Greek Fathers also favour this interpretation, and more especially Theodoret, who thus develops the notion: 'He who undergoes baptism is therein buried with his Lord, that having partaken in his death, he may become partaker in his resurrection also. But if the body is a corpse and rises not, why is it ever baptized?' Chrysostom: 'Paul said, Unless there is a resurrection, why art thou baptized for corpses, that is, for mere bodies. For to this end art thou baptized, for the resurrection of thy dead body, etc.' The idea thus developed is by itself admissible, and harmonizes well with the whole course of

ideas pursued by Paul from ver. 19. The form of the sentence, however, becomes uncommonly harsh, because of the transition: 'else what shall they do who are baptized on account of the dead? (on account of themselves, who are dead)? Indeed, it is by far more jarring than Rom. v. 6, which is quoted as a parallel passage.

2. The words of Chrysostom, just quoted, certainly convey also the same meaning as regards 'the dead,' but differ from the two former interpretations with regard to *ὑπὲρ*: 'in behalf of the dead' thus means 'in the belief of the resurrection of the dead.' This ungrammatical version is adopted by Theophylact; 'Why are men baptized at all in behalf of resurrection, that is, in expectation of resurrection, if the dead rise not?' (Isidor. Pelus. 'If bodies rise not at all, why do we believe that in baptism they are changed to incorruptibility?' perhaps with reference to our passage).

3. Pelagius, Olearius, Fabricius, are of opinion that the phrase, 'on account of the dead,' or 'of those who are dead,' although strictly plural, here alludes to an individual, namely, to Christ, 'on account of whom' we are baptized, alluding to Rom. vi. 3. Though the plural is in itself admissible (Winer, *Gram.* p. 163), its use here would nevertheless be rather strange, there being no ground whatever for the use of so peculiar a phraseology; neither can we account for the fact, that the regular construction of *βαπτίζω* with *eis* should have been converted into the unprecedented construction with *ὑπὲρ*. Vater justifies the plural, by including in it *John the Baptist*; Semler understands it of Christ and those of the Apostles and teachers of the church who were already dead at that time; Flatt, by adding, on account of Christ, and those who have died in him (in the belief in him):—all quite inadmissible combinations.

4. Among the best interpretations is that of Spanheim and Joh. Christ. Wolf. They consider 'the dead' to be martyrs and other believers, who, by firmness and cheerful hope of resurrection, have given in death a worthy example, *by which* (*ὑπὲρ*) others were also animated to receive baptism. Still this meaning would be almost too briefly and enigmatically expressed, when no particular reason for it is known, while also the allusion to the exemplary death of many Christians could chiefly apply to the martyrs alone, of whom there were as yet none at Corinth.

5. Olshausen's interpretation is of a rather doubtful character. In the first instance he interprets *ὑπὲρ* = *instead of, in favour of*; and the meaning of the passage he takes to be, that 'all who are converted to the church are baptized—for the good of the dead, as it requires a certain number, a 'fulness of believers, before the resurrection can take place. Every one therefore who is baptized is so for the good of believers collectively, and of those who have already died in the Lord' (both of which we can hardly suppose *νεκρῶν* to embrace at once!) Olshausen is himself aware that the apostle could not have expected that such a difficult and remote idea, which he himself calls 'a mystery,' would be understood by his readers without a further explanation and development of his doctrine. He therefore proposes an interpretation as already suggested by Clericus and Döderlein (*Instit. Theol. Christ.* ii. 405). In this explanation, it is argued, that the miseries and hardships Christians have to struggle against in this life

can only be compensated by resurrection. Death causes, as it were, vacancies in the full ranks of the believers, which are again filled up by other individuals. 'What would it profit those who are baptized *in the place of the dead* (to fill up their place in the community) if there be no resurrection? The tendency of the whole connection of the text, however, would rather lead us to expect the question, 'What would the *dead* profit by it?' since the tenor of the passage decidedly refers to them. To make $\text{ὕπερ} = \text{ἀντὶ}$, therefore, is quite unsuitable; not to mention, that the idea—to enter into the ranks of Christians—must first be supposed to be contained in the word 'baptism,' in order to draw from it the figure of *substitution*. A reference is made, in support of the opinion which considers $\text{ὕπερ} = \text{ἀντὶ}$, to Dionys. Halicari. (*Antiq.* viii.), where he is treating of a new conscription, which was to be made to fill up the ranks rendered vacant by the death of the soldiers who had fallen in the war, and the expression there used is— $\text{οὐτοὶ ἤξιουν ὑπὲρ τῶν ἀποθανόντων στρατιωτῶν ἑτέρους καταγράφειν}$. Nor are there wanting other similar passages in proof of this; but we must bear in mind, that in Dionys. the word denotes a literal substitution, while in our passage the *substitution* is figurative, far-fetched, and hard to unriddle. It is not probable that the Apostle should not have said ἀντὶ , if he had really wished to express that thought. Moreover, the very essence of the argument, the notion that resurrection is the compensation for the sufferings of life, is here not at all given, nor even hinted at except we connect the ἐπεὶ directly with ver. 19, a thing quite impossible. A somewhat similar opinion is expressed by F. J. Herman, that $\text{ὕπερ} = \text{præter}$ (גַּם, Genes. xxvii. 9), 'Cur præter eos qui jam mortui sunt, alii quoque baptismum suscipiunt, et ita initiati religionem Christianorum profitentur, si tamen nulla erit resurrectio mortuorum nec melioris vitæ præmium expectandum est?' In this sense, however, ὕπερ would require the accusative.

'C. βαπτίζόμενοι, in a figurative sense.

'Some (referring to the words of Christ, Matt. xx. 22) take it in the sense of the *baptism of passion, suffering*: this is evidently too forced to require refutation.'

The uncertainty which attaches to this phraseology led Valcknaer to suggest that we should read $\text{βαπτ. ἀπ' ἔργων νεκρῶν}$, in place of β. ὑπὲρ τῶν νεκ. ; but this is pure conjecture, however ingenious, and, besides, gives a meaning to the passage which seems pointless and inapposite to the writer's purpose.—W. L. A.

BAQAR (בָּקָר [in Arab. بقر, from a verb

signifying to *cleave, divide, to wit, the ground*; comp. Lat. *armentum* from *aro, trio* from *terō*]). This word is used to designate both the individual animal, and collectively the class to which it belongs, or a multitude of individuals of the class. It is applicable to all ruminants, but is especially used to designate the Bovidæ or Beeve tribe (the ox, or cow, or a herd of such), and the genus of the larger antelope.

The earliest pastoral tribes appear to have had domesticated cattle in the herd; and judging from the manners of South Africa, where we find nations still retaining in many respects primeval usages, it is likely that the patriarchal families, or at least

their movables, were transported on the backs of oxen in the manner which the Caffres still practise, as also the Gwallahs and grain-merchants in India, who come down from the interior with whole droves bearing burdens. But as the Hebrews did not castrate their bulls, it is plain some other method of enervation (*bistournure*?) was necessary in order to render their violent and brutal indolence sufficiently tractable to permit the use of a metal ring or twisted rope passed through the nostrils, and to ensure something like safety and command to their owners. In Egypt, emasculation, no doubt, was resorted to, for no ring is observable in the numerous representations of cattle, while many of these indicate even more entire docility in these animals than is now attained.

The breeds of Egypt were various, differing in the length and flexures of the horns. There were some with long horns, others with short, and even none, while a hunched race of Nubia reveals an Indian origin, and indicates that at least one of the nations on the Upper Nile had come from the valleys of the Ganges; for it is to the east of the Indus alone that that species is to be found whose original stock appears to be the mountain yak (*Bos grunniens*). It is born with two teeth in the mouth, has a groaning voice, and is possessed of other distinctive characters. Figures of this species or variety bear the significant lotus flower suspended from the neck, and, as is still practised in India, they are harnessed to the cars of princesses of Nubia. These, as well as the straight-backed cattle of Egypt, are all figured with evident indication of beauty in their form, and they are in general painted white with black, or rufous clouds, or entirely red, speckled, or *grandinated*, that is, black with numerous small white specks; and there are also beeves with white and black occasionally marked in a peculiar manner, seemingly the kind of tokens by which the priesthood pretended to recognize their sacred individuals. The cattle of Egypt continued to be remarkable for beauty for some ages after the Moslem conquest; for Abdolatif, the historian, extols their bulk and proportions, and in particular mentions the Al-chishiah breed for the abundance of milk it furnished and for the beauty of its curved horns.

The domestic buffalo was unknown to Western Asia and Egypt till after the Arabian conquest; it is now common in the last-mentioned region and far to the south, but not beyond the equator; and from structural differences it may be surmised that there was in early ages a domesticated distinct species of this animal in Africa. In Syria and Egypt the present races of domestic cattle are somewhat less than the large breeds of Europe, and those of Palestine appear to be of at least two forms, both with short horns and both used to the plough, one being tall and lanky, the other more compact; and we possess figures of the present Egyptian cattle with long horns bent down and forwards. From Egyptian pictures it is to be inferred that large droves of fine cattle were imported from Abyssinia, and that in the valley of the Nile they were in general stall-fed, used exclusively for the plough, and treated with humanity. In Palestine the Mosaic law provided with care for the kind treatment of cattle; for in treading out corn—the Oriental mode of separating the grain from the straw—it was enjoined that the ox should not be muzzled (Deut. xxv. 4), and old cattle that had long served

in tillage were often suffered to wander at large till their death—a practice still in vogue, though from a different motive, in India. But the Hebrews and other nations of Syria grazed their domestic stock, particularly those tribes which, residing to the east of the Jordan, had fertile districts for that purpose. Here, of course, the droves became shy and wild; and though we are inclined to apply the passage in Ps. xxii. 12, to wild species, yet old bulls, roaming at large in a land where the lion still abounded, no doubt became fierce; and as they would obtain cows from the pastures, there must have been feral breeds in the woods, as fierce and resolute as real wild Uri—which ancient name may be a mere modification of Reem. [REEM.]—C. H. S.

BAR (בַּר), a Hebrew word meaning *son*, but used only poetically in that language (Ps. ii. 12; Prov. xxxi. 2). In Syriac, however, Bar (ܒܪ or ܒܪܐ) answered to the more common Hebrew word for *son*, i. e., בֶּן *ben*; and hence in later times, in the New Testament, it takes the same place in the formation of proper names which *Ben* had formerly occupied in the Old Testament.

BAR (בַּר). This word, cognate with בָּר *pure*, is used to designate properly corn which has been winnowed or purified from the chaff, and is stored up for use (Gen. xli. 35, 49; Prov. xi. 26; Joel ii. 24). In one instance it is used to designate corn standing in the field (Ps. lxx. 13). The word may be compared with the Arab. ب *wheat*, the Lat. *far*, Goth. *baris*, Ang. Sax. (still retained in Scotch) *bere*, Gr. φορβή, etc.—W. L. A.

BARABBAS (Βαραββᾶς, probably בַּר אַבְבָּא, *son of Abba*, a common name in the Talmud), a person who had forfeited his life for sedition and murder (Mark xv. 7; Luke xxiii. 25). As a rebel, he was subject to the punishment laid down by the Roman law for such political offences; while, as a murderer, he could not escape death even by the civil code of the Jews. But the latter were so bent on the death of Jesus, that, of the two, they preferred pardoning this double criminal (Matt. xxvii. 16-26; Mark xv. 7-15; Luke xxiii. 18-25; John xviii. 40). Origen says that in some copies Barabbas was also called *Jesus*. The Armenian Version has the same reading: 'Whom will ye that I shall deliver unto you, Jesus Barabbas, or Jesus that is called Christ?' Griesbach, in his *Comment.*, considers this as an interpolation; while Fritzsche has adopted it in his text. We can certainly conceive that a name afterwards so sacred may have been thrown out of the text by some transcriber.—E. M. [Tischendorf, in his last edition, rejects this reading. Dr. Alford (Smith's *Dict. of the Bible*, s. v.) justly observes, that 'the contrast in ver. 20, that they should ask Barabbas and destroy Jesus, seems fatal to it.']

BARACHEL (בַּרְכֵּיָאֵל, Sept. Βαραχιήλ), the father of Elihu the Buzite (Job xxxii. 2, 6).

BARACHIAS (Βαραχίας), father of the Zechariah (Zacharias) mentioned in Matt. xxiii. 35. [ZECHARIAH].

BARAK (בָּרַק, *lightning*; Sept. Βαράκ), son of Abinoam of Kadesh-Naphtali, a Galilean city of refuge in the tribe of Naphtali (Judg. iv. 6; comp. Josh. xix. 37; xxi. 32). He was summoned by the prophetess Deborah to take the field against the hostile army of the Canaanitish king Jabin, commanded by Sisera, with 10,000 men from the tribes of Naphtali and Zebulun, and to encamp on Mount Tabor, probably because the 900 chariots of iron (Judg. iv. 3), in which the main force of Sisera consisted, could not so easily manœuvre on uneven ground. After some hesitation, he resolved to do her bidding, on condition that she would go with him, which she readily promised. Confiding, therefore, in the God of Israel, he attacked the hostile army by surprise, put them to flight, and routed them to the last man (Judg. iv. 14, 15, 16). In conjunction with Deborah, he afterwards composed a song of victory in commemoration of that event (*ibid.*). [DEBORAH.]—E. M.

BARBARIAN (βάρβαρος). This term is used in the New Testament, as in classical writers, to denote other nations of the earth in distinction from the Greeks. 'I am debtor both to the Greeks and Barbarians'—'Ἐλλησι τε καὶ βαρβάρους (Rom. i. 14); 'der Griechen und der Ungriechen'—Luther; 'To the Grekes and to them which are no Grekes'—Tyndale, 1534, and Geneva, 1557; 'To the Grekes and to the Ungrekes'—Cranmer, 1539. In Coloss. iii. 11, 'Greek nor Jew—Barbarian, Scythian'—Βάρβαρος seems to refer to those nations of the Roman empire who did not speak Greek, and Σκύθης to nations not under the Roman dominion (Dr. Robinson). In 1 Cor. xiv. 11, the term is applied to a difference of language: 'If I know not the meaning of the voice, I shall be unto him that speaketh a barbarian ('as of another language,' *Geneva Vers.*), and he that speaketh shall be a barbarian ('as of another language' *Geneva Vers.*) unto me.' Thus Ovid, 'Barbarus hic ego sum, quia non intelligor ulli,' *Trist. v. io. 37*. In Acts xxviii. the inhabitants of Malta are called βάρβαροι, because they were originally a Carthaginian colony, and chiefly spoke the Punic language. In the Septuagint,

βάρβαρος is used for the Hebrew לָעַן, 'A people of *strange* language' (Ps. cxiv. 1); in the Chaldean paraphrase מְעוֹמַת בְּרַבְרָא. In the Rabbinical writers לָעַן is applied to foreigners in distinction from the Jews; and in the Jerusalem Talmud it is explained by יוֹנִית, i. e., the Greek language; Rabbi Solomon remarks, that whatever is not in the Holy tongue, is called לָעַן (Buxtorf, *Lex. Talm.*) According to Herodotus, the Egyptians called all men barbarians who did not speak the same language as themselves: μὴ σφίσι ὁμογλώσσους, ii. 158. Clement of Alexandria uses it respecting the Egyptians and other nations, even when speaking of their progress in civilization, as in his *Strom.* i. c. 16, sec. 74: Οὐ μόνως δὲ φιλοσοφίας, ἀλλὰ καὶ πάσης σχεδὸν τέχνης εὐρεταὶ Βάρβαροι. Αἰγύπτιοι γούν πρῶτοι ἀστρολογίαν εἰς ἀνθρώπους ἐξήνεγκαν, ὁμοίως δὲ καὶ Χαλδαῖοι.—'Barbarians have been inventors not only of philosophy, but likewise of almost every art. The Egyptians, and in like manner the Chaldeans, first introduced among men the knowledge of astrology.' In a singular pas-

sage of Justin Martyr's first Apology, the term is applied to Abraham and other distinguished Hebrews: 'We have learned and have before explained, that Christ is the first begotten of God, being the Word (or reason) *λόγον ὄντα*, of which the whole human race partake. And they who live agreeably to the Word (or reason) *ὁ μετὰ λόγου βιώσαντες*, are Christians, even though esteemed atheists: such among the *Greeks* were Socrates, Heraclitus, and the like; and among the *barbarians* ('among other nations,' Chevallier's *Trans.*) *ἐν βαρβάρους*, Abraham, Ananias, Azarias, Misaël, and Elias, and many others.'—*Apol.* i. 46. Strabo (xiv. 2) suggests that the word *Bar-bar-os* was originally an imitative sound, designed to express a harsh dissonant language, or sometimes the indistinct articulation of the Greek by foreigners, and instances the Carians, who on the latter account he conjectures were termed by Homer *βαρβαρόφωνοι* (*Il.* ii. 867). The word appears to have acquired a reproachful sense during the wars with the Persians; their country was called *ἡ Βάρβαρος* (γη). (Rost u. Palm, *Lex.* s. v. *Βάρβαρος*.)—J. E. R.

BARBURIM (בַּרְבִּירִים). This word occurs 1 Kings v. 3 (iv. 23), and is translated in the A. V. 'fowls,' fattened (אֲבוּסִים) for Solomon's table. The Targ. of Jonathan gives the same rendering. Kimchi makes them *capons*, and the Jerusalem Targ. *geese*. Gesenius approves this last on etymological grounds, deriving the word from ברר to *cleanse, purify*, and supposing an allusion to the *white* plumage of the goose. Many of the rabbins derive the name from *Barbary*, and suppose the allusion is to some fowl from that country. Bochart has devoted a whole chapter to the inquiry, and after a careful examination of different opinions, comes to the conclusion that not birds, but beasts, are intended by the word. His main argument is, that the adjective אֲבוּסִים is used only of fatted beasts; which is true (*Hieroz.* ii. 127-135). Lee (*Lex.* in voc.) follows Bochart, though he gives a somewhat different account of the origin of the word; Bochart deriving it from ברר *eligere*, and Lee from בר *purus*, but both agreeing that it signifies *choice beasts*.—W. L. A.

BARQETH (בְּרִיקַת, Exod. xxviii. 17), and BAREQATH (בְּרִיקַת, Ezek. xxviii. 13), a species of gem, so called probably from its sparkling brilliancy (from ברק, to *lighten, to flash like lightning*). In all the passages in which this word occurs, it is rendered by the LXX. *σμάραγδος*, and by the Vulg. *emeraldus*; Josephus, also, in his account of the high priest's breastplate, calls it *σμάραγδος* (*De Bell. Jud.* v. 5. 7; *Antiq.* iii. 7. 5). This is the most probable identification of the word. The smaragd was what is now known as the Oriental emerald; a gem of the Corundum species, which contains many varieties; transparent, in some cases colourless, but in most presenting a beautiful green of different shades. Pliny mentions twelve kinds of the smaragd (*H. N.*, bk. xxxvii. ch. 5, sec. 16). Braun contends that one of these is the biblical bareqeth, and borrows an argument for this from the etymological resemblance between that word and the Gr. *σμάραγδος* (*De Vest. Sacerdot. Heb.*, p. 517); and this Gesenius thinks valid (*in voc.*) The rendering in the A. V. is *carbuncle*, which has less in its favour. This gem belongs to the same

family with the emerald, but is of the ruby species, and of a deep red colour. [NOPHECH.]—W. L. A.

BARHUMITE. [AZMAVETH; BAHURIM.]

BAR-JESUS (Βαριησοῦς). [ELYMAS.]

BAR-JONA (Βάρ Ἰωνᾶ, son of *Jonas*), the patronymic appellation of the Apostle Peter (Matt. xvi. 17). [PETER.]

BARNABAS (בְּרִנְיָהוּ; Βαρνάβας). His name was originally Ἰωσήφ, *Joses*, or Ἰωσήφ, *Joseph* (Acts iv. 36); but he received from the apostles the surname of Barnabas, which signifies *the Son of Prophecy*. Luke interprets it by *ὁ παρὰ κλήσεως*, i. e., *Son of Exhortation*. The Hebrew term and its cognates are used in the Old Testament with a certain latitude of meaning, and are not limited to that of foretelling future events. Thus Abraham is termed in Gen. xx. 7 נְבִיאָה, Sept. *προφήτης*, as being a person admitted to intimate communion with the Deity, and whose intercession was deemed of superior efficacy. In Exod. vii. 1, Jehovah declares to Moses, 'I have made thee a god to Pharaoh, and Aaron, thy brother, shall be thy prophet,' נְבִיאָךְ, which Onkelos translates by כְּתוּרְמִנְכֵךְ, *thy interpreter* (Buxtorf, *Lex. Talmud.*) In like manner *προφητεία*, in the New Testament, means not merely prediction, but 'includes the idea of declarations, exhortations, or warnings uttered by the prophets while under divine influence' (Dr. E. Robinson). 'He that *prophesieth* (ὁ *προφητεύων*) speaketh unto men, unto edification, and *exhortation* (παράκλησιν), and comfort' (1 Cor. xiv. 3). Of Silas and Judas it is said, 'being *prophets*, they *exhorted* (παρεκάλεισαν) the brethren' (Acts xv. 32). It can hardly be doubted that this name was given to Joses to denote his eminence as a Christian teacher. In Acts xiii. 1, his name is placed first in the list of prophets and teachers belonging to the church at Antioch. Chrysostom, however, understands the surname in the same way as the Auth. Vers., *Son of Consolation*, and supposes that it was given to Barnabas on account of his mild and gentle disposition: 'This Barnabas was a mild and gentle person. His name means *Son of Consolation*: hence he became a friend of Paul; and that he was very kind and easy of access is proved by the instance before us, and by the case of John (Mark). (*In Act. Apost.* Hom. xxi.) He is described by Luke as 'a good man, full of the Holy Ghost and of faith' (Acts xi. 24). He was a native of Cyprus, but the son of Jewish parents of the tribe of Levi. From Acts iv. 36, 37, it appears that he was possessed of land, but whether in Judæa or Cyprus is not stated. He generously disposed of the whole for the benefit of the Christian community, and 'laid the money at the apostles' feet.' As this transaction occurred soon after the day of Pentecost, he must have been an early convert to the Christian faith. According to Clement of Alexandria (*Strom.* ii. c. 20, vol. ii. p. 192, ed. Klotz), Eusebius (*Hist. Eccles.* i. 12), and Epiphanius (*Har.* xx. 4), he was one of the seventy disciples (Luke x. 1). It has been maintained that Barnabas is identical with Joseph Barsabas, whose name occurs in Acts i. 23. Most modern critics, however, embrace the contrary opinion, which they conceive is supported by the circumstantial manner in which Barnabas is first mentioned. However

similar in sound, the meanings of the names are very different; and if no further notice is taken of Barsabas (a circumstance which Ullman urges in favour of his identity with Barnabas), the same may be affirmed of Matthias. Chrysostom observes, on Acts iv. 36, 'This person is not, in my opinion, the same that is mentioned with Matthias; for he was called Josès and Barsabas, and afterwards surnamed Justus; but this man was surnamed by the apostles Barnabas, *Son of Consolation*; and the name seems to have been given him from the virtue, inasmuch as he was competent and fit for such a purpose' (*In Act. Apost. Hom. xi. 1*).

When Paul made his first appearance in Jerusalem after his conversion, Barnabas introduced him to the apostles, and attested his sincerity (Acts ix. 27). This fact lends some support to an ancient tradition that they had studied together in the school of Gamaliel—that Barnabas had often attempted to bring his companion over to the Christian faith, but hitherto in vain—that meeting with him at this time at Jerusalem, not aware of what had occurred at Damascus, he once more renewed his efforts, when Paul threw himself weeping at his feet, informed him of 'the heavenly vision,' and of the happy transformation of the persecutor and blasphemer into the obedient and zealous disciple (Acts xxvi. 16).

Though the conversion of Cornelius and his household, with its attendant circumstances, had given the Jewish Christians clearer views of the comprehensive character of the new dispensation, yet the accession of a large number of Gentiles to the church at Antioch was an event so extraordinary, that the apostles and brethren at Jerusalem resolved on deputing one of their number to investigate it. Their choice was fixed on Barnabas. After witnessing the flourishing condition of the church, and adding fresh converts by his personal exertions, he visited Tarsus to obtain the assistance of Saul, who returned with him to Antioch, where they laboured for a whole year (Acts xi. 23-26). In anticipation of the famine predicted by Agabus, the Antiochian Christians made a contribution for their poorer brethren at Jerusalem, and sent it by the hands of Barnabas and Saul (Acts xi. 28-30), who speedily returned, bringing with them John Mark, a nephew of the former. By divine direction (Acts xiii. 2) they were separated to the office of missionaries, and as such visited Cyprus and some of the principal cities in Asia Minor (Acts xiii. 14). Soon after their return to Antioch, the peace of the church was disturbed by certain zealots from Judæa, who insisted on the observance of the rite of circumcision by the Gentile converts. To settle the controversy, Paul and Barnabas were deputed to consult the apostles and elders at Jerusalem (Acts xv. 1, 2); they returned to communicate the result of their conference (ver. 22), accompanied by Judas Barsabas and Silas, or Silvanus. On preparing for a second missionary tour, a dispute arose between them on account of John Mark, which ended in their taking different routes; Paul and Silas went through Syria and Cilicia, while Barnabas and his nephew revisited his native island (Acts xv. 36-41). In reference to this event, Chrysostom remarks—'Τί οὖν; ἔχθροι ἀνεχώρησαν; μή γένοιτο. Ὅρας γὰρ μετὰ τοῦτο Βαρνάβαν πολλῶν ἐγκωμιῶν ἀπολαύοντα παρὰ Παύλου ἐν ταῖς ἐπιστολαῖς. Παροξυσμὸς, φησί, ἐγένετο, οὐκ ἐχθρα οὐδέ

φίλονεκτα;' 'What then? Did they part as enemies? Far from it. For you see that after this Paul bestows in his Epistles many commendations on Barnabas. There was 'a sharp fit of anger' (Doddridge) he (Luke) says, not enmity, nor love of strife.' At this point Barnabas disappears from Luke's narrative, which to its close is occupied solely with the labours and sufferings of Paul. From the Epistles of the latter a few hints (the only authentic sources of information) may be gleaned relative to his early friend and associate. From 1 Cor. ix. 5, 6, it would appear that Barnabas was unmarried, and supported himself, like Paul, by some manual occupation. In Gal. ii. 1 we have an account of the reception given to Paul and Barnabas by the apostles at Jerusalem, probably on the occasion mentioned in Acts xv. In the same chapter (ver. 13) we are informed that Barnabas so far yielded to the Judaizing zealots at Antioch, as to separate himself for a time from communion with the Gentile converts. The date of this occurrence has been placed by some critics soon after the apostolic convention at Jerusalem (about A.D. 52); by others, on the return of Paul from his second missionary journey (A.D. 55). Dr. Paley thinks 'that there is nothing to hinder us from supposing that the dispute at Antioch was prior to the consultation at Jerusalem, or that Peter, in consequence of this rebuke, might have afterwards maintained firmer sentiments' (*Horæ Paulinæ*, ch. v.) The same view has been taken by Hug and Schneckenburger; but (as Dr. Neander remarks) though Paul may not follow a strict chronological order, it is difficult to believe that he would not place the narrative of an event so closely connected with the conference at Jerusalem, at the beginning, instead of letting it follow as supplement (*History of the Planting of the Christian Church*, vol. i. p. 248, Eng. Transl.) It has been inferred from 2 Cor. viii. 18, 19, that Barnabas was not only reconciled to Paul after their separation (Acts xv. 39) but also became again his coadjutor; that he was 'the brother whose praise was in the Gospel through all the churches.' Chrysostom says that some suppose the brother was Luke, and others Barnabas. Theodoret asserts that it was Barnabas, and appeals to Acts xiii. 3, which rather serves to disprove his assertion, for it ascribes the appointment of Paul and Barnabas to an express divine injunction, and not to an elective act of the church; and, besides, the brother alluded to was chosen, not by a single church, but by several churches, to travel with Paul (*χειροτονηθεὶς ὑπὸ τῶν ἐκκλησιῶν συνέκδημος ἡμῶν*, 2 Cor. viii. 19). In Colos. iv. 10, and Philemon, ver. 24, Paul mentions Mark as his fellow-labourer; and at a still later period, 2 Tim. iv. 11, he refers with strong approbation to his services, and requests Timothy to bring him to Rome; but of Barnabas (his relationship to Mark excepted) nothing is said. The most probable inference is, that he was already dead, and that Mark had subsequently associated himself with Paul. For the latter years of Barnabas we have no better guides than the *Acta et Passio Barnabæ in Cypro*, a forgery in the name of John Mark, and, from the acquaintance it discovers with the localities of Cyprus, probably written by a resident in that island; and the legends of Alexander, a Cyprian monk, and of Theodore, commonly called Lector (that is, an *ἀναγνώστης*, or reader) of Constantinople: the two

latter belong to the sixth century. According to Alexander, Barnabas, after taking leave of Paul, landed in Cyprus, passed through the whole island, converted numbers to the Christian faith, and at last arrived at Salamis, where he preached in the synagogue with great success. Thither he was followed by some Jews from Syria (the author of the *Acta* names Barjesus as their leader), who stirred up the people against him. Barnabas, in anticipation of his approaching end, celebrated the Eucharist with his brethren, and bade them farewell. He gave his nephew directions respecting his interment, and charged him to go after his decease to the Apostle Paul. He then entered the synagogue, and began as usual to preach Christ. But the Jews at once laid hands on him, shut him up till night, then dragged him forth, and, after stoning him, endeavoured to burn his mangled body. The corpse, however, resisted the action of the flames; Mark secretly conveyed it to a cave about five stadia from the city; he then joined Paul at Ephesus, and afterwards accompanied him to Rome. A violent persecution, consequent on the death of Barnabas, scattered the Christians at Salamis, so that a knowledge of the place of his interment was lost. This account agrees with that of the pseudo Mark, excepting that, according to the latter, the corpse was reduced to ashes. Under the emperor Zeno (A.D. 474-491), Alexander goes on to say, Peter Fullo, a noted Monophysite, became patriarch of Constantinople. He aimed at bringing the Cyprian church under his patriarchate, in which attempt he was supported by the emperor. When the bishop of Salamis, a very worthy man, but an indifferent debater (*ὀλιγοστός δὲ πρὸς διάλεξιν*), was called upon to defend his rights publicly at Constantinople, he was thrown into the greatest perplexity. But Barnabas took compassion on his fellow-countryman, appeared to him by night no less than three times, assured him of success, and told him where he might find his body, with a copy of Matthew's gospel lying upon it. The bishop awoke, assembled the clergy and laity, and found the body as described. The sequel may be easily conjectured. Fullo was expelled from Antioch; the independence of the Cyprian church acknowledged; the manuscript of Matthew's gospel was deposited in the palace at Constantinople, and at Easter lessons were publicly read from it; and by the emperor's command a church was erected on the spot where the corpse had been interred. These suspicious visions of Barnabas are termed by Dr. Cave, 'a mere addition to the story, designed only to serve a present turn, to gain credit to the cause, and advance it with the emperor.'

Neither Alexander nor Theodore is very explicit respecting the copy of Matthew's gospel which was found with the corpse of Barnabas. The former represents Barnabas as saying to Anthemius, *ἐκεῖ μου τὸ πᾶν σῶμα ἀπὸκειται, καὶ εὐαγγέλιον ἰδιόχειρον δ' ἐξέλαβον ἀπὸ Ματθαίου*—'There my whole body is deposited, and an autograph gospel which I received from Matthew.' Theodore says, *ἔχον ἐπὶ στηθοῦς τὸ κατὰ Ματθαίου εὐαγγέλιον, ἰδιόγραφον τοῦ Βαρνάβα*—'Having on his breast the Gospel according to Matthew, an autograph of Barnabas.' The pseudo Mark omits the latter circumstance. If we believe that, as Alexander reports, it was read at Constantinople, it must have been written not in Hebrew, but in Greek. The year when Barnabas died cannot be determined with cer-

tainly; if his nephew joined Paul after that event, it must have taken place not later than A.D. 63 or 64. 'Chrysostom,' it has been asserted, 'speaks of Barnabas as alive in A.D. 63.' The exact statement is this: in his *Eleventh Homily on the Epistle to the Colossians* he remarks, on ch. iv. 10, 'touching whom ye received commandments, if he come unto you receive him'—*ἴσως παρὰ Βαρνάβα ἐντολὰς ἐλάβον*—'perhaps they received commands from Barnabas.'

There is a vague tradition that Barnabas was the first bishop of the church at Milan, but it is so ill supported as scarcely to deserve notice. It is enough to say that the celebrated Ambrose (b. A.D. 340, d. 397) makes no allusion to Barnabas when speaking of the bishops who preceded himself (*v. Hefele, Das Sendschreiben des Apostels Barnabas*, pp. 42-47).

From the incident narrated in Acts xiv. 8-12 Chrysostom infers that the personal appearance of Barnabas was dignified and commanding. When the inhabitants of Lystra, on the cure of the impotent man, imagined that the gods were come down to them in the likeness of men, they called Barnabas Zeus (their tutelary deity), and Paul, Hermes, because he was chief speaker: *ἔμολ' ὀκεῖ καὶ ἀπὸ τῆς ὕψους ἀξιοπρεπῆς εἶναι ὁ Βαρνάβας* (*In Act. Apost. Hom. xxx.*)

BARNABAS, GOSPEL OF. A spurious gospel, attributed to Barnabas, exists in Arabic, and has been translated into Italian, Spanish, and English. It was probably forged by some heretical Christians, and has since been interpolated by the Mohammedans, in order to support the pretensions of their prophet. Dr. White has given copious extracts from it in his *Bampton Lectures*, 1784; *Sermon* viii. p. 358, and *Notes*, p. 41-69 (See also Sale's *Koran, Prelim. Dissert.* sec. 4). It is placed among the Apocryphal books in the Stichometry prefixed by Cotelerius to his edition of the Apocryphal Constitutions (Lardner's *Credibility*, part ii. ch. 147). It was condemned by Pope Gelasius I. (Tillemont, *Mémoires*, etc. i. p. 1055).
